Figure S1. Cdc60-Gtr1 Interaction in the Absence of Gtr2, Related to Figure 1

Gtr1-TAP, or the control protein Igo1-TAP, was precipitated from extracts of Cdc60-HA₃-expressing wild-type (WT) or *gtr2Δ* cells that were grown to and harvested in exponential growth phase. Cell lysates (Input) and TAP pull-down fractions were subjected to SDS-PAGE and immunoblots were probed with anti-HA or anti-protein A (anti-TAP) antibodies as indicated.

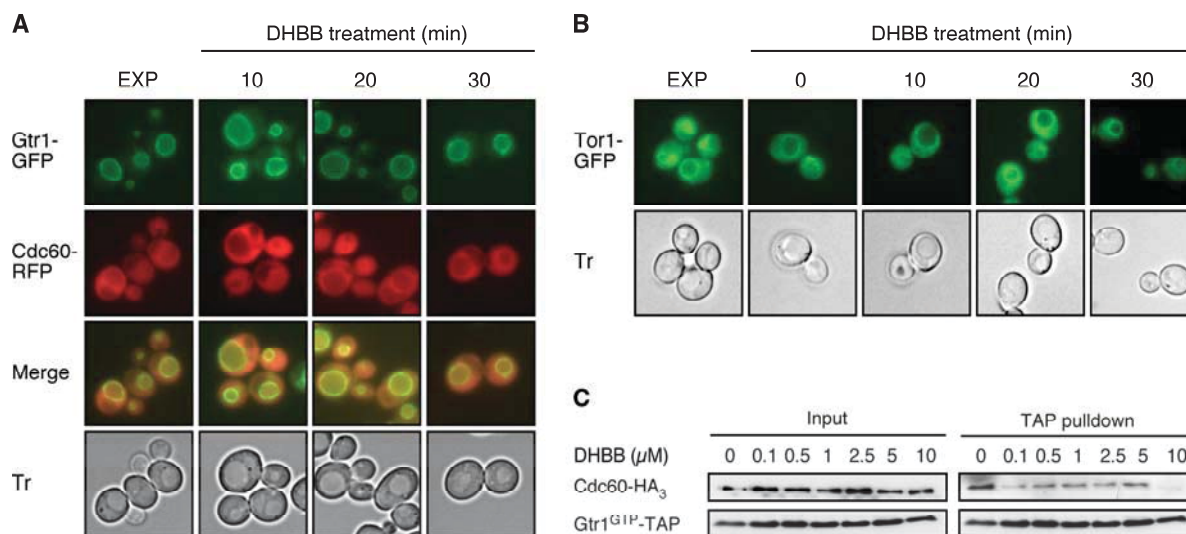

Figure S2. Additional Effects of DHBB Treatment, Related to Figure 2

(A and B) DHBB treatment does not affect the localization of Gtr1-GFP (A) or Tor1-GFP (B). Gtr1-GFP (A) and Tor1-GFP (B) mainly localize to the vacuolar membrane, while Cdc60-RFP (A) adjoins the limiting membrane of the vacuole, but mainly localizes to the cytoplasm in exponentially growing cells (EXP). DHBB (10 μ M) treatment does not detectably alter the localization of Gtr1-GFP, Tor1-GFP, or Cdc60-RFP. Notably, given the high abundance of Cdc60-RFP within the cytoplasm, a potential DHBB-induced displacement of Cdc60-RFP from the vacuolar membrane may escape detection by standard fluorescence microscopic analyses. Tr, transmission.

(C) DHBB disrupts the Cdc60-Gtr1^{GTP} interaction in a concentration-dependent manner. Gtr1^{GTP}-TAP was precipitated from cells co-expressing Cdc60-HA₃. Cells were harvested in exponential growth phase either prior to (0) or following a 30-min period of treatment with the indicated DHBB concentrations. Cell lysates (Input) and TAP pull-down fractions were subjected to SDS-PAGE and immunoblots were probed with anti-HA or anti-protein A (anti-TAP) antibodies.

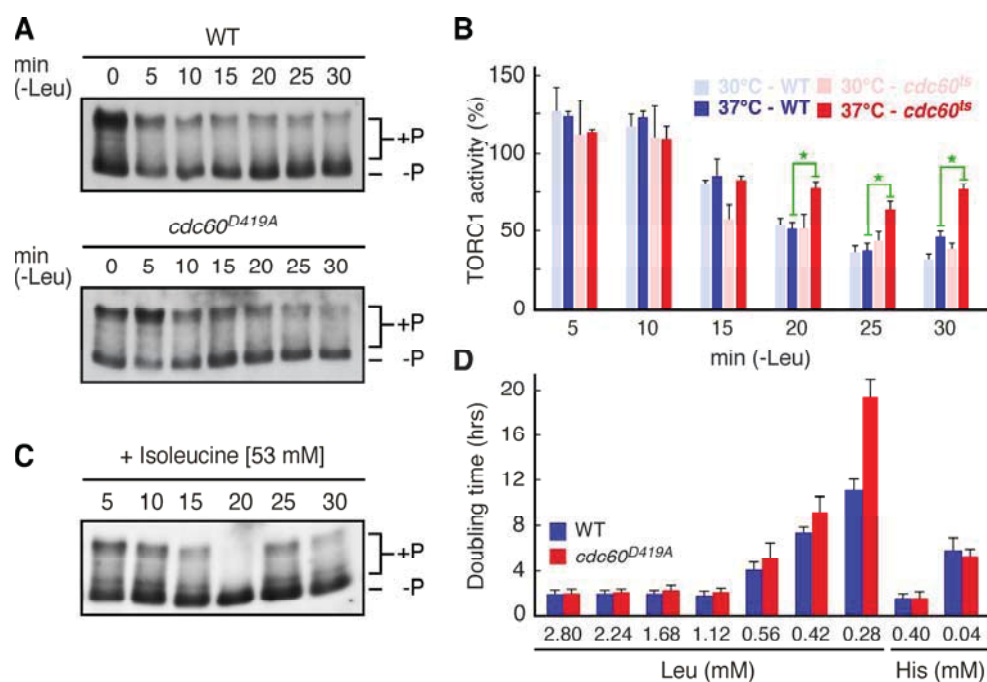

Figure S3. Physiological Relevance of LeuRS Editing, Related to Figure 4

(A) Leucine starvation causes TORC1 inactivation in both wild-type and *cdc60^{D419A}* mutant cells. Leucine (*leu2Δ*) auxotrophic wild-type (WT) and *cdc60^{D419A}* mutant cells were grown to exponential phase in medium containing leucine and then transferred to a medium lacking leucine (0 time point). Samples were taken at the times indicated following leucine starvation and TORC1 activity was assayed as in Figure 1D.

(B) Temperature-inactivation of Cdc60^{ts} protects TORC1 from leucine starvation-induced downregulation. Leucine (*leu2Δ*) auxotrophic wild-type and *cdc60^{ts}* mutant cells were grown to exponential phase in medium containing leucine, incubated for 1 hr at either 30°C or 37°C, and then transferred to a medium lacking leucine (0 time point). Samples were taken at the times indicated following leucine starvation (-Leu) and TORC1 activity was assayed as in Figure 1D. Data are expressed as relative values with respect to the 0 time point and reported as averages (n = 3), with standard deviations indicated by the lines above each bar. As assessed by two-way analysis of variance (ANOVA) followed by post-test analysis, the observed differences between wild-type and *cdc60^{ts}* cells at 37°C are statistically significant with p-values < 0.05 (indicated with one asterisk).

(C) Addition of isoleucine in disproportionate quantities causes transient TORC1 inactivation. Wild-type cells were grown (on SD medium) to exponential growth phase and treated with excessive amounts of isoleucine (*i.e.* final concentration of 53 mM). Samples were taken at the times indicated following isoleucine addition and TORC1 activity was assayed as in Figure 1D.

(D) LeuRS editing is specifically required for growth under leucine limiting conditions. Leucine (*leu2Δ*) and histidine (*his3Δ*) auxotrophic wild-type (blue bars) and LeuRS editing defective *cdc60^{D419A}* mutant (red bars) cells were grown in SD medium containing either 5 mM histidine and various levels of leucine (Leu [mM]), or 9 mM leucine and different levels of histidine (His [mM]) as indicated. Doubling times are reported as averages (n = 3), with standard deviations indicated by the lines above each bar.

Table S1. Proteins Identified in Gtr1-TAP Pull-Down Experiments, Related to Figure 1

Protein¹	Function	No. of peptides (+ Leu)	No. of peptides (- Leu)
Rpl4A	Component of the large (60S) ribosomal subunit	9	0
Vas1	Mitochondrial and cytoplasmic valyl-tRNA synthetase	6	0
Ded1	DEAD-box helicase	6	0
Fas1	Fatty Acid synthetase	24	1
Cdc60	Leucyl-tRNA synthetase	11	1
Rpo21	DNA-directed RNA polymerase	9	1
Gnd1	6-Phosphogluconate dehydrogenase	8	1
Trr1	Thioredoxin reductase	6	1
Faa4	Fatty acyl-CoA synthetase	5	1
Acc1	Acetyl-CoA carboxylase	5	1
Pfk2	Phosphofructokinase	5	1
Rpn8	Regulatory subunit of the 26S proteasome	5	1
Fet5	Multicopper oxidase	5	1

¹Proteins were identified by LC-MS-MS analysis of polypeptides in purified Gtr1-TAP preparations from exponentially growing (+Leu) or leucine-deprived (30 min; -Leu) cells. Only proteins for which at least one peptide was identified in the Gtr1-TAP preparations (confidence interval of 99.9%) and none in control preparations from non-tagged wild-type cells were retained for further analysis. Proteins for which at least 5 peptides were identified in the +Leu samples and none in the corresponding -Leu samples, or proteins for which the ratio of the number of peptides in the +Leu versus the -Leu samples was > than 5, were retained for this table.
