# What's its Power?

Bend an ear to the deep baritone song of this marvel motor, and you'll know we aren't fooling when we call it Fireball.

What happens beneath that brawny Buick bonnet happens in no other car in the world.

Years ahead of the rush to high-compression valve-in-head engines, Buick was in there pitching for more power from every drop of

The result: a spectacular engineering phenomenon you feel the instant you touch toe to gas treadle. A rapid-fire sequence of tiny tornados, let loose their pent-up power every five inches a Buick travels.

If you could look inside that Fireball engine, you'd see why. Instead of the flat-topped pistons used in other cars, Buick uses a turbo-top piston, like this:

So the inrushing fuel whirlwinds into a compressed ball that adds a super-urge to the ownstroke of the piston.

you get the thrill - and thrift - of this Buick "first" in every mile you drive.

More, you get a tried-and-true engine that's

been polished and perfected in every detail up through the years.

Again and again, compression ratios have been stepped up to keep pace with advances in fuels. Self-setting valve lifters contribute to silence. Micropoise balance and Hi-Poised engine mountings add two more Buick

And the silken might of this Fireball's power has been made more beautifully obedient by still another "first"-Dynaflow Drive.\*

So we list as a prime reason why "smart buy's Buick" this Fireball power plant-and a host of happy owners will say "Amen."

Better see your dealer soon. #Standard on ROADMASTER, optional at extra cost on other Series

as tast as the prices increased demand for the larger

costs of producing these products are rising as tast as the prices being paid.

Under these conditions farmers have to make a good crop every year. A poor crop under such a financial structure will ruin the average farmer. With all the locally grown farm commodities being in strong demand, farmers can well afford to take a risk on trying to produce a large crop in 1951, Mr. Fanning thinks.

The value of farm property has increased materially in Georgia since 1940, but 70 per cent of this increase has been due to rise in prices, while a good feature of the present financial structure is due to the 30 per cent added to capital stock, such as tractors, livestock, and other working capital.

Loggerheads Still Deep-Sea Mystery

ALMOST everybody is convinced that the man who ate the first oyster was indeed an intrepid character. The gentleman who dined on the first loggerhead turtle egg must

be regarded as a chap of unquestionable courage and unflinching determination.

The egg is about the size of a golf ball with a soft, pliable shell. Before regulations were passed to protect the loggerhead eggs, some restaurants along the Georgia coast featured them.

Old loggerhead is a slow crawling.

deep-sea monster with power enough in its flippers to knock a man sprawling. Its powerful jaws could snap a broom

handle as you might snap a toothpick.

Remember post cards showing a bathing beauty riding the back of an enormous turtle?—that is old loggerhead.

An adult loggerhead could weigh 350 pounds although the average is about 250 pounds. In water it is agile and quick. No record has ever been received of a loggerhead attacking a human being in water. On land, the giant turtle is pitifully low. One can have only sympathy for it as it drags its huge body over the sand.

A party of men and women captured an enormous speci-

The fippers scratched and scraped into the sand. It gasped and groaned as if in great agony. Its breath was beavy and labored. Women in the party watched only a few moments and turned away and wept. One man filled his bat with water and spilled it over the turtle in an effort to relieve its suffering. It was generally agreed that it would be an act of extreme cruelty for anyone to attempt to ride the distressed and suffering turtle.

Mating occurs in the water early in the summer. In June, July and August, the female crawls onto the beach and into the sea oats, just out of the range of the high water mark.

beary and labored. Women in the party watched only a tew moments and turned away and wept. One man filled his bat with water and spilled if over the turtle in an effort to relieve its suffering. It was generally agreed that it would be an act of extreme cruelty for anyone to attempt to ride the distressed and suffering turtle.

Mating occurs in the water early in the summer. In June, July and August, the female cruelty so not the beach and into the sea cats, just out of the range of the high water mark. Using her flippers, she digs a bottle-shaped hole after which she deposits her eggs at the rate of 20 per minute. The deposit may run as high as 250 although the average is between 100 and 150 eggs.

This prolific mother ignores all disturbances once she starts depositing her eggs. Raccoons have been known to sit patiently a few feet away until the performance is complete and the hole covered, then dig up the eggs and dine. This maternal operation is said to always take place at night. Contrary togeneral belief, the turtle, when ready, comes out regardless of weather conditions or phase of the moon.

Occasionally, a female will climb too steep a sand dune and flip over. In this condition she is helpless and dies. Often she will lose her direction and wander about seeking water until she perishes.

It is estimated that 95% of the nests are destroyed by man, raccoons, sand crabs or foraging pigs. Biologists reported an alarming decrease in the species which brought shout the law for their protection. Chicken wire placed ever the nests have greatly helped survival. Before the less have been invited to be the chief design school the Gederate of the server developed to the species which brought shout the law for their protection. Chicken wire placed ever the nests have greatly helped survivals. It is estimated that 95% of the nests are destroyed by man, raccoons, sand crabs or foraging pigs. Biologists reported an alarming decrease in the species which brought about the law for their protection. Chicken wire placed ever the nests have greatly helped survival. Before the law, people staged "turtle egg hunts." People gathered at the nests and counted the eggs as they dropped. Then they filled bags with eggs. Many housewives have used the eggs to make cakes.

the eggs to make cakes.

Newly hatched turtles are about the size of a silver dollar.

From egg to turtle takes 59 days, depending on the temperature of the sand. Young turtles have an unerring sense of direction and head directly for water.

Loggerhead eggs are used by experimental biologists in embryological and physiological studies. These sea turtles have pro lactin, a hormone associated with milk production in mammals. "Why?" is an unsolved biological studies.

Loggerheads have barnacles attached which are a species seculiar to turtles alone and do not occur elsewhere. We do not know the loggerhead's habitat nor its complete diet and we assume it is safe from deep sea predators since it carries its own armour plate and would be a tough customer to

"EXHIBIT A"

cerpt from minutes of directors' Witness: eting held December 7, 1951. FRANCES THOMPSON, Excerpt from minutes of directors meeting held December 7, 1951.

"After proper discussion and consideration of our capital position and the high book value pershare of our stock, our directors approved the recommendation to our annual stockholders meeting to be held January 9, 1951, that we increase our capital stock from \$50,000 to \$100,000, same to be done by 100% stock dividend and this to be done by transferring \$50,000 from the Undivided Profits account to the Capital Account and the issuance of additional shares in equal amounts as now held by our stockholders."

I hereby certify that the above is a true and correct copy of except from directors meeting of the Bulloch County Bank, said meeting held December 7, 1950, and that I was present at said meeting.

W. G. COBB, Vice President.
