DataCite Implementations at the University of Massachusetts

Presentation for DataCite General Assembly April 1, 2019 Tess Grynoch, @Te_Gryn

Erin Jerome, Libraries, UMass Amherst Christian Haselgrove, CANDI, UMass Medical School Lisa Palmer, Lamar Soutter Library, UMass Medical School

5 campuses, 3 groups on two of the campuses currently using DataCite

- UMass Amherst Libraries
- UMass Medical School Library
- CANDI (Child and Adolescent NeuroDevelopment Initiative), based at UMass Medical School

Joined DataCite: March 2018 (migrated from EZID)

DataCite Implementation: UMass Medical School Library

eScholarship@UMMS

- Data
- Posters
- Presentations
- Theses & Dissertations
- Post-prints

Generation 1

DataCite Implementation:

CANDI

The scene

Brain imaging studies:

- Large numbers of subjects are needed, but scanning is expensive.
- Data have become first-class research objects, and large data sets are collected and shared for reuse.

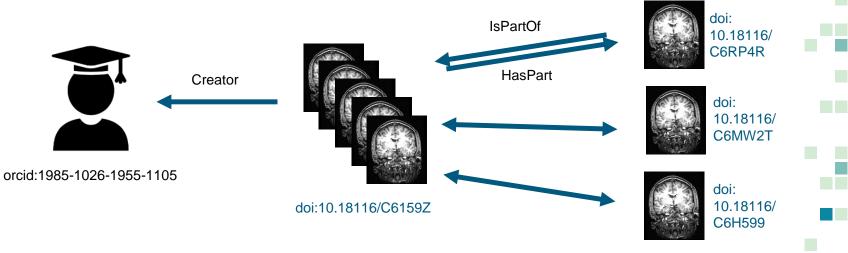

The problems

- Reproducibility
 - A study won't typically use all of the scans from a large database and won't report exactly which scans were used.
- Credit
 - If data is reused in a study, the data provider should be acknowledged for their contribution. Data providers will also want to track how their data is used.

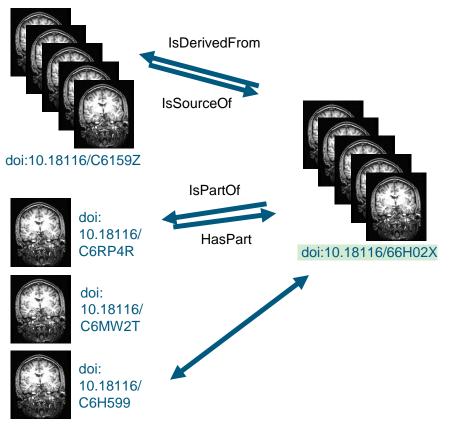

The approach

- Data providers assign DOIs to large data releases and scans within those releases
- DOI metadata links the parts

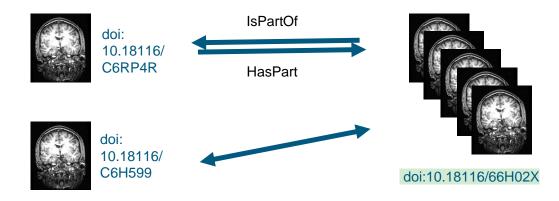

The approach (continued)

- New study takes a subset of the scans from multiple existing data releases.
- DOI is assigned to the collection of scans used in the new study.
- DOI metadata links the parts.

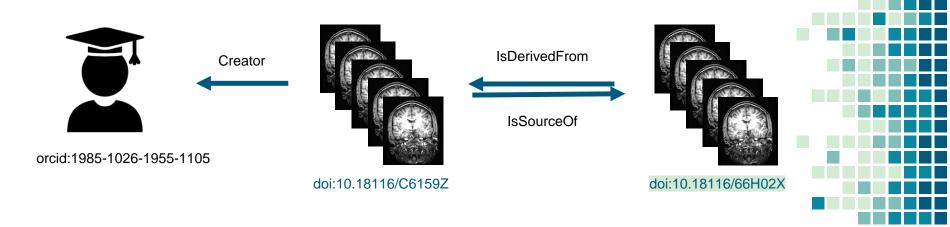

The solution

 The authors publish the DOI of the data set they used, and the individual scans can be identified.

The solution (continued)

The source of the data can be tracked right back to the data providers, acknowledging their contribution and allowing them to track the use of the data they provided.

The solution (continued)

CANDI Share Schizophrenia Bulletin 2008 data

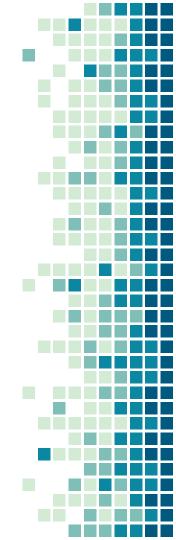

JA Frazier, SM Hodge, JL Breeze, AJ Giuliano, JE Terry, CM Moore, DN Kennedy, MP Lopez-Larson, VS Caviness, LJ Seidman, B Zablotsky & N Makris

Imaging Data published 2008 via Child and Adolescent NeuroDevelopment Initiative

Data for CANDI Share Schizophrenia Bulletin 2008 (reference below) as part of the CANDI Neuroimaging Access Point. This set includes preprocessed MRI images and segmentation results of all 4 diagnostic groups (Healthy Controls, N=29; Schizophrenia Spectrum, N=20; Bipolar Disorder with Psychosis, N=19; and Bipolar Disorder without Psychosis, N=35). Frazier JA, Hodge SM, Breeze JL, Giuliano AJ, Terry JE, Moore CM, Kennedy DN, Lopez-Larson MP, Caviness VS, Seidman LJ, Zablotsky B, Makris N. Diagnostic and sex...
