Abstract:	<p>Reviews the role of copyright in digital academic and research library development in the UK over the last twenty-five years, drawing on policy documents, legislative reviews and statutes, project documentation and programme syntheses. Finds that copyright-related issues have presented challenges for the development of digital libraries. UK copyright law has been reformed as a result of consultative reviews, but the role of high-level negotiations between stakeholder representatives and the development of model and blanket licences have arguably been more effective in supporting the development of digital libraries. Despite tensions between libraries and publishers, gradual cultural change and the roles played key players such funding councils and high-level representative groups has facilitated progress. The increasing trend towards open licensing presents new roles for libraries as well as challenges and new business opportunities for publishers. Concludes it is unclear what future UK copyright and research policy will be, but it is likely that improved access to academic resources and research will continue, the roles of libraries and publishers will continue to evolve and new sources of tension and challenges will arise.</p>

Copyright and digital academic library development in the UK

Abstract

Reviews the role of copyright in digital academic and research library development in the UK over the last twenty-five years, drawing on policy documents, legislative reviews and statutes, project documentation and programme syntheses. Finds that copyright-related issues have presented challenges for the development of digital libraries. UK copyright law has been reformed as a result of consultative reviews, but the role of high-level negotiations between stakeholder representatives and the development of model and blanket licences have arguably been more effective in supporting the development of digital libraries. Despite tensions between libraries and publishers, gradual cultural change and the roles played key players such funding councils and high-level representative groups has facilitated progress. The increasing trend towards open licensing presents new roles for libraries as well as challenges and new business opportunities for publishers. Concludes it is unclear what future UK copyright and research policy will be, but it is likely that

25 26 27 **Introduction**

28
29
30
31 There has been a great deal of change in how academic and research
32
33 libraries provide access to resources in the last twenty five years or
34
35 so. A major driver for change has been digitisation and the
36
37 development of digital networks. All the major stakeholder groups in
38
39 digital libraries have been involved in implementing change or have
40
41 been affected by it. The rate and degree of change has been greatest
42
43 in developed countries, but some developments have the potential to
44
45 increase access to resources in less-developed parts of the world that

9 have been disadvantaged by traditional scholarly publishing business
10 models.
11

12
13
14
15 The United Kingdom (UK) has been an active participant in exploring
16 the potential of digitisation, digital publishing and information and
17 communication technologies in the context of academic and research
18 libraries and publications. The UK is an interesting case study in the
19 development of digital libraries. A national programme of research
20 and development was launched in the 1990s (see below), which
21 resulted in a range of outcomes and further initiatives that paved the
22 way for improved access to knowledge.
23
24

29
30
31
32
33
34
35
36

37 Copyright is a crucial issue for libraries as almost all library services
38 involve activities that could infringe copyright. This includes digitising
39 collections, lending and otherwise providing access to digital
40 resources. Libraries services are provided in agreement with
41 copyright holders, and usually require some form of financial
42 compensation. This is done through various means, including
43 exceptions to copyright, licence agreements and other arrangements,
44
45

9 such as the UK's Public Lending Rightⁱ for public libraries. Library
10 budgets not only have to cover the cost of purchase or subscriptions
11 for resources in their collections, but also the costs for other uses
12 such as copying and reformatting to meet the needs of their
13 communities.
14
15
16
17
18
19

20
21
22 In the context of academic and research libraries, traditional scholarly
23 publishing models have involved the control of intellectual property
24 by publishers. There have been tensions between intermediaries such
25 as publishers and libraries as research and education communities
26 have sought to harness the potential of information and
27 communication technologies to innovate in research and the
28 provisions of access to the outcomes of research. Progress has not
29 always been smooth because of the uncertainties of the potential
30 economic impact of innovations on businesses built on exploiting
31 intellectual property rights.
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

48 The UK government has had to balance the perceived need to
49 encourage the digital economy with a commitment to increasing
50

6
7
8
9 access to the results of publicly funded research. Copyright has been
10
11 perceived by some stakeholders as a barrier to increasing access to
12
13 these results, but it has also been used to increase sharing of this
14
15 knowledge, in a controlled way, through licence agreements. A good
16
17 deal of progress has been made through the negotiation of model and
18
19 blanket licences, more so than through legal reform. The cultural
20
21 change towards open licensing is currently providing opportunities
22
23 and challenges for libraries and publishers. A major aspect of this is
24
25 an increasing commitment to open access, not just to research
26
27 outputs, but also research data.
28
29
30
31
32
33

34
35 The aim of this paper is to review the role of copyright in the
36
37 development of digital academic and research libraries in the UK,
38
39 identifying the key issues, developments and players that have made
40
41 an impact on progress. A key theme that emerges is the seeming
42
43 incompatibility with the core role of libraries in facilitating access to
44
45 knowledge with an economic model of intellectual property rights.
46
47 This paper concentrates on the UK as a case study as it involves
48
49 strong national support for research and development for digital

9 libraries and open research, coupled with government commitment to
10 the digital economy; strong commitment on the part of publishers for
11 licensed use on intellectual property and lobbying groups for libraries
12 and the research and academic communities. While scope of the
13 paper is limited to the UK, the lessons emerging from this example
14 are potentially relevant to other countries.

25 **Research and development in digital libraries in the UK**

26
27
28
29 There has been research and development activity in digital libraries
30 in many countries for many yearsⁱⁱ. An interesting aspect of activity in
31 the UK has been the national programme funded by its higher
32 education funding councils. The 1993 *Joint Funding Councils*ⁱⁱⁱ
33 *Libraries Review Group (Follett) Report* (HEFCE, 1993 paras 48-74)
34 reported the results of a review carried out in response to concerns
35 about the impact on academic library services of the expansion of the
36 HE sector, the rising costs of scholarly publication and limited library
37 budgets. The focus of the review was how information and
38 communication technologies could be applied to libraries and

9 scholarly publishing to address issues of concern. This included
10 sharing information across UK campuses and international networks,
11 digital publishing and the digitisation of existing resources. The so-
12 called *Follett Report* acknowledged copyright concerns [para. 75-76]
13 and recommended that solutions to the copyright issues should be
14 investigated through the funding of a small practical pilot project
15 involving higher education institutions and publishers [para. 351].
16 Another recommendation was that demonstrator digitisation projects,
17 including the development of copyright management systems, should
18 be funded [para. 361].

35 *The Electronic Libraries Programme*

36
37
38 In response to the Follett recommendations, the UK funding councils'
39 Joint Information Systems Committee^{iv} initiated the *Electronic*
40 *Libraries* (eLib) programme. Jisc's approach was to initially fund a
41 large number of projects under a number of strands of activity
42 (Rusbridge, 1998). This allowed experimentation with different
43 approaches to the similar issues in the creation, storage and delivery
44 of digital books, journals, images, pre-prints and on-demand

9 publishing (Whitelaw and Joy, 2000). Jisc commissioned evaluations
10 of each phase of the eLib programme (Whitelaw and Joy 2000,
11 2001). These evaluations and the Tavistock Institute's synthesis of
12 the 1997 eLib project annual reports highlighted the difficulties faced
13 by the on demand publishing and electronic reserve projects in
14 "overcoming the myriad difficulties connected with copyright
15 clearance, protection and charges" (Tavistock Institute, 1999: p. 9).
16
17
18
19
20
21
22
23
24
25
26

27 Two successful eLib projects in this context were Academic COurse
28 Readings via Networks (ACORN) and Scottish On-demand Publishing
29 Enterprise (SCOPE). A key element of Project ACORN was the
30 emphasis on good relations with academics and publishers (Gadd and
31 Kingston, 1998: pp.3-4). The 1997 Tavistock made the following
32 comment on project-publisher relations:
33
34
35
36
37
38
39
40
41
42
43

44 ... the lack of an adequate mechanism or procedure to support
45 effective dialogue with publishers as stakeholders. There were
46 notable exceptions here (ACORN for example, which set up a
47 Participating Publishers Seminar) but our impression from reading

8
9 the annual reports is that most projects dealt with publishers on
10 an individual, case by case basis, rather than engaging with them
11 as part of a broad process of dialogue (Tavistock Institute, 1999:
12 p. II, 3).
13
14
15
16
17

18
19
20
21 While ACORN's participating publishers did not view the provision of
22 electronic journal articles to undergraduate students as a serious
23 potential threat to their businesses, an important aspect of the
24 publishers seminar was they were able to voice their concerns over
25 issues such as access and security mechanisms (Gadd and
26 Kingston,; p. 9) and the project team were able to provide
27 reassurances. Another feature of Project ACORN that contributed to
28 its success was a partnership with a trusted intermediary, Swets &
29 Zeitlinger BV. The ACORN project team was responsible for
30 developing a process for negotiating and managing copyright
31 clearances. Swets provided publisher contact details and allowed
32 the project to include the company logo in permission request
33 letters to publishers. Swets also directly facilitated some of the
34 clearances and undertook scanning of journal articles for the

9 electronic reserve service as most publishers were unable to
10 provide digital copies (Gadd and Kingston, 1998: pp. 8-10).
11
12
13

14
15
16
17 The SCOPE project tackled the more contentious activity of a
18 publishing on-demand service. As with ACORN, SCOPE aimed to
19 provide a service for undergraduate students. In SCOPE's case, this
20 effectively involved printed and electronic course packs provided on
21 demand from a resource bank of digitised short extracts (Pickering
22 and McMenemy, 1999). The project was undertaken under the
23 aegis of the Scottish Consortium of Research Libraries (SCURL) and
24 the aim was to deliver material to students in member institutions.
25 Unlike the ACORN project, which asked for permission to use
26 publishers' material without payment, the SCOPE project developed
27 a mechanism for royalty payments. Another feature of SCOPE was
28 the development of model licences for publishers. Publishers
29 differed in their views on appropriate models for calculating
30 payments, including appropriate page rates and flat fees (Pickering
31 and McMenemy, 1999: p. 215). It was up to academics and
32 publishers to agree fees. These were sometimes successfully

9 negotiated and sometimes the academics decided not to include
10 material if they thought expected fee was too high. As with ACORN,
11 publishers were wary of online delivery of their material, but were
12 also reassured by the project team on security and access
13
14
15
16
17
18 (Pickering and McMenemy, 1999: p. 219).
19

20
21
22
23 The first e-Lib programme evaluation included a conclusion that was
24 true of the ACORN and SCOPE projects:
25
26

27
28
29
30 ... eLib projects have helped stimulate many companies within the
31 publishing industry into taking positions on electronic information
32 and into addressing and clarifying their perspectives on
33 intellectual property rights, and on charging structures. (Tavistock

Institute, 1999: p. II, 7).

46 A key conclusion from the initial phases of the eLib programme was
47 that a centralised copyright clearance operation would facilitate the
48 development of digital services. The SCOPE project team was
49

6
7
8
9 successful in its bid for funding to run the Higher Education Resources
10 On Demand (HERON) service. HERON's aim was to streamline rights
11 clearance and digitisation through the development of processes and
12 software (McRory and Curry, 2000). The eLib programme manager
13 (Rusbridge, 2001), commented that HERON was:
14
15
16
17
18
19

20
21
22 ... a great project battling against very difficult conditions to
23 provide a valuable service to HEIs and to publishers. Membership
24 is growing rapidly, as is usage amongst members. This is a
25 genuine case where, after much hard work and many drafts of
26 business models, a business strategy may have been identified.
27
28 The important thing here is to devise sustainable ways that
29 copyright material can be used with clear, known and reasonable
30 costs, and at short notice.
31
32

6
7
8
9 HERON was able to use of the Copyright Licensing Agency's Rapid
10 Clearance Service (CLARCS) digitisation licence, which was
11 introduced in 1999. The CLARCS licence was a transactional, rather
12 than a blanket licence. However, clearing house services, such as
13 CLARCS, could potentially ease the administrative burden of clearing
14 rights. The nascent services did always run smoothly as Gadd (2001)
15 found in her study of copyright clearance in UK libraries. It was clear
16 from responses from libraries that they had received an inconsistent
17 level of service from CLARCS (Gadd 2001 pp. 20-21) in terms of
18 speed and helpfulness of staff. One of the qualitative responses on
19 the HERON service was telling with regard to the costs of clearing
20 rights. The respondent was "aware that using HERON is important to
21 Higher Education Institutions ... it gives us a stronger negotiating
22 position to lower fees." (p. 21).
23
24
25

9 digitisation in the CLA's blanket licence. Aspects of the licence have
10
11 been re-negotiated to reduce cost and reporting burdens on the
12
13 sector (Copyright Licensing Agency 2016).
14
15

16
17
18 When its Jisc funding came to an end, HERON became a commercial
19
20 service run by the publishing technology companies, Ingenta and
21
22 then Publishing Technology Ltd. HERON continued as commercial
23
24 service until the end of 2016 when the Copyright Licensing Agency
25
26 (CLA) took over its service and then developed its Digital Content
27
28 Store service for educational institutions.^v The cottage industry of
29
30 copyright clearance for creation and use of digital library materials
31
32 has moved to the mainstream and rights holders through their
33
34 collecting agencies have developed solutions to meet the needs of
35
36 library customers.
37
38
39
40
41
42
43
44

45 While progress was being made on digitisation, another issue was
46
47 emerging. Jisc did not withdraw completely from supporting digital
48
49 library developments, funding studies of copyright and preservation
50
51 and further developing model licences to meet the needs of digital

9 libraries and their users^{vi}. The CURL Exemplars in Digital Archives
10 (CEDARS) eLib project identified copyright as a barrier to digital
11 preservation and produced some guidance on intellectual property
12 rights in this context^{vii}. Later studies put copyright issues on the
13 international agenda and were part of a process towards legislative
14 reform in the UK (Ayre and Muir, 2004; Besek et al., 2008). The
15 problems included copyright exceptions that were no longer fit for
16 purpose and inconsistent across jurisdictions, and contracts and
17 technological protection measures over-riding preservation
18 exceptions. The findings of Besek et al. (2008) were presented at the
19 World Intellectual Property Organization (WIPO) International
20 Workshop on Copyright and Preservation (2008)^{viii}. WIPO's Standing
21 Committee on Copyright and Related Rights then carried out a study
22 of limitations and exceptions for libraries in 2008, which was most
23 recently updated by Krews in 2015, but it is not clear whether any
24 real changed has emerged as a result of WIPO deliberations on this.

28 **Reforms of UK copyright law relevant to digital libraries**

29
30
31
32

33 Recent UK copyright reforms have included changes relevant to
34 digital academic and research libraries. UK legal deposit law has also
35 been reformed to include digital publications. The law now makes
36 provisions for legal deposit libraries to engage in web archiving and to
37 provide on-site access to and preserve digital legal deposit collections
38 without infringing copyright (Legal Deposit Libraries Act 2003; The
39 Legal Deposit Libraries (Non-Print Works) Regulations 2013). There
40 are, however, limitations to these reforms that may not make sense
41 to researchers. As Ballard (2013) points out, copyright material that

16 The Hargreaves review of the UK's intellectual property frameworks
17 made recommendations on exceptions to copyright that are relevant
18 to academic and research libraries. Most of these recommendations
19 were implemented in 2014 and included amendments to address
20 identified shortcomings in the scope of existing copyright exceptions
21 (Copyright, Designs and Patents Act 1988: ss. 29 & 42). Two of the
22 changes are meant to intended to improve access for people with
23 disabilities (Copyright, Designs and Patents Act 1988: ss. 31A and
24 31B). There were also recommendations for new exceptions,
25 including for text and data analysis for non-commercial research
26 (Copyright, Designs and Patents Act 1988: s. 29A), which applies
27 whatever contractual agreements say to the contrary. This exception
28 potentially allows researchers to lawfully carry out new forms of
29 research based on large-scale analyses of material in digital library
30 collections. However, responses to the UK government's consultation
31 on the Hargreaves proposals indicated that this exception is

9 unpopular with publishers who would prefer to only allow this activity
10 under licence (HM Government, 2012: p. 17). There have been
11 reports (Mounce, 2016) that, in practice, large-scale mining of
12 scholarly literature has been hampered by technological protection
13 measures to prevent copyright infringement, such as limiting the
14 number of items that can be downloaded in one go, or slowing the
15 speed at which such downloads occur. There is a mechanism to
16 appeal against these measures being used to prevent lawful users
17 exercising their freedoms under copyright exceptions (Copyright,
18 Designs and Patents Act: s. 296ZEA). The Intellectual Property Office
19 (2015) has reported that only nine complaints were made between
20 2003 and 2014. All of these were in regard to computer programmes
21 and none were upheld. It remains to be seen whether the mechanism
22 will be used in the context of text and data analysis in future. Another
23 issue of concern has been how researchers can download content for
24 analysis. A prominent example is Elsevier's policy that this activity
25 should be licensed and researchers should register to access
26 Elsevier's own application programming interface (Elsevier, 2017).

9 While formally published material of interest to users of academic and
10 research libraries is increasingly available in digital form, there is still
11 potentially useful material that could be digitised to increase its
12 accessibility. This includes orphan works. A work is an orphan if the
13 rights holder of the work is not known or cannot be found to ask
14 permission to use the work. Research carried out for the Strategic
15 Content Alliance and Collections Trust (Korn, 2009) attempted to
16 quantify the extent of orphan works in the public sector, including
17 universities and libraries. The report comments on the volume of
18 orphan works of academic but little commercial value that are unused
19 because of difficulties in tracing rights owners. The Hargreaves
20 Review favoured a licensing solution for the use of orphan works,
21 which is now in place (Enterprise and Regulatory Reform Act 2013;
22 Intellectual Property Office 2016). This is more suited to commercial
23 use of copyright works than to digitisation of library collections to
24 improve access. The UK also now has a new copyright exception
25 through the European Union Orphan Works Directive (2012/28/EU).
26 The exception is much narrower in scope than the licensing scheme:
27 it allows for certain uses of orphan works by certain types of

19 **Impact of copyright reform and research and development**
20 **work on the development of digital academic and research**
21 **libraries**
22
23
24
25
26
27
28
29

30 It is clear that early efforts to develop digital libraries raised copyright
31 issues for academic and research libraries and concerns among
32 publishers and other rights holders. At a practical level, UK-based
33 digital library projects encountered difficulties in acquiring
34 permissions from rights holders to digitise content and to provide
35 seamless services based on this content. Digitisation of content by
36 projects was necessitated largely because publishers were not
37 offering digital versions of scholarly publications at the time.
38
39
40
41
42
43
44
45
46
47
48

49 Publishers participating in digital library projects were interested in
50 experimenting. There was concern that they could lose control over
51
52
53
54
55
56
57
58
59
60

1
2
3
4
5
6
7
8
9 their intellectual property and that their business models would be
10
11 damaged. These difficulties were not limited to the UK; they were
12
13 also experienced by projects and rights holders in other countries,
14
15 including the EU's digital library programme (EBLIDA, 1999).
16
17

18
19
20
21 There were tensions between publishers and libraries in the early
22
23 stages of digital development, and differences of perspective on how
24
25 to move forward. As far as the eLib programme was concerned, with
26
27 some exceptions, efforts to engage with rights holders were limited.
28
29 However, a great deal of progress has been made at a higher level.
30
31 Jisc has been an influential player, funding research and development
32
33 activities and working with other stakeholder groups such as the UK's
34
35 Publishers Association (PA) during the eLib programme^{ix}.
36
37
38
39
40
41
42
43

44 Disputes between libraries and rights holder groups over digitisation
45
46 continue to this day.^x Apart from Jisc, there are several bodies in the
47
48 UK that have a role in supporting the development of digital academic
49
50 and research libraries. The UUK/GuildHE Copyright Working Group
51
52
53
54
55
56
57
58
59
60

1
2
3
4
5
6
7
8
9 (CWG)^{xi} has negotiated copyright licences with collective licensing
10 organisations. The CWG also advises its members on copyright issues
11 and responds to proposals relating to copyright. Society of College,
12 National and University Libraries' (SCONUL) strategic vision includes
13 a national digital library and SCONUL is a member of the CWG.
14
15 SCONUL and the practitioner members of the CWG are able to
16 communicate such issues to the senior management of HEIs through
17 this UUK/GuildHE group.
18

25
26
27
28
29
30

31 Another body that is concerned with the identifying and
32 communicating the impact of copyright law and the need for reform is
33 in the UK is Libraries and Archives Copyright Alliance (LACA). LACA's
34 mission is to advocate "a fair and balanced copyright framework
35 which respects the rights of copyright holders whilst placing equal
36 value on the importance of users' liberties" (Libraries and Archives
37 Copyright Alliance, 2017). LACA has academic and research library
38 members and is an active group, running campaigns, responding to
39 consultations, writing to policy makers and collaborating with partner
40 groups in Europe and beyond. Most recently, LACA has focused on

9 copyright exceptions, orphan works and lending of digital publications
10
11 (Libraries and Archives Copyright Alliance, 2017). It is hard to say
12
13 what direct impact LACA has had on government and publisher
14
15 policies, but it has certainly raised awareness of the impact of
16
17 copyright issues on libraries.
18
19

20 21 22 23 24 **Another approach to licensing: the impact of the open access** 25 **movement on digital libraries** 26

27
28
29
30 A development that has the potential to really open up access to
31
32 knowledge and research is the growth of the open access movement.
33
34 The negotiation of model licences over time has had a great impact
35
36 on the ability of libraries to provide digital content and services. The
37
38 Creative Commons family of licences (Creative Commons, 2017) is
39
40 widely used for publications. It is built on copyright, but has a
41
42 different approach to rights. Instead of reserving rights, the licences
43
44 facilitate sharing and re-use of resources with the proviso of
45
46
47
48
49 acknowledgement of the original authors.

2
3
4
5
6
7
8
9 In the UK and elsewhere, research funders (Research Councils UK,
10 2017) and academic communities are embracing open access, not
11 just to improve access to research outputs, but also to increase
12 transparency in research and re-use of research data. This trend is
13 being reinforced in the UK by the research funding councils grant
14 conditions^{xii} and through the Research Excellence Framework^{xii}, a
15 periodic evaluation exercise which has funding implications for
16 education institutions. The impact on libraries includes the
17 opportunity to take on new roles in providing access to knowledge,
18 through managing institutional repositories, facilitating discovery of
19 open access publications and advising researchers.
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37

38 This cultural shift is a challenge to commercial publishers who have
39 been introducing various versions of open access, introducing author
40 pays models and/or embargo periods before publication become
41 openly accessible. It is not yet clear what the future of academic
42 publishing models will be, but it is likely that academic and research
43 libraries will be able to enhance their ability to facilitate access to
44 digital content for their communities.

Future policy on copyright and digital libraries

The UK's future policy making has become less certain since it started the process of withdrawing from the European Union on 29 March 2017. It is not clear how copyright policy in the UK will develop and what impact this might have on academic and research libraries. The UK government plans (Department for Exiting the European Union, 2017) to convert EU law into UK domestic law through a European Union (Withdrawal) Bill. After the UK has left the EU, parts of this body of law will undoubtedly be repealed and/or changed to meet policy goals. The key question is what those policy goals will be and whether copyright and access to academic knowledge will have any place in the UK government's policy agenda.

The UK could change its copyright law post-Brexit, but there might be strong commercial and political reasons not to do so, at least in the short term. The UK intellectual property framework has recently been reformed with the aim making it fit for the digital economy. Trade with the European Union post-Brexit may limit the extent to which

1
2
3
4
5
6
7
8
9 the UK could dispense with the elements of its copyright regime that
10
11 came from the EU Directives.
12
13

14
15
16 It may be that rights owners feel that the new economic situation will
17
18 merit renewed lobbying of government to roll back recent reforms
19
20 and strengthen copyright protection. However, it is not clear whether
21
22 the government would be persuaded or whether it would be a
23
24 priority. There is no obvious reason for funding bodies to withdraw
25
26 open access mandates either, given that this is an international trend
27
28 which the UK can exploit to ensure a high international profile for its
29
30 academic institutions and research. As far as libraries are concerned,
31
32 LACA (2016) has indicated that it will seek clarification from
33
34 government officials of the impact of withdrawal from the European
35
36 Union on libraries and continue to work to increase fairness in
37
38 copyright.
39
40

48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3
4
5
6
7
8
9 There is no doubt that digital access to knowledge through academic
10 and research libraries in the UK has greatly improved since the
11 publication of the *Follett Report* in 1993. While there have been
12 reforms to update the law and address issues that have arisen, it is
13 the way that copyright law is interpreted and used by various
14 stakeholders that is the key issue in the digital environment. The
15 opportunities offered by digital technologies are not being fully
16 exploited. Improvements have been largely driven by academic and
17 research community representatives. Rights holders and their
18 representatives have been resistant to change but have responded
19 with digital offerings and more affordable licensing solutions when the
20 demand has become abundantly clear.
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39

40 The impetus towards open access to publications and research
41 continues and it is not fully clear how the relative roles of
42 intermediaries between academic knowledge and its consumers will
43 evolve. Academic and research libraries have increased scope to
44 provide access to and preserve academic knowledge through
45 copyright exceptions and increasingly open content. For publishers,
46
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3
4
5
6
7
8
9 traditional approaches to economic exploitation of intellectual
10
11 property in this context could become less important and provision of
12
13 new services around it become more prominent. For example,
14
15 Elsevier has acquired services such as Mendeley, the Social Science
16
17 Research Network and Bepress. No doubt, this is a sensible business
18
19 strategy, but it may result in a different form of control over the
20
21 research process and research outputs.
22
23
24
25
26
27

28
29 It is probably reasonable to assume no change in government policy
30
31 on copyright, at least in the short-to-medium term. Future
32
33 development is more likely to be driven by the needs of research
34
35 communities, the desire of libraries and other services to support
36
37 these needs and negotiation and innovation between libraries and
38
39 publishers. It is unlikely that the tensions between these stakeholders
40
41 will lessen in future; it is more likely that it is the sources of tension
42
43 will change.
