

Suppl. Fig. 1:

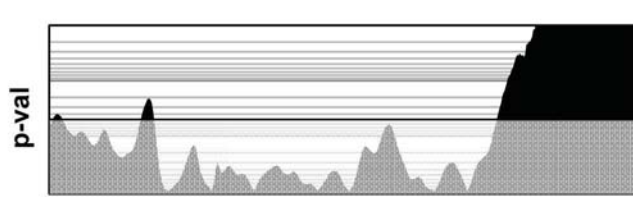

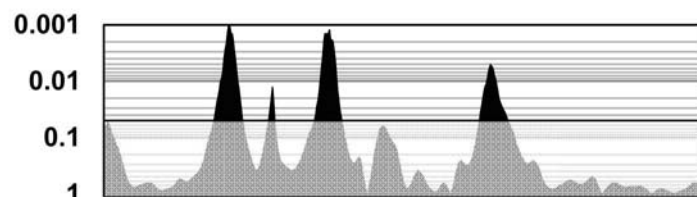

The main effects of Conflict Strength and Congruency. a. Results of the global dissimilarity analysis for the main effects of factors Conflict Strength and Congruency. The p value of the main effects are plotted as a function of time; periods of significant topographic modulation ( $p < 0.05$ ) are indicated in red. b. Results of the global field power (GFP) analysis for the main effects of factors Conflict Strength and Congruency. The p values of the main effects are plotted as a function of time

## Suppl. Fig 1. Electrical Neuroimaging Analyses

### 1. Main Effect of Conflict Strength

### 2. Main Effect of Congruency

#### a. Global Field Power

#### b. Global Dissimilarity
