**[Computation tools for the combat of cardiovascular heart disease](#)**

by L.P. Khoo, Y.Y. Cai, Z.W. Xiong, Y.L. Lim, M.L. Wahlqvist, S.C. Fok  
*International Journal of Computer Applications in Technology (IJCAT)*, Vol. 21, No. 1/2, 2004

**Abstract:** The paper discusses two potential applications of computational technologies to combat cardiovascular heart disease in Singapore. The first application involves the exploitation of neural networks for the risk prediction of coronary heart disease. The second application involves the potential integration of artificial intelligence and high performance modelling with clinical biology for the analysis and visualisation of atherosclerosis related structure. The implementation of these computation tools in phases constitutes initial efforts in the development of a digital clinical atherosclerosis laboratory to assist in the prevention and treatment of cardiovascular heart disease.

is only available to individual subscribers or to users at subscribing institutions.

**ATTENTION SUBSCRIBERS:**

Please re-direct your browser by clicking on this [Inderscience Online Journals](#) link, to access the full text of this article.

**Pay per view:** If you are not a Subscriber and you just want to read the full contents of this article, please [click here](#) to purchase online access to the full-text of this article. Please allow 3 days + mailin time. Current price for article is Thirty Euros (€30)

**Complimentary Subscribers, Editors or Members of the Editorial Board** of the International Journal of Computer Applications in Technology (IJCAT) journal, that have been redirected here, please check if you have a registered username/password subscription with Inderscience. If that is the case, please **Login**:
