

Congenital Midline Upper Lip Sinuses: 3 Rare Cases

Submitted by Beatrice Guillaumat on Wed, 08/28/2019 - 10:15

Titre	Congenital Midline Upper Lip Sinuses: 3 Rare Cases
Type de publication	Article de revue
Auteur	Kün-Darbois, Jean-Daniel [1], Chatellier, Anne [2], Paré, Arnaud [3], Caillot, Aude [4], Ambroise, Béatrice [5], Bénateau, Hervé [6], Veysseyre, Alexis [7]
Editeur	Sage Journals
Type	Article scientifique dans une revue à comité de lecture
Année	2018
Langue	Anglais
Date	2018
Numéro	2
Pagination	292-295
Volume	55
Titre de la revue	Cleft Palate-Craniofacial Journal
ISSN	1545-1569
Mots-clés	Abnormalities, Multiple [8], Child [9], Child, Preschool [10], Cleft lip [11], Cleft palate [12], Female [13], Fistula [14], Humans [15], Infant, Newborn [16], Lip Diseases [17], Male [18]
Résumé en anglais	<p>Congenital sinuses of the upper lip are rare congenital malformations. There have been only 40 cases described in the literature. We report 3 cases of congenital midline upper lip sinus in Caucasian children. Two of those lesions were associated with other anomalies (complete cleft palate and hemifacial macrosomia or submucous cleft palate with bifid uvula). The pathophysiology remains unexplained yet. Congenital upper lip sinuses can be considered as possible microforms of cleft-lips. Associated anomalies are frequent and must be sought. The treatment is a full excision of the sinus tract and of the skin around the punctum in order to avoid risks of recurrence.</p>
