

**Asignatura:** Gestión de Redes y Servicios

**Titulación:** Máster en Ingeniería de Telecomunicación

**Centro:** ETSI Telecomunicación

**Título:** 5G wireless systems: Principles, IoT connectivity, and slicing of radio resources

**Conferenciante:** Petar Popovski

**Fecha:** 6 de mayo de 2019

**Lugar de impartición:** Aula 1.0.4, ETSI Telecomunicación, Universidad de Málaga

**Resumen:**

In the conference, the landscape of future wireless connectivity is first described. Later, a glimpse into the new radio and standardization is given. New modes in 5G are treated in deep, emphasizing those related to Ultra-Reliable Low Latency Communication and massive Machine Type Communication (mMTC). Finally, an overview is given on slicing and modeling of 5G systems.
