COMMENTS TO AUTHORS

Peptide aptamer-mediated modulation of prior protein α -cleavage as treatment strategy for prior and other neurodegenerative diseases

In this invited paper, the authors have proposed that peptide aptamer-mediated modulation of prior protein α -cleavage can be used as treatment strategy for prion and other neurodegenerative disorders such as Alzheimer's disease.

Having carefully read the manuscript, my view this invited paper is very interesting. This is of potentially scientific interest and it should be published in "Neural Regeneration Research".
