The authors regret that [Fig. 8](#) bottom panel had a 0.1 offset applied to the buoyancy frequency (N). This plotting error did not affect any other aspect of the original paper. The correctly plotted [Fig. 8](#) is shown below.

Fig. 8. Top panel shows on a log scale 5-day smoothed diffusivity (κ) at the base of the mixed layer (plus marks) and their errors (grey line). Values below the grey line can be considered noise. Middle panel shows hourly values of $1/Ri$ on a linear scale. A nominal critical Ri is shown as a grey dashed line. The bottom panel shows the 5-day smoothed buoyancy frequency (N) on a linear scale.
