

Supporting Table 2. Results of marker-based genome scans for non-neutral population divergence based on divergence and diversity based tests, pairwise population comparisons arranged side-by-side on separate pages to facilitate inspection of locus-specific outlier patterns across populations and to allow printing of particular population comparisons if desired. Reference numbers in the footnote refer to the literature section of the main paper.

¹ Significant results of F_{ST} and purely drift (Vitalis *et al.* 2001) based tests at the 5% level are indicated by a 'Yes'. Significant results with a false discovery rate (FDR) of 10% or less in F_{ST} based tests are also indicated by a 'Yes'. Loci with 3 x 'Yes' are shown with bold type and grey shading. Only loci that matched these stringent criteria (3 x 'Yes') are discussed in the text.

² Significant results of diversity (lnRH and lnRV) based tests at the 5% level are indicated by a 'Yes'. Significant results with a FDR of 10% or less are also indicated with a 'Yes'. Loci with 2 x 'Yes' for either lnRH or lnRV are indicated with bold type and grey shading. Only loci that matched these stringent criteria (2 x 'Yes' for either lnRH or lnRV) are discussed in the text.

³ Lg = linkage group; Lg assignments refer to *Populus* linkage maps (e.g. Yin *et al.* 2004) and *P. trichocarpa* genome assembly v1.1.

Loci with significant HWE deficits at the 5% level are indicated by an asterisk, and six cases of loci under balancing selection within populations are indicated by 'bal'. For population abbreviations see Table 1 of the paper.
