Present.   Publish.   Promote.

Digital Commons@Georgia Southern includes the following services free of charge to all Georgia Southern faculty.

Profiles & Metrics

SelectedWorks compile your information and scholarship in one place with options to upload materials or link to sites that contain your work.

Plum Analytics list the altmetrics (usage, captures, mentions, social media, citations) for your publications and presentations.

When your profiles are created, you will automatically be added to Georgia Southern's **Expertise Search**.

To create your sites, email Ashley Lowery your CV, expertise keywords, and photo.

Journals & Conferences

Digital Commons journal and conference sites are customizable and have a built-in peer-review process from submission to decision.

Data Curation

Many funding agencies and publishers now require that research data be made publicly available. Also, sharing data increases visibility and opportunities for collaboration.

Curate data in Digital Commons, ICPSR, and other data repositories available through the library. Contact the library to explore curation options as you prepare research and grant proposals.

Contact

For more information on Digital Commons services, contact **Ashley Lowery**, Digital Collections Specialist at alowery@georgiasouthern.edu

For more information about data curation services, contact **Jeff Mortimore**, Discovery Services and Data Curation Librarian, at jmortimore@georgiasouthern.edu
