**INTRODUCTION**

Soybean cultivar performance tests are conducted each year in Arkansas by the University of Arkansas Division of Agriculture. The tests provide information to companies developing cultivars and/or marketing seed within the State, and aid the Arkansas Cooperative Extension Service in formulating cultivar recommendations for soybean producers.

The 2004 soybean cultivar performance tests were conducted at the Northeast Research and Extension Center (NEREC) at Keiser, the Cotton Branch Station (CBS) near Marianna, the Rice Research and Extension Center (RREC) near Stuttgart, the Southeast Research and Extension Center - Rohwer Division (SEREC-RD) near Rohwer and the Vegetable Substation (VSS) near Kibler. A test location map can be found inside the back cover.

**METHODS**

Soybean cultivars were entered by commercial seed companies and state and federal institutions. Recommended cultural practices were used at each location and all data were taken from a uniform set of instructions.

Cultivars were grouped by maturity groups based on information provided by the originating company or institution. To facilitate field operations, and to allow for fairer comparisons between cultivars, entries in the Group IV and V Commercial Cultivar Tests (CCT) were separated into "early" cultivars and "late" cultivars. Cultivars in the "early" Group IV test had a relative maturity range of 4.0 to 4.7 and in the Group V test, a range of 5.0 to 5.5. Cultivars in the "late" Group IV test had a relative maturity range of 4.8 or 4.9 and in the "late" Group V test, a range of 5.5 to 5.9.

Early planted tests (EPT) were established at NEREC, SEBS, and VSS. As with the CCT IVs and Vs, entries in the EPT were subdivided into "early" and "late" cultivars.

Within each test, entries were arranged as a randomized complete block design with three replications. Plots in all tests were 4 or 5 rows wide depending on between-row spacing and 20 feet in length. Seed were packaged for recommended planting rates and were planted with a cone planter. Specific location and cultural practice information accompany each table.

Interior rows of each plot were harvested for yield determination. The cultural practice notes that accompany each table have information on end trimming at each location. Percent moisture was recorded for all harvested seed of early-planted tests and plot weights were adjusted to thirteen percent moisture. Harvested seed of all other tests were not adjusted to uniform moisture. Plot weights of all

tests were converted to yield in bushels per acre (bu/A).

Plots were visually rated for shattering and lodging. Shattering ratings were carried out on border rows according to the following scale:

1. No shattering
2. 1-3% shattered
3. 4-8% shattered
4. 9-19% shattered
5. 20% or more shattered

Lodging ratings were recorded on a scale from 1 to 5 based on the following criteria:

1. Almost all plants erect
2. Either all plants leaning slightly, or a few plants down
3. Either all plants leaning moderately, or 25-50% of the plants down
4. Either all plants leaning considerably, or 50-80% of the plants down
5. All plants down badly

Average plant height was recorded in inches for each plot.

Tests were established at the Main Experiment Station at Fayetteville on a Taloka silt loam soil to evaluate cultivar sensitivity to the herbicide propanil. Propanil was applied over-the-top of one-half of each plot at 0.75 lb active ingredient/A (0.25X recommended rate) when plants were in the V4 to V5 growth stage to simulate drift from rice fields. Plots were visually rated 7 and 21 days after propanil application by Marilyn McClelland.

<sup>2</sup> The early maturing group 4 cultivars (RM 4.7 or less) at this location were planted on May 12. Because of wet weather, all remaining group 4 cultivars and all group 5 cultivars were planted on May 21.

<sup>3</sup> Shattering and especially lodging reduced yields at this location.

<sup>4</sup> The "Late" MG 5 Nonirrigated test will not be reported due to poor uniformity.

<sup>5</sup> The Maturity Group V tests at this location were first planted on May 24, but an error during planting caused the tests to be unusable. These results are from replanting on June 10.

<sup>6</sup> Delsoy 5500 was planted but did not emerge. This test is not included in the multi-location average for this variety.

<sup>2</sup> The early maturing group 4 cultivars (RM 4.7 or less) at this location were planted on May 12. Because of wet weather, all remaining group 4 cultivars and all group 5 cultivars were planted on May 21.

<sup>2</sup> Average yield for 2003 and 2004.

<sup>3</sup> Average yield for 2002, 2003 and 2004.

Soil Series..... Sharkey clay  
 Previous Crop..... Grain sorghum  
 Row Width..... 38"  
 Fertilizer Applied..... None  
 Lime Applied..... None  
 Planting Dates..... MG4 Early: 5-12-04, MG4 Late and MG5 early and late 5-21-04  
 Herbicide Application..... 1.25pts/A Flexstar, 10oz/A Select, 6-8-04; 1.25pts/A Flexstar, 10oz./A Select, 6-28-04  
 Irrigation Dates..... 8-2-04; 8-12-04  
 End Trimming..... None  
 Harvest Dates..... MG4 Early: 9-24-04  
                   MG4 Late: 9-29-04  
                   MG5 Early: 10-5-04  
                   MG5 Late: 10-8-04

<sup>1</sup> Propanil was applied at 0.25X rate when plants were in the V4 to V5 growth stage to simulate drift from rice fields.

<sup>2</sup> 7DAA and 21DAA represent ratings seven and twenty-one days after propanil application, respectively. Ratings by Ms. Marilyn McClelland.
