Program

Thursday 9th Decembe

			inursaay yan december
5.00-7.00 ı	om	registration	foyer of Building 67 (McKinnon Building)
			Friday 10th December
9.00 am	chair	registration and coffee/tea	Talks (in lecture theatre 67.104)
10.30	Paul Else	Welcome and introduction	
10.40		Alexander Kabat and R. Swain	The metabolic costs of pregnancy in Niveoscincus microlepidotus
11.00		John E. Nelson and Robert T. Gemmell	The temperature gradient from the urogenital sinus to the pouch in the pregnar marsupial quoll, <i>Dayurus hallucatus</i>
11.20		Roger Lentle	Reactor theory meets rheometry: a test of chemical reactor based models of digestion using gastric and small intestinal digesta from two marsupial
11.40		Stuart M Linton, Peter Greenaway and David Towle	Endogenous production of cellulases by the Gecarcinid land crabs Gecarcoldea natalis and Discoplax hirtipes
12.00		LUNCH	
1.20 1.40	Sam Richardson	Terry O'Dwyer, W.A. Buttemer and D.M. Priddel Harry Battam, C. Robertson and W.A. Buttemer	Relationships between parental body condition and prolactin during breeding i Gould's petrels, <i>Pterodroma leucoptera</i> Dimensions and scaling of locomotor muscles of the petrels (<i>Procellariiformes</i>)
2.00		Kea N. Webster and T.J. Dawson	Organ sizes and metabolic performance of marsupials
2.20		Yvonne Ingen-Housz	The effect of incubation temperature on hatching attributes of the freshwater turtle <i>Elseya</i> sp. from the Burnett River
2.40		Elektra Sinclair	Thermal acclimation in the limpet Cellana tremoserica
3.00		COFFEE/TEA	
3.40	Nigel Turner	A. Barber and Philip Withers	Ocular water loss in skinks and geckos
4.00	i unici	<u>Christine Cooper</u> , F. Guiser und B. McAllan	The effect of duily torpor on the water economy of an arid-zone marsupial, the stripe-faced dunnart
4.20		Nereda Christian and Fritz Geiser	Is frequency of torpor in sugar gliders (<i>Petaurus breviceps</i>) due to winter food shortages or restrictions to foraging?
4.40		Terence J. Dawson and Cyntina E. Blaney	The effects of dehydration on the thermal biology of kangaroos - differences between lab and field responses.
5.00		POSTERS	
		Rachel C. Aland and Sophie Baron	Histology and ultrastructure of the prostate gland of Antechinus subtropicus
		<u>Niels A. Andersen</u> , Christina Vedel-Smith and Stewart Nicol	Circadian and circannual patterns of body temperature and activity in the Tasmanian echidna (<i>Tachyglossus aculeatus</i>)
		Jessica Gregg	Are small and large dogs different in body and membrane composition?
		and Joan Whittier <u>Susan M. Jones</u> and Ashley Edwards <u>Bronwyn McAllan</u> , Steven Hobbs	Effects of environmental stress on alpine skinks in Tasmania - an Earthwatch-funded project Which endocrine factors influence reproductive decisions in the multiennially breeding viviparous lizard, <i>Tiliqua nigrolutea</i> Presence of neurofibrillary alterations and beta-amyloid immunoreactivity in the brain of a marsupial, <i>Antechinus stuartii</i>
		Michael Usher	Diet, lipids and lifespan of the blowfly (Calliphora stygia)
		<u>Edwards</u>	Progesterone is angiogenic and oestrogen is anti-angiogenic in mouse endometrium Molecular and Immunohistochemical identification of a putative sodium protor exchanger isoform in the gills of euryhaline barramundi ($Lates\ calcarifer$)
	1	Kerry W Withers and J. Billingsley	Application of machine vision to determine the density of dingo teeth
6.15		SIZZLING SOCIAL	held in sports lounge in Sports & Recreation Centre (bldg 13)

Application of machine vision to determine the density of Dingo teeth

Kerry. W. Withers¹* and J. Billingsley²

To devise effective management strategies for animals in the wild and to examine their ecology, it is often useful to determine their age. For determining of the age of dingoes, methods are usually associated with measurements of the diameter of tooth pulp cavity. However, this approach is complicated in animals older than two years by closure of this cavity. Tooth density has recently been examined as a means of aging dingoes (Ellerton et al: in prep). To avoid the need for immersion of the porous tooth to use the Archimedes method, we present a method to determine tooth density through the application of machine vision technology.

A canine tooth removed from a dingo skull of known age was mounted on a rotating vertical shaft, driven by a stepper motor controlled by a computer. Using a web camera, the computer can capture images of the tooth against a black background as the tooth rotates about the vertical axis. Active-X software was developed for analyzing images using some principles common to those used in tomography. Analysis using the green component of the image data resulted in a clear black and white silhouette of the tooth. Fifty images were captured per rotation of the tooth. These were used to compute volumes of 320 notional slices to calculate tooth volume in cubic pixels. Calibration of the system with a marble of known diameter enabled tooth volume to be expressed in mm³. Tooth density was calculated by dividing tooth mass by tooth volume.
