In the article titled "Comparison of some tests of fit for the Inverse Gaussian distribution" [1], there were a number of typographical and other errors. Except for the minor typographical error in $V_{0}$ below, all calculations reported appear to be correct.

In (2.1) + sign in the denominator should be omitted so that the denominator is $24(\cdots)(\cdots)$. Also a hat is missing on $\phi$ and the last $\widehat{\phi}$ should not be cubed. Thus

$$
\begin{aligned}
\widehat{V}_{3}^{2} & =\frac{n \widehat{\phi}^{6}}{24(4+\widehat{\phi})\left(120+75 \widehat{\phi}+15 \widehat{\phi}^{2}+\widehat{\phi}^{3}\right)} \\
& \times\left\{\widehat{\widehat{Z}}^{3}(4+\widehat{\phi})-\overline{\widehat{Z}}^{2}\left(\frac{60}{\hat{\phi}}+30+4 \widehat{\phi}\right)+\frac{120}{\widehat{\phi}^{3}}+\frac{195}{\widehat{\phi}^{2}}\right. \\
& \left.+\frac{123}{\widehat{\phi}}+32+3 \widehat{\phi}\right\} .
\end{aligned}
$$

In (2.2) the first occurrence of $1+$ should be $1-$. Thus

$$
V_{0}
$$

$$
\begin{align*}
= & \frac{1}{n} \sum_{j, k=1}^{n} Z_{j k}^{-1} \\
& -2 \sum_{j=1}^{n} Z_{j}^{-1}\left\{1-\sqrt{\frac{\pi \widehat{\phi}}{2 Z_{j}}} \operatorname{erfce}\left(\frac{\left(Z_{j}+1\right) \sqrt{\hat{\phi}}}{\sqrt{2 Z_{j}}}\right)\right\} \tag{2}
\end{align*}
$$

$$
+\frac{n(1+2 \widehat{\phi})}{4 \widehat{\phi}}
$$

In (2.5) and (2.6) $n$ s before $e_{3}$ and $e_{4}$ should both be deleted. Thus

$$
\begin{align*}
& \pi_{3}(z)=\frac{\left(z^{3}-a_{3} z^{2}-b_{3} z-c_{3}\right)}{\sqrt{ } e_{3}},  \tag{3}\\
& \pi_{4}(z)=\frac{\left(z^{4}+a_{4} z^{3}+b_{4} z^{2}+c_{4} z+d_{4}\right)}{\sqrt{ } e_{4}} .
\end{align*}
$$

In the definition of $e_{4}$ following (2.6) -253440 should be +253440 .

In example (ii) the value of $V_{0}$ should be 0.0033 .
