

# A comparison of different strategies for antimicrobial peptides incorporation onto/into lipid nanocapsules

Submitted by Laurent Lemaire on Wed, 07/17/2019 - 09:33

Titre	A comparison of different strategies for antimicrobial peptides incorporation onto/into lipid nanocapsules
Type de publication	Article de revue
Auteur	Matougui, Nada [1], Groo, Anne-Claire [2], Umerska, Anita-Monika [3], Cassisa, Viviane [4], Saulnier, Patrick [5]
Editeur	Future Medicine
Type	Article scientifique dans une revue à comité de lecture
Année	2019
Langue	Anglais
Date	11 Juillet 2019
Numéro	13
Pagination	1647-1662
Volume	14
Titre de la revue	Nanomedicine
ISSN	1743-5889
Mots-clés	Amp [6], antimicrobial peptides [7], antimicrobialactivity [8], Formulation [9], nanomedicine [10], protease [11], Stability [12]
Résumé en anglais	<p><b>Aim:</b> Over the last decade, antimicrobial peptides (AMPs) have emerged as a promising alternative for the treatment of various infections. The aim of this work is to explore the potential of lipid nanocapsules for the delivery of AMPs. Three approaches were compared in terms of encapsulation efficiency, peptide activity and protection against proteases: peptide encapsulation, surface adsorption or covalent attachment of three selected AMPs. <b>Results:</b> A potentiation of the antimicrobial activity and a partial protection of the peptides after adsorption were demonstrated compared with native peptides. Conversely, encapsulation allowed better peptide stability, correlated with higher encapsulation efficiencies and a preservation of the activity. Finally, the covalent attachment strategy turned out to be less conclusive due to peptide inactivation. <b>Conclusion:</b> In brief, a lipid nanocapsule-based platform appears suitable to deliver AMPs.</p>
