

Stereotactic treatment of intracerebral hematoma by means of a plasminogen activator

Citation for published version (APA):

Teernstra, O. P. M. (2002). Stereotactic treatment of intracerebral hematoma by means of a plasminogen activator. Maastricht: Datawyse / Universitaire Pers Maastricht.

Document status and date:

Published: 01/01/2002

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Stereotactic treatment of
Intracerebral Hematoma by means
of a Plasminogen Activator

Onno P.M. Teernstra

12 december 2002

1. Stereotactic aspiration of intracerebral hematoma with the use of urokinase effectively reduces hematoma volume.
(This thesis, chapter 2)
2. A substantial intracerebral hematoma volume reduction significantly reduces chances of an unfavorable clinical outcome.
(This thesis, chapter 3)
3. Stereotactic aspiration of intracerebral hematoma with the use of urokinase does not provoke rebleeding of the hematoma.
(This thesis, chapter 4)
4. From a societal perspective, costs of stereotactic aspiration of intracerebral hematoma with the use of urokinase are similar to those of conservative treatment alone.
(This thesis, chapter 5)
5. A large trial on stereotactic aspiration of intracerebral hematoma with the use of urokinase is likely to find it to be more efficacious than conservative treatment alone.
(This thesis, chapter 6)
6. Als geen andere aandoening zit een hersenbloeding 'tussen de oren'. Het is daarom goed de effectiviteit van een medische behandeling ervan in te schatten door na te gaan wat de patiënt ervan vindt.
7. The ultimate purpose of a profession is to develop a knowledge database that will maximize the effectiveness of practice.
(L.G. Portney and M.P.Watkins in 'Foundations of clinical research')
8. Shall I teach you what knowledge is? When you know a thing, to recognize that you know it, and when you do not know a thing to recognize that you do not know it.
(Confucius)
9. The agreement of experts traditionally has been the source of all the errors in medical history.
(Feinstein)
10. 'Tsjakaaaa!': een kreet waar norm noch waarde achter schuilt; het is eerder een ontluisterend epitaaf dat het failliet van 'de nieuwe politiek' bondig samenvat.
11. Geen effect heeft wel degelijk effect.
