

ERRATUM

Plasma fibrinogen concentration is correlated with postoperative blood loss in children undergoing cardiac surgery: erratum

In our article,¹ we wrote that, in the cardiovascular setting, the European Society of Anaesthesiology has recommended the administration of fibrinogen concentrate to maintain a plasma fibrinogen concentration of $3.8 \text{ g} \cdot \text{l}^{-1}$. This is a mistake, the European Society of Anaesthesiology² recommended to maintain fibrinogen level above $1.5 - 2.0 \text{ g} \cdot \text{l}^{-1}$. We apologise for the error.
