THE WOODY PLANTS OF SOUTHEASTERN IOWA

MALCOLM McDONALD

This is a preliminary list of the species of trees and shrubs of southeastern Iowa, consisting of the counties of Davis, Des Moines, Henry, Jefferson, Keokuk, Lee, Louisa, Van Buren, Wapello, and Washington. The limits of the region were chosen for convenience in collecting and coincide fairly well with the forest belt of southeastern Iowa. The work at Parsons College as originally planned was to include all the above named counties, but extensive collecting has been done only in Jefferson and Van Buren Counties.

This list is a compilation based largely upon the collection in the Parsons College herbarium; the collection of Henry County plants in the Iowa Wesleyan College herbarium; and the collections in the Iowa State College herbarium made by T. J. Fitzpatrick some years ago, and by Jess L. Fults in Lee County in 1933. If time had permitted a complete investigation of the herbariums at the Iowa State College and the State University it is probable that additional species could have been added.

This list contains 159 species, seven varieties, and two hybrids, 168 in all, of which 89 are trees and 79 are shrubs. Ten trees and eight shrubs were introduced, escaped from cultivation, and became naturalized. Four of the introduced species were native to the United States; the other fourteen were exotics. The Parsons College herbarium contains 123 of the species here listed.

In this region the oak-hickory forest predominates, this list containing thirteen oaks and six hickories. The Rosaceae, with 29 species, and the Salicaceae, with 15, are the other families most largely represented.

Identification is based on the seventh edition of Gray's "Manual," Britton and Brown's "Illustrated Flora," Sargent's "Manual of the Trees of North America," and Rehder's "Manual of Cultivated Trees and Shrubs." Nomenclature follows that given by Palmer and Steyermark's "Catalogue of Flowering Plants of Missouri." Where the generic or specific name differs from that given by Gray, Gray's nomenclature is included in parentheses. For each species the counties in which it is known to occur are given, followed by the numbers referring to the herbarium or list in which it is reported.
