XIII. GLOSSARY OF TERMS

FROM THE DESK OF FIRE MARSHAL JOHN C. DEAN

Welcome to the 2011 MEFIRS Annual Report, our ninth annual report. In this report Maine residents and visitors are provided with detailed data on incidents in which 176 Maine Fire Departments responded. The data provides the reader with a picture of the impact of fire on our state. The reader will also find in this report summary charts and narratives discussing certain aspects of Maine's fire burden in historical context. We hope the information will assist fire service people, educators, policy makers and others interested in their efforts to find viable approaches to reduce the cost of fire to Maine citizens and the visiting public.

The 23 fire deaths in 2011 marked over a 100% increase in fire deaths over 2010. Though this may seem unbelievable it only reflects the unusual year we had in 2010. This report provides you with a body of information in which you might find some reason as to why the two years were so different. Take time to look at the overall 2011 fire experience first. Then look back at 2010, 2009, and further back. Compare the years prior to 2010 to 2011. You should find some interesting details that put the change in the two years in context.

I would like to thank my staff for making this report possible and wish each and everyone of them, and you the public we serve, a safe and happy 2012.

Sincerely,

A handwritten signature in black ink, appearing to read "John C. Dean".

John C. Dean, State Fire Marshal

2011 FIRE MARSHAL'S ANNUAL REPORT

Foreword

The Office of State Fire Marshal provides the following report on the offices activities in addition to fire incidents in Maine reported to us through the NFIRS system. The incident data is provided by departments that reported to the Maine Fire Information Reporting System. The data imported to the Fire Marshal's Office has been validated using the NFIRS 5.0 Data Entry / Validation Tool, Version 5.4.1 for completeness and accuracy. During the import of local fire department data into the State's MEFIRS data server, any corrective action needed by fire departments is returned for additional attention. As a result of these quality assurance activities, the data maintained and reported is an accurate summary of the incident event as it happened and recorded within the National Fire Incident Reporting System at the United States Fire Administration.

Upon completion of the data validation process, the Office of State Fire Marshal exports the cumulative State MEFIRS data to the U.S. Fire Administration. Following the export of the State of Maine MEFIRS data to the U.S. Fire Administration, it is released for fire service and public access.

The MEFIRS 2010 Annual Report has been generated using the Web-based Reporting Tool of the National Fire Incident Reporting System. The NFIRS 5.0 Web-based reports utilize Actuate information delivery technology in providing summary and statistical information from fire department and incident data saved to the National Database. Report executables are predefined according to NFIRS 5.0 reporting requirements established by the U.S. Fire Administration. Two types of reports have been included in this report. Management reports, which provide summary information as specified by the report query, and reports with user-specified parameters have been populated with data provided by the Fire Departments of the State of Maine for the development of this report.

THE OFFICE OF STATE FIRE MARSHAL

JOHN C. DEAN, STATE FIRE MARSHAL

The primary function of the State Fire Marshal is to protect lives and property from fire. It is the duty of the State Fire Marshal to enforce all laws, ordinances and rules directed toward and concerned with the prevention and containment of fire and the protection of life and property. The State Fire Marshal is responsible for the suppression of arson and the investigation of cause, origin and the circumstances of fires. In addition, the Fire Marshal has under his domain, the storage, sale and use of combustibles, flammables and explosives. Building safety and fire prevention efforts responsibilities include such focus areas as the installation, maintenance or sale of automatic and other fire alarm systems and fire extinguishing systems; the construction, maintenance and regulation of fire escapes; as well as the adequacy of means of egress in case of fire from buildings.

The Division of State Fire Prevention was created in 1937 to combat an increasing number of fraudulent insurance claims resulting from set fires. Since then there has been a substantial growth in the areas of responsibility of the State Fire Marshal's Office, which replaced the Division of State Fire Prevention in 1972. The scope of statutory authority has broadened to include a number of activities related to life safety as well as fire prevention.

The functions of the State Fire Marshal have primary goals of:

1. Investigation of the cause and origin of fires and explosions;
2. Arson investigation, evidence gathering and case preparation for possible prosecution;
3. Regulate, permit and inspect for the use of explosives, fireworks and certain flammable liquids;
4. Inspect approximately 25 different types of buildings and facilities with the primary focus to enforce life safety codes and standards;
5. Review plans to issue permits for construction and alteration of public buildings, handicap accessibility, installation of fire alarm and fire sprinkler systems; installation of above ground fuel storage tanks, amusement rides, and self-service gas stations;
6. Conduct and offer specialized training for trade professionals, care givers, code enforcement officials, and fire and law enforcement professionals; and
7. Coordinate specialty subject areas such as the State of Maine Juvenile Fire Safety Collaborative that was created by a Governor's Executive Order.

THE OFFICE OF STATE FIRE MARSHAL DIVISIONS

The Office of the State Fire Marshal is Maine's leading fire investigation, prevention, fire research, and fire and life safety education and awareness organization. All activities of the Fire Marshal's Office are driven by an assessment of Maine's unique fire burden. Understanding the many direct and indirect social and economic costs of fire and the cost to benefits ratio of particular fire suppression, mitigation, law enforcement, and regulatory practices employed by Maine's fire service is a central concern of the Fire Marshal. The data from that assessment provides the basis from which the Fire Marshal directs all legislative, rule making, public education/awareness, and policy initiatives. The assessment is based upon nationally and internationally recognized methods of fire research and data analysis. The Fire Marshal's Office now assesses Maine's fire burden annually.

Investigations Division

The Fire Marshal has three investigative offices with a total complement of 13 sworn officers located in the northern, central and southern regions of Maine. Investigators determine the cause and origin of all fires causing death and injury, suspicious fires and explosions, and pursue criminal investigative activities in addition to providing training to municipal fire investigation officers. Fire investigators work closely with the Portland office of ATF and the two agencies investigate many fires and explosions jointly.

Northern Investigations Office Located in Bangor under the supervision of Sgt. Tim York, these officers investigate fires in Aroostook, Piscataquis, Washington, Hancock, Waldo and Penobscot counties.

Central Investigations Office Located in Augusta under the supervision of Sgt. Ken Grimes, these officers investigate fires in Somerset, Kennebec, Lincoln, Knox, Sagadahoc, Waldo and Hancock counties.

Southern Investigations Office Located in Portland under the supervision of Sgt. Joel Davis, these officers investigate fires in York, Oxford, Androscoggin, Franklin, and Cumberland counties.

Fire Prevention Division

This division is located in Augusta under the supervision of Nelson Collins, Fire Inspectors conduct inspections of public assemblies in addition to DHHS, DOC and other government licensed occupancies for compliance with fire safety and life safety codes as well as federal ADA regulations. The Inspections Unit conducts inspections of these facilities throughout the State of Maine and provides training to constituencies managing facilities that house vulnerable populations.

Construction Plans Review Located in Augusta under the supervision of Nelson Collins, the Plans Review Unit identifies and provides consultation to correct life safety issues and fire hazards in all public assemblies and DHHS, DOC and other government licensed occupancies. All major construction projects in Maine must be reviewed by the Fire Marshal's Office for life safety, fire sprinkler and code compliance. Those construction plans reviews include businesses as well as day care facilities, schools, assisted living and numerous other public buildings. Plans are reviewed out of this office for construction in all 16 counties.

Engineering and Sprinkler Plans Review Under Eric Ellis, a licensed Fire Protection Engineer, the fire sprinkler industry with its nearly 300 licensees submits for review 700 fire sprinkler system plans annually. He also typically does field inspections for 20 to 25% of these to verify that standards are maintained.

Eric's work includes online services for license renewals and permit submittals complete with the ability to make payments electronically in addition to regular communication with the licensed industry to iron out any technical issues that might arise.

Questions of an engineering nature are funneled to this part of our office. The various constituent groups are pleased to have such professional expertise so readily available.

Research

The research staff is located in Augusta under the direction of Senior Research and Planning Analyst, Richard Taylor. The research unit collects data on fire incidents from Maine's Fire Departments through the Maine Fire Incident Reporting System (MEFIRS) for annual reporting. That information is made available to local decision makers in reviewing fire department response times, fire incident types, causes and strategies. Specialized topical research on various elements of Maine's fire burden such as fire fatalities, injuries, trends and the economics of fire are designed, implemented and modeled for statistical analysis. The specialized research is shared with constituencies throughout Maine in an effort to augment fire prevention and safety.

Public Education/Awareness and Special Projects

Florian Hall, opened in late 2005, has been used by Maine's fire service community for fire codes and standards training, seminars, specialized informational activities focused on pipeline security, sprinkler and smoke detection systems, injury prevention, and other special events.

The Office of State Fire Marshal sponsored one summer intern through the University of Southern Maine that conducted Play Safe / Be Safe presentations to children in day care facilities throughout the State.

Maine Fire Marshal News, a quarterly newsletter distributed to a wide range of interests in both the public and private sectors continues to be a very successful effort.

Public Education/Awareness and Special Projects continued

The Office of the State Fire Marshal received a FEMA Fire Prevention and Safety Grant. With the funding four public service announcements were developed, produced and broadcast on Maine radio and television channels. The PSAs focused on heating fires, brush fires, smoke and carbon monoxide detection. The PSAs were made via a contract with the Maine Association of Broadcasters through their Public Education Partnership (PEP) program. The PEP program essentially gave the Fire Marshal's Office three PSAs aired for every one spot purchased. In addition, a pre-PSA and post-PSA survey on the awareness of these issues were conducted to measure the impact this public awareness effort had in changing public awareness.

Fire Marshal History

The history of the State Fire Marshal's Office has evolved from the creation in 1937 as the Division of State Fire Prevention, to combat fraudulent insurance claims. On July 1, 1972, the division was transferred to the newly created Department of Public Safety. The following year the bureau's name was changed to the Office of State Fire Marshal. The following have served in the role of State Fire Marshal:

Director Joseph A.P. Flynn 1939 to 1965
Director and Fire Marshal Charles F. Rogan 1965 to 1975
Fire Marshal Don Bissett 1977 to 1991
Fire Marshal Dennis Lundstedt 1992 to 1995
Fire Marshal Ladd Alcott 1995 to 1998
Fire Marshal John C. Dean 1998 to present

Maine Fire Deaths

Since 1950, the Office of State Fire Marshal has kept detailed records of fire deaths in the state. The first decade of the new milenia has been the safest thanks to the prominent use of smoke detectors, improved building codes and increased fire prevention programs by state and local fire service agencies.

1950 to 1959 – 484 deaths
1960 to 1969 – 493 deaths
1970 to 1979 – 498 deaths
1980 to 1989 – 324 deaths
1990 to 1999 – 200 deaths

2000 - 17 deaths
2001 - 18 deaths
2002 - 16 deaths
2003 - 20 deaths
2004 - 18 deaths
2005 - 23 deaths
2006 - 15 deaths
2007 - 12 deaths
2008 - 15 deaths
2009 - 14 deaths
2010 - 9 deaths
2011 - 23

Maine's Deadliest Fires Since 1945

1/31/45	Auburn, 17 killed, one nurse and 16 infants at Le Coste Baby Home
1947	Forest fires, 15 killed and over 200,000 acres burned. Damage over \$30 million dollars
3/2/50	Monson, eight killed, 2 adults and 6 children
3/27/60	Winthrop, six killed, a mother and 5 children
12/15/63	Portland, six killed, 6 children
7/4/67	Oxford, eight killed, 3 adults and 5 children
9/20/84	Hartland, five killed, 1 adult and 4 children

Fires Since 1990 With Three or More Deaths

10/26/90	Corinna, four dead, 1 adult and 3 children
6/7/90	Milo, three dead
2/18/91	Topsham, three dead, 3 adults
12/3/92	Portland, four dead, 3 adults and 1 child
1/23/92	Kittery, three dead, 3 adults
2/3/93	Augusta, three dead, 1 adult and 2 children
6/19/93	New Sweden, three dead, 1 adult and 2 children
9/5/94	Kittery, three dead, 1 adult and 2 children
4/23/97	Lewiston, three dead, 1 adult and 2 children
5/31/98	Madison, three dead, 1 adult and 2 children
1/11/99	Surry, three dead, 3 adults
1/13/00	Unity, four dead, 3 children and Unity Fire Chief collapses and dies at fire scene

2011 OVERVIEW AND SUMMARY

[Back To Table of Contents](#)

FIRE IN MAINE: 2007 to 2011

Fire death, injury and calls are in decline or leveling off. That's good news. Total dollar losses, property and contents, are still rising due primarily to better reporting by fire departments in Maine. The following graphs provide some detail as to trends that go back decades and others over the past five years.

As you can see the average number of fire fatalities we see in a given decade declined from an amazingly bad 47.7 in the 1950s to a much improved 16.4 through the first decade of the new millennium.

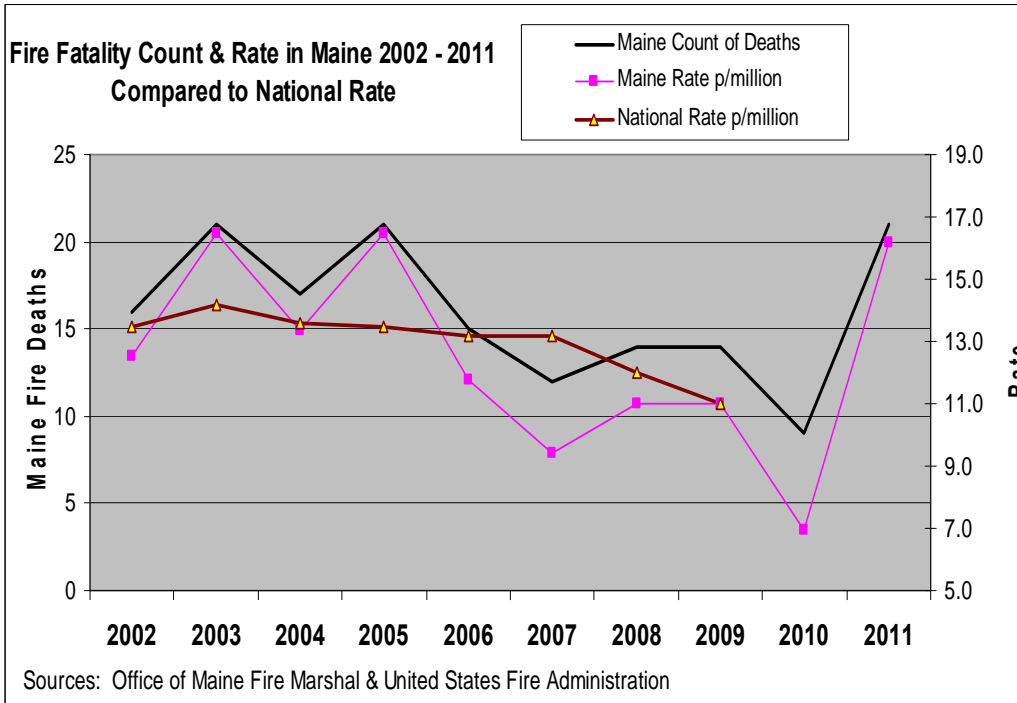

Within each of the six decades examined, the slope has been negative (downward) with the exception being the 1980's in which it remained flat and the 1950's in which it was positive (increased).

Why is fire death decreasing? Over the six decade period the majority of people died in a single-family or apartment type residential occupancy. The Fire Marshal's Office sets state standards and codes pertaining to these occupancies but only enforces them when a licensed facility is in one. Still, over time the regulations have become practice for contractors and that combined with fire prevention and education programs launched by the fire service in the 1970's have helped reduce the frequency of fire fatality in Maine.

A review of historical data and documents strongly suggests cigarettes played a key role in fire death in Maine (and across the nation). The graph to the left certainly tells us that has been the case over the five year span from 2007 to 2011. It should be noted that many of these cigarette related events also involved the use of oxygen in combination with smoking. This is a problem that should cause fire Chiefs around Maine to take notice given Maine's aging population.

Finally, you'll note that heating and cooking, leading causes of residential fires, do not compare to smoking when it comes to fatal fires. It should also be pointed out that in terms of age the number of undetermined causes has diminished from 2008 to 2011. In other words the fire death burden is felt most heavily among older adults in Maine. Thirty-two to forty percent of deaths annually will be older adults.

How is Maine doing when you compare and contrast us with the rest of the nation in term of fire deaths? The graph to the left provides you with a solid line indicating the number (count) of fire deaths per year and then has two lines showing the national and Maine fire death rate p/million population.

Maine has been below the national fire death rate 5 of the 8 years we looked at in this graph. Note that Maine is a rural state where, nationally speaking, the rate of fire death compared to non-rural areas is higher. Maine's performance in this area therefore is encouraging though nationally the areas considered rural were counties with a population of less than 20,000 or not adjacent to metropolitan areas. Only Piscataquis County meets both aspects of the definition. Cumberland and Androscoggin are the only counties that have any areas closely definable as metropolitan.

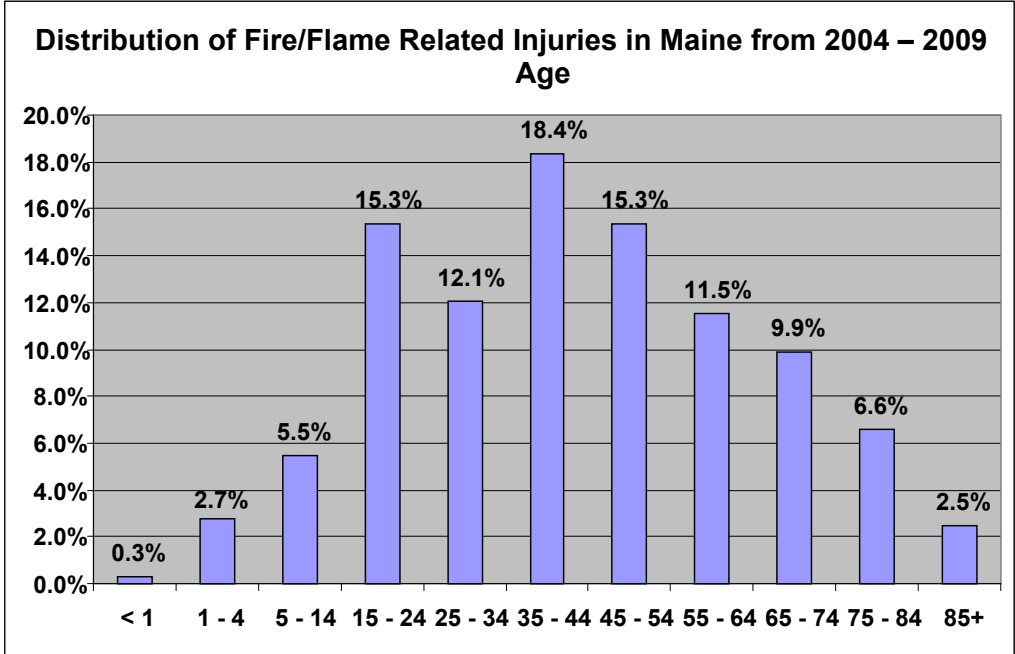

Fire death is very seasonal with most deaths occurring in the months of December, January and March.

Another way to look at the fire problem is to look at injuries. To the left is a graph with a line indicating the number of fire/flame injuries each year in Maine that required a hospital admittance. Unlike fire deaths, injuries occur most often in the months of May, June, and July. This suggests that many may be occurring outside.

The primary cause of these injuries is due to the "ignition of highly inflammable materials" or "accidents caused by an unspecified fire." A "conflagration in a private dwelling or structure" will account for 11 injuries and that comes in third in terms of causes of injuries.

Like deaths, males are more often injured than females.

The distribution of injuries in terms of age leans toward the middle of the age spectrum. When we look at the causes of injuries, the age group, and the time of year in which they occur we believe that more fire/flame injuries are outdoor events. Why? Though we do not know with certainty these are in fact outdoor events, fires in May, June, and July are often outdoor events. These are fires often related to everything from brush burning, fireworks, yard machine fueling, to campfires which all take place outdoors. Also, older adults are more likely to be injured indoors.

Finally, senior citizens, along with very young children, are least likely to escape a fire and because we know with more certainty what causes fire related deaths, we know seniors are killed more often in the winter and inside a structure. We need more detailed analysis and reporting to confirm this however.

Maine's CDC provides us with injury data and we appreciate it greatly.

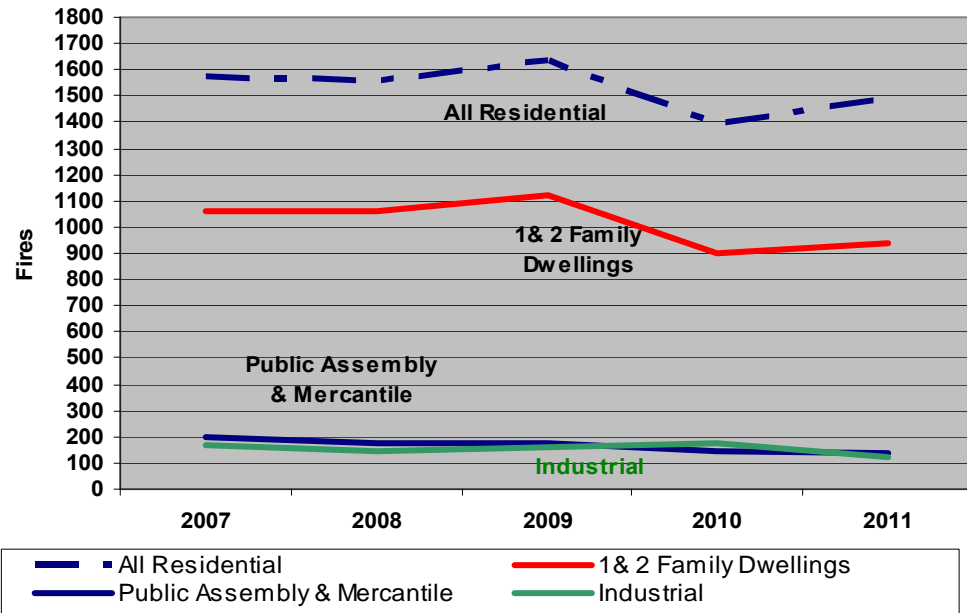

When we look at fire in Maine we're separating strictly fires from all other incident types a fire department responds to. As you can see over the past five years the number of fires is in decline. As you look at the graph to the left, do understand that a structure can be anything from a dumpster to a commercial building or home. Other fires are primarily outdoor fires. If you remove all home (residential) structure fires from the entire universe of structure fires, you'll find that the number of outdoor fires exceed home fires. This is important because most fatal fires do occur in the home.

You'll note that there has not been much change in the number of fires in vehicles or structures whereas we've seen other (outdoor) fires decline by nine-hundred events.

The graph on the following page looks closer at structure fires alone.

Structure Fires by Property Use 2007 - 2011

In looking at structure fires we begin by breaking them down by property use. You can see that when you add single family dwelling (home) fires to apartments and all other residential occupancy type fires they will exceed any other type of structure fire by far but home fires alone still will not surpass all other or outdoor fires.

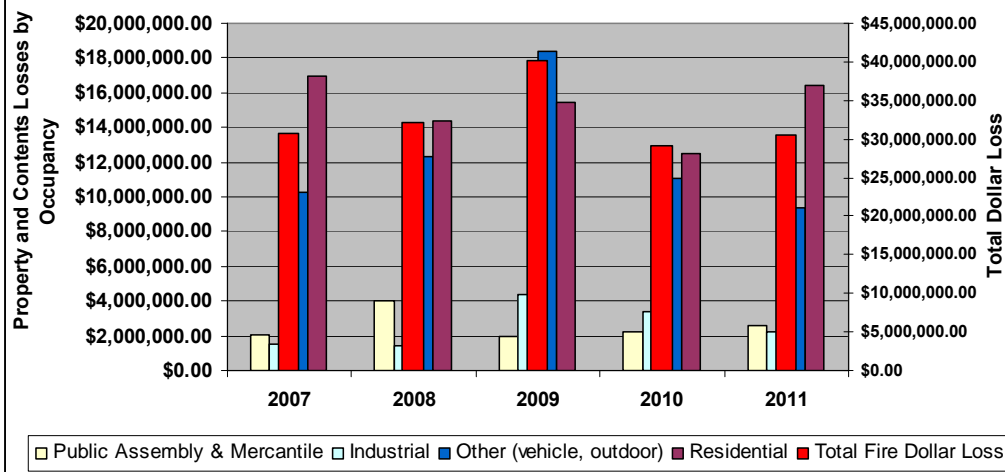

However, what's important about the residential occupancy fire count is that these places are where people get killed and it's where we want to reduce the frequency of fire the most. It is also where regulations are not enforced. Absent a local code enforcement officer who is trained in the *Life Safety Code*, fire codes will not be enforced.

In contrast, public assemblies, businesses and industrial facilities are more heavily regulated and the dollar loss, injury count is low. Fatalities are non-existent.

The last graph shows the dollar loss associated with fires in Maine structures. On the left is the cost associated with each of the three occupancy types or other type fire. On the right is the total dollar loss. You'll notice three developments. First, the total cost has gone up, then down, over the past fire years. Second, residential fire losses have gone up then down then up again. Third, 2010 was not only a good year in that we had the fewest fire fatalities ever recorded but we also experienced few high cost fires. This resulted in 2010 being a low loss year and 2011 was a return to normal.

When you look at fire fatalities, injuries, fire counts and dollar losses and think of that in terms of what we can do to prevent them, you wonder if we may have reached a plateau.

Property and Content Losses to Fire in Maine 2007 - 2011

2011 State of Maine Fire Fatal Incidents

TOWN	DATE	TIME	SEX	OCCUPANCY - CAUSE
Waterville	1-1-11	2:31	W 55	Apartment – Accidental - Careless disposal of Smoking Materials.
Parsonfield	2-20-11	4:13	M 86	Single Family Dwelling – Undetermined – Due to extent of fire damage.
Waterboro	3-2-11	8:47	F 86	Single Family Dwelling – Accidental – Wood stored behind woodstove being ignited.
Lisbon Falls Double Fatal	3-4-11	7:33	F 6 F 11	Single Family Dwelling – Accidental – Heat from a hand held torch directly to available combustibles.
Unity Triple Fatal	3-12-11	9:40	M 56 M 57 F 72	Mobile Home – Undetermined.
Portland	3-15-11	7:58	M 43	Apartment – Accidental – Victims clothing ignited.
Buxton	3-29-11		M 85	Outside – Accidental – Grass fire; Clothes caught on fire.
Biddeford	4-10-11	18:05	M 72	Airplane Crash – Autopsy was conducted; death was determined to be inhalation of by-products of combustion.
Brunswick	2-16-11	11:01	M 63	(Died if injuries 4-17-11) - Apartment – Accidental – Overheating & ignition of cooking material on the stove.
Presque Isle	4-25-11		F 78	Apartment – Accidental – Smoking while on oxygen.
Seal Cove (Tremont) Double Fatal	5-27-11		M 83 F 78	Single Family
Westbrook	8-31-11		M 63	Apartment – Accidental – Smoking while on oxygen.
Hiram	9-16-11		M 83	Camper/Trailer – Accidental – Woodstove or propane heater.
Biddeford	10-4-11		M 39	Apartment –
Sanford	11-1-11	8:58	M 74	Single Family – Accidental – Failure of lighting fixture.
Robbinston	11-14-11		M 71 F 92	Single Family – Accidental – Careless disposal of smoking materials.
Brunswick	12-10-11	4:54	M 70	Single Family – Accidental – Smoking while on oxygen.

THE MAINE FIRE INCIDENT REPORTING SYSTEM

“FIGHTING FIRE WITH FACTS”

MEFIRS – AN OVERVIEW

The Maine Fire Incident Reporting System is an information and data gathering system initiated and supported by the Office of State Fire Marshal. The goal of the Maine Fire Incident Reporting System, or MEFIRS, is to encourage the use of a standardized incident reporting system as a means of addressing the State's fire problem and related emergency services issues. Through its use, the Maine Fire Incident Reporting System can play a major role in reducing injuries, fatalities, and economic losses from fire and related emergencies by facilitating the collection, compilation, analysis, and use of data to produce and disseminate the information needed by decision makers. Maine statute, Title 25 MRSA § 2395, requires that Fire Chiefs shall submit to the State Fire Marshal an incident report for each response made, regardless of whether an actual fire occurred. The report must be submitted in a manner consistent with a national fire incident reporting system.

As the collection and use of accurate incident data is critical to the decision making process for identification of fire problems at local, state, and federal levels, the United States Fire Administration developed NFIRS as a means of assessing the nature and scope of the fire problem in the United States. The U.S. Fire Administration and the National Fire Information Council jointly manage NFIRS. NFIC is a users' group comprised of state agencies and metropolitan fire departments that are responsible for fire data collection and analysis. In the State of Maine, the Office of State Fire Marshal functions as the states' fire service representative to the National Fire Information Council. The heart and sole of the system is the more than 14,000 fire departments, dispersed across the country, that participate and report their data to the National Fire Incident Reporting System.

After returning from an incident, fire departments make out the appropriate NFIRS reports. These reports are provided in an electronic computer software application within a fire and records management system. These standard NFIRS forms contain a core of information common to every state's reporting system. Local fire departments forward completed NFIRS form data, which are filled out by the computer based application, to the state agency responsible for NFIRS data. The Office of State Fire Marshal electronically submits data compiled from all participating jurisdictions to the U.S Fire Administration. Annual NFIRS data are used as the basis for the U.S. Fire Administration's publication "Fire In The United States", which is the single most comprehensive reference on the nature and scope of the fire problem in the United States.

STATE USES OF MEFIRS

Perhaps the most fundamental use of MEFIRS is in understanding the nature of the fire problem, whether conceived at the local, state, or national level. One indicator of the usefulness of the reporting system is its utilization by the State Fire Marshal's Office in the preparation of the annual report. This information that is gathered from local fire departments provides a resource of statistical data that can then be shared statewide to assist local fire chiefs in determining fire trends and specific areas of fire loss that may need to be addressed. The application of the Maine Fire Incident Reporting System provides the critical link to this data collection sharing.

LOCAL FIRE DEPARTMENT USES OF MEFIRS

Because of the number of departments that are using MEFIRS, it is difficult to document all of the ways that they are using the data. For departments, in the State of Maine, that rely heavily on MEFIRS for reporting fire statistics, an important advantage is that the local fire departments can compare their own productivity and effectiveness with the State average. They can also seek out statistics on fire departments in communities similar to their own and conduct comparisons. The rich resources available through the Maine Fire Incident Reporting System allow a local fire department to conduct many sophisticated analyses that include the identification of trends in the number of calls to the fire department, the types of calls made, and the origin of calls. This information might be used to determine the best location for a fire station. Data acquired can also provide justification of fire department budgets to the city or town council. The system will allow the fire department to count, for example, the number of brush fires to which it has responded, identify whether the trend is upward or downward, and then make an assessment as to whether the department has enough brush fire resources available to meet the demands for service. There is little doubt that MEFIRS has stimulated many local fire departments to use hard data for their fire protection management decision-making and to improve local fire service delivery.

THE FUTURE OF MEFIRS AND LOCAL FIRE DEPARTMENT USE

Because of the number of departments that are using MEFIRS, it is difficult to document all of the ways that they are using the data. For departments, in the State of Maine, that rely heavily on MEFIRS for reporting fire statistics, an important advantage is that the local fire departments can compare their own productivity and effectiveness with the State average. They can also seek out statistics on fire departments in communities similar to their own and conduct comparisons. The rich resources available through the Maine Fire Incident Reporting System allow a local fire department to conduct many sophisticated analyses that include the identification of trends in the number of calls to the fire department, the types of calls made, and the origin of calls. This information might be used to determine the best location for a fire station. Data acquired can also provide justification of fire department budgets to the city or town council. The system will allow the fire department to count, for example, the number of brush fires to which it has responded, identify whether the trend is upward or downward, and then make an assessment as to whether the department has enough brush fire resources available to meet the demands for service. There is little doubt that MEFIRS has stimulated many local fire departments to use hard data for their fire protection management decision-making and to improve local fire service delivery.

MEFIRS 2010 ANNUAL REPORT

Data Sources and Analysis

The data used for this report was received from fire departments throughout the State of Maine. The data was imported into the MEFIRS database. Imported fire department data is validated for NFIRS compliance and provided quality assurance assessment by the Office of State Fire Marshal. Upon complete validation, data is then exported to the United States Fire Administration. As data analysis by the Office of State Fire Marshal provides quality assurance of known statewide issues, it is assumed that the integrity of each data element was reviewed at the local level.

During 2011, usable MEFIRS data was received by 176 Fire Departments. This data provided a total of 86,354 incidents. Of this total, the breakdown of this data consisted of 4,542 fire related incidents, 56,096 EMS incidents, and 25,716 non-Fire & non-EMS incidents. It should be noted that these counts exclude “No Activity” incidents.

The departments reporting in this report experienced the following losses:

Incident Loss

Property Loss = \$24,794,829.00
Contents Loss = 7,438,590.00
\$32,233,419.00

Pre-Incident Value

Property Value = \$178,357,718.00
Contents Value = \$38,130,549.00
\$216,488,267.00

The amounts above of Pre-Incident Value and Incident Loss reflect the fact that the Fire Departments in the State of Maine saved \$546,861,207.00 in property and contents last year as a result of their department’s response and actions taken.

FIRE & LIFE SAFETY IN MAINE

[Back To Table of Contents](#)

A Tale of Two Maine Towns

On Sunday, September 14, 2008 a small fire, like all fires are at first, started in Hobknobbers Pub in little Milo, Maine. The fire started at approximately 3:20 AM and moved from the pub, slowly up Main Street, consuming four more buildings: one housing the Milo Flower Shop; a former movie theater building most recently used for storage; the Robshaws' building which also housed their pool hall and arcade; the Spot Game Room; and the Milo True Value Hardware Store which consisted of three sections (two of them wooden and one made from concrete blocks). The slow but steady advance, or fire spread, was attributed to the buildings being old, constructed primarily of wood, and being built so close together. These attributes combined to make fighting the fire difficult for the eleven fire departments to fight. When it was put out, Milo was in ruins.

The cost of the Milo fire was estimated to be in the millions and that was strictly the losses associated with building property and contents. When you add in the losses incurred as a result workers no longer working in the businesses that were lost (lost productivity and wages) the cost goes even higher. Then imagine how much it cost the eleven towns to send personnel and numerous apparatus to the scene for hours! The cost goes up even more! There were two good things about this fire. First, no one was hurt or injured. Second, it serves as a model demonstration of the value of fire codes.

The fire spread beyond the area of origin, the pub, due to the absence of a fire suppression system (sprinklers) required in new construction of this type. In addition, inadequate fire-rated separation between the buildings facilitated continued spread. Current codes would require fire-rated separation. The Milo fire is testimony to the cost of not having and applying fire codes.

Now, let's look at another fire. On December 23, 2008 a fire broke out at the Bay View Landing construction site on the beautiful and historic waterfront of Camden, Maine. The fire was reported by a passerby on Camden's public landing around 5:50 p.m. Farley said there were a number of people walking down along the harbor who saw an orange glow inside the building and called 911. Camden's fire department, assisted by Rockport, Lincolnville, Hope and Rockland would battle the blaze and successfully contain it to the construction site. The site was to be a 150 seat restaurant with ten rooms above the restaurant.

"The place was framed up but there was no sheetrock so it was just a big open barn with a lot of construction materials inside," said Camden Fire Chief Chris Farley. Farley said that prior to construction, as a requirement for obtaining a building permit, the state fire marshal required that a cement block firewall be constructed between the new and old buildings on Bay View Landing. "*That surely helped keep the fire from spreading to the existing buildings,*" said Farley.

The heat from this fire alone cracked windows in nearby waterfront buildings but this fire, unlike the Milo buildings, was built to modern code and the fire did not spread. Yes, the insurance costs were considerable and the cost of fire departments have to be taken into account. *But just imagine if the fire had spread through the rest of Camden like the Milo fire did?* Look at the pictures below and just imagine what could have happened absent code required fire protection elements being put in place. Given the value of waterfront property and property in Camden in general, this fire could have very easily become the most expensive disaster in Maine history.

To the left you can see the construction project underway on the waterfront in beautiful Camden.

Notice the proximity of other structures to the one you see burning below. Note the white arrow pointing to the little cupola styled structure.

To the left you see the intense fire. In the morning the only loss was the construction project and some windows broken in nearby buildings due to heat.

PLANS REVIEW

The State Fire Marshal's Office focus on fire and life safety in Maine has played a considerable role in reducing the number of fires, fire deaths and injuries to civilians and firefighters, as well as holding the line on the dollar losses associated with fire and other injuries. Without a doubt, the most cost effective and efficient way to keep people safe from fire and other dangers in buildings is to construct them with built-in engineered safety features. Ensuring the safe building environment is the primary duty of the plans reviewer and why the position is so critical.

Without a doubt, the most cost effective and efficient way to keep people safe from fire and other dangers in buildings is to construct them with built-in engineered safety features.

There were no plans reviewers involved in building downtown Milo. There were in the Bay View Landing Restaurant and Inn in Camden. The history of catastrophic fires killing hundreds of people and destroying sections of cities and even entire cities is adequate testimony for the need of trained plans reviewers. The Maine State Fire Marshal's Office has them.

Jim Graves, Plans Reviewer

They will also attend meetings with architects, developers, and jurisdiction staff to discuss plan review requirements and procedures and, when appropriate, make recommendations on alternate methods or materials when appropriate. They will also examine requests for variance to the fire codes and local laws pertaining to fire safety.

The State Fire Marshal's Plans Reviewers are NFPA (National Fire Protection Association) certified and have working knowledge of fire and building codes and laws; basic knowledge of the principles, techniques, and design of fixed fire suppression and detection systems; the ability to read and interpret plans and blueprints; and the ability to establish performance measures. The job necessitates excellent oral and written communication skills.

State Fire Marshal's Office Plan Reviewers are responsible for examining and evaluating building plans, site plans, fire protection system plans, and specifications for compliance with applicable state and federal fire codes, laws, as well as ADA (Americans with Disabilities Act) requirements. They also review and respond to requests for information and technical assistance from architects, engineers, and developers on design criteria for various occupancies and industrial processes. In doing so they ensure that buildings are safe for the public.

Ron Peaslee, Plans Reviewer

The job necessitates excellent oral and written communication skills.

All our plans reviewers have several years of experience behind them.

Areas of special focus within the plans review section include sprinkler systems and aboveground storage tank systems. Our sprinkler plans reviewer is a licensed fire protection engineer who also licenses sprinkler installers and designers as well.

Eric Ellis, Fire Protection Engineer

Though sprinklers are only required in specified licensed occupancies, expanded awareness of the value of these systems being used in homes is essential.

In 2011, the plans review team reviewed 637 plans that included 532 barrier free (ADA) compliance plans. The total cost value of these projects was approximately \$571,957,999.00. That means essentially over 570 million dollars worth of property is protected along with the thousands who will occupy them in the future. The Milo/Camden story, like many others tells us this is a valuable public service. As previously stated, our plans reviewer will also do inspections to monitor progress during construction in an effort to lower costs for organizations by catching issues before construction is complete.

In 2011, our Fire Protection Engineer issued 83 sprinkler contractor licenses; 133 sprinkler inspector licenses; and, 47 responsible managing supervisor licenses. Of these licenses, 42 were initial and expired renewals. 448 sprinkler permits were issued in 2011 which indicates that number of facilities are protected by the most effective means of fire protection known at this time. Over 97% of these 448 plans were received and paid for electronically from our online permit submittal site. Electronic service saves us and the customer valuable mail and time costs.

The work done by the plans review staff is considerable when you consider that there are only two regular plans reviewers and one engineer focused primarily on sprinkler systems. Since 2008 their load has been down, but economic indicators suggest that could be changing. Should a full economic recovery unfold, based on history, the Office of the State Fire Marshal will not be able to keep up with the demand of businesses requiring a plans review.

INSPECTIONS

It is obvious to state that if all buildings are built with occupant safety in mind then the outcomes, in terms of safety, are going to be better. As we saw in Milo however, that has not always been the case. In fact, because Maine has some of the oldest housing stock in the country we're confident there are some other Milo's out there waiting to happen. This is where our inspectors come in.

The Fire Marshal's Office inspectors work primarily on existing structures. Because a variety of public assemblies and other licensed occupancies require a fire inspection, the inspectors are able to inspect and evaluate public, commercial, and licensed residential structures to ensure compliance with state and federal fire codes and ordinances. They also inspect to make sure given facilities are in compliance with federal ADA (Americans with Disability Act) standards. Inspectors also investigate complex fire hazard complaints and aboveground storage tanks for compliance with state, and federal regulations.

The inspectors work often involves the identification of corrective actions that must be made to bring properties into compliance with applicable fire codes and recommend modifications to jurisdiction's fire codes. For the public at large and other agency personnel our inspectors provide code interpretations and information when requested, prepare written documentation, create forms and checklists addressing key inspection issues, and design and maintain filing system for reference.

All new Maine State Fire Marshal's Office Fire Inspectors are required to obtain certification from the National Fire Protection Association if they do not already have it. The position requires working knowledge of methods of fire prevention, fire protection systems, and building construction. The positions necessitate effective oral and written communication skills and a capacity to make mathematical calculations. Our inspectors all have more than four years of experience.

More advanced inspectors work on the preparation and submittal of the division's budget and allocate its resources in accordance with policy to ensure maximum performance. Some will serve as a liaison to various local, state and federal government agencies, as well as local organizations and groups. They will make recommendations and implement policy and operational changes to improve efficiency and effectiveness as well as assisting in the preparation and updates in codes and standards for the jurisdiction.

Rich McCarthy, Asst. Fire Marshal

There are two inspectors with supervisory requirements who indirectly coordinate, through an established chain of command, activities relating to fire prevention and safety through code enforcement.

The Assistant Fire Marshal, Rich McCarthy heads up the inspections and plans review sections of the Fire Marshal's Office and establishes realistic and obtainable goals for subordinates through a team process and ensures successful obtainment of those goals through appropriate

training and assigned accountability, He also serves as a highly visible representative for the Fire Marshal's Office of the fire department and the fire service to the jurisdiction at large through involvement in various community organizations and events relating to code enforcement and development. Assistant Fire Marshal McCarthy also serves on National Fire Protection Association committees.

Timothy Fuller is the Assistant Fire Marshal's senior inspector. Tim is involved with all aspects of the inspections process and has a commanding knowledge of the principles and techniques of modern suppression and fire prevention practices. Tim also has the ability to apply his knowledge of fire prevention laws, codes and ordinances to in a public administration context. He is familiar with code development, enforcement, and personnel administration as well as principles of jurisdiction budget preparation and finance.

Timothy Fuller, Senior Fire Inspector

Rich and Tim have the skill to provide effective leadership and to plan and assign, directing the work of subordinates; plan, initiate, and carry out long-term programs in the division and relate the division's programs with other jurisdictional programs, goals, and objectives; speak and deal tactfully and effectively with the people with whom he or she comes in contact; fairly and effectively evaluate the performance of subordinates; communicate orally and in writing to analyze the concepts necessary for accomplishment of required written and oral records and reports; and demonstrate an ability to positively represent the department and jurisdiction in the community at large.

OTHER SERVICES

Fire Marshal's inspectors also check facilities where auto racing takes place to ensure that the spectators are both safe from the vehicles being raced as well as from any structural failure of the seating. Fire safety issues are also a concern in evaluating spectator seating to ensure that everyone could escape should the unthinkable occur. In addition to spectator seating and safety inspectors also examine aboveground storage tanks containing flammable liquids. These installations can be large with thousands of gallons of oil to very small containing simply a couple hundred gallons. Whether large or small they pose both a fire and environmental hazard if not properly installed with required controls and set up in such a way as to avoid a massive spill of pollutants into the ground. These facilities tend to be distributed around the state and often in quite remote areas.

2011 REPORTING DEPARTMENTS BY COUNTY

[Back To Table of Contents](#)

What do fire and other emergencies our fire departments respond to cost Maine's tax payers? What could we do if we could really answer that question?

- 1. We might be able to justify building a state of the art fire training facility like the one we see in New Hampshire and other states.**
- 2. We could draft viable grant proposals for additional staff, fire stations, equipment, fire prevention and fire safety programs.**
- 3. We could convince local policy makers not to cut staff, programs and that we really do need that additional truck or equipment.**
- 4. We could really show residents that we are worth every penny even if we don't have all the problems a *big town* has.**

The fact is that absent better data from more fire departments in Maine, most of this is not probable or it more difficult at best. Take a look at the data on the following pages and if your department hasn't reported every year, think about making sure you report each and every year from here on out. You'll be helping your department, your community and your state. The Office of the Fire Marshal will help you. Please call us if we can be of assistance. Thank you.

Summary: Percentage of Fire Departments (FDID) Reporting by County				
County	Total # of Fire Departments	2009	2010	2011

Staffing For Adequate Fire & Emergency Response Grants (SAFER) - Award Year 2010

Organization	City	State	Program	Award Amount
Portland Fire Department	Portland	ME	Hiring	\$1,047,363.00

Glossary of Terms

The terminology used in this report is taken from common terms used in the National Fire Protection Association and the National Fire Incident Reporting System. A description of a few of those terms is as follows:

ALARM

Any notification made to the fire department that a situation exists or may exist that requires a response.

AREA OF ORIGIN

The room or area within the property where the fire originated.

AUTOMATIC

As applied to fire protection devices, a device or system providing an emergency function without the necessity of human intervention.

AUTOMATIC AID

Predetermined and preauthorized two-way assistance rendered between departments under the terms of a written agreement.

BUILDING

A structure enclosed with walls and a roof and having a defined height.

BUILDING CODE TYPE

Building code classification of the building involved in the incident.

BUILDING FIRE (also structure fire)

Any fire occurring inside or involving a building. A building fire may be a wastebasket, a mattress fire, or a roof fire, whether or not structural members were actually involved.

CASUALTY – CIVILIAN

A civilian who is injured or killed at the scene of a fire.

CASUALTY – FIRE PERSONNEL

Fire personnel who are injured or killed as a result of responding to, handling, or returning from an incident.

COMBUSTIBLE

A material or structure that will burn.

FIRE AREA

The space within a structure bound by fire division assemblies (two-hour fire rating or greater).

FORM OF HEAT (see HEAT OF IGNITION)

FORM OF MATERIAL (see MATERIAL FIRST IGNITED)

Glossary of Terms

GENERAL PURPOSE USE

The general use of land or space under the same management, ownership, or within the same legal boundaries; including any structures, vehicles or other appurtenances thereon.

HAZARDOUS MATERIAL

Any material that is an air-reactive material, flammable, or combustible liquid, flammable gas, corrosive material, explosive material, organic peroxide, oxidizing material, radioactive material, toxic material, unstable material or reactive material, and any substance or mixture of substances that is an irritant, a strong sensitizer, or that generates pressure through exposure to heat, decomposition, or other means.

HEAT OF IGNITION

The heat energy that brings about ignition. Heat energy comes in various forms and usually from a specific object or source. Therefore, the heat of ignition is divided into two parts: "equipment involved in ignition" and "form of heat of ignition."

IGNITION FACTOR

The condition or situation that allowed a heat source and a combustible material to combine to initiate a fire.

MATERIAL FIRST IGNITED

The combustible that is first set on fire by the heat of ignition. To be meaningful, both a type of material and a form of material must be identified.

MUTUAL AID

Assistance provided under a written agreement that establishes general guidelines and procedures for providing and receiving assistance between fire departments. (Requested in addition to initial dispatch)

STRUCTURE FIRE (Residential & Commercial)

Any fire inside a structure or on, under or touching a structure. A structure fire may be an automobile fire in a tunnel, a leaking flange in a refinery tower, or a building.

PROPERTY MANAGEMENT

Identification of who controls the property where the incident occurred.

SPECIFIC PROPERTY

The use to which a specific space, structure, or portion of a structure is put by the owner, tenant, or occupant of the space.

WILDFIRE

Any uncontrolled fire burning in wild land vegetation, including any structures or other improvements thereon.

WILDLAND

Land in an uncultivated, more or less natural state, and covered.
