

The triangular nasal notch sign in patients with Crohn's disease treated with tumor necrosis factor inhibitors

Submitted by St phanie Pinot on Wed, 06/26/2019 - 11:42

Titre	The triangular nasal notch sign in patients with Crohn's disease treated with tumor necrosis factor inhibitors
Type de publication	Article de revue
Auteur	Mesnard, C [1], Aubert, H [2], Bourreille, A [3], Trang, C [4], Gagey-Caron, V [5], Le Corre, Yannick [6], Topin Ruiz, S [7], Barbarot, S�bastien [8]
Editeur	Wiley
Type	Article scientifique dans une revue � comit� de lecture
Ann�e	2019
Langue	Anglais
Date	30 Mai 2019
Num�ro	5
Pagination	1103-1104
Volume	181
Titre de la revue	British Journal of Dermatology
ISSN	1365-2133
R�sum� en anglais	<p>Tumor necrosis factor (TNF) inhibitors are used to treat a range of chronic inflammatory diseases, such as rheumatoid arthritis, inflammatory bowel disease and psoriasis. Some of the cutaneous side effects of these drugs are well documented, such as infections, skin carcinomas, palmoplantar and skinfold pustulosis, psoriasis-like or eczema-like lesions. We are not aware of TNF inhibitor-induced nasal lesions in the literature. We report a case series demonstrating a specific pattern of cicatricial nasal fissure (triangular nasal notch) following nasal dermatitis episodes in patients treated with TNF inhibitors.
