Abstract:

ARCADE (Architecture for Reusable Courseware Authoring and DELivery) is a Web-based e-learning platform specially targeted to the needs of distant education in universities and schools. This paper presents ARCADE in two aspects: as a system for distance learning and as a virtual university. The authors put accent on the way of organization of the education process as a whole while showing the power of the ARCADE platform. Moreover, there is discussed in details the administration of courses and students groups within a university curriculum.
