Ron Singer's article *Poll Pirate* appeared in the November 2018 *Word Ways*, and made extensive use of the letters A, W and K. Which set us wondering - how many words are there which use only the letters A, W and K? We have managed to find just 51 of these rare specimens, listed in the table below.

Of particular note is the penultimate entry, **Kwakwakawakw**. This is especially notable for using four occurrences of each of the three different letters, while not being composed of a group of three letters simply being repeated four times. We cannot think of another solidly-spelled word or name with this property.
