Introduction

The KJ66 is an obsolete model Jet Turbine Engine used mainly by people starting the hobby for static testing. Our team set out to improve the design of the engine for performance and make it competitive with newer models.

Solution

Several parts were modified for performance and maintenance.

- > Hydrodynamic bearings
- > Cowl
- Removable turbine stator vanes
- Exhaust cone strut
- Mounting brackets
- Compressor diffuser
- Shaft Housing
- > Shaft
- Compressor control system
- Intake Nozzle
- Engine Housing

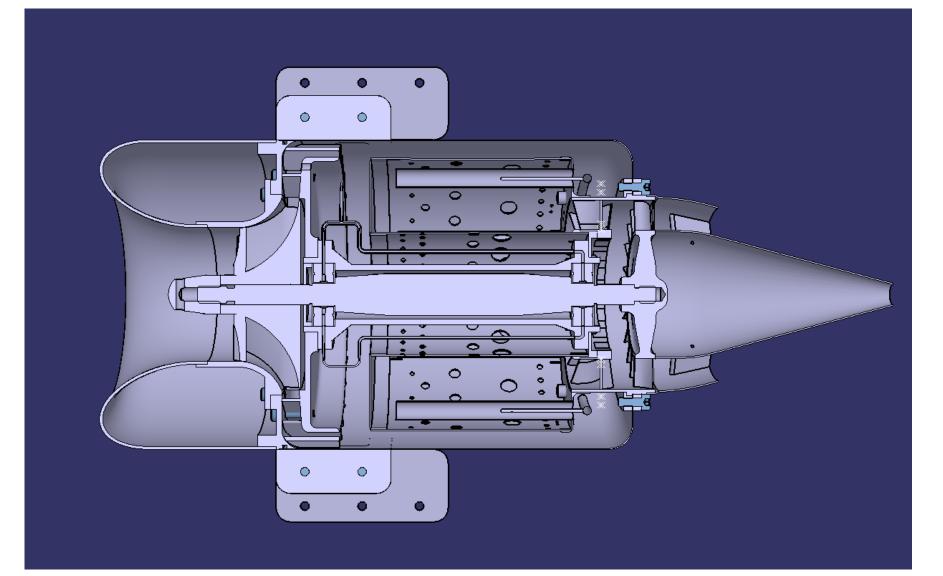

Figure 2. Full section view

KJ66 REVAMP

Christian Llanes; Cody Abendschein; Wasif Memon Aerospace Engineering Department, Embry-Riddle Aeronautical University

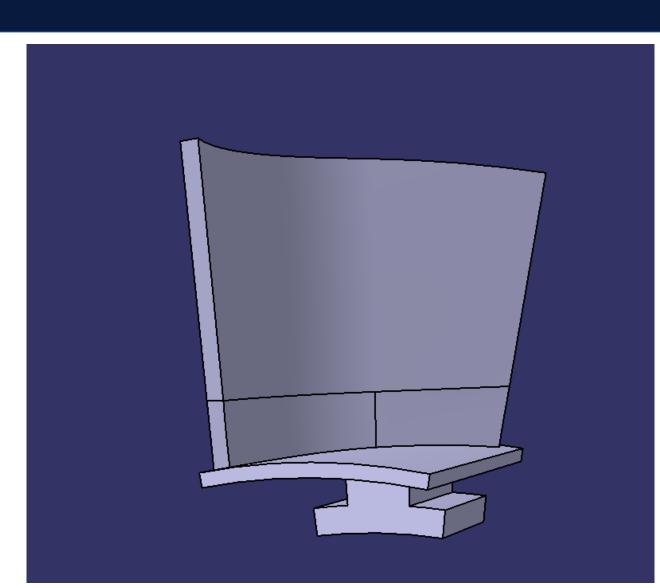

Figure 3. Turbine stator vane

- Removable from ring
- Cost efficient
- > 16 for inner turbine ring

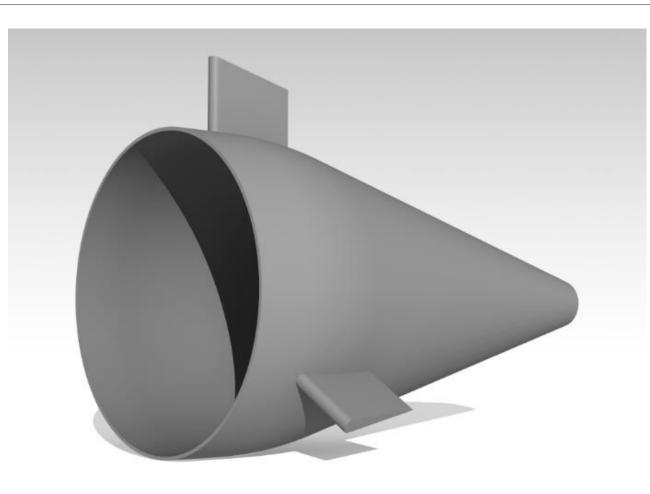

Figure 6. Exhaust cone struts

- Required modification for our setup.
- Replaced springs on engine Housing.
- Struts have Aerodynamic features

Materials

Stainless Steel 316

- Corrosion resistance
- Heat resistance
- Melting point 2550 °F
- Used for combustion chamber Brass
- Used for tubing
- Easy to shape (bend)
- Lower chances of sparks

Plastic

- Cheap cowl material
- Lightweight

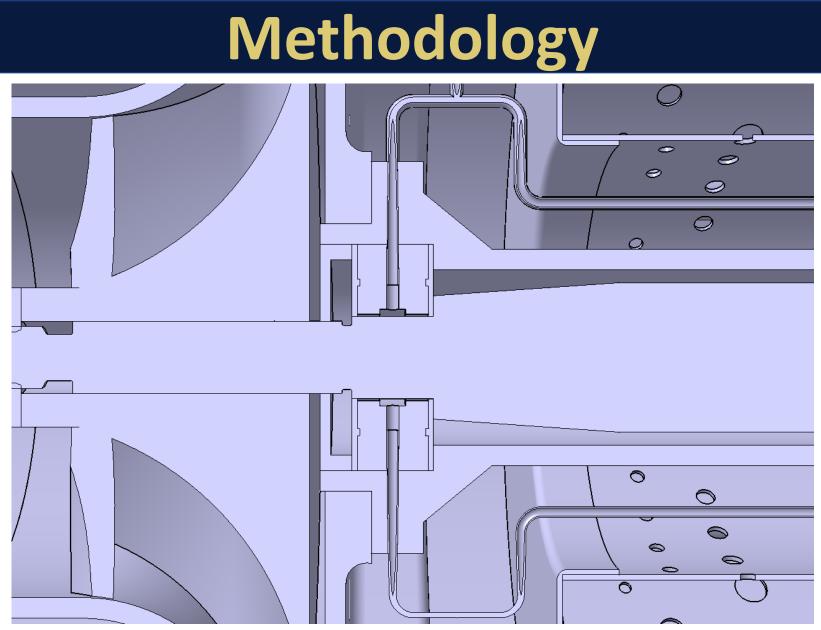

Figure 4. Hydrodynamic bearings

- Cheaper (lathe machined part)
- Quieter than Ball bearings
- > Oil cooling
- Efficient for High RPM conditions

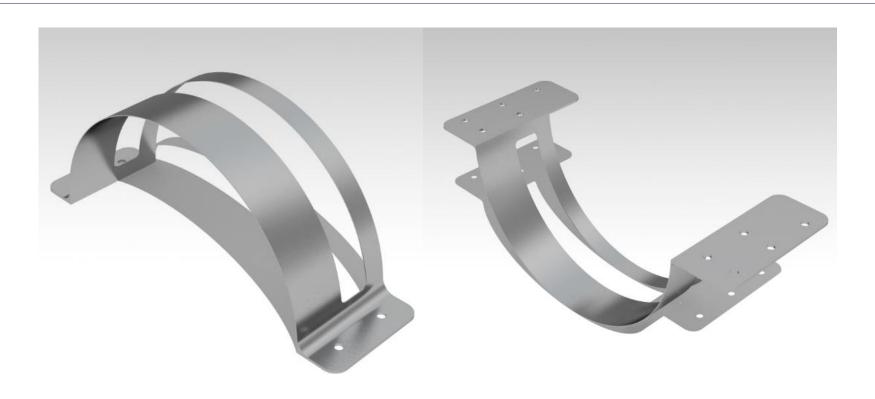

Figure 7. Mounting Brackets

- Used by many Model Jet Engines
- > 4 fasteners squeeze the engine housing
- 6 fasteners on the bottom mount hold the engine to a structure.

Aluminum

- > Cheap
- Lightweight
- Easy to manufacture
- Inconel 713c
- Nickel-chromium alloy
- Castable
- Oxidized layer formed when exposed to heat

Steel

All Standard Bolts used

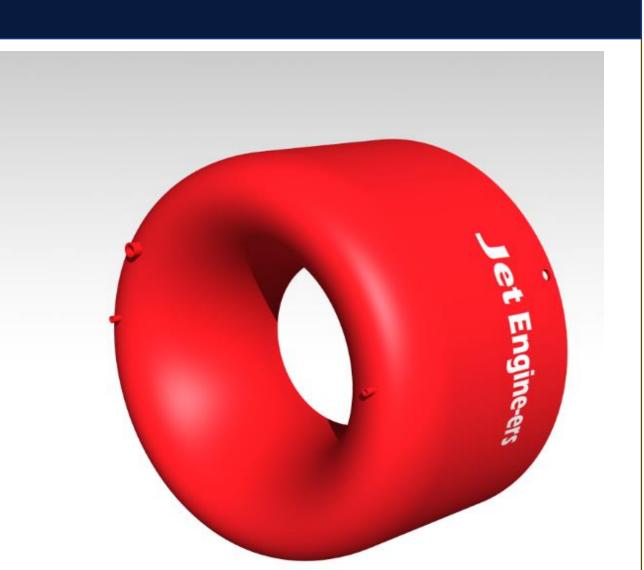

Figure 5. Cowl

- > Aerodynamic upgrade
- Aesthetics
- Good location for storing electronics (ex. FADEC)

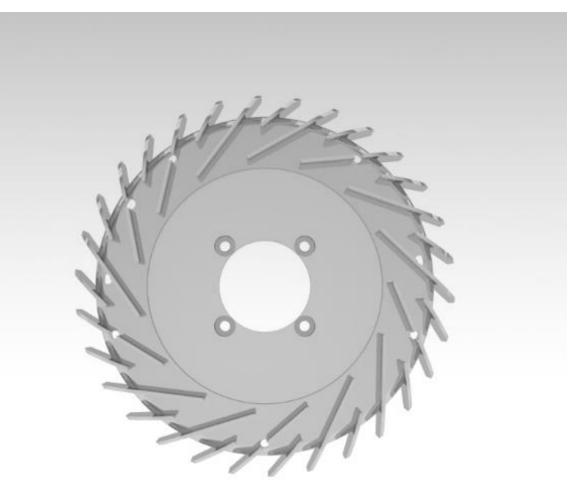

Figure 8. Compressor diffuser

- Guide vane shape and location modification.
- Less Screws
- More air compression
- Better air direction

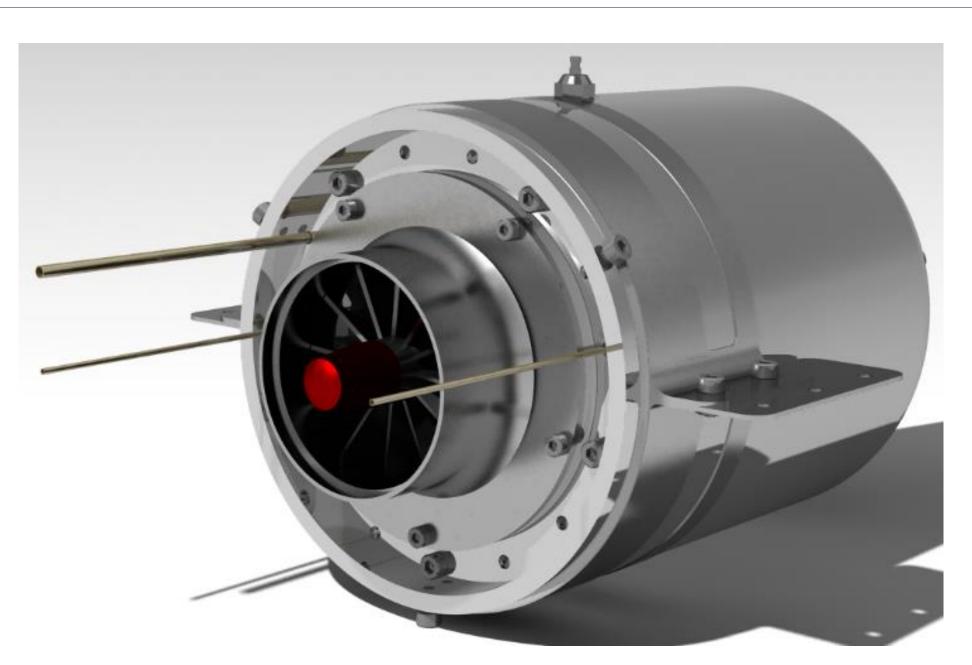

Figure 9. Engine with no cowl

Total Cost

Modified plans like the compressor diffuser, shaft housing, shaft, compressor control system, intake nozzle, and engine housing were provided by the John-Tom.com website.

Results

Table 1. The Calculations our team made for finding the price of the Jet Engine.

eners	~\$12.00 (not added	HomeDepot.com	
	because already		
	included in the Jet		
	Engine)		

Table 2. The comparison of our upgraded product
 and others with similar specifications in the market.

~\$1081.89

ngine	P80 SE	P60 SE	KJ66 (upgraded)
neter (mm)	111.76	82.55	107.4
s (lbs.)	2.9	1.87	2.221
st (lbs.)	22	13	16.77 (gtba.co.uk)
	\$2195.00	\$1995.00	~\$1081.89

Conclusion

After incorporating the new parts and making calculations our group has produced a product that is competitive in the market and outperforms some leading turbine engines in terms of cost, thrust, and weight.
