

World Conference on Educational Sciences 2019

Evaluation for QR Codes in Environmental Museums

Pablo Franco & Francisco García

Alborania Museum

Updated facilities

Broad age spectrum of participants

Economic, social, educational, and
accessibility diversity

Bilingual information

Museums & Tech

Interest → Knowledge → Interest

Adapting to connectivity

Audioguide

Websites

Virtual Visits

Podcasts & **Informational QR**

QR Codes

1994 - Denso-Wave.

QRコードは漢字/かなを効率
よく表現できます

(QR code can express kanji /
kana efficiently.)

QR Codes

~30 → 7089 digits

2D + Colors.

Restore information.

Geolocalization, links,
contacts...

Aim of study

Has the QR code system of the Alborania Museum been satisfactory?

Methodology

Contribution Analysis (Mayne, 2008)

Define **Causes** through **Effects**

Causality defined by:

- Reasoned Theory of Change

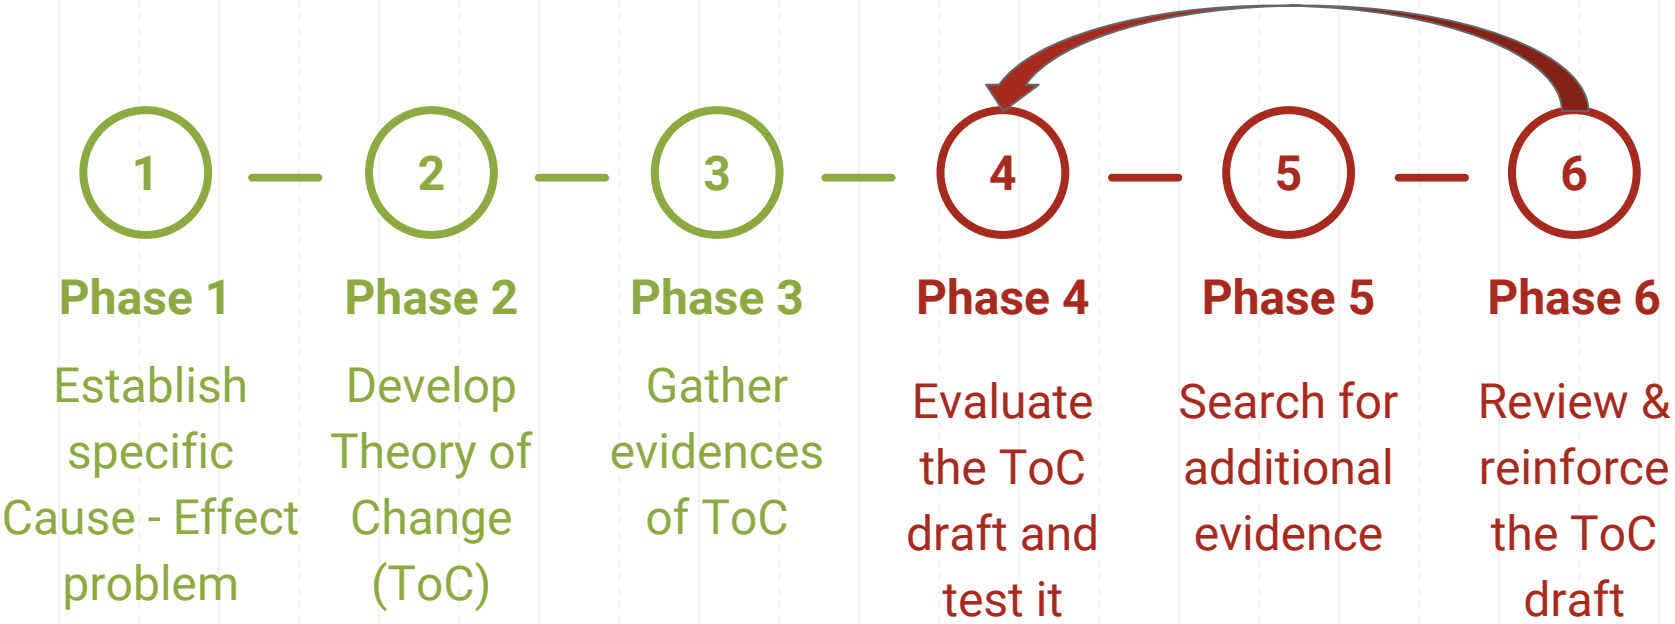

- Activities already implemented

- Theory of change verified by evidence

- Controlled external factors

Contribution Analysis

Evaluation

Cause

Effect

Evaluation

Evaluation

Results

Indicator	Before	After
Time of the visit	30-45 min	45-60 min
Question's type	<10%	~30%
Satisfaction (Questionnaires)	3.2 (sd 0.4)	4.1 (sd 0.8)
Casual questions	17%	35%
Request of Internet	65%	70%

Conclusions

The methodology is appropriate to the context.

QR usefulness to inform.

Environmental sustainability.

Thank you.
