# Differences in interviewer- respondent interactions in CAPI and CATI interviews

Yfke Ongena & Marieke Haan

# Do voice calls have a future?

- › Telephone apprehension 10-15 % of adult population
  
- › 2.5% telephonophobic
  
- › US: 90% cell phone owners
- › Average call length is dropping
  - 2008: 2.27 minutes
  - 2018: 1.81 minutes

# Mode and response effects

- › Satisficing:                    Web > CATI > CAPI
- › Social desirability:        CATI > CAPI > Web
  
- › (Holbrook et al. 2003; Heerwegh 2008)
  - Social presence
  - Rapport

# Difference in satisficing and rapport visible in interviewer-respondent interactions?

- › Paradigmatic sequence, 3-part structure:
  - Question
  - Answer
  - Acknowledgement

# Interaction in a CATI survey

I: Do you, during the week or weekend, consume alcoholic beverages?

R: Yes

I: What is the number of alcoholic drinks that you consume on average during a week?

R: Ohh uh that's a moral question haha, uh now I am allowed to lie about that or not?

I: eh well yes you can be honest about that, that is uh, not a single answer is right or wrong so

R: uhm well I think I eh drink about ten glasses of beer each day or something

I: 10 glasses of beer per day and that times seven days a week?

R: mhm

I: Ok, then I'll note that

# Deviations from paradigmatic sequences

Detection from transcripts by means of:

- › Sequence Length: #turns (events), #words uttered
- › Utterances related to rapport (Garbarski et al. 2016)
  - Apologetic utterances
  - Consideration
  - Emotion display
  - Respondent's uncertainty markers

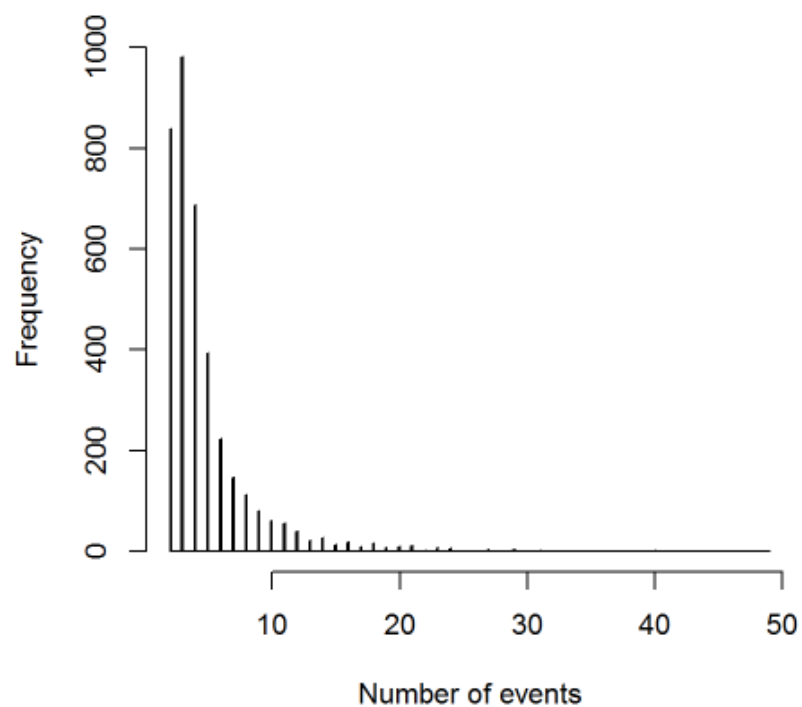

# Analysis of CAPI and CATI interviews

- › European Social Survey, mixed mode experiment, 130 questions, 30-minute interviews
- › 60 CATI + 54 CAPI-interviews = 57 hours of interaction, 8,780 QA sequences (50%), transcribed in Sequence Viewer

# Results number of events

Histogram of Number of events in CATI

Histogram of Number of events in CAPI

|      | Mean | sd  | Median | Mode | Min | Max |
|------|------|-----|--------|------|-----|-----|
| CATI | 4.8  | 3.9 | 4      | 3    | 2   | 49  |
| CAPI | 5.5  | 5.6 | 4      | 2    | 2   | 88  |

# Results number of events

| Question                        | General topic | Sequence size effect |
|---------------------------------|---------------|----------------------|
| Immigration                     | Politics      | CATI < CAPI          |
| Ban parties                     | Politics      | CATI > CAPI          |
| Trust in politics               | Politics      | CATI > CAPI          |
| Left/Right                      | Politics      | CATI < CAPI          |
| Satisfied with life             | Social        | CATI < CAPI          |
| Meet family/friends             | Social        | CATI > CAPI          |
| Angry when wishes not fulfilled | Marlow-Crowne | CATI > CAPI          |

Example of question with difference in  
number of events: CAPI > CATI

**To what extent do you think the Netherlands should allow people of the same race or ethnic group as most Dutch people to come and live here ? (B35)**

- Allow many to come and live here
- Allow some
- Allow a few
- Allow none

Average number of events CATI: 4,6 / CAPI: 6,8  
W=2180,  $p < 0.01$

R: Yes I am considering some or a few, I mean I think someone that in other countries are very uh dangerous

I: Yes

R: Those should always be allowed, so uh...

I: What would you pick as answer?

R: Uh just a pick a uh a few

Example of question with difference in  
number of events:  $CAP1 < CAT1$

## **Political parties that wish to overthrow democracy should be banned (B32)**

- Helemaal mee eens (Strongly agree)
- Eens (Agree)
- Niet eens, niet oneens (Neither agree nor disagree)
- Oneens (Disagree)
- Helemaal oneens (Strongly disagree)

Average number of events CAPI: 3.0 / CATI: 6.0

W=2355,  $p < 0.01$

R: Uh I don't agree

I: Disagree then?

R: Yes

I: Or neither agree nor disagree?

R: uh

I: In the middle?

R: I don't agree

I: You don't agree, so really disagree or strongly disagree?

R: Disagree

I: Disagree

# Number of events vs. words

| Question                        | General topic | Sequence size effect  | Nr of words effect    |
|---------------------------------|---------------|-----------------------|-----------------------|
| Immigration                     | Politics      | CATI < CAPI           | CATI = CAPI           |
| Ban parties                     | Politics      | <b>CATI &gt; CAPI</b> | <b>CATI &gt; CAPI</b> |
| Trust in politics               | Politics      | <b>CATI &gt; CAPI</b> | <b>CATI &gt; CAPI</b> |
| Left/Right                      | Politics      | CATI < CAPI           | CATI = CAPI           |
| Satisfied with life             | Social        | CATI < CAPI           | CATI = CAPI           |
| Meet family/friends             | Social        | <b>CATI &gt; CAPI</b> | <b>CATI &gt; CAPI</b> |
| Angry when wishes not fulfilled | Marlow-Crowne | <b>CATI &gt; CAPI</b> | <b>CATI &gt; CAPI</b> |

# Results

## Rapport-related Interviewer utterances

|                          | CATI<br>(N = 4620) | CAPI<br>(N = 4160) | Chi-square<br>(df = 1, N =<br>8780) |
|--------------------------|--------------------|--------------------|-------------------------------------|
| Apologetic<br>utterances | 16 (0.3%)          | 17 (0.4%)          | 0.223                               |
| Thanking                 | 121 (2.6%)         | 103 (2.5%)         | 0.180                               |
| Laughter                 | 107 (2.3%)         | 44 (1.1%)          | 20.51***                            |

# Results

## Rapport-related Respondent utterances

|                          | CATI<br>(N = 4620) | CAPI<br>(N = 4160) | Chi-square<br>(df = 1, N =<br>8780) |
|--------------------------|--------------------|--------------------|-------------------------------------|
| Apologetic<br>utterances | 25 (0.5%)          | 18 (0.4%)          | 0.528                               |
| Uncertainty              | 373 (8.1%)         | 327 (7.8%)         | 0.135                               |
| Laughter                 | 146 (3.2%)         | 133 (3.2%)         | 0.009                               |

# Example of respondent laughter

I: uh I am always honest about my own mistakes

R: Disagree

I: Excuse me?

R: Disagree uhaha

I: Disagree okay

R: haha

# Example of respondent laughter 2

I: We appreciate it you made time available for us in this survey.

I: As a thank you, we offer you a gift certificate, but perhaps you prefer to give the money to a good cause

I: What is your preference?

R: I give— my preference is the gift certificate haha

I: To the gift certificate

R: haha

I: Okay, let's do that

# Example of interviewer laughter

I: Political parties that throw over democracy should be banned

R: No, they should shoot them

I: haha... hahaha

I: Even more extreme

I: What suits best for you, totally agree, agree,

R: Well yes they shoot them all down

I: mhm, I, I,

R: Then you got rid of them

I: haha

I: And in terms of totally agree, agree, neutral

R: Yes I mean I totally agree eh that political parties should be banned

I: Then we note this.

# Conclusion

- › Interaction analysis useful for questionnaire design
- › Three-part structure (Q-A-A) more common in CATI than in CAPI
- › In CATI more words uttered than in CAPI
- › Questions in CATI often not adjusted to cognitive abilities of respondents (see Jablonski 2017)
- › Variance at respondent level not very large, type of question does matter

# Conclusion (cd.)

- › Interviewer laughs more often in CATI than in CAPI, may add to impression that interviewer is judging answers
- › Laughter is audio**visual** behavior (ignored in this study)
- › E-mail and text messaging decrease level of confidence of using voice-only
