Data Management Plan

Expected Data: The PI will conduct a survey of participants to evaluate participants' satisfaction with the consortium and solicit suggestions for further developing the event's value proposition for doctoral students. The PI will also collect data about participants' dissertation topics and the research methods they are employing. We will use the same survey questions we used last year. The results from previous years surveys are attached to the main proposal.

Period of Data Retention: We will retain the raw data for up to three years before destroying it.

Data Formats and Dissemination: The surveys will be administered by pen and paper and collected at the end of the Doctoral Consortium. The data will be entered electronically and analyzed in Excel. The collected data will be archived and shared with other members of the Academy and CISE community in general through dissemination at the OCIS business meeting at the Academy of Management conference and in the OCIS newsletter.

Data Storage and Preservation of Access: The raw data will be stored in a password-protected file on the PI's laptop computer. It will be collected anonymously and no names or identifying information will be collected.

Additional Possible Data Management Requirements: N/A
