## NINE JUSTICES, TEN YEARS: A STATISTICAL RETROSPECTIVE

The 2003 Term marked an unprecedented milestone for the Su preme Court: for the first time in history, nine Justices celebrated a full decade presiding together over the nation's highest court. ${ }^{1}$ The continuity of the current Court is especially striking given that, on average, one new Justice has been appointed approximately every two years since the Court's expansion to nine members in $1837 .{ }^{2}$ Although the Harvard Law Review has prepared statistical retrospectives in the past, ${ }^{3}$ the last decade presents a rare opportunity to study the Court free from the disruptions of intervening appointments.

Presented here is a review of the 823 cases decided by the Court over the past decade. Of course, bare statistics cannot capture the nuanced interactions among the Justices nor substantiate any particular theory about the complex dynamics of the Court. Rather, this statistical compilation and the preliminary observations articulated here are intended only as a starting point - a modest effort to showcase trends that deserve closer attention and to jumpstart more robust analyses of how the Court, despite its apparent stability, has evolved over the past decade.

Even a cursory review of this retrospective produces several noteworthy insights. Some implicate broad institutional trends that cannot be explained by the voting patterns of any particular Justice. For instance, Table I suggests that while the Court has reviewed a decreasing number of cases from its appellate docket, in forma pauperis petititions have climbed steadily despite judicial ${ }^{4}$ and congressional ${ }^{5}$ efforts to curb this trend. ${ }^{6}$ What has not changed is the Ninth Circuit's status

[^0]as the tribunal most frequently reversed by the Supreme Court - a trend noted by legislators ${ }^{7}$ and jurists ${ }^{8}$ alike. Table VI(D) reveals that the Ninth Circuit accounts for over thirty percent of the cases in which the Supreme Court reversed a federal court of appeals decision. Although the Ninth Circuit's docket size no doubt offers a partial explanation, this side-by-side comparison is nonetheless striking.

## Figure i. Supreme Court Reversals of Circuit Court Decisions

Unique to this retrospective is the possibility of documenting a specific Justice's voting pattern without the complications of changes in the Court's composition. Take, for example, Justice O'Connor, whose vote is widely regarded as crucial in close cases. ${ }^{9}$ Table V confirms that Justice O'Connor found herself in five-Justice majorities more often than any of her colleagues, casting decisive votes in over three-

[^1]quarters of 5-4 decisions. ${ }^{10}$ In these closest of cases, two coalitions have been said to flank Justice O'Connor. ${ }^{11}$ To one side were Justices Stevens, Souter, Ginsburg, and Breyer, with whom Justice O'Connor voted twenty-eight times. To the other were Chief Justice Rehnquist and Justices Scalia, Kennedy, and Thomas, with whom she voted eighty-two times. But an analysis of Justice O'Connor's voting tendencies in all cases - not just 5-4 ones - demonstrates that her rates of agreement with the two roalitions appear to have converged over the past eight years. ${ }^{12}$

## Figure 2. Justice O'Connor's Voting Alignments

These statistics also reinforce longstanding characterizations of Justice Stevens as the Court's most independent voice. ${ }^{13}$ Table III(B) demonstrates that Justice Stevens issued more dissenting opinions - 251 in total - than any other Justice. In fact, he authored more than twice

[^2]as many dissents as Justice $\mathrm{O}^{\prime}$ Connor and nearly three times as many as Justice Kennedy.

But the statistics also shed light on other popular impressions about the Justices. The voting patterns of Justices Scalia and Thomas, for example, have long been cast as unusually indistinguishable. ${ }^{14}$ Table II(B) indeed indicates that Justices Scalia and Thomas agreed in $86.7 \%$ of cases during the past decade, more than any other two members of the Court. It also reveals, however, that Justices Souter and Ginsburg - who have received far less attention for their jurisprudential similarities - agreed in $85.6 \%$ of the cases over the same period. In addition, contrary to the view that Justice Thomas infrequently authors opinions, ${ }^{15}$ Table III(A) reveals that Justice Thomas has emerged as one of the Court's most prolific writers: over the past three years, Justice Thomas averaged nearly twenty-six opinions per Term, more than all but two of his colleagues. ${ }^{16}$

Raw numbers, of course, will never tell the full story. Why have certain circuits consistently suffered higher rates of reversal than others? Do voting coalitions change from one substantive field to the next? And, indeed, what effect has the Court's continuity ultimately had on its jurisprudence? We hope this retrospective will help to raise such questions and inspire the scholarship that endeavors to answer them.

${ }^{\text {a }}$ All information in Table I is derived from data provided by the Supreme Court. See, e.g., The Supreme Court, 2003 Term-The Statistics, 118 HARV. L. REV. 497, 504 n.a (2004); see also, e.g., October Term 2003, Statistical Sheet No. 28 (June 30, 2004) (unpublished statistical sheet, on file with the Harvard Law School Library).
${ }^{b}$ The Harvard Law Review's annual Statistics introduced the category "On Review" in 1998. See The Supreme Court, 1997 Term—The Statistics, 112 HARV. L. REV. 366, 372 n.d (i998) (describing the distinction between this category and its predecessor). Data for the 1994, 1995, and ig96 Terms have been assembled by evaluating statistics provided by the Supreme Court in its annual journal. See, e.g., Statistics as of June 29, 1995, J. SUP. CT. U.S., Oct. Term 1994, at II, available at http://supremecourtus.gov/orders/journal.html. For these years, the number of decisions made "On Review" was determined by adding the total number of petitions for certiorari and appeals granted by the Court to the number of cases available for argument at the beginning of the Term, and then subtracting those available for argument after the end of the Term. These decisions were then allocated between the appellate and miscellaneous dockets such that the sum of "On Review," "Summarily Decided," and "Appeals and Petitions for Review Denied, Dismissed, or Withdrawn" on each docket matched the total number of cases on each docket according to the Supreme Court's own report. In the data for October Term 1997, a discrepancy of one case was noted between the sum of "On Review," "Summarily Decided," and "Appeals and Petitions Denied, Dismissed, or Withdrawn" and the total number of cases disposed according to the Journal.

## TABLE I (continued)

As a result, the total number of cases reported in the appellate docket here is higher than the total number of cases in the appellate docket according to the Journal.
c In the 1996 Term, the Harvard Lave Review's annual Statistics did not include the number of cases that were summarily decided in the miscellaneous docket. The figure in this table was, therefore, calculated by subtracting the number of cases in which review was granted from the total number of cases decided on the merits in the miscellaneous docket during that Term. See The Supreme Court, 1996 Term-The Statistics, II I Harv. L. Rev. 43 I, 435 (1997).
${ }^{\text {d }}$ The data in this table were derived directly from Table $\operatorname{II}(\mathrm{A})$ of the annual Statistics rather than from Table II(C), which has intermittently included cases from the Court's original docket not relevant to this analysis. See The Supreme Court, 1997 Term-The Statistics, in 2 HARV. L. REV. 366, 373 n.k (1998). These data were derived by adding the number of cases disposed by each method within the appellate and miscellaneous dockets. Cases arising under original jurisdiction have been excluded.
${ }^{\text {e }}$ This table includes only cases disposed of by full opinions or by per curiam opinions containing legal reasoning substantial enough to be considered full opinions. For examples of per curiam opinions containing sufficient legal reasoning to be included in these tables, see The Supreme Court, 2003 Term-The Statistics, 118 HARV. L. REV. 497, 497 n.a (2004).

${ }^{\text {b }}$ This table records the total number of decisions ("CD") in which one Justice voted in agreement with another Justice over the last decade. "CN" represents the cumulative number of decisions in which both Justices participated and thus the total number of opportunities for agreement. "P" represents the percentage of cases in which two Justices agreed, calculated by dividing $C D$ by $C N$. Note that $C D=\Sigma D$ and $C N=\Sigma N$, where $D$ and $N$ are drawn directly from the voting alignment tables for all written opinions for each of the last ten years. E.g., The Supreme Court, 2003 Term-The Statistics, 118 HARV. L. Rev. 497, 499 tbl.I(BI), 501 n.g (2004). Note also that this table includes all opinions authored by the Justices rather than solely non-unanimous opinions; because the Justices tend to agree quite often, the rates of agreement presented here are higher than those reflected in the annual presentation of voting patterns in non-unanimous cases. See id. at 501 n.h.

A previous Statistics retrospective noted that a change in the Law Review's methodology for assessing agreement among Justices in separate opinions ("S") may have resulted in slight overreporting of the rates of agreement for certain Terms. The Supreme Court, 1999 Term-The Supreme Court in the Nineties: A Statistical Retrospective, II4 HARV. L. REV. 402, 404 n.a (2000). However, calculating rates of agreement as a quotient of the decisions in which the Justices agreed ("D") has eliminated any such overreporting by counting agreements between Justices only once for any particular case without respect to the number of opinions two Justices joined together. See, e.g., The Supreme Court, 2003 Term-The Statistics, supra, at 501 n.g.

## TABLE III

(A) ACTIONS OF INDIVIDUAL JUSTICES:

Total Opinions Written

|  | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 | Total | Avg. |

| Total | 16 | 11 | 18 | 15 | 16 | 18 | 27 | 21 | 14 | 19 | 175 |

${ }^{\text {a }}$ This table records the number of times that each Justice voted with the majority in a 5-4 decision. For an explanation of the voting arrangements that constitute a 5-4 decision, as well as a detailed list of the cases included here, see the notes accompanying Table $\mathrm{I}(\mathrm{E})$ of the annual Statistics. E.g., The Supreme Court, 2003 Term—The Statistics, 118 HARV. L. Rev. 497, 503 nn.n-v (2004).
${ }^{b}$ The numbers in this row represent the total number of 5-4 decisions rendered by the Court in a given Term.

## TABLE V (continued) (B) 5-4 Decisions: Voting Blocs Constituting the Majority ${ }^{\text {c }}$

| Justices Constituting the Majority | Number of Decisions |
| :---: | :---: |

| State Courts | 9 | 8 | 6 | 5 | 9 | 8 | 11 | 6 | 14 | 6 | 81 | 8.1 |
| Total | 50 | 41 | 50 | 42 | 44 | 45 | 50 | 51 | 48 | 50 | 469 | 46.9 |

[^0]:    ${ }^{1}$ A seven-Justice Court sat together for more than a decade only once, from Justice Joseph Story's appointment in 1812 to Justice Brockholst Livingston's death in 1823 . See Supreme Court of the United States, Members of the Supreme Court of the United STATES I (n.d.), available at http://www.supremecourtus.gov/about/members.pdf (last visited Oct. 10, 2004). Justice Stephen Breyer, the most recent appointee to the Court, took the judicial oath on August 3, 1994. Id. at 2.
    ${ }^{2}$ Eighty-five Justices have been appointed to the Court since 1837, when the Court was expanded to nine members, yielding an average of one new Justice every two years. See id. at 1-2.
    ${ }^{3}$ The Supreme Court, 1999 Term-The Supreme Court in the Nineties: A Statistical Retrospective, 114 HARV. L. Rev. 402 (2000); The Supreme Court, 1989 Term-The Supreme Court in the Eighties: A Statistical Retrospective, io4 Harv. L. Rev. 367 (1990).
    ${ }^{4}$ See Martin v. D.C. Court of Appeals, 506 U.S. I, 2 ( 1992 ) (per curiam) (ordering the Clerk of the Court to refuse in forma pauperis petitions for certiorari from petitioners abusing the Court's certiorari process). But see id. at 4 (Stevens, J., dissenting).

    5 The Prison Litigation Reform Act, for example, contains a "three strikes" provision barring in forma pauperis actions by prisoners who have previously filed three frivolous claims. 28 U.S.C. § $1915(\mathrm{~g})(2000)$.

    6 This trend may be attributed to ballooning prison population and inmate litigation. See generally Margo Schlanger, Inmate Litigation, 116 HARV. L. REV. 1555 (2003).

[^1]:    7 See Confirmation Hearings on Federal Appointments Before the Senate Comm. on the Judiciary, Part 6, 108th Cong. 533 (2004) (statement of Sen. Orrin G. Hatch) (describing the Ninth Circuit's reversal rate in the Supreme Court as the "highest and widest . . . in the country"), available at $\mathrm{http}: / / \mathrm{judiciary}$. senate.gov/member_statement.cfm?id $=1030 \&$ wit_id $=2628$.

    8 See, e.g., Kennedy v. Lockyer, No. 01-55246, 2004 U.S. App. LEXIS 17190, at *80-81 (9th Cir. June 14, 2004) (O'Scannlain, J., dissenting) (lamenting that the Ninth Circuit's reversal rate in certain contexts "has become a source of repeated public embarrassment").
    ${ }^{9}$ See, e.g., Paul H. Edelman \& Jim Chen, The Most Dangerous Justice: The Supreme Court at the Bar of Mathematics, 70 S. Cal. L. Rev. 63, 65 (1996); Lyle Denniston, High Court OK's School Vouchers, Boston Globe, June 28, 2002, at AI (noting that Justice O'Connor is often the deciding vote in close cases).

[^2]:    10 Justice Kennedy has also been characterized as a "swing vote," particularly in the Court's First Amendment and religious freedom jurisprudence. See, e.g., R. Collin Mangrum, State Aid to Students in Religiously Affiliated Schools: Agostini v. Felton, 31 Creighton L. Rev. 1155 , 1205 (1998).

    11 See, e.g., Lino A. Graglia, The Myth of a Conservative Supreme Court: The October 2000 Term, 26 HARV. J.L. \& PUB. POL'Y $28 \mathrm{I}, 287$ (2003) (describing Justice O'Connor's choice between the "conservative bloc" and the "liberal four").

    12 This trend did not hold last Term, however, when Justice O'Connor aligned herself with Chief Justice Rehnquist and Justices Scalia, Kennedy, and Thomas seventy-two percent of the time.

    13 See, e.g., Robert Judd Sickels, John Paul Stevens and the Constitution i (1988); Linda Greenhouse, In the Matter of Labels, a Loner, N.Y. Times, July 23, 1984, at A8.

[^3]:    14 See, e.g., Richard Carelli, Thomas' Decisions Show Archconservative Bent, St. Louis POST-DISPATCH, Feb. 27, 1992, at IC (quoting one litigator's assessment that Justice Thomas could become a "clone" of Justice Scalia).

    15 See, e.g., Kathryn E. Diaz, There Is No Plain Meaning: The Jurisprudence of ERISA and the "Exclusive Benefit" Rule, 4 U. PA. J. LAB. \& Emp. L. 7I, 93 (2001) (describing Justice Thomas as the "least prolific opinion writer on the Court").

    16 Interestingly, Justice Thomas's opinion production reached its lowest point — sixteen - in 1996, the same Term that his rate of agreement with Justice Scalia reached its peak - $97.7 \%$. By comparison, Justices Scalia and Thomas agreed in just $75.9 \%$ of the cases last Term, when Justice Thomas authored a personal-record twenty-seven opinions.
