ACKNOWLEDGEMENTS

Preparation of this report was overseen by an advisory committee consisting of four members of the Mortgage Lending Committee of the Massachusetts Community and Banking Council (MCBC)—Tom Callahan of the Massachusetts Affordable Housing Alliance, Donna Haynes of Central Bank, Esther Schlorholtz of Boston Private Bank & Trust Company, and Kathy Schreck of the Massachusetts Mortgage Bankers Association—plus Kathleen Tullberg, MCBC’s manager. Rolf Goetze of the Boston Redevelopment Authority and Roy Williams of the Massachusetts State Data Center provided assistance with 2000 Census data. Stuart Ryan of Bank Maps LLC produced the map. Eileen Callahan of Eileen Callahan Design designed the report and prepared the PDF file for the on-line version of the report. In spite of helpful comments and suggestions received, the ideas and conclusions in this report are the responsibility of the author, and should not be attributed to officers or board members either of the MCBC or of the Gastón Institute at UMass/Boston.

This report is available online at: www.mcbc.info.

FOREWORD

The Massachusetts Community & Banking Council (MCBC) is pleased to offer *Changing Patterns XVI*, its annual report on mortgage lending to traditionally underserved borrowers and neighborhoods in Boston, Greater Boston and Massachusetts. Once again, the report incorporates the analysis of higher-cost mortgage loans previously presented in a separate series of *Borrowing Trouble* reports. In addition to the data presented in this report, MCBC is also providing data on all Massachusetts cities and towns in a set of on-line tables. MCBC hopes that this report and its supplementary data can help to increase access to fair credit for lower-income and minority homebuyers and homeowners by providing bankers, mortgage lenders, community representatives, regulators and others involved in the mortgage process with information on current mortgage lending patterns and the performance of major types of lenders.

MCBC was established in 1990 to bring together community organizations and financial institutions to affect positive change in the availability of credit and financial services across Massachusetts by encouraging community investment in low- and moderate-income and minority neighborhoods; promoting fair and equitable access to financial products and services for minority group members; and providing research, other information, assistance and direction in understanding and addressing the credit and financial needs of low- and moderate-income individuals and neighborhoods.

MCBC's Mortgage Lending Committee, which includes bank and mortgage company lenders, home buyer counseling and foreclosure prevention agency representatives, public officials and consumer and housing advocates, oversees preparation of this report. The Committee also works to identify other ways to expand homeownership opportunities for low- and moderate-income homebuyers and to sustain homeownership in low- and moderate-income neighborhoods. Over the last year and more,

MCBC's Mortgage Lending Committee has served as a forum for information sharing on the efforts of homebuyer counselors, non-profit organizations and public agencies to address the rising rate of foreclosures.

MCBC continues to support mortgage lending and homebuyer counseling programs that help to promote sustainable homeownership. For nearly ten years, MCBC's Mortgage Lending Committee has collaborated with the Massachusetts Housing Partnership Fund to track and report the quarterly performance of the SoftSecond Mortgage Loan Program. The SoftSecond Loan Program, now available statewide, has provided mortgage loans to over 13,700 income-qualified borrowers. In the third quarter of 2009, 1.39 percent of prime, fixed-rate loans in Massachusetts were in process of foreclosure. Among SoftSecond borrowers, the number of loans in process of foreclosure was 0.75 percent. SoftSecond borrowers are required to attend pre-purchase home buyer counseling and can also take advantage of post-purchase counseling and foreclosure intervention assistance.

This report and its supplementary tables, as well as earlier reports in the *Changing Patterns* series are available on MCBC's website at www.mcabc.info. Other MCBC reports, including *Expanding Homeownership Opportunity II: The SoftSecond Loan Program 1991–2006* and the Fair Lending Coordinating Committee report, *Expanding Fair Access to Credit*, are also available at this website, together with further information on MCBC's committees and programs.

MCBC is grateful to Bank of America, Boston Private Bank & Trust Company, Central Bank, Eastern Bank and Hyde Park Savings Bank for their help in distributing this report. MCBC depends on the financial support of its members to produce reports like *Changing Patterns*. MCBC thanks the following financial institutions for their 2009 membership:

EXECUTIVE SUMMARY

This is the sixteenth in the annual series of *Changing Patterns* reports prepared for the Massachusetts Community & Banking Council (MCBC) by the present author. The series is aptly named: mortgage lending since 1990 has indeed been characterized by “changing patterns.” In recent years, the major focus of the series shifted from concern for *fair access to credit* for traditionally underserved borrowers and neighborhoods to concern for *access to fair credit* for these same borrowers and neighborhoods. This reflects the extent to which the problem of *redlining* had become overshadowed by the problem of *reverse redlining*, whereby areas that previously had difficulty getting any mortgage loans at all became specifically targeted for higher-cost mortgage loans.

This year’s report offers information on patterns of mortgage lending during 2008, a year when there was very little subprime lending. While the limited subprime lending that remains continues to show substantial racial and ethnic disparities, this most recently changed pattern shifts attention back toward the original problem of fair access to good loans for traditionally underserved borrowers and neighborhoods.

The report presents information for the city of Boston, for Greater Boston, and for Massachusetts, as well as for each of the state’s fourteen counties and each of its thirty-three largest cities and towns. The primary data source is federal Home Mortgage Disclosure Act (HMDA) data for 2008, supplemented by data on population and income from the U.S. Census Bureau and annual data on metropolitan area income levels from the Department of Housing and Urban Development. The report is restricted to first-lien loans for owner-occupied homes. It gives particular attention to higher-cost loans, identified in HMDA data as having annual percentage rates (APRs) at least three percentage points higher than the current interest rate on long-term U.S. Treasury bonds; these loans are referred to in this report as **high-APR loans, or HALs**.

This “Executive Summary” highlights some of the most interesting findings presented in the following

pages. A more inclusive summary is provided by the bold-faced portions of the bullet points in the body of the report, and by the charts and tables that are interspersed with the text. Readers interested in additional detail will want to investigate the tables that follow the body of the report; these may be particularly useful for those interested in lending patterns in a particular community or region of the state.

Tables 1–28 provide data on lending patterns in Boston, Greater Boston, and Massachusetts. Tables 29–35 provide selected data on lending in the fourteen counties of Massachusetts, and Tables 36–42 provide data on lending in the state’s 33 largest cities and towns. Six supplemental tables, available online at www.mcabc.info, provide information on lending in all of the state’s 351 cities and towns.

- ❖ Both the HAL shares of total lending and the numbers of HALs were dramatically lower in 2008 than in previous years. Between 2006 and 2008 in the city of Boston, the HAL share of all loans fell from 25% to 4%, while the number of HALs fell from 3,651 loans to just 339.
- ❖ Even so, there were more than five thousand HALs in Massachusetts in 2008. HAL loan shares were highest in Springfield, Chicopee, and Brockton, but almost every city and town in Massachusetts—all but fifteen—received at least one HAL.
- ❖ HALs accounted for a substantially smaller percentage of loans in Massachusetts than they did nationwide. For home-purchase loans, the HAL loan shares were 4.6% in the state and 8.1% nationwide; for refinance loans, they were 3.9% in the state and 11.0% nationwide.
- ❖ Black and Latino borrowers in Boston, Greater Boston, and statewide received shares of total prime loans that were far below their shares of total households. In Boston, blacks made up 21.1% of households, but received only 9.5% of prime home-purchase loans and 8.1% of prime refinance loans. Latinos made up 13.6% of Boston households, but received only 5.3% of

prime home-purchase loans and 4.3% of prime refinance loans.

- ❖ Total home-purchase lending to blacks and Latinos was highly concentrated in a small number of the state's cities and towns, and entirely absent in many others. Just four cities and towns (Boston, Brockton, Springfield, and Randolph) accounted for over one-half of total loans to blacks in Massachusetts, and eight communities received over half of all lending to Latinos in the state. At the same time, blacks received no home-purchase loans in 189 of the state's 351 cities and towns and there were 132 communities where Latinos received no loans.
- ❖ Black and Latino borrowers were much more likely to receive HALs than were their white or Asian counterparts. Among homebuyers in Greater Boston, for example, the HAL loan shares were 10.0% for blacks and 8.1% for Latinos, but only 3.2% for whites. In other words, black homebuyers in Greater Boston were 3.1 times more likely, and Latinos were 2.5 times more likely, to get their home-purchase loan in the form of a HAL than were their white counterparts.
- ❖ HAL loan shares were higher for borrowers with lower incomes. For home-purchase loans statewide, for example, HAL loan shares ranged from 7.0% for low-income borrowers to 1.8% for borrowers in the highest income category.
- ❖ When borrowers are grouped by both race/ethnicity and income level, HAL loan shares for blacks and Latinos are usually substantially higher than HAL shares for white borrowers in the same income categories. For example, among homebuyers in Greater Boston with incomes of \$170,000 or more, blacks were 5.0 times more likely to receive a HAL than their white counterparts, and Latinos were 2.8 times more likely than whites to receive a HAL.
- ❖ HAL lending varied dramatically among Boston's major neighborhoods. For home-purchase loans, HAL shares ranged from 12.7% in Roxbury to 1.1% in Fenway/Kenmore. For home-purchase loans statewide, the HAL loan share in low-income census tracts was 4.6 times greater than that in upper-income tracts and the HAL loan share in predominantly minority tracts was 3.2 times greater than in predominantly white tracts.
- ❖ Denial rates on mortgage loan applications by blacks and Latinos were more than twice as high as the denial rates on applications by whites. For example, the denial rates on applications for home-purchase loans in Greater Boston were 27.8% for blacks, 25.1% for Latinos, and 10.3% for whites. When applicants are grouped into income categories, the denial rates for blacks and for Latinos were in every case well above the denial rates for white applicants in the same income category.
- ❖ Subprime lenders accounted for just 0.5% of all loans both in Boston and statewide, down from a peak loan share of 19%. Massachusetts banks and credit unions made 39.1% of all home-purchase loans in Boston, their highest market share since 1998.
- ❖ Massachusetts banks and credit unions (whose local performance in meeting community credit needs is subject to evaluation under the Community Reinvestment Act [CRA]) directed a substantially greater share of their total loans as prime loans—and a substantially smaller share of their total loans as HALs—to every one of the categories of traditionally underserved borrowers and neighborhoods examined in this report than did other types of lenders.
- ❖ The Bank of America “lender family” was by far the biggest lender both in Boston and statewide. Indeed, the two major individual lenders in this family—Countrywide Bank and Bank of America, NA—each made substantially more loans than the second ranked lender. Mortgage Master ranked second in Boston and third statewide, Wells Fargo was second statewide and third in Boston, and JPMorgan Chase ranked fourth in both areas. These top four lender families accounted for 36% of total loans in Boston and 25% in Massachusetts.
- ❖ Only two of the top ten overall lenders in the state (Bank of America and Sovereign, ranked #1 and #5), and eight of the top thirty, were fully or

partially covered by the CRA for their Massachusetts lending. The state's new Mortgage Lender Community Investment (MLCI) regulation, imposing CRA-like responsibilities on licensed mortgage lenders, was finalized in September 2008 and the first MLCI performance evaluations became public in October 2009. Eleven of the top thirty lending families in the state, including four of the top ten, consisted entirely or partially of licensed mortgage lenders.

- ❖ For the great majority of lenders, HALs made up much greater shares of their total loans to blacks and Latinos than of their total loans to whites. For the top five HAL lending families in Boston, the average black/white disparity ratio was 3.46 and the average Latino/white disparity ratio was 3.10. Mortgage Master, the third biggest overall lender but only the seventh biggest HAL lender, had a black/white disparity ratio of 4.85 and a Latino/white disparity ratio of 6.92.

INTRODUCTION

This report is the sixteenth in an annual series of studies that was initiated by *Changing Patterns: Mortgage Lending in Boston, 1990–1993*.¹ The report includes information on lending in Boston, Greater Boston, and Massachusetts, as well as in the state's fourteen counties and in its thirty-three largest cities and towns. In addition, a set of on-line tables provides selected data for every Massachusetts municipality.

The series is aptly named: mortgage lending since 1990 has indeed been characterized by “changing patterns.” In the early 1990s, Massachusetts banks, responding to community and regulatory pressures to fulfill their obligations under the state and/or federal Community Reinvestment Act (CRA), greatly increased their lending to the lower-income and minority borrowers and neighborhoods that had previously been underserved. In the following years, however, these banks lost most of their total market share to other lenders whose local lending was not covered by the CRA. In the middle 1990s, subprime lending began its explosive growth. Although subprime loans initially consisted overwhelmingly of loans to refinance existing mortgages, by 2003 they had become a larger share of home-purchase loans than of refinance loans. And all this was before the dramatic changes associated with the boom-and-bust developments in mortgage lending between 2004 and the present that resulted in the current foreclosure crisis.

This report offers information on patterns of mortgage lending during 2008, a year when the overall volume of mortgage lending fell for the fifth consecutive year and when there was very little subprime lending. As documented below, the number of high-cost loans statewide in 2008 was down 88% from the peak reached in 2005, and lenders specializing in subprime lending accounted for only 0.5% of total loans in the state in 2008, down from over 19% in 2006.

The basic goal which motivated the Massachusetts Community & Banking Council (MCBC) to initiate the *Changing Patterns* series of reports was to increase access to home-purchase mortgage loans—and, thus, access to homeownership—for traditionally underserved borrowers and neighborhoods. In the early 1990s, mortgages themselves were a relatively standard product, which potential home-buyers either got or didn't get. With the growth of subprime lending, however, a very different concern became increasingly important: the proliferation of higher-cost mortgage loans to the same borrowers and in the same neighborhoods that had traditionally been underserved. In short, concern shifted to include not only *fair access to credit* but also *access to fair credit*.²

Expressed differently, the problem of *redlining* became overshadowed by concern with *reverse redlining*, whereby areas that previously had difficulty getting any mortgage loans at all became specifically targeted for higher-cost mortgage loans. Predatory lenders pushed loans characterized by egregiously high interest rates and fees, unconscionable features, and/or highly deceptive sales practices. These loans were often aimed at stripping away the accumulated equity of vulnerable home owners, and they too often resulted in borrowers losing their homes.

More than a decade later, in light of the on-going foreclosure epidemic, it is particularly important to note that there is considerable evidence of a strong correlation between subprime lending and subsequent foreclosures. The Mortgage Bankers Association reported that the percentage of loans in the foreclosure process nationwide at the end of the third quarter of 2009 was 3.20% for prime loans (up from 1.58% a year earlier) and 15.35% for subprime loans (up from 12.55%).³ Closer to home, the City of Boston's Department of Neighborhood Development

¹ This year's report again incorporates the analysis of subprime lending previously presented in a companion series that ended with *Borrowing Trouble VII: Higher-Cost Mortgage Lending in Boston, Greater Boston and Massachusetts, 2005*.

² This shift is discussed in “From Fair Access to Credit to Access to Fair Credit,” Chapter 5 of Dan Immergluck, *Credit to the Community: Community Reinvestment and Fair Lending Policy in the United States* (M.E. Sharpe, 2004).

³ Mortgage Bankers Association, “Delinquencies Increase, Foreclosure Starts Flat in Latest MBA National Delinquency Survey,” December 5, 2008, and “Delinquencies Continue to Climb in Latest MBA National Delinquency Survey,” November 19, 2009. Available at: www.mbaa.org/newsandmedia.

found not only that the four Boston neighborhoods where the rate of foreclosure petitions were highest in 2007 were the same four neighborhoods where the rate of higher-cost lending was found to be highest in previous *Changing Patterns* reports, but also that “the top originating lenders of foreclosed loans were identified as top [high-cost] lenders in 2004, 2005, and 2006 by [these] reports.”⁴ In addition, researchers at the Federal Reserve Bank of Boston found that foreclosure rates tended to be high in the same Massachusetts communities in which rates of subprime lending were high.⁵

The main data source for this report is the Home Mortgage Disclosure Act (HMDA) data released annually by the Federal Financial Institutions Examination Council. HMDA data include information from almost all lenders who make substantial numbers of mortgage loans. For each loan application received, the data include the income, race, ethnicity, and sex of the applicant; the location of the property; whether the loan is for home-purchase, refinance, or home improvement; whether the loan is secured by a first lien or a junior lien on the property; and whether or not the loan is for an owner-occupied home. HMDA data also include limited information on the pricing of some higher-cost loans. In particular, lenders are required to compare the **annual percentage rate (APR)** on each mortgage loan to the current interest rate on U.S. Treasury securities of the same maturity. If the “spread” between the loan’s APR and the interest rate on the corresponding Treasury security is three percentage points or more for a first-lien loan (five percentage points or more for a junior-lien loan), then the spread for that loan must be reported in the lender’s HMDA data. **In this report, loans with**

reported rate spreads are referred to as “high-APR loans” or “HALs.”

The primary focus of many of this report’s tables and charts is to provide information on HALs as a share of all loans made to different categories of borrowers and in different geographical areas. To this end, the report draws on two major sources of data in addition to HMDA data. First, the estimates of the 2008 median family income (MFI) in each metropolitan area produced by the U.S. Department of Housing and Urban Development (HUD) are used to place borrowers into income categories. Second, information from the 2000 U.S. Census is utilized so that analysis of HAL lending patterns in terms of the income level and race of the *borrowers* who receive the loans can be supplemented by analysis of patterns in terms of the income level and percentage of minority households in the *geographic areas* where the loans were made. The “Notes on Data and Methods” at the end of the report provide details on the definitions and sources of the data used and on how the data were processed in preparing the report’s tables and charts.

The analysis in this report is limited to first-lien loans for owner-occupied homes, both home-purchase loans and refinance loans. That is, it excludes (1) second mortgages and other junior-lien loans,⁶ and (2) loans for homes that borrowers will not be occupying as a principal residence. Appendix Table 1 provides detailed data on the numbers and percentages of different types of loans in Massachusetts. It shows that first-lien loans for owner-occupied homes accounted for 84.4% of all loans in the state, that first-lien loans for non-owner-occupied homes accounted for 9.8%, and that junior-

⁴ City of Boston, Department of Neighborhood Development, “Foreclosure Trends 2007,” pages 2 and 8. Similar findings are reported in “Foreclosure Trends 2008,” p. 9. Available at: www.cityofboston.gov/dnd/PDFs/U_2007_Foreclosure_Trends.pdf and www.cityofboston.gov/dnd/PDFs/U_2008_Foreclosure_Trends.pdf.

⁵ For example, Ricardo Borgos, Prabal Chakrabarti, and Julia Reade found, for Massachusetts cities and towns, not only that “the correlation between higher-cost lending and foreclosure rates is strong,” but also that “higher foreclosure rates were more closely associated with higher-cost lending than with high rates of poverty.” (*Understanding Foreclosure Rates in Massachusetts*, Community Affairs Discussion Paper 07-1, Federal Reserve Bank of Boston, March 2007, page 7).

⁶ Junior-lien home-purchase loans—sometimes referred to as “piggyback loans”—became very common a few years ago, although they were seldom used in 2008. These loans provided a way of avoiding the cost of private mortgage insurance, which is generally required when the loan amount is greater than 80% of the value of the home being purchased. Thus, borrowers received a first-lien loan for 80% of the value of the home and a second, junior-lien mortgage for the additional amount being borrowed (20% of the home’s value in the case of a zero-down-payment loan). Restricting the analysis to first-lien loans avoids double-counting home buyers who obtained piggy-back second mortgages.

lien loans accounted for the remaining 5.8%.⁷ Appendix Table 2 provides information on the percentages of HAL loans—overall and by the race/ethnicity of borrowers—for both first-lien and junior-lien loans.

The principal goal of this report, like its predecessors, is to contribute to improving the performance of mortgage lenders in meeting the needs of traditionally underserved borrowers and neighborhoods by presenting a careful *description* of what has happened that all interested parties—community groups, consumer advocates, banks and other lenders, regulators, and policy-makers—can agree is fair and accurate. This series of reports offers neither *explanations* of why the observed trends have occurred nor *evaluations* of how well lenders have performed. Rather, its descriptive contributions are intended to be important annual inputs into the complex, ongoing tasks of explanation and evaluation.

For many readers, this report’s main contribution will consist of the wealth of information contained in its forty-six pages of tables, especially data about individual municipalities or counties of particular interest.⁸ No attempt is made to summarize all of this information in the pages that follow.

For those seeking an overview, however, the following pages of text, charts, and simple tables attempt to highlight some of the most significant findings that emerge from an analysis of the data for Boston, Greater Boston, and Massachusetts, with limited attention to other areas. (In this report, *Greater Boston* is defined as consisting of the 101 cities and towns in the Metropolitan Area Planning

Council [MAPC] region.⁹) The remaining sections of the report are organized as follows:

- ❖ Part I presents information on the overall level of high-APR mortgage lending.
- ❖ Part II analyzes patterns of lending to borrowers grouped by race/ethnicity and by income level.
- ❖ Part III examines patterns of lending in neighborhoods. The analysis looks at census tracts grouped by income level and by percentage of minority households, as well as at Boston’s major neighborhoods.
- ❖ Part IV summarizes data on denial rates, highlighting racial/ethnic disparities.
- ❖ Part V focuses on the relative importance and differential patterns of lending by three major types of mortgage lenders.
- ❖ Part VI presents information on the biggest lenders—both overall and for high-APR loans—both in Boston and statewide.
- ❖ Part VII offers information on a few matters not covered elsewhere in the report: the magnitude of the costs imposed on borrowers who obtain HALs rather than prime loans; the limitations of currently available HMDA data; the initial implementation of a regulation imposing CRA-type obligations on the state’s licensed mortgage lenders; and the dramatic increase in FHA-insured mortgage lending.
- ❖ Finally, a section of “Notes on Data and Methods” provides considerable detail on a number of technical matters.

⁷ Some analysts restrict their coverage to conventional loans and/or to site-built homes (i.e., they exclude government-backed [VA and FHA] loans and/or loans for manufactured homes). The *Changing Patterns* reports have not restricted coverage in this way, because the numbers of government-backed loans and loans for manufactured home in Massachusetts have been so small that their impact on the analysis was negligible. In 2006, for example, government-backed loans accounted for only 1.0% of total loans and loans for manufactured homes made up just 0.2% of total loans. In 2008, however, FHA lending expanded dramatically; this development is noted in the introduction to Part I and discussed in Part VII.

⁸ Additional tables, available in the reports section of the website of the Massachusetts Community & Banking Council (www.mcbc.info) provide **information on mortgage lending in all of the cities and towns in Massachusetts**. The format of the six on-line tables is the same as the corresponding tables in this report that provide information for the state’s 33 largest cities and towns (Tables 36–40 and 42). It should be noted that these on-line tables do not provide individual data for all 351 of the state’s cities and towns; this is because census tracts are the smallest geographic units for which HMDA data are reported, and 68 towns in Massachusetts are too small to have even one census tract of their own. In these cases, information is reported for the set of towns that share a single tract (for example, Truro and Wellfleet in Barnstable County).

⁹ More information on the MAPC region and on the MAPC itself—a regional planning agency established by the state in 1963—is available at www.mapc.org. Another widely used definition of “Greater Boston” is the Boston Metropolitan Statistical Area (MSA), the Massachusetts portion of which is currently defined by the federal government to include the 147 communities in Essex, Middlesex, Norfolk, Plymouth, and Suffolk counties. A map of the MAPC region and the Boston MSA precedes Table 1.

I. THE OVERALL LEVEL OF HIGHER-COST MORTGAGE LENDING

Before examining the distribution of **high-APR loans (HALs)** among different categories of borrowers and neighborhoods, this brief section reports on how large a share of total mortgage lending was accounted for by these loans. The findings presented in the bullet points and chart below are based on detailed tables that follow the text of this report. Tables 1 and 2 provide information on mortgage lending in the city of Boston, in the Greater Boston area, in Massachusetts; data for the fourteen counties of Massachusetts and for its thirty-three largest cities and towns are presented in Tables 29 and 36, respectively. For each geographical area, the tables provide information on the number of mortgage loans, the number of HALs, and the percentage of all loans that are HALs; this information is provided separately for home-purchase loans and refinance loans. This section provides no information on the dramatic rise in FHA loans during 2008.¹⁰ Among the main findings that emerge from analysis of these tables are the following:

- ❖ **Both HAL shares of total lending and the numbers of HALs were dramatically lower in 2008 than in previous years.** Statewide, the HAL share of all loans (home-purchase plus refinance) fell from 22.2% in 2006 to 4.2% in

2008, while the number of HALs dropped from 40,173 to 5,138 during the same period. In the city of Boston, the HAL share declined from 24.6% to 3.8% of all loans, while the number of HALs fell from 3,651 loans in 2006 to 339 loans in 2008. The declines were roughly comparable for Greater Boston, and for home-purchase loans and refinance loans considered separately in each area. In 2008, the percentages of HALs were somewhat higher for home-purchase loans than for refinance loans (for example, in Greater Boston HALs accounted for 3.5% of home-purchase loans and for 2.6% of refinance loans). (Tables 1 & 2 and Exhibit 1)

- ❖ **Even so, there were more than five thousand high-APR loans (HALs) in 2008 in Massachusetts—2,361 loans to finance home purchases and 2,777 refinance loans.** Borrowers in Greater Boston received about eighteen hundred HALs (920 home-purchase plus 902 refinance). In the city of Boston, there were 339 HALs (198 home-purchase plus 141 refinance). (Table 1)
- ❖ **High-APR loans accounted for a substantially smaller percentage of loans in Massachusetts than they did nationwide.** For home-purchase loans, the HAL loan shares were 4.6% in the state

EXHIBIT I: Overall HAL Loan Shares, 2006 & 2008

Source: Table 2

¹⁰ The *Changing Pattern* series of reports has never distinguished conventional from government-backed (e.g., FHA-insured) mortgages because the latter have usually accounted for only about one percent of all loans here; in 2007 their share of total lending doubled to 2.1%. In 2008, however, government-backed loans accounted for 12.4% of all mortgage loans in Massachusetts, including 14.3% of first-lien loans for owner-occupied homes. This sharp increase in government-backed lending is discussed in Section VII.

and 8.1% nationwide; for refinance loans, they were 3.9% in the state and 11.0% nationwide.¹¹

- ❖ **Among the state's thirty-three biggest cities,¹² HAL loan shares were highest in Springfield** (where they accounted for 13.1% of all home-purchase loans and 17.2% of all refinance loans), **Chicopee** (8.4% and 13.6%) and **Brockton** (12.9% and 8.3%). Among these thirty-three cities, Springfield and Brockton have the second and third highest percentages (behind Boston) of black households, and Springfield has the second highest percentage of Latino households (behind Lawrence). (Table 36)

- ❖ **Almost every city and town in Massachusetts¹³—all but fifteen—received at least one high-APR loan (HAL) in 2008.** Weston, which has the highest median family income (MFI) of any community in the state (\$181,041, according to the 2000 Census), received two HALs. Dover, with the second highest MFI, did not receive a HAL, but Carlisle, which had the third highest MFI, received three HALs. The fifteen communities that did not receive HALs were Chatham, Dover, Dunstable, Florida, Harvard, Monterey, Pelham, Peru, Provincetown, Savoy, Stockbridge, West Newbury, West Stockbridge, Tyringham, and Windsor. (Supplemental Table 1, available online)

II. LENDING BY BORROWER RACE/ETHNICITY AND INCOME

In all areas of Massachusetts, black and Latino borrowers were much more likely than their white counterparts to receive **high-APR loans (HALs)**. At the same time, blacks and Latinos received shares of total **prime loans (a term we use here as equivalent to “non-HAL loans”)** that were disproportionately small compared to their shares of total households. The pattern with respect to HAL loans can be seen from two different perspectives. On the one hand, HALs made up much larger shares of all loans to black and Latino borrowers than they did of all loans to white borrowers. On the other hand, blacks and Latinos received much larger shares of total HALs than they received of total prime loans. When borrowers are grouped by income level, HAL loan shares were greater for borrowers with lower

incomes, although only a minority of total HALs went to low- and moderate income borrowers. When borrowers are classified by both race and income, the disparities between black and Latino borrowers and white borrowers tend to be *greater* at higher income levels.¹⁴

- ❖ **Black borrowers in Boston, Greater Boston, and statewide received shares of total prime loans that were far below their shares of total households. In Boston, for example, blacks made up 21.1% of households, but received only 9.5% of prime home-purchase loans and 8.1% of prime refinance loans.** Statewide, the black household share was 4.6%, but black loan shares were just 3.1% for prime home-purchase

¹¹ Nationwide HAL shares were calculated from data in Table 9 of Robert B. Avery, *et al.*, “The 2008 HMDA Data: The Mortgage Market during a Turbulent Year,” *Federal Reserve Bulletin*, 2009 [forthcoming]. These percentages are for conventional and government-backed first-lien loans on owner-occupied site-built homes. The overall percentage used in Exhibit 1 is from the same source, and the 2006 nationwide percentages in Exhibit 1 were calculated from data in Table 4 of Robert B. Avery, Kenneth P. Brevoort, and Glenn B. Canner, “The 2006 HMDA Data,” *Federal Reserve Bulletin*, December 2007.

¹² Although five of the state's thirty-three largest municipalities, as listed in Table 36, are officially towns, the municipalities will be referred to collectively as “cities” throughout this report. The five towns are: Arlington, Brookline, Framingham, Plymouth, and Weymouth. The smallest city or town among the biggest thirty-three is Westfield, with a population of 40,072.

¹³ More precisely, this should say “every city and town in Massachusetts that consists of at least one entire census tract, plus every multi-town census tract.” Of the 351 cities and towns in the state, only 283 are large enough to have at least one census tract entirely to themselves. The other 68 towns share a total of 23 census tracts, with the number of towns that share a single census tract ranging from two to six. Census tracts are the smallest geographical area for which HMDA data are available, so it is impossible to determine which towns received the loans made in these 23 census tracts.

¹⁴ Appendix Table 3 and the accompanying Chart A-3 update the table and chart from previous *Changing Patterns* reports that have tracked the number and percentage of all home-purchase loans (not just HALs) that have gone to borrowers of different races/ethnicities in Boston since 1990. In addition, information on the share of all loans (not just HALs) that went to borrowers at various income levels is presented in the bottom half of Table 4, and Appendix Table 4 and Chart A-4 provide data on the number and percentages of all loans that went to borrowers at different income levels in the city of Boston since 1990. This information is provided for readers who may be interested; none of it is discussed in the text of this report.

EXHIBIT 2: HAL Loan Shares by Race, Greater Boston, 2008

Source: Table 3

loans and 1.9% for prime refinance loans.¹⁵ (Panel II of Table 3)

- ❖ **Latino borrowers in Boston, Greater Boston, and statewide also received shares of total prime loans that were well below their shares of total households. In Boston, for example, Latinos made up 13.6% of households, but received only 5.3% of prime home-purchase loans and 4.3% of prime refinance loans.** Statewide, the Latino household share was 6.9%, but Latino loan shares were 4.7% for prime home-purchase loans and just 2.4% for prime refinance loans. (Panel II of Table 3)
- ❖ Black and Latino borrowers in Boston, in Greater Boston, and statewide were much more likely to receive HALs than were their white or Asian counterparts. **Among homebuyers in Greater Boston in 2008, the HAL loan shares were 10.0% for blacks and 8.1% for Latinos, but only 3.2% for whites. Accordingly, the black/white disparity ratio was 3.1 and the Latino/white disparity ratio was 2.5; this black/white disparity ratio, for example, indicates that black**

homebuyers in Greater Boston were 3.1 times more likely to get a HAL than were their white counterparts. For *refinance loans* in Greater Boston, HALs accounted for 9.4% of loans to blacks and 4.9% of loans to Latinos, but only 2.5% of loans to whites, for a black/white disparity ratio of 3.8 and a Latino/white disparity ratio of 2.0. For home-purchase loans in the city of Boston, the black/white and Latino/white disparity ratios both were 3.1, while statewide the black/white disparity ratio was 2.6 and the Latino/white disparity ratio was 2.3. HAL loan shares were consistently much *lower* for Asian borrowers than for whites. (Exhibit 2 & Table 3)

- ❖ The dramatic racial/ethnic disparities in high-cost mortgage lending can be illuminated from a different perspective by noting that **while black homebuyers in Greater Boston received just 3.4% of all prime loans in 2008, their share of all HAL loans was three times greater—10.1%. Similarly, while Latino homebuyers received only 4.1% of all prime loans in Greater Boston, their share of all HAL loans was almost two and one-half times greater—9.8%.** (Table 3, Panel II)

¹⁵ The black and Latino household shares in this paragraph and the next are for 2008, calculated using data from the Census Bureau's American Fact Finder (www.census.gov). The black household shares both in Boston and statewide decreased slightly between 2000 and 2008: from 21.4% to 21.1% in Boston and from 4.7% to 4.6% statewide. The Latino household shares both in Boston and statewide increased between 2000 and 2008: from 10.6% to 13.6% in Boston and from 4.9% to 6.9% statewide. Calculations for 2000 were based on data in Tables H9 and H10 of Summary File 3 data. Calculations for 2008 were based on data in Tables B11001, B11001B, and B11001I of American Community Survey 1-year estimates for 2008. The method used for these calculations was consistent for the two dates; it produced percentages for 2000 that differ slightly from those shown in Table 1.

EXHIBIT 3: Black and Latino Homebuyer Shares of All Loans, Ten Biggest Cities in Massachusetts, 2008

	Black share of total		Latino share of total	
	non-HALs	HALs	non-HALs	HALs
Boston	9.5%	23.7%	5.3%	13.6%
Worcester	7.7%	11.6%	7.7%	8.4%
Springfield	12.8%	15.6%	21.1%	30.3%
Lowell	1.2%	1.6%	8.2%	6.3%
Cambridge	2.2%	0.0%	3.0%	0.0%
Brockton	32.6%	37.5%	10.2%	9.4%
New Bedford	6.7%	6.3%	8.5%	15.6%
Fall River	3.0%	3.3%	2.6%	10.0%
Lynn	4.4%	12.7%	21.3%	15.9%
Quincy	1.3%	0.0%	2.0%	8.0%

Source: Table 39

- ❖ The general patterns of HAL loan shares being substantially higher for black and Latino borrowers than for their white counterparts, and of blacks and Latinos having substantially larger shares of HALs than of prime loans, were also present in many of the state’s counties and largest cities. (See Tables 30–31 [for counties], Tables 37–40 [for cities], and Exhibit 3)
- ❖ When borrowers in Boston, Greater Boston, and Massachusetts are grouped into five income categories, HAL loan shares in 2008 were higher for borrowers with lower incomes. For home-purchase loans statewide, for example, HAL loan shares ranged from 7.0% for low-income borrowers to 1.8% for highest-income borrowers, with shares falling steadily for the three intermediate income groups. This finding represents a significant change from 2007, when middle-income and high-income borrowers generally had *larger* HAL loan shares than low-income and moderate-income borrowers. This general pattern (and the reversal from 2007) held in Boston, in Greater Boston,

EXHIBIT 4: HAL Loan Shares by Income, Massachusetts, 2008

Source: Table 4

and in Massachusetts as a whole, and for both home-purchase and refinance loans. The median family income in the Boston MSA in 2008 was \$84,300, so low- and moderate income borrowers were those with incomes up to \$67,000 and middle- and high-income borrowers had incomes between \$68,000 and \$169,000.¹⁶ (Table 4 and Exhibit 4)

- ❖ Looking at the *numbers* of loans to borrowers at different income levels, however, shows that **low- and moderate-income borrowers still received a minority of HAL loans**. For home-purchase loans, low- and moderate-income (LMI) borrowers received 33.5% of all HALs in Boston, 31.8% of all HALs in Greater Boston, and 41.2% of HALs statewide. These loan shares are sharply up from 2007, when the HAL home-purchase loan shares of LMI borrowers were 11.9% in Boston, 15.5% in Greater Boston, and 25.3% in Massachusetts. (Table 4)¹⁷
- ❖ **When borrowers are grouped by both race/ethnicity and income level, the HAL loan shares for blacks and Latinos are usually substantially higher than the HAL shares for white borrowers in the same income category.**

Furthermore, the disparities in HAL shares tend to increase as the income level increases. These general patterns are the same for Boston (Table 6), for Greater Boston (Table 7), and for the entire state (Table 8). Black/white and Latino/white disparity ratios are generally greatest in either the “high” or “highest” income categories. (High-income borrowers in the Boston MSA in 2008 were those with incomes between \$102,000 and \$169,000 and highest-income borrowers were those with incomes of \$170,000 or more.) For brevity, only two specific examples will be provided here. **In Greater Boston, 10.6% of high-income blacks and 9.3% of high-income Latinos received their home-purchase loans in the form of HALs, while the HAL loan share was 3.0% for high-income whites. For the highest-income homebuyers in Greater Boston, the HAL loan shares were 8.1% for blacks, 4.5% for Latinos, and 1.6% for whites.** This means that among homebuyers with reported incomes of \$170,000 or more, blacks were 5.0 times more likely to receive a HAL than their white counterparts, and Latinos were 2.8 times more likely than whites to receive their mortgage in the form of a HAL. (Tables 6–8)

III. LENDING BY NEIGHBORHOOD RACE/ETHNICITY AND INCOME

In this part of the report the focus is on the characteristics of the *geographical areas* where high-APR loans (HALs) were made rather than on the characteristics of the *borrowers* who received such loans. The data in Tables 9–12 provide clear evidence that high-APR loans (HALs) are concentrated

disproportionately in areas where the percentage of minority residents is high and in areas where income levels are low (often, these are the same areas).

Table 9 (Boston), Table 10 (Greater Boston), and Table 11 (Massachusetts) classify census tracts by

¹⁶ Following standard practice in mortgage lending studies, these income categories are defined in relationship to the median family income (MFI) in the metropolitan area in which the home is located. Standard practice is to divide borrowers into four income categories: less than 50% of the MFI of the metro area is “low-income”; between 50% and 80% is “moderate-income”; between 80% and 120% is “middle-income”; and over 120% is “upper-income.” **In this report, the standard “upper-income” category for borrowers is subdivided into “high-income” (between 120% and 200% of the MFI in the relevant metropolitan area) and “highest-income” (more than double the MFI in the metro area).** This report also differs from standard practice in using the MFI of the Boston MSA for all communities in that five-county region. The standard practice for analysis of HMDA data now is based on the division of the Boston MSA into three Metropolitan Divisions (MDs), each with its own MFI. This report deviates from the standard practice because it makes no sense to treat, for example, Cambridge and Boston as being in different metropolitan areas. Note: HMDA data only reports borrower income to the nearest thousand dollars. See “Notes on Data and Methods” for more detailed information on metropolitan areas and MFIs.

¹⁷ Information on lending to borrowers at different income levels is provided for counties in Table 32 and for the state’s 33 biggest cities in Table 41. In a substantial majority of cases, HALs made up larger shares of total loans to low- and moderate-income (LMI) borrowers than of total loans to their middle- and high-income counterparts, although LMI borrowers received smaller *numbers* of HALs.

both race/ethnicity and income level.¹⁸ In each panel of these tables, the first four rows and columns of numbers provide information on tracts classified by both income level and race/ethnicity; the bottom row provides information for the total of all tracts at each income level; and the right-most column provides information for the total of all tracts in each racial/ethnic category. Panel A indicates the distribution of census tracts among categories; Panels B–D provide information on home-purchase lending: total number of loans, share of these loans that are HALs, and HAL-share disparity ratios (expressed as the ratio of each HAL share to the HAL share in upper-income, predominantly white tracts); and Panels E–G provide the same information on refinance lending. These tables show that high-APR loans account for greatly disproportionate shares of total lending in traditionally underserved neighborhoods—that is, in census tracts with low income levels and high concentrations of minority households. The first two bullets summarize results for home-purchase lending in Boston and statewide; the patterns that emerge from the table for Greater Boston are similar.

- ❖ **For home-purchase loans in the city of Boston in 2008, the HAL share in low-income census tracts was almost five times greater than that in upper-income tracts (6.3% vs. 1.3%) and the HAL loan share in predominantly minority tracts (those with more than 75% minority households) was almost four times greater than that in predominantly white tracts (11.4% vs. 2.9%).** For tracts in every income category, the HAL share rises consistently as the percentage of minority households increases.¹⁹ The concentration of high-APR lending is greatest in the predominantly minority census tracts (all of these tracts are low- or moderate-income). **For**

home-purchase loans in Boston, the HAL shares for low-income predominantly minority tracts was more than ten times higher than the HAL share in upper-income predominantly white tracts. (Table 9)

- ❖ **For home-purchase loans in the state as a whole, the HAL loan share in low-income census tracts was 4.6 times greater than that in upper-income tracts (10.2% vs. 2.2%) and the HAL loan share in predominantly minority tracts was 3.2 times greater than in predominantly white tracts (12.9% vs. 4.0%).** For tracts in every income category, the HAL share rises consistently as the percentage of minority households increases. The concentration of high-APR lending is greatest in the census tracts with lower income levels and with high percentages of minority households; the HAL share for low-income predominantly minority tracts was almost seven times higher than the HAL share in upper-income predominantly white tracts (15.2% vs. 2.2%). (Table 11)

- ❖ **High-APR lending varied dramatically among Boston's major neighborhoods. For home-purchase loans, HAL shares ranged from 12.7% in Roxbury and 12.5% in Mattapan to 1.5% in Back Bay/Beacon Hill and 1.1% in Fenway/Kenmore. For refinance loans, HAL shares ranged from 10.6% in Mattapan to 0.2% in the South End.** The four Boston neighborhoods with the highest percentages of minority residents—Mattapan, Roxbury, Dorchester, and Hyde Park—were all among the five neighborhoods with the highest HAL shares for home-purchase lending, all 6.4% or greater; meanwhile, in the four neighborhoods with fewer than 25% minority residents—Back

¹⁸ Census tracts, defined by the U.S. Census Bureau for each decennial census, are the smallest geographic area for which HMDA data are reported. Census tracts typically contain between 3,000 and 6,000 people and, in urban areas, cover an area several blocks square. Boston, with a population of 589,141 according to the 2000 census, has 157 census tracts. Census tracts are placed in racial/ethnic categories on the basis of percentages of minority and white households as reported in the 2000 census (minority households are all those for which the householder is other than a non-Latino white). A tract is placed into an income category on the basis of its median family income (MFI) in relationship to the MFI in the Metropolitan Statistical Area (MSA) within which the tract is located. MFIs for geographical areas are from the 2000 decennial census. “Low-income” tracts are those with MFIs less than 50% of the MFI in the MSA; “moderate-income” tracts have MFIs from 50%–80% of the MFI in the MSA; “middle-income” tracts have MFIs from 80%–120% of the MFI in the MSA; and “upper-income” tracts are those with MFIs greater than 120% of the MFI in their MSA.

¹⁹ There is one exception to this generalization: there were no HALs among the seven home-purchase loans in the single upper-income census tract with 25%–50% minority households, while the HAL loan share was 1.3% in the thirteen upper-income tracts with more than 75% white households.

Bay/Beacon Hill, South Boston, West Roxbury, and Charlestown—the HAL shares were between 1.5% and 4.4%. (Table 12 and Exhibit 5)

- ❖ The same pattern emerges at the level of entire communities. For the 33 biggest cities in Massachusetts, Table 36 provides information on median family income and percentages of black and of Latino households as well as on high-APR lending. Examination of these data shows that HAL loan shares have a strong positive correlation with communities' percentages of black and Latino residents and a strong negative correlation with communities' median family incomes (MFIs). For example, **the four cities with the highest HAL shares for home-purchase loans in 2008 had an average of 34.8% black plus Latino households and an average MFI of \$39,906, while the four cities with the lowest HAL shares had an average of 8.3% black plus Latino households and an average MFI of \$73,938.** (The high HAL-share cities are Springfield, Brockton, Lawrence, and Lynn; the low HAL-share cities are Arlington, Brookline, Waltham and Cambridge.)

- ❖ **Total home-purchase lending to blacks and Latinos was highly concentrated in a small number of the state's cities and towns, and entirely absent in many others.** Just four cities and towns (Boston, Brockton, Springfield, and Randolph) accounted for over one-half (54.4%) of total loans to blacks in Massachusetts; these same four communities accounted for only 9.7% of the state's total loans to whites. Eight communities (Lawrence, Boston, Springfield, Lynn, Revere, Worcester, Chelsea, and Brockton) accounted for over half (51.1%) of all lending to Latinos in the state; these eight communities accounted for just 13.4% of total lending to whites. At the same time, **blacks received no home-purchase loans in 189 of the state's 351 cities and towns, and only a single loan in 60 more, while there were 132 communities where Latinos received no loans and 74 more where they received just one. In 111 communities, nearly one-third (31.6%) of the state's cities and towns, there was not a single home-purchase loan to either a black or a Latino homebuyer.** (Calculated from data presented in Supplemental Table 2, available online.)

EXHIBIT 5: HAL Loan Shares of Home-Purchase Loans, Boston Neighborhoods, 2008

Source: Table 12

IV. DENIALS OF MORTGAGE LOAN APPLICATIONS

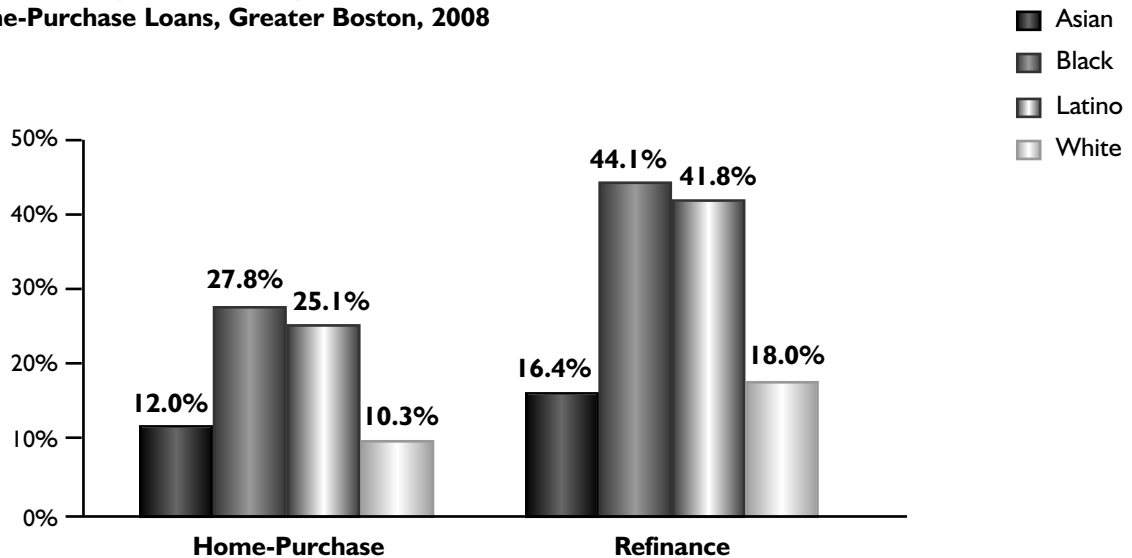

HMDA data include information not just on mortgage loans made, but also on all applications for mortgage loans, thereby making it possible to examine patterns of loan denials. The findings presented in this section are based on information presented in Tables 13–17 for Boston, Greater Boston, and Massachusetts. Information on denials for Asians, blacks, Latinos, and whites in each of the state’s fourteen counties and in its thirty-three largest cities is presented in Table 33 and Table 42.²⁰

❖ **In Boston, Greater Boston, and Massachusetts in 2008, the denial rates on mortgage loan applications by blacks and Latinos were more than twice as high as the denial rates on applications by whites.** For example, the denial rates on applications for home-purchase loans in Greater Boston were 27.8% for blacks, 25.1% for Latinos, and 10.3% for whites; this translates into black/white and Latino/white denial rate disparity ratios of 2.69 and 2.43, respectively. For

refinance loan applications in Greater Boston, the denial rates were 44.1% for blacks, 41.8% for Latinos, and 18.0% for whites, resulting in disparity ratios of 2.45 and 2.33, respectively. Denial rates for Asians were fairly close to those for whites. (Table 13 and Exhibit 6)

❖ Even though black and Latino applicants had, on average, substantially lower incomes than their white counterparts,²¹ **the higher denial rates experienced by blacks and Latinos cannot be explained by their lower incomes. When applicants in Boston, in Greater Boston, and statewide are grouped into income categories, the 2008 denial rates for blacks and for Latinos were in every case well above the denial rates for white applicants in the same income category.** In fact, denial rate disparity ratios tended to be higher for applicants in higher income categories. For example, in Greater Boston, black applicants with incomes between \$91,000 and \$120,000

**EXHIBIT 6: Denial Rates by Race/Ethnicity
Home-Purchase Loans, Greater Boston, 2008**

Source: Table 13

²⁰ Note that HMDA data do not provide any information on applications or denials for high-APR loans; this is because pricing (rate-spread) information is provided only for loans that were actually originated. Appendix Table 5 updates the table from earlier reports that provided information on overall denial rates and on denial rate disparity ratios since 1990. It shows that denial rates for black, and Latino applicants fell in Boston and Massachusetts in 2008 while denial rates for Asians and whites rose, leading to a significant decrease in black/white and Latino/white disparity ratios. In the U.S., however, black and Latino denial rates—and black/white and Latino/white disparity ratios—increased in 2008.

²¹ For example, it can be calculated from the data in Table 14 that 56% of white applicants in Greater Boston had reported incomes of \$91,000 or greater, compared to only 24% of black applicants and 25% of Latino applicants.

**EXHIBIT 7: Denial Rates by Race & Income,
Home-Purchase Loans, Greater Boston, 2008**

Source: Table 14

experienced a denial rate of 27.9%, more than three times greater than the 8.8% denial rate experienced by their white counterparts; the 21.7% denial rate for Latinos in this income category was two and one-half times the white rate. (Table 14 and Exhibit 7)

- ❖ Another interesting perspective on the differential outcomes experienced by black, Latino, and white loan applicants is to consider what percentage of applications resulted in a prime loan (i.e., a non-HAL loan). **In Greater Boston in 2008, 69.2% of white applicants for a home-purchase loan ended up receiving a prime loan, compared to 46.3% of black applicants and 50.1% of Latino applicants.** The difference has three components: blacks and Latinos applicants were more likely to be denied; more likely to have their applications result in neither a loan nor a denial; and, if they did receive a loan, more likely to have that loan be a HAL rather than a prime loan.²² (Tables 15 & 16)

- ❖ Table 17 provides summary information on the stated reasons for loan denials to black, Latino, and white applicants for home-purchase loans, both overall and for two broad income groupings. Providing up to three reasons for a loan denial is optional for most lenders and **in 2008 no reason was given for 22% of white denials, 23% of black denials, and 17% of Latino denials. Stated reasons for loan denials are quite similar for blacks, Latinos, and whites, but differ substantially by the income level of applicants.** For all three racial/ethnic groups, the most common reason for denial—given for about thirty percent of all denials for which any reason was provided—was “debt-to-income ratio.” The second most common reason was “other.” When applicants from each of the three racial/ethnic groups are divided into two major income categories, lenders were substantially more likely to cite “debt-to-income” or “credit history” as a reason for denials to low- and moderate-income applicants in each group than for denials to their middle- and upper-income counterparts.

²² Table 16 provides information on the percentage distribution of applications for home-purchase loans among the five possible results of a mortgage application that are reported in HMDA data (loan originated, loan approved by lender but declined by applicant, application denied, application withdrawn, and file closed for incompleteness). Data are provided for Boston, Greater Boston, and Massachusetts, separately for home-purchase and refinance loans.

V. LENDING BY MAJOR TYPE OF LENDER

The analysis in this section is based on classifying each mortgage lender into one of three major categories. *Massachusetts banks and credit unions* consist of all banks headquartered in Massachusetts or with branches in the state, plus Massachusetts-chartered credit unions, plus most mortgage lending affiliates of these institutions. *Licensed Mortgage Lenders* consist of all lenders who require a license from the state's Division of Banks in order to make mortgage loans in the state; these are primarily independent mortgage companies, but also include subsidiaries of non-Massachusetts federally-chartered banks as well as subsidiaries and affiliates of non-Massachusetts state-chartered banks. *Other Lenders* consist primarily of out-of-state banks and credit unions, plus federally-chartered Massachusetts credit unions.²³ This three-way classification has been used in the *Changing Patterns* series of reports to emphasize one crucial factor—whether a lender's Massachusetts mortgage lending (1) is currently covered by the state and/or federal Community Reinvestment Act (CRA); (2) is potentially subject to similar oversight by the state; or (3) is exempt from such state oversight.

This classification has proved useful in identifying dramatically different patterns of mortgage lending by lenders subject to evaluation under the CRA and by those not subject to such evaluation. Recognition of these different lending patterns was an important factor in the inclusion of CRA-type obligations and evaluation for licensed mortgage lenders (LMLs) as part of *An Act Protecting and Preserving Homeownership* that was signed into law in November 2007. In other words, the “potential”

noted for category (2) at the end of the preceding paragraph has now become a reality for licensed mortgage lenders who have made at least fifty mortgage loans in Massachusetts during the preceding year. (See Section VII for more information on the implementation of the state's Mortgage Lender Community Investment regulations.)

- ❖ **The home-purchase loan shares of Massachusetts banks and credit unions increased in 2008, from 36.8% to 39.1% in Boston and from 37.7% to 41.2% statewide. The loan shares of subprime lenders both in Boston and statewide shrank to just 0.5% of all loans, down from peaks of 19%.²⁴** Table 18 shows how the shares of major categories of mortgage lenders have changed since 1990, following the same format—and the same lender categories—as the corresponding table in previous reports.²⁵ For this table only, Licensed Mortgage Lenders and Other Lenders are combined into “Mortgage Companies and Out-of-State Banks,” and lenders classified as “subprime lenders” are separated out from the other lenders within this broad grouping. (Table 18)
- ❖ **Massachusetts banks and credit unions accounted for a substantially larger share of total (home-purchase plus refinance) loans than of HALs (e.g., 32.4% vs. 19.7% in Greater Boston).** On the other hand, both Licensed Mortgage Lenders (LMLs) and Other Lenders each accounted for substantially larger shares of HALs than of total lending (e.g., Other Lenders accounted for 44.7% of HALs but only 36.7% of total loans in Greater Boston). (Table 19)

²³ Federal credit unions based in Massachusetts are included in the “other lenders” category because they are not subject to either the federal or state CRA.

²⁴ From 1998 through 2003, lenders were classified as “subprime” on the basis of annual lists published by the U.S. Department of Housing and Urban Development [HUD]. Beginning with 2004, the *Changing Patterns* series of reports identifies “subprime lenders” on the basis of information on high-APR loans (HALs), which was included for the first time in 2004 HMDA data. A lender is classified as a “subprime lender” for 2008 if HALs constituted more than 40% of its total loans in the state. See “Notes on Data and Methods” for more information on the classification of lenders as subprime lenders.

²⁵ For Boston only, the “Big Boston Banks” are separated out from other Massachusetts banks and credit unions to document how the formerly dominant market share of this group has diminished. In 2008, the biggest Boston banks consisted of Citizens, Bank of America, and Sovereign, together with their affiliated mortgage companies. Bank of America includes Bank of America and Fleet loans for 2004, but only Fleet loans for earlier years. Five former banks were included in this grouping while they still existed: Bank of New England (1990–91), Boston Five Cents Savings Bank (1990–92), BayBanks (1990–96), Shawmut (1990–96), and BankBoston (1990–99). A sixth bank, Boston Safe Deposit (now Mellon New England), was included in this category until it exited the mortgage lending business in 2002.

EXHIBIT 8: Market Shares of Major Lender Types, Greater Boston, 2008

Source: Table 19

- ❖ **HAL shares of all loans by LMLs and by Other Lenders were approximately twice as large as the HAL shares of all loans by Massachusetts banks and credit unions.** In Greater Boston, for example, HALs constituted 1.8% of all loans by Massachusetts banks and credit unions, 3.5% of all loans by LMLs and 3.7% of all loans by Other Lenders. (Table 20)
- ❖ Table 21 (Boston) and Table 22 (Massachusetts) present information on the shares of the total loans of each of the three major types of lenders that consisted of prime loans (a term used here as equivalent to “non-HAL loans”) to traditionally underserved borrowers and neighborhoods, and on the shares of their total loans that consisted of HALs to these same borrowers and neighborhoods. **Massachusetts banks and credit unions (“CRA-covered lenders”) directed a substantially greater share of their total loans as prime loans—and a substantially smaller share of their total loans as HALs—to every one of the categories of traditionally underserved borrowers and neighborhoods examined in this report than did LMLs and Other Lenders.**²⁶ For

home-purchase loans in Boston, for example, prime loans to black borrowers made up 12.0% of all loans made by CRA-covered lenders, but only 6.2% of all loans by LMLs and 8.1% of all loans by Other Lenders. At the same time, HAL loans to black borrowers made up just 0.5% of all loans made by CRA-covered lenders, while making up 1.2% of the loans by LMLs and 1.6% of the loans by Other Lenders. (This same pattern holds for loans to Latino borrowers.) CRA-covered lenders directed 11.6% of their total loans to predominantly black and Latino LMI census tracts in the form of prime loans, and only 0.6% in the form of HALs. LMLs directed 7.8% of their total loans to these tracts in the form of prime loans, and 0.9% in the form of HALs; for Other Lenders, the corresponding percentages were 7.0% and 2.4%. The general patterns statewide are similar to those in Boston, although the percentages of total loans to black and Latino borrowers and to LMI census tracts are lower, reflecting the greater concentration of these borrowers and census tracts in Boston. (Tables 21 & 22)

²⁶ LMLs and Other Lenders directed quite similar shares of their total loans to these categories of borrowers and neighborhoods. For home-purchase lending statewide, for example, their loan shares were within 0.3 percentage points of each other in eight of the ten categories. In future years, it will be interesting to see if the implementation of the state’s Mortgage Lender Community Investment (MLCI) regulation covering LMLs will have an impact on their performance relative to the other two major types of lenders. In 2008, however, it seems highly unlikely that the new regulation would have had any impact on LML lending since the regulation was not issued in final form until September of that year.

VI. THE BIGGEST LENDERS

Who were the biggest lenders, both overall and for high-APR loans (HALs)? Tables 23 and 24 present information on the 30 biggest overall lenders in 2008 in the city of Boston and in Massachusetts. For each lender, these tables show the total number of loans, the total number of HALs, and HALs as a percentage of the total (for overall lending as well as for home-purchase and refinance loans separately). These tables include the 12 biggest HAL lenders in Boston and the 15 biggest HAL lenders statewide. Loans by separate lenders within the same corporate family are consolidated; information on the lending by individual lenders within each family is presented in Tables 27 and 28.

❖ **The Bank of America “lender family” was by far the biggest lender both in Boston and statewide. In fact, the two major individual lenders in this family—Countrywide Bank and Bank of America, NA—each made substantially more loans than the second ranked family.**²⁷ In Boston, the Bank of America family made 1,623 total loans (including 885 by Countrywide Bank

and 735 by Bank of America, NA), while second-ranked Mortgage Master made 582 loans.²⁸ In Massachusetts, the Bank of America family made 15,898 total loans (including 9,031 by Countrywide Bank and 6,822 by Bank of America, NA), while the second-ranked Wells Fargo lender family made 5,614 loans. Mortgage Master ranked third statewide while Wells Fargo ranked third in Boston. JPMorgan Chase ranked fourth both in Boston and statewide. These top four lender families accounted for 36.3% of the total loans in Boston, and 24.6% of the total loans in Massachusetts. (Tables 23, 24, 27, & 28)

❖ **The Bank of America and Wells Fargo lender families were Boston and the state’s two biggest HAL lenders in 2008, with JPMorgan Chase, HSBC, and CitiGroup rounding out the top five lenders in Boston and Wachovia replacing JPMorgan Chase among the top five statewide.** HALs accounted for a very small percentage of total loans by Bank of America and Wells Fargo (e.g., 3.0% and 7.0% statewide, respectively), but

**EXHIBIT 9: The 5 Biggest HAL Lender Families in Boston & Massachusetts
Home-Purchase & Refinance Loans Combined, 2008**

Rank	Boston		Massachusetts	
	Lender	HALs	Lender	HALs
1	Bank of America	38	Bank of America	478
2	Wells Fargo	36	Wells Fargo	393
3	JPMorgan Chase Bank	23	CitiGroup	349
4	HSBC	22	HSBC	272
5	CitiGroup	20	Wachovia	184
	Total, Top 5 Lenders	139		1,676
	Total, All Lenders	339		5,138
	Share of Top 5 lenders	41.0%		32.6%

Source: Tables 23 & 24. For data on individual lenders within these families: Tables 27 & 28.

²⁷ Bank of America Corp. announced on January 11, 2008 that it would purchase Countrywide Financial; the purchase was completed on July 1, 2008. Thus, this report includes Countrywide Bank and Countrywide Home Loans as members of the Bank of America lender family for 2008. However, Countrywide Bank remained a separate legal entity until April 27, 2009, and its Massachusetts lending was not included in Bank of America’s CRA performance evaluation for Massachusetts; therefore, it is classified as an out-of-state bank and the Bank of America lender family is classified as a “MIX.”

²⁸ Mortgage Master, Inc. is a privately-held mortgage company based in Walpole, Massachusetts. In 2007, it was the tenth biggest lender both in Boston and statewide.

**EXHIBIT 10: Disparity Ratios of 5 Biggest HAL Lending Families
Boston, 2008**

Lender	HALs as Share of Total Loans			HAL share Disparity Ratios	
	Blacks	Latinos	Whites	Black/White	Latino/White
Bank of America	5.6%	2.8%	1.8%	3.08	1.54
Wells Fargo	14.5%	14.3%	4.9%	2.98	2.94
JPMorgan Chase	20.0%	18.2%	3.5%	5.71	5.19
HSBC	72.7%	100.0%	29.7%	2.45	3.36
CitiGroup	20.8%	16.7%	6.7%	3.10	2.48
Five-Lender Average	26.7%	30.4%	9.3%	3.46	3.10
All Lenders	9.9%	8.2%	2.9%	3.40	2.81

Source: Table 25

accounted for double-digit shares of statewide loans by CitiGroup (13.9%) and Wachovia (12.3%), and made up almost one-third (32.0%) of HSBC's Massachusetts loans. The top five HAL lenders accounted for 41.0% of the total HALs in Boston, and for 32.6% of the total HALs statewide. (Tables 23 & 24 and Exhibit 9)

- ❖ **Of the top four overall lender families in Boston and the state, only one had its Massachusetts lending covered by the CRA, and this coverage was only partial because CRA oversight applied only to the portion of Bank of America's lending done by Bank of America, NA, not the larger portion done by Countrywide Bank. Mortgage Master, ranked second in Boston and third statewide, is now covered by the state's new Mortgage Lender Community Investment (MLCI) regulations.** Of the thirty biggest lender families statewide, fifteen are (completely or partially) out-of-state banks, eleven are (completely or partially) covered by MLCI, and just eight are (completely or partially) covered by the CRA. (Table 24)
- ❖ Table 25 (Boston) and Table 26 (Massachusetts) provide information on lending to blacks, Latino, and white borrowers by each of the lenders

included in Tables 23 and 24 (listed in the same order). This information includes: total loans to each of these racial/ethnic groups, the percentage of high-APR loans for each group, and the disparity ratios for black/white and Latino/white HAL shares (calculated as the black [or Latino] HAL share divided by the white HAL share). **For the great majority of lenders, HALs made up much greater shares of their total loans to blacks and Latinos than of their total loans to whites. For the top five HAL lending families in Boston, the average black/white disparity ratio was 3.46 and the average Latino/white disparity ratio was 3.10. JPMorgan Chase had the highest disparity ratios among these five lenders; it gave HALs to 20.0% of its black borrowers and 18.2% of its Latino borrowers, but to only 3.5% of its white borrowers, resulting in a black/white ratio of 5.71 and a Latino/white ratio of 5.19.** Mortgage Master, the third biggest overall lender but only the seventh biggest HAL lender, had even greater disparity ratios: its black/white ratio was 4.85 and its Latino/white ratio was 6.92. Statewide, the general pattern was the same as in Boston although the disparity ratios tended to be smaller.²⁹ (See Exhibit 10)

²⁹ For example, for the top five HAL lenders statewide, the average black/white disparity ratio was 2.15 and the average Latino/white disparity ratio was 1.82. Mortgage Master's statewide disparity ratios were notably high; it gave HALs to 6.9% of its black borrowers and 11.3% of its Latino borrowers, but to only 1.3% of its white borrowers, for black/white disparity ratio of 5.43 and a Latino/white ratio of 8.85.

VII. ADDITIONAL INFORMATION

It is beyond the scope of this descriptive report to offer explanations of the causes underlying the observed patterns of high-APR subprime mortgage lending or to investigate the extent to which HAL lenders engage in predatory lending, opportunity pricing, or racial/ethnic discrimination. Instead, this concluding section offers supplementary information on four matters that may help readers better interpret the report's findings.

High-APR Loans Involve Very Substantial Cost for Borrowers, Compared to Prime Loans

To examine the extra costs imposed by high-APR loans compared to prime loans, the monthly payments on a thirty-year fixed-rate loan of \$259,000 (the median size of a first-lien HAL for an owner-occupied home in Greater Boston in 2008)³⁰ were calculated at three different interest rates: 6.03% (the average interest rate for a prime 30-year fixed-rate

loan in 2008); 7.28% (the estimated minimum rate to qualify as a high-APR loan when the rate for prime mortgages was 6.03%); and 7.63% (the estimated median rate on first-lien HALs in 2008 when the rate for prime mortgages was 6.03%).³¹ The calculated monthly payments for principal and interest are shown in the table below—together with the additional monthly and annual costs resulting from above-prime interest rates. Even the lowest-price HAL costs twenty-five hundred dollars more per year than a prime-rate loan. **The median-rate HAL entails annual payments \$3,264 greater than for a prime-rate loan.**³²

This table indicates the higher costs imposed on HAL borrowers who make their monthly payments in a timely manner. However, this represents only part of the additional costs imposed by high-APR lending. In fact, **many homeowners who received high-APR**

EXHIBIT 11: Monthly Payments on a \$259,000 Thirty-Year Fixed-Rate Mortgage Selected Interest Rates, 2008

Rate Level	Interest Rate	Monthly Payment	Extra over Prime-rate loan: per month	Extra over Prime-rate loan: per year
Prime loan	6.03%	\$1,550	--	--
Minimum-rate HAL	7.28%	\$1,761	\$211	\$2,532
Median-rate HAL	7.63%	\$1,822	\$272	\$3,264

³⁰ The median loan amount for a first-lien HAL for an owner-occupied home in 2008 was slightly lower than this in the city of Boston (\$254K), and was considerably lower statewide (\$198K). In Greater Boston in 2008, the median loan amount for a first-lien *non-HAL* loan was \$296K.

³¹ 6.03% is the annual interest rate on a thirty-year fixed rate mortgage loan in 2008 as reported by Freddie Mac's Primary Mortgage Market Survey (www.freddiemac.com/pmms/pmms30.htm). Information presented in the article accompanying the Federal Reserve's release of the 2008 HMDA data indicates that the average difference between the APR for 30-year fixed rate prime loans and the reporting threshold for high-APR loans was about 1.25 percentage points in 2008 (Robert Avery *et al.*, "The 2008 HMDA Data: The Mortgage Market during a Turbulent Year," *Federal Reserve Bulletin*, 2009 [forthcoming], mss. pp. 12–18 and Figure 5). Appendix Table 2 of the present report shows that the median rate spread on first-lien HALs in Massachusetts in 2008 was 3.24 percentage points for home-purchase loans and 3.45 percentage points for refinance loans. The average of these two rate spreads is 3.35 percentage points, which is 0.35 percentage points above the threshold rate spread of 3.00. Thus, the accompanying table shows the minimum-rate HAL having an interest rate 1.25 percentage points above the interest rate on prime mortgages and the median-rate HAL having an interest rate 0.35 percentage points higher than that. For simplicity, this table assumes that the interest rates are the same as the APRs.

³² These extra costs of HALs are significantly lower than those calculated for last year's report, where the additional annual cost over a prime loan was \$4,008 for a minimum-rate HAL and \$8,316 for a median-rate HAL. The difference is accounted for by a much lower loan amount (\$259K this year vs. \$330K last year), a lower spread between the prime mortgage rate and the minimum-rate HAL (1.25 vs. 1.50 percentage points), and a much lower spread between the median-rate HAL and the minimum-rate HAL (0.35 vs. 1.53 percentage points).

loans in previous years have been unable to keep up their monthly payments and have lost their homes through foreclosure, and many more are expected to lose their homes before the current foreclosure epidemic has run its course. In addition to the human costs involved, these foreclosures impose financial costs including: the loss of any home equity previously achieved, the possible costs imposed by foreclosure rescue scams, the future costs resulting from ruined credit ratings, the neighborhood effects of lowered property values, and the impacts on municipal budgets.³³

Limitations of HMDA Data Could be Reduced by Including Additional Information

Analysis of mortgage lending—particularly of subprime lending—is constrained by the limited nature of HMDA data. Many of the questions that may have occurred to readers of this report could be explored much more fruitfully if HMDA data included appropriate additional information. Important possible enhancements to HMDA include expanding the information available about *the borrower* (e.g., creditworthiness, such as measured by a FICO or other credit score); *the lender* (e.g., the top-level corporate parent, to facilitate identifying affiliated lenders); *the lending channel* (e.g., broker, correspondent lender, or retail); *the type of loan* (e.g., fixed-rate or adjustable-rate and, if the latter, what sub-type); *loan ratios* (e.g., the loan-to-value ratio and the debt-to-income ratio); *loan features* (e.g., prepayment penalty, balloon payment, single-payment credit insurance, low- or no-doc, stated-income, interest-only, payment-option); and *loan pricing* (e.g., separate information on interest rate and fees).

In October 2008, the Federal Reserve published a final rule revising the reporting of price information for high-APR loans that is a major improvement over

the present method. Under the new rules, lenders will compare the APR of each loan to an estimate of the current APR of prime loans in the same category (e.g., 30-year fixed-rate; one-year adjustable rate) that will be updated weekly by the Fed. However, the new rules did not become effective until October 1, 2009, and so it will not be until September 2011 that HMDA data based on a whole year under the new rule will become available.³⁴

Congress is currently considering legislation that would significantly expand the data collected under HMDA as part of proposed legislation that would establish a Consumer Financial Protection Agency. The Wall Street Reform and Consumer Protection Act of 2009 (H.R. 4173) was passed by the House of Representatives in December 2009, related legislation will be considered by the Senate in 2010.³⁵

The State Began Implementation of its Mortgage Lender Community Investment (MLCI) Regulation

Under the federal Community Reinvestment Act (CRA), as under its Massachusetts counterpart, a lender's performance in meeting the credit needs of local communities is evaluated by government regulators only if the lender is a bank with at least one branch office in the area. As a result, most mortgage lending in Massachusetts is done by lenders who are not subject to CRA regulatory review, evaluation, and ratings for their lending here.

This situation has been partially remedied with the enactment of Section 13 of "An Act Protecting and Preserving Homeownership" (Chapter 206 of the Acts of 2007), which provides that licensed mortgage lenders (LMLs) that made fifty or more mortgage loans in the Commonwealth during the preceding year will be evaluated by the Division of Banks for their performance in helping low- and moderate-

³³ Remember, lenders maintain that borrowers obtain high-APR loans only when there is too great a risk that they will be unable to successfully make the required monthly payments on prime loans. But the substantially higher monthly payments required by high-APR loans can only make the likelihood of default even greater. While it is often true that borrowers receive costlier loans because they are riskier borrowers, causation also runs in the other direction: subprime borrowers are riskier *because* they receive costlier loans.

³⁴ These revisions to Regulation C (Home Mortgage Disclosure Act) were published in the *Federal Register* on October 24, 2008 and are available at: <http://edocket.access.gpo.gov/2008/E8-25320.htm>.

³⁵ The proposed amendments the Home Mortgage Disclosure Act are contained in Section 4808 of H.R. 4173, available at: <http://www.thomas.gov/cgi-bin/query/F?c111:1:./temp/-c111vnnQnE:e1177886>:

income residents acquire and remain in affordable housing with loans on reasonable rates and terms, avoiding patterns of lending that result in the loss of affordable housing, and working with delinquent borrowers. The Division's examinations result in public performance evaluations and ratings, and an unsatisfactory rating may provide the basis for non-renewal of a lender's license. The implementation of the new law will be governed by a regulation, entitled "Mortgage Lender Community Investment" (MCLI), issued by the Division of Banks in September 2008.³⁶

The Division of Banks' website provides quarterly lists of LMLs scheduled for performance evaluations as well as a list, updated monthly, of performance evaluations and ratings that have been completed and made public. The latter list has links to the written performance evaluations for the individual lenders. As of November 30, 2009, the performance evaluations for four mortgage companies had been made public; all of these received an overall rating of "Satisfactory."³⁷ On the basis of their total (any purpose, any lien, any occupancy) lending in the state in 2008, these four lenders ranked between 24th and 42nd among the 77 LMLs currently eligible for evaluation under MLCI on the basis of the statutory cutoff point of at least fifty Massachusetts reported in HMDA data. (An additional 130 LMLs made between one and forty-nine loans in 2008.)

Out-of-state banks (and subsidiaries of federally-chartered out-of-state banks) without local branches are not covered by the new legislation; imposing CRA obligations on them for their Massachusetts lending

would require legislation and/or regulatory changes at the federal level. Such changes are included in the CRA Modernization Act of 2009 (H.R. 1479), whose principal sponsor is Rep. Eddie Bernice Johnson of Texas, and whose 56 co-sponsors includes Massachusetts Reps. Capuano, Delahunt, Lynch, McGovern, and Tsongas.

FHA Lending Increased Dramatically in 2008

There were 17,420 government-backed loans in Massachusetts in 2008, accounting for 14.3% of all loans in the state. This is up very sharply from 2007, when 3,995 government-backed loans accounted for 2.8% of all loans (this latter percentage was double the 1.4% for 2006).³⁸ The great majority (92.9% in 2008) of these government-backed loans were insured by the Federal Housing Administration (FHA loans); accordingly, the discussion that follows will focus on FHA lending.³⁹

The Federal Reserve researchers who wrote the *Federal Reserve Bulletin* article accompanying the release of the 2008 HMDA data report that, nationwide, FHA loans accounted for over 21% of home-purchase and finance loans in 2008, up from less than 6% in the preceding year. They devote an entire section of their article to exploring the causes and significance of "The Surge in FHA and VA Lending."⁴⁰

The following bullet points present some summary information about FHA lending in Massachusetts in 2008. All numbers and percentages refer to first-lien home-purchase loans for owner-occupied homes, statewide.

³⁶ The final regulations (209 CMR 54.00: *Mortgage Lending Community Investment*, effective September 5, 2008), are available at the Division of Banks website: www.mass.gov/dob. Licensed mortgage lenders continue to be covered by fair lending laws, truth-in-lending laws, and the state's anti-predatory lending law.

³⁷ The lists of lenders scheduled for MLCI examinations and of publicly available MLCI performance evaluations and ratings can be reached from www.mass.gov/dob by clicking on "Loans & Mortgages" (under "Consumer Services") and then clicking on "CRA at Mortgage Lenders." The URL of the relevant webpage is too long to reproduce here.

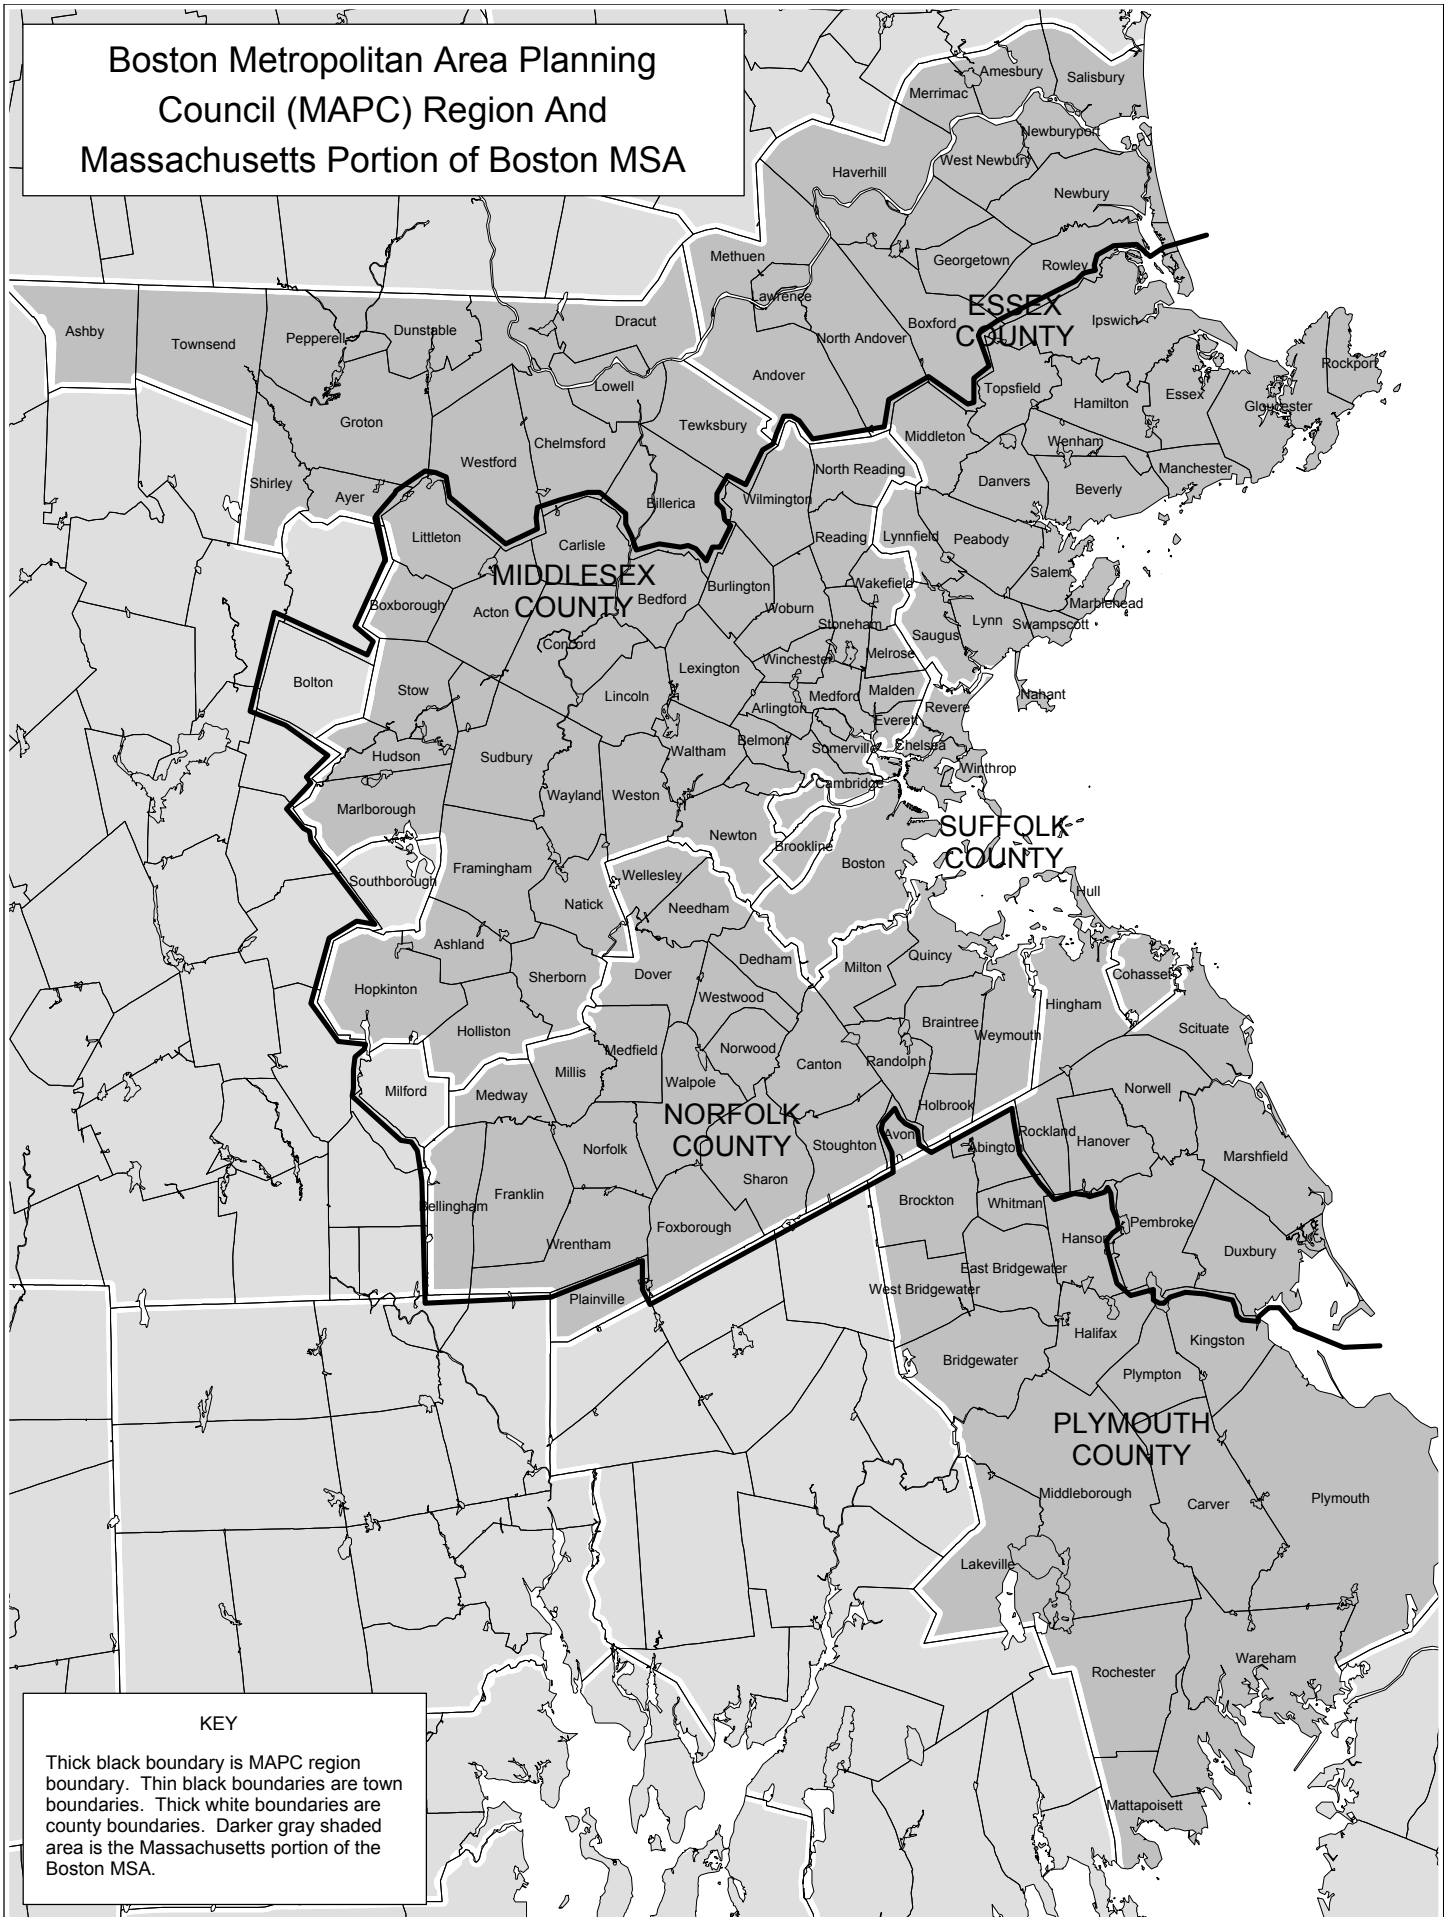

³⁸ These numbers and percentages are all for the total of first-lien home-purchase and refinance loans for owner-occupied homes; based on data in Appendix Table 1 of this report and of the two previous reports in the *Changing Patterns* series.

³⁹ Loans guaranteed by the Veterans Administration (VA loans) accounted for 5.7% of government-backed loans in 2008 and the remaining 1.5% of government-backed loans were backed by the Rural Housing Service of the U.S. Department of Agriculture (RHS loans). It is notable that while 11.4% of all FHA loans were HALs in 2008, only 1.1% of VA loans and just 0.4% of RHS loans were HALs; for all loans in the state, the HAL percentage was 4.2% (Table 2).

⁴⁰ Robert B. Avery, *et al.*, "The 2008 HMDA Data: The Mortgage Market during a Turbulent Year," *Federal Reserve Bulletin*, 2009 [forthcoming], pp. 6 & 19–27. Available at: www.federalreserve.gov/pubs/bulletin/2009/pdf/hmda08draft2.pdf. (URL and page numbers are for draft version of article; as of mid-January, the final version had not been posted by the Fed.)

- ❖ Blacks and Latino borrowers were much more likely to receive FHA loans than were whites. The shares of FHA loans among all loans were 37.7% for blacks, 40.4% for Latinos, and 16.8% for whites. This translates to a black/white disparity ratio of 2.24 and a Latino/white disparity ratio of 2.40.
- ❖ FHA loan shares were considerably higher in neighborhoods with higher percentages of minority households. The FHA loan share was 16.6% in census tracts with fewer than 25% minority households, 24.6% in tracts with 25%–50% minority households, 31.8% in tracts with 50%–75% minority households, and 29.7% in tracts with 75%–100% minority households.
- ❖ HALs made up a considerably larger share of FHA loans than of all loans—12.0% vs. 4.6%.
- ❖ Black and Latino recipients of FHA loans were only moderately more likely to receive HALs than their white counterparts—HAL shares were 16.5% for blacks, 12.9% for Latinos, and 11.6% for whites.
- ❖ The two biggest overall lenders in the state (Bank of America and Wells Fargo) were also the two biggest FHA lenders. First Tennessee, GMAC, and Flagstar Bank ranked third through fifth in FHA lending.

**Boston Metropolitan Area Planning
Council (MAPC) Region And
Massachusetts Portion of Boston MSA**

KEY

Thick black boundary is MAPC region boundary. Thin black boundaries are town boundaries. Thick white boundaries are county boundaries. Darker gray shaded area is the Massachusetts portion of the Boston MSA.

TABLE I
High-APR Loans in the City of Boston, Greater Boston, and Statewide
First-Lien Home-Purchase and Refinance Loans for Owner-Occupied Homes, 2008

	Home-Purchase Loans			Refinance Loans			%	%	Median Family Income
	All Loans	High-APR Loans	% High-APR	All Loans	High-APR Loans	% High-APR	Black House-holds	Latino House-holds

Note: In this report, "Greater Boston" consists of the 101 cities and towns that constitute the Metropolitan Area Planning Council (MAPC) region.

* Income categories are defined in relationship to the Median Family Income (MFI) of the metropolitan area in which the home is located. For the Boston Metropolitan Statistical Area (MSA), which includes all of Greater Boston, the MFI in 2007 was \$84,300. There are five other MSAs in the state, with MFIs in 2008 ranging from \$64,800 to \$76,900. Borrowers in Dukes and Nantucket Counties, which are not in any metro area, were classified using the MFI for the nonmetro part of the state (\$74,000). "Low" is less than 50% of the MFI in the relevant MSA; "Moderate" is 50%–80% of this amount; "Middle" is 80%–120% of this amount; "High" is 120%–200% of this amount; and "Highest" over 200% of the MFI in the relevant metro area. (More detail in "Notes on Data & Methods.")

TABLE 5
High-APR Loans (HALs) to Borrowers at Different Income Levels#
in the City of Boston, Greater Boston, and Statewide
First-Lien Loans for Owner-Occupied Homes, 2008

	Home-Purchase Loans					Refinance Loans				
	Low/Mod Income		Mid/High Income		Ratio: LMI%/MHI%	Low/Mod Income		Mid/High Income		Ratio: LMI%/MHI%
	Number HALs	% HALs	Number HALs	% HALs		Number HALs	% HALs	Number HALs	% HALs	
Boston	66	5.2%	114	4.9%	1.05	58	5.5%	72	2.9%	1.86
Greater Boston	290	4.4%	540	3.8%	1.18	300	4.3%	498	2.5%	1.73
Massachusetts	961	6.1%	1,239	4.4%	1.39	1,072	6.1%	1,445	3.6%	1.72

"Low/Mod Income" is no more than 80% of the Median Family Income (MFI) of the metro area in which the home is located; "Mid/High-income" is between 80%–200% of the MFI in the relevant metro area. "Highest-income" borrowers (those with incomes more than double the MFI in the metro area) are excluded from this table. For more information, see footnote to Table 8 or "Notes on Data & Methods."

* In this report, "Greater Boston" consists of the 101 cities and towns that constitute the Metropolitan Area Planning Council (MAPC) region.

White	1.00	1.00	1.00	1.00	1.00

Note: In this report, "Greater Boston" consists of the 101 cities and towns that constitute the Metropolitan Area Planning Council (MAPC) region.

* Income categories are defined in relationship to the Median Family Income (MFI) of the metropolitan area in which the home is located. All but 3 of the 101 communities in the MAPC Region are in the Boston MSA where the MFI in 2008 was \$84,300 (three small communities were in the Worcester MSA, where the MFI in 2008 was \$76,900). "Low" is less than 50% of the MFI in the relevant MSA; "Moderate" is 50%–80% of this amount; "Middle" is 80%–120% of this amount; "High" is 120%–200% of this amount; and "Highest" is over 200% of the MFI in the relevant MSA. For more information, see "Notes on Data & Methods."

* A census tract is placed into an income category based on the relationship, according to the 2000 census, between its Median Family Income (MFI) and the MFI of the Boston MSA. "Low" is less than 50% of the MFI of the MSA; "Moderate" is between 50% and 80%; "Middle" is between 80% and 120%; and "Upper" is greater than 120% of the MFI of the MSA.

A census tract is placed into a racial/ethnic category based on its percentage of minority households according to the 2000 census. All householders other than non-Latino whites are classified as minority.

The 2000 Census did not report an MFI for tract 1501.00 (Harbor Islands).

* A census tract is placed into an income category based on the relationship, according to the 2000 census, between its Median Family Income (MFI) and the MFI of the MSA within which it is located. All but 3 of the 101 communities in Greater Boston are in the Boston MSA where the MFI in 2000 was \$66,676 (3 small communities were in the Worcester MSA where the MFI in 2000 was \$58,426). "Low" is less than 50% of the MFI of the MSA; "Moderate" is between 50% and 80%; "Middle" is between 80% and 120%; and "Upper" is greater than 120% of the MFI of the MSA.

A census tract is placed into a racial/ethnic category based on its percentage of minority households according to the 2000 census. All householders other than non-Latino whites are classified as minority.

^ Note: In this report, "Greater Boston" consists of the 101 cities and towns that constitute the Metropolitan Area Planning Council (MAPC) region.

* A census tract is placed into an income category based on the relationship, according to the 2000 census, between its Median Family Income (MFI) and the MFI of the metro area within which it is located. Communities in Massachusetts are located in six different MSAs, with MFIs in 2000 ranging from \$50,150 to \$66,676. "Low" is less than 50% of the MFI in the relevant MSA; "Moderate" is 50%–80% of this amount; "Middle" is 80%–120% of this amount; "High" is 120%–200% of this amount; and "Upper" is greater than 120% of the MFI of the metro area.

A census tract is placed into a racial/ethnic category based on its percentage of minority households according to the 2000 census. All householders other than non-Latino whites are classified as minority.

The neighborhoods used in this study are based on the Planning Districts (PDs) defined by the Boston Redevelopment Authority (BRA), except: North and South Dorchester are combined and the Harbor Islands PD (no loans in 2007) is omitted. *Percent minority* population was calculated by the BRA for these exact neighborhoods from 2000 Census data. However, lending data are available only on a census tract basis and many tracts are divided among two or more PDs; *loans* in each PD were calculated using a list of census tracts obtained from the BRA that correspond to the PDs as closely as possible. The income level is estimated as the median of the Median Family Incomes of the census tracts in the PD.

Other	27%	28%	28%	21%	33%	25%	20%	27%	24%

Notes: Lenders can report up to three reasons for the denial of a mortgage loan application. This is why percentages in Panel B add to more than 100%. Lenders supervised by OTS or OCC must report at least one reason for each denial; reporting reasons is optional for all other lenders. Lenders reported three reasons for only 4.5 % of denials in Massachusetts in 2007; to greatly simplify calculations, this table includes only first and second reasons. HMDA reporting instructions specify which of the approximately twenty reasons for denial listed in the model form for adverse action contained in the appendix to Regulation B (Equal Credit Opportunity) correspond to each of the reasons for denial that are available in HMDA data:

- Debt-to-income ratio: income insufficient for amount of credit requested; excessive obligations in relation to income
- Employment history: temporary or irregular employment; length of employment
- Credit history: insufficient number of credit references provided; unacceptable type of credit references provided; no credit file; limited credit experience; poor credit performance with us; delinquent past or present credit obligations with others; garnishment, attachment, foreclosure, repossession, collection action, or judgment; bankruptcy
- Collateral: value or type of collateral not sufficient
- Insufficient cash: [for downpayment or closing costs]
- Unverifiable information: unable to verify credit references; unable to verify employment; unable to verify income; unable to verify residence
- Credit application incomplete: credit application incomplete
- Mortgage insurance denied: [none listed]
- Other: length of residence; temporary residence; other reasons specified on notice.

* **Important Note:** 2004 and later data are not strictly comparable to those for earlier years. Beginning in 2004, loans other than first-lien mortgages on owner-occupied homes are excluded. Previously, only second-lien loans under the SoftSecond Program were excluded.

Subprime lenders for 1998–2003 are from HUD's annual lists of subprime lenders. Subprime lenders for 2004, 2005, and 2006–2008 are those for whom high-APR loans constituted more than 15.0%, 33.3%, and 40.0% (respectively) of their total Massachusetts loans. Lenders were also classified as subprime for 2007 if they were classified as subprime in 2006 and had more than 25% HALs in 2007. Two Mass. banks met criteria for subprime lenders in 2008 (Holbrook Co-op and Merrimac SB); their 10 loans in Mass. are in row A+B, not row D.

"Big Boston Banks": Citizens, Bank of America, and Sovereign in 2004–2008. BankBoston, Bank of New England, BayBanks, Boston Five, Boston Safe Deposit, Fleet and Shawmut were included during the years they existed. Mortgage companies affiliated with these banks are included, except that in 2008 Countrywide was not considered part of Bank of America for this purpose.

"Other Mass. Banks and Credit Unions": all other banks with Mass. branches, plus all affiliated mortgage companies, plus Mass.-chartered CUs.

"Mortgage Companies & Out-of-State Banks": all lenders not affiliated with Massachusetts banks or state-chartered credit unions.

For Massachusetts banks and credit unions local performance in meeting community credit needs is subject to evaluation by federal and/or state bank regulators under the state and/or federal Community Reinvestment Act (CRA). Local lending by mortgage companies (licensed mortgage lenders) became subject to similar evaluation under a state law enacted in 2007, with the first evaluations taking place in 2009. Out-of-state are not subject to any such evaluation.

TABLE 19
Shares of Total Loans by Major Types of Lenders*
In the City of Boston, Greater Boston, and Statewide
First-Lien Mortgage Loans for Owner-Occupied Homes, 2008

	All Loans (HomePur + Refi)				High-APR Loans (HomePur + Refi)			
	Total Loans	% Mass Banks & CUs*	% Lic. Mort Lenders*	% Other Lenders*	Total Loans	% Mass Banks & CUs*	% Lic. Mort Lenders*	% Other Lenders*
Boston	8,915	32.7%	28.7%	38.5%	339	19.2%	33.3%	50.4%
Greater Boston	60,691	32.4%	30.9%	36.7%	1,822	19.7%	35.6%	44.7%
Massachusetts	122,236	36.4%	27.6%	36.0%	5,138	22.3%	36.5%	41.2%

In this report, "Greater Boston" consists of the 101 cities and towns that constitute the Metropolitan Area Planning Council (MAPC) region.

* "Mass. Banks and Credit Unions": all banks with Mass. offices, plus all affiliated mortgage companies; excludes fed-chartered CUs.

"Licensed Mortgage Lenders": those requiring a state license to make mortgage loans in Mass.; mostly independent mortgage companies.

"Other Lenders": those not in either of the two preceding categories; mainly out-of-state banks.

For Mass. banks and credit unions, local performance in meeting community credit needs is subject to evaluation by federal and/or state bank regulators under the state and/or federal Community Revestment Act (CRA). Licensed mortgage lenders became subject to similar state evaluation under a state law enacted in 2007, with the first evaluations taking place in 2009. Other lenders are, essentially, exempt from such oversight and evaluation.

* "Mass. Banks and Credit Unions": banks with Mass. offices, plus affiliated mortgage companies; excludes fed-chartered CUs.
"Licensed Mortgage Lenders": require state license to make mortgage loans in Mass.; mostly independent mortgage companies.
"Other Lenders": those not in either of the two preceding categories; mainly out-of-state banks.
For Mass. banks and credit unions, local performance in meeting community credit needs is subject to evaluation by federal and/or state bank regulators under the state and/or federal Community Revestment Act (CRA). Licensed mortgage lenders became subject to similar state evaluation under a state law enacted in 2007, with the first evaluations taking place in 2009. Other lenders are, essentially, exempt from such oversight and regulation.
"Low-Income" borrowers: reported incomes below 50% of median family income (MFI) in the relevant metropolitan area.
"LMI [low- or moderate-income] borrowers": reported incomes below 80% of MFI in the relevant metropolitan area.
"LMI census tracts" have median family incomes (MFIs) less than 80% of the MFI in the Boston MD (2000 Census data).
"LMI CTs >75% Blk+Latino" include all 31 census tracts in which over 75% of the population was black or Latino (2000 Census).

* Indicates that the loans shown are for two or more affiliated lenders in the same “lender family.”

Table 27 provides information on the individual lenders within each “lender family.”

CRA: banks with Mass. branches, whose local lending is subject to evaluation under the Community Reinvestment Act. LML: licensed mortgage lenders, mostly mortgage companies, who became subject to CRA-type state regulation beginning in 2008. OSB: other lenders, mainly out-of-state banks, who can do mortgage lending in Mass. without a license and are exempt from state regulation. CRA^ or LML^ or OSB^ indicates that the family includes more than one type of lender, but that more than 90% of the lending family’s loans are accounted for by lenders of the type indicated. MIX: lender families that include two types of lenders (with each lender type accounting for at least 10% of the lender family’s total loans).

* This table is a supplement to Table 23, which shows total loans for each of the 31 biggest “lender families.” This table includes only individual lenders in multi-lender families, as indicated by an asterisk following the family name in Table 23. Nine individual lenders with 5 or fewer total loans in Boston are excluded from this table, but their loans are included in the lender family totals in Table 23. These eleven lenders include one each from Bank of America*, GMAC*, HSBC*, JPMorgan Chase*, and Wells Fargo*, and two each from CitiGroup* and Wachovia*.

CRA: banks with Mass. branches, whose local lending is subject to evaluation under the Community Reinvestment Act. LML: licensed mortgage lenders, mostly mortgage companies, who will become subject to state CRA-type regulation beginning in 2008. OSB: other lenders, mainly out-of-state banks, who can do mortgage lending in Mass. without a license and are exempt from state regulation.

Massachusetts	122,236	34.5%	27.7%	37.7%	5,138	18.2%	39.0%	42.8%

* "Mass. Banks and Credit Unions": all banks with Mass. offices, plus all affiliated mortgage companies; excludes fed-chartered CUs.

"Licensed Mortgage Lenders": require a state license to make mortgage loans in Mass.; mostly independent mortgage companies.

"Other Lenders": those not in either of the two preceding categories; mainly out-of-state banks.

For Mass. banks and credit unions, local performance in meeting community credit needs is subject to evaluation by federal and/or state bank regulators under the state and/or federal Community Reinvestment Act (CRA). Licensed mortgage lenders became subject to state evaluation under a state law enacted in 2007, with the first evaluations taking place in 2009. Other lenders are, essentially, exempt from such oversight and regulation.

"Low/Mod Income" is no more than 80% of the Median Family Income (MFI) of the metro area in which the home is located; "Mid/H" is between 80%–200% of the MFI in the relevant metro area. "Highest-income" borrowers (those with incomes more than double metro area) are excluded from this table. For more information, see footnote to Table 4 or "Notes on Data & Methods."

Note: This five-way classification results in a total of 32 categories. The number of loans in each of these categories was obtained from the 2008 HMDA data.

All other numbers in this table are calculated from these 32 basic numbers.

The text of this report, and all other tables, include only first-lien loans for owner-occupied homes, which are shown in this table to constitute 84.4% of total loans. The loans excluded by this criterion consisted of first-lien loans for non-owner occupied homes 9.8% of the total) and subordinate-lien loans (5.8%).

Additional details: Of the government-backed loans, 93.0% were FHA, 5.5% were VA, and 1.4% were FSA/RHS. There were a total of exactly 5 HEOPA loans.

This table ignores 256 loans (0.1% of the total) for which owner-occupancy status was not reported.

This table also ignores the state's 13,207 home-improvement loans, of which 5,128 were first-lien loans on owner-occupied homes.

APPENDIX TABLE 2
High-APR Loans (HALs), by Race/Ethnicity of Borrower
By Loan Purpose and Lien Type, with Median Rate Spread#
Loans for Owner-Occupied Homes, Massachusetts, 2008

Total*	130,570	124,862	5,708	4.4%		3.41

For each High-APR loan, HMDA data include the difference between the APR of the loan and the interest rate on Treasury securities of the same maturity (e.g., 30 years) at the time the loan was made. This difference, reported in percentage points, is referred to as the "rate spread."

* "No Info" is "Information not provided...in mail or telephone application" & "Not applicable."

"Total" includes "Other" as well as the categories shown in the table; "other" is 0.3% of all loans & below 0.7% in each category.

**APPENDIX TABLE 3
Boston Home-Purchase Loans by Race/Ethnicity, 1990–2008 ***

Race/ Ethnicity	Number of Loans						Percent of All Loans#					
	1990	1995	2000	2005	2007	2008	1990	1995	2000	2005	2007	2008
Asian	100	269	381	453	304	320	5.7%	6.0%	5.8%	6.1%	6.1%	8.2%

Total	1,770	4,637	7,467	8,330	5,718	4,472						

Important Note: 2004 and later data are not strictly comparable to those for previous years. Beginning in 2004, loans other than first-lien mortgages for owner-occupied homes are excluded; previously only junior-lien loans under the SoftSecond Program were excluded. In addition, race and ethnicity are treated differently in the HMDA data beginning in 2004 so the definitions underlying the categories are different. See “Notes on Data and Methods” for details.

* Columns for many years are omitted from this table because of insufficient space, but all years are shown in Chart A-3.

Percentages are of subtotal of all loans for which information on race/ethnicity was reported.

+ “No Info” is short for “Information not provided by applicant in telephone or mail application” or “not available.”

Chart A-3: Shares of Home-Purchase Loans & Households by Race/Ethnicity, Boston, 1990–2008*

The black share of Boston households was 20.6% in 1990 and 21.4% in 2000.

The Asian share of Boston households was 4.1% in 1990 and 6.8% in 2000.

The Latino share of Boston households was 8.1% in 1990 and 10.8% in 2000.

* Percentages for 2004 and later are not strictly comparable to those for earlier years.

**APPENDIX TABLE 4
Boston Home-Purchase Loans by Income Level, 1990–2008***

Income Level ^	Number of Loans						As Percent of All Loans					
	1990	1995	2000	2005	2007	2008	1990	1995	2000	2005	2007	2008
Low#	51	530	369	216	173	236	2.8%	11.6%	5.1%	2.7%	3.1%	5.3%
Moderate	352	1,233	1,321	1,314	1,104	1,044	19.6%	27.0%	18.4%	16.4%	19.9%	23.5%
Middle	527	1,261	1,815	2,281	1,650	1,248	29.3%	27.6%	25.2%	28.5%	29.7%	28.1%
High	513	889	2,095	2,715	1,480	1,077	28.5%	19.4%	29.1%	33.9%	26.6%	24.2%
Highest	355	659	1,589	1,474	1,151	841	19.7%	14.4%	22.1%	18.4%	20.7%	18.9%
Hi + Hi'est	868	1,548	3,684	4,189	2,631	1,918	48.3%	33.9%	51.2%	52.4%	47.3%	43.1%
Total#	1,798	4,572	7,189	8,000	5,558	4,446	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

Important Note: The metropolitan area used to determine income categories for Boston borrowers changed in 2004, so data for 2004 and later are not directly comparable to those for earlier years. If the metro area definitions had not changed, there would have been 376 loans (4.5%) to low-income borrowers and 1,864 loans (22.4%) to moderate-income borrowers in 2004. Also, beginning in 2004, loans other than first-lien loans for owner-occupied loans are excluded; previously, only junior-lien loans under the SoftSecond Program were excluded. See "Notes on Data and Methods" for details.

* Columns for many years are omitted from this table because of insufficient space, but all years are shown in Chart A-7.

"Total" excludes borrowers without income data (26 in 2008); before 2004, Low & Total also excluded those with incomes of \$10K or less.

^ Income categories are defined in relationship to Boston Metro Area Median Family Income as follows:

Low: <50% Moderate: 50%–80% Middle: 80%–120% High: 120%–200% Highest: >200%

The actual income ranges for each year were calculated from the following Boston Metro Area Median Family Incomes:

1990: \$46,300; 1991: \$50,200; 1992: \$51,100; 1993: \$51,200; 1994: \$51,300; 1995: \$53,100; 1996: \$56,500; 1997: \$59,600
1998: \$60,000; 1999: \$62,700; 2000: \$65,500; 2001: \$70,000; 2002: \$74,200; 2003: \$80,800; 2004: \$75,300; 2005: \$76,400
2006: \$82,000; 2007: \$80,500; 2008: \$84,300

Chart A-4: Loans to Low- and Moderate-Income Borrowers as % of All Boston Home-Purchase Loans, 1990–2008*

* Percents for 2004 and later are not directly comparable to those for earlier years; see Table 2 and "notes on Data Methods."

APPENDIX TABLE 5
Home-Purchase Loan Denial Rates by Race
Boston, Massachusetts, and United States, 1990–2008*

	Denial Rate						Ratio to White Denial Rate					
	1990	1995	2000	2005	2007	2008	1990	1995	2000	2005	2007	2008

White		7.3%	8.4%	9.7%	10.4%	11.2%		1.00	1.00	1.00	1.00	1.00
C. UNITED STATES #												
Asian	12.9%	12.5%	12.4%	15.8%	17.3%	18.7%	0.90	0.61	0.56	1.28	1.31	1.38
Black	33.9%	40.5%	44.6%	27.5%	30.9%	36.1%	2.35	1.97	2.00	2.24	2.34	2.65
Latino	21.4%	29.5%	31.4%	21.3%	24.7%	31.1%	1.49	1.43	1.41	1.73	1.87	2.29
White	14.4%	20.6%	22.3%	12.3%	13.2%	13.6%	1.00	1.00	1.00	1.00	1.00	1.00

Important Note: Denial rates & ratios for 2004 and later are not strictly comparable to those for previous years. Beginning in 2004, all applications other than for first-lien mortgages for owner-occupied homes are excluded; previously only junior liens under the SoftSecond Program in Boston were excluded. In addition, race and ethnicity are treated differently in HMDA data beginning in 2004, so the definitions underlying the categories used in this table are different for 2004 than for earlier years. See “Notes on Data and Methods” for details.

* Columns for many years are omitted from this table because of insufficient space, but denial rate ratios for all years are shown in Chart A-5.

U.S. denial rates from *Federal Reserve Bulletin* and FFIEC annual press releases, various dates.

U.S. denial rates are for conventional loans only; in Boston and MA overall denial rates (in table) are very close to conventional denial rates.

Chart A-5: Minority/White Denial Ratios, by Race
Boston Home-Purchase Loans, 1990–2008*

* Ratios for 2004 and later are not strictly comparable to those for earlier years.

NOTES ON DATA AND METHODS

Introduction

This report is based primarily on data from three major sources: the Federal Financial Institutions Examination Council (FFIEC) for Home Mortgage Disclosure Act (HMDA) data; the U.S. Census Bureau for data from the 2000 Census; and the U.S. Department of Housing and Urban Development (HUD) for annual data on income levels for metropolitan areas. These “Notes” provide information on the data obtained from these three sources. The information here is intended to supplement the information provided in the notes to the tables, and not all of that information is repeated here.

Home Mortgage Disclosure Act (HMDA) Data

HMDA Loan Application Register (LAR) data are the main source of data on loans, lenders, and borrowers for this report. These data are collected, processed, and released each year by the FFIEC (www.ffiec.gov/hmda). Among the HMDA data provided for each loan are: the identity of the lending institution; the census tract, county, and metropolitan area in which the property is located; the race, ethnicity, and sex of the applicant (and co-applicant, if any); the income of the applicant(s); the purpose of the loan (home-purchase, refinancing of existing mortgage, or home improvement); the amount of the loan, the *lien status* of the loan (first lien or junior lien), *pricing information* for loans with annual percentage rates above threshold levels (see below), whether the loan is secured by a *manufactured home*, and whether the loan is a *HOEPA loan* (that is, a high-cost loan subject to the protections of the Home Ownership and Equity Protection Act of 1994; home-purchase loans are not covered by HOEPA). The information in *italics* was included for the first time in 2004 HMDA data. The FFIEC makes raw HMDA LAR data available on CD-ROM. Starting with data for 2006, raw HMDA LAR data may also be downloaded from the FFIEC website.

High-APR loans (HALs) were identified for the first time in 2004 HMDA data. Lenders are required to compare the annual percentage rate (APR) on each loan made to the current interest rate on U.S. Treasury securities of the same maturity. If the difference (“spread”) between the loan’s APR and the interest rate on Treasury securities is three percentage points or more for a first-lien loan (or five percentage points or more for a junior-lien loan) then the spread for that loan must be reported, to two decimal points. In this report, loans for which the spreads are reported are referred to as “high-APR loans” or “HALs.”

The tables in this report provide information on first-lien loans for owner-occupied homes, usually presented separately for home-purchase loans and refinance loans.

(A few tables combine data for home-purchase and refinance loans; a few other tables have data for home-purchase loans only.) This involves ignoring a great deal of data in order to avoid a proliferation of tables that would result in information overload. In fact, information in the HMDA LAR data makes it possible to present results for 72 categories of loans on the basis of the following five distinctions: government-backed vs. conventional loans; 1–4 family site-built homes vs. manufactured homes vs. multi-family properties; owner-occupied vs. non-owner-occupied homes; home-purchase vs. refinance vs. home improvement loans; and first-lien vs. junior-lien loans. To achieve simplicity and to focus on the loans of greatest interest, I have taken two measures. First, I ignored all junior-lien loans, all loans for multi-family properties, all home improvement loans, and all loans for non-owner-occupied homes—that is, none of these types of loans are included in any of the numbers contained in this report’s tables. Second, I ignored the distinction between conventional and government-backed loans and the distinction between site-built and manufactured homes (in 2008, government-backed loans accounted for 12.4% of all loans in Massachusetts [up from 2.1% in 2007] and loans for manufactured homes accounted for only 0.3% of the state’s loans). Appendix Tables 1 and 2 provide data that allow the interested reader to assess the impact of these decisions about what loans to include and exclude from the analysis in this report. (These tables do not provide any information on home-improvement loans. There were a total of 13,207 home-improvement loans reported in 2008 HMDA data for Massachusetts, which constituted 8.3% of total [home-purchase plus refinance plus home-improvement] loans. Of these, 5,128 were first-lien home-improvement loans for owner-occupied homes, which constituted 4.0% of total first-lien loans for owner-occupied homes. HALs made up 6.0% of all home-improvement loans, and 9.6% of first-lien home-improvement loans for owner-occupied homes.)

The decision to include only first-lien loans in all of the tables in body of this report has less impact for 2008 data than in previous years because junior-lien loans made up just 6.3% of all home-purchase loans and 6.4% of all refinance loans, and because the percentage of junior-lien home-purchase loans that were HALs (5.1%) was quite close to the percentage of first-lien home-purchase loans that were HALs (4.6%); all data in this sentence are for loans for owner-occupied homes. Appendix Table 1 provides information on the breakdown of home-purchase and refinance lending between first-lien and junior-lien loans for total loans and HALs, overall and for each of the major racial/ethnic groups included in this report. In the case of home-purchase loans, including all loans (rather than restricting the analysis to first-lien loans as is done in this study) would have resulted in reporting the same higher

percentage of HALs among home-purchase loans (4.6%), and only a slightly higher percentage of HALs among refinance loans (4.2% vs. 3.9%). Black-white and Latino-white disparity ratios for all loans were similar to those for first-lien loans only.

Income categories for applicants/borrowers are defined in relationship to the median family income (MFI) of the Metropolitan Statistical Area (MSA) in which the property is located, as reported annually by the U.S. Department of Housing and Urban Development (see below). These categories are as follows—low: below 50% of the MFI in the MSA; moderate: between 50% and 80% of the MFI; middle: between 80% and 120% of the MFI; high: between 120% and 200% of the MFI; and highest: over 200% of the MFI. (Note that the “high-income” and “highest-income” categories used in this report are subdivisions of the standard “upper-income” category.) Using these definitions, specific income ranges were calculated for each income category for each MSA. Applicants/borrowers were assigned to income categories on the basis of their income as reported (to the nearest \$1000) in the HMDA data.

Metropolitan areas used in defining income categories for borrowers. Beginning in 2004, HMDA data use the revised metropolitan areas defined by U.S. Office of Management and Budget OMB in June 2003, under which New England joined the rest of the U.S. in having metropolitan areas consist of entire counties [www.whitehouse.gov/omb/bulletins/b03-04.html]. The Boston MSA now consists of Essex, Middlesex, Suffolk, Norfolk, and Plymouth counties. (Actually, this is just the Massachusetts portion of the Boston-Cambridge-Quincy MA-NH MSA; only data for the Massachusetts portion of the MSA are analyzed in this series of reports). Furthermore, like ten other large MSAs in the U.S., the Boston MSA is divided into Metropolitan Divisions (MDs). The Boston MSA now consists of three MDs: the Essex Country MD; the Cambridge-Newton-Framingham MD (Middlesex County); and the Boston-Quincy MD (Suffolk, Norfolk, and Plymouth Counties). Although the standard practice—by bank regulators and others—in analyzing HMDA data is to use the MFI of MDs in classifying borrowers and census tracts into income categories, **this report uses the MFI of the Boston MSA to classify all borrowers and census tracts in the Boston MSA into income categories.** This practice, first used in *Changing Patterns XIV*, was adopted because there is little or no economic, political, or social logic to a system which places Cambridge and Boston into separate Metropolitan areas. (The 2008 MFIs for the three MDs as well as for the entire Boston MSA are provided below.)

Racial/ethnic categories: Beginning with 2004, HMDA data classify each applicant and co-applicant by both ethnicity (Latino or Not Latino) and race (the possible races are now: American Indian or Alaska Native, Asian, Black, Native

Hawaiian or Other Pacific Islander, and White) and each person can choose as many races as they wish (up to all five). This report uses this information to place each borrower into one of six categories: “Asian” is shorthand for non-Latino Asian; “black” is shorthand for non-Latino black; “Latino” includes all applicants with Latino ethnicity; “white” is shorthand for non-Latino white; “other” is shorthand for non-Latino American Indian, Alaska Native, Native Hawaiian, or Other Pacific Islander; and “no information” includes borrowers with no information on race and either no information or Not Latino for ethnicity. Other analysts, including the Federal Reserve researchers who write an annual analysis of HMDA data for the *Federal Reserve Bulletin*, have grouped black Latinos with other blacks rather than with other Latinos. Which of these two ways of classifying black Latinos is adopted makes relatively little difference because the number of such borrowers is relatively small. Of all 122,236 first-lien loans for owner-occupied homes in Massachusetts in 2008, a total of 3,360 are identified in the HMDA data as going to black borrowers and a total of 4,318 are identified as going to Latinos; only 205 are identified as going to borrowers who were both black and Latino.

This report classifies borrowers on the basis of the ethnicity and first race of the applicant—that is, information about second or additional races of the applicant is ignored, as is all information about co-applicants. This provides considerable simplification to the analysis with very small impact: For example, of all loans for owner-occupied homes in Massachusetts in 2008 with information on the race of the borrower, only 0.4% of borrowers specified more than one race and only 1.3% of borrowers had co-borrowers of a different race; only 1.0% of borrowers had co-borrowers with different ethnicity.

Denial rates are calculated simply as the number of applications denied divided by the total number of applications. Not all loan applications result in either a loan or a denial. Table 16 provides data on how the actions taken on mortgage loan applications (for first-lien home-purchase loans on owner-occupied homes) were distributed among the five possible outcomes. This information is provided for four racial/ethnic categories as well as overall—for Boston, Greater Boston, and Massachusetts.

Lenders in HMDA data are not necessarily the same as the lenders who close the loans or those who interact directly with borrowers. In many cases, local banks dealing with borrowers are, in effect, acting as agents or brokers for out of state banks. HMDA regulations specify that a loan is reported only by the lender that makes the “credit decision.” For details on this matter see the Fed’s “Official Staff Commentary” on Section 203.1 of its Regulation C (available in the 2004 edition of *A Guide to HMDA Reporting: Getting It Right!*, Appendix D, pages D1–D2 [www.ffiec.gov/hmda/guide.htm]).

Data from the 2000 Census

All population and income data presented in this report for geographic areas are from the 2000 Census. Rolf Goetze of the Policy Development and Research Department at the Boston Redevelopment Authority (BRA) provided me with 2000 Census data in electronic form on requested variables for all of the census tracts in the city of Boston. Roy Williams of the Massachusetts State Data Center provided me with information on these same variables for all Massachusetts cities and towns and for all census tracts in the state. Income data from the 2000 Census were obtained using the “American FactFinder” feature on the website of the U.S. Census Bureau (www.census.gov).

Racial/ethnic composition of geographic areas may be defined in a number of ways as a result of the fact that the 2000 Census allowed individuals to choose two or more racial categories for themselves, in addition to classifying themselves as either Hispanic/Latino or not (the 2000 Census regards the terms “Latino” and “Hispanic” as equivalent; this report uses the term “Latino”). The percentage for Latinos consists of all those who classified themselves as Latino, regardless of the race or races that they selected. The terms “Asian,” “black,” and “white” are used in this report as shorthand for “non-Latino Asian,” “non-Latino black,” and “non-Latino white,” respectively. The percentage for a single race is calculated as the average of (1) the percentage that chose that race alone and (2) the percentage that chose that race alone or together with one or more other races. One advantage of this method is that the sum of the percentages for all of the races is very close to 100% (the sum of all percentages based on each race alone is less than 100%, while the sum of all percentages based on each race alone or together with one or more other races is greater than 100%).

Racial/ethnic composition may be reported either as percentage of the entire population or as percentage of households, where a household is defined as one or more persons living in a single housing unit. (In many cases, a household consists of a family, but there are also many non-family households consisting of a single individual or a set of unrelated individuals.) In most cases, this report uses household percentages because households provide a better indicator of the number of potential home mortgage borrowers. The race/ethnicity of a household is determined by the race/ethnicity of the individual identified as the householder.

Census tracts are assigned to income categories on the basis of decennial census data, using the metropolitan area definitions adopted by the federal government in June 2003 (see above). This differs from the way that borrowers are assigned to income categories on the basis of annually updated data on median family incomes (MFIs) for

metropolitan areas as reported annually by HUD. MFIs for census tracts are only reported (by the Census Bureau) once every ten years, so the assignment of census tracts to income categories does not change annually. (However, the assignment of census tracts is different in this report than in *Changing Patterns XIII* and earlier reports because of the decision [discussed above] to classify all census tracts in the Boston MSA on the basis of the MFI in the MSA rather than on the basis of the MFIs in the three Metropolitan Divisions [MDs] within the Boston MSA.)

Data from the Department of Housing and Urban Development (HUD)

Median family income (MFI) of each metropolitan area is reported annually by HUD. Borrowers are placed into income categories by comparing their reported incomes to the annual HUD estimate of the MFI in the Metropolitan Statistical Area (MSA) area where the home being mortgaged is located. The Boston MSA is divided into three Metropolitan Divisions (MDs), but the MFIs of these MDs were not used in this report. The 2008 MFIs for all of the state’s metropolitan areas were:

Barnstable MSA (Barnstable County)	\$73,500
Boston MSA (Essex/Middlesex/Norfolk/Plymouth/Suffolk Counties)	\$84,300
Boston–Quincy MD (Norfolk/Plymouth/Suffolk Counties)	\$79,500
Cambridge–Newton–Framingham MD (Middlesex County)	\$93,000
Peabody MD (Essex County)	\$78,800
Pittsfield MSA (Berkshire County)	\$64,800
Providence–Fall River–New Bedford MSA (Bristol County)	\$68,300
Springfield MSA (Franklin/Hampden/Hampshire Counties)	\$64,800
Worcester MSA (Worcester County)	\$76,900
Non-Metro part of Massachusetts (Dukes/Nantucket Counties)	\$74,000

Subprime lenders among HMDA-reporting lenders were identified, for the *Changing Patterns* covering lending from 1998 through 2003, using annual lists prepared by Randall Scheessele of HUD. HUD’s lists include lenders who specialized in subprime loans or for whom subprime loans constituted a majority of loans originated. Information on how the lists were compiled, and the lists themselves through 2005, are available at: www.huduser.org/datasets/manu.html. HUD’s lists for 2004 and 2005 were not available in time for use in preparing the *Changing Patterns* report on lending during those years. For most purposes, it is preferable to identify higher-cost loans directly rather than to try to

approximate these loans by identifying lenders who specialize in such loans and for this reason HUD has stopped preparing annual lists of subprime lenders. HUD never classified any Massachusetts bank or credit union (or any affiliate) as a “subprime lender.”

For 2004 and later years, lenders were classified as *subprime lenders*—for the purposes of this series of reports—on the basis of the percentage of their total Massachusetts loans that consisted of high-APR loans (HALs). Minimum percentages for specifying subprime lenders were chosen to include known subprime lenders, including those identified as subprime lenders on HUD’s annual lists. A lender was classified as a “subprime lender” for 2004 if it made at least five first-lien, owner-occupied, home-purchase HALs in Massachusetts, and if these HALs constituted more than 15% of its total loans in the state. A lender was classified as a “subprime lender” for 2005 if HALs constituted more than

one-third (33.3%) of its total loans in the state. A lender was classified as a “subprime lender” for 2006 if HALs constituted more than 40% of its total loans in the state. A lender was classified as a “subprime lender” for 2007 if HALs constituted more than 40% of its total loans in the state in 2007 or more than 40% of its loans in 2006 and at least 25% of its loans in 2007.

A lender was classified as a “subprime lender” for 2008 if HALs constituted at least 40% of its total loans in the state in 2008. The 46 lenders identified in this report as subprime lenders for 2008 accounted for 21.6% of all the first-lien home-purchase and refinance HALs on owner-occupied homes made in Massachusetts by the 263 lenders that made at least one HAL loan.
