Rising Eagle Youth Services (REYS)

Outcomes Measurement

Keywords: Rising Eagle, substance abuse, mental health, day treatment curriculum, outcomes measurement, pre/post test, evaluation protocol

Abstract: The project works toward giving a nonprofit organization the ability to measure the effect of its day-treatment curriculum on its clients. The project provides measuring instruments and an evaluation protocol, which guides survey process, survey evaluation, recording, and reporting.

Executive Summary

Rising Eagle Youth Services provides substance abuse and mental health services for Monterey County youth ages 12 to 18 through two programs: day treatment and outpatient. The treatment philosophy promotes personal responsibility, social and emotional skills and improved relationships with peers, family and the

This capstone project focuses in on the Day Treatment Program and the counseling sessions provided. The counseling sessions use a curriculum that focuses on anger management, healthy relationships, responsible thinking, stress management, drug education, and relapse prevention. It is in this area of the program structure that there is a need. The agency is looking for an improved way to measure the effectiveness of the program's curricula on clients.

The project works towards giving Rising Eagle the capacity to measure the effect of the program's curriculum on clients' knowledge, skills, and attitudes using outcome measurement. With entry (pre) and exit (post) surveys, Rising Eagle can begin to look for indicators that support identified outcomes. Such indicators include having a client gain new knowledge, increase an important life skill, and begin to change attitudes, values, or lifestyle.

In addition to the surveys, I have created an evaluation protocol for the organization. The protocol guides the organization during the pre and post testing procedure. The protocol also provides direction during the analysis stage. The protocol explains how the surveys are to be measured and evaluated. Finally, the protocol provides a chain of command. The chain of command allows information to travel through the necessary components in the most effective way.

Area of Need

Rising Eagle Youth Services (REYS) a program of Community Human Services. REYS attempts to reduce drug and alcohol abuse and related problems among youth ages 12-18, and to provide life-skills education that prepares clients to seek and obtain healthy relationships with their families, their communities, their peers, and themselves. Rising Eagle has two main programs: the Day Treatment Program and the Outpatient Program.

The Day Treatment Program is an intensive all-day program. The program works in collaboration with Monterey County Office of Education, and involves both counseling and academics. Clients participate in an on-site school classroom in the morning, and have counseling sessions in the afternoon. A weekly recovery meeting occurs on site in which all clients participate. Some individual and family therapy is also provided, based on client need. The minimum time to complete the day program is six months, and clients “graduate” only at the close of a semester in order to coordinate their school and counseling needs.

In Outpatient Program, the treatment program is individualized according to client need, but every client is encouraged to attend group therapy at some point. The outpatient groups are based on a sixteen-week curriculum, and clients can enter at any time and leave when they have made significant progress after a minimum sixteen weeks of groups.

This capstone project focuses in on the Day Treatment Program and the counseling sessions. I have included an organizational chart at the end of the capstone write up under the Additional Documentation section. Again, as illustrated by the organizational chart, I find myself working in the Day Treatment program along with

three Counselor Specialists (CIIIs) and two Counselors (CIIs). The Counselor Specialists are the clinicians and facilitators of the counseling sessions. The Counselors partake in the counseling sessions as co-facilitators.

The counseling sessions use a curriculum that focuses on anger management, healthy relationships, responsible thinking, stress management, drug education, and relapse prevention. It is in this area of the program structure that there is a need. The agency is looking for an improved way to measure the effectiveness of the program's curricula on clients. Having an ineffective program structure can hinder efficient service delivery.

Background/History of the Need

Since 1996, Community Human Services has collaborated with Monterey's county offices of Probation, Behavioral Health, Children's Mental Health, and Office of Education. In the last three years, the program has taken on a different model of service. This new model has created more structure and implemented a comprehensive curriculum. The purpose of the program's curriculum is to reach teenagers at their level of cognitive and emotional development.

Each of the selected curriculums contains threads of the others, and all are geared toward helping teens become better at self-awareness, self-control and communication. These skills lead to a sense of competency, self-esteem and personal power, which in turn enable a client to make positive changes and responsible choices. In order to see whether the curriculum is having an effect, an organization must look to measure such changes.

“Human service agencies are in a major shift from a focus on activities to a focus on results. They are getting this message from many directions - state and local governments, private foundations, corporate offices, individual donors, and their own associations (Hatry, van Houten, Plantz, Greenway, 1996).” In order to measure success, the agency needs to begin measuring their clients instead of measuring how many clients.

An outcome describes a specific desirable result or quality of an organization’s services. “Service organizations are increasingly recognizing that they need some form of regular feedback on their outcomes to help them improve their services (Morley, Vinson, & Hatry, 2001).” “The measurement of a program's outcomes – the benefits or results it has for its customers, clients, or participants – can and will have a tremendous impact on nonprofit health and human service organizations. Outcome measurement shifts the focus from activities to results, from how a program operates to the good it accomplishes (Plantz, Greenway, Hendricks, 2004).”

Project Description

The project works towards giving Rising Eagle the capacity to measure the effect of the program’s curriculum on clients’ knowledge, skills, and attitudes using outcome measurement. Outcome measurement involves the identification of outcomes, development of appropriate outcome indicators and data collection, data analysis to better understand organization achievements, and user-friendly regular reporting of the findings.

The overall outcomes that the curriculum is trying to attain include:

- Awareness of one’s thoughts
- Learning to distinguish thinking patterns

- Ability to evaluate relationships
- Understanding abuse
- Exploring values
- Understanding the nature of stress
- Understanding of the addiction process

With entry (pre) and exit (post) surveys, Rising Eagle can begin to look for indicators that support the above-mentioned outcomes. Such indicators include having a client gain new knowledge, increase an important life skill, and begin to change attitudes, values, or lifestyle. These indicators will allow the agency to identify modified behaviors, improved conditions, and altered status.

In addition to the surveys, I have created an evaluation protocol for the organization. The protocol guides the organization during the pre and post testing procedure. The protocol also provides direction during the analysis stage. The protocol explains how the surveys are to be measured and evaluated. Finally, the protocol provides a chain of command. The chain of command allows information to travel through the necessary components in the most effective way.

As for the evaluation of the project itself, the organization's Program Director/Coordinator and one Senior Counselor Specialist did the evaluation. Both people evaluated the project by answering two questions: Does the project measure curricula outcomes and indicators? In addition, does the project provide a system to measure the curricula's effectiveness?

Application of Project to Academic Requirements

The capstone project follows the vision of California State University Monterey Bay (CSUMB) in a way that my work promotes a response to a changing condition. Through the integration of work and learning, service and reflection, I practiced on a project that helped build upon an immediate region. With the acquired technical skills, critical thinking abilities, and social responsibility, I designed a capstone project that promotes the well-being of a community and organization, and allows me to be a productive citizen.

Furthermore, my capstone project addresses CSUMB Major Learning Outcomes (MLOs). The MLOs that this project covered are Information Management, Knowledge of Health and Human Services, Leadership, Personal and Professional Communication, Personal and Professional Ethics, and Statistics and Research Methods. ,

The evidence that supports these claims are copies of the Excel spreadsheets that will be used for managing information and presenting information in an electronic format. The surveys show my ability to assess a community health issue through the use of outcomes measurement and the surveys also show my skills in developing basic surveys to obtain health and human service information. The human subjects forms show my knowledge of ethical practice and appropriate research abilities. The oral presentation shows that I can present information in a professional manner, and the overall project shows my ability to design measurement tools that assist in the evaluation of direct service intervention and the ability to lead and promote goals, set clear direction for activities, and the vision to improve community conditions. Finally, the capstone project

will be presented during the capstone festival through PowerPoint and will be archived in the university's library for future reference.

Conclusion

In conclusion, the capstone project provides tools that measure the competency outcomes of the primary focus of the program. The project provides an efficient and practical system that allows the program and the clients to measure the curricula's effectiveness. Furthermore, the protocol has been established within the system that allows for expedient review and feedback of the survey results.

By moving towards outcome measurement, the agency can begin to show how well they are helping their clients rather than showing how many clients they served. In addition, the project helps the agency measure and improve services. By using outcome measurement, the agency and staff begin to show accountability for the services they provide. All together, the project will help the agency and client population because it will make and call for better services and structure, which in turn increase the possibilities of future grants/funding, and sustainability.

As for me the student, the capstone project has been an experience that has taught me to reflect, prepare, lead, and rise. I begin to see my knowledge, skills, and attitude come together in a project that shares ideas matching the vision of the university. I have learned that with the proper structure, many things can improve. However, they will not improve by themselves, there needs to be a change agent willing to take the lead and challenge the established.

Evaluation Protocol

Rising Above: Rising Eagle Youth Services Outcomes Measurement

Surveys:

- I. Consists of Pre- and Post-Surveys
- II. Group Facilitator will conduct testing at introduction and conclusion of a curriculum module.
- III. Surveys are to be done in a setting that does not influence client's answers.

Evaluation:

- I. Knowledge (K) Scores are calculated as follows:
 - a. Each correct answer represents one point, which are totaled together and recorded in second page.
 - 0= No knowledge
 - 1= Poor knowledge
 - 2= Some knowledge
 - 3= Exceptional knowledge
- II. Skills (S) and Attitude (A) Scores are calculated as follows:
 - a. Points are totaled together;
 - Never= 0
 - At times= 1
 - Always= 2
 - b. Then divided by two.
 - c. Scores are rounded up if needed:
 - 1= No skills present
 - 2= Poor skills
 - 3= Some skills
 - 4= Exceptional use of skills
- III. All scores are recorded on second page of surveys.

IV. Goal Setting will be analyzed in reference to service plans.

a. This information is for counselor use only.

V. Scores and progress are revisited at the conclusion of the Post-survey.

Agency Records:

I. Group facilitators will pass scores and surveys on to Program Coordinator, Program Coordinator will pass to Office Manager.

II. Office Manager will record:

a. Client Names/ID

b. Pre- & Post- Scores:

- knowledge, skills, and attitude

III. Information can be stored in Microsoft Excel. Which will include two sets of scores (Pre- and Post-) for each client and curriculum.

(EXAMPLE)

client name (id)	Knowledge (pre)	Knowledge (post)	Skills (pre)	Skills (post)	Attitude (pre)	Attitude (post)
XXXXXXXX	X	Y	X	Y	X	Y

IV. Information attained from Pre- and Post-testing can be examined for any changes in client's knowledge, skills, and attitudes. Furthermore, with the appropriate statistical program, the information can be further studied and effectively presented through quarterly reports. The information is to be passed back to Program Coordinator and Program Director. Ultimately passed back on to counselors, clinicians, agency administration, and board of directors.
