Abstract

The South Dakota Agricultural Experiment Station's mission is one of the cornerstones of a land grant university. In addition to enhancing the quality of life in our state, our research directly supports the teaching programs offered by the College of Agriculture and Biological Sciences, the College of Education and Human Sciences, and the educational program delivered by SDSU Extension. The collection is composed of material generated by the stations and includes financial reports, general office records, research, institutional reviews, and publications, including some bulletins and circulars. Also included are files related to station biochemistry.

Historical Note

The Hatch Act of 1887 established the Agricultural Experiment Station. This act required all of the colleges established under the Morrill Act of 1862 to establish a department to be known as an "Agricultural Experiment Station." This station was to acquire and diffuse practical and useful information on topics related to agriculture for the people of the United States. Promotion of scientific investigation and experimentation was also a requirement of the act. An annual report was to be provided from all stations and periodic bulletins or reports of progress were to be distributed. Federal funds were provided for this venture, and in 1887, Dakota Agricultural College, as South Dakota State University was then known, established its Agricultural Experiment Station along these guidelines.

Today, much of the Agricultural Experiment Station research is done at Brookings, however, a considerable amount is conducted at six field stations and at the West River Agricultural Research and Extension Center at Rapid City. Field stations are maintained to conduct research designed to solve local or special purpose problems. Beyond this, research on farms and ranches, in wildlife areas, in streams and reservoirs, and with cooperating business and

institutions results in research being conducted in nearly every county of the state.

The research function of the College of Agriculture and Biological Sciences results from carefully designed experiments providing a base of new knowledge and service to the citizens of South Dakota. This new knowledge is effectively used by farmers, ranchers, homemakers, industry, in the campus classroom, and in extension education programs throughout the state.

Research may be grouped in the following subject matter areas: livestock, crops and soils, community and public affairs, animal health, fertilizers, garden and orchard, home and consumer, water resources and irrigation, forestry, insects, farm machinery, marketing, business management, farm buildings, pollution, range and grass, fisheries, plant diseases, wildlife, sociology, and biostress in plants, animals and humans. Research is financed by state and federal appropriations, industry grants, and federal and state grants. Research results are published in Experiment Station or Extension bulletins, journals of scientific societies, and a quarterly publication, Farm and Home Research.

Arrangement

This collection is arranged into six series:

Series 1. General Office records

Series 2. Cooperative State Research, Education, and Extension Service / Institutional Program Review

Series 3. Research

Series 4. Publications

Series 5. Seed Releases

Series 6. Terminated Projects

Series 7. Station Biochemistry Records

Folders are arranged alphabetically within each series.

Contents Note

Series 1. General Files.

This series is composed of general office records generated by the South Dakota Agricultural Experiment Station. Folders contain newsletters, committee files, task force files, correspondence, brochures, programs, and financial data. In addition, the series contains reports of the

Agricultural Experiment Station during the time period of 1907-1916. This information should also appear in the published reports of the Agricultural Experiment Station.

Series 2. CSRES Institutional Program Review.

The Cooperative State Research, Education, and Extension Service Institutional Program Review series consists of program reviews for the various university departments and units.

Series 3. Research.

This series is composed of research conducted by Experiment Station staff. Folders consist mainly of final reports, but may also include some correspondence.

Series 4. Publications.

This series contains bulletins published by the South Dakota Agricultural Experiment Station. Bulletins are generally defined as publications of research conducted by staff of the Experiment Station and are meant for distribution like a periodical. Theoretically, this is true, but some cross-over in subject and title may occur between bulletins and circulars.

This is an incomplete collection of Agricultural Experiment Station bulletins. Items are added to this collection only after it has been determined that the library's collection is complete. It is suggested that, when conducting research, the library catalog be search for a particular title, author or bulletin number. The bulletin number is included following the title.

This series also includes circulars produced by the South Dakota Agricultural Experiment Station. Circulars are generally defined as a printed advertisement, directive, or notice intended for mass distribution to staff and departments with the Experiment Station. Theoretically, this is true, but some cross-over in subject and title may occur between bulletins and circulars.

This is an incomplete collection of Agricultural Experiment Station circulars. Items are added to this collection only after it has been determined that the library's collection is complete. It is suggested that, when conducting research, the library catalog be search for a particular title, author or circular number. The circular number is included following the title.

In addition the series contains various other publications produced by the South Dakota Agricultural Experiment station other than bulletins and

circulars. Folders consist mainly of report or preliminary reports. Also included are leaflets and pamphlets and a video cassette on manure management. Leaflet or pamphlet numbers were included if present on the publication.

Series 5. Seed Releases.

The series is comprised of information regarding various seeds that have been developed through the South Dakota Agricultural Experiment station

Series 6. Terminated Projects.

This series contains documents about the South Dakota Agricultural Experiment Station research projects that have ended.

Series 7. Station Biochemistry Records

This series is composed of records related to South Dakota Agricultural Experiment Station Biochemistry. Included are administrative files, research, and publications.

Administrative Information

Conditions Governing Access

This collection is open to researchers without restrictions. The materials in the Archives do not circulate and may be used in-house only.

Researchers conducting extensive research are asked to make an advance appointment to access archival material. Please call or e-mail prior to visiting the collection and indicate as much detail as possible about a particular topic and intended use.

South Dakota State University supports access to the materials, published and unpublished, in its collections. Nonetheless, access to some items may be restricted as a result of their fragile condition or by contractual agreements with donors.

Copyright note

Copyright restrictions apply in different ways to different materials. Many of the documents and other historical materials in the Archives are in the public domain and may be reproduced and used in any way. There are other materials

in the Archive carrying a copyright interest and must be used according to the provisions of Title 17 of the U.S. Code. The Archive issues a warning concerning copyright restrictions to every researcher who requests copies of documents. Although the copyright law is under constant redefinition in the courts, it is ultimately the responsibility of the researcher to properly use copyrighted material.
