

# Integration and dissemination of aquatic biodiversity and ecosystem service data for case studies focusing on ecosystem-based management

Aaike De Wever, **Astrid Schmidt-Kloiber**, Juan Arévalo Torres, Declan Dunne, Ana Luisa Barbosa, Koen Martens, Alejandro Iglesias Campos

The AQUACROSS project has received funding from the European Union's Horizon2020 for Research, Technological Development and Demonstration under Grant Agreement Number 642317.

*What is this all about ?*

# The AQUACROSS project

- Knowledge, Assessment and Management for AQUATIC Biodiversity and Ecosystem Services across EU policies
- Horizon 2020 project
- 2015 to 2018
- 16 partners

coordinated by

# The AQUACROSS project – aims

- ≈ to support EU efforts to **protect aquatic biodiversity** and ensure the **provision of aquatic ecosystem services**
  - advance knowledge and application of ecosystem-based management (EBM)
  - support the timely achievement of the EU 2020 Biodiversity Strategy targets
- ≈ to develop and test an **assessment framework** which considers the full array of interactions within aquatic ecosystems

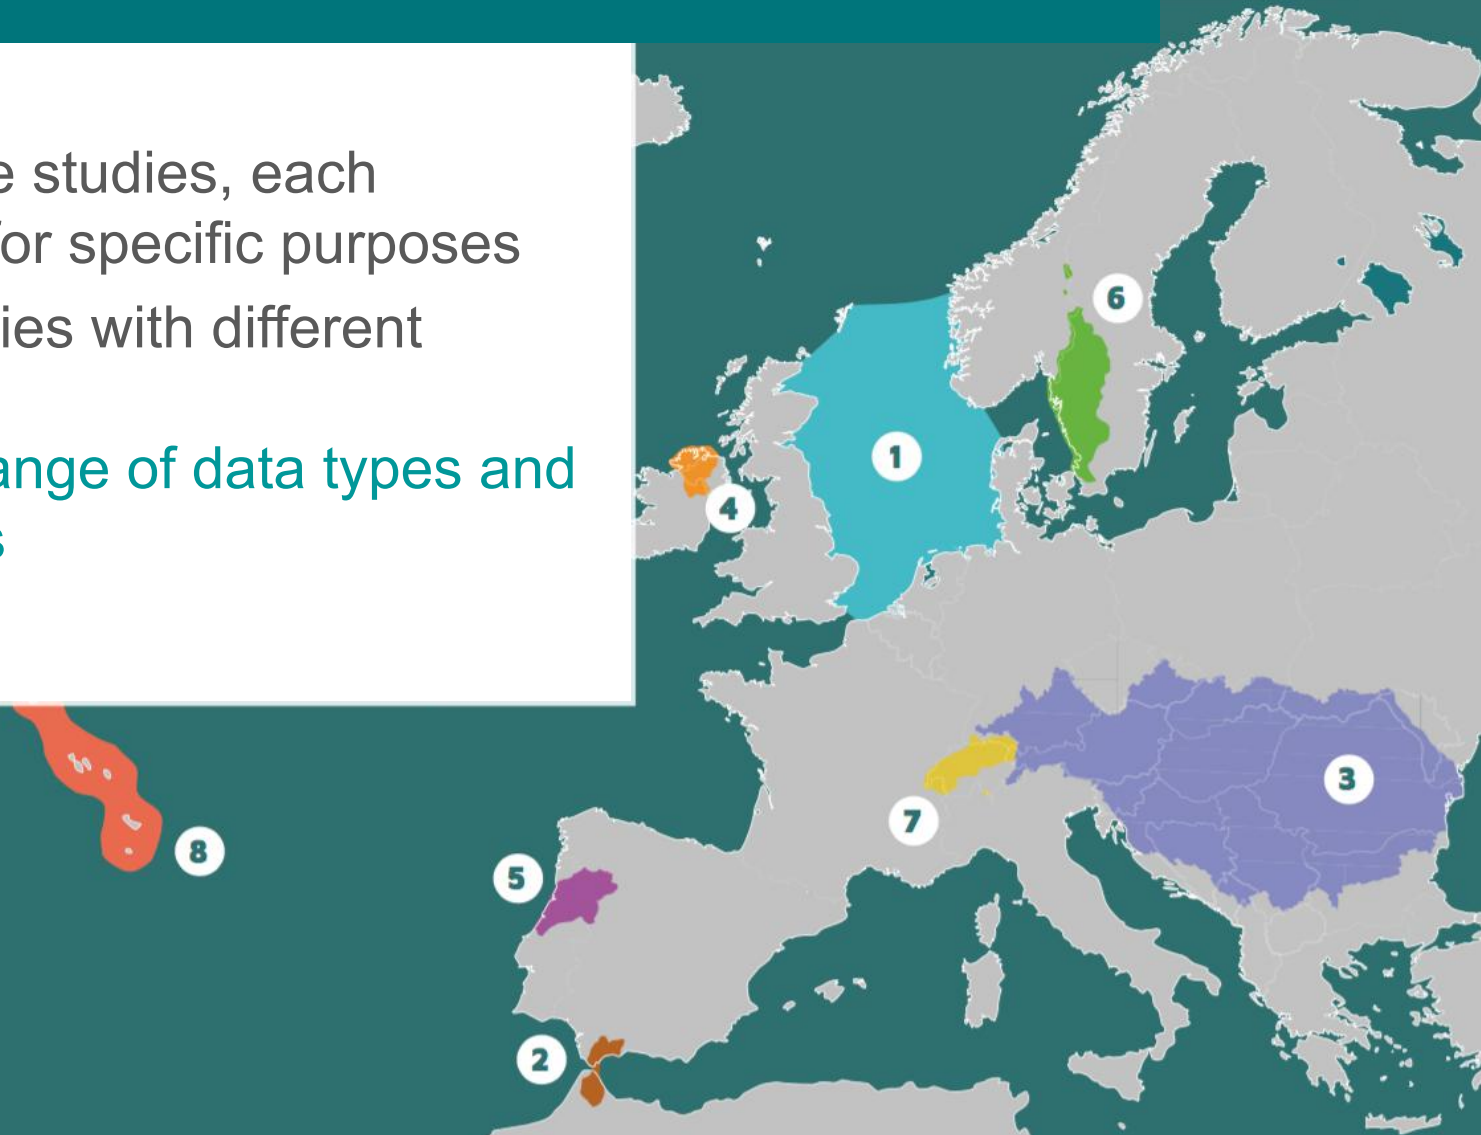

AQUACROSS focuses on integration, linking science, stakeholders, policy, knowledge, data and management to improve ecosystem-based management for aquatic ecosystems

*How did we approach it?*

# The AQUACROSS case studies

- ☞ eight case studies, each selected for specific purposes
- ☞ case studies with different scopes
  - ☞ wide range of data types and resources

*How did we manage data?*

# The AQUACROSS Information Platform (IP) – aims

- ≈ implement an online tool that allows the **cataloguing**, **interrogation**, **manipulation**, and **visualisation** of diverse datasets and documents on water and biodiversity
- ≈ provide project **partners** with a **tool** and **data repository** to support the **case study work** and the implementation of the project
- ≈ provide the **end-user community** with a **knowledge platform** to search for and visualise (geospatial) data, metadata and other relevant resources related to **aquatic** (freshwater, marine and coastal) **ecosystem** and **biodiversity management** at the European level

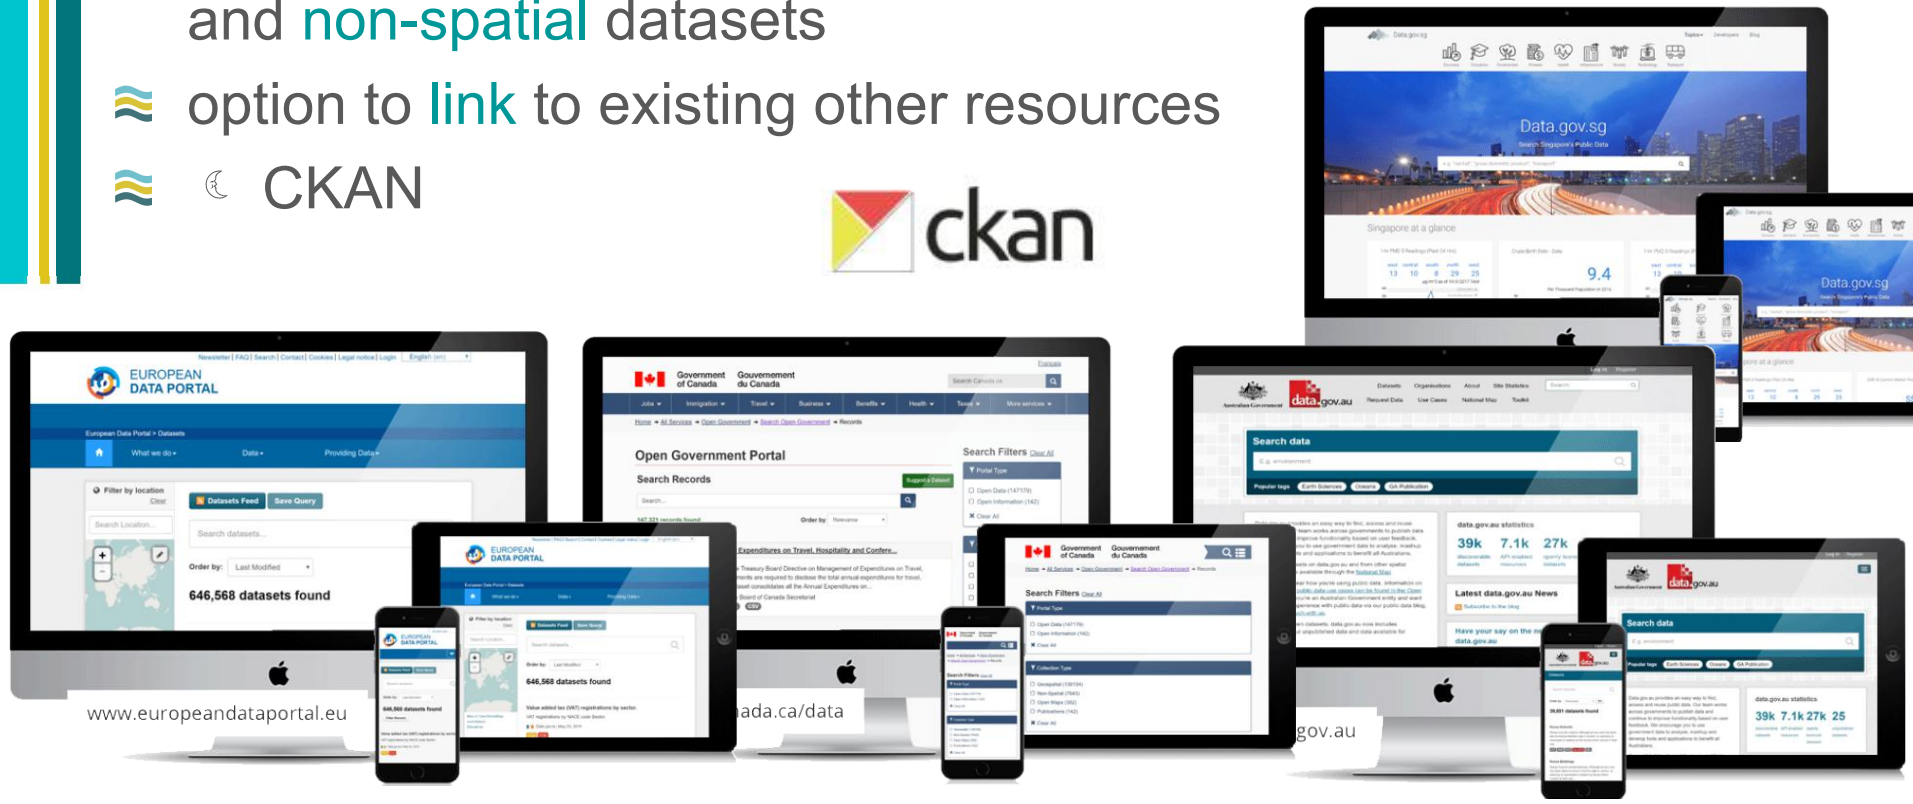

*Which were the main challenges?*

# The AQUACROSS IP – challenges

- ≡ variety of requirements
- ≡ diversity of resources/data that need to be handled
- ≡ open access (H2020 Open Data pilot)
- ≡ option to upload existing and new spatial and non-spatial datasets
- ≡ option to link to existing other resources
- ≡ CKAN

# The AQUACROSS IP – CKAN functionalities

- 🌊 powerful search engine
- 🌊 manage and publish data
  - metadata system
  - file store
  - data store
- 🌊 search and discover data
  - built-in visualisation tools
  - geospatial features
- 🌊 easy extensions
- 🌊 API function
- 🌊 open source; project development work on GitHub

Welcome to the Information Platform of the **AQUACROSS project**, which seeks to advance the application of **ecosystem-based management** for **aquatic ecosystems** in an effort to support the timely achievement of the EU 2020 **Biodiversity Strategy** and other international conservation targets.

This platform aims to provide **open access** to a wide range of **resources** related to **aquatic** (freshwater, marine and coastal) **ecosystem** and **biodiversity management** at the European level. The primary focus is on data used in the various project **Case Studies** and Work packages, and resulting maps, model outputs and tools.

As most of this work is on-going, **new resources** will gradually be **uploaded** to this **Information Platform**. We also **welcome suggestions** from external visitors on relevant datasets that could be linked to the platform at: [aquacross.IP \(at\) unesco.org](mailto:aquacross.IP@unesco.org).

### What are AQUACROSS Groups?

You can use AQUACROSS Groups to create and manage collections of datasets. The datasets have been organized by project case studies and work packages, as a very simple way to help people find and search your own published datasets.

## Case Study 3: Danube River Management Area

The main focus in terms of the Danube CS3 at the whole basin scale will be on hydro-morphological pressures at catchment and regional scales, focusing on alterations in longitudinal and lateral connectivity, and on the consequences of these. CS3 also includes the Danube Delta, where the effects of eutrophication are studied at regional scale, focusing on the impact of hydro-morphological alteration (lakes and floodplains along the Danube Delta's channels). Thereby, we explore trade-offs and synergies of biodiversity and ecosystem services related to hydro-morphological alterations of the River Danube and its tributary rivers. For more information please check: <https://aquacross.eu/content/case-study-3-danube-river-basin-harmonising-inland-coastal-and-marine-ecosystem-management>

The screenshot shows the 'Create Dataset' page on the AQUACROSS website. The page has a teal header with the AQUACROSS logo and navigation links for Datasets, Organizations, Groups, and About. A search bar is located in the top right. The main content area is titled 'Datasets / Create Dataset' and features a progress indicator with two steps: '1 Create dataset' (active) and '2 Add data'. A sidebar on the left contains a 'What are datasets?' section with a definition of a CKAN Dataset. The main form is divided into several sections: 'Visibility' (set to Private), 'AQUACROSS contact point' (Organisation: QC, E-mail: ask@boku.ac.at), 'Responsible organisations for this dataset' (Organisation: University of Natural Resources and Life Sciences, E-mail: ask@boku.ac.at, Role: Owner), and 'Title' (Title: BOKU macroinvertebrate data, URL: dataportal-dev.aquacross.eu/dataset/boku-macroinvertebrate-data). A note below the title section states: 'Enter the title in English above. The URL field is automatically generated from this title.' Below this, there is a field for 'Original Title' (BOKU Makrozoobenthos Datensatz) and a 'Language' dropdown (German).

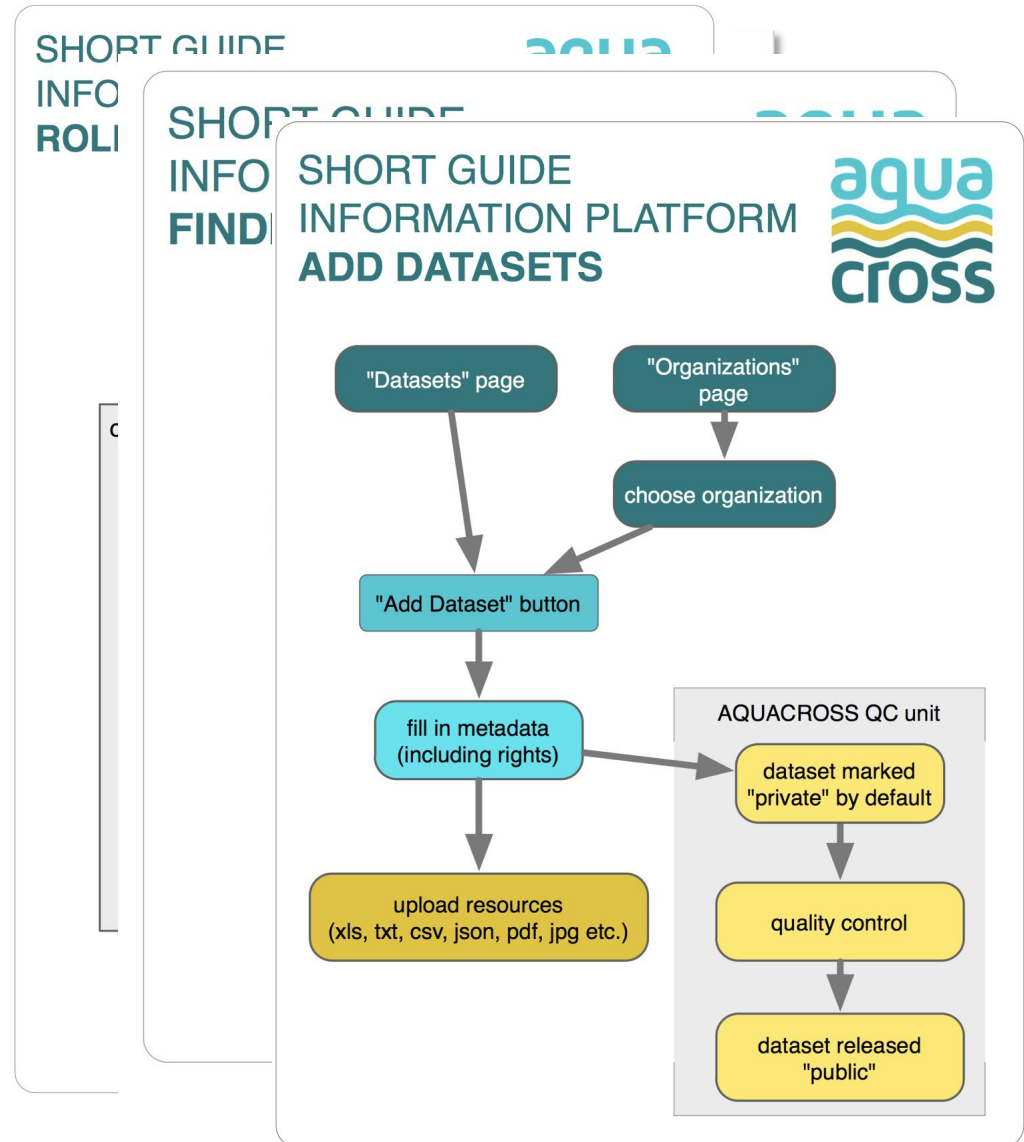

*Where are we now?*

- 🌊 help and [manual](#) available

# The AQUACROSS IP – and others

- ≈ interoperable with other existing European information platforms (for instance the European Data Portal)
- ≈ interoperable with third party GIS and statistical software (e.g. QGIS, R statistics)
- ≈ development of a custom harvester plugin to collect the data from the Freshwater Information Platform (based on CKAN harvester)

# The AQUACROSS IP – summary

- ≡ developers and users **satisfied** with the IP and its **functionalities**
- ≡ user survey
  - more than 90% found the publishing process easier or as expected
  - around 80% were satisfied with finding and understanding the instructions
- ≡ appreciation in the **public** and **scientific community**

A screenshot of the AQUACROSS website's news page. The page features the European Commission logo and the CORDIS (Community Research and Development Information) logo. A navigation menu includes 'NEWS & EVENTS', 'PROJECTS & RESULTS', and 'RESEARCH\*EU MA'. The main headline is 'New open-access platform supports biodiversity', with a sub-headline: 'A new tool aids efforts to meet the EU's biodiversity targets. The recently launched platform allows scientists to share data about freshwater, coastal and marine ecosystems'. The text below discusses the importance of aquatic biodiversity and the role of the AQUACROSS project in supporting the EU's biodiversity strategy. It mentions that in 2015, the EU-funded AQUACROSS project was launched to support the EU's efforts in knowledge and application of ecosystem-based management (EBM) for aquatic ecosystems. It also notes that just recently, project partner UNESCO, and more specifically its Intergovernmental Oceanographic Commission (IOC), has launched the AQUACROSS Information Platform (IP) as part of these endeavours. The IP serves as a central access point for data on aquatic ecosystems and EBM practices.

European Commission > CORDIS > News and Events > New open-access platform supports biodiversity

NEWS & EVENTS PROJECTS & RESULTS RESEARCH\*EU MA

## New open-access platform supports biodiversity

**A new tool aids efforts to meet the EU's biodiversity targets. The recently launched platform allows scientists to share data about freshwater, coastal and marine ecosystems.**

With their rich biodiversity, aquatic ecosystems benefit our economy and society in many ways. However, human activities and pressures such as pollution, overfishing, invasive species and climate change are placing these aquatic ecosystems at risk and threatening their sustainability. To halt and reverse the loss of aquatic biodiversity, the EU has implemented a number of policies. But for them to be effective, there needs to be coordination and cooperation between different policy areas spanning freshwater, coastal and marine ecosystems, as well as innovative business solutions and public-private engagement.

In 2015, the EU-funded AQUACROSS project was launched to support the EU's efforts in knowledge and application of ecosystem-based management (EBM) for aquatic ecosystems. Biodiversity Strategy and other international conservation targets will be met in time.

Just recently, project partner UNESCO, and more specifically its Intergovernmental Oceanographic Commission (IOC), has launched the [AQUACROSS Information Platform \(IP\)](#) as part of these endeavours. Developing existing open-source software, the IP serves as a central access point for data on aquatic ecosystems and EBM practices.

*What can we learn from it?*

# The AQUACROSS IP – lessons learned

## use of CKAN

- excellent tool for making data and information visible and disseminating results
- available for **harvesting** and **integration** in other CKAN installations
