## Can We Find Pharmaceutical Calculations Low Performers Before Class Starts?: Identifying Problem Solving Deficiencies

Benjamin D. Aronson, Emily T. Eddy, Jennifer Grundey, Brittany L. Long, Jessica L. Hinson, Kristen F. Sobota

## BACKGROUND

- Recent increases in deficient pharmaceutical calculations grades have prompted internal reflection
- Our experiences suggest some current students have difficulty applying problem solving skills to simple algebra-based word problems
- Previous research suggests success in calculation courses is related to undergraduate GPA and PCAT scores, ${ }^{1,2}$ as well as time since and level of previous math exposure ${ }^{2}$
- Research is lacking as to what factors are related to calculations success for direct-entry students
- One older study was located that linked a basic math test to success in a calculations course ${ }^{1}$, but the assessment used was not published

## OBJECTIVES

- To determine the relationship between an algebra-based word problem pretest and pharmaceutical calculations performance to identify those at risk of low performance

## METHODS

Sample

- Student pharmacists from the College of Pharmacy at Ohio Northern University, a 0-6 direct-entry program

## Procedure

- First year students were given an 18 item pretest during spring semester
- The pretest contained algebraic word problems assessing percent, proportional reasoning, and unit analysis
- Prior to the pretest, students were asked to provide informed consen
- During the fall semester of their second year, those students completed a course containing pharmaceutical calculations content, containing three 50-point summative assessments
- Preadmission demographic characteristics were collected from student records
- This study was deemed exempt from full IRB review

Analysis

- Pretest scores were compared with the calculations assessments
- Linear regression was used to understand the relationship between pretest and calculation assessment scores after controlling for demographic and pre-admission factors

| RESULTS |  |  |  |  |  |  |  |  | \|MPL|CAT|ONS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Preadmission Demographics <br> - Out of 123 students completing both courses, 118 provided consent for this study <br> - The mean age of participants was 19.69 <br> - Female was listed as gender for $62.7 \%$ <br> - The mean ACT score was 26.53 <br> - The mean high school GPA was 3.99 | Calculations Assessments <br> - Figure 2 shows the distribution of letter grades obtained from all calculations assessments, of which the mean was 115.7 / 150 ( $77.1 \%$ ) <br> Figure 2. Letter grade obtained from sum $40 \% \quad$ of calculation assessments | Table 1. Correlations between select study variables |  |  | Table 2. Linear regression for calculations sum score |  |  |  | - After controlling for age, gender, earlier academic performance, and standardized test scores, an algebra-based word problem pretest was associated with performance on later pharmaceutical calculations assessments |
|  |  |  |  |  |  |  |  |  |  |
|  |  | 1. Calculations sum score | 1 |  | Constant |  |  | . 582 |  |
|  |  | 2. Pretest score | . 413 * | 1 | Pretest score |  | . 241 | . 008 |  |
|  |  | 3. Age | . 009 | -. 009 | Age |  | . 038 | . 650 | - Although the pretest is associated with calculations performance, there is no perfect cutoff using the pretest alone (i.e., sacrificing sensitivity for specificity or vice versa depending on criteria) |
| Pretest Performance <br> - Figure 1 shows the distribution of pretest scores <br> - The mean score was $15 / 18$ (83.3\%), ranging from $5(27.8 \%)$ to 18 (100\%) | 30\% | 4. Gender ( 1 = female) | -. 025 | -. 008 | Gender ( 1 = female) |  | -. 011 | . 901 |  |
|  | 25\% | 5. High school GPA | .214* | . 134 | High school GPA |  | . 016 | . 864 |  |
|  |  | 6. ACT math sub-score | .517* | . $387^{*}$ | ACT math sub-score |  |  | . 013 |  |
|  | 20\% 15\% | 7. ACT science sub-score | .421* | .278* | ACT science sub-score |  |  | . 559 | - The next step in this line of inquiry is to determine how to reduce this deficit through deliberate supplementary content and structured problem solving activities for those in need |
