Physical activity and depression: a multiple mediation analysis

Pickett, Karen, Yardley, Lucy and Kendrick, Tony (2012) Physical activity and depression: a multiple mediation analysis. Mental Health and Physical Activity, 5, (2), 125-134. (doi:10.1016/j.mhpa.2012.10.001).

Description/Abstract

Objectives: Physical activity is associated with reduced symptoms among people with depression, but the factors that may mediate this relationship are poorly understood. We conducted multiple mediation analyses to assess whether positive affect (PA), negative affect (NA), physical activity self-efficacy, coping self-efficacy and exercise-induced feelings cross-sectionally mediated the association and the relative importance of each of these. We also examined whether leisure-time, non-leisure time or total physical activity were more storagly associated with depression.

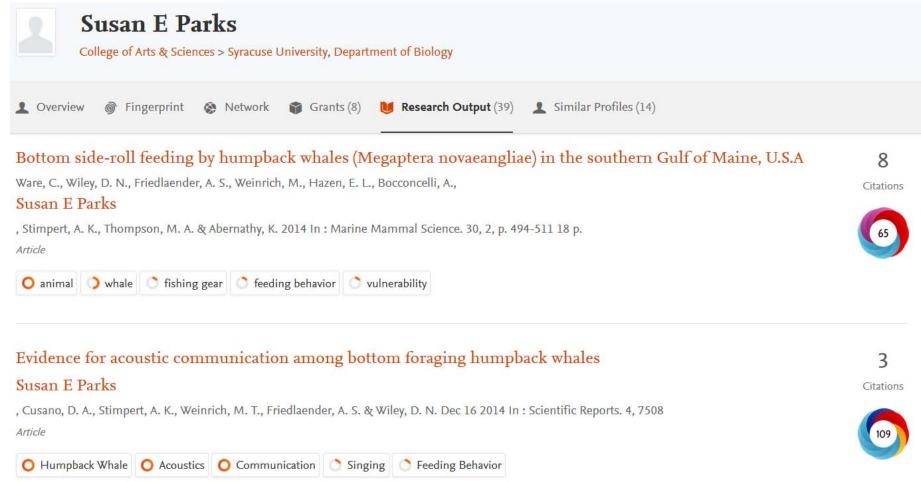

Method: Participants (N = 164) experiencing degression or low mood completed a one-off postal questionnaire containing measures of physical activity, depression, the potential mediators and covariate variables. Data were analysed using correlations and multiple mediation analyses, controlling for the covariates.

Results: Higher levels of leisure-time and total, but not non-leisure time, physical activity were significantly associated with lower depression. Improvement in PA, pleasant feeling states, NA and levels of physical exhaustion significantly mediated the association between leisure-time and total, but not non-leisure time, physical activity and depression. Post-hoc analyses showed that improvements in physical activity self-efficacy or mediated the leisure-time physical activity and depression relationship through improved PA. Coping self-efficacy was not a statistically significant mediator. Conclusions: Leisure-time physical activity, as it increases PA and pleasant feelings and reduces NA and physical exhaustion. PA responses may be partly dependent on improvement in physical activity eff-efficacy, People's psychosocial experiences of physical activity may be more important predictors of their depression responses than total energy expenditure.

Introduction

Discovering and documenting one's research impact is an important part of the scholarly process. This guide is designed to help you understand the methods and tools available for documenting impact.

Enter Search Words

Search

- . Journal Metrics shows tools for determining highly-cited journals
- Citation Metrics Includes instructions for performing cited reference searches in three major resources Scoups,
 Web of Science, and Google Scholar illustrating the number of times an author or published work has been cited.
- Altmetrics is a new means of measuring a scholar's impact based on their presence in the social web using online tools and environments.

Getting Started

To be sure that your scholarly impact is accurately represented, we recommend that you do three things:

Register for ORCID

ORCID (Open Researcher and Contributor Identification) is an initiative to provide researchers and scholars with a persistent, unique identifier. This will enable individuals to get recognized for all their scholarly output, in both established and emerging media. With broad-based support from publishers, academic institutions, and funders, ORCID registration and services are free to individuals. Sign up at http://about.orcid.org/.

Lunch & Learn: Demonstrating Your Scholarly Impact

Friday, February 26, 2016

Quantifying scholarly output via citation metrics is the long-standing practice to gauge academic success. While there are many limitations to this practice, the tools and methods used are important for scholars to understand. This workshop, led by Anne Rauh, Science & Engineering Librarian and Interim Collection Development and Analysis Librarian for Syracuse Libraries, taught participants to demonstrate the impact of their work through metrics such as impact factor, h-index, and citation counts. It discussed access to the tools that provide these metrics and best practices for demonstrating one's

scholarly impact.

Benefits to librarians

Skills

"Chris Bourg, director of MIT Libraries, Cambridge, MA, says some librarians may need to help scholars put together the data needed for tenure and promotion reviews."

> Schwartz, Meredith. "<u>Top Skills for Tomorrow's Librarians:</u> <u>Careers 2016</u>." *Library Journal*.
