AN AGRICULTURAL COLLEGE. — WHAT IS IT?

Written for the Rio Grande Republican:

As there seems to be a lively interest in the Agricultural College, and a manifested desire to know more in regard to its peculiarities, and in what particulars it differs from other colleges I will briefly attempt to answer the above question.

Within the present century institutions of the higher grade have been founded in this country for giving instruction in the various branches of mathematics, physical and natural science, and their application to the useful arts. These schools take many and different names, according to their special purpose. But they all have their foundation in scientific knowledge, and their purpose is the application of this scientific knowledge to the useful arts. There may be called schools of science to distinguish them from professional schools such as those of law, medicine, and theology, or schools of the fine arts, such as those of music, drawing, painting, and sculpture. These schools of science are the very close to the solid multitude, by giving them a scientific knowledge, applying it directly to their several callings, lightening their labors, increasing the pleasure of the pursuit, by accompanying them with a higher degree of intelligence, and greatly augmenting the reward of toil.

An Agricultural College par excellence, is one whose special field is the training of its students first in scientific knowledge, secondly, in the application of this knowledge to Agriculture. But, as strictly Agricultural Colleges have not usually been very successful, these colleges have come to embrace a large field, giving a liberal education. These schools having their origin in Europe and founded in a few places in the United States by private benefactions, received a wonderful stimulus by the Act of Congress approved July 2, 1862, appropriating to each State 30,000 acres of public lands for each senator and representative and State might have in Congress "to the endowment, support, and maintenance of at least one college, where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanical arts, in such manner as the legislatures of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life."

This clause of the bill is worth careful reading. Notice the expression, "leading object," "without excluding, etc.," "to teach such branches, etc.," "in such manner, etc.," "in order to promote, etc." It is broad, liberal, wise in its provisions. Although considerable variety of manner of administration by the different States of this endowment by government exists, they all give it a liberal construction, and the Agricultural Colleges are by no means narrow, contracted institutions, surrounded by rigid enclosures, but they are institutions giving broad and deep training, especially as specified in the Congressional act, but not excluding other scientific and classical studies.

As examples of how to serve to illustrate the point just made, the Illinois Industrial University opens as far as 1100 acres of land, and adjoins as embraced within the realm of its work, Colleges of Agriculture, Engineering, Natural Science, Literature and Science, Industrial Art, and Military Science.

That of Indiana advertises Schools of Mechanical Engineering, Civil Engineering, Electrical Engineering, Agriculture, Horticulture, and Veterinary Science; Industrial Art, Pharmacy, Domestic Economy, and a Preparatory School.

The buildings to accommodate those of Indiana have cost \$200,000 and three new ones are in process of construction at a cost of \$60,000. The Register for the past year shows 425 students in attendance.

Kansas Agricultural College realized over \$200,000 from the Congressional grant of 90,000 acres of land, and if New Mexico should put herself into harmony with the educational spirit of the Nation and early desire and receive admission into the Union, there awaits her Agricultural College 90,000 acres of land from which, let us hope, may be realized \$1,000,000 as a permanent endowment. In the United States are over 60 institutions aided by the National grant of \$2. I have named two or three typical ones. These were not born full grown, but ever by year, have developed from just such germs as New Mexico possesses now. Are we content to remain

so far in the rear of the procession of State at this great Union? Let us hope not.

EXPERIMENT STATIONS.

Coordinate with, yet somewhat independent of the Agricultural College is the Agricultural Experiment Station. What is it and what are its relations to the College? In no other department of labor does success depend so much upon intelligent and carefully conducted experiments as in Agriculture. In no other department is a profound scientific basis more essential to deductions that shall be conclusive and reliable. Intelligent, enterprising farmers and stockmen are always on the alert, and in their individual capacity are conducting such experiments as their means and ability will justify. But these generally lack the scientific basis, and a knowledge of the results obtained could not be generally disseminated. Besides these experiments become very expensive to those making them.

Many agricultural colleges, realizing the importance of this work, engaged in such experiments as they could undertake by the voluntary and mostly unpaid labor of their faculties. The first of these attachments was made about fifteen years ago.

Recognizing the transcendent importance of this work to the whole people, and to every part of the country; also taking into consideration the varying circumstances of different portions of the United States, Congress, by what is known as the "Hatch Bill," approved March 2, 1887, appropriated annually to each State and Territory, under certain conditions, \$15,000 for the maintenance and support of at least one Experiment Station. This Station must be connected with an Agricultural College, or one having a department of agriculture. No part of the fifteen thousand dollars can be used to pay for teaching; \$3,990 of the first year's appropriation can be used for building purposes, or repair of buildings, and \$750 annually thereafter; a bulletin reporting the work done and progress made, must be published each quarter and one copy sent "to each newspaper in the State or Territory in which they are located, and to such individuals engaged in farming as may request the same." These are carried in this issue free.

Thus it is easily seen that the United States have stepped in and relieved the individual experimenter of that burden, and has provided something vastly superior. An army of trained workers, stimulated by the fostering and material support of our grand and glorious nation, are engaged in prying into the mysteries of nature, and determining how with the least labor to get the most from the soil, and in determining this knowledge among those who need it. What work more beneficent in its nature or grander in its prospective results could have been undertaken!

The number and variety of subjects claiming the attention of these stations is legion, and the American mind having become awakened to questioning, no prognosticator can see to what extent these investigations shall be carried.

The appropriation made for the current fiscal year for this work is \$999,000, which is supplemented by state aid by, perhaps \$125,000 more. Counting stations and branch stations in the United States, the number is about sixty, and the officers connected with them number about three hundred and seventy.

With these wise and liberal provisions, the government expects, in the development and growth of both the college and station, that the respective States and Territories shall perform a liberal part. College buildings must be provided, boarding-halls erected, laboratories equipped, and a multitude of appliances necessary to a great institution furnished. In character and style, these must be such as to represent creditably the resources and intelligence of a great commonwealth, and to indicate that they are intended to do good service to our posterity. Let the good people of our great New Mexico determine now that we will not fall behind, but come up to the standard with a brave heart and a determined and united purpose.

A Sound Legal Opinion.

E. Reinbridge, Munday Esq., County Attorney, Clay Co., Tex. says: "Have used Electric Bitters with most happy results. My brother also was very low with Malaria Fever and Jaundice, but was cured by using by use of this medicine. An afflicted Electric Bitters saved his life."

Mr. D. L. Whitson, of Howe Cave, Ryndale, a like testimony, saying: "He positively believes he would have died, had it not been for Electric Bitters."

This great remedy will work off, as well as cure all Malaria Diseases, and for all Kidney, Liver and Stomach Disorders stand unequalled. Price 50c, and \$1. at P. Moreno's Dispensary.

To the Columbus Penitentiary.
Columbus, Ohio, July 14.—Romulo Martinez, United States marshal of New Mexico, has arrived here, having been charged as Apache Indian, named Sarate Ki Kerdis, who will serve a life sentence at the military prison at Columbus. He was convicted of murder in the first degree at the spring term of the United States court at Las Cruces, and was sentenced to hang. By the efforts of his counsel, President Harrison commuted his death sentence to imprisonment for life, and ordered him confined in the military prison here. The victims of Sarate Ki Kerdis were of his own tribe and his immediate family.

The New Discovery.
You have heard your friends, and neighbors talking about it. You may yourself be one of the many who know from personal experience just how good a thing it is. If you have ever tried it, you are one of its staunch friends, because the wonderful thing about it is, that when once given a trial, Dr. King's New Discovery never after holds a place in the house. If you have never used it and should be afflicted with a cough, cold or any Throat, Lung or Chest trouble, secure a bottle at once and give it a fair trial. It is guaranteed ever true, or money refunded. Trial Bottle Free at P. Moreno's Dispensary.

ROYAL BAKING POWDER
Absolutely Pure.

This powder never varies. A marvel of purity, strength and wholesomeness. More economical than the ordinary kinds, and can not be sold in competition with the multitude of low cost, short weight, "dummy" or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO. 106 Wall Street New York
