CRUISE REPORT OF RESEARCH SHIP R/B NORPPA

Daily cruises between May 1st and September 30, 2007 to the Tisler Reef

| 1. | NAME OF RESEARCH SHIP | R/B Norppa | <u>CRUISE NO. 2007-02</u> | | |
|----|---|---|--|--|--|
| 2. | DATES OF CRUISE | From 2007-05-01 | То 2007-09-30 | | |
| 3. | OPERATING AUTHORITY: Jacobs University Bremen TELEPHONE: | +49-421 200 3254 | | | |
| | TELEFAX: | +49-421 200 3229 | | | |
| | Email: | l.thomsen@iu-bremen.de | | | |
| 4. | <u>OWNER (if different from no. 3)</u> | | | | |
| 5. | PARTICULARS OF SHIP: | Name: Nationality: Overall length: (in metres) Maximum draught: (in metres) Net tonnage: Propulsion e.g. diesel/steam: Call sign: Registration port and number (if registered fishing vessel) | Research Boat NORPPA German 6.4 m 0.5 m 1.6 tons Gasoline | | |
| 6. | | | | | |
| | Name of master: | | | | |
| | Number of crew: | 1 | | | |
| 7. | <u>SCIENTIFIC PERSONNEL</u> Name and address of scientist in c | Volker Karpen 1en, OceanLab, Campusring 8 | | | |
| | Tel/telex/fax no.: No. of scientists: | D- 28759 Bremen +49-421 200 3254, +49 1-4 | -421 200 3229 | | |
| 8. | <u>GEOGRAPHICAL AREA IN WHICH SHIP OPERATED</u> (with reference to latitude and longitude) Polygon, with limitations given below. 59° 03′,90 N, 10° 49′,45 E; 59° 03′,90 N, 11° 08′,76 E; | | | | |
| 9. | 58 [°] 57′,10 N, 10° 49′,45 E; 58 [°] 57′,10 N, 11° 04′,90 E <u>BRIEF DESCRIPTION OF PURPOSE OF CRUISE</u> | | | | |

BRIEF DESCRIPTION OF PURPOSE OF CRUISE

- 1. EU FP6 project HERMES. Interaction between cold-water coral reefs and passing water bodies
- 2. Education and Training for graduate students at TMBL for the HERMES project
- 3. Project in collaboration with Statoil: Effects of particulate matter on cold-water coral ecosystems

a) PURPOSE OF RESEARCH

1. EU FP6 project HERMES. Interaction between cold-water coral reefs and passing water bodies

2. Education and Training for graduate students at TMBL

3. Project in collaboration with Statoil in HERMES: Effects of particulate matter and sedimentation on cold-water coral ecosystems

b) GENERAL OPERATIONAL METHODS (including full description of any fish gear, trawl type, mesh size, etc.)

Camera-transects for studies on quality and quantity of benthic fauna. Studies will only be conducted in areas selected from bathymetric conditions. Camera-aided deployment of recording instruments. The following types of equipment will be used: Hummingbird Echosounder with GPS Olex navigational system Mini-ROV Camera type GNOM (max depth 200 m) Aanderaa RCM 9 Recording instrument (salinity, temperature, current, turbidity) and Aanderaa ADCP 600 (recording profiling current meter) Llist particle sizer Particle traps Time-lapse cameras Particle-Cameras Small Water sampler

The daily cruises were aimed to investigate fluxes of particulate matter along the Tisler reef. The work concentrated on the development of new video and image analyses to better and faster evaluate coral community structure and varying health status of corals. Further on New sensor systems for environmental monitoring of coral reefs with special emphasis on particle dynamics were tested and deployed.

During two major field campaigns in July and September a total of 29 video guided water samples from different depths (1 m to 5 m above bottom) and different locations across the reef (NW & SE of main reef structure, and mid-reef) for later C, N and Amino Acids analyses were taken.

- 33 deployments of a small Particle Camera at both the NW and SE edges of the reef and mid-reef took place

- 30 camera guided CTD and Oxygen Profiles of the water column at different locations across the reef were taken

The field campaign data are currently being analysed. 23 water samples of surface waters have been taken across the campaigns for amino acid and CN analysis.

<u>Results</u>

Sensor reliability and applicability

The Nortek ADCP and Aanderaa ADCP/turbidity, oxygen, fluorescence sensor-package have been found to operate well at the Tisler Reef. The LISST particle sizer is considered as an essential tool to model particle transport behaviour of fine material within the reef. It is is still undergoing testing to determine its applicability in monitoring coral reef environments.

Equipment necessary for video-mosaicing has been successfully tested. The work with filming and identifying areas with different coral health status will now begin in close collaboration with the TMBL labs. We will estimate health status by looking at e.g. proportion of dead/live polyps, overgrowth by other organisms and sediment coverage. After identifying areas where corals seem more healthy and less healthy, instruments to record hydrodynamics, particle fluxes, oxygen etc will be deployed by TMBL in 2008.

This results will lead to a better understanding of:

- The transport behaviour of particulate organic matter in the benthic boundary layer (BBL) within Coral Reefs and its implications for the marine carbon cycle.
- The alteration of lateral transported particulate matter by Coral reefs ecosystems and the composition, quantity and temporal variability of particulate organic matter (POM) exported from this systems.
- The influence of the exported POM on surrounding benthic communities and their carbon degradation behaviour and the role of these alteration and export processes in the benthic carbon cycle.

The NORPPA cruises allowed us to investigate the Tisler reef with small and sophisticated equipment. Samples were taken with video guided devices to prevent any damage for corals. The results will be presented during the 2008 annual HERMES workshop in Faro. Results show that the coral reef deposits large amounts of particles and exports mucus to the surrounding sediment communities. The collaborative partner StatoilHydro has been informed about the sensor tests and will use our results for the preparation of improved ecosystem monitoring. The results have also been presented during the first ESONET training workshop. ESONET aimes to develop long-term monitoring observatories for the deep waters around Europe. The sensors from the Tisler tests are currently implemented in long term landers for the University of Bergen, Jan Helge Fossa. We hope that you will allow us to proceed with our daily cruises in 2008. A proposal will be sent to you soon. Copies of publications will be sent to you asap.
