

Figure S1. Alphaproteobacterial HpnP and species tree reconciliation. The 16S rRNA species tree (black) is overlaid with the HpnP tree (blue). The reconciliation was completed in Jane using 1, 2, and 3 as the event costs for loss, duplication, and horizontal transfer respectively. Vertical transfer – open circle, horizontal transfer – closed circle, loss – dashed line, red – best reconciliation, yellow – other equally good reconciliations.

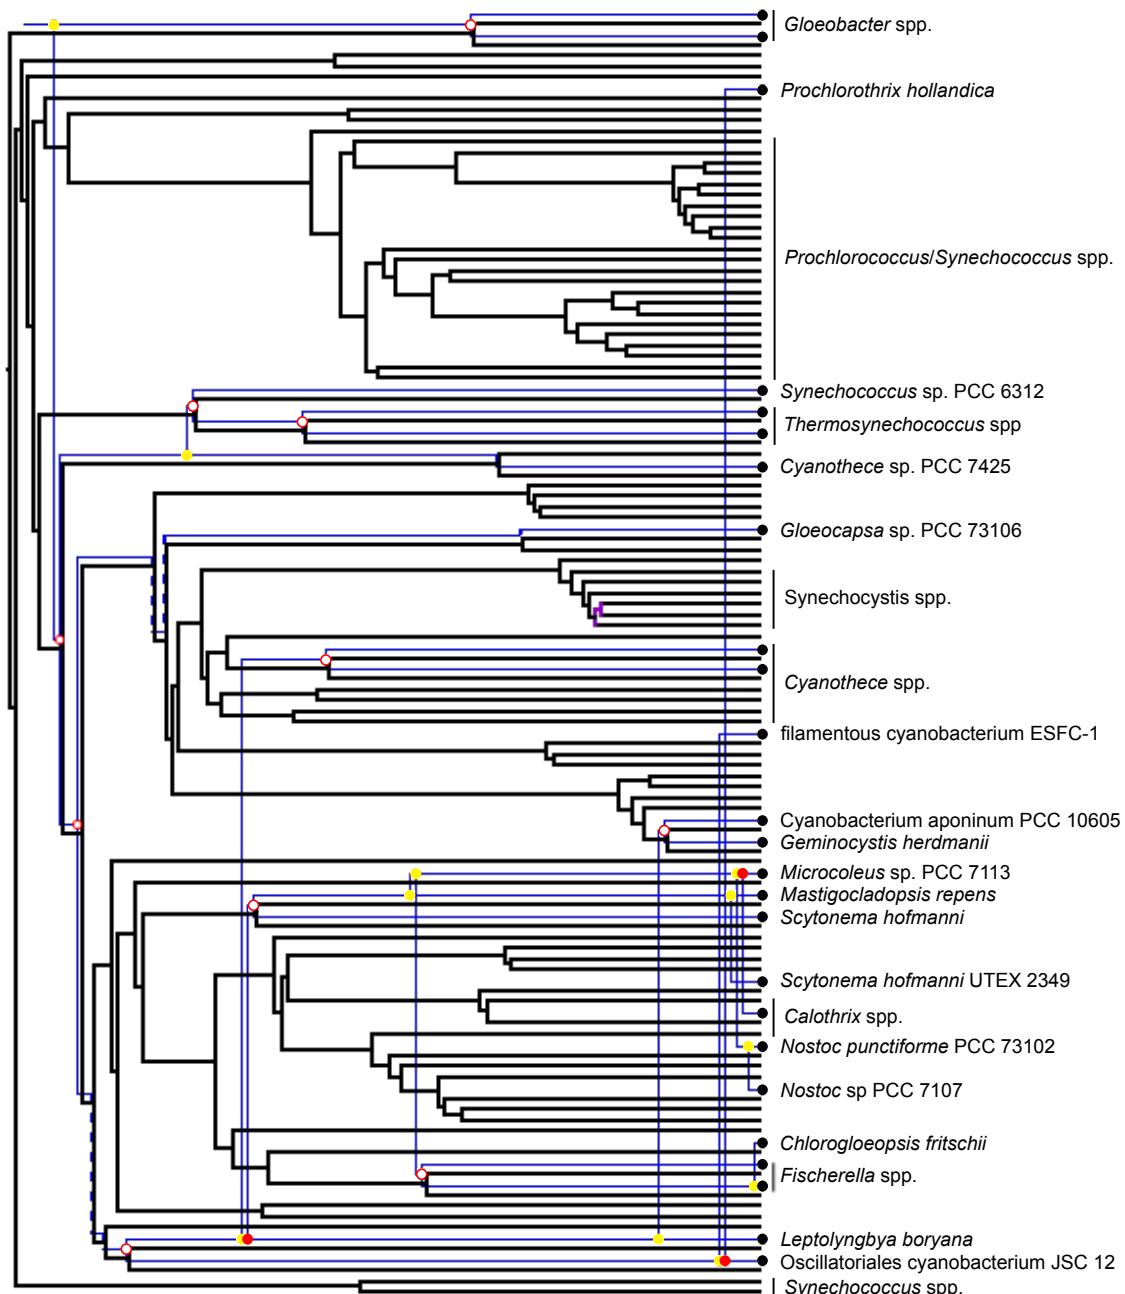

Figure S2. Cyanobacterial HpnP and species tree reconciliation. The 16S rRNA species tree (black) is overlaid with the HpnP tree (blue). The reconciliation was completed in Jane using 1, 2, and 3 as the event costs for loss, duplication, and horizontal transfer respectively. Vertical transfer – open circle, horizontal transfer – closed circle, loss – dashed line, red – best reconciliation, yellow – other equally good reconciliations, purple – polytomy due to identical sequences.

Table S1. Environmental genome walking primers

Primer Name	Target	Method	Primer Sequence
IGU1iPCR1F	U1 IG1	Inverse PCR	AATGATCTGCTGTGGGGTC
IGU1iPCR1R	U1 IG1	Inverse PCR	GGCAGAAAGAGCGGGGTTAT
IGU1iPCR2F	U1 IG1	Inverse PCR	CGTTCCGTGTGGCTATCAA
IGU1iPCR2R	U1 IG1	Inverse PCR	CGGTGCAATTGCCTGTGAA
IGU1SP1F	U1 IG1	SpeedUp Forward	AACAAAGTAGATGGCTCCCG
IGU1SP2F	U1 IG1	SpeedUp Forward	AATGATCTGCTGTGGGGTC
IGU1SP3F	U1 IG1	SpeedUp Forward	CGTTCCGTGTGGCTATCAA

Table S2. Improved phylogenetic diversity.

Phylogeny	Number of unique sequences	PD score*	Colless's Imbalance†
Welander et al., 2010	28	8.95	0.387(48)
This study, genomic sequences only	115	14.02	0.111(2)
This study, genomic and environmental sequences	117	14.07	0.132(4)

\*Phylogenetic diversity (PD) score is the sum of all branch lengths.

†Colless's Imbalance ranges from 0(even) to 1(lateralized). The percentile of the target tree's imbalance is found in parentheses and is based on an equiprobable distribution of random trees (n=1000).

Table S3. List of sequences used with gi numbers.
