Xerxes

An Overview of the Engagement with
Stakeholders to Determine Logical
Subject Headings

Where we started

Select a Database to Search

Database Titles Subject Browse More Options

1. Choose a Category:

- Pharmacy
- Philosophy
- Physics / Astronomy
- Plant Sciences
- Political Science**
- Psychology
- Reference
- Religion
- Russia / Eastern Europe / Central Asia
- Social Work
- Sociology / Social Sciences
- South / Southeast Asia
- Theatre
- Urban Planning / Landscape Arch
- Western Europe
- Databases with E-Book/E-Text Content
- Databases with Pre-1970

2. Choose a Sub-category:

- Core(10)**
- Also Helpful(82)
- ALL(92)

3. Go

Show all databases Show only databases available to guests

18 broad subjects/173 specific subjects

To select a database, you choose a broad category (engineering, social science, etc.) then narrowed it down further by major or by resource type (civil engineering, political science, e-book, patent, etc.)

Where we are now

By Subject

Search by Subject: Search databases specific to your area of study.

Environment / Natural Resources	Mathematics / Statistics	Urban Planning / Landscape Arch
Ethnic Studies	Mechanical / Nuclear Engineering	Western Europe

63 subjects that strike a balance between the 18 broad subjects and 173 specific subjects

How we got there

- Draft organization
- Subject specialists
- Coordinating committees
- User testing
- Compromise, compromise, compromise

Draft organization

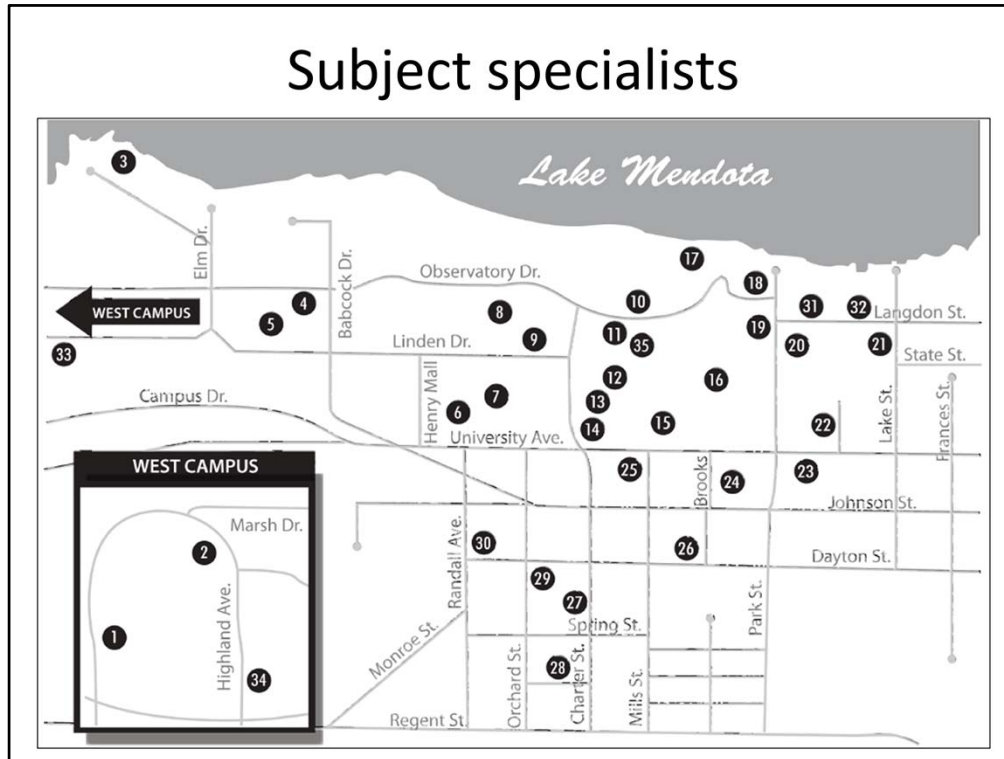

The first draft of the subject organization was put together by the Xerxes Implementation Team. Team members included:

Todd Bruns, chair (now at Eastern Illinois University), Allan Barclay, Sue Dentinger, Mitch Lunquist (WSMT Liaison), Annie Rauh, Curran Riley

Drafts of the overall subject page were put into place on the test server and drafts each individual subject page were created in word documents for easy updating before we made changes online.

Subject specialists

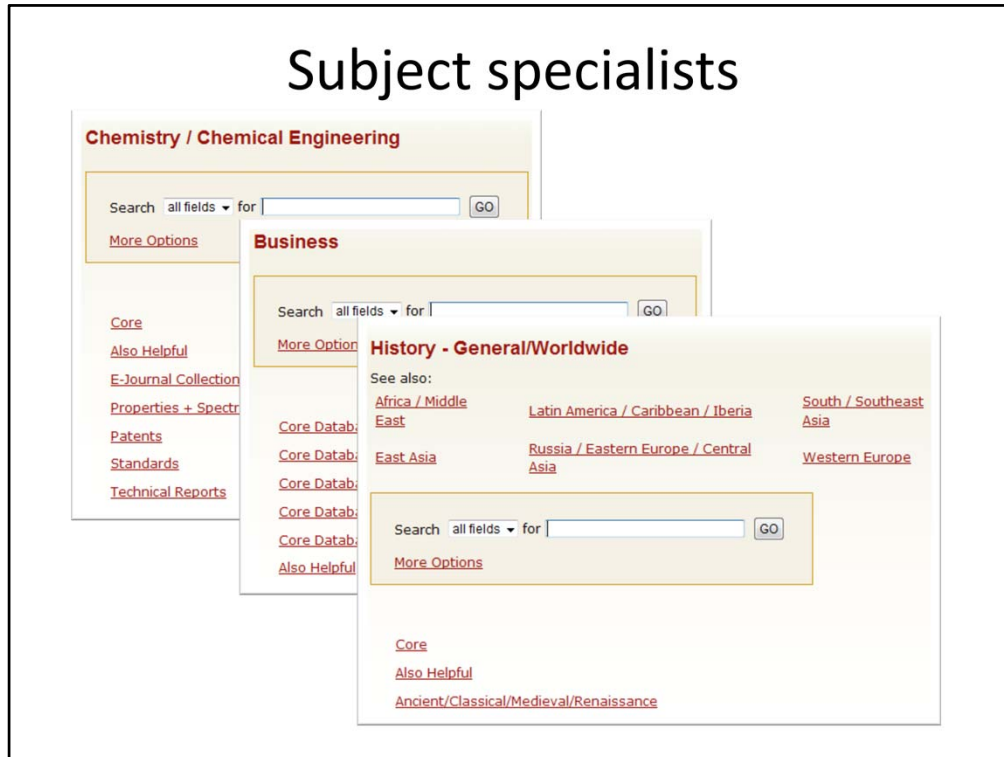

Todd and Annie visited subjects specialists at almost all of our campus libraries to get input on the drafts. At larger libraries we met with liaisons and / or bibliographers. Librarians from across campus used their knowledge of their subjects and patrons we serve to edit our draft. Some examples included:

- Labeling Consumer Science and Human Development and Family Studies as Family Studies
- On our campus, architecture is more related to Art and Art History as we don't have an architecture program, so people who study it are interested in it as an art while landscape architecture is more related to urban planning
- We have a HUGE number of history resources and nothing in World History is core to US history and vice versa
- Not all engineering could be covered in one subject area but the nine engineering departments could be broken down into four or five areas based on resources some of them could be merged with areas outside of engineering (Chemistry / Chemical Engineering)

In order to keep this page at a manageable size, we tried to keep everyone focused on the resources rather than the department they represent and we tried to keep names general so patrons did not expect to see the name of the department they are in.

Subject specialists

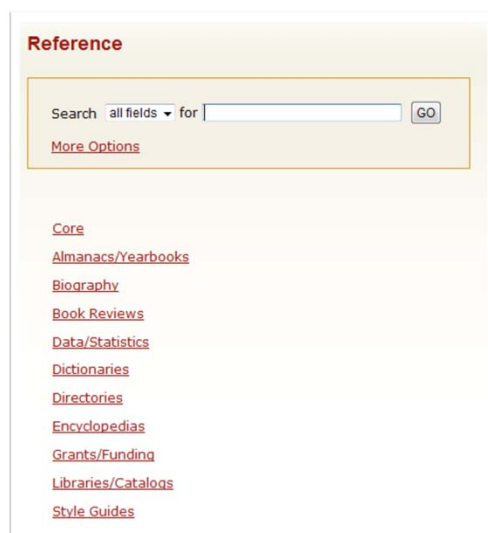

Once the top level of a subject was decided, subjects specialists were left with a word document mock up of a subject page. They were asked to break down their resources by Core resources (which would be the default for the metasearch) and other subcategories that were useful to their subject page. In some cases, there were a number of subject specialist for each page and in that case they were expected to collaborate on this break down.

These are a few examples of sub-categories in different subject areas:

- Chemistry / Chemical Engineering includes Properties + Spectra
- Business includes sections for company financials and market research
- World History includes links to the area specific subject pages

Reference coordinating committee

The screenshot shows a web interface for a library's reference services. At the top, the word "Reference" is displayed in a red font. Below this is a search box with the text "Search all fields ▾ for" followed by an empty input field and a "GO" button. Underneath the search box is a link labeled "More Options". A list of subject categories follows, each with a red underline: "Core", "Almanacs/Yearbooks", "Biography", "Book Reviews", "Data/Statistics", "Dictionaries", "Directories", "Encyclopedias", "Grants/Funding", "Libraries/Catalogs", and "Style Guides".

One of the coordinating committees that we met with was the Reference Management Team who coordinates reference service and policy across campus. They were particularly interested in how reference material would be organized and how generalists would be able to use the subject pages for general reference questions.

Instruction coordinating committee

The screenshot displays a library search interface. At the top, there are navigation tabs: "Articles" (highlighted), "Books", "Journals", "Databases", and "Site Search". A "BETA" badge is visible above the "Books" tab. Below the tabs, there is a search area with the text "Search 3 general databases". A dropdown menu is set to "all fields". Below this, there are labels for "Database" and "Introductory Datab".

Overlaid on the right is a "Multidisciplinary / Dissertations" search window. It contains a search input field with the text "global warming" and a "GO" button. Below the input field is a link for "More Options".

Below the search window is a "Search Status" section. It features a progress bar with 10 yellow segments. Below the progress bar is a table showing the status of searches across different databases.

Database	Status	Hits
Academic Search	DONE	23,804
ProQuest Research Library	FETCHING	39,338
Web of Knowledge (Web of Science)	DONE	15,290

Another coordinating committee that we met with was the LILI Coords who coordinate instruction across campus. They were particularly interested in the “articles” tab on our home page – a feature for quick searching – would work with the implementation of Xerxes.

They helped us select databases for the core Multidisciplinary search which would also be the search from our home page.

Once implemented, LILI Coords worked to integrate Xerxes in teaching though out the libraries.

User testing

1. Recent research
2. Commenting on interface design
3. Specific tasks

Once we had made revisions based on the subject specialist and coordinating committee input, we began around of user testing. The tests were administer to approximately 15 participants from across campus. The participants represented faculty, staff, graduate students and undergrads.

The user testing had three parts

1. The users were ask to perform a research task they had recently done using our old interface
2. They were then asked to comment on differences between the old interface and new interface and what they liked and did not like better
3. Lastly, they were asked to do a number of specific tasks such as locate resources about green building, find the database Academic Search and locate a dissertation in their research area.

User testing comments

"This is really cool. It's much more appealing and easy to use than [the E-Resource Gateway]."

-Mechanical Engineering Undergraduate

"I like that I can check/uncheck databases to search. The subject list is much better than the ERG...the status bar when searching is great. The peer review icon and the citing information are great."

-Library Science Grad Student

"Chemistry and Chemical Engineering make sense together."

-Chemistry post-doc

These were a few of the comments that we received. Comments had to do with all aspects of the project – how each piece worked, the subject assignments, which databases were found where, the color chosen, etc.

After taking the test results into account we made a few additional changes and recommendations for future updates.

The most significant change we made at this point was to correct the partial word search. Because Xerxes would search for partial words, when you did a search for art, to find databases about art, you received results from every database with the word "article" in its description...

Today

By Subject
Search by Subject: Search databases specific to your area of study.

[Temporarily Saved Records](#)

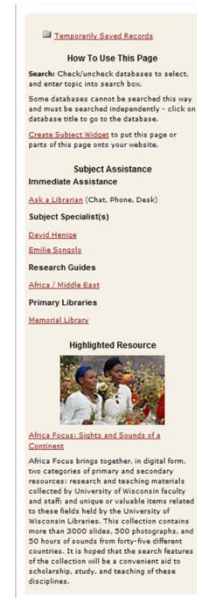

Africa / Middle East	Family Studies	Medicine / Public Health
Agriculture	Film / Television	Microbiology

East Asia	Linguistics / Language	Sociology / Social Sciences
Economics	Literature	South / Southeast Asia
Education	Materials Science / Biomedical Engineering	Theatre
Environment / Natural Resources	Mathematics / Statistics	Urban Planning / Landscape Arch
Ethnic Studies	Mechanical / Nuclear Engineering	Western Europe

And with that, this is where we are today. The process took approximately four months (not including initial installation, decision to buy server, etc).

To get here we relied on lots and lots of expertise around campus – subject specialists, librarians who work closely and teach to undergrads, reference generalists, technical expertise.

Priorities going forward

- Distinguish format versus subjects
- “Value added” box
- Language

Highlighted Resource

[Africa Focus: Sights and Sounds of a Continent](#)

Africa Focus brings together, in digital form, two categories of primary and secondary resources: research and teaching materials collected by University of Wisconsin faculty and staff; and unique or valuable items related to these fields held by the University of Wisconsin Libraries. This collection contains more than 3000 slides, 300 photographs, and 50 hours of sounds from forty-five different countries. It is hoped that the search features of the collection will be a convenient aid to scholarship, study, and teaching of these disciplines.

We recently completed another round of assessment as we have been using Xerxes for a year. This test was only administered to undergraduates and graduate students who work in the library so it will need to be expanded but some priorities we've set are:

- Find a way to distinguish format versus subjects – news papers, dissertations don't fit with what patrons expect to find on a subject page
- Patrons are not reading the right hand box on each subject page – find ways to make it more appealing
- Clarify language used within the interface – multidisciplinary, subject specialist were not terms familiar to the undergrads that took part in the user testing
