CONTENTS

Chapter I

INTRODUCTION

§ 1. Sets and set operations. (1.1. The notion of set. Implication. 1.2. Subsets. 1.3 The symbol E . 1.4. Union and intersection of sets. 1.5. Difference of sets. Exercises 1.1–1.19.)	13
§ 2. Mappings. (2.1. Cartesian product. 2.2. Mappings. 2.3. Functions. 2.4. Partial mappings. 2.5. The symbols $f(M)$ and $f_{-1}(N)$. 2.6. One-to-one mappings. Exercises 2.1–2.25.)	17
§ 3. Countable sets. (3.1. Sequences. 3.2. Countability. 3.3. Subsets of countable sets. 3.4. Mappings of countable sets. 3.5. Cartesian product of countable sets. 3.6. Unions of countable sets. 3.7. Existence of uncountable sets. Exercises 3.1–3.14.)	20
§ 4. Ordered sets. (4.1. Ordering. 4.2. Similarity of orderings. 4.3. Well ordering. 4.4. Orderings similar to the natural ordering of sets of integers. 4.5. Dense orderings. 4.6. Orderings similar to the natural ordering of sets of rationals. 4.7. Similarity of densely ordered countable sets. 4.8. Cuts. 4.9. Abstract basis of the Dedekind theory of irrational numbers. 4.10. Supremum and infimum. Exercises 4.1–4.11.)	23
§ 5. Cyclically ordered sets. (5.1. Cyclical ordering. 5.2. Cyclically ordered set formed from an ordered set by adding an element. 5.3. Cyclically ordered sets formed by joining two ordered sets. 5.4. Inverse cyclical orderings. 5.5. Cyclical orderings determined by intervals. Exercises 5.1–5.5.)	34

Chapter II

GENERAL METRIC SPACES

§ 6. Distance. (6.1. Spaces E_m and H . 6.2. Cartesian product of metric spaces. 6.3. Point sets embedded into a metric space. 6.4. Metric properties. 6.5. Upper and lower distances. Exercises 6.1–6.13.)	42
§ 7. Convergence. (7.1. Definition of the limit. 7.2. Equivalent distance functions. 7.3. The space U . Exercises 7.1–7.4.)	46
§ 8. Closure of a point set. Open and closed sets. (8.1. Definition and fundamental properties of closure. 8.2. Further properties of closure. 8.3. Closed sets. 8.4. Another definition of closure. 8.5. Open sets. 8.6. Neighborhoods. 8.7. Relative closure. Relatively open and relatively closed sets. 8.8. Upper and lower limits of sequences of point sets. Exercises 8.1–8.21.)	50
§ 9. Continuous mapping. Homeomorphism. (9.1. Definition of continuity. 9.2. Behaviour of closed and open sets under a continuous mapping. 9.3. Topological properties.	

9.4. Distance function in \mathbf{R} . 9.5. A criterion of continuity. 9.6. Uniform continuity. Exercises 9.1–9.21.)	55
§ 10. Separated point sets; the boundaries of point sets. (10.1. Normality of metric spaces. 10.2. Separated sets. 10.3. Boundary. 10.4. Menger's addition theorem. 10.5. Relative boundary. Exercises 10.1–10.19.)	62
§ 11. Dense-in-itself and dispersed spaces. (11.1. Dense-in-itself spaces. 11.2. Dispersed spaces. Exercises 11.1–11.19.)	68
§ 12. Dense and nowhere dense sets. Sets of the first category. (12.1. Dense sets. 12.2. Nowhere dense sets. 12.3. Sets of the first category. 12.4. Relativization. Exercises 12.1–12.19.)	70
§ 13. \mathbf{G}_δ -sets and \mathbf{F}_σ -sets. (13.1. \mathbf{G}_δ -sets. 13.2. Closed sets are \mathbf{G}_δ . 13.3. \mathbf{F}_σ -sets. 13.4. Behaviour of \mathbf{G}_δ -sets and \mathbf{F}_σ -sets under a continuous mapping. 13.5. A theorem on separating of \mathbf{G}_δ -sets. 13.6. Relativization. Exercises 13.1–13.15.)	73
§ 14. Functions of the first class. (14.1. Definition and elementary properties. 14.2. Uniform limit of functions of the first class. 14.3. A criterion for functions of the first class. 14.4. Algebraic operations with functions of the first class. 14.5. Baire's theorem on functions of the first class. 14.6. Functions with a countable set of points of discontinuity. 14.7. Semicontinuous functions. 14.8. Extension of a continuous function. Exercises 14.1–14.15.)	78

Chapter III

SPECIAL METRIC SPACES

§ 15. Complete spaces. (15.1. Definition and examples of complete spaces. 15.2. Complete subspaces of metric spaces. 15.3. Completion. 15.4. Properties of the completion. 15.5. Absolutely closed and absolute \mathbf{G}_δ -spaces. 15.6. Extension of a homeomorphism. Existence of a complete metrisation of an absolute \mathbf{G}_δ -space. 15.7. Theorems concerning non-void intersections in complete spaces. 15.8. Baire's theorem on complete spaces. Exercises 15.1–15.1.6.)	92
§ 16. Separable spaces. (16.1. Definitions, examples and criteria. 16.2. Systems of open sets in a separable space. 16.3. Countability of the set of points with countable neighborhoods. 16.4. Brouwer reduction theorem. 16.5. Embedding of a separable space into the Urysohn space. 16.6. Functions of the first class on a separable (in particular, complete separable) space. Countable complete spaces. 16.7. Sequences of sets in separable spaces. Exercises 16.1–16.8.)	105
§ 17. Compact spaces. (17.1. Definition, examples and criteria for totally bounded spaces. 17.2. Definition, examples and criteria for compact spaces. 17.3. Distances of subsets in a compact space. 17.4. Continuous mappings of compact spaces. 17.5. A theorem on non-void intersections in compact spaces. Systems of open subsets of a compact space. 17.6. The Hausdorff hyperspace. 17.7. The space of continuous mappings of a compact space into a metric space. 17.8. Compact subsets of \mathbf{E}_1 . The Cantor discontinuum. 17.9. Locally compact spaces. 17.10. Spherical spaces. Exercises 17.1–17.25.)	114

Chapter IV

CONNECTEDNESS

- § 18. General theorems concerning connectedness.** (18.1. Definition and fundamental theorems. 18.2. Components. 18.3. Connectedness between given points. Quasicomponents. 18.4. Set chains. 18.5. Separating of points by a set. Irreducible cuts. Exercises 18.1 to 18.23.) 137
- § 19. Connectedness of compact spaces.** (19.1. Continuum. 19.2. E_n and S_n are connected. 19.3. Theorems concerning boundaries of open sets in a continuum. 19.4. Irreducible continua. 19.5. Semicontinua. Constituants. Exercises 19.1–19.34.) 145
- § 20. Simple arc.** (20.1. Definition and elementary properties. 20.2. Orientation of a simple arc. 20.3. Topological characterization of simple arcs. 20.4. Another characterization of simple arcs. Exercises 20.1–20.13.) 156
- § 21. Simple loop.** (21.1. Definition and relations to the simple arc. 21.2. Orientation of a simple loop. 21.3. A theorem on points of a simple loop separating a continuum. 21.4. Topological characterization of simple loops. Exercises 21.1–21.6.) 165

Chapter V

LOCAL CONNECTEDNESS

- § 22. General theorems concerning local connectedness.** (22.1. Definition and consequences. 22.2. Connected accessibility of a point. 22.3. Locally connected complete connected spaces. Exercises 22.1–22.28.) 172
- § 23. Locally connected continua.** (23.1. Some criteria of local connectedness and their consequences. 23.2. Any locally connected continuum is a continuous image of a segment. Consequences. Exercises 23.1–23.10.) 183

Chapter VI

MAPPINGS OF A SPACE ONTO THE CIRCLE

- § 24. Inessential mappings onto the circle.** (24.1. The circle of complex units in the Gauss plane. 24.2. Essential and inessential mappings. Some theorems concerning them. 24.3. Degree of a mapping. 24.4. Monodromy theorem. 24.5. Inessentiality of a mapping of a product. Relations to homotopy. Exercises 24.1–24.8.) 191
- § 25. Unicoherence.** (25.1. Definition and fundamental theorems. 25.2. Characterization of the unicoherence by means of mappings into S_1 . Exercises 25.1–25.5.) 211

Chapter VII

TOPOLOGY OF THE PLANE

§ 26. Cutting of the plane by a given set. (26.1. Stereographical projection. 26.2. The mapping $\pi(M; a)$. 26.3. Subsets of the sphere. Number of components of a complement. 26.4. Cutting of the sphere. Theorem on the invariance of interior points in \mathbf{S}_2 . 26.5. Jordan theorem. 26.6. Further theorems on cutting of \mathbf{E}_2 and \mathbf{S}_2 . 26.7. Components of the complement of a closed subset of \mathbf{S}_2 . 26.8. Further theorems concerning $\pi(M; a)$. Positive and negative orientations of a simple loop. Exercises 26.1–26.28.) 218

§ 27. Topological characterization of the sphere. (27.1. Spherical space. \mathbf{S}_2 is a spherical space. 27.2. Unicoherence of a spherical space. Simple arcs and loops in a spherical space. 27.3. Maps. Spherical spaces are mutually homeomorphic. 27.4. Topological characterization of an open connected subset of \mathbf{S}_2 by number of components of the complement. Exercises 27.1–27.6.) 242
