MFS II EVALUATIONS

Joint evaluations of the Dutch Co-Financing System 2011 - 2015

*Civil Society contribution
towards achieving
the Millennium Development Goals*

Country report

ETHIOPIA

July 2015

SGE Stichting Gezamenlijke Evaluaties

Netherlands Organisation for Scientific Research
WOTRO Science for Global Development

PREFACE

This report is one of a series of evaluation reports, consisting of ten reports in total, reflecting the results of the jointly-organised MFS II evaluation:

- eight country reports (India, Bangladesh, Ethiopia, Uganda, Indonesia, DR Congo, Liberia, Pakistan);
- a synthesis report (covering the eight country studies); and
- a report with the results of the international lobbying and advocacy programmes.

This series of reports assessed the 2011-2015 contribution of the Dutch Co-Financing System (MFS II) towards achieving the Millennium Development Goals, strengthening international civil society, setting the international agenda and changing decision-makers' policy and practice, with the ultimate goal of reducing structural poverty. On July 2nd, 2015, the reports were approved by the independent steering committee (see below), which concluded that they meet the quality standards of validity, reliability and usefulness set by the Ministry of Foreign Affairs.

MFS II has been the 2011-2015 grant framework for Co-Financing Agencies (CFAs). A total of 20 alliances of Dutch CFAs were awarded € 1.9 billion in MFS II grants by the Ministry of Foreign Affairs. CFAs receiving MFS II funding work through partnerships with Southern partner organisations supporting a wide range of development activities in over 70 countries and at the global policy level.

The MFS II framework required each alliance to carry out independent external evaluations of the effective use of the available funding. These evaluations had to meet quality standards in terms of validity, reliability and usefulness. The evaluations had to focus on four categories of priority result areas, as defined by the Ministry of Foreign Affairs, and comprise baseline assessments serving as a basis for measuring subsequent progress.

Out of the 20 alliances receiving MFS II funding, 19 decided to have their MFS II-funded activities evaluated jointly. These 19 alliances formed the *Stichting Gezamenlijke Evaluaties (SGE)*¹, which acted on their behalf in relation to the joint MFS II evaluation. The SGE was assisted by an 'Internal Reference Group', consisting of seven evaluation experts of the participating CFAs.

The Netherlands Organisation for Scientific Research (NWO/WOTRO) managed the evaluation and selected ten research teams to carry out the joint MFS II evaluation: eight teams responsible for carrying out studies at country level, one team responsible for the synthesis of these country studies, and one team responsible for the study of international lobbying and advocacy. Each study comprises a baseline assessment (2012) and a final assessment (2014). Research teams were required to analyse the effectiveness, efficiency and relevance of development interventions funded by MFS II. An independent steering committee was appointed to verify whether the studies met with the required quality standards. In its appraisal, the steering committee drew on assessments by two separate advisory committees.

¹ *Stichting Gezamenlijke Evaluaties can be translated as Joint Evaluation Trust.*

The evaluation has been implemented independently. The influence of the CFAs was limited to giving feedback on the first draft reports, in particular to correct inaccuracies. The contents and presentation of information in this report, including annexes and attachments, are therefore entirely the responsibility of the research team and/or NWO/WOTRO.

However, as SGE we are responsible for adding this preface, the list with parties involved and a table of contents, in the cases that the report is a compilation of several reports.

In addition we would like to note that when reference is made to individual case studies, this should be seen as illustrative examples, rather than as representative of a CFA's entire partner portfolio.

The Dutch CFAs participating in this unique joint evaluation are pleased that the evaluation process has been successfully completed, and thank all the parties involved for their contribution (see the next pages for all the parties involved). We hope that the enormous richness of the report will serve not only accountability but also learning.

PREFACE AND ACKNOWLEDGEMENTS

This document provides the endline assessment of the MFS II evaluation for Ethiopia. The document is divided into three parts, starting with an executive summary, then presenting some annexes directly related to the executive summary. In the executive summary we review the endline evaluation of the different parts of the evaluation, and discuss some of the main results, as well as the main challenges we were faced with. In order to limit the executive summary to a reasonable size, we have moved some of the summarizing tables for the capacity development and civil society strengthening evaluation to an annex to the executive summary. The reader is referred to the Table of Contents for further details about the structure of this document.

My thanks go to all contributing authors, including the advisors, for all the work they have done for this evaluation. At times, in line with the baseline evaluation, it has been a quite hectic exercise, not the least because of the severe time constraints we were faced with. Again deadline were extremely difficult to meet. Nevertheless, we succeeded, as a team, to complete almost the entire evaluation in time. The endline evaluation has again benefited a great deal from us being able to use background documents from the MFS organisations and the Southern Partner Organisations (SPOs). I am also indebted to the many people from the MFS organisations and SPOs who were willing to discuss their programs and projects with us, and who gave feedback on the draft endline reports.

Robert Lensink

EXECUTIVE SUMMARY ETHIOPIA

1. Introduction

This report documents the assessment for the joint MFS II evaluations of development interventions in Ethiopia. The assessment of the development intervention combines qualitative and quantitative methods as required by NWO (2011) and consists of three pillars. 1) An evaluation of the millennium development goals (MDGs) of projects financed through MFS II funds. 2) An evaluation on the capacity development of southern partner organizations (SPOs) who are involved in projects financed through MFS II funds. 3) An evaluation of the impact on civil society of SPOs who run projects that are financed through MFS II funds.

This report will finalize the MFS II evaluation that started in 2012 and builds upon the baseline report that was completed early 2013. This executive summary will report the main findings, describe the challenges we were faced with, and explain the methodologies we have used

The executive summary starts by describing the sample of MDG projects and Southern Partner Organizations (SPOs) that have been evaluated. Next, a country background will be given. Finally, summaries of the three pillars of the evaluation, the MDG evaluation, the evaluation of capacity development of SPOs and the civil society strengthening evaluation, respectively, will be provided.

2. The Sample

Table 1 provides some basic information about the MDG projects and the SPOs that were involved in the evaluation. The sample of MDG projects and the group of SPOs that were assessed on capacity development is provided to us by NWO-WOTRO.¹ In total there are 20 SPOs involved in the evaluation. A short description of the SPOs involved in the Capacity development evaluation is given in the section dealing with the Capacity development evaluation (Section 5); the SPOs involved in the Civil Society evaluation are described in the section on Civil Society evaluation (Section 6). Details of the MDG projects are given in Section 4.

As can be seen from Table 1, there is no overlap between the Civil Society sample on the one hand, and the MDG and capacity development sample, on the other hand. However, there is considerable overlap between the MDG and Capacity Development Sample: 9 SPOs are involved in both evaluations. There are 13 MDG projects in our sample (see Table 2), which are run by 9 SPOs in total, which implies that we need to evaluate more than 1 MDG project for some SPOs: our sample includes 2 projects of AMREF Ethiopia and 2 projects of HOAREC.

¹ For details see NWO (2011), Call for proposals: Joint MFS II evaluation of development interventions at country level, NWO WOTRO. Section 6.8

3. Country Background²

Before describing some details of the evaluation, it is relevant to give some background information about Ethiopia in relation to the projects and SPOs that was evaluated. Ethiopia is the second-most populous country in Africa with over 83 million inhabitants. It is landlocked and has a diverse geography, including mountains and lowlands. Although Ethiopia contains rich soils and is the source of over 85% of the total Nile water flow, it suffered a series of famines in the 1970s and 1980s, worsened by adverse geopolitics and civil wars. Today, however, Ethiopia has one of the fastest growing economies in the world and the biggest economy by GDP in East and Central Africa.

3.1 MDGs

Below follows a short description of MDGs relevant for the projects we will evaluate.

MDG 1 private sector and agriculture

Ethiopia experiences an impressive annual growth rate of above 10 % per year since 2004, except in 2009 when the economy grew by 8.8%. The poverty headcount ratio at the national poverty line declined from 44% in 2000 to 39% in 2005. Poverty rates are highest in rural areas, where 83% of the population lives. Agriculture is still the backbone of the economy, providing 48% of GDP and 80% of employment in 2010 (www.worldbank.org). A third of agricultural income is provided by livestock production, either from integrated crop-livestock farming or from pastoralist systems. The productivity of agriculture is low, and market systems are underdeveloped. Farmer marketing organizations can be an important mechanism to support smallholder commercialization. As will become clear below, several of the MDG projects in our sample explicitly deal with agriculture and farmer marketing organizations.

MDG 2 Education

Although adult literacy rates are still low, gross primary school enrolment has risen from 23% in 1993 to 102% in 2010 (www.worldbank.org). This tremendous increase was at least partly the result of the introduction of free primary education. Especially poor and rural communities have benefited, and the gender gap in enrolment has narrowed. The government education budget has increased, but not nearly enough to track the increased enrolment. As a result, the quality and efficiency of education have deteriorated. Key measures required to improve quality are recruiting and training teachers and financing teaching and learning materials³. The three projects in our sample that focus on MDG 2, explicitly aim to improve the quality of education.

MDG 3 Gender

Ethiopia ranks 89 of 102 non-OECD countries on the social institutions and gender index of the OECD Development Centre (genderindex.org/country/Ethiopia). Around 30% of girls between 15 and 19 years of age were married, divorced or widowed, and the practice of abducting young women for marriage purposes is still common⁴. Violence against women is widespread. The two projects in our sample that deal with MDG 3 explicitly focus on improving the position of women.

MDG 4,5,6 Health

While health indicators have improved, Ethiopia has not yet reached the health-related MDGs. Due to effective immunization campaigns, the under-5 mortality rate decreased from 184 per 1,000 live births in 1995 to 106 in 2010 but it remained relatively high in rural areas (135) (www.mdgs.un.org). Half of children under 5 are stunted (www.who.int). Maternal mortality has decreased from 871/100,000 live births in 2000 to 470/100,000 in 2010.

² This section is drawn from the baseline report.

⁴ United Nations, 2004. World Fertility Report 2003, UN Department of Economic and Social Affairs, Population Division, New York.

These relatively high numbers are the result of the large number of teenage pregnancies and the lack of antenatal care. Infectious and communicable diseases like TB and malaria account for about 60-80 % of Ethiopia's health problems. The HIV prevalence among adults is 2%. One of the projects in our sample focuses on increasing the use of sexual and reproductive health services.

MDG 7ab Safeguards for a sustainable living environment & forests and biodiversity

While Africa is considered the continent most vulnerable to the adverse impacts of variability and extreme events resulting from climate change, the continent's coping and adaptation mechanisms are limited. At present, two consecutive missed rainy seasons have led to the worst drought in 60 years in the horn of Africa. According to the government, 4.5 million Ethiopians need emergency food assistance. Especially pastoralist communities in the south and south-east have been severely affected (www.wfp.org/countries/ethiopia). For Ethiopian pastoralists, reduction of poverty may be secondary to the avoidance of destitution, and development interventions should aim to benefit from the existing risk management and social exchange mechanisms that are part of the livelihood of pastoralists⁵.

Traditional biomass fuels (fuel wood, charcoals, branches, leaves, twigs, and dung) account for more than 90% of Ethiopia's final energy consumption (www.worldbank.org). This biomass is neither cultivated in a sustainable way nor used efficiently, and its heavy use causes deforestation, soil erosion, loss of farm yield potential, and desertification.

In our sample there are two projects dealing with MDG7 ab, one with creating disaster risk resilient communities, one with renewable energy.

MDG 7c Drinking water and sanitation

Most Ethiopians do not have access to sanitation and save drinking water. In 2009, only about 25% of urban population and less than 10 % of the rural population had access to improved sanitation systems (www.mdgs.un.org). While 95% of the urban population had access to improved drinking-water sources, this was only the case for 25% of rural households. A WHO/UNICEF study shows that water supplies in more than one fifth of households were classified as high-risk to health. In addition, more than half of household containers showed serious post-source contamination⁶. In our sample, two projects aim to improve drinking water and sanitation.

⁶ Tadesse, D, A. Desta, A. Geyid, W. Girma, S. Fisseha, O. Schmoll, 2010. Rapid assessment of drinking-water quality in the Federal Democratic Republic of Ethiopia. Country Report. WHO/UNICEF.

3.2 Organisational development capacity

According to UNDP capacity building is a long-term continual process of development that involves all stakeholders; including ministries, local authorities, non-governmental organizations, professionals, community members, academics and more. Unlike most African countries, Ethiopia has no colonial history. Government administrative systems are mostly homegrown. Very few studies have been done in the country assessing the situation of organizational capacity building by government organizations, NGOs as well as civil society institutions and the private sector.

As a result of limited capacity, the private sector in Ethiopia is far from reaching its potential role as the real engine of growth and employment. Since 1999, the Government has gradually changed its approach to capacity building. It launched a comprehensive National Capacity Building Program (NCBP), coordinated by a new Ministry of Capacity Building (MCB). While mainly focused on capacity building in the public sector, the NCBP also includes support for capacity building in the private sector and civil society organizations.

There are NGOs, very little in number, who specialize and get involved in building capacities of civil society institutions at a lower government level such as in the districts (woredas). Inevitably the quality of organizational/institutional strengthening work will vary considerable across NGOs, and very few specialize in this area of work.

Sectoral associations in the country also engage in building organizational capacities for members. A case in point can be the Addis Ababa Chamber of Commerce and Sectorial Associations. The chamber has a training center under the motto of “Enhancing Capacity by Imparting Knowledge” offering various business training courses for the local business communities of the private sector to maximize their capacity. Most of the trainings focus on the fields of management, leadership, finance, accounting, and taxation.

Regarding the capacity of public organizations, the major capacity challenge is visible in terms of highly limited implementation capacity of the different government organizations implementing policies. The main challenge in this regard involves continuing the on-going efforts aimed at building adequate administrative capacity at the decentralized level (particularly woreda and kebele levels). The capacity building of woredas and kebeles is still a work in progress, which has serious implications for accelerated implementation of scaled up development programs and service delivery.

3.3 Civil society

The Ethiopian civil society organizations (CSOs) law formulated in 2009 divides civil societies into charities and societies and also classifies them into one of three legal designations. These are: Ethiopian Charities or Societies, Ethiopian Resident Charities or Societies, or Foreign Charities. The classification is based on where the organization was established, its source of income, composition of membership, and membership residential status.

Ethiopian Charities or Societies refer to those formed under the laws of Ethiopia, whose members are all Ethiopians, generate income from Ethiopia and are wholly controlled by Ethiopians. These organizations may not receive more than 10 percent of their resources from foreign sources. But, Ethiopian Resident Charities or Societies are those that receive more than 10 percent of their resources from foreign sources. On the other hand Foreign Charities are formed under the laws of foreign countries, or whose membership includes foreigners, or foreigners control the organization, or the organization receives funds from foreign sources. According to the law, engagement on rights-based programs and policy advocacies is left for Ethiopian charities only while the others are limited to development activities. At present, a total of 2117 charities and societies are registered at the federal level where most are Ethiopian Resident Charity. In addition, regions too, have registered many more localized charities and societies.

Changes in the civil society context during MFS II

As required in the Terms of Reference, the evaluation team looked at changes in Ethiopia's context in line with the CIVICUS framework. Where possible, changes were identified between 2010 and 2014. More information regarding the civil society context of Ethiopia can be found in appendix 3.

With regards to changes in the socio-economic context, according to the Human Development Index Ethiopia shows a slight improvement in the 2000 – 2013 period and a slight improvement in its Economic Freedom Index. However the country still occupies the 173th DHI place out of 187 countries and its overall Economic Freedom Index is below the regional average.

According to the Social and Economic Rights Fulfilment Index (SERF Index), Ethiopia's situation worsened in 2012 as compared to 2010, in particular with regards to the right to food and housing. In 2014 Ethiopia scored 3.3 points on a scale of 0 to 10, with ten being classified as a country without corruption.

With regards to changes in the socio-political context, the most significant change that directly affects civil society is the 2009 proclamation act, which defines the role of civil society organisations in the development of the country. Although the act is to be interpreted as the acknowledgement of the government that "charities and societies" have an important role to play, CIVICUS and the UN Special Rapporteur on the Rights to Freedom of Peaceful Assembly and of Associations state condemn the act as a violation of international standards. The Proclamation restricts NGOs that receive more than 10% of their financing from foreign sources from engaging in essentially all human rights and advocacy activities. As a follow up of this Act in 2011, the government issued the Guideline on Determining the Administrative and Operational Costs of CSOs that stipulate that limits administrative costs for all charities and societies to a maximum of 30% of their budgets. These two regulations are considerably constraining the civil society space in Ethiopia and have impacted upon the SPOs in this sample.

In the 2008-2012 period Ethiopia's Freedom House scores show a deterioration of its political rights and civil liberties ratings, indicating that the country is not politically free nor performing on protecting civil rights.

With regards to changes in the socio-cultural context, no recent data are available, however the 2005-2009 World Values Survey concluded that 21.4 percent of Ethiopia's population states that most people can be trusted and 66.2 percent indicated that they needed to be very careful.

4. Endline evaluation of MDG projects

4.1 Basic information

Table 2 provides basic information about the MDG projects in our sample. See Table A1 in Annex 1 for an overview of the different MDGs. Table 2 gives the name of the projects, the MFS organisation that is responsible; the SPO that runs the project and the starting date as well as the end date of the projects together with the available budget. The table also shows the main MDG the project focuses on, as well as the main outcome indicator, and the main interventions.

Table 2 shows that that the projects in our sample cover a wide range of MDGs, and contain various interventions. Below we will give a short description of the type of interventions per project, classified by MDG.

MDG1 private sector and agriculture

Three projects in our sample, C5, C7 and C10, focused on improving MDG 1. Both C5 and C7 dealt with farmers' market organizations (FMOs), and both projects aimed to increase income and livelihood of households, to increase the volume of traded goods by households and to reduce food insecurity. However, the interventions they conducted to realize these aims differed considerably. Where the interventions of C5 dealt with ICT support to the

FMOs, C7 provided, more in general, organizational support to the FMOs. C10 aimed to increase families' income from sales of milk and milk products, and to reduce pressure on grazing land through promotion of zero grazing. This was e.g. done by establishing a central nursery site, by improving artificial insemination services, and by training farmers on livestock production. It should be noted that three other projects in our sample, C6, C9, C12, also partly dealt with MDG 1 topics.

MDG 2 Education

There were three projects in our sample that mainly focused on MDG 2; C1, C4, and C8. Project C1 aimed at increasing the accessibility to basic education and to improve the quality of education for out-of-school and working children in rural areas. The main intervention was the opening of non-formal education centers (called ABE centers) in close collaboration with the communities. The questions to answered was if the opening of these centers increased the access to basic education, if there was an improvement in the quality of education (compared to formal education) and if providing education in ABE centers improved the position of the child in terms of harmful traditional practices (compared to formal versus no education).

Table 2: Basic information MDG Projects

Project Code	Name	SPO	Consortium	MDG	MFS II Budget	Main outcome	Main interventions	Project start date	Project end date
(C1)	Non formal alternative basic education in Sibule Woreda	New Vision in Education Association (NVEA)	Kinderpostzegels	2	182,929.14 Euro	Student's school performance	Setting up two Alternative Basic Education Centers (ABE)	1 Jan 2011	31 Dec 2015
(C2)	Nazareth Child Help Line (CHL): Protection	Enhancing Child Focused Activities (ECFA)	Child Helpline International	3	243,644.01 Euro	protection for girls and young women	Child helpline and Community conversations	Jan 2011	Jan 2015
(C3)	Girl Power: Protection of Girls and Young Women against Violence in Addis Ababa and Adama towns (FSCE-ECPAT)	Forum on Sustainable Child Empowerment (FSCE)	Defence for Children – ECPAT Netherlands	3	323,000 Euro	gender equality and empowerment of women?	girls at girls clubs; Adults at Iddir; street girls; community conversations	April 1 2011	31 Dec 2015
(C4)	Improving the Teaching-Learning Processes and Educational Management through ICT	Teacher Training College Ayssaita (TTCA)	IICD and Edukans and Development Expertise Centre (DEC)	2	61,518 Euro	Student's school performance	Trainings to teachers	1 June 2011	30 June 2015
(C5)	CAVC/C4C/OGRI	HUNDEE	IICD and ICCO	1*, 1**	525,000 Euro	Livelihoods	FMO most important source of market information	Sept 2011	Dec 2013
(C6)	Climate Proof-Disaster Risk Reduction program	CARE Ethiopia	CARE Nederland	1*, 7a,b	607,241 Euro	Disaster risk reduction	Irrigation	1 July 2011	31 June 2016
(C7)	FMO Consortium	Facilitators for Change	ICCO	1*, 1**	1,297,188 Euro	Livelihoods	Increase in crop sales (quantity)	June 2011	May 2014
(C8)	Multilingual education	SIL Ethiopia	Wycliffe	2	206,389 Euro	Student's school performance	Minority language teaching	1 Oct 2009	Sept 2015
(C9)	Sustainable energy: Integrated Approach to Meet Rural Household Energy Needs of Ethiopia	The Horn of Africa Regional Environmental Network and Centre (HOA-REC/N)	ICCO and Kerkin Actie	1*, 1**, 4,5,6, 7a,b	486,483 Euro	Livelihood	Number of energy-saving devices	2011	Dec 2014
(C10)	Zero Grazing Project	Oromo Self Reliance Association (OSRA)	ICCO	1*, 1**	104,264.50 Euro	Livelihood	Milk production	Oct 2010	Sept 2014
(C11)	AE Project – Unite For Body Rights	AMREF Ethiopia	AMREF Flying Doctors Netherlands	4,5,6	1,515,000 Euro	Sexual and reproductive health	Do you prefer treatment from a health service provider or traditional treatment?	1 Jan 2011	31 Dec 2015
(C12)	Innovative WASH – Water purification with Moringa	HOAREC/N	ICCO	1*, 7c	251,099.60 Euro	Livelihood	Improved latrines	July 2011	June 2016
(C13)	Pastoralist WASH	AMREF Ethiopia	AMREF Flying Doctors Netherlands	7c	1,245,000 Euro	Sanitation	Main source of drinking water is a protected water source	Jan 2011	31 Dec 2015

Note: 1*: poverty; 1**: private sector and agriculture

C4 aimed at improving the quality of teaching to obtain a better students' performance and to increase their motivation. This was mainly done by training teachers in a teacher training college and schools in (1) teaching-learning processes and (2) educational management by using ICT which in turn should improve the quality of teaching.

The goal of C8 was to increase the access to education, to improve the quality of education, and to increase the self-esteem and strengthening of ethnic identity of language minority students. To reach these goals the intervention focused on the development of teaching materials of oral minority languages and offering of mother tongue education in elementary school to support language minority students.

MDG 3 Gender

Two projects dealt with gender: C2 and C3. Both projects were part of a broader country-wide "Girl Power Programme". The programme promotes equal rights and opportunities for girls and young women. Within the Girl Power Programme" different MFS organizations and SPOs work together. The "Girl Power Programme" is designed by different partners in coordination and alignment. Activities of different projects within the broader "Girl Power Programme" are additional of each other and strengthen and complement each other. Sometimes they are difficult to disentangle. The interventions included awareness campaigns, community conversations, sensitization campaigns, media interventions, campaigns at iddirs (funeral organizations), girl clubs and the helpline. It is noteworthy that, with respect to C2, activities related to the community conversations, as well as the Child Helpline itself, were financially supported with MFS-funding by Plan international, and not by the MFS organization "child helpline"(CHI). The MFS organization Child Helpline International (CHI), which runs the project we evaluated, only provides capacity building support for ECFA staff. For further details, see the MDG project report of ECFA in the appendix.

MDG 4,5,6 Health

The projects C9 and C11 are related to health. Their goals are, however, very different. C9 mainly focused on sustainable energy, and indirectly on health. This project aimed to reduce household's use of fuelwood and therefore to an improvement in health, especially women's health. The main interventions included awareness campaigns and trainings. C11, instead, was a project about reproductive health. The project aimed at increasing the use of sexual and reproductive health services, at improving a comprehensive sexuality education, and reducing the number of sexual and gender based violence. The interventions included trainings on e.g. sexual education, community mobilizations and sensitization campaigns.

MDG 7ab Safeguards for a sustainable living environment & forests and biodiversity

C6 and C9 focused on MDG 7a,b. The core objective of C6 was to create disaster risk resilient communities in four selected villages in the Afar region. Whereas the project was supposed to benefit the entire community, some of the activities were targeted towards specific direct beneficiaries. Activities involved 1) organization and support of women saving groups; 2) introduction of irrigated agriculture; 3) training and implementation activities related to rangeland management and fodder production; 4) community risk management activities such as trend risk mapping, response plans, awareness raising, establishment and training of DRR committees and food security task forces.

C9 dealt with renewable energy, and in particular, aimed at increasing the access to appropriate renewable energy (RE) and Energy Efficiency Technologies (EETs) in the targeted areas and to enhance the capacity of the community and renewable energy technology (RET) enterprises. This was done by awareness creation campaigns at Kebele level, by the establishment and support of Renewable Energy Technology Centres (RETCs), by the training on Jatropha and castor crop management, and by the training of Kebele Development Agents (DAs) on biofuel crop management.

MDG 7c Drinking water and sanitation

C12 and C13 dealt with drinking water and sanitation. The main objective of C12 was to reduce poverty and improve health, environmental, and economic conditions through empowering the people and creating an environment with increased access to and use of safe water and sanitation services as well as improved hygiene practices for women and marginalized groups. The project had three main components. The first was the introduction and promotion of eco-san toilets. Relevant activities were: pilot eco-san toilet trials, experience-sharing visits, and training on eco-san toilet construction and maintenance. The second was the introduction and promotion of Moringa, the seed of which can be used for water purification. This was done through experience sharing visits, training, nursery development, seedling distribution through newly established women groups, and linking with financing institutions. However, this part of the project was abandoned after the baseline and therefore not evaluated at endline. The third component was the facilitation and promotion of low-cost manual well drilling technologies to provide better access safe and adequate drinking water for communities and households. Again, training, demonstration, and providing links with financing institutions are the main activities.

C13 main objectives were to improve key hygiene practices and sanitation behavior of the target groups, and to improve the accessibility to drinking water and latrine facilities. This was mainly done by the construction of latrines for schools, health-centers, boreholes etc., by awareness campaigns and by training government and NGO staff, and by obtaining support from the private sector.

4.2 Impact evaluation details

The evaluation needs to address five questions: 1) what changes in outcomes do take place during the 2012-2014 period? 2) are the observed results attributable to the project interventions of the SPOs (i.e. the impact of the intervention)?; 3) Are the observed results relevant to the project beneficiaries?; 4) Is the project implemented efficiently? and 5) what factors explain the findings, i.e. are there reasons why a project has been a success or not.⁷

The different MDG evaluations have been organized such that the five main questions can be answered as good as possible. For reasons of space, all details cannot be provided in this country summary. Yet, in this sub-section we try to summarize the impact evaluation information that is relevant in the light of the main evaluation questions. We will also point out some challenges we were faced with. In section 4.3 we will end the summary report on MDG by valuing each MDG project in terms of the main evaluation questions.

Table 3 provides basic information on impact evaluation details for the different MDG projects. The table gives information about the evaluation strategy used and the sample sizes. It also indicates whether evaluations suffered from serious attrition and/or power problems, which may affect the rigour of the analyses considerably. Finally it shows whether the intervention had a significant impact on the main outcome indicator, in line with the main outcomes, specified in Table 2.

For all MDG projects, quantitative surveys have been conducted.⁸ Using these questionnaires we were able to identify the changes in the main outputs and outcomes per project over the project period. The questionnaires aim to provide information on important output and outcome indicators, in line with the

⁷ For exact details see NWO (2011), Call for proposals: Joint MFS II evaluation of development interventions at country level, NWO WOTRO. Section 6.5

⁸ For more detailed information about the data collection procedure for each of the individual projects, see annex H or the individual reports.

theories of change of the individual projects.⁹ Some questionnaires are typical household surveys, with the usual contents such as expenditure blocks; others focus on quality of education, and/or more sensitive issues like sexual violence. It should be noticed that for some projects questionnaires are combined. We developed one common questionnaire for the three MDG 2 projects, C1, C4 and C8, because these projects focus on similar issues. We also developed one common questionnaire for the MDG 3 projects, C2 and C3 since these projects are part of the national “Girl Power Programme”. Finally, we used common questionnaires for both projects of AMREF, C11 and C13, as well as for both projects of HUNDEE, C5 and C7. It is important to note that several of our projects deal with “sensitive issues”, such as sexual abuse, circumcision, and gender bias violence. This holds especially for projects C2, C3 and C11. For these projects, we added so-called “list experiments” to the questionnaires. The use of a list-experiment enables to obtain information about sensitive issues in an indirect way.¹⁰

Theory of change

The first step in the MDG evaluation was obtaining a clear idea about the theory of change of each of the individual projects. This starts by clarifying the inputs used for the project. Subsequently, we examined the activities planned/undertaken by the SPO leading to the required outputs resulting in the desired outcomes. The outcomes are then translated to indicators specific to each of the projects. Where possible we tried to use uniform indicators for similar projects, e.g. general expenditures as a poverty indicator. Finally we have addressed possible risks which may degrade the theory of change. The theory of change differs per project. Therefore, detailed explanations of the relevant theories of change are given in the individual MDG reports.

Comparison groups

For all MDG projects, we managed to gather data for at the least one reference (control) group. It should be noticed, though, that it turned out to be very difficult to find reference groups that are not affected by similar interventions. A clear example for this is project C11, which focuses e.g. on the use of reproductive health services. For this project we are able to find observations from the control group with similar observable characteristics. However, it turned out to be difficult to find people in the control group who were not affected by a similar intervention. Obviously this has implications for the impact analyses. If a comparison group has been affected by a similar intervention, our impact analysis does not provide information on the impact of the treatment as such, but shows whether the SPO we consider does better than a possible other NGO conducting a similar intervention. For details, we refer to the individual MDG reports. For some MDG projects, we even sampled two reference groups in order to conduct heterogeneous treatment effects. This, for instance, holds for project C1 and C4. Regarding C1, the first control group is a group in a village without a school. The second group consists of students in a governmental school. In the case of C4, the first comparison group consisted of students taught by not trained teachers in the same pilot school. The second comparison group was students who were taught at governmental schools in which teachers were not trained.

Impact evaluation methods

The MDG evaluation is predominantly done using quantitative evaluation techniques, although in some cases the quantitative analyses are supplemented with qualitative information. Especially regarding projects C2 and C3, which focus on empowerment of girls, several qualitative analyses are added to better assess the wide-variety of interventions of the SPOs involved. In theory, the most rigorous quantitative evaluation method would be a randomised controlled trial (RCT) since a RCT guarantees, under certain assumptions, that control and treatment groups only differ due to the intervention. However, we could not conduct RCTs for we had to evaluate ongoing projects. In other words, we had to

⁹ Since projects differ very much, theories of change (TOCs) are project specific. For reasons of space, we do not present the individual TOCs in the executive summary. The reader is referred to the full MDG reports in the appendix.

¹⁰ See Daniel Corstange Sensitive Questions, Truthful Answers? Modeling the List Experiment with LISTIT, Political Analysis (2009) 17:45–63.

conduct retrospective evaluations that assess the program's impact after it has been implemented, using observational data. Yet, we tried to use the most rigorous evaluation methodology possible, given the content of the project, the availability of baseline and endline data, and possibilities to gather data for a comparison group.

For all projects, but C3 for the street girls intervention, two rounds of data have been collected, both for treatment and comparison groups. For this reason we used a double-difference (DD) methodology as the main impact evaluation method for all projects. The advantage of a DD specification is that it controls for unobserved heterogeneity that does not change over time. For some projects we complimented the DD analyses with propensity score matching (PSM). This holds for C5-C7 and C9-C13. It should be noticed that only the first step of PSM, i.e. the estimation of the propensity scores, is used to determine the common support in the baseline. The DD analyses are performed on the common support sample.

One of the main problems we were faced with is that most interventions related to the projects in our MDG sample have already been started (long) before the baseline data gathering took place. One project (C8) started in 2009, one project (C10) started in 2010, and the remaining projects run since 2011. Hence, all projects have been ongoing for several years. This implies that our baseline data gathering in fact does not give real baseline data. The term baseline data in this report therefore refers to the first collection of data. Therefore, in many cases we are working in regions where the NGOs have been active for a number of years and have been implementing similar interventions.

Since the baseline survey is not a "real" pre-intervention baseline, as it is not conducted before the program started, a DD methodology measures the *incremental* impact of the program, i.e. the impact of being "longer" in the program, and not the average impact of the program. For some projects, the DD methodology is complemented with simple cross-sectional comparisons, see for instance C11 and C13. The obvious drawback of the latter approach is that it does not control for unobserved heterogeneity, and hence it may be the case that measured impacts are biased due to unobserved characteristics of the treatment and/or comparison groups.

Power

The sample size is important for the power of the analysis as too low power may lead to false non-rejections –so-called false negatives- , i.e. concluding that there is no impact while there is an impact. Power analyses are important in the "planning stage" of a project, i.e. before conducting the baseline. However, since the budget basically determined the maximum sample sizes, formal power analysis to determine sample sizes were not useful and therefore not conducted during the baseline.¹¹ Originally, we planned to conduct formal power analyses for all projects after the second round of data collection, so-called retrospective power analyses. The idea was that it might be useful to conduct reverse power analysis (see Thomas, 1997) in order to determine the minimum effect sizes that could be detected given the pre-determined sample sizes and given a power of, say, 80 percent. However, in contrast to ex-ante power analyses, the relevance of retrospective power analysis is controversial (See Thomas, 1997 and Lenth, no date), even considered by several scientists to be fundamentally flawed, used in whatever way (see Hoenig and Heisey, 2001). The main reason is that it is immediately obvious that as the significance level increases, retrospective power decreases. Hence in case there is a significant effect, the power will be high, while the power will by definition be low if there is no significant effect. This implies that if we find a significant effect, a power analysis becomes redundant for apparently the power of the test is big enough. It also implies that if we do not find a significant effect the power is apparently too low to pick up the observed effect size. A similar reasoning holds for the reverse power analyses: if the impact is

¹¹ According to Cohen a standardized effect size of 0.2 to 0.3 might be a "small" effect, around 0.5 a "medium" effect and 0.8 to infinity, a "large" effect. For a very simple case, where we assume that all observations are independent, a sample size of around 350 should be sufficient to identify an effect size of 0.2. This suggests that our sample sizes should in general be big enough to detect relatively small impacts of the intervention. Obviously, this is a very rough estimate.

insignificant apparently the sample is too small to pick up the possible effect. Additional information that can be obtained by conducting the reverse power analyses is minor. Retrospective power analyses, also in the form of reverse power analyses, suffer from the “power approach paradox” (PAP), for details see Hoenig and Heisey (2001). Because of the fundamental critiques on retrospective power analyses, and the fact that performing power analyses in a panel framework with fixed effects, as is the case for our double difference models, are not trivial, we decided that it was on the discretion of the project leaders of the different MDG projects to conduct **formal** power analyses. For our sample of MDG projects a formal power analysis has been done for project C3 and C6, C9, C10 and C12. For projects C1, C4 and C8 a Cohen’s D analysis, which is similar to a power analysis, is conducted to determine whether effect sizes that can be detected are big, small or large. **Informal** expert expertise on the power of the remaining projects has been used. We grade all projects on the question whether there are serious power problems, see Table 3. For most projects we believe that sample sizes are big enough to pick up the potential impact of the projects. However, power problems may be serious for two projects, C1, C4, C3 and C8. For C3 there are only power issues related to some of the interventions.

Attrition

The impact analyses can be severely affected by non-random attrition, and may lead to an overestimate of the impact of the project if unsuccessful members drop out of the program or to an underestimate if the most successful members leave the project. Fortunately, in our sample, most projects evaluations did not suffer from serious attrition problems. Yet, C1, C3, C4 and C8 experienced problems due to attrition. For further detail see the individual reports.

Impacts

For seven out of the thirteen evaluated projects we did not find a significant impact of the intervention on the main outcome indicator. However, it needs to be taken into account that the analyses faced several challenges. Thus, not finding a significant impact does not necessarily imply that the project is not effective. On the other hand, some projects classified in the table as projects with a significant impact on the main outcome, focus on several interventions separately, and only found a significant impact on one of the interventions. This for instance holds for projects C2, and C3. C2 focused on community conversations and on the child helpline. The community conversations turned out to be rather successful, whereas the child helpline was faced with several problems. C3, the project that deals with gender and female empowerment issues, focused on the impact of a temporary shelter for street girls, interventions related to girls clubs and interventions at so-called IDDIRs. The impact analyses suggest that the recovery and reintegration program, as well as the interventions at IDDIRs were successful, whereas we were not able to detect significant positive impacts of the interventions at girls clubs in terms of changes of the main outcome indicators. The evaluation of the MDG 2 projects show mixed results. Project C1, which aims to increase access to education and improve quality of education, seems to be effective for access to education as well as the quality of education increased. Also project C8 turned out to be successful. The main objective of this project was to study the impact of teaching in minority languages, as well as to develop teaching material in the minority languages of Bertha, Gumuz, and Shinasha. The impact evaluation suggests that the project increased access to education for students from the Bertha and Shinasha community. With respect to indicators of quality of education, Bertha, but not Shinasha. students following mother tongue education overall performed better on a learning test compared to language minority students following education in Amharic. However, project C4, that aimed to improve the quality of education by offering teacher training in educational management with ICT, did not find strong evidence for positive impacts. This project was faced with several challenges that strongly influenced the implementation, such as high teacher-turn overrate, high migration of students, security issues, and a relevant change in teaching which were outside the control of the teacher training college. The related projects C11 and C13, who focused on e.g. the sexual and reproductive health and livelihood issues in the Afar region, turned out to be relatively successful. For C11 we found positive impacts of the project on knowledge, perceptions and intentions about Sexual Reproductive Health and

Right (SRHR) issues. Concerning C13, the impact evaluation shows significant positive effects of the project interventions on sanitation. However, the impact on drinking water, which may take a longer time to take place, are so-far disappointing. Also projects C5 and C7 are related in that they both focus on livelihoods, and were analyzed with a the same questionnaire. For C5 we expect that ICT utilization will bring about innovations in the value chain. By doing so, it contributes to increased market participation, market efficiency and better prices for farmers and ultimately contributes to poverty reduction. However, we also document some serious weaknesses as sales to the farmer marketing organizations (FMO) are low and the FMO is the most important source of market information for less than 10% of its members. Regarding C7 we also observed some serious weaknesses as sales to the FMO are far below the intended '75% sales through the FMO'. Farmers sell by far the largest share of their marketable output to private traders, while more than 50% of the members did not sell at all through the FMO.

Efficiency

The impact evaluation also contains an efficiency analysis of the MDG projects. Efficiency analyses, or more restricted cost-effectiveness analyses, are important since costs and benefits determine the relevance of a project. However, while during the last decade, the focus has been on improving benefit measurement, measuring costs lacks behind. There is little sense of how to apportion costs to particular benefits, how to value opportunity costs, etcetera. Thus, conducting cost-effectiveness analyses are extremely important, but there is not yet a standard approach available that can be used in practice. Ideally one would conduct a welfare analysis for all projects, but this is not possible as the necessary data is lacking. Standard models for efficiency analysis like data envelopment analysis and stochastic frontier analysis require many homogeneous projects and are therefore also not applicable to our sample. Therefore, we tried to use a simple as possible approach. That is, per project, the costs of main outputs, if available, are compared with the benchmarks found in the literature as summarized by AIID (see AIID, 2014). However, in some cases even such an analysis could not be performed as no benchmark was available. Hence, the efficiency analyses we conduct only provide an indication of the efficiency of the projects.

TABLE 3: Information on impact analyses for MDG Projects

Project Code	Information comparison group sampled	Baseline and Endline information	Evaluation Design	Sample size baseline treatment	Sample size baseline control	Serious attrition problems from baseline to endline	Serious power problems with respect to the main outcome indicator	Significant impacts on main outcome
C1	Yes	Yes	1	75	76	Yes	Yes	Yes
C2	Yes	Yes	1, 3	450	450	No	No	Yes
C3	Yes	Yes	1, 3	450	450	Yes	No/Yes	Yes
C4	Yes	Yes	1	180	320	Yes	Yes	No
C5	Yes	Yes	1; 2	551	473	No	No	Yes
C6	Yes	Yes	1; 2	251	251	No	No	No
C7	Yes	Yes	1; 2	551	473	No	No	No
C8	Yes	Yes	1	291	366	Yes	Yes	Yes
C9	Yes	Yes	1; 2	301	301	No	No	No
C10	Yes	Yes	1; 2	165	165	No	No	No

(Spillover:
165)

C11	Yes	Yes	1; 2	722	360	No	No	Yes
C12	Yes	Yes	1; 2	240	261	No	No	No
C13	Yes	Yes	1; 2	263	719	No	No	No

Notes regarding evaluation designs: 1 refers to double difference method; 2 refers to propensity score method; 3 refers to qualitative methods. For details, see the individual MDG reports . For project C3 there are power problems for some of the interventions. Note also that the analyses for C12 needs to be partly redone since the project downscaled which was not taken into account in the analyses.

4.3 General Findings of the MDG evaluation

We end the MDG evaluation part of this report by valuing the program in terms of the main evaluation questions (see the beginning of section 4.2). These questions are summarized in table 4. The general finding is that the evaluated projects are well designed; most projects score 7, 8, 9, or even a 10. The main exception is project C10. One of the main reasons why we gave this project a low score on the design question is that the project lacked a market component to increase the profitability of dairy production and generate incentives for investment.

It appears that most projects are implemented as designed. Only projects C2, C4 and C10 scored relatively low on this question. C2 scored low since the child helpline was not very effective during the project period. Due to several reasons, such as a change in government law governing NGOs in Ethiopia, that were not under control of the SPO (ECFA), the child helpline could not be reached. Project C4 could not be implemented as designed for the program as faced with a high teacher-turn overrate, high migration of students, security issues, and a relevant change in teaching which were outside the control of the teacher training college. In the case of project C10, although the technological innovations were integrated fairly well, problems in the output side of the market made it difficult to implement the project as designed. For further explanation, see the technical report.

From Table 3 it was clear that for six out of the 13 projects a significant effect on outcome was found. However, as most projects have multiple outcomes, a score has been given on how well the project achieved all of its objectives. Here we can see that many projects did not succeed in achieving all objectives. Three projects had severe problems, projects C4, C9 and C12. For C4 we already pointed at the design problems. For this project, we selected many outcome indicators but only found, with all methodological limitations in mind, one positive impact, namely increased motivation to attend school. This effect might be driven by a motivated teacher who encourages students to attend school. While C9 tackles a very important issue: the lack of access to modern energy in rural households, our analyses do not show any impact that can be attributed to the project interventions. It should be noticed, though, that impact could still arise in the last project year or beyond. With regard to C12, we find that the respondents experienced positive changes with respect to MGD7C during the 2012-2014 period: the incidence of diarrhea and distance and queuing at water source decreased, while hand washing, the incidence of covered and clean water containers and the use of traditional private and public latrines increased. However, this cannot be attributed to the intervention of HOAREC/N, as the situation improved more in the comparison areas. Two possible reasons for the lack of evidence are: failure to consider local preferences or slow adoption rates due to the need for behavioral changes.

The efficiency analyses suggest that most projects are at the least reasonably cost-effective. Yet, our analyses indicate that projects C6 and C9 score low on efficiency since the project costs are on the high side of the benchmarks from the literature. We also give a low score for C4, but it should be noticed that a proper benchmark is missing for this project. In general, it needs to be realized that the cost-effectiveness analyses are extremely crude, and should be taken with caution.

The score on the relevance question is subjective. It is based on the evaluator's assessment of the fit between the problems of the beneficiaries and the project. It is not based on a needs assessment. For our sample, we deem most project results to be very relevant for the project beneficiaries. Again project C4 scores low because of the many problems this project was faced with.

We also score projects on how well each result could be attributed to the project intervention. This question deals with the rigor of the analysis. In other words, it values how well we are able to attribute the impacts to the project intervention. Thus, these grades do not value the project or the project design as such. Nor does it reflect our ability to assess the efficiency of the project as discussed above. We have used the following grading system. If we were able to construct identical control and treatment groups, and if there were no serious other evaluation problems, like attrition and/or power problem, we decided to grade the project with a 9 or a 10. Since identical control and treatment groups will in general only be obtained by large scale RCTs, a 9 or 10 is only used for projects for which the main analyses have been done by using a RCT. This was never the case for our Ethiopia sample. We based the grading system for our sample on the degree to which a randomization could be mimicked. We decided to grade projects with an 8 if a double difference methodology has been used with pre-intervention data and if there were no other serious issues that affected the evaluation. In our sample, we only graded C9 and C12 with an 8. It is notable that these projects score very low on the question related to whether objectives had been achieved. Low scores on the attribution question were given to projects C3 and C4. The reason for the low score for C3 is that for some of the interventions, such as the intervention related to street girls, not a proper control group could be identified, and that the evaluation is partly based on a qualitative analysis. C4 scored low because of severe attrition and power problems.

Table 4: General Scores

Project:	C1	C2	C3	C4	C5	C6	C7	C8	C9	C10	C11	C12	C13
The project was well designed.	10	7	8	6.5	8	7	8	10	7.5	5	7	9	9
The project was implemented as designed.	7	5	9	5	7	9	8	9	8	7	9	8	9
The project reached all its objectives.	8	5	6	3	5	5	5	7	1	5	7	1	6
The observed results are attributable to the project interventions. ¹	7	7	5	3	7	6	7	7	8	6	6	8	6
The observed results are relevant to the project beneficiaries.	10	9	9	4	6	8	6	8	8	8	9	8	9
The project was implemented efficiently.	8	6	6.5	5	6	4	6	10	5	8	8	8	7

Note. Scores run from 0 (worst) to 10 (best). ¹ The score is based on the rigor of the impact analysis, i.e. it depends on whether it was possible to find appropriate control groups, whether there are attrition problems etc. Thus, these grades do not value the project or the project design as such.

5. Evaluation of capacity development of Southern Partner Organisations (5C evaluation)

5.1 Methodological approach

The overall evaluation approach for evaluating capacity development of the SPOs is a participatory, theory-based approach using theories of change, impact pathways and process tracing^{12,13}, in a before-after comparison. Mainly qualitative methods have been used as organisational capacity is characterised by complexity and uncertainty.

The overall evaluation design is centred around the 4 evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described in more detail in annex B.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see annex C) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided. The scores were developed by the evaluation team, after thorough analysis and description of the situation during endline and how this changes since the baseline. These scores are based on mainly proportional differences. Whilst the information provided by staff may have provided socially desirable answers, the information provided has been cross-checked using different sources of information (different staff groups based on functions; self-assessments in interviews; interviews with CFA and other externals).
- **Key organisational capacity changes - 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described. This general causal map was developed to also get the SPO perspective on what they considered as important capacity development changes since the baseline. For this reason, and since the indicators by themselves could not provide this overall SPO story and perspectives on what they considered important changes, only the SPO perspective has been included.

¹² In Stern et al, 2012: Evaluation and IE in particular, is an opportunity to test a programme's theory through the links in the causal chain. In terms of method, this tendency is close to 'process tracing' (George and McKeown, 1985, Collier 2011), defined by Aminzade (1993) as: 'theoretically explicit narratives that carefully trace and compare the sequences of events constituting the process...'. These causal chains are represented graphically as causal maps or neural networks.

¹³ Stern et al (2012) say there are 'three main designs that show promise to reinforce existing IE practice when dealing with complex programmes - theory-based; case-based and participatory'.

This was an additional activity that wasn't planned for during the baseline. The analysis in terms of organisational capacity changes has however mainly focused on changes in the 5c indicators.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This was also confirmed during the 5c endline study. Theory-based evaluation can help to understand why a program works or fails to work and they attend to not only what a programs do but also to how participants respond¹⁴. The theory based approach also allows space for the evaluation to reflect the complex nature of the development process, particularly when focusing on changes in organisational capacity. To deal with the attribution question (2), the theory-based approach '(outcome explaining) process tracing' is used.

This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

The evaluators have considered the internationally agreed upon evaluation standards as useful guidelines for their work, and ranked in order of importance: 1. Utility, 2. Feasibility, 3. Propriety, 4. Accuracy, 5. Evaluation Accountability, which are ranked in order of importance. Within the boundaries of the conditions set for this evaluation, the evaluators have as much as possible adhered to these standards, particularly utility, whilst the setup of the evaluation seems to focus more on the accuracy standard.

Organizational capacity is complex and seen as an outcome of an open system. Within a complex system, multiple processes operate simultaneously and by no means in isolation. Interactions between these processes can result in unpredictable and evolving results. According to Stern et al (2012), there are "three main designs that show promise to reinforce existing IE practice when dealing with complex programmes – theory-based; case-based and participatory". In order to understand changes in organisation capacity, it is important to develop a deep understanding of the change process and the dynamics that affect organisational change of organisations. Simple linear input-activities-outputs-outcomes-impact chains do not suffice for complex issue like organisational capacity.

The evaluation is participatory in that SPO staff and stakeholders are engaged in a process of self-reflection, learning and validation of findings. Having interactive workshops with staff is part of this.

The evaluation process is also participatory in terms of design and analysis. The overall methodology, including standard indicators and a Likert scale, has been designed by the Centre for Development Innovation (CDI), Wageningen University and Research centre (WUR; Ethiopia, India, Indonesia, Liberia), in collaboration with ETC Foundation (Uganda) and Disaster Studies (WUR; DRC), covering in total 6 out of 8 countries. For the endline process CDI has also taken a lead in methodological development, especially in terms of process tracing, for all the 8 countries in the MFS II evaluation. CDI is involved in 4

¹⁴ Carol H. Weiss (2007).

out of the 8 countries for the 5C evaluation. Due to the nature of the evaluation (multiple countries, with multiple institutions carrying out the evaluation), all possible efforts were made to design a standard methodology to be used across countries. This included a set of common indicators (32); and data collection tools for six countries¹⁵. The 5 capabilities were reformulated in outcome domains and for each outcome domain performance indicators have been developed. See also annex D The methodology has been shared with the country based evaluation teams, the country project leaders, the synthesis team, and MFS-II organisations for feedback. Detailed guidelines and tools have been developed by CDI for the baseline and endline, and these have been piloted in each of the countries CDI is involved in, in line with training the in-country team. Country based evaluators have had a critical input in reviewing and adapting these detailed guidelines and tools. This enhanced a rigorous data collection process. Rigorous analysis of the qualitative data is done with the assistance of the NVivo software program. The qualitative data analysis software allows for a transparent and systematic analytical process across an international team. During data collection, analysis and sense-making, the overall 5C coordinator (CDI) provided training, coaching and mentoring and carried out quality checks for each of the 4 5C country teams that CDI is involved in (Ethiopia, India, Indonesia, Liberia). Details specific to the SPO are described in chapter 5.1 of the SPO reports. A detailed explanation of the methodological approach and reflection on this is provided in annex B

5.2 Key findings and conclusions

This chapter includes brief descriptions for each Southern Partner Organisation (SPO) included in this capacity development (5C) evaluation, and provides main findings and conclusions of the evaluation, in relation to the 4 core evaluation questions as described in the previous section.

5.2.1 Key information on the Southern Partner Organisations (SPOs)

Please find below a brief description of the key information on the Southern Partner Organisations.

AMREF

The African Medical and Research Foundation (Amref) was established in 1957, and is an independent not-for-profit, non-governmental organisation (NGO) with its headquarters in Nairobi, Kenya. Today, Amref implements its projects through country programmes in Kenya, Ethiopia, Uganda, Tanzania, Senegal, South Sudan and South Africa. Training and consulting support are provided to an additional 30 African countries. Amref in Ethiopia is a registered international NGO under the Ministry of Justice and Societies and Charities Agency of Ethiopia. Amref's vision is: "Lasting health change in Africa: communities with the knowledge, skills and means to maintain their good health and break the cycle of poor health and poverty". In terms of their mission, Amref believes in the inherent power within African communities – that the power for lasting transformation of Africa's health lies within its communities. Amref believes that by focusing on the health of women and children, the health of the whole community can be improved. Amref is concerned with skilled care of mothers before, during and after childbirth; prevention and treatment of cervical cancer, and proper management of childhood illnesses. Amref's main areas of intervention are maternal and child health; HIV and Tuberculosis; safe water and sanitation; malaria; and essential clinical care. Amref shares knowledge gained from our grassroots programmes with others, and uses it as evidence to advocate appropriate change in health policy and practice. In all of its programmes, Amref partners with communities, civil society organisations, health practitioners, and the private and public sectors to establish a participatory health care system.

CARE

¹⁵ DRC, Ethiopia, India, Indonesia, Liberia, Uganda

Care's vision is: To seek a world of hope, tolerance and social justice, where poverty has been overcome and people live in dignity and security (*CARE International Vision*). The mission is: To serve individuals and families in the poorest communities in the world. Drawing strength from our global diversity, resources and experience, we promote innovative solutions and are advocates for global responsibility (*CARE International Mission*). CARE Ethiopia's mission is to work with poor women and men, boys and girls, communities and institutions, to have a significant impact on the underlying causes of poverty. CARE started working in Ethiopia in 1984 in response to severe drought and famine that devastated the population and claimed the lives of nearly one million people. Since then, the organization's activities have expanded to address the root causes of poverty and vulnerability. As part of CARE Ethiopia's development of a focused and long-term program approach to poverty, the office targets three groups of people: pastoralist girls; chronically food-insecure rural women; poor young girls living in cities and on the outskirts of urban areas.

ECFA

Enhancing Child Focused Activities (ECFA) is an indigenous, non-governmental organisation working in Oromiya regional state, to effectively respond to the protection, rehabilitation and integration needs of children and young people; and to contribute to protecting children from any forms of violence in all settings through a holistic manner of service delivery and creating an informed and enlightened target community.¹⁶ Enhancing Child Focused Activities (ECFA) is a coalition of NGOs and GOs (government organisations) working in the field of Child Rights in Adama. Established in 2004, ECFA initially spearheaded bringing child oriented organisations in Adama to pull resources together to celebrate the Day of African Child in the city. After the first celebration of the Day of the African Child together, it was observed and agreed that the coalition could act as a collective voice and an alternative organ for monitoring the implementation of programmes on the rights of the child in Adama.¹⁷ The current vision, which was developed in 2009, is "to see the development of Ethiopia children with their basic needs realized and protected from any form of abuse". Since 2009, the mission is "working with children, families, communities, government agencies and national and international partners to prevent child abuse and ensure the protection, social and psychological needs of orphan and vulnerable, marginalized, abused and exploited children".

FSCE

Forum on Sustainable Child Empowerment (FSCE) previously named as Forum on Street Children-Ethiopia is an indigenous not-for-profit, non-governmental organization established at the end of 1989 by a group of social development professionals who thought and believed that they can make a difference in the lives of vulnerable children especially those who are forced to live and/or work on the streets of major cities and towns of Ethiopia due to various reasons. Following the issuance of new Civil Society Organizations (CSOs) legislation issued in 2009, FSCE has redefined its Vision, Mission and program and reregistered as Forum on Sustainable Child Empowerment under the registration number 0064. The mission statement and FSCE programs is again rectified and revised during the evaluation of its fifth strategic plan (2010-2014) at its mid-term and the organizational development study conducted in 2013. The vision is: To see the well-being and protection needs of children fulfilled. The mission is: FSCE as a child centred organization "Strives to protect and support vulnerable children through comprehensive system approach in collaboration with relevant stakeholders".

HOAREC

¹⁶ Country specific information Ethiopia, MFS II call for proposals, 2012.

¹⁷ <http://www.crin.org/organisations/vieworg.asp?id=4585>

The Horn of Africa Regional Environment Centre (HoA-REC) and the Horn of Africa Regional Environment Network (HoA-REN) were founded in 2006. They were established to help consolidate the efforts of environmental organisations operating in the HoA region and to establish a platform for collaboration between different stakeholders. The HoA region is comprised of Ethiopia, Eritrea, Djibouti, Kenya, Somalia, Sudan, South Sudan and Uganda. HoA-REC is an autonomous institution within Addis Ababa University, and facilitates cooperation between member organisations and other environmental actors--including the private sector and government, to carry out activities "on the ground". HoA-REC also serves as the secretariat for the larger HoA-REN. The Centre has several components, of which the most important ones are the partnership programmes, capacity upgrading and demand driven action research. Concerning the latter, HoA-REC aims to motivate students in environmentally-related fields by offering practice-oriented research options in field situations. HoA-REN is a network of members and partners consisting of environmental CBOs, NGOs and higher learning institutes from all countries (Djibouti, Eritrea, Ethiopia, Kenya, Somalia and Sudan) in the HoA (Horn of Africa) region. Members of the network are indigenous civil society organizations and higher learning and research institutes. Partners of the network consist mainly of non-indigenous (international) organizations working on environmental issues in the region. The network promotes intensive cooperation among and exchange of information and experiences between endogenous NGOs, CBOs, research institutions and universities in HoA region. The network strives to facilitate experience exchange between the countries in the region because there is a great deal of untapped environmental knowledge in the region which is currently not utilized to its fullest potential. In addition, HoA-REN also partners with government bodies, businesses and international organizations to achieve an optimal impact on the ground. Over the past five years, HoA-REC/N has been working towards improving environmental governance and management at all levels within the HoA region. The vision of the Horn of Africa Regional Environment Centre and Network is to contribute to: Sustainable development; Environmental conservation; Prevention of conflict escalation around access to natural resources in the Horn of Africa. The mission is: To improve environmental governance and management in the Horn of Africa Region, encompassing Ethiopia, Sudan, Djibouti, Kenya, Somalia and Eritrea.

HUNDEE

HUNDEE – Oromo Grassroots Development Initiative is an indigenous NGO established in 1995. It is a local non-governmental organisation based on the philosophy that poor rural communities should be responsible for their own development. HUNDEE acts as a facilitator in this process. HUNDEE's major programmes include community organizing, cereal bank promotion and networks, civic education, environmental rehabilitation, and women's and older persons' economic support. HUNDEE's vision is: A just world where women and men, and girls and boys, live in dignity and prosperity. The mission includes: Enable small farmers, women, older persons, youth and other marginalized groups to get organized around common issues of concern for livelihoods, and to revitalize proven community based traditional support system & institutions; Reduce vulnerability of target groups to transitory food shortage; Enable target groups to rehabilitate their degraded land; Empower women to attain economic and social rights, and eradicate all forms of violence and discrimination against them in Oromia regional state; Relate with government, civil institutions and NGOs to further our possible implement our development our development activities together with them.

NVEA

New Vision in Education Association (NVEA) is an Ethiopian Non-Government Organization established in November 2000, with the objective to improve access to quality education for disadvantaged children in rural areas of Ethiopia, NVEA is founding member of BEN-E (Basic Education Network Ethiopia), also partner of Edukans and of Kinderpostzegels. The vision is: To see every child (in Ethiopia) accessing

quality primary education at the right age and close-to-home. The mission is: To expand inclusive quality basic education and early childhood care through non-formal programs that mitigate the impacts of HTPs & HIV/AIDs by developing infrastructure and strive to improve rural agricultural technology.

OSRA

The Oromo Self-Reliance Association (OSRA) was established in 1995 with a vision of reduction of poverty, and improving literacy and well-being in Oromia region. OSRA is an indigenous non-governmental, non-political, secular, non-profit making voluntary development organisation. It was registered by the Ministry of Justice and re-registered as Ethiopian Residents Charities in accordance with charities and Societies Proclamation 621/2009 in October 2009. OSRA's vision is: To see poverty free, food secured and self-reliant society in Oromiya. The mission is: OSRA implements participatory integrated rural development projects, to assist marginalized and resource poor community members to improve food security, self-reliance, and family health and to support environmental protection, through building their capacity and mobilization of internal and external resources. Operating in four zones of Oromia region, OSRA's programmes are based on the belief that the rural communities it works with are best suited to shape and sustain their own development. Hence, OSRA's motto is to help people help themselves.

TTCA

Aysaita College of Teachers Education (ACTE or TTCA) was established in 2007 with the vision of improving the backward life style of Afar region pastoralists. The mission of TTCA was to produce disciplined primary school teachers who can alleviate backwardness of the Afar community. The current vision is: To see an institute capable of producing teachers with democratic culture, well qualified and competent for teaching-learning process. The current mission is: To reduce the shortage of primary school teachers and equip them with skills and competencies, deliver on the job training to improve capacity and problem solving research.

5.2.2 Changes in partner organisation's capacity and reasons for change (evaluation question 1 and 4)

This section describes the main findings for the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **"What factors explain the findings drawn from the questions above?"**

These questions are mainly addressed by reviewing standard indicators that have been developed for each of the five core capabilities, which make up the capacity of an organisation (see also annex C). Through a mix of methods (self-assessments – SPO staff; interviews with SPO staff and externals; document review; observation), data have been selected on whether and what changes have taken place in these indicators since the baseline in 2012. See also a description of the methodology in annex B The main findings and conclusions are described below. In addition to reviewing standard 5C indicators, the evaluation team facilitated a discussion on what the organisation perceived as the key organisational capacity changes since the baseline, and how these changes have come about. Key findings are also explained below.

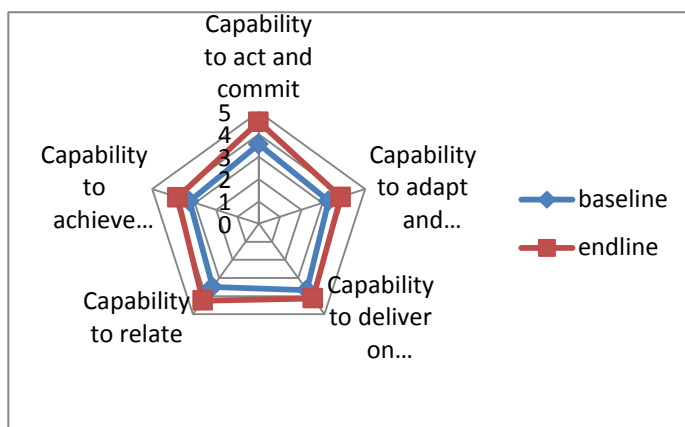

Changes in terms of the five core capabilities

Below you can see how each of the SPOs changed since the baseline in terms of their average capability and specific indicators. The scores were developed by the evaluation team, after thorough analysis and

description of the situation during endline and how this changes since the baseline. These scores are based on mainly proportional differences.

AMREF

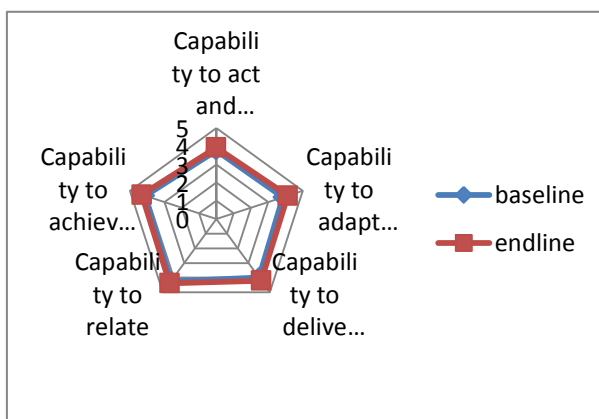

Since the baseline, two years ago, many improvements took place under all capabilities. In the capability to act and commit, Amref Health Africa Ethiopia (Amref) improved on many indicators. New leadership appointed in April 2012 introduced a new, matrix style, organisational structure and appointed new programme managers. This led to more timely decisions, and better technical support and strategic guidance for staff, including field staff. There was slightly less staff turnover due to better incentives, i.e. internal promotion of staff, ample opportunities for capacity building, and better hardship allowances and per diems. Skills of staff have improved. Fundraising procedures have improved, a fundraising manager appointed and Amref has diversified its funding base to 30 donors and has doubled its operational budget since the baseline. In the capability to adapt and self-renew Amref also improved on all indicators. They improved their M&E implementation because of having a pool of M&E experts, a new Information Management

System (AIMS), an M&E manual, an M&E manager who oversees the M&E at program level, more M&E staff with better skills, better critical reflection opportunities, better follow-up, and better involvement and responsiveness to stakeholders. All of this has also led to better reporting. In terms of the capability to deliver on development objectives, Amref again shows some improvement in all indicators. Operational plans are regularly revised, there is a pull system for effective use of resources which has led to more cost-effectiveness, budgets are revised to be realistic and linked to timely planning, a beneficiary feedback mechanism strategy has been institutionalised, there are regional based assessments for joint monitoring of results, Amref has a quality assurance mechanism in place, and has better record keeping than during the baseline. In the capability to relate, Amref has improved as well: stakeholders are better engaged during programme design, Amref is involved in new networks and programme sites are more regularly visited by Director and Deputy Director. Internal communications have improved due to the establishment a communications department with a communications manager who resolves disputes, a new HR and admin manager and shorter communication lines. Finally, Amref has improved in its capability to achieve coherence because of the involvement of all staffs in revisiting the vision, mission and strategies of the organisation; and operational guidelines and manuals that are in place with field staff being informed about this. There is a knowledge management committee, and Amref's programmes are aligned with the new business plan which in turn is aligned to the strategic plan of the organisation.

CARE

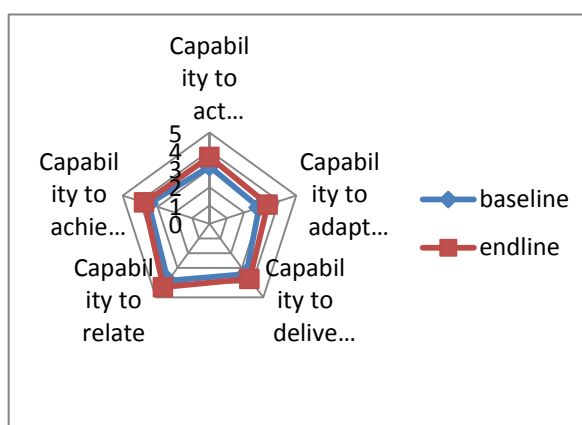

Since the baseline, two years ago, improvements took place in all of the capabilities. Over the last two years some small improvements took place in the indicators under the capability to act and commit. The management of CARE Ethiopia is responsive and now receiving regular information from projects to use for taking action. In the last two years a substantial amount was budgeted for training of staff and staff are encouraged to seek education opportunities in-country and abroad. Many opportunities have been

offered to staff, staff has taken CARE Academy courses and are offered in-country scholarships. Staff skills have therefore improved and the training opportunities are also seen as an important incentive. Staff salaries have increased and the merit-based salary increment policy has been further implemented. In the capability to adapt and self-renew CARE Ethiopia saw many small improvements. The application of M&E improved slightly because more competent staffs were hired and the information system has been strengthened. Staff's M&E competencies were strengthened through MFS II funded training. CARE Ethiopia has established a knowledge centre through which learning takes place and lessons are shared. In this way M&E findings are used to inform future strategies. There has been a very slight improvement in terms of room for critical reflection which was triggered by feedback from CARE Netherlands. CARE Ethiopia has become more responsive to its stakeholders as they are now organising a yearly partnership day and are following a community development approach. In terms of the capability to deliver on development objectives, CARE Ethiopia has improved in various indicators. Staff's awareness of the importance to work cost-effectively has increased. In various projects CARE Ethiopia has reduced costs by maximising the contribution of the community. The organisation is reaching or surpassing its planned outputs and the partners are satisfied with the results. There was a very slight improvement in ensuring that beneficiary needs are met because of the presence of qualified staff, regular monitoring and beneficiary consultations. Staffs have become more experienced e.g. through learning events, and are therefore better able to balance quality and efficiency. Hiring new staff for the program quality and learning unit has also helped in this regard. In the capability to relate, CARE Ethiopia very slightly improved in engaging with their target groups. The CARE PFR program manager visits projects and discusses with beneficiaries more frequently now. With regards to relations within the organisation, communication has improved due to Wi-Fi connection in the field offices with USAID funding. Finally, CARE Ethiopia has shown slight improvements in some of the indicators under the capability to achieve coherence. There has been a very slight improvement in operational guidelines due to a revision of the HR manual and policy and development of implementation guidelines and transparent financial procedures. There is a slight improvement in staff's capacity to ensure the complementarity of the various projects to CARE's new program approach for a better impact.

ECFA

Since the baseline, two years ago, improvements took place in all of the capabilities. In the capability to act and commit ECFA improved on many indicators. Most important was a new organisational structure, for example a division between administrative and program issues. This has led to the delegation tasks from leadership to appropriate staff, so that the director can focus more on programs and provide organisational directions to his staff. And it led to more clarity for staff on their roles and responsibilities. ECFA has taken measures to retain staff: increased salaries, sustain freedom at work, giving opportunities for staff to let their voices be heard, and hiring new staff. Staff competencies have improved because of hiring qualified new staff and training opportunities on resource mobilisation and M&E. ECFA has slightly better articulated strategies, due to improved M&E on which these strategies are based. Also daily operations have slightly improved and are more in line with strategic plans because of review meetings and improved stakeholder involvement in the annual planning meetings. In the capability to adapt and self-renew ECFA also improved in many indicators. M&E has improved because of a dedicated M&E officer and regular review and planning meetings with stakeholders and staff. The M&E officer is skilled and can coach the other staff members. Different tools are used for monitoring and

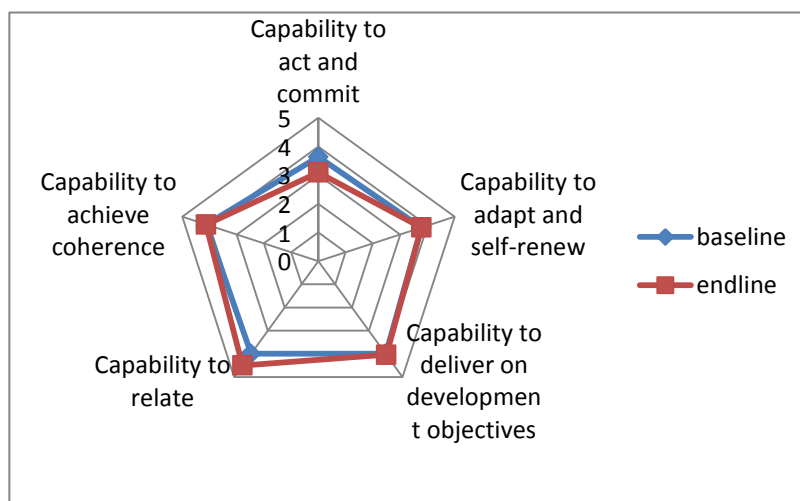

supervision and M&E formats have been developed. ECFA makes more use of the CHI Principles and Standards Assessment to assess the quality of its work and they use biannual review meetings to plan for the next 6 months. The frequency of critical reflection meetings went up to weekly thus enhancing the opportunities for staff to share their ideas. There is a more free flow of ideas between different departments. ECFA has become more responsive to stakeholders, especially the Bureau of Women's and Children Affairs Office, one of their major stakeholders. In terms of the capability to deliver on development objectives, ECFA shows some improvement in almost all indicators. There are new guidelines in place to minimise operational costs and become more cost-effective. ECFA has been delivering outputs in a more timely fashion because of restructuring of the program department and recruitment of new staff. The organisation has better organised its way of getting feedback from beneficiaries. Through the organisational restructuring, new staff has been hired with better efficiency and quality. In the capability to relate, ECFA has improved as well. The organisation has improved its network with beneficiaries and stakeholders who continue to be engaged in project planning. ECFA has formed strong local networks with the community, the Bureau of Women's and Children Affairs, regional finance offices and the social affairs office. Having a social worker in all the kebeles that ECFA works in has helped to connect more with their target groups. In terms of relations within the organisation, there are new weekly meetings which have been good for the working relations among staff and have stimulated mutual sharing. Finally, ECFA has improved in one of the indicators under the capability to achieve coherence: a number of operational guidelines and manuals have been developed, e.g. financial guidelines, admin and HR manual.

FSCE

Since the baseline, two years ago, in all capabilities changes (improvements or deteriorations) took place. Deteriorations took place in the indicators under the capability to act and commit, due to internal problems FSCE experienced. In May 2013 an organisational development (OD) study was initiated, that was completed in Dec 2013. This study concluded that to improve internal functioning a new director was required. This new director started in March 2014, only two months prior to the endline workshop. Many staffs are still frustrated and funding is still low due to this period of internal problems. Funding is said to have declined because of many different reasons, one being the internal problems, but others include restrictive NGO legislation and donors wanting to work in coalitions. As the positive changes of installing a new director were very recent, many staffs still felt that there was some delay in implementing the OD study's recommendations. The strategic plan has been revised but it is not yet guiding FSCE's daily operations. Due to the lower annual budget, staff turnover increased. Some staff resigned due to low salaries and staff performance evaluation is not well managed. Compared to similar organisations, the benefit package at FSCE is poor and training opportunities for staff have decreased since the baseline. Little training has been given since 2012 because there has been less emphasis on getting funding for trainings and the 30/70 rule, in which trainings fall under the 30% of the budget that can be spent on administrative costs, has not helped in this respect. Skilled staff has left the organisation so that, although staff that remained has gained some skills due to experience and self-organised trainings, overall there is a slight deterioration in staff skills. New staffs hired do have clear roles and responsibilities that fit in the organisational structure of FSCE. In the capability to adapt and self-renew FSCE saw some deterioration and some improvements. Staff have improved there M&E competencies especially due to an M&E training during the Annual MFS II partner meeting in May 2014. There is a team of experts that works on M&E and support the area program offices. More emphasis is now given to reporting on outcome indicators. With the new leadership, organisational management is making use of M&E findings at organisational and program level to make timely decisions. While some improvements have been made in terms of creating moments for critical reflection, the general feeling among staff is that because of the internal problems and reorganisation process that followed not enough attention has been given to this. The same holds for staff's freedom to share ideas: there are some very recent positive developments but the internal communication problems under the previous management worsened the situation since the baseline. In terms of the capability to deliver on development objectives, FSCE shows very slight improvement in its cost-effectiveness. In this regard, the organisation is developing guidelines on project proposal development, project appraisal, realignment of activities and budgets in the annual action plan, and is undertaking financial activities with deadlines and reviewing the M&E system and M&E application. In the capability to relate, FSCE has shown slight improvements in engaging its stakeholders in policies and strategies. The organisation is using Multi Stakeholder Child Protection Structures (MSCPS) to engage different stakeholders in the program process. The relations within the organisation have, however, deteriorated compared to the baseline situation. Due to change processes and leadership problems, at different levels relations between staff have not been free and open. While some positive developments are taking place at the head office (with the new director) this has not yet reached the Area Program offices. Finally, FSCE has improved and deteriorated in indicators under the capability to achieve

coherence

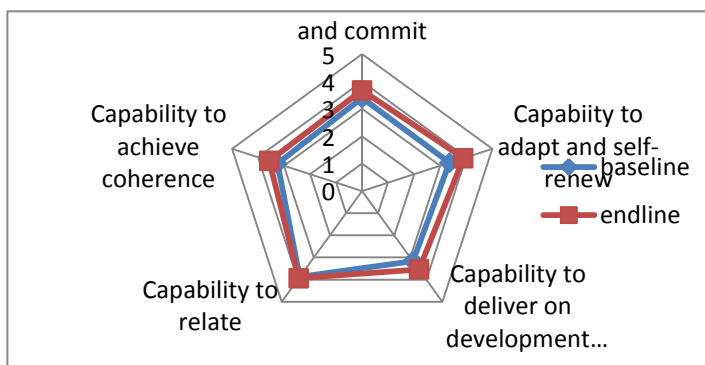

coherence

coherence. After the OD assessment in 2013 and the change in leadership in 2014, the mission and vision statement of FSCE were revised and significant improvements were made in organisational structure, communication, program, finance and HR strategies. There was however, a slight deterioration in programs being aligned to the vision and mission, and while projects are still aligned, realignment to the new organisational level strategies and program categorisations is required.

HOAREC

Since the baseline, two years ago, improvements took place in all of the capabilities. Over the last two years many small improvements and one slight deterioration took place in the indicators under the capability to act and commit. The management of HoA-REC/N is striving to be more responsive and to decentralise decision making. There are weekly management meetings and program officers have become more independent. There has been a slight improvement in the strategic guidance that management gives as they are strengthening program partnerships (to tap into new sources) and have pointed out six strategic objectives that will help HoA-REC/N better achieve its mission and vision. Staff turnover has increased among program and support staff, especially highly skilled staff and staff working in the remote areas. Since the baseline, the organisation has created an organisational structure with a new more decentralised grouping of programs and more clear roles and responsibilities. There has been a very slight improvement in staff skills especially in program design, implementation and M&E. Staff recruitment criteria have been revised and new staff that is hired is qualified in experience and education. Staffs have improved their skills due to more opportunities for trainings either in-house or abroad on technical topics such as climate change and carbon emissions as well as crosscutting topics like communication. HoA-REC/N now has a standard form to objectively assess staff performance and identify training needs. The incentives for staff to work at the organisation have improved very slightly because of the revised HR manual that has been put online, and staffs are now able to be informed about their entitlements. Over the last two years HoA-REC/N has diversified its funding with support from ICCO in developing proposals and improving their reporting capacity. The organisation now has a fundraising strategy in place and has assigned a consultant to liaise with the fundraising officer and identify calls for proposals, and develop proposals together. In the capability to adapt and self-renew HoA-REC/N saw many improvements. The organisation has put in place M&E software application system (Akvo FLOW). Staff has had training on using this tool and also on outcome mapping with support from ICCO. The M&E unit has been strengthened and now has three fulltime and one part-time staff. Management also raised awareness about the importance of M&E among other staff. Staffs are now using the monitoring system and data has been collected on a timely basis. Through the M&E software application system management has quick access to M&E findings and is using this in decision-making for future strategies. Staff is encouraged to speak out new ideas especially concerning proposal development and is recognised for providing these ideas. A communications officer has been hired under the public relations (PR) and communications department, who tracks HoA-REC/N's operating environment and is in regular contact with program staff. Staff uses this information e.g. when preparing proposals and capacity building for the PR and communications unit. A revised organogram and newly recruited staff has further helped with this. Over the last two years HoA-REC/N has become more responsive to stakeholders because program staffs frequently communicate with and work closely together with them. In terms of the capability to deliver on development objectives, HoA-REC/N also showed improvements in many indicators. The organisation has clear operational plans and budgets in place and technical staff

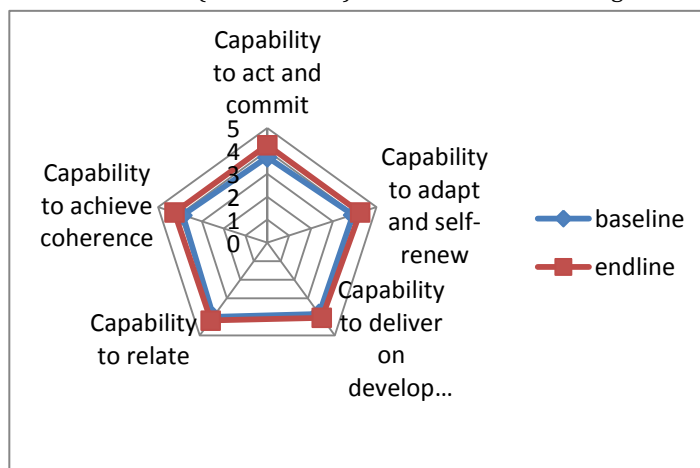

and commit. The management of HoA-REC/N is striving to be more responsive and to decentralise decision making. There are weekly management meetings and program officers have become more independent. There has been a slight improvement in the strategic guidance that management gives as they are strengthening program partnerships (to tap into new sources) and have pointed out six strategic objectives that will help HoA-REC/N better achieve its mission and vision. Staff turnover has increased among program and support staff, especially highly skilled staff and staff working in the remote areas. Since the baseline, the organisation has created an organisational structure with a new more decentralised grouping of programs and more clear roles and responsibilities. There has been a very slight improvement in staff skills especially in program design, implementation and M&E. Staff recruitment criteria have been revised and new staff that is hired is qualified in experience and education. Staffs have improved their skills due to more opportunities for trainings either in-house or abroad on technical topics such as climate change and carbon emissions as well as crosscutting topics like communication. HoA-REC/N now has a standard form to objectively assess staff performance and identify training needs. The incentives for staff to work at the organisation have improved very slightly because of the revised HR manual that has been put online, and staffs are now able to be informed about their entitlements. Over the last two years HoA-REC/N has diversified its funding with support from ICCO in developing proposals and improving their reporting capacity. The organisation now has a fundraising strategy in place and has assigned a consultant to liaise with the fundraising officer and identify calls for proposals, and develop proposals together. In the capability to adapt and self-renew HoA-REC/N saw many improvements. The organisation has put in place M&E software application system (Akvo FLOW). Staff has had training on using this tool and also on outcome mapping with support from ICCO. The M&E unit has been strengthened and now has three fulltime and one part-time staff. Management also raised awareness about the importance of M&E among other staff. Staffs are now using the monitoring system and data has been collected on a timely basis. Through the M&E software application system management has quick access to M&E findings and is using this in decision-making for future strategies. Staff is encouraged to speak out new ideas especially concerning proposal development and is recognised for providing these ideas. A communications officer has been hired under the public relations (PR) and communications department, who tracks HoA-REC/N's operating environment and is in regular contact with program staff. Staff uses this information e.g. when preparing proposals and capacity building for the PR and communications unit. A revised organogram and newly recruited staff has further helped with this. Over the last two years HoA-REC/N has become more responsive to stakeholders because program staffs frequently communicate with and work closely together with them. In terms of the capability to deliver on development objectives, HoA-REC/N also showed improvements in many indicators. The organisation has clear operational plans and budgets in place and technical staff

now provide specification on each item for procurement in the project's budget. Now that HoA-REC/N has moved to its new premises, there is no longer a lack of offices and all staff work together which saves costs in terms of time and transport. Reaching planned outputs has improved since the baseline. Because of an improved M&E system and a strengthened M&E unit, the M&E system is now working for almost all departments in the organisation and the M&E staff analyses reports on project input and output basis to monitor efficiency. HoA-REC/N has improved in balancing the quality and efficiency of its work because of the good functioning of the M&E unit that looks into this, updating of operational guidelines and ICCO recommendation to work with organisations that have the required structures and contacts in place for certain topics. In the capability to relate, HoA-REC/N very slightly improved in engaging in networks. The organisation's expertise has always been in networking, but over the last two years they established new networks with TERI, IRC, the Stockholm Environmental Institute, and UMass Boston. Finally, HoA-REC/N has improved in a few indicators under the capability to achieve coherence. HoA-REC/N has developed a strategic plan for the period of 2015-2020 and has revised its mission, vision and strategies with key staff, an external consultant and network partners. The organisation's vision and mission are now very well-articulated and project agreements have been amended based on the organisation's new vision and mission. Projects have become more mutually supportive because of better communication and synergy between programs and projects for example for the climate and WASH programs.

HUNDEE

Since the baseline, two years ago, improvements took place in all of the capabilities. Many improvements took place in the indicators under the capability to act and commit. The leader at HUNDEE is responsive and the Board has become more engaged in decision making and guiding the management since the baseline. Board and management meetings are held on a more regular basis. In 2014 HUNDEE updated its organogram. The new organisational structure segregates staff duties and provides more clarity on roles and responsibilities. The board, management and different donors felt the need for this more clear organisational structure because of the expansion of the organisation in terms of themes and geography. Strategies are now articulated based on situation analysis and M&E findings. Staff skills in HUNDEE have improved, especially in using ICT for data collection, sharing of information, community managed disaster risk management, reporting, resilient livelihoods etc. because of many trainings offered by different donors including ICCO and IICD under MFS II (C4C Alliance). No staff has left the organisation since the baseline and most staff have enjoyed working at HUNDEE for over ten years because of the enabling work environment. The salary scale has improved shortly before the endline evaluation. HUNDEE also revised its HR policy and provides limited staff loans. The total annual budget of HUNDEE doubled from 25 million in 2012 to 50 million in 2014 because the credibility of the organisation and the resource mobilisation capacity improved. This resource

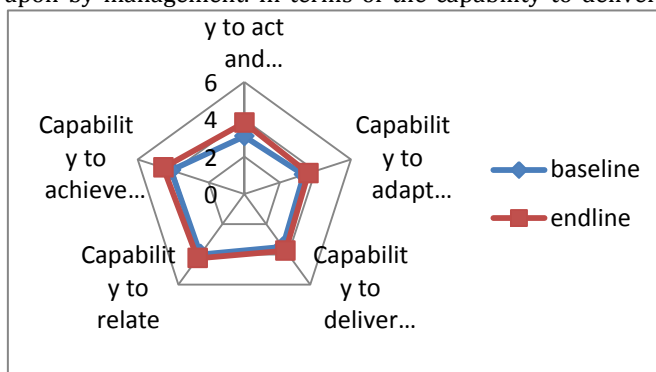

mobilisation capacity was also supported by ICCO through quality assurance of their proposals. With the new organisational structure there are now dedicated staff members for resource mobilisation, there is more clarity on responsibilities in this matter and there is a more proactive approach to exploring new funding opportunities. In the capability to adapt and self-renew HUNDEE also improved in many indicators. The organisation has slightly improved its M&E application because staff capacity to exercise and internalize the organisational accountability framework has increased. There is now an M&E team for each unit to strengthen the M&E system. ICCO has also been supporting HUNDEE to monitor and

evaluate at different levels of impact and has provided training on downward accountability since 2009 (MFS II funded since 2011). The organisation is using M&E findings slightly more strategically as these findings have been used in project development. In terms of critical reflection, HUNDEE has institutionalized transparency and collective decision making and has established a grievance committee to resolve conflicts. HUNDEE keeps tracking its operating environment and has expanded its channels for getting information through working with other NGOs. Through implementing downward accountability, HUNDEE has become more responsive to its stakeholders and has gained the trust of the community. In terms of the capability to deliver on development objectives, HUNDEE shows some improvement. The organisation has very slightly improved in having more clear operational plans that consider financial inflation so that there is no budget shortage for implementation. HUNDEE now has a budgeting officer and has improved in its planning and resource allocation. Administration costs have been reduced to work more cost-effectively. Through mainstreaming downward accountability mechanisms HUNDEE is well aware of client satisfaction in projects funded by various donors. In the capability to relate, HUNDEE has improved as well. Understanding of the importance of working in networks has improved at top management level due to the advice of ICCO. HUNDEE is working more with networks and gets more information through them. Through the downward accountability mechanism, field staff and program staff have become more responsive to the target groups and visit them frequently. Within the organisation, between head office and field offices communication and information sharing has improved through the use of ICT. The new organisational structure also entails a formal communication and documentation system. Finally, HUNDEE has improved in three of the four indicators under the capability to achieve coherence. Staffs are now more aware of the vision, mission and strategy of the organisation and are involved in the process of revisiting them, which creates a sense of ownership. There was an improvement in operational guidelines because the HR and financial policy were revised and a Disaster Risk Reduction guideline was developed (with ICCO's support). HUNDEE's programs have grown to be more complementary. In the operation areas all projects fall under one unified leadership.

NVEA

Since the baseline, two years ago, improvements took place in all of the capabilities. Over the last two years many improvements took place in the indicators under the capability to act and commit. The management has become more responsive and takes swift action on issues raised by staff. Field staff is now participating in the management committee and there is a close collaboration between management, partners and beneficiaries. Strategic guidance has improved over the last two years in both formal and informal ways. Board members are giving better technical back-up for program and administrative staff, regular meetings are taking place and the reporting mechanism has strengthened. Staff turnover has been negligible in the last two years because of successful staff retention initiatives that were introduced after the feedback of the baseline evaluation in 2012. Incentives for staff have increased as the per diem rate increased, some medical and education costs are covered, salaries increased by 10 percent and there are more training opportunities for staff. Staff have improved their skills especially in report and proposal writing, project planning and management. DEC, CCRDA, Kinderpostzegels, Edukans and the World Bank have supported NVEA in this by giving trainings. Daily operations are in line with the strategic plan and this has improved because of recruitment of new staff and training on Project M&E. The overall fundraising capacity of NVEA has improved since the baseline: they have acquired new projects in 2013 and 2014 and MFS II funding has also increased. A new funding procedure that the organisation adopted is proposal writing in clusters, in this way they obtained funding from the British Embassy. In the capability to adapt and self-renew NVEA saw some improvements. The organisation's M&E application improved slightly because of establishing a cost-effective M&E system, using an M&E manual for project follow up and facilitating M&E on a quarterly basis. The program and project staffs have been trained in M&E and have gained experience in this. Since the baseline, NVEA is making very slightly more use of its M&E findings by compiling track records, communicating lessons learned to stakeholders and using them for decision making on strategies. Room for critical reflection has slightly improved because all levels of staff are now welcome to raise issues and

these are taken up and are often acted upon by management. In terms of the capability to deliver on development objectives, NVEA shows slight improvement in its operational plans. The field staffs now also make operational plans and day-to-day plans are developed. After the baseline in 2012, NVEA assigned an internal auditor to assure that budgets are used properly and in a transparent way. Finance staff is documenting their work more effectively and procurement is done in a more cost-

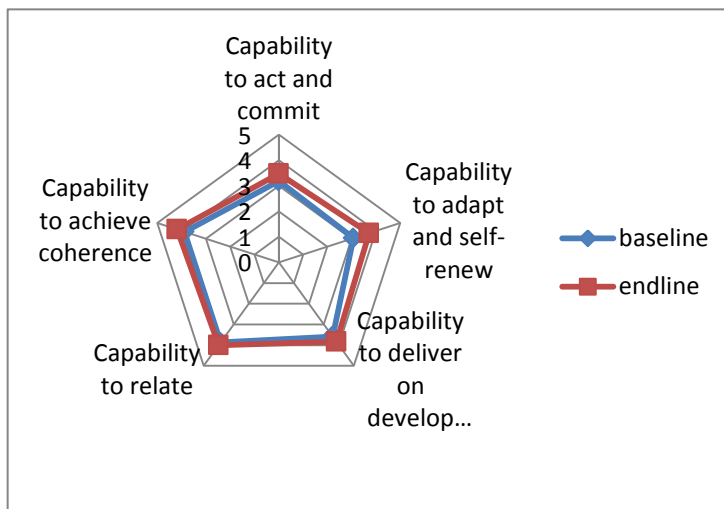

effective way. Since the ESAP 2 (Ethiopian Social Accountability Program Phase 2) has been launched in 2013, NVEA has improved its bottom-up approach in doing needs assessments among beneficiaries of their programs to ensure their needs are being met. In the capability to relate, NVEA has shown very slight improvements in engaging in networks because they are now involved in a new partnership with the British Embassy and GTZ (German Development Cooperation)/DVV (Institute for International Cooperation of the German Adult Education Association). Frequency of visits to target groups has increased because thanks to Kinderpostzegels, NVEA now has motor bikes to visit the target groups more often. There has been a very slight improvement in internal relations because of better documentation and use of minutes of meetings. Finally, NVEA has improved in a few indicators under the capability to achieve coherence. In 2013 NVEA revised its vision, mission, goal, objective and core functions to include adaptations in line with the changing development agenda. New operational guidelines were developed since the baseline on topics including HRM, M&E, Child Protection Policy, SRH manual and resource mobilisation. In the implementation of all its program components, NVEA ensures mutually supportive efforts by establishing good relationships with the concerned government organisations, CBOs, and communities.

OSRA

Since the baseline, two years ago, improvements took place in all of the capabilities. Over the last two years many small improvements took place in the indicators under the capability to act and commit. Since the baseline, decision making has been further decentralised within OSRA, giving a decision-making role to programs and departments. The board members have become more responsive and involved in organisational issues. There is a very slight improvement in senior management leading and following up on strategic issues. Due to dwindling foreign funding, OSRA needed to strengthen its resource mobilisation strategy and performance, which they are doing by hiring qualified staff and involving stakeholders in planning and implementation. There is an improvement in collecting outcome related information which is used for operational management, but not yet used to articulate strategies. Staff trainings were provided on different topics since the baseline based on a training needs assessment done among OSRA staff. Most trainings were funded by ICCO and other donors like CRRDA. OSRA has made some improvements in incentives for staff by revising the salary scale and the HR policy; and introducing limited loan schemes for staff. OSRA has diversified its funding and the total amount of funding has increased with 30 percent since the baseline. Among the new projects there are some multi-year (3-5 year) projects. There is now a separate unit dedicated to fundraising, proposal development and income generation. In the capability to adapt and self-renew OSRA saw many improvements. The application of M&E improved because forms have been developed that help collect and report at outcome and impact level and OSRA has started to report case studies. ICCO is supporting OSRA in its M&E activities through providing technical support, training and introduction of various approaches. There are now two M&E teams: one at the head office and another at the area level. A monitoring officer is responsible for coordinating M&E activities. He has improved his skills in collecting and analysing information as a result of the ICT based interventions through the financial support of IICD. Area office

staff has also improved their skills in reporting and documenting changes. In terms of the capability to deliver on development objectives, OSRA has improved in various indicators. Planning is now done in a more participatory way and there are operational plans per project in place. Staffs use the operational work plans and budgets to guide them in their day-to-day activities. There is a very slight improvement in monitoring efficiency because

of training on RBM in 2013 and experience of staff has helped with crudely comparing inputs with outputs. OSRA has improved their way of balancing quality and efficiency because they have prepared quality of work monitoring tools and these have been communicated to staff. For ensuring efficiency there is a well-designed project management plan in place for each project. In the capability to relate, OSRA slightly deteriorated in the indicator on engaging in

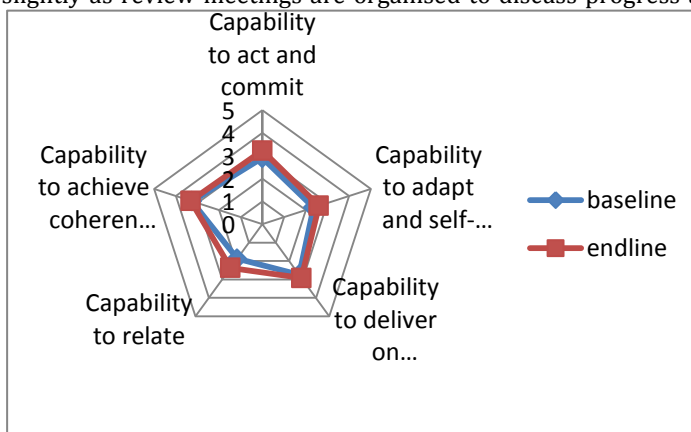

networks. Though they continued to network in their alliances, in the zero grazing project there was limited coordination among stakeholders and the collaboration with financial service institutes was not effectively done. OSRA is however, engaging more with its target groups after feedback they gained from MFS II expertise field reports and improved leadership and management. OSRA's outreach has increased through the various projects they are involved in, in which the community is actively engaged. With regards to the relations within OSRA, access to telephone and internet at the head and field offices has improved, facilitating efficient communication between staff. Finally, OSRA has shown some improvement in the indicators under the capability to achieve coherence. The mission and the vision of OSRA have been regularly discussed since the baseline, with efficient participation of the staff especially in strategy and policy formulation. There has been an improvement in OSRA's operational guidelines: there now are revised and updated HRM, accounting and financial policy manuals in place. New procurement guidelines and financial formats have been developed.

TTCA

Since the baseline, two years ago, improvements took place in all of the capabilities. Over the last two years many small improvements took place in the indicators under the capability to act and commit. Members of management have become more responsive and proactive and the academic dean is more easily approached by all staff. The management has become better at providing strategic guidance and staffs are able to discuss the strategic plan, which is available for all departments, with management. TTCA is using M&E feedback and takes the current situation into consideration when articulating operational plans. Staff skills have improved since the baseline, as college teachers now have second degrees, while they used to have first degrees; key tutors and the vice dean have been trained through the C4C Alliance (MFS II); and staff is making better use of ICT. There has been a slight improvement in the training opportunities that are offered to staff. Trainings through the C4C alliance (DEC) are for a limited number of staff, but USAID, MoE and Save the Children UK have also offered training opportunities for staff. There has been a very slight improvement in the funding situation of TTCA because UNICEF and UNESCO have started supporting primary schools. No new funding procedures are in place but some (successful) efforts have been made to approach donors by writing proposals for funding for e.g. ICT infrastructure, reference books, library etc. In the capability to adapt and self-renew TTCA saw some improvements. Teaching practices are now evaluated in a more integrated way through joint M&E practice involving teachers, the department head and academic dean. Improvements have

been observed in the number of staff evaluations, the utilization of evaluation reports, preparations of students' results in a timely fashion, and in delivery of scheduled progress reports by Department heads. The student and teacher behaviour observation matrix that is provided by the C4C alliance (MFS II funding) provides inputs for strategic planning and also to make actions and corrections. Opportunities for critical reflection have improved slightly as review meetings are organised to discuss progress and design improvement actions. TTCA has seen a very slight improvement in the way it is tracking its operating environment. Through sharing experience within the C4C alliance, linkages with primary schools and working closely with communities, TTCA understands better what is happening in its environment. In terms of the capability to deliver on development objectives, TTCA has improved in some indicators. The

The centre has improved in delivering planned outputs because active teaching and learning strategies are now applied and teachers are aware of the need to actively involve students in the learning process. Mechanisms to check whether service meet beneficiaries' (students') needs, have improved very slightly because every 20 days there are discussions with students' representatives from each department and the students council about the teaching-learning process and other issues in the college with the academic dean and the respective heads of departments. Despite the limited resources, TTCA is trying to balance efficiency and quality by improving the quality of education and trainings. In the capability to relate, TTCA improved in all indicators. According to management TTCA has improved its relations with external groups and is considering partners' feedback and reflection in their strategy and future activity towards improving the quality of education. The college has started collaborating with Dessie and Jimma CTEs (through the C4C alliance) and therefore their engagement in networks improved slightly. TTCA is engaging slightly more with its target groups as there is now a formal system to support DEC intervention at schools, and parents' involvement in e.g. the preparation of strategies is encouraged. Within TTCA there is a slight improvement in relations between top management and staff as they are engaging more in open discussions and dialogue.

Finally, TTCA has shown a very slight improvement in the indicator "mutually supportive efforts" under the capability to achieve coherence. The college has started to work with other NGOs like USAID, UNESCO and UNICEF to complete projects and there are good efforts to help cluster schools through e.g. the provision of computers.

All in all, changes took place in all the five capabilities, for most of the SPOs (8 out of 9), as can also be seen in the table below. Most of these changes have been slight improvements. For the following SPOs improvements of 0.5 or more have taken place: AMREF (all 5 capabilities), ECFA (3 capabilities), HOAREC (two capabilities). All in all, most of the changes can be seen with AMREF. FSCE is the only SPO where changes were a negative (2) or no changes (3) at all, in terms of overall capabilities. This is mainly related to problems with previous leadership.

Changes in terms of average capabilities	AMREF	CARE	ECFA	FSCE	HOAREC	HUNDEE	NVEA	OSRA	TTCA
Capability to act and commit	0.7	0.2	0.5	-0.5	0.7	0.6	0.8	0.3	0.3
Capability to adapt and self-renew	0.6	0.3	0.5	0.0	0.5	0.3	0.3	0.6	0.3
Capability to deliver on development objectives	0.5	0.2	0.3	0.0	0.4	0.2	0.3	0.3	0.2
Capability to relate	0.8	0.1	0.4	-0.1	0.1	0.2	0.3	0.1	0.5
Capability to achieve coherence	0.6	0.2	0.3	0.0	0.3	0.4	0.4	0.3	0.1

Key organisational capacity changes as perceived by the SPO - general causal map

For each organisation, a discussion with staff was facilitated, so as to understand what they perceived as the key organisational capacity changes in the organisation since the baseline, and how these changes have come about. It was expected that this would provide a comprehensive story for the SPO on what they perceived as the most important changes as well as providing reasons for change, which were difficult to surface from the 33 standard indicators. It must be noted that this information for the SPO story has not been verified with other sources of information, as has been done with the process tracing as explained in the next paragraph. Below you find the results per SPO. On the whole, a mix of internal and external factors were perceived to be important in the key organisational capacity changes, as experienced by the SPO staff. For more details about the specific findings please see the 5C reports for the SPOs.

AMREF

During the endline workshop, changes that were perceived by SPO staff as the most important organisational capacity changes since the baseline in 2012 were improved leadership capacity, improved staff capacity and improved resource mobilization competences. Leadership capacity improved because of a more active engagement of the new advisory council at national level and the international Board at corporate level; improved leadership knowledge and skills through continuous and short term training; and performance targets that were set for leaders. These performance targets were set to address the gaps identified in the “behavioural survey” conducted by Amref headquarters in Nairobi. Staff capacity has improved because of improved staff competences in planning, M&E and PCM among others things, which resulted from recruiting more competent staff, training, and more regular experience sharing. Other improvements like the improved team coherence from the more regular experience sharing, and closer follow up and technical support by the renewed management also contributed to improved staff capacity. Improved resource mobilisation competences happened because of improved concept and proposal writing skills of staff due to training and recruiting staff with fundraising skills; taking up business development as a special focus as a result of the organisational restructuring; increased capacity to create partnerships due to the assistance they had in networking from Amref-NL and other offices; and Dutch support in terms of salary, training, donor contacts and technical reviews. Many of these changes have been brought about by the change in leadership at country level, and a behavioural survey by Amref global. There was no particular mention made of MFS II funded capacity development interventions but during process tracing these have clearly come up.

CARE

During the endline workshop some key organisational capacity changes were brought up by CARE Ethiopia’s staff in the general ‘key changes in organisational capacity’ causal map: better understanding and knowledge of disaster risk reduction and management; enhanced knowledge and understanding of options for local adaptation to climate change; enhanced M&E and learning capacity including automated data base management; enhanced capacity of staff in strengthening and utilizing school clubs for environment protection interventions; enhanced capacity in joint monitoring through partnership with government and community; and knowledge and awareness to carry out reconciliation of results versus expenses. According to CARE Ethiopia’s staff, they improved their knowledge on disaster risk reduction and management (DRRM) because of joint bi-monthly review meetings with PFR (Partners for Resilience) partners (MFS II funded); experience gained from implementation of the BREAD IV project (funded by DFID); a training on community management disaster risk reduction in 2013 (funded by MFS II), quarterly meetings of the agricultural task force organised by MoA and FAO; participation in the climate change strategy for CARE; and past experiences in joint monitoring with implementing partners.

The organisation enhanced its knowledge and understanding of options for local adaptation to climate change because of participating in the climate change strategy for CARE; participation in the CARE climate working group that discusses on local adaptation; and because of exploration of knowledge by contacting partners, experts and consulting documents. CARE Ethiopia enhanced its M&E and learning capacity (including having automated data base management) because of a training on M&E in 2014 (funded by MFS II); CARE Ethiopia's robust M&E system and M&E unit; and support for planning and quality learning by a new impact measurement advisor since 2013. CARE Ethiopia has enhanced its staff capacity in strengthening and utilising school clubs through partnership with the government and the community due to two midterm review meetings organised in Dire Dawa, Ethiopia and Uganda (MFS II funded); and past experience and knowledge on group formation and working with groups in different development interventions. The organisation said to have enhanced its capacity in joint monitoring through their partnerships with government and communities because of past experiences in joint progress monitoring with implementing partners; and the nature of the MFS II funded program that required a multidisciplinary approach, community involvement and is implemented in partnership with a local NGO. Finally, CARE Ethiopia improved its knowledge and awareness on carrying out reconciliation of results versus expenses because of exposure to the MFS II reporting system (reporting costs by activity and result area). According to CARE Ethiopia's staff, MFS II funded capacity development interventions have thus played a role in better understanding and knowledge of disaster risk reduction and management; and enhanced M&E and learning capacity. This was through bi-monthly review meetings with PFR partners, training on M&E; and midterm review meetings. However, internal factors like participation in CARE's climate change strategy and climate working group; experiences in joint monitoring; hiring an impact measurement advisor, having a robust M&E system and unit; and exploring knowledge have also played an important role in the key organisational capacity changes that the CARE Ethiopia staff considered important since the baseline in 2012. Support from other funders, like, DFID, FAO and MoA, in terms of meetings and experience gained through projects, has also been mentioned among the underlying factors for these changes.

ECFA

During the endline workshop the following key organisational capacity changes were brought up by ECFA's staff as the most important capacity changes in the organisation since the baseline: improved capacity for partnerships and networking with a large number of stakeholders; improved resource mobilization capacity; improved capacity to reach a larger number of beneficiaries; improved capacity to implement livelihood improvement activities; and improved leadership and management capacity.

According to ECFA staffs present at the endline workshop, the improved capacity for partnerships and networking with a large number of stakeholders was due to renewing and maintaining its memberships with different networks and associations; and improved lobbying and communication skills of the organisation, as a result of opportunities created by CHI (MFS II related) in linking the organisation with its networks and partners and because of ECFA's own experience which created new opportunities.

The resource mobilisation capacity of ECFA improved because of the identification of the need and the recommendations to diversify and increase ECFA's financial resources by a consultant who did a MFS II funded assessment in 2012; and improved capacity in preparing convincing proposals. ECFA improved this latter capacity because of MFS II and other donors' training on resource mobilisation, hiring qualified staff (partially funded by MFS II), and improved capacity to identify the needs of the community. This capacity change is further detailed in a process tracing causal map.

ECFA improved its capacity to reach a larger number of beneficiaries because of improved capacity in preparing convincing proposals (explained above) and improved community mobilisation capacity. This last capacity improved because of the improved capacity to design people engagement strategies, which in turn was triggered by the recommendations of a multi-sectorial project evaluation conducted in 2010.

The organisation furthermore improved its capacity to implement livelihood improvement activities because of the enhanced attention of ECFA to deploy livelihood interventions geared towards income generating activities (IGAs), because of the demand for this of communities and government.

Finally, the organisation felt it improved its leadership and management capacity because of improved follow up and supervision, past experience of the leadership and donor feedback and financial support. Manuals on organisational and operational management; and donor feedback helped in improved follow up and supervision.

All in all, there is some mention of MFS II funded capacity development interventions which helped to improve the capacity to write convincing proposals, which is related to improved resource mobilisation capacity and improved capacity to reach a large number of beneficiaries. Other external factors have also played a role in these organisational capacity changes as experienced by ECFA, i.e. trainings funded by other organisations; evaluation recommendations (2010); inputs from government, communities and other funders. To a lesser extent internal factors played a role, such as organisational and operational manuals. During process tracing these and more MFS II funded capacity development interventions have clearly come up which will be further explained below.

FSCE

During the endline workshop the following key organisational capacity changes were brought up by FSCE's staff: "improved implementation capacity in holistic approach"; "improved M&E capacity including reporting"; and "improved organizational system of operations". According to FSCE staff present at the endline workshop, the capacity to implement a holistic approach improved because of improved knowledge of staff to apply a Multi Stakeholder (MS) approach and a more harmonious collaboration with and between staff from different departments; improved application of different strategies to support target groups; and improvement in working with target groups. FSCE's knowledge on MS improved because of a MFS II funded training on Multi-Stakeholder Processes (MSP) in September 2012, at CDI in the Netherlands, in which one FSCE staff member participated, who shared his knowledge with other staff in a workshop in December 2012. FSCE improved its application of different strategies to support target groups because of experience sharing visits to Tanzania and the Netherlands (MFS II funded) and coaching and mentoring of staff by FSCE Head Quarters (HQ). The organisation improved the way it works with target groups because of a training on SHG related implementation (Kinder Not Hilfe funded) and training on the area based approach and exposure visit to the Netherlands (MFS II funded). Secondly, FSCE improved its M&E capacity, including reporting, because of increased intensity and frequency of visits to the target groups, and improvements in standard and concise reporting, which were both triggered by a training on outcome level reporting in 2012, organised by FSCE. M&E capacity also improved because of an improvement in outcome oriented reporting capacity due to the same training and the requirements of FSCE for outcome level information. Improved recording of case stories and publication capacity also contributed to improved M&E capacity. This was the result of regular mentorship given by the new director. Finally according to FSCE staff, they improved their organisational operating system because there are now systems in place to apprehend the concerns of staff due to the new leadership and regular discussions; improved formal, interdepartmental communication due to improved joint planning and team work capacity; and improved multi stakeholder engagement capacity because of the MSP training at CDI (MFS II funded). FSCE improved its joint planning and team working capacity as a result of coaching and mentoring of staff by HQ and the experience sharing visit to the Netherlands and Tanzania (MFS II funded). All in all, there is some mention of MFS II funded capacity development interventions in two of the three key organisational capacity changes that FSCE staff identified. During process tracing these and more MFS II funded interventions, in particular training and experience sharing visits have clearly come up. However, internal factors like the change in leadership, training, coaching and mentoring, have also played an

important role in the key organisational capacity. Some support from other funders in terms of training, has also been mentioned as one of the underlying factors to these changes.

HOAREC/N

During the endline workshop the following key organisational capacity changes were brought up by HoA-REC/N's staff in the 'general causal map': increase in number and quality of staff; clear roles and responsibilities for staff and programme created; improved knowledge on development of implementation strategy; improved knowledge and understanding of logframe and preparation of M&E tools; improved report quality and time of reporting; improved knowledge of financial planning and budget management; and improved knowledge and understanding about procurement procedures. The evaluators considered it important to also note down the SPO's story about what they perceived as key organisational capacity changes since the baseline, as this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team. According to HoA-REC/N staff, the number and quality of staff increased because they set a requirement to hire only experienced and qualified staff, who they were able to hire after the revision of the salary scale and staff benefits (with support of the Dutch Embassy) and because of HoA-REC/N's affiliation to the University (attracts staff that wants to be academician and practitioner at the same time). The number and quality of staff also increased because of the creation of clear roles and responsibilities for staff and programmes. These clear roles and responsibilities were created because four thematic program areas were identified, which in turn was the result of developing a new organogram and more clarification on the organisational focus. These last developments both happened after a capacity assessment was carried out by PricewaterhouseCoopers (PWC) in 2012 (funded by the Dutch Embassy). HoA-REC/N improved its knowledge on developing an implementation strategy because of their increased emphasis on looking for calls for proposals and the sharing and coaching on proposal development and project implementation because of deployment of expatriate staff for sharing and exposure through MFS II. The organisation increasingly focussed on looking for calls for proposals because of a need for diversifying funding sources which was identified by the capacity assessment by PWC (funded by Dutch Embassy). HoA-REC/N improved its knowledge and understanding of logframes and preparation of M&E tools because of sharing and coaching on proposal development and project implementation (funded by MFS II); and a training on M&E by MDF in 2013 (funded by the Dutch Embassy). The organisation improved the quality and timing of their reporting because of the M&E training by MDF in 2013; the automation of the financial and monitoring system established by support of Nuffic and MFS II; and the training they received on project cycle management (PCM) in 2012 funded by Nuffic. HoA-REC/N now has knowledge on financial planning and budget management because of the automation of the financial and monitoring system established by support of Nuffic and MFS II and the training on PCM they received in 2012 funded by Nuffic. Finally, HoA-REC/N improved its knowledge and understanding about procurement procedures because of the same PCM training in 2012. In general most of the capacity building initiatives that were implemented since 2012, were based on the recommendations of the capacity assessment carried out by PWC in 2012 with financial support from the Dutch embassy. According to HoA-REC/N, MFS II funded capacity development interventions have played a role in improved knowledge on development of implementation strategy; improved knowledge and understanding of logframe and preparation of M&E tools; improved quality and timing of reporting; and improved knowledge of financial planning and budget management. This was through sharing by expatriate staff and exposure through MFS II, the automation of the financial and monitoring system established with support of Nuffic and MFS II. However, internal factors like their affiliation to the university, development of a new organogram, deciding and clarification of organisational focus have also played an important role in the key organisational capacity changes that the HoA-REC/N staff considered important since the baseline in 2012. Support from other funders, like the Dutch Embassy and Nuffic, in terms of training and funding of revision of salary scales, has also been mentioned among the underlying factors for these changes.

HUNDEE

During the endline workshop the following key organisational capacity changes were brought up by HUNDEE's staff: "improved capacity to facilitate behavioural change in rural communities"; "improved capacity in adaptive management"; "improved capacity in communication and information sharing"; "improved capacity to apply an integrated (multidisciplinary) M&E system"; "improved capacity in resource mobilization"; and "improved capacity to design drought resilient livelihood programs in pastoral and semi-pastoral areas". According to HUNDEE staff present at the endline workshop, the capacity to facilitate behavioural change in rural communities improved because of the ability to use the appreciative inquiry approach through training on Asset Based Community Development (ABCD) by the COADY institute in 2012; and the ability to identify opinion leaders or other power centres due to understanding the power of mass mobilization which they gained during training on mass mobilization by GIZ in 2013. Secondly, the organisation improved its capacity in adaptive management in the sense of adapting strategies to the interest and areas of concern of the government by understanding these interests and concerns. They gained this understanding by identification of possible alternatives that would be in agreement with the new CSO regulation and that could be accepted by the government, at an internal reflection meeting on adaptive management by HUNDEE. Thirdly, HUNDEE improved its capacity in communication and information sharing because of access to information technology (broadband network, computers, smart phones etc. funded by MFS II), knowledge and skills in data management and computer utilisation for different purposes (due to MFS II funded computer skills trainings), and knowledge and skills on data collection, sharing and receiving by using smart phones because of a MFS II funded training on this topic. Fourthly, the organisation improved its capacity to apply an integrated (multidisciplinary) M&E system because HUNDEE realized the need to involve all department units in M&E and clarifying the M&E responsibilities for the different programs/departments and M&E manager. Both these developments were due to the realisation that the work cannot be done by one person after HUNDEE expanded its work in terms of geographic areas and themes. The need to involve all departments in M&E also came from the need for quality reporting which takes all programmes into account. How this capacity was improved and the role of MFS II funded interventions will be further explained in the process tracing on this subject further below. Fifthly, HUNDEE improved their resource mobilisation capacity because they started preparing big proposals, had a good track record, were willing to diversify their work, realised that donors' preferences are changing because of general limitations in terms of funding and the general manager showed networking and leadership capacity. HUNDEE started to prepare big proposals because of knowledge on detailed program proposal preparation they gained during a financial management training by Trocaire in 2013 and because they were forced to look for big projects to run the organisation because of the CSO regulation that allows only 30 percent of the project budget to be used for administrative purpose. Finally the organisation improved its capacity to design drought resilient livelihood programs in pastoral and semi-pastoral areas because of their improved skills in preparation of proposals related to Community based Disaster Risk Reduction and Management (CDRRM) and their improved capacity to implement resilience projects. The knowledge on CDRRM and implementing it was gained through training on CDRRM and the experience sharing/visit to Tigray, Dire Dawa and Awassa in 2013 (both MFS II funded), due to the needs assessment carried out in 2013 by the IRR consortium to identify capacity gaps in the area of CDRRM with the support of ICCO (MFS II funded). All in all, there is some mention of MFS II funded capacity development interventions in the improved capacity for integrated M&E; improved capacity in communication and information sharing; and improved capacity to design drought resilient livelihood programs. During process tracing these and more MFS II funded interventions (such as trainings on these computer skills, and the use of smart phones and CMDRR; and the provision of broadband connection, computers and smart phones) have clearly come up, see further below. Other factors that were mentioned by HUNDEE staff include external factors like trainings by other funders (GIZ, Trocaire); changing funding climate; and CSO regulations. Also, there have been internal factors like internal reflections; expanding the program and have a good relationships with the government.

NVEA

During the endline workshop some key organisational capacity changes were brought up by NVEA's staff in the 'general causal map': improved capacity to prepare winning proposals; improved capacity for networking and partnerships; improved capacity in financial reporting and compiling; improved capacity in social cognition and team spirit; and improved capacity in PME. The evaluators considered it important to also note down the SPO's story about what they considered to be key organisational capacity changes since the baseline, and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team. According to NVEA staff, their capacity to prepare winning proposals improved because staff has knowledge on which key components to include in proposals. This was due to training on project cycle management in 2013 (funded by Basic Education Network Ethiopia (BEN-E), training on fundraising by BEN-E and sharing experiences during these trainings. The organisation has improved its capacity in partnerships and networking because of improved knowledge on partnerships and networking. This knowledge was gained through a training on networking by the Ethiopia Center for Disability and Development (ECDD) in 2013; through advice from Kinderpostzegels and Edukans (MFS II funded) regarding donor preferences for working with partners for better impact; and by implementing the social accountability program in 2013 (funded by the World Bank). NVEA improved its capacity in financial reporting and compilation due to better knowledge about a functioning financial system and the assignment of an internal auditor. NVEA learned about a functioning financial system through the feedback of the MFS II 5c baseline evaluation in 2012, feedback and recommendations from Kinderpostzegels (MFS II funded) and a training on financial management and budgeting in 2013 by Edukans (MFS II funded). According to NVEA staff they improved their capacity in social cognition and team spirit due to regular review meetings (on a quarterly basis) which were introduced as a result of the feedback and advice of the NVEA board, of Kinderpostzegels (MFS II funded) and experience from other organisations. Finally, NVEA improved its capacity in PME because of improved knowledge in preparing results based reports and on conducting checklist based M&E supervision. Knowledge on preparing reports improved because of a training on Results Based Management (RBM) in 2012 (funded by MFS II); a training on RBM in 2014 by Cheshire Service Ethiopia; and the preparation of M&E guidelines by a consultant in 2013 (partly funded by MFS II). Knowledge on M&E supervision improved because of these M&E guidelines; a training on M&E in 2013 by board members (partially MFS II funded); and regular quarterly monitoring. According to NVEA, MFS II funded capacity development interventions have thus played a role in improved capacity in networking and partnerships; improved capacity in financial reporting and compilation; Improved capacity in social cognition & team spirit; and improved PME capacity. This was through training, advice and feedback, and the development of an M&E guideline. However, internal factors like advice from board members, assigning an internal auditor and regular review meetings have also played an important role in the key organisational capacity changes that the NVEA staff considered important since the baseline in 2012. Support from other funders, like BEN-E, ECDD, the World Bank, Cheshire Service Ethiopia in terms of training, has also been mentioned as among the underlying factors for these changes.

OSRA

During the endline workshop some key organisational capacity changes were brought up by OSRA's staff in the 'general causal map': improved capacity to reach a larger numbers of beneficiaries (also increased

geographical coverage); improved M&E capacity; decentralization of planning process; improved capacity in project design and fund raising; and improved capacity to involve and mobilize the community. The evaluators considered it important to also note down the SPO's story about what they considered to be key organisational capacity changes since the baseline, and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team. According to OSRA's staff, they improved their capacity to reach a large number of beneficiaries because of their improved resource mobilisation capacity due to increased staff numbers (following the advice of OSRA's board partly funded by MFS II) which helped in proposal writing; and improved capacity to mobilise and involve the community because of the trust they gained from the community and from donors. OSRA improved its M&E capacity because of donors' demand for outcome data; improved capacity to collect client satisfaction information and provide feedback to the community; feedback from donor after field visit (MFS II funded); and experience from other networks. OSRA improved its capacity to collect client satisfaction information because of a seminar on downward accountability and client satisfaction feedback in 2012 (funded by MFS II); and the development of a manual on downward accountability in 2012 (funded by MFS II). OSRA decentralised its planning process because of past experience and problems in the planning process and enhanced capacity of process staff. Staff enhanced their capacity because of on the job training by HQ staff; training on project development in 2013 by CCRDA; and training on gender mainstreaming in value chain development in 2012 (funded by MFS II). According to OSRA staff, the organisation has improved its capacity in project design and fundraising because of enhanced capacity of staff; creation of an independent fundraising unit due to an OSRA future directions assessment report; and hiring new staff; improved management to scan the environment; and training on mainstreaming Community Managed Disaster Risk Reduction (CMDRR) (funded by MFS II). The organisation became better at scanning their environment because of regular monthly review meetings; training on leadership and management by CCRDA and Colombia University in 2013; and donor staff's feedback after field visits (MFS II funded). Finally, OSRA improved its capacity to involve and mobilise the community because of trust gained by the community; donor requirements and advice; and past experience gained in project implementation. According to OSRA's staff, MFS II funded capacity development interventions have thus played a role in improved M&E capacity; decentralization of planning process; and improved capacity in project design and fund raising. This was through a seminar on downward accountability, development of a manual on the same topic; feedback from field visits; training on gender mainstreaming in value chain development; and training on CMDRR. However, internal factors like advice of their Board; trust of community and donors; experiences in other networks; past experiences; on the job training; recommendation from the OSRA future directions assessment report; and meetings have also played an important role in the key organisational capacity changes that the OSRA's staff considered important since the baseline in 2012. Support from other funders, like CCRDA and Colombia University; in terms of training, has also been mentioned among the underlying factors for these changes.

TTCA

During the endline workshop some key organisational capacity changes were brought up by TTCA's staff in the 'general causal map': "improved knowledge in the application of active learning approaches and teaching skills"; "improvement in ICT utilization"; and "improved skills in compiling and recording student grades". The evaluators considered it important to also note down the SPO's story about what they considered to be key organisational capacity changes since the baseline, as this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team. According to TTCA staff, they have improved their knowledge in the application of active learning approaching and teaching skills because of progressively built knowledge on the different approaches of active learning and the improvement in ICT utilisation. Knowledge was progressively built during a training for mathematics and science teachers by the MoE and JICA (Japan

International Cooperation Agency) in 2013; a training on active learning organized by USAID in 2012; Continuous Professional Development (CPD) on different subjects by the MoE and the college; practice active learning approaches in project elementary schools (MFS II funded), which teachers has learned during a series of trainings by DEC in 2012-2014 (MFS II funded) and through continuous supervision and follow up by DEC, UvA and Edukans in 2012-2014 (MFS II funded). TTCA improved its utilisation of ICT because of installation of required infrastructure by DEC (MFS II funded); material (computer etc.) provision by USAID before 2012; and material provision and training by DEC during 2012-2013 (MFS II funded). The college improved its skills in compiling and recording student grades because of improvement in ICT utilisation; cascading of the MIS training by USAID for the management before 2012 to other staff; and guidance and coaching by the college management, which was triggered by the USAID MIS training. According to TTCA's staff, MFS II funded capacity development interventions have thus played a role in improved knowledge in the application of active learning approaches and teaching skills; improvement in ICT utilization; and the improved skills in compiling and recording student grades. This was through MFS II funded trainings, supervision and the provision of ICT infrastructure and material. However, internal factors like Continuous Professional Development by the college have also played an important role in the key organisational capacity changes that the TTCA's staff considered important since the baseline in 2012. Support from other funders, like MoE, JICA, USAID, in terms of trainings and material provision, has also been mentioned among the underlying factors for these changes.

On the whole, according to SPOs for which a 'general causal map' was developed based on what they perceived as key organisational capacity changes since the baseline, MFS II funded capacity development interventions were mentioned as playing a role in bringing about these changes, especially in terms of enhancing staff capacity for all SPOs, except AMREF did not explicitly mention this although it has come back in the process tracing (next section). Internal factors have also played an important role (for all except for CARE not mentioned), whilst support from other funders, mainly in terms of training (7 out of 9 SPOs), also played a role. Improved M&E was mentioned as key organisational capacity change by 7 SPOs; technical/general staff competences by 5 SPOs; improved resource mobilization by 4 SPOs; improved leadership capacity by 2 SPOs; improved financial competencies by 2 SPOs.

Key underlying reasons for key identified organisational capacity changes, as perceived by the SPO									
SPOs:	AMREF	CARE	ECFA	FSCE	HOAREC	HUNDEE	NVEA	OSRA	TTCA
Key organisational capacity changes as identified by SPO and key underlying reasons for change	improved leadership capacity, improved staff capacity and improved resource mobilization competences See also next section on process tracing	better understanding and knowledge of disaster risk reduction and management; enhanced knowledge and understanding of options for local adaptation to climate change; enhanced M&E and learning capacity including automated data base management;	improved capacity for partnerships and networking with a large number of stakeholders; improved resource mobilization capacity; improved capacity to reach a larger number of beneficiaries; improved capacity to implement livelihood improvement activities; and improved leadership and management capacity. See also next section on process tracing	“improved implementation capacity in holistic approach”; “improved M&E capacity including reporting”; and “improved organizational system of operations”. See also next section on process tracing	increase in number and quality of staff; clear roles and responsibilities for staff and programme created; improved knowledge on development of implementation strategy; improved knowledge and understanding of logframe and preparation of M&E tools; improved report quality and time of reporting; improved knowledge of financial planning and budget management; and improved knowledge and understanding about procurement	“improved capacity to facilitate behavioral change in rural communities”; “improved capacity in adaptive management”; “improved capacity in communication and information sharing”; “improved capacity to apply an integrated (multidisciplinary) M&E system”; “improved capacity in resource mobilization”; and “improved capacity to design drought resilient livelihood programs in pastoral and semi-pastoral areas”.	improved capacity to prepare winning proposals; improved capacity for networking and partnerships; improved capacity in financial reporting and compiling; improved capacity in social cognition and team spirit; and improved capacity in PME.	improved capacity to reach a larger numbers of beneficiaries (also increased geographical coverage); improved M&E capacity; decentralization of planning process; improved capacity in project design and fund raising; and improved capacity to involve and mobilize the community.	“improved knowledge in the application of active learning approaches and teaching skills”; “improvement in ICT utilization”; and “improved skills in compiling and recording student grades”.

Key underlying reasons for key identified organisational capacity changes, as perceived by the SPO									
MFS II funded capacity development interventions	-	better understanding and knowledge of disaster risk reduction and management and enhanced M&E and learning capacity, through bi-monthly review meetings with PFR partners; training on M&E; and midterm review meetings.	Interventions to improve the capacity to write convincing proposals	training and experience sharing visits: training on Multi-Stakeholder Processes (MSP) – CDI (Netherlands); experience sharing visits to Tanzania and the Netherlands (MFS II funded)	sharing by expatriate staff and exposure through MFS II, the automation of the financial and monitoring system	improved capacity for integrated M&E; improved capacity in communication and information sharing; and improved capacity to design drought resilient livelihood programs	training, advice and feedback, and the development of an M&E guideline.	seminar on downward accountability, development of a manual on the same topic; feedback from field visits; training on gender mainstreaming in value chain development; and training on CMDRR.	trainings, supervision and the provision of ICT infrastructure and material

Key underlying reasons for key identified organisational capacity changes, as perceived by the SPO									
Internal factors	Change in leadership at country level		organisational and operational manuals	change in leadership; training (e.g. outcome level reporting); coaching and mentoring by HQ staff	affiliation to the university; development of a new organogram; deciding and clarification of organisational focus.	internal reflections; expanding the program and have a good relationships with the government	advice from board members, assigning an internal auditor and regular review meetings	advice of their Board; trust of community and donors; experiences in other networks; past experiences; on the job training; recommendation from the OSRA future directions assessment report; and meetings	Continuous Professional Development by the college
External factors (including other funders)	behavioural survey by Amref global		trainings funded by other organisations; evaluation recommendations (2010); inputs from government, communities and other funders.	Training by other funders	recommendations of the capacity assessment carried out by PWC in 2012 with financial support from the Dutch embassy; financial and monitoring system established (Nuffic); training and funding of revision of salary scales	trainings by other funders (GIZ, Trocaire); changing funding climate; and CSO regulations.	Support from other funders in terms of training: BEN-E, ECDD, the World Bank, Cheshire Service Ethiopia	Support from other funders, like CCRDA and Colombia University; in terms of training,	Support from other funders, like MoE, JICA, USAID, in terms of trainings and material provision,

5.2.3 Attribution of changes in partner organisation's capacity and reasons for change (evaluation question 2 and 4)

This section describes the main findings and conclusions for the second evaluation question: *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?* And the fourth evaluation question: *“What factors explain the findings drawn from the questions above?”*

Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. Furthermore, since ‘process tracing’ is used for this purpose, and this is a very intensive process, not all capabilities could be focused on. For more information about the methodology, please see annex B. AMREF, ECFA, FSCE and HUNDEE were the four SPOs selected for process tracing. Below the key findings are discussed. But for more detailed information please see the 5C reports for the SPOs.

AMREF

For Amref Ethiopia, the organisational capacity changes that were focused on were “improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services” and “improved planning, monitoring and evaluation (PME) capacity”. Based on the detailed causal map developed through process tracing, the changes that took place since the baseline in 2012 in terms of improved Amref ET staff competencies to deliver SRHR services can be largely attributed to MFS II supported capacity development interventions, such as multiple training and workshops on SRHR related issues, SRHR outcome measurement, and SRHR advocacy; and SRHR alliance review meetings. To a lesser extent the improved competences to deliver SRHR services can be attributed to other, non MFS II related reasons, i.e. the recruitment of already skilled staff & reproductive health professionals at organisational level; the regular scheduled visits and advice from programme managers; trainings organised by Amref HQ (Nairobi); and the sexual curriculum to train youth/ schools adopted from Rutgers WPF. The latter was adopted from another Dutch funded (non-MFS II) project at Amref ET. Improved PME capacity at Amref can be partly attributed to MFS II supported capacity development interventions, mainly through PME related and outcome measurement related trainings and review meetings from SRHR as well as WASH Alliances; and the OCA assessments that helped the organisation to identify issues that needed improvement. For the other part the improved PME capacity can be attributed to organisational structure changes and improved managerial guidance following the leadership change; the introduction and institutionalization of a number of PME and information management related manuals, procedures and tools; Amref HQ training; the recruitment of skilled staff; and donor requirements and feedback in general.

ECFA

For ECFA the organisational capacity changes that were focused on were “improved fundraising capacity”, “improved capacity to respond to child protection issues”, and “improved capacity to implement M&E and provide quality M&E information”. Based on the process tracing causal map it can be said that ECFA’s “improved fundraising capacity” can to a large extent be attributed to a range of MFS II supported capacity development interventions, including: training on counselling, data management and reporting; training on resource mobilisation; Plan International Ethiopia (PIE) partners forum; regional and international consultation meetings; support from CHI in funding proposals; helpline

infrastructure, employment of councillors, and general capacity development support of the CFA like helping with planning and costing of activities and for fundraising policies. All of this has helped the organisation to expand to 4 other towns and thereby become more attractive to donors. Other factors to which these changes can be attributed include: experience gained in the past and in other activities; resource mobilisation training by PANE; and coaching and mentoring by senior staff and management. The underlying reasons for change included donor requirements and the precarious situation in the organisation in terms of funding, which triggered the organisation to develop a policy on diversifying its funds. The “improved capacity to respond to child protection issues” of ECFA can to a large extent be attributed to MFS II supported capacity development interventions: training, and international and regional consultation meetings, the conference on sexual child abuse in Ghana and through learning visits to the Helplines of other African countries. The only other reasons for change included coaching, mentoring and follow up by senior staff, employing staff with small scale business management skills, and the training on male engagement by Hiwot Ethiopia. The “improved M&E capacity” at ECFA can to a large extent be attributed to MFS II supported capacity development interventions, through M&E related training, a (5C) baseline assessment by Plan International, feedback and advice from Plan International and CHI, and the provision of infrastructure and training for a digitalised data management system. The only non-MFS II related reasons for this improved M&E capacity since the baseline in 2012, were an internally felt need to have a monitoring and evaluation unit, and the provision of three computers by Oak Foundation.

FSCE

For FSCE the organisational capacity changes that were focused on were “Improved capacity to apply a Community Centred Multi Stakeholder (CCMS) approach”, and “Improved M&E capacity using a Results Based Management (RBM) approach”. Based on the process tracing causal map it can be said that the changes that took place since the baseline in 2012 in terms of improved capacity of FSCE to apply a Community Centred Multi Stakeholder Approach can be largely attributed to MFS II supported capacity development interventions, notably the above mentioned MSP training at the CDI in the Netherlands; life skills, facilitation leadership and conflict management training for FSCE area office staff and community, social workers and other stakeholders; and guidance and counselling for applying a child based community conversation approach. However, it must be noted that these approaches were already initiated in the organisation before the baseline with the support of Kinderpostzegels since 2010. The additional MFS II supported trainings that took place since 2012 helped to strengthen the MSP approach as well as to increase the capacity of FSCE to create, strengthen and engage CBOs for child protection.

In terms of improved M&E capacity for using RBM approach, can be partly attributed to MFS II capacity development interventions, such as providing formats for outcome reporting, M&E training with a focus on outcome reporting, and close follow-up by MFS II partners. However, there is also an important role for the organisation in developing its own M&E tools and formats, biannual monitoring meetings and establishing a separate PME unit.

HUNDEE

For HUNDEE the organisational capacity changes that were focused on were “Enhanced resource mobilisation capacity”, “Improved competences for gender mainstreaming”, “Improved ICT capacity for information sharing and communication” and “Improved M&E practices including institutionalized downward accountability”. Based on the process tracing causal map, it can be said that HUNDEE's enhanced resource mobilisation capacity can partly be attributed to MFS II supported capacity development interventions, notably by improved financial management capacity: through training and technical support on adapting financial system and accounting procedures in line with CSA regulations (although this was also done by other organisations); and through coaching and mentorship. Furthermore, the organisation increased its knowledge on funding trends and donor intelligence partly

because of an improved ICT infrastructure (MFS II funded). There are also other factors to which enhanced resource mobilisation capacity of HUNDEE can be attributed. These include internal factors like experience from working on development projects, and experience and feedback from previous funding proposals. But there has also been support from other donors like by OXFAM Canada, who provided the training on gender analysis tools, and oriented the organisation to principals and useful empowerment tools integrated into to the ABCD approach, both useful for donor requirements in these areas. Then a range of funders have also contributed to the earlier mentioned trainings related to financial management capacity. Being an active member of new and existing consortia and networks helped them in understanding the importance of networks for resource mobilisation.

HUNDEE's improved competences for gender mainstreaming can partly be attributed to MFS II supported capacity development interventions, notably in the area of women in value chain development: i.e. training, coaching and an exchange visit to Kenya in relation to gender in value chain development which helped the organisation to review projects with a gender lens and increase their knowledge on these issues. Especially Oxfam Canada has also played an even more important role in terms of supporting annual organisation wide gender audits; and training on gender analysis with related tools and manual. Other donors have also played a role in terms of promoting gender mainstreaming and providing training on gender mainstreaming (CST). Internal factors like previous experience and establishing a gender task force have also played a role. And a USAID funded project has helped the organisation in addressing gender related issues.

ICT capacity has improved which can almost entirely be attributed to MFS II funded capacity development interventions by IICD and ICCO (C4C Alliance), by providing training and hardware: in particular training capacity based data collection using smart phones; training on data analysis software and website development; training on basic computer skills; and training on computer troubleshooting and hardware maintenance; provision of smart phones; provision of DVD and video deck; provision of Wi-Fi internet infrastructure and computers. The 6NGO consortium meeting has been the main source of some of these ideas and proposals. The provision of smartphones by USAID and the engagement of the agricultural research centre documenting information for technology use have a relatively minor role.

Based on the process tracing causal map it can be said that the "improved M&E practices including institutionalised downward accountability", can partly be attributed to MFS II supported capacity development interventions, and particularly in the area of downward accountability through the training trajectory on downward accountability that started in 2009 (MFS I) by the workshop organised by ICCO on client satisfaction instruments, and continued in 2011 with MFS II funding; including the training sessions on participatory filmmaking. In terms of improved competences to apply RBM and M&E tools, this can be attributed to efforts by training and coaching supported by MFS II (in M&E and PIM) but also training by other funders, including the World Bank, Trocaire, and Christian Aid.

Concluding, one can say that for all of the SPOs, the selected key organisational capacity changes can to a large extent be attributed to MFS II funded capacity development interventions: AMREF (1 out of 2); ECFA (3 out of 3); FSCE (1 out of 2); HUNDEE (1 out of 3). For ECFA, all of the identified key organisational capacity changes can be largely attributed to MFS II supported capacity development interventions. Internal factors have also played a relatively important role for all of the SPOs although not for all key organisational capacity changes. External factors have played a minor role except for HUNDEE, where the role of other funders, especially, Oxfam Canada has been important. Improved (planning), monitoring and evaluation were key organisational capacity changes that were selected for process tracing for all of the SPOs - falling under the capability to adapt and self-renew. All of these SPOs received training in monitoring and evaluation, but for two of these SPOs (AMREF, HUNDEE), training was also non-MFS II funded. For 2 out of the 4 SPOs fundraising/resource mobilisation has been an important organizational capacity that was further developed, since the baseline. Improved staff competencies were also identified as key organisational capacity changes, in the capability to act and commit, for all of the 4 SPOs that were selected for process tracing. All in all, in the SPOs selected for process tracing MFS II support has played an important role in the capabilities to act and commit – in

particular improved staff competencies (all 4 SPOs) but also fundraising/ resource mobilization; and the capability to adapt and self-renew – in terms of improved (planning), monitoring and evaluation.

Attribution of selected, key organisational capacity changes to key underlying factors											
SPOs:	AMREF		ECFA			FSCE		HUNDEE			
Key organisational capacity changes and key underlying reasons for change	improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services	improved planning, monitoring and evaluation (PME) capacity	improved fundraising capacity	improved capacity to respond to child protection issues	improved capacity to implement M&E and provide quality M&E information	Improved capacity to apply a Community Centred Multi Stakeholder (CCMS) approach	Improved M&E capacity using a Results Based Management (RBM) approach	Enhanced resource mobilisation capacity	Improved competences for gender mainstreaming	Improved ICT capacity for information sharing and communication	Improved M&E practices including institutionalized downward accountability

6. Civil Society

This section represents the findings of the Civil Society component of Ethiopia for which the CIVICUS framework was used and which looks at five dimensions: civic engagement, level of organisation, practice of values, perception of impact and the civil society context. This last dimension influences the space – the arena - that civil society organisations and citizens have to debate, discuss, associate and to influence society with regards to the concerns or the ambitions they have that may impact upon the civil society arena itself, households, the public and/or the private sector.

1.1 The sample of NGOs in this evaluation

The sample

For the Civil Society Component the sample of the SPOs to be included in the evaluation was conducted by the evaluation team in 2012. As the ToR explicitly emphasized the focus on the relevant MDGs and themes in the selected country for the civil society evaluation, the team first identified the most relevant MDGs and themes in terms of the number of MFS II funded projects classified under the MDGs and themes that have a civil society and/or policy influencing component. The sampling procedure was the following:

1. Identify the most relevant (frequent) MDGs and themes.
2. Randomly sample SPOs per selected MDG/theme, from which the last 2 are reserves.
3. If the SPO is part of the capacity development sample, replace the SPO from the reserve list.

Only those SPOs were eligible for the civil society evaluation that had an on-going contract with a CFA on 1 January 2012 and were directly contracted by the CFA, in consequence leading to a total population of 60 SPOs. The most frequently mentioned MDGs or themes in this population were that of MDG 1 with 23 SPOs; MDG 2 with 36 SPOs, and; MDG 4,5, and 6 with 23 SPOs. For each MDG, three SPOs were randomly selected.

The following table presents the SPOs and their Dutch partner organisations in the sample.

Table 5

Sample of SPOs and their Dutch partners in the civil society evaluation

SPO	Dutch Partner	Dutch Alliance	MDG/theme	Contract period	Contract amount MFS II
CCGG&SO	Cordaid	Communities of Change	MDG 1	January 2010 – December 2012	€ 200.000
				January 2013 – December 2015	€ 225.000
RIPPLE	WASTE, ICCO and RAIN Foundation	WASH Alliance	MDG 1	July 2011 – December 2012 – WASTE and ICCO	€ 147.000
				July 2011 – December 2012 – WASTE and RAIN	€ 40.660
				2 contracts from May 2011 – April 2013 – RAIN	€157.841
ERSHA	ICCO	Connect for Change (C4C)	MDG 1	September 2011 - 2013	€525,000 Euro for C6NGOs, of which €81,900 for ERSHA.
ADAA	SKN	Child and Development Alliance	MDG 2	4 contracts from January 2011- December 2014	€ 282.250,00
EfDA	Edukans Foundation	C4C	MDG 2	October 2011 – December 2015	€ 606.714 for 11 partners.
JeCCDO	Edukans Foundation	ICCO Alliance	MDG 2	3 contracts from January 2012 – December 2014	€ 408.422 of which € 120.000 for JeCCDO
EKHC	Tear Fund NL	ICCO Alliance	MDG 4,5,6	February 2011 – January 2015	€ 376.354
MKC-RDA	TEAR Fund NL	ICCO Alliance	MDG 4,5,6	3 contracts from July 2011 – June 2014	€ 143.222
OSSA	Cordaid	Communities of Change	MDG 4,5,6	2 new contracts and one budget neutral extension November 2011 – June 2014	€ 164.877

In 2014, all SPOs were again contacted, however the end-line assessment for RiPPLE did not take place, because early 2013, two of the three partners of the WASH alliance decided to end their partnership with RiPPLE, in particular those involved in the project which is most related to MDG 1 and which was subject of the baseline study. ICCO is the only partner that continued collaboration in the second semester of 2014. In the period 2013 – 2014 hardly any activities were implemented.

Short description of the SPOs in the sample for MDG 1

Catholic Church Goma Gofa and South Omo (CCGG&SO) has engaged in community based development related to health, education, food security and gender issues for the last 35 years. With support of Cordaid, it implements an Integrated Community Development Program (ICDP) in Southern Nations Nationalities and Peoples Regional State (SNNPRS), in particular in Hamar district since 2012. Most important components relate to community based health care; primary education, and sustainable livelihoods. Apart from Cordaid, other donors are supporting these interventions. This end line study focussed on the livelihoods component.

Research Inspired Policy and Practice Learning in Ethiopia (RiPPLE) was established as a WASH research programme and became an independent organisation in 2012. Its vision is to “see all Ethiopians attain sustainable water & food security and live in a clean & healthful environment”. The organisation promotes multiple uses of rainwater and it is well positioned in the WASH sector in Ethiopia. RiPPLE implemented projects with three partners of the Dutch WASH Alliance, but collaboration was suspended in 2013 and 2014, after which only ICCO resumed collaboration in the second semester of 2014.

Ethiopian Rural Self Help Association (ERSHA) started its operations in January 1998 and supports rural communities to attain food security. ERSHA is one of the members of the Consortium of six NGOs (C6NGOs) that implement the ‘Integration of ICT in Agricultural Commodity Value Chain’ project with support of IICD and ICCO and the Connect for Change Alliance. This project aims to integrate ICT in the daily practices of small-holders as a means to improve their livelihoods. It is complementary to another project implemented with support of ICCO, “Farmers Competitiveness on Agricultural Commodity Value Chain”. It intervenes in Oromia Regional State where it supports Famer Market Organisations (FMOs) and Unions.

Short description of the SPOs in the sample for MDG 2

African Development Aid Association (ADAA) was created in 1998 and works in many sectors to develop the capacities of communities to become self-reliant and to upgrade their living standards. With Stichting Kinderpostzegels Nederland (SKN) the SPO works in ten communities in one district of Oromia Regional State, supporting ten Alternative Basic Education centres; reducing the prevalence of Female Genital Mutilation and Early Forced Marriages, and; reducing child labour.

Education for Development Association (EfDA) was created in 1999 and aims for a literate, self-confident and productive community that is capable of solving their economic, social and environmental problems. For this to happen, EfDA wants to fill the gap in information, resources and technical skills that are needed by communities to manage their own life and environment. EfDA, together with ten other organisations, implements a project with IICD and Edukans to improve teacher-learning processes and education management through ICT. The project is being coordinated by Development Expertise Centre (DEC) in Ethiopia. The ten partners support 55 schools: EfDA is in charge of 5 schools in one district.

Jerusalem Children and Community Development Organization (JeCCDO) was created in 1985 and its development approach can be summarised as child centred, family focussed and community based. Each year it reaches about 850,000 beneficiaries directly or indirectly. The organisation is one of the four NGOs in the ‘Amhara Cluster’ that implement Edukans’ programme “Improving Access to Quality Basic Education for Marginalized Children in Amhara region”. The SPO is operational in three administrative zones in the Amhara region and focuses on Education for All (EFA), including Basic Education, Partner Formal Schools Support and Integrated Functional Adult Literacy.

Short description of the SPOs in the sample for MDG 4,5 and 6

Ethiopian Kale Heywet Church (EKHC) was created in 1927. One of the programmes it implements is Medan Acts that addresses Health and HIV-AIDS issues. Tear Fund NL supports the programme in three districts in SNNPRS. EKHC is one of seven Ethiopian partners that together implement the Ethiopia Health Country Plan 2011-2015 of the ICCO Alliance. This

plan has three components: creating accountability mechanisms that hold the health system to account for the delivery of equally accessible basic health care; capacitate change agents who promote the prevention of Sexual and Reproductive Health (SRH) and; improving the quality, accessibility and sustainability of the health system.

Meserete Kristos Church – Relief and Development Association (MKC-RDA) is the second partner of Tear Fund NL that implements the Ethiopia Health Country Plan in two districts in Oromia Regional State. The SPO was created in 1951 and it addresses issues related to food security, health, education and self-help group development schemes.

Organisation for Social Service for Aids (OSSA) was founded in 1989 by a group of religious ministers from various faiths in Ethiopia in conjunction with the Ministry of Health. The founding of OSSA was a response to the growing incidence of HIV/AIDS in Ethiopia. In 2013, OSSA supported over 20,000 OVCs, 5,000 PLHIV (People Living with HIV) and a large number of AIDS affected families. The OSSA Hawassa branch works with 140 community volunteers and 16 community based organizations (CBO) and receives support from Cordaid.

1.2 The evaluation methodology

1.2.1 Evaluation procedures

The evaluation questions consisted of identifying changes occurred in line with the CIVICUS dimensions in the 2012 – 2014 period, the extent to which these changes are to be attributed to the Indonesian NGOs and to MFS II, the relevance of these changes and factors explaining the changes. Information about the CIVICUS framework and the evaluation methodology used can be found in the appendices.

The first evaluation question identified *changes in civil society* in the 2012 – 2014 period, with a particular focus on the relevant MDGs in Ethiopia. A scoring tool with 17 indicators was developed during the baseline, resulting in the description and a score (0-3) in 2012. During a workshop with the SPO in 2014, workshop participants received the description of the indicator obtained during the baseline and were asked to describe qualitative changes as well as give an indication of the importance of the change on a scale of -2 -- +2. Apart from this document analysis and follow-up interviews with the SPO provided additional information.

For the *attribution question* a theory based methodology was used for four of the nine SPOs and comprising a maximum of two outcomes achieved in the 2012 – 2014 period because of resource constraints. For this in-depth outcome explaining process tracing method was used. A quick contribution assessment was done for the remaining four NGOs. The selection of the four NGOs was based upon an estimation of the MFS II budget for that SPO that is related to CIVICUS dimensions, ensuring that both SPOs working on MDG 1, MDG 2 and MDG 4,5 and 6 were amongst the selected and a variety of Dutch partners.

For those SPOs included for in-depth process tracing in Ethiopia, priority was given towards assessing impact with regards to the creation and performance of new CSOs by the SPOs and with regards to civic engagement which addressed amongst others social inclusion and people engaged in civil society. The steps to be followed were as follows:

- With the SPO identifying outcomes achieved in the 2012 -2014 period, providing evidence for these outcomes and develop pathways that according to the SPO explains the outcome
- With external resource persons and written materials, confirm that the outcome was achieved, and develop pathways that according to these persons explain the outcome (with a particular focus on rival pathways)
- Construct a model of change that encompasses all pathways that possibly explain the outcome.
- Identify information needs to confirm or reject each of the pathways and collect relevant information be it through interviews, document search etc.
- Analyse findings and conclude about the most likely pathway that explains the outcome, the nature of the relation between the pathway and the outcome and the role of the SPO and MFS II in this.

The *relevance question* was assessed through interviews with the Indian NGOs and their Dutch partners, as well as through context information and written documents. Relevance was assessed against the Theory of Change constructed with the

NGO during the baseline assessment in 2012, the context in which the NGO is operating and the civil society policies of the Dutch MFS II alliance.

The *explaining factors* question assessed organisational factors of the SPO itself, its external context and the relation between the Dutch and the Ethiopian SPO that explained the civil society changes achieved or not. No additional information was collected for this question.

A last additional assessment was made with regards to the *design* of the interventions by the Ethiopian partner.

In 2013, a decision was made with the commissioner of the study to exclude an evaluation question related to efficiency because of the resources available.

More information on the methodology can be found in the annex F.

1.2.2 Limitations

Generally speaking we observe that the CIVICUS framework has never been used for evaluation purposes, and that the period between the baseline and end line study hardly covers two years, whereas the entire MFS II period covers 5 years. Furthermore, we observe that the interventions by the SPOs do not distinguish interventions that relate to Civil Society or Policy influencing from other interventions. This makes it occasionally difficult to obtain a clear focus for the civil society evaluation.

Project documentation was needed as a means to link outcomes to the CIVICUS framework, to obtain an overview of outputs-outcomes achieved versus planned, and to orient the in-country evaluation team for the attribution question. In practice the most recent progress reports were hardly available, did hardly report on outcomes and no monitoring systems are in place to track the performance of CSOs created by the SPOs.

A number of organisations that the evaluation team looked at are working in a programmatic approach with other partner organisations. In consequence reporting was organised at the programme level and to a lesser extent at the level of the individual partner, which seriously hampered the possibilities to get oversight on outcomes and outputs achieved. This was the case with EKHC and MKC-RDA, ERSHA, EfDA and JeCCDO.

Critical steps in the evaluation methodology are the following:

1. Linking project interventions from the SPO to the CIVICUS framework. The project documents do not provide this information and are based upon the interpretation by the evaluation team in the Netherlands.
2. The extent to which the project documentation enables the Dutch team to understand the in-country realities. If the quality of the reports is weak, then the guidance provided to the in-country evaluation team is weak. Therefore deciding upon the outcomes to be selected for in-depth process tracing was sometimes hampered by incomplete and un-clear project documents.
3. After the workshop with the SPO, the in-country team had to decide upon which outcomes they will focus on for the in-depth process tracing. There was a tendency to selecting positive outcomes achieved.
4. Designing the model of change that explains the outcome achieved, followed by the inventory of rival pathways to explain that outcome has also proven to be a critical and difficult step. A major challenge is that in-country teams at this moment of the evaluation have obtained a lot of information from the SPO, and not from other NGOs or resource persons, which possibly might strengthen their bias in favour of attributing change to the SPO. This bias was countered as much as possible by using Bayesian thinking; the more confidence the in-country evaluation team had in the SPO explaining the outcome, the harder they had to concentrate on rival explanations.

The Ethiopian evaluation team observes that they had no difficulties in triangulating information obtained from different resource persons (Government, beneficiaries and SPOs); that the guidance provided by CDI was helpful and the use of the Models of Change for process-tracing helped both the evaluation team as the SPO staff in obtaining a clear picture of the outputs and outcomes and to get a general picture of the evaluation. The team also observes that there was a repetition in

a number of questions in the evaluation methodology that came back in different information collection forms, which may have impacted upon SPO staff losing interest in the evaluation.

Challenges encountered by the team consist of resource persons, including SPO staff not being able to provide exact figures when needed and reports high staff turnovers.

1.3 Evaluation findings

1.3.1 Changes in Civil Society

Introduction

The CIVICUS framework has five dimensions, civic engagement, level of organisation, practice of values, perception of impact and civil society context. During data collection we observed considerable overlap in indicators and also between dimensions. For a more meaningful overview of *changes* that occurred in the 2012 – 2014 period we here conclude about changes and perceived impacts that occurred in the civil society arena, those at household level, the public sector and the private sector level (see figure 1). These relate in the following way to the CIVICUS dimensions:

- Within the civil society arena all findings regarding civic engagement, level of organisation, practice of values and a number of indicators from the perception of impact dimension are regrouped together.
- Perceived impacts at household level are derived from information mostly found in the civic engagement dimension and that of perception of impact.
- The perceived impacts for the public and the private sector are part of the perception of impact dimension.

In line with the evaluation question, we draw conclusions for each of the MDGs. However we have not found any information suggesting that SPOs and their interventions have mutually reinforced each other’s civil society arena. Each SPO had and still has its own arena, with possible impacts upon households, public sector and private sector.

Changes in MDG 1

Table 6

Perception of impact upon civil society, households, public and private sector.

Presentation of the absolute scores in 2012 (0-3) + relative change observed in 2014 (-2---+2)

SPO	Civil Society	Households	Public Sector	Private Sector
CCGG&SO	2+0	2+1	3-2	NA+0

Figure 1: Changes in civil society

ERSHA	2+1	2+2	2+2	1+0
-------	-----	-----	-----	-----

Source: Individual evaluation reports.

CCGG&SO did have some positive influence on the civil society arena, but most positive impacts date from before the baseline. At household level some Income Generating Activities helped to generate an income but not for the 1300 households planned. Relations with the local administration deteriorated since the baseline and CCGG&SO did not engage with private sector organisations.

ERSHA's 15 Farmer Market Organisations and their Union became better positioned in the civil society arena since the baseline. More women are said to take leadership positions in the FMOs, indicating social inclusion taking place. The situation of the FMO members is said to have improved in economic terms. ERSHA, the FMOs and the union have a constructive relationship with the local administration to jointly address market access; however, with regards to the private sector ERSHA lacks the necessary capacities at field level to connect the FMOs to promising value chains.

Changes in MDG 2

Table 7

Perception of impact upon civil society, households, public and private sector.

Presentation of the absolute scores in 2012 (0-3) + relative change observed in 2014 (-2---+2)

SPO	Civil Society	Households	Public Sector	Private Sector
ADAA	2+1	2+1	2+1	NA
EfDA	2+1	1+0	2+0	NA
JeCCDO	2+0	2+1	2+1	NA+1

Source: Individual evaluation reports.

Whereas ADAA itself did not position itself better in the civil society arena, the SPO contributed to the creation of many CBOs that seem to be capable to address education issues, child labour and harmful traditional practices at community level. Also EfDA's strength is its community based approach which is more related to its education project than to the ICT project under evaluation. Contrary to ADAA, JeCCDO positioned itself in the first place better in the CS arena at regional and district level and did not engage with communities. Instead it focussed on quality education at schools like EfDA. All three organisations helped to increase school attendance of children and reduced dropout rates. They engaged constructively with the local administration and apart from that, JeCCDO was capable to influence the procedures of some regular meetings between NGOs and the government. None of the three SPOs engaged with private sector organisations.

Changes in MDG 4,5 and 6

Table 8

Perception of impact upon civil society, households, public and private sector.

Presentation of the absolute scores in 2012 (0-3) + relative change observed in 2014 (-2---+2)

SPO	Civil Society	Households	Public Sector	Private Sector
EKHC	1+1	2+1	1+1	0+1
MKC-RDA	2+1	2+1	2+0	NA
OSSA	2+0	1+1	1+0	NA

Source: Individual evaluation reports.

ALL three SPOs supported traditional civil society institutions (idirs) and at a more strategic level they created a religious forum or an idir coalition at district level, which can engage more easily with district health services. In particular the idirs have been oriented towards a new role in society beyond that of financially and emotionally supporting families that are mourning; they are in charge of awareness raising activities and ensuring care and support services. Unfortunately those structures supported by OSSA were not independent enough at the end of the project. Impact at household level occurred not only in economic terms but also in social terms by means of the creation of Self Help and Literacy groups that helped the guardians of orphans and vulnerable children as well as people living with HIVAIDs to become a more integrated part in society. Practically no changes occurred with regards to the rapport between the SPO and local administration, except for EKHC's religious forum that developed some countervailing power vis-à-vis the local administration, whilst at the same time the relations between the SPOs and the administration have remained constructive. EKHC managed to engage private sector organisations in the accomplishment of its objectives, the other two didn't.

Changes in the civil society arena, at household level, in the public and private sector

The previous tables gave an indication of changes that occurred in the civil society arena, household level and the public and private sector. The following table presents the total scores of these changes, which should be interpreted in terms of trends rather than of quantitative data.

Table 9
Changes observed in scores between baseline and end line
 Total of scores presented in the previous tables

	Baseline situation	End line situation
Civil Society arena	15	5
Household level	14	8
Public sector	15	3
Private sector	1	2

Scores obtained for the civil society arena, households and the public sector were already high during the baseline, whereas collaboration and influencing the private sector did hardly occur, except for ERSHA. In terms of changes that occurred since the baseline we observe that most changes relate to impact at household level, followed by contributions to the civil society arena. Relations with the public sector hardly improved (three points for nine SPOs), including a considerable deterioration for CCGG&SO. Only JeCCDO and EKHC started collaboration with the private sector.

1.3.2 Attribution/contribution/effectiveness

This section presents the findings of the in-depth process tracing analysis, presents the overall findings of the contribution analysis for all SPOs and including an assessment of the planned outcomes versus achieved outcomes in the project document, concludes about the effectiveness of MFS II funding for civil society.

Introduction

This section presents findings with regards to the attribution question. Starting with an outcome achieved, the evaluation team developed a model of change that identifies different pathways that possibly explain the outcome. Data collection was done to confirm or reject these pathways. Based upon this assessment, the evaluation team concluded about the most plausible explanations of the outcome after which the role of the SPO and MFS II were being discussed.

The relations between the pathways and the outcomes can differ in nature as is being explained in the following table.

Table 10
Nature of the relation between parts in the Model of Change

Nature of the relation between parts and other parts or outcome
The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient)
The part does not explain the outcome at all: other subcomponents explain the outcomes.
The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary)
The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient)
The part is a contributory cause it is part of a 'causal package' of actors and factors that together are sufficient to produce the intended effect.

Sources: Mayne, 2012; Stern et al, 2012

Not all SPOs underwent the same in-depth process tracing assessment and the procedures for selecting those SPOs included for in-depth process tracing has been explained in the appendix on the evaluation methodology. These were OSSA, EKHC, CCGG&SO and JeCCDO. The other SPOs underwent a quick assessment.

Findings with regards to in-depth process tracing

CCGG&SO

The only outcome achieved that the evaluation team looked at is increased food security at household level. Whereas CCGG&SO's target was to reach out to 1300 households, only some households may have improved their food security situation. is the capacity of the health micro finance schemes, cooperatives, Saving and Internal Lending Communities (SILC) and IGA groups to improve food security at household level that were put in place by CCGG&SO. No evidence was found that 1300 households improved their food security situation according to plan, but some 500 households may have done so.

Five pathways were identified that possibly explain the outcome: 1) households access small loans and emergency grants through the Saving and Internal Lending Committees created by the SPO; 2) the health micro finance schemes created by the SPO; 3) cooperatives provide consumer goods to prohibit traders from inflating prices in times of shortage of which three were created by CCGG&SO; 4) food security is most likely to be increased through individual Income Generating Activities supported by the SPO, and; 5) households earn an income through the cash/food for work programme run by the Government. The first and the third pathway were rejected and the most likely explanation for the outcome consist of CCGG&SO's support to some IGAs (the solidarity groups for goat keeping, poultry and carpeting) as well as a food safety net programme by the government. Those two pathways each provide a *sufficient but not necessary explanation* of the outcome. No information is available that confirms the role of the popular health micro finance schemes. CCGG&SO's contribution since 2012 has been minimal it had to hand over all groups formed to the local administration and had to close its doors since the beginning of 2014 due to internal problems that escalated.

MFS II funding has contributed to this outcome until 2012.

JeCCDO

The first outcome to be explained is that quality education has been ensured for marginalised and disabled children. Four rival pathways were identified, the first consisting of the Parent Teacher Association and the Center Management Committees supported by JeCCDO; the second consisting of the Kebele Education and Training Board (public administration) supported by JeCCDO; the third the local government and fourth other NGOs. JeCCDO's interventions partly explain that marginalized and disabled children access education, since other actors also contribute to this outcome. JeCCDOs interventions are *sufficient* to explain increased access of marginalised and disabled children to quality education, but *not necessary*: other actors contribute to this outcome as well and include other NGOs and the local administration.

The second outcome to be explained is that the education budget of the region increased significantly from 18 million in 2011 to 43 million birr (USD 2.1 million) in 2014. Three rival pathways were identified; 1) the cluster of SPOs, including JeCCDO, regularly attends forum meetings at regional level; 2) JeCCDO is a member of the district government – NGO network and; 3) Primary education is the highest priority for the government. The evaluation team concludes that the outcome is to be explained by a *causal package* comprising the three pathways. In addition, each member of the Amhara cluster organizes experience sharing visits in which local authorities take part and that in consequence inform the district and the zonal education bureaus for the allocation of budgets. JeCCDO's role in this is considerable, because it is a rather big NGO with a good reputation and with strong relations at national, regional and local level: They manage to take high level government officials along on experience sharing visits which is an occasion to influence policies.

EKHC

The first outcome explained is that of reintegration of Orphans and Vulnerable Children into the school community and their enhanced chances of becoming a full member in society. The following pathways were identified to possibly explain the outcome; 1) EKHC supports peer education groups by training 50 students each year, which through a cascade training system train some 400 – 500 other students to support orphans and vulnerable children (OVCs); 2) Anti Aids Clubs and girls clubs in and out of schools conduct awareness creation sessions aimed at convincing communities not to socially exclude OVCs and provide material and psychological support to OVCs, also with the support of EKHC; 3) the local administration supports OVCs financially by covering different expenses and with support of other NGOs provides them

with food and materials, and; 4) other actors and factors, like USAID that also supports OVCs through a network of volunteers through EKHC and the Red Cross. The most plausible explanation of the outcome consists in the first place of the mobilisation of material support of diverse nature (food, school uniform, school contributions, etc). Once these conditions (*necessary but not sufficient*), counselling services by both peers in the AACs and education groups help to create solidarity, trust and comfort of OVC that allows for more open discussions of sensitive topics. It remains difficult to disentangle the performance of the peer education groups, that of the AACs, both supported by MFS II, and the performance of the network of volunteers supported by USAID. Each of these actors provides a *sufficient but not necessary* explanation of the outcome. EKHC's support under MFS II in particular covers the social issues, the material issues are covered to a lesser extent.

The second outcome that we looked at is 'enhanced food and nutritional support for vulnerable groups'. A first pathway that possibly explains the outcome is the religious forum, initiated by religious leaders together with EKHC in 2010 to support to the most vulnerable groups in the community and which is operational at district level; the second pathway consists of food and nutritional support being provided through grain banks, also supported by EKHC; the third pathway consists of support being provided through the National Health Extension Programme, and; the fourth pathway is support provided by other actors, like USAID that works with the World Food Programme to reach children and PACT NGO that also supports children. The third pathway with the national programme was rejected and each of the other pathways explains the outcomes *sufficiently but not necessarily*. The capacity of the religious forum (due to the nature of donations given) and the grain banks (due to rampant inflation) to deliver foods and nutritional support is limited. Apart from these the grain banks cannot provide the food and nutritional requirements needed for PLWHIV under ART. EKHC's contribution to the forum and the grain banks is limited and most of these entities were already *formed* before 2011, during MFS I.

OSSA

The first outcome achieved consists of OVCs (and their guardians) and People Living With HIV (PLWHIV) having improved their social and economic capital to become a full member in society (no figures available). Two rival pathways were identified that possibly explain the outcome; three saving associations that in total have 55 members who received extensive support from OSSA and; OVCs, their guardians and PLWHIV do not adhere to the saving association but start their own IGAs (petty trade) or start working as daily labourer on a construction site, become a civil servant as a cleaner etc. whilst having received a minimum of non-economic support from OSSA. The outcome is most likely explained by the following conditions (*necessary but not sufficient*): volunteers who identify OVCs and PLWHIV and support them; the access to free ART provided by the government, and; community conversations that show that PLWHIV can live with effective ART. When these conditions are in place, PLWHIV supporting each other, their engagement in IGA or in daily labourers help them to further reintegrate into society. OSSA's most important support consists of the community conversations and covering other medical costs than ART. The saving association help to create mutual support, but compulsory saving on a bank account for one year in a context of rampant inflation is to be considered as an adverse effect of the intervention. Interventions supported since 2008 explain the outcome so are a combination of MFS I and II support.

The second outcome that we looked at is 'improved referral to health services through referral and care and support efforts' by CBOs. Four pathways possibly explain the outcome which are: 1) the idir coalition that is operational at district level and in charge of raising people's awareness on HIV; 2) the volunteers that amongst others improve people's referral to health services with support from OSSA; 3) the public health extension workers (HEW) who extend health services to the community, including mobile testing facilities and; 4) other actors. The contribution of the idir coalition to the outcome does *not provide a sufficient and necessary explanation*. Individual idirs, who manage to reach all people in the community through awareness raising conversations; volunteers who visit people; HEW to some extent, all explain the outcome in a *sufficient but not necessary* way. Conditions for the outcome (*necessary but not sufficient*) are the fact that ART medication is free of charge, and; testing taking place in health centres for those who come for other reasons (voluntary testing) and for pregnant women (mandatory testing). OSSA's role with regard to this outcome is not convincing. Their work through

the idir coalition does not explain the outcome and volunteers are not sufficiently motivated to do a good job after they receive training from OSSA.

Findings contribution analysis for all SPOs

Until so far 11 outcomes achieved have been assessed: three for MDG 1 and six for MDG 2 and MDG 4,5 and 6 each¹⁸.

Five of these outcomes can be explained by multiple actors and the SPO is one of these actors that in itself is *necessary but not a sufficient explanation*. Concrete examples of this are for instance that many NGOs and the public sector are improving the food security of the 1300 households identified by CCGG&SO or the vulnerable groups identified by EKHC; that not only JeCCDO ensures quality education for marginalised and disabled children; that OVCs and PLWHIV improved their social and economic capital not only due to OSSA's interventions, but also due to health centres and; that there are multiple ways and actors that refer people to health centers for HIV testing and for ART in OSSA's case, except the idir coalition that was created by the SPO.

Five outcomes seemingly can only be explained by the SPO, however these outcomes were not assessed with an in-depth-process tracing procedure. ERSHA's improved performance of the FMOs and the networks in which these FMOs and the union engage are explained by ERSHA being in the driver seat, but requiring a constructive relation with local administration. The same applies for ADAA's community conversation groups who helped to increase school attendance and fewer children being burdened by household tasks and for EfDA where communities started to build their own class rooms and where girls are increasingly attending school.

Three outcomes are the result of a causal package: different actors and factors contributing, which however cannot be disentangled. The economic empowerment of women who now buy school materials for their children is the result of both start-up capital provided by a network of NGOs SLUF and technical support by ADAA. The increase of the education budget at regional and zonal level is the result of a combination of events that mutually reinforce each other, such as meetings between NGOs and the administration at regional and zonal level; JeCCDO and other members of the Amhara cluster inviting local and higher education officials to participate in field visits etc. However JeCCDO's reputation and credibility has been a positive factor in this influencing process. OVC's reintegration in school and in society requires both material support (hardly provided by EKHC) and social support given through peer education groups and AACs.

Effectiveness

Considering the analysis of outcomes planned vs. achieved and the findings of the contribution analysis we estimate the effectiveness of the MFS II programme between 50 and 60 percent, with organisations like RiPPLE, CCGG&SO, OSSA performing below 50 percent. A number of outcomes are the result of interventions already financed under MFS I and co-funding from other organisations. This is the case with ADAA, CCGG&SO, EKHC and OSSA.

1.3.3 Relevance of the changes

With regards to the relevance of the outcomes in relation to the ToC constructed in 2012, for two SPOs these were low because hardly any change was perceived in society (CCGG&SO and OSSA). EfDA's ToC does not integrate ICT interventions which is not (yet) relevant for civil society but for schools and improved education. For JeCCDO the information collected does not help to answer the question and for ERSHA, ADAA and EKHC changes were achieved in line with their ToC.

Generally speaking the changes achieved are relevant in relation to the context in which the SPO is operating. However it is being observed that CCGG&SO operates in a difficult political and administrative context; ERSHA also needs to work towards making relevant market information available through its FMOs; no clear outcomes were identified for the two new project sites where EKHC is working; the health services increasingly are taking over tasks previously carried out by OSSA, in particular HIV testing and counselling.

¹⁸ The outcomes included in this analysis are those related to civil society in particular and some outcomes achieved but not related to civil society have been excluded in this analysis.

In relation to the MFS II policies the outcomes achieved by the partners of Cordaid and the Community of Change Alliance were not relevant; JeCCDO's approach to quality education misses a community based component, which makes its interventions less relevant for the ICCO alliance, whereas EKHC's religious forum is very relevant for the same alliance. Learning and sharing lessons amongst partners of the Child and Development Alliance has not yet materialised and is seen as part of civil society building. ERSHA's outcomes are partially relevant in the light of the C4C ICT4Development policies but those of EfDA are not (yet) relevant.

1.3.4 Factors explaining the findings drawn from the questions above

CCGG&SO faced serious organisational problems since the baseline and that hampered its operations in the field. Apart from JeCCDO, all other SPOs faced some organisational problems that hampered their capability to deliver on development outcomes: ERSHA at field level misses for instance the capacity to integrate the FMOs into promising value chains, ADAA experienced problems with financial management, EKHC's two new project sites required high transportation, and OSSA had human resource problems.

The most important external factor that impacted upon the effectiveness of the organisations is the 30/70 percent rule that caused problems for RiPPLE, JeCCDO, OSSA and EKHC. The political context (CCGG&SO), high staff turnovers of administrative staff, the transformation of ABECs into official schools are some of the other external issues mentioned.

Generally speaking the relations between the Co-Funding Agency and the SPO were constructive. Worthwhile mentioning though is that OSSA's relation with Cordaid ended because the project was transferred from Cordaid's health department to the education department.

1.3.5 Design of the intervention

Apart from CCGG&SO and OSSA who need to be redesigned, the other five project interventions are replicable under the following conditions.

- ERSHA needs to take the context in which it operates into account as a means to provide valid market information and as a means to ensure the sustainability of the ICT tools introduced.
- EKHC's creation of forums like the religious forum take more time than an average project and largely depends upon the capacity of congregations or idirs willing to cooperate and the capacity of the SPO to create such a civil society space.
- JeCCDO education quality project requires strong and constructive relations with the government at multiple levels as a means to get the education system right. Another organisation wanting to implement such a programme needs to show that it knows what it is talking about.
- EfDA's ICT intervention model is replicable under the conditions of access to electricity, fully equipped schools, skilled teachers and good performing school management boards.

7. Conclusion

This report presented a summary of the results of the three pillars of the evaluation. What remains is to assess whether there is a linkage between the findings of the three components. Since there is no overlap between the civil society sample on the one hand and the MDG and capacity development (CD) samples on the other hand, the focus is on the relationship between the MDG findings and the CD findings. In this concluding section, in order to examine the relationship between MDG projects and the capacity of the SPO, we present a correlation matrix concerning the grading on MDG (see table 4) and endline scores on CD constructed by summing the baseline scores and the changes over the evaluation period. We do not consider the question “the observed results are attributable to the project interventions” for this outside of the SPO’s control. The correlation matrix obviously contains only SPOs represented in both samples and for which baseline and endline analyses have been conducted (See table below). It seems as if there is some correlation between the scores on MDG and CD. The capacity to act and commit is significantly related at the five percent level with the question “the observed results are relevant to the project beneficiaries”. The capability to adapt and self-renew is significantly at the ten percent level related to the question “the project reached all its objectives”. A significant effect at the ten percent level is also found between the capacity to achieve coherence and the question “the project was implemented as designed”. Obviously this analysis is very rudimentary and more in depth research is needed to examine the exact relationship between the capacities of the SPOs and the impact of their projects.

Table 11: Correlation matrix table between MDG and Capacity development scores

	Act and commit	Adapt and self- renew	Deliver on development objectives	Relate	Achieve coherence
The project was well designed.	0.1582	0.0177	-0.1417	-0.1905	0.0035
	0.6422	0.9589	0.6777	0.5747	0.9918
The project was implemented as designed.	0.3748	0.0586	0.3783	0.3236	0.5742
	0.256	0.8641	0.2513	0.3316	0.0647
The project reached all its objectives.	-0.0865	0.5481	-0.2729	-0.1459	0.3955
	0.8004	0.0808	0.4169	0.6686	0.2286
The observed results are relevant to the project beneficiaries.	0.7031	-0.0309	0.2506	0.2539	0.3173
	0.0158	0.9281	0.4574	0.4513	0.3417
The project was implemented efficiently.	0.3915	0.3214	0.4718	0.4993	0.0897
	0.2338	0.3351	0.1429	0.1179	0.7931

The upper number denotes the correlation coefficient and the lower number denotes the significance level.

ANNEXES TO THE EXECUTIVE SUMMARY

Annex A: Millennium Development Goals (MDGs)

Table A1: Millennium Development Goals (MDGs)
MDG 1: Eradicate extreme poverty and hunger
MDG 2: Achieve universal primary education
MDG 3: Promote gender equality and empower women
MDG 4: Reduce child mortality
MDG 5: Improve maternal health
MDG 6: Combat HIV/AIDS, malaria and other diseases
MDG 7: Ensure environmental sustainability
MDG 8: Develop a global partnership for development

Annex B: Methodological approach & reflection of Capacity Development

1.1 Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

1.2 Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.¹⁹ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff; This general causal map was developed to also get the SPO perspective on what they considered as important capacity development changes since the baseline. For this reason, and since the indicators by themselves could not provide this overall SPO story and perspectives on what they considered important changes, only the SPO perspective has been included. This was an additional activity that wasn't planned for during the baseline. The analysis in terms of organisational capacity changes has however mainly focused on changes in the 5c indicators.
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

The scores were developed by the evaluation team, after thorough analysis and description of the situation during endline and how this changes since the baseline. These scores are based on mainly proportional differences. Whilst the

¹⁹ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

information provided by staff may have provided socially desirable answers, the information provided has been cross-checked using different sources of information (different staff groups based on functions; self-assessments in interviews; interviews with CFA and other externals).

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration

- 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
 3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);

- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about $\frac{1}{2}$ to $\frac{3}{4}$ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map'

was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

1.3 Attributing changes in partner organisation’s capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as “a complex system which produces an outcome by the interaction of a number of parts” (Glennan, 1996, p. 52). Process tracing involves “attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable” (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

- Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.
- Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.
- Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which ‘theories’ are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that

the evaluation team has developed an adapted form of ‘explaining outcome process tracing’, since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table B1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA-REC	HUNDEE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing.

Table B2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit– by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing: 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table B3

The extent to which the Dutch NGO explicitly targets the following capabilities – India²⁰

Capability to:	BVHA	COUNT	DRIST I	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table B4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

²⁰ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit– by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table B5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya kologi	ECPAT	GSS	Lem baga Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table B6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit– by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table B7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table B8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
 2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
 3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
 4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
 5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
 6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
 7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
 8. Analyse and conclude on findings– CDI team, in collaboration with in-country team
- 1.

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

- A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.
- A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).
- **Part** or **cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.
- **Attributes of the actor** = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- **5C Indicators:** this was to identify the changes that took place between baseline and endline. This information was coded in NVivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in NVivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;

- During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the

CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011- up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

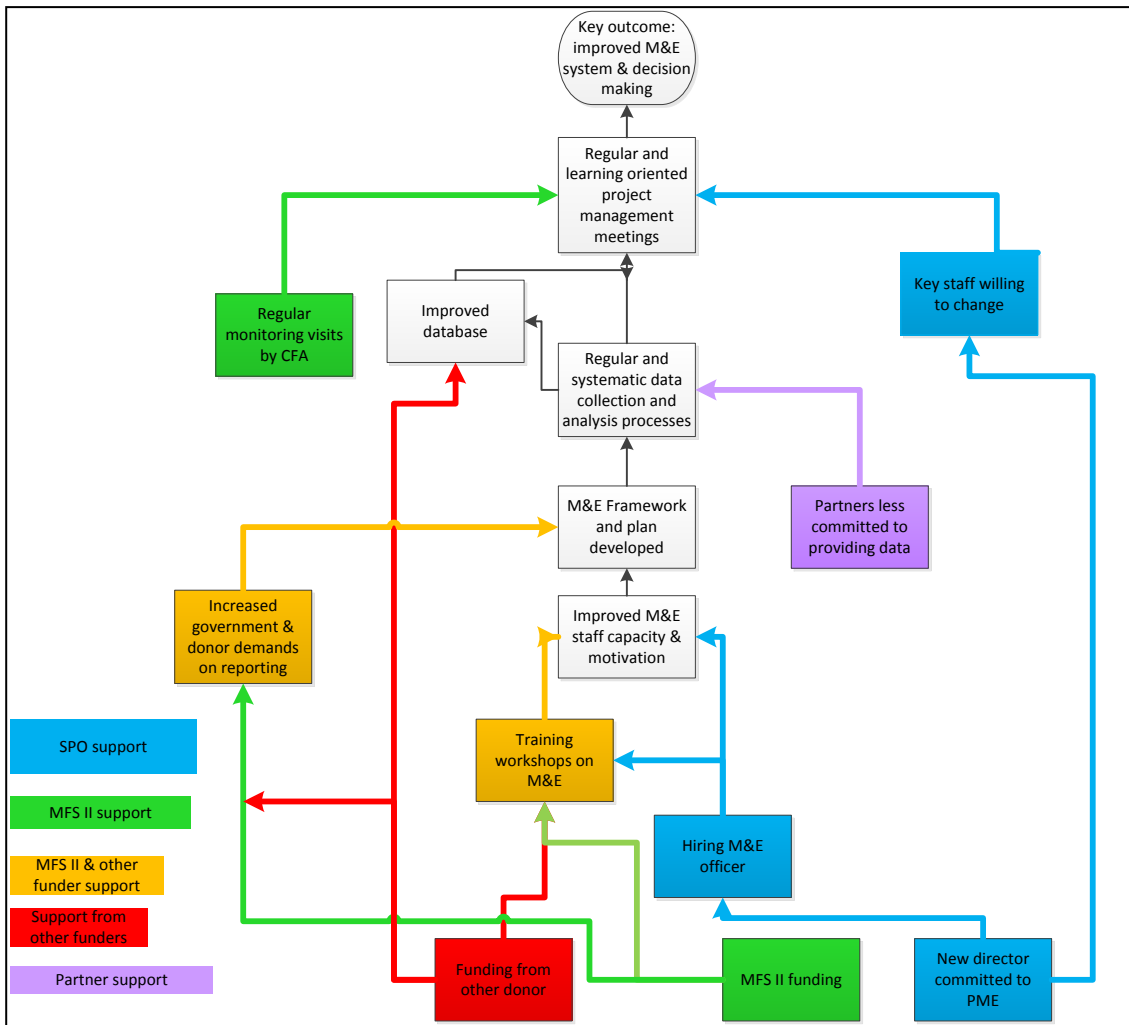

Figure 1 An imaginary example of a model of change

Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, “What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?”. The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern, sequence, trace, and account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

- **Pattern evidence** relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.
- **Sequence evidence** deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).
- **Trace evidence** is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.
- **Account evidence** deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table B9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality** of data and **analyse data**, and develop the **final detailed causal map**_(model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/ contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

- Confirming/ rejecting a causal relation (yes/no);
- Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;
- Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i>	Confirming/ rejecting a causal relation (yes/no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
Description of causal relation e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: *“To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?”* and *“What factors explain the findings drawn from the questions above?”* It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

1.3 Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: **“What factors explain the findings drawn from the questions above?”**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the ‘general causal map’ has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

1.4 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing

asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.

- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors , rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome. Staff turnover may have seriously affected institutional memory , which is an important factor, next to the difficulty of recall when describing a chain of events, in qualitative information. These factors are important to take into account.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs and providing a comprehensive story per SPO in terms of its organisational capacity development. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation. For future evaluation purposes, it is important to keep 'utility' in mind since this is the first and most important evaluation standard. Helping to think through how evaluation can be useful for primary intended users is crucial. Ensuring a process whereby stakeholders involved are engaged in a learning process can support utility. However, it must be noted that, with qualitative information, respondents may suffer from recall bias if they describe a chain of events. Particularly when attrition is high, learning becomes limited since it is hard to find institutional memory.

For future evaluations it is important to be more utilisation focused next time with engagement of stakeholders in a learning process so that they can also take up the lessons learned for further improve upon their organisations. Now, the evaluation was too much accountability driven. Furthermore, it's important that enough time is taken into account for the evaluation process, to provide useful insights for all involved. The time period of two years was too short to see remarkable change in terms of capacity development. Process tracing has proven to be a useful exercise that provided a lot of insight into how changes in terms of capacity development have taken place. Many SPOs and CFAs valued this insightful learning process and indicated they would work with the results to further improve the organisational capacity of the SPO. Furthermore, in case of staff turnover, this may have seriously affected institutional memory, which is an important factor, next to the difficulty of recall when describing a chain of events, in qualitative information. Organisational capacity contains many different aspects that are constantly changing and it's important to see these as part of a whole rather than a separate issues, which had to be done for this specific evaluation in terms of standard indicators. The different aspects relate to each other, a need to be seen more from a whole systems perspective. Furthermore, organisational capacity is complex, methodologies for evaluation need to be tuned to the specific situation of each organisation. For future purposes it would be useful if SPO and CFA develop a clear theory of change together in terms of organisational capacity strengthening. This would strengthen theory-based evaluation.

Annex C: Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

1. The capability to act and commit;
2. The capability to deliver on development objectives;
3. The capability to adapt and self-renew;
4. The capability to relate (to external stakeholders);
5. The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each

situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Annex D: Overview of capabilities, and related outcome domains and performance indicators

Capabilities	Outcome domains	Performance indicators
Capability to act and commit	Level of Effective Leadership	1.1.Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'
		1.2.Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'
		1.3.Staff turnover: 'Staff turnover is relatively low'
	Level of realistic strategic planning	1.4.Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'
		1.5.Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'
	Level of translation of strategy into operations	1.6.Daily operations: 'Day-to-day operations are in line with strategic plans'
	Level of Staff Capacity and Motivation	1.7.Staff skills: 'Staff have necessary skills to do their work'
		1.8.Training opportunities: 'Appropriate training opportunities are offered to staff'
		1.9.1.Incentives: 'Appropriate incentives are in place to sustain staff motivation'
	Level of Financial Resource Security	1.9.2.Funding sources: 'Funding from multiple sources covering different time periods'
1.9.3.Funding procedures: 'Clear procedures for exploring new funding opportunities'		
Capability to adapt and self-renew	Level of effective application of M&E	2.1.M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'
		2.2.M&E competencies: 'Individual competencies for performing M&E functions are in place'
	Level of strategic use of M&E	2.3.M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'
	Level of openness to strategic learning	2.4.Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'
		2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives'
	Level of context awareness	2.6.System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'
		2.7.Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

Capabilities	Outcome domains	Performance indicators
Capability to deliver on development objectives	Extent to which organisation delivers on planned products and services	3.1.Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'
		3.2.Cost-effective resource use: 'Operations are based on cost-effective use of its resources'
		3.3.Delivering planned outputs: 'Extent to which planned outputs are delivered'
	Extent to which delivered products and services are relevant for target population in terms of the effect they have	3.4.Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'
	Level of work efficiency	3.5.Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'
		3.6.Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'
Capability to relate	Level of involving external parties in internal policy/strategy development	4.1.Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'
	Level of engagement of organisation in networks, alliances and collaborative efforts	4.2.Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'
	Extent to which organisation is actively engaging with target groups	4.3.Engagement with target groups: 'The organisation performs frequent visits to their target groups/ beneficiaries in their living environment'
	Level of effective relationships within the organisation	4.3.Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'
Capability to achieve coherence	Existence of mechanisms for coherence	5.1.Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'
		5.2.Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'
	Level of coherence of various efforts of organisation	5.3.Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'
		5.4.Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

Appendix E: CIVICUS and Civil Society Index Framework Title

CIVICUS, the World Alliance for Citizen Participation is an international alliance of members and partners which constitutes an influential network of organisations at the local, national, regional and international levels, and spans the spectrum of civil society. It has worked for nearly two decades to strengthen citizen action and civil society throughout the world. CIVICUS has a vision of a global community of active, engaged citizens committed to the creation of a more just and equitable world. This is based on the belief that the health of societies exists in direct proportion to the degree of balance between the state, the private sector and civil society.

One of the areas that CIVICUS works in is the Civil Society Index (CSI). Since 2000, CIVICUS has measured the state of civil society in 76 countries. In 2008, it considerably changed its CSI.

1.1 Guiding principles for measuring civil society

Action orientation: the principal aim of the CSI is to generate information that is of practical use to civil society practitioners and other primary stakeholders. Therefore, its framework had to identify aspects of civil society that can be changed, as well as generate knowledge relevant to action-oriented goals.

CSI implementation must be participatory by design: The CSI does not stop at the generation of knowledge alone. Rather, it also actively seeks to link knowledge-generation on civil society, with reflection and action by civil society stakeholders. The CSI has therefore continued to involve its beneficiaries, as well as various other actors, in this particular case, civil society stakeholders, in all stages of the process, from the design and implementation, through to the deliberation and dissemination stages.

This participatory cycle is relevant in that such a mechanism can foster the self-awareness of civil society actors as being part of something larger, namely, civil society itself. As a purely educational gain, it broadens the horizon of CSO representatives through a process of reflecting upon, and engaging with, civil society issues which may go beyond the more narrow foci of their respective organisations. A strong collective self-awareness among civil society actors can also function as an important catalyst for joint advocacy activities to defend civic space when under threat or to advance the common interests of civil society vis-à-vis external forces. These basic civil society issues, on which there is often more commonality than difference among such actors, are at the core of the CSI assessment.

CSI is change oriented: The participatory nature that lies at the core of the CSI methodology is an important step in the attempt to link research with action, creating a diffused sense of awareness and ownerships. However, the theory of change that the CSI is based on goes one step further, coupling this participatory principle with the creation of evidence in the form of a comparable and contextually valid assessment of the state of civil society. It is this evidence, once shared and disseminated, that ultimately constitutes a resource for action.

CSI is putting local partners in the driver's seat: CSI is to continue being a collaborative effort between a broad range of stakeholders, with most importance placed on the relationship between CIVICUS and its national partners.

1.2 Defining Civil Society

The 2008 CIVICUS redesign team modified the civil society definition as follows:

The arena, outside of the family, the state, and the market – which is created by individual and collective actions, organisations and institutions to advance shared interests.

Arena: In this definition the arena refers to the importance of civil society's role in creating public spaces where diverse societal values and interests interact (Fowler 1996). CSI uses the term 'arena' to describe the particular realm or space in a society where people come together to debate, discuss, associate and seek to influence broader society. CIVICUS strongly believes that this arena is distinct from other arenas in society, such as the market, state or family.

Civil society is hence defined as a political term, rather than in economic terms that resemble more the 'non-profit sector'.

Besides the spaces created by civil society, CIVICUS defines particular spaces for the family, the state and the market.

Individual and collective action, organisations and institutions: Implicit in a political understanding of civil society is the notion of agency; that civil society actors have the ability to influence decisions that affect the lives of ordinary people. The CSI embraces a broad range of actions taken by both individuals and groups. Many of these actions take place within the context of non-coercive organisations or institutions ranging from small informal groups to large professionally run associations.

Advance shared interests: The term 'interests' should be interpreted very broadly, encompassing the promotion of values, needs, identities, norms and other aspirations.

They encompass the personal and public, and can be pursued by small informal groups, large membership organisations or formal associations. The emphasis rests however on the element of 'sharing' that interest within the public sphere.

1.3 Civil Society Index- Analytical Framework

The 2008 Civil Society Index distinguishes 5 dimensions of which 4 (civic engagement, level of organisation, practice of values and perception of impact), can be represented in the form of a diamond and the fifth one (external environment) as a circle that influences upon the shape of the diamond.

Civic Engagement, or 'active citizenship', is a crucial defining factor of civil society. It is the hub of civil society and therefore is one of the core components of the CSI's definition. Civic engagement describes the formal and informal activities and participation undertaken by individuals to advance shared interests at different levels. Participation within civil society is multi-faceted and encompasses socially-based and politically-based forms of engagement.

Level of Organisation. This dimension assesses the organisational development, complexity and sophistication of civil society, by looking at the relationships among the actors within the civil society arena. Key sub dimensions are:

- Internal governance of Civil Society Organisations;
- Support infrastructure, that is about the existence of supporting federations or umbrella bodies;
- Self-regulation, which is about for instance the existence of shared codes of conducts amongst Civil Society Organisations and other existing self-regulatory mechanisms;
- Peer-to-peer communication and cooperation: networking, information sharing and alliance building to assess the extent of linkages and productive relations among civil society actors;
- Human resources, that is about the sustainability and adequacy of human resources available for CSOs in order to achieve their objectives:
 - Financial and technological resources available at CSOs to achieve their objectives;
 - International linkages, such as CSO's membership in international networks and participation in global events.

Practice of Values. This dimension assesses the internal practice of values within the civil society arena. CIVICUS identified some key values that are deemed crucial to gauge not only progressiveness but also the extent to which civil society’s practices are coherent with their ideals. These are:

- Democratic decision-making governance: how decisions are made within CSOs and by whom;
- Labour regulations: includes the existence of policies regarding equal opportunities, staff membership in labour unions, training in labour rights for new staff and a publicly available statement on labour standards;
- Code of conduct and transparency: measures whether a code of conduct exists and is available publicly. It also measures whether the CSO’s financial information is available to the public.
- Environmental standards: examines the extent to which CSOs adopt policies upholding environmental standards of operation;
- Perception of values within civil society: looks at how CSOs perceive the practice of values, such as non-violence. This includes the existence or absence of forces within civil society that use violence, aggression, hostility, brutality and/or fighting, tolerance, democracy, transparency, trustworthiness and tolerance in the civil society within which they operate.

Perception of Impact. This is about the perceived impact of civil society actors on politics and society as a whole as the consequences of collective action. In this, the perception of both civil society actors (internal) as actors outside civil society (outsiders) is taken into account. Specific sub dimensions are

- Responsiveness in terms of civil society’s impact on the most important social concerns within the country. “Responsive” types of civil society are effectively taking up and voicing societal concerns.
- Social impact measures civil society’s impact on society in general. An essential role of civil society is its contribution to meet pressing societal needs;
- Policy impact: covers civil society’s impact on policy in general. It also looks at the impact of CSO activism on selected policy issues;
- Impact on attitudes: includes trust, public spiritedness and tolerance. The sub dimensions reflect a set of universally accepted social and political norms. These are drawn, for example, from sources such as the Universal Declaration of Human Rights, as well as CIVICUS’ own core values. This dimension measures the extent to which these values are practised within civil society, compared to the extent to which they are practised in society at large.

Context Dimension: External Environment. It is crucial to give consideration to the social, political and economic environments in which it exists, as the environment both directly and indirectly affects civil society. Some features of the environment may enable the growth of civil society. Conversely, other features of the environment hamper the development of civil society. Three elements of the external environment are captured by the CSI:

- Socio-economic context: The Social Watch's basic capabilities index and measures of corruption, inequality and macro-economic health are used to portray the socioeconomic context that can have marked consequences for civil society, and perhaps most significantly at the lower levels of social development;
- Socio-political context: This is assessed using five indicators. Three of these are adapted from the Freedom House indices of political and civil rights and freedoms, including political rights and freedoms, personal rights and freedoms within the law and associational and organisational rights and freedoms. Information about CSO experience with the country's legal framework and state effectiveness round out the picture of the socio-political context;
- Socio-cultural context: utilises interpersonal trust, which examines the level of trust that ordinary people feel for other ordinary people, as a broad measure of the social psychological climate for association and cooperation. Even though everyone experiences relationships of varying trust and distrust with different people, this measure provides a simple indication of the prevalence of a world view that can support and strengthen civil society. Similarly, the extent of tolerance and public spiritedness also offers indication of the context in which civil society unfolds.

Appendix F: Methodology for Civil Society

This appendix describes the evaluation methodology that was developed to evaluate the efforts of Dutch NGOs and their Southern Partner Organisations (SPO) to strengthen Civil Society in India, Ethiopia and Indonesia. The first paragraph introduces the terms of reference for the evaluation and the second discusses design issues, including sampling procedures and changes in the terms of reference that occurred between the 2012 and 2014 assessment. The third paragraph presents the methodologies developed to answer each of the evaluation questions. The evaluation team uses the qualitative software programme NVIVO and how this is being used is presented in paragraph 1.4.

1.1 Introduction

1.1.1 Terms of reference for the evaluation

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (MFS) is its most recent expression. MFS II is the 2011-2015 grant programme which meant to achieve sustainable reduction in poverty. A total of 20 consortia of Dutch Co Financing Agencies have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

One component of the MFS II programme addresses the extent to which the Southern Partners of the Dutch Consortia are contributing towards strengthening civil society and this evaluation assesses this contribution for Southern Partner countries in Indonesia, India and Ethiopia. The evaluation comprised a baseline study, carried out in 2012, followed by an end line study in 2014.

The entire MFS II evaluation comprises assessments in eight countries where apart from a civil society component, also assessments towards achieving MDGs and strengthening the capacity of the southern partner organisations by the CFAs. A synthesis team is in place to aggregate findings of all eight countries. This team convened three synthesis team meetings, one in 2012, one in 2013 and one in 2014. All three meetings aimed at harmonising evaluation methodologies for each component across countries. CDI has been playing a leading role in harmonising its Civil Society and Organisational Capacity assessment with the other organisations in charge for those components in the other countries.

This appendix describes the methodology that has been developed for the evaluation of the efforts to strengthen civil society priority result area. We will first explain the purpose and scope of this evaluation and then present the overall evaluation design. We will conclude with describing methodological adaptations, limitations and implications.

1.1.2 Civil Society assessment – purpose and scope

The overall purpose of the joint MFS II evaluations is to account for results of MFS II-funded or –co-funded development interventions implemented by Dutch CFAs and/or their Southern partners and to contribute to the improvement of future development interventions.

The civil society evaluation is organised around 5 key questions:

- What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?
- To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?
- What is the relevance of these changes?
- Were the development interventions of the MFS II consortia efficient?
- What factors explain the findings drawn from the questions above?

Furthermore, the evaluation methodology for efforts to strengthen civil society should:

- Describe how a representative sample of Southern partner organisations of the Dutch CFAs in the country will be taken
- Focus on five priority result areas that correspond with dimensions of the Civil Society Index (CSI) developed by CIVICUS (see paragraph 6.4 - Call for proposal). For each of those dimensions the call for proposal formulated key evaluation questions.
- Should compare results with available reference data (i.e. a CSI report or other relevant data from the country in question).

The results of this evaluation are to be used by the Dutch Ministry of Foreign Affairs, the Dutch Consortia and their partner organisations. The evaluation methodology has to be participatory in the sense that Dutch Consortia and their partner organisation would be asked to give their own perception on a range of indicators of the adjusted CIVICUS analytical framework in 2012 and in 2014.

1.2 Designing the methodology

1.2.1 Evaluation principles and standards

The overall approach selected is a participatory, theory-based evaluation through a before and after comparison. This paragraph briefly describes these principles and how these have been translated into data collection principles. It also describes how a 'representative sample' of Southern Partner Organisations was selected and how the initial terms of references were adjusted with the consent of the commissioner of the evaluation, given the nature of the evaluation component and the resources available for the evaluation.

Recognition of complexity

The issues at stake and the interventions in civil society and policy influence are complex in nature, meaning that cause and effect relations can sometimes only be understood in retrospect and cannot be repeated. The evaluation methods should therefore focus on recurring patterns of practice, using different perspectives to understand changes and to acknowledge that the evaluation means to draw conclusions about complex adaptive systems (Kurtz and Snowden, 2003)²¹.

Changes in the values of the Civil Society Indicators in the 2012-2014 period are then the result of conflict management processes, interactive learning events, new incentives (carrots and sticks) that mobilise or demobilise civil society, rather than the result of a change process that can be predicted from A to Z (a linear or logical framework approach)²².

A theory-based evaluation

Theory-based evaluation has the advantage of situating the evaluation findings in an analysis that includes both what happened over the life of the project as well as the how and why of what happened (Rogers 2004). It demonstrates its capacity to help understand why a program works or fails to work, going further than knowing only outcomes by trying to systematically enter the black box (Weiss 2004).

Theory-based evaluations can provide a framework to judge effectiveness in context of high levels of complexity, uncertainty, and changeability when traditional (impact) evaluation methods are not suitable: the use of control groups for the civil society evaluation is problematic since comparable organizations with comparable networks and operating in a similar external environment would be quite difficult to identify and statistical techniques of matching cannot be used because of a small n.

Because SPO's theories of change regarding their efforts to build civil society or to influence policies may alter during the 2012-2014 period, it requires us to develop a deep understanding of the change process and the dynamics that affect civil society and policies. It is important to understand what has led to specific (non-) changes and (un)-expected changes. These external factors and actors, as well as the SPO's agency need to be taken into account for the attribution question. Linear input-activities-outputs-outcomes-impact chains do not

²¹ C. F. Kurtz, D. J. Snowden, The new dynamics of strategy: Sense-making in a complex and complicated world, in IBM Systems Journal vol 42, no 3, 2003)

²² Caluwe de, L & Vermaak H. (2003) "Learning to Change. A Guide for Organization Change Agents" Sage Publications.

suffice for complex issues where change is both the result of SPOs' interventions as those by other actors and/or factors.

Therefore, the most reasonable counterfactual that can be used for this evaluation is that of considering alternative causal explanations of change (White and Philips, 2012). Therefore the SPOs' Theory of Change constructed in 2012 is also related to a Model of Change constructed in 2014 that tries to find the ultimate explanations of what happened in reality, including other actors and factors that might possibly explain the outcomes achieved.

Triangulation of methods and sources of information

For purposes of triangulation to improve the robustness, validity or credibility of the findings of the evaluation we used different types of data collection and analysis methods as well as different sources of information. The CIVICUS analytical framework was adjusted for this evaluation in terms of providing standard impact outcome indicators to be taken into account. Data collection methods used consisted of workshops with the SPO, interviews with key resource persons, focus group discussions, social network analysis (during the baseline), consultation of project documents; MFS II consortia documents and other documents relevant to assess general trends in civil society

Participatory evaluation

The evaluation is participatory in that both baseline and end line started with a workshop with SPO staff, decision makers and where possible board members. The baseline workshop helped SPOs to construct their own theory of change with regards to civil society. Detailed guidelines and tools have been developed by CDI for both baseline and follow-up, and these have been piloted in each of the countries CDI is involved in. Country based evaluators have had a critical input in reviewing and adapting these detailed guidelines and tools. This enhanced a rigorous data collection process. Additionally, the process of data analysis has been participatory where both CDI and in-country teams took part in the process and cross-check each other's inputs for improved quality. Rigorous analysis of the qualitative data was done with the assistance of the NVivo software program..

Using the evaluation standards as a starting point

As much as possible within the boundaries of this accountability driven evaluation, the evaluation teams tried to respect the following internationally agreed upon standards for program evaluation (Yarbrough et al, 2011). These are, in order of priority: Utility; Feasibility; Propriety; Accuracy; Accountability. However, given the entire set-up of the evaluation, the evaluation team cannot fully ensure the extent to which the evaluation is utile for the SPO and their CFAs; and cannot ensure that the evaluation findings are used in a proper way and not for political reasons;

1.2.2 Sample selection

The terms of reference for this evaluation stipulate that the evaluators draw a sample of southern partner organisations to include in the assessment. Given the fact that the first evaluation questions intends to draw conclusions for the MDGs or the themes (governance or fragile states) for each countries a sample was drawn for the two or three most frequent MDGs or themes that the SPOs are working in.

The Dutch MFS II consortia were asked to provide information for each SPO regarding the MDG/theme it is working on, if it has an explicit agenda in the area of civil society strengthening and/or policy influence. The database then give an insight into the most important MDG/themes covered by the partner organisations, how many of these have an explicit agenda regarding civil society strengthening and/or policy influence. For Indonesia, 5 partner organisations were randomly selected for respectively MDG 7 (natural resources) and 5 for the governance theme. For India 5 SPOs were selected for MDG 1 (economic or agricultural development) and 5 others for the theme governance. The sample in Ethiopia consists of 3 SPOs working on MDG 4,5 and 6 (Health); 3 SPOs for MDG 2 (education) and 3 SPOs for MDG 1 (economic or agricultural development).

1.2.3 Changes in the original terms of reference

Two major changes have been introduced during this evaluation and accepted by the commissioner of the MFS II evaluation. These changes were agreed upon during the 2013 and the 2014 synthesis team meetings.

The efficiency evaluation question:

During the June 2013 synthesis meeting the following decision was made with regards to measuring how efficient MFS II interventions for organisational capacity and civil society are:

[...] it was stressed that it is difficult to disentangle budgets for capacity development and civil society strengthening. SPOs usually don't keep track of these activities separately; they are included in general project budgets. Therefore, teams agreed to assess efficiency of CD [capacity development] and CS activities in terms of the outcomes and/or outputs of the MDG projects. This implies no efficiency assessment will be held for those SPOs without a sampled MDG project. Moreover, the efficiency assessment of MDG projects needs to take into account CD and CS budgets (in case these are specified separately). Teams will evaluate efficiency in terms of outcomes if possible. If project outcomes are unlikely to be observed already in 2014, efficiency will be judged in terms of outputs or intermediate results (e-mail quotation from Gerton Rongen at February 6, 2014).

Attribution/contribution evaluation question

During the June 2013 NWO-WOTRO workshop strategies were discussed to fit the amount of evaluation work to be done with the available resources. Therefore,

1. The number of SPOs that will undergo a full-fledged analysis to answer the attribution question, were to be reduced to 50 percent of all SPOs. Therefore the evaluation team used the following selection criteria:
 - An estimation of the annual amount of MFS II funding allocated to interventions that have a more or less direct relation with the civil society component. This implies the following steps to be followed for the inventory:
 - Covering all MDGs/themes in the original sample
 - Covering a variety of Dutch alliances and CFAs
2. The focus of the attribution question will be on two impact outcome areas, those most commonly present in the SPO sample for each country. The evaluation team distinguishes four different impact outcome areas:
 - The extent to which the SPO, with MFS II funding, engages more and diverse categories of society in the 2011-2014 period (Civicus dimensions "Civic engagement" and "perception of impact")
 - The extent to which the SPOs supports its intermediate organisations to make a valuable contribution to civil society in the 2011 -2014 period (Civicus dimension "Level of organisation" and "perception of impact")
 - The extent to which the SPO itself engages with other civil society organisations to make a valuable contribution to civil society in the 2011-2014 period (Civicus dimension "level of organisation")
 - The extent to which the SPO contributes to changing public and private sector policies and practices in the 2011-2014 period (Civicus dimension "perception of impact")
3. The CS dimension 'Practice of Values' has been excluded, because this dimension is similar to issues dealt with for the organisational capacity assessment.

The aforementioned analysis drew the following conclusions:

Table F1

SPOs to be included for full-fledged process tracing analysis.

Country	SPO in the in-depth analysis	Strategic CS orientation to include
Indonesia	Elsam, WARSI, CRI, NTFP-EP, LPPSLH	1. Strengthening intermediate organisations AND influencing policies and practices 2. If only one of the two above mentioned is applicable, then select another appropriate impact outcome area to look at.
India	NNET, CWM, CEOEDECON, Reds Tumkur, CSA	1. Enhancing civic engagement AND strengthening intermediate organisations 2. If only one of the two above mentioned is applicable then select another appropriate impact outcome area to look at.
Ethiopia	OSSA, EKHC, CCGG&SO, JeCCDO	1. Strengthening the capacities of intermediate organisations AND SPO's engagement in the wider CS arena 2. If only one of the two above mentioned is applicable then select another appropriate impact outcome area to look at.

1.3 Answering the evaluation questions

1.3.1 Evaluation question 1 - Changes in civil society for the relevant MDGs/topics

Evaluation question 1: *What are the changes in civil society in the 2012-2014 period, with particular focus on the relevant MDGs & themes in the selected country?*

Indicators and tools used

In line with the CIVICUS Civil Society Index, a scoring tool was developed in 2012 which comprises 17 indicators. The selection was inspired by those suggested in the terms of reference of the commissioner. Each indicator was, also in line with the CIVICUS index accompanied by an open evaluation question to be used for data collection in 2012 and 2014. In 2012 the scoring tool contained four statements describing the level of achievements of the indicator and scores ranged from 0 to 3 (low score - high score).

A comparison of the scores obtained in 2012 informed the evaluation team that there was a positive bias towards high scores, mostly between 2 and 3. Therefore during the 2014 assessment, it was decided to measure relative changes for each indicator in the 2012 – 2014 period, as well as the reasons for changes or no changes and assigning a score reflecting the change between -2 (considerable deterioration of the indicator value since 2012) and +2 (considerable improvement).

In 2012 and based upon the Theory of Change constructed with the SPO, a set of *standard indicators* were identified that would ensure a relation between the standard CIVICUS indicators and the interventions of the SPO. However, these indicators were not anymore included in the 2014 assessment because of the resources available and because the methodology fine-tuned for the attribution question in 2013, made measurement of these indicators redundant.

Also in 2012, as a means to measure the 'level of organisation' dimension a *social network analysis tool* was introduced. However this tool received very little response and was discontinued during the end line study.

Key questions to be answered for this evaluation question

In 2012, SPO staff and leaders, as well as outside resource persons were asked to provide answers to 17 questions, one per standard indicator of the scoring tool developed by CDI.

In 2012, the SPO staff and leaders were given the description of each indicator as it was in 2012 and had to answer the following questions:

1. How has the situation of this indicator changed compared to its description of the 2012 situation? Did it deteriorate considerably or did it improve considerably (-2 → +2)
2. What exactly has changed since 2012 for the civil society indicator that you are looking at? Be as specific as possible in your description.
3. What interventions, actors and other factors explain this change compared to the situation in 2012? Please tick and describe what happened and to what change this led. It is possible to tick and describe more than one choice.
 - Intervention by SPO, NOT financed by any of your Dutch partners
 - Intervention SPO, financed by your Dutch partner organisation(In case you receive funding from two Dutch partners, please specify which partner is meant here)
 - Other actor NOT the SPO, please specify.....
 - Other factor, NOT actor related, please specify.....
 - A combination of actors and factors, INCLUDING the SPO, but NOT with Dutch funding, please specify...
 - A combination of actors and factors, INCLUDING the SPO, but WITH Dutch funding, please specify...
 - Don't know
4. Generally speaking, which two of the five CIVICUS dimensions (civic engagement, level of organisation, practice of values, perception of impact, environment) changed considerably between 2012 – 2014? For each of these changes, please describe:
 - Nature of the change

- Key interventions, actors and factors (MFS II or non-MFS II related) that explain each change (entirely or partially).

Sources for data collection

During the baseline and the end line and for purposes of triangulation, several methods were used to collect data on each (standard) indicator:

- Self-assessment per category of staff within the SPO: where possible, three subgroups were made to assess the scores: field staff/programme staff, executive leadership and representatives of the board, general assembly, and internal auditing groups if applicable completed with separate interviews;
- Interviews with external resource persons. These consisted of three categories: key actors that are knowledgeable about the MDG/theme the SPO is working on and who know the civil society arena around these topics; civil society organisations that are being affected by the programme through support or CSOs with which the SPO is collaborating on equal footing, and; representatives of public or private sector organisations with which the SPO is interacting
- Consultation and analysis of reports that relate to each of the five CIVICUS dimensions.
- Project documents, financial and narrative progress reports, as well as correspondence between the SPO and the CFA.
- Social network analysis (SNA), which was discontinued in the end line study.

During the follow-up, emphasis was put on interviewing the same staff and external persons who were involved during the baseline for purpose of continuity.

1.3.2 Evaluation question 2 – “Attribution” of changes in civil society to interventions of SPOs.

Evaluation question 2: To what degree are the changes identified attributable to the development interventions of the Southern partners of the MFS II consortia (i.e. measuring effectiveness)?

Adapting the evaluation question and introduction to the methodology chosen

In line with the observation of Stern et al. (2012) that the evaluation question, the programme attributes, and the evaluation approaches all provide important elements to conclude on the evaluation design to select, the teams in charge of evaluating the civil society component concluded that given the attributes of the programmes it was impossible to answer the *attribution* question as formulated in the Terms of References of the evaluation and mentioned above. Therefore, the evaluation teams worked towards answering the extent *to which the programme contributed towards realising the outcomes*.

For this endeavour explaining outcome process-tracing²³ was used. The objective of the process tracing methodology for MFS II, in particular for the civil society component is to:

- Identify what interventions, actors and factors explain selected impact outcomes for process tracing.
- Assess how the SPO with MFS II funding contributed to the changes in the selected impact outcomes and how important this contribution is given other actors and factors that possibly influence the attainment of the outcome. Ruling out rival explanations, which are other interventions, actors or factors that are not related to MFS II funding.

Methodology – getting prepared

As described before a limited number of SPOs were selected for process tracing and for each country strategic orientations were identified as a means to prevent a bias occurring towards only positive impact outcomes and as a means to support the in-country evaluation teams with the selection of outcomes to focus on as much as possible, based upon the project documents available at CDI. These documents were used to track realised outputs and outcomes against planned outputs and outcomes. During the workshop (see evaluation question on changes in civil society) and follow-up interviews with the SPO, two impact outcomes were selected for process tracing.

²³ Explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented. The aim of process tracing is not to verify if an intended process of interventions took place as planned in a particular situation, but that it aims at increasing our understanding about what works under what conditions and why (Beach & Pedersen, 2013).

Steps in process tracing

1. Construct the theoretical model of change – by in-country evaluation team

After the two impact outcomes have been selected and information has been obtained about what has actually been achieved, the in-country evaluation team constructs a visual that shows all pathways that might possibly explain the outcomes. The inventory of those possible pathways is done with the SPO, but also with external resource persons and documents consulted. This culminated in a Model of Change. A MoC of good quality includes: The causal pathways that relate interventions/parts by any actor, including the SPO to the realised impact outcome; assumptions that clarify relations between different parts in the pathway, and; case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance specific attributes of the actor or socio-cultural-economic context. The Models of Change were discussed with the SPO and validated.

2. Identify information needs to confirm or reject causal pathways as well as information sources needed.

This step aims to critically reflect upon what information is needed that helps to confirm one of causal pathways and at that at same time helps to reject the other possible explanations. Reality warns that this type of evidence will hardly be available for complex development efforts. The evaluators were asked to behave as detectives of Crime Scene Investigation, ensuring that the focus of the evaluation was not only on checking if parts/interventions had taken place accordingly, but more specifically on identifying information needs that confirm or reject the relations between the parts/interventions. The key question to be answered was: “What information do we need in order to confirm or reject that one part leads to another part or, that X causes Y?”. Four types of evidence were used, where appropriate:²⁴

- *Pattern evidence* relates to predictions of statistical patterns in the evidence. This may consist of trends analysis and correlations.
- *Sequence evidence* deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A. However, if we found that event B took place before event A, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).
- *Trace evidence* is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of meeting minutes, if authentic, provides strong proof that the meeting took place.
- *Account evidence* deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

3. Collect information necessary to confirm or reject causal pathways

Based upon the inventory of information needs the evaluation teams make their data collection plan after which data collection takes place.

4. Analyse the data collected and assessment of their quality.

This step consists of compiling all information collected in favour or against a causal pathway in a table or in a list per pathway. For all information used, the sources of information are mentioned and an assessment of the strength of the evidence takes place, making a distinction between strong, weak and moderate evidence. For this we use the traffic light system: **green letters mean strong evidence**, **red letters mean weak evidence** and **orange letter mean moderate evidence**: The following table provides the format used to assess these issues.

²⁴ Beach and Pederson, 2013

Table F2

Organisation of information collected per causal pathway and assessing their quality

Causal pathway	Information that confirms (parts of) this pathway		Information that rejects (parts of) this pathway	
Pathway 1	Information 1	Source of information	Information 1	Source of information
Part 1.1	Information 2	Source of information	Information 2	Source of information
Part 1.2	Information 3	Source of information	Information 3	Source of information
Etc	etc	etc	etc	etc
Pathway 2	Information 1	Source of information	Information 1	Source of information
Part 2.1	Information 2	Source of information	Information 2	Source of information
Part 2.2	Information 3	Source of information	Information 3	Source of information
Etc.	etc	etc	etc	etc
Pathway 3				

5. Assessing the nature of the relations between parts in the model of change

The classification of all information collected is being followed by the identification of the pathways that most likely explain the impact outcome achieved. For this the evaluators assess the nature of the relations between different parts in the MoC. Based upon Mayne (2012) and Stern et al (2012) the following relations between parts in the MoC are mapped and the symbols inserted into the original MoC.

Table F3

Nature of the relation between parts in the Model of Change

Nature of the relation between parts and other parts or outcome	
The part is the only causal explanation for the outcome. No other interventions or factors explain it. (necessary and sufficient)	
The part does not explain the outcome at all: other subcomponents explain the outcomes.	
The part explains the outcome but other parts explain the outcome as well: there are multiple pathways (sufficient but not necessary)	
The part is a condition for the outcome but won't make it happen without other factors (necessary but not sufficient)	
The part explains the outcome, but requires the help of other parts to explain the outcome in a sufficient and necessary way (not a sufficient cause, but necessary) → it is part of a causal package	

Sources: Mayne, 2012; Stern et al, 2012

6. Write down the contribution and assess the role of the SPO and MFS II funding

This final step consists of answering the following questions, as a final assessment of the contribution question:

- The first question to be answered is: What explains the impact outcome?
- The second question is: What is the role of the SPO in this explanation?
- The third question, if applicable is: what is the role of MFS II finding in this explanation?

Sources for data collection

Information necessary to answer this evaluation question is to be collected from:

- Interviews with resource persons inside and outside the SPO
- Project documents and documentation made available by other informants
- Websites that possibly confirm that an outcome is achieved and that the SPO is associated with this outcome
- Meeting minutes of meetings between officials
- Time lines to trace the historical relations between events
- Policy documents
- etc

1.3.3 Evaluation question 3 – Relevance of the changes

Evaluation question 3: *What is the relevance of these changes?*

The following questions are to be answered in order to assess the relevance of the changes in Civil Society.

- How do the MFS II interventions and civil society outcomes align with the Theory of Change developed during the baseline in 2012? What were reasons for changing or not changing interventions and strategies?

- What is the civil society policy of the Dutch alliance that collaborates with the SPO? And how do the MFS II interventions and civil society outcomes align with the civil society policy of the Dutch alliance that collaborates with the SPO?
- How relevant are the changes achieved in relation to the context in which the SPO is operating?
- What is the further significance of these changes for building a vibrant civil society for the particular MDG/ theme in the particular context?

Sources for data collection

For this question the following sources are to be consulted:

- Review of the information collected during interviews with the SPO and outside resource persons
- The 2012 Theory of Change
- Interview with the CFA liaison officer of the SPO;
- Review of reports, i.e: the civil society policy document of the Dutch Alliance that was submitted for MFS II funding, relevant documents describing civil society for the MDG/ theme the SPO is working on in a given context.

1.3.4 Evaluation question 4, previously 5 - Factors explaining the findings

Evaluation question 4: *What factors explain the findings drawn from the questions above?*

To answer this question we look into information available that:

- Highlight changes in the organisational capacity of the SPO
- Highlight changes in the relations between the SPO and the CFA
- Highlight changes in the context in which the SPO is operating and how this might affect positively or negatively its organisational capacity.

Sources for data collection

Sources of information to be consulted are:

- Project documents
- Communications between the CFA and the SPO
- Information already collected during the previous evaluation questions.

1.4 Analysis of findings

A qualitative software programme NVivo 10 (2010) was used to assist in organizing and making sense of all data collected. Although the software cannot take over the task of qualitative data analysis, it does 1) improve transparency by creating a record of all steps taken, 2) organize the data and allow the evaluator to conduct a systematic analysis, 3) assist in identifying important themes that might otherwise be missed, and 4) reduce the danger of bias due to human cognitive limitations, compared to “intuitive data processing” (Sadler 1981). The qualitative data in the evaluation consisted of transcripts from semi-structured interviews, focus group discussions workshops, field notes from observation, and a range of documents available at the SPO or secondary information used to collect reference data and to obtain a better understanding of the context in which the CS component evolves.

To analyse this diverse collection of data, several analytical strategies are envisioned, specifically content analysis, discourse analysis, and thematic analysis. Although each of these strategies can be understood as a different lens through which to view the data, all will require a carefully developed and executed coding plan.

Data have been coded according to: standard civil society indicator; outcome included for in-depth contribution analysis; relevance, and; explaining factors.

This qualitative analysis will be supported by a limited amount of quantitative data largely arising from the score assigned by the evaluation team to each performance indicator described in the civil society scoring tool. Other quantitative data in this study are drawn information provided in background literature and organisational documents as well as the Social Network Analysis method.

1.5 Limitations to the methodology

1.5.1 General limitations with regards to the MFS II evaluation

The MFS II programme and CIVICUS

Although the MFS II programme stated that all proposals need to contribute to civil society strengthening in the South²⁵, mention was made of the use of the CIVICUS framework for monitoring purposes. The fact that civil society was to be integrated as one of the priority result areas next to that of organisational capacity and MDGs became only clear when the MoFA communicated its mandatory monitoring protocol. In consequence, civil society strengthening in the MFS II programmes submitted to the ministry is mainstreamed into different sub programmes, but not addressed as a separate entity.

This late introduction of the Civil Society component also implies that project documents and progress reports do not make a distinction in MDG or theme components vs those of civil society strengthening, leaving the interpretation of what is a civil society intervention our outcome and what not to the interpretation of the evaluation team.

At the same time the evaluation team observes that SPOs and CFAs have started to incorporate the organisational capacity tool that is being used in the monitoring protocol in their own organisational assessment procedures. None of the SPOs is familiar with the CIVICUS framework and how it fits into their interventions.

Differences between CIVICUS and MFS II evaluation

CIVICUS developed a Civil Society Index that distinguishes 5 dimensions and for each of these a set of indicators has been developed. Based upon a variety of data collection methods, a validation team composed of civil society leaders provides the scores for the civil society index.

Major differences between the way the Civil Society Index is been used by CIVICUS and for this MFS II evaluation is the following:

2. CIVICUS defines its unit of analysis in terms of the civil society arena at national and/or subnational level and does not start from individual NGOs. The MFS II evaluation put the SPO in the middle of the civil society arena and then looked at organisations that receive support; organisations with which the SPO is collaborating. The civil society arena boundaries for the MFS II evaluation are the public or private sector organisations that the SPO relates to or whose policies and practices it aims to influence
3. The CIVICUS assessments are conducted by civil society members themselves whereas the MFS II evaluation is by nature an external evaluation conducted by external researchers. CIVICUS assumes that its assessments, by organising them as a joint learning exercise, will introduce change that is however not planned. With the MFS II evaluation the focus was on the extent to which the interventions of the SPO impacted upon the civil society indicators.
4. CIVICUS has never used its civil society index as a tool to measure change over a number of years. Each assessment is a stand-alone exercise and no efforts are being made to compare indicators over time or to attribute changes in indicators to a number of organisations or external trends.

Dimensions and indicator choice

The CIVICUS dimensions in themselves are partially overlapping; the dimension 'perception of impact' for instance contains elements that relate to 'civic engagement' and to 'level of organisation'. Similar overlap is occurring in the civil society scoring tool developed for this evaluation and which was highly oriented by a list of evaluation questions set by the commissioner of the evaluation.

Apart from the overlap, we observe that some of the standard indicators used for the civil society evaluation were not meaningful for the SPOs under evaluation. This applies for instance for the political engagement

²⁵ Policy Framework Dutch Cofinancing System II 2011 - 2015

indicator “How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?”.

Measuring change over a two-year period

The MFS II programme started its implementation in 2011 and it will finish in 2015, whereas its evaluation started mid-2012 and will end in the beginning of 2014. The period between the baseline and the end line measurement hardly covers 2 years in some cases. Civil society building and policy influence are considered the type of interventions that requires up to 10 years to reap significant results, especially when taking into account attitudes and behaviour. Apart from the fact that the baseline was done when MFS II was already operational in the field for some 1,5 years, some SPO interventions were a continuation of programmes designed under the MFS I programme, hence illustrating that the MFS II period is not a clear boundary. Contracts with other SPOs ended already in 2012, and practically coincided with the baseline assessment being conducted at the moment the relationship with the CFA had practically ended.

Aggregation of findings

Although working with standard indicators and assigning them scores creates expectations of findings being compared and aggregated at national and international level, this may lend itself to a quick but inaccurate assessment of change. Crude comparison between programs on the basis of findings is problematic, and risks being politically abused. The evaluation team has to guard against these abuses by ensuring the necessary modesty in extrapolating findings and drawing conclusions.

Linking the civil society component to the other components of the MFS II evaluation

The Theory of Change in the terms of reference assumes that CFAs are strengthening the organisational capacity of their partners, which is evaluated in the organisational capacity components, which then leads to impact upon MDGs or upon civil society. Because the evaluation methodology designed for both the organisational capacity and the civil society evaluation require considerable time investments of the SPOs, a deliberate choice was made not to include SPOs under the organisational capacity component in that of Civil Society. This may possibly hamper conclusions regarding the assumption of capacitated SPOs being able to impact upon civil society. However, where information is available and where it is relevant, the civil society component will address organisational capacity issues.

No such limitations were made with regards to SPOs in the MDG sample, however, apart from Indonesia; none of the SPOs in the civil society sample is also in that of MDG.

1.5.2 Limitations during baseline with regards to the methodology

A very important principle upon which this evaluation methodology is based is that of triangulation, which implies that different stakeholders and documents are consulted to obtain information about the same indicator from different perspectives. Based upon these multiple perspectives, a final score can be given on the same indicator which is more valid and credible.

For Ethiopia this has not always been possible:

- A Survey Monkey questionnaire was developed to assess the intensity of the interaction between stakeholders in the Basic Education Network of Ethiopia. Out of 85 actors that were invited to fill in this 5 minute questionnaire, none of them effectively filled in the questionnaire. The online Social Network Analysis aims at having both the opinion of the SPO on the intensity of the interaction with another actor, as well as the opinion of the other actor for triangulation. Important reasons for not filling in this form are that actors in the network are not technology savvy, or that they have difficulties in accessing internet.
- With regards to filling in offline interview forms or answering questions during interviews a number of civil society actors did not want to score themselves because they do not benefit from the interventions of the MFS II projects. Having the scores of their own organisations will help to assess the wider environment in which the SPO operates and possibly an impact of the SPO on other civil society organisations in 2014.

- All respondents working for CSOs are working on a voluntary basis. It has not been easy for the evaluation team to fix appointments with them. Voluntary work so high staff turn-over → new staff is not knowledgeable about the interview topics (loss of institutional memory)
- SPOs in Ethiopia are not influencing public sector policies but are implementing these public sector policies. This means that most often there will be no efforts to influence those policies, but efforts are made to make those policies operational at local level and to revitalise them.

1.5.3 Limitations during end line with regards to the methodology

Project documentation

The methodology assumed that project documents and progress reports would be helpful in linking project interventions to the CIVICUS framework and obtaining an overview of outputs-outcomes achieved versus planned. These overviews would then be used to orient the in-country evaluation teams for the quick or in-depth contribution analysis.

In practice the most recent progress reports were hardly available with the CFAs or were made available later in the process. These reports often were not helpful in accumulating outputs towards to the planned outputs and even outcomes. Hardly any information is available at outcome or impact level and no monitoring systems are available to do so. Key information missing and relevant for civil society impact (but also to track progress being made on effects of project interventions) is for instance a comprehensive overview of the organisational performance of organisations supported by the SPO.

For a number of SPOs the reality was different than the progress reports reflected which meant that constant fine-tuning with the in-country evaluation team was necessary and that CDI could not always provide them with the guidance needed for the selection of impact outcomes for contribution analysis.

A number of organisations that the evaluation team looked at for the civil society component are working in a programmatic approach with other partner organisations. In consequence reporting was organised at the programme level and to a lesser extent at the level of the individual partner, which seriously hampered the possibilities to get oversight on outcomes and output achieved. This was the case with EKHC and MKC-RDA, ERSHA, EfDA and JeCCDO.

The Ethiopian evaluation team made the following evaluation remarks with regards to the methodology.

1. What worked?

The team had no difficulties in triangulating information obtained from different resource persons (Government, beneficiaries and SPOs) which helped to cross check information.

The document analysis by CDI, including providing guidance for the fieldwork has been helpful for the team.

The use of the Models of Change for process-tracing helped both the evaluation team as the SPO staff in obtaining a clear picture of the inputs, out puts and outcomes and to get a general picture of the evaluation.

2. What didn't work and why?

There was repetition in a number of questions in the evaluation methodology, such the forms used during the workshop with the SPO, the interviews with the SPO after the workshops; questions were interpreted by the SPO staff of being more or less the same and therefore made them less interested to go into detail or be specific.

The workshop form to be filled in for the CS indicators was long and therefore answers given may have been too general. Some of the questions were not clear and seemed similar to the others and therefore were misunderstood and got wrong responses.

3. Challenges encountered

The team observes that it was very difficult to obtain exact information from resource persons, including those representing the SPOs. Resource persons were able to give facts based upon general observations in most cases but were not able to provide figures. Therefore the in country team suggests to identify a number of indicators during the baseline and to ask the SPO and their headquarters to monitor those indicators since the baseline as a means to inform the end line study.

Some beneficiaries were not aware or did not keep track of numbers and figures, making it also difficult to confirm or reject quantitative information from the SPO. The in-country evaluation team suggests to incorporate quantitative analysis in the evaluation of the CS component.

The partner organisations do not keep records of progress and what they document is available in hard copy. They also keep (monthly) records but do not aggregate these.

High staff turnover within the SPOs also hampered the evaluation.

1.6 Civil Society Scoring tool - baseline

Civil Society Assessment tool – Standard Indicators

Dimension	Outcome domains		Question	Statements					What are factors (strengths, weaknesses) that explain the current situation?
				0	1	2	3	x	
Civic engagement	1	Needs of marginalised groups	How does your organisation take the needs of your beneficiaries/target groups, in particular marginalised groups into account in your planning, actions, activities, and/or strategies?	Are NOT taken into account	Are POORLY taken into account	Are PARTLY taken into account	Are FULLY taken into account	Question not relevant, because	
	2	Involvement of target groups	What is the level of participation of your beneficiaries/target groups, in particular marginalised groups in the analysis, planning and evaluation of your activities?	They are INFORMED about on-going and/or new activities that you will implement	They are CONSULTED by your organisation. You define the problems and provide the solutions.	They CARRY OUT activities and/or form groups upon your request. They provide resources (time, land, labour) in return for your assistance (material and/or immaterial)	They ANALYSE PROBLEMS AND FORMULATE IDEAS together with your organisation and/or take action independently from you.	Question not relevant, because	
	3	Political engagement	How intense is your (individual staff or organisational) participation in locally-nationally elected bodies and/or sectoral user groups?	No participation	You are occasionally CONSULTED by these bodies	You are a member of these bodies. You attend meetings as a participant	You are a member of these bodies. You are chairing these bodies or sub groups	Question not relevant, because	

Organisation level of	5	Relations with other organisations	In the past 12 months what has been the most intensive interaction you had with other CSOs?	No interaction at all	Networking - Cooperation: Inform each other; roles somewhat defined; all decisions made independently	Coordination - Coalition: ideas and resources shared; roles defined and divided; all have a vote in decision making	Collaboration: organisations belong to one system; mutual trust; consensus on all decisions.	Question not relevant, because	
	5	Frequency of dialogue with closest CSO	In the past 12 months how many meetings did you have with the CSO that you have most intensive interaction with?	No interaction at all	Less than 2 times a year	Between 2 and 3 times a year	More than 4 times a year	Question not relevant, because	
	6	Defending the interests of marginalised groups:	Which CSO are most effective in defending the interests of your target groups? In the past 12 months, how did you relate to those CSOs?	No interaction at all	Networking - Cooperation: Inform each other; roles somewhat defined; all decisions made independently	Coordination - Coalition: ideas and resources shared; roles defined and divided; all have a vote in decision making	Collaboration: organisations belong to one system; mutual trust; consensus on all decisions.	Question not relevant, because	
	7	Composition current financial resource base	How does your organisation finance institutional costs such as workshops of the General Assembly (if applicable); attendans to workshops of other CSOs; costs for organisational growth and/or networking?	Depends on 1 international donor	Depends on few financial sources: one fund cover(s) more than 75% of all costs.	Depends on a variety of financial sources; one fund cover(s) more than 50% of all costs.	Depends on a variety of sources of equal importance. Wide network of domestic funds	Question not relevant, because	
Practice of Values	8	Downward accountability	To what extent can mandatory social organs (steering committee, general assembly, internal auditing group) ask your executive leaders to be accountable to them?	(financial) information is made available and decisions are taken openly	They fulfil their formal obligation to explain strategic decisions and actions	They react to requests of social organs to justify/explain actions and decisions made	Social organs use their power to sanction management in case of misconduct or abuse	Question not relevant, because	
	9	Composition of social organs	What % of members of your mandatory social organs belong to the marginalised target groups you are working with/for?	Between 0-10 % of all members of the social organs	Between 11-30 % of all members of the social organs	Between 31-65 % of all members of the social organs	More than 65% of all members of the social organs	Question not relevant, because	

	10	External financial auditing	How regularly is your organisation audited externally?	Never	Occasionally, upon request of funders	Periodically and regularly, because our external funder asks for it	Periodically and regularly, because it is part of our code of conduct	Question not relevant, because	
Perception of impact	11	Client satisfaction	What are the most important concerns of your target groups? How do your services take into account those important concerns?	Majority of target groups are NOT satisfied	Majority of target groups are POORLY satisfied	Majority of target groups are PARTLY satisfied	Majority of target groups are MOSTLY satisfied	Question not relevant, because	
	12	Civil society impact.	In the past 12 months, what impact did you have on building a strong civil society?	You have not undertaken any activities of this kind	You have undertaken activities of this kind but there is no discernible impact	You have undertaken activities of this kind but impact is limited	You have undertaken activities and examples of significant success can be detected.	Question not relevant, because	
	13	Relation with public sector organisations.	In the past 12 months, what interaction did you have with public sector organisations to realise your programme and organisations' objectives?	No direct interaction	You have been invited by public sector organisations for sharing of information	You have been invited by public sector organisations for regular consultations (but public sector decides)	Formal and regular meetings as a multi-stakeholder task force.	Question not relevant, because	
	14	Relation with private sector organisations	In the past 12 months, what interaction did you have with private sector organisations to realise your programme and organisations' perspective?	No direct interaction	You have been invited by private sector organisations for sharing of information	You have been invited by private sector organisations for regular consultations (but public sector decides)	Formal and regular meetings as a multi-stakeholder task force.	Question not relevant, because	
	15	Influence upon public policies, rules, regulations	How successful have you been in influencing public policies and practices in the past 2 years?	No activities developed in this area	Some activities developed but without discernible impact	Many activities developed in this area, but impact until so far has been limited	Many activities developed in this area and examples of success can be detected	Question not relevant, because	

		Influence upon private sector agencies' policies, rules, regulations.	How successful have you been in influencing private sector policies and practices in the past 2 years?	No activities developed in this area	Some activities developed but without discernible impact	Many activities developed in this area, but impact until so far has been limited	Many activities developed in this area and examples of success can be detected	Question not relevant, because	
	16								
Environmental context		Coping strategies	In the past 2 years, how did your organisation cope with these changes in the context that may have been positive or negative consequences for civil society.	No analysis of the space and role of civil society has been done.	You are collecting information of the space and role of civil society but not regularly analysing it.	You are monitoring the space and role of civil society and analysing the consequences of changes in the context for your own activities. Examples are available.	You are involved in joint action to make context more favourable. Examples are available.	Question not relevant, because	
	17								

Appendix G: Changes in the Civil Society Context 2010-2014

Civil Society context

This section describes the civil society context in Ethiopia that is not SPO specific. The socioeconomic, socio-political, and sociocultural context can have marked consequences for civil society, perhaps more significantly at the lower levels of social development. The information used is in line with the information used by CIVICUS.²⁶

1. Socio-economic context

Table G1

Ethiopia's rank on respectively the Human Development Index, World Bank Voice and Accountability Index and Failed State Index

Ranking Body	Rank	Ranking Scale (best - worst possible)
UN Human Development Index	173 (2013)	1 - 187
World Bank Voice & Accountability Indicators	12 (2012)	100 - 0
Failed State Index	19 (2013)	177 - 1

Sources: UNDP, World Bank Governance Indicators, and Fund for Peace

The Human Development Index (HDI) is a summary measure for assessing long-term progress in three basic dimensions of human development: a long and healthy life, access to knowledge and a decent standard of living.²⁷ Ethiopia's HDI value for 2013 is 0.435— which is in the low human development category—positioning the country at 173 out of 187 countries and territories. Between 2000 and 2013, Ethiopia's HDI value increased from 0.284 to 0.435, an increase of 53.2 percent or an average annual increase of about 3.34 percent.

An alternative non-monetary measure of poverty and well-being is the Basic Capabilities Index (BSI). This index is based on key human capabilities that are indispensable for survival and human dignity.²⁸ Ethiopia falls with a BCI of 58 in the critical BCI category, which means the country faces major obstacles to achieving well-being for the population. 10% of children born alive do not grow to be five years old, only 6 % of women are attended by skilled health personnel and only 33% of school age children are enrolled in education and attain five years of schooling.

Ethiopia scores relatively low on the Social and Economic Rights Fulfilment Index (SERF Index)²⁹. In 2012 Ethiopia is only protecting 58.10% of all its social and economic rights feasible given its resources, and the situation has worsened between 2010 and 2012. Especially the right to food and the right to housing remain problematic.

²⁶Mati J.M., Silva F., Anderson T., April 2010, *Assessing and Strengthening Civil Society Worldwide; An updated programme description of the CIVICUS Civil Society Index: Phase 2008 to 2010.*, CIVICUS

²⁷ A long and healthy life is measured by life expectancy. Access to knowledge is measured by: i) mean years of education among the adult population, which is the average number of years of education received in a life-time by people aged 25 years and older; and ii) expected years of schooling for children of school-entry age, which is the total number of years of schooling a child of school-entry age can expect to receive if prevailing patterns of age-specific enrolment rates stay the same throughout the child's life. Standard of living is measured by Gross National Income (GNI) per capita expressed in constant 2011 international dollars converted using purchasing power parity (PPP) rates.

²⁹ http://www.socialwatch.org/sites/default/files/SERF2012_eng.pdf

The Transparency International's Global Corruption Barometer survey shows how 1,000 Ethiopian people assess corruption and bribery in their home country: A low score indicates that a country is perceived as highly corrupt, while a high score indicates that a country is perceived as very clean. Ethiopia has a Corruption Perception Index score of 3.3 out of 10 in 2014, which places the country on position 110 out of 174 countries.³⁰ Survey participants were furthermore asked to rate their perceptions of corruption within major institutions in their home country on a scale of 1 to 5, 5 being most corrupt and 1 being least corrupt³¹. With a range of perceived corruption scores from around 2 (military, education and NGO's) to over 3 (private sector, public officials, and judiciary), most major institutions are perceived as corrupt.

Ethiopia's economic freedom score in 2014 is 50.0, making its economy the 151st freest out of 174 countries in the 2014 Index. Its 2014 score is 0.6 point higher than in 2013 due to improvements in five of the 10 economic freedoms, including business freedom, labour freedom, and fiscal freedom. Ethiopia is ranked 35th out of 46 countries in the Sub-Saharan Africa region, and its overall score continues to be below the regional average.³²

2. Socio-political context

In February 2009, the Government adopted the NO. 621/2009 Proclamation which is Ethiopia's first comprehensive law governing the registration and regulation of NGOs. This law violates international standards relating to the freedom of association. Notably, the Proclamation restricts NGOs that receive more than 10% of their financing from foreign sources from engaging in essentially all human rights and advocacy activities.

The UN Special Rapporteur on the rights to freedom of peaceful assembly and of association, Mr. Maina Kiai, has commented that "The enforcement of these provisions has a devastating impact on individuals' ability to form and operate associations effectively, and has been the subject of serious alarms expressed by several United Nations treaty bodies." Mr. Kiai went on to recommend that "the Government revise the 2009 CSO law due to its lack of compliance with international norms and standards related to freedom of association, notably with respect to access to funding".³³ The Ethiopian Proclamation may effectively silence civil society in Ethiopia by starving NGOs of resources, and thus essentially extinguish their right to expression.³⁴

In November 2011, the Ethiopian Charities and Societies Agency issued the Guideline on Determining the Administrative and Operational Costs of CSOs, which is applicable to all charities and societies (international and domestic). Retroactive to July 2011, when approved by the Agency without any consultation with organizations or donors, the "70/30" regulation limits administrative costs for all charities and societies to a maximum of 30% of their budgets.³⁵

Freedom of assembly and association are guaranteed by the constitution but limited in practice. Organizers of large public meetings must request permission from the authorities 48 hours in advance. Applications by opposition groups are routinely denied. Peaceful demonstrations were held outside mosques in July 2012, but the security forces responded violently, detaining protestors, including several prominent Muslim leaders. A total of 29 Muslims were eventually charged with offences under the antiterrorism law. They were awaiting trial at year's end.³⁶

Table G2

Ethiopia's rank on respectively the World Bank Rule of Law Index, Transparency International Perception of Corruption Index and Freedom House's Ratings of Freedom

Ranking Body	Rank	Ranking Scale (best – worst possible)
World Bank Rule of Law Index	31 (2012)	100 – 0
Transparency International perception of corruption index	111 (2013)	1 – 178
Freedom House: Freedom in the World	Status: Not Free	Free/Partly Free/Not Free
	Political Rights: 6	1 – 7
	Civil Liberties: 6 (2014)	1 – 7

Sources: World Bank Governance Indicators, Transparency International and Freedom House

Freedom House evaluates the state of freedom in 195 countries annually. In 2014, Ethiopia scored a 6 on both the political rights and civil liberties ratings, indicating that the country is not politically free nor performing on protecting civil rights.³⁷ Its total aggregate scores from the Freedom House Index decreased with 15 points in the 2008-2012 period.³⁸

The media are dominated by state-owned broadcasters and government-oriented newspapers. One of the few independent papers in the capital, Addis Neger, closed in 2009, claiming harassment by the authorities. Privately-owned papers tend to steer clear of political issues and have low circulations. A 2008 media law criminalizes defamation and allows prosecutors to seize material before publication in the name of national security³⁹.

Trade union rights are tightly restricted. All unions must be registered, and the government retains the authority to cancel registration. Two-thirds of union members belong to organizations affiliated with the Confederation of Ethiopian Trade Unions, which is under government influence. Independent unions face harassment. There has not been a legal strike since 1993.

Women are relatively well represented in Parliament, having won 152 seats in the lower house in the 2010 elections. Legislation protects women's rights, but they are routinely violated in practice. Enforcement of the law against rape and domestic abuse is patchy, with cases routinely stalling in the courts. Forced child labour is a significant problem, particularly in the agricultural sector. Same-sex sexual activity is prohibited by law and punishable with imprisonment.⁴⁰

3. Socio-cultural context

The World Values Survey Wave 2005-2009 asked 1500 Ethiopians the question: "Generally speaking, would you say that most people can be trusted or that you need to be very careful in dealing with people?" Out of 1500 respondents, only 21,4 % stated that most people can be trusted. 66,2% indicated they needed to be very careful.⁴¹ Additionally, only 36,1% of the respondents mentioned 'tolerance and respect for other people' as a quality that needs to be encouraged to learn children at home.⁴² 74% of the respondents think that churches are giving adequate answers to people's spiritual needs.⁴³

Appendix H: Data collection for MFS-II impact evaluation on MDGs

1. Sample size

The Ethiopian evaluation was planned for 13 projects drawn from different sectors and MDGs. Some of the projects were interrelated while others were different both in terms of topic and location. As a result, samples were drawn jointly for certain projects in order to maximize the sample size and avoid duplication of sampling in the same locality. The original plan was to select 500 respondents for each project for the baseline and follow-up surveys respectively. But, if two projects are conducted together, we can have 1000 respondents that can be used for the two projects. Of the 13 projects, samples are chosen jointly for 1) C5 and C7, 2) C11 and C13, and 3) C2 and C3. Because of this merging, we were left with 10 survey blocks for which sampling has been done independently. The summary of their lists, sample size and specific locations are shown in table H1 below.

The plan was to interview a total of 6500 samples in each phase. However, to account for population size and further requirements, the actual total sample size in 2012 increased to 6725. New samples were added in 2014 and including attrition of respondents interviewed in 2012, the actual total interviewed was 6975. The maximum attrition observed was 46%, for C2 and C3. The next highest attrition rates, 30-33%, were observed in Afar region for C12 and C13 projects. These attrition rates were expected due to the nature of the samples. In C2 and C3, the respondents were school girls and street girls, who are very mobile and very difficult to trace. In C11 and C13, the Afar community is a pastoral community continually moving from place to place in search of animal feeds and water. To compensate these attritions, new respondents representing different segment of projects beneficiaries, for example, community conversation participants in C2 and C3, and husbands in C11 and C13 were added in the follow-up survey so the sample size came close to the one of the baseline. The attrition rates for the education projects were significant, but a replacement is taken. In some projects, e.g. C8, the replacement goes beyond the number of attrition, so that the follow-up sample size is larger than the baseline. For most projects, the attrition rate was below 10%.

Table H1
Overview of survey blocks and sample size

Lists of survey blocks	Locations		Sample size		
	Region(s)	Zone/city /District	Plan	Baseline	Follow up
C1	Oromia	East Wollega	500	497	472
C2 & C3	Oromia	Adama	1000	891	883
C4	Afar	Assayita	500	484	552
C5 & C7	Oromia	Bale, West Arsi, South West and West shoa	1000	1023	960
C6	Afar	Zone 5	500	502	416
C8	Benishangul-Gumuz	Bertha, Gumuz, Shinasha and Mao-Komo	500	646	1073
C9	Tigray,	Kola Tembien	500	602	564
	Amhara,	Bati			
	Oromia, and	Fedis & Boset			
C10	Oromia	East Shoa	500	495	492
C11 and C13	Afar	Zone1, Zone3, Zone5	1000	1084	1067
C12	Oromia	West Arsi	500	501	496
Total			6500	6725	6975

2. Sampling

Sampling is done using multi-stage stratified sampling technique. First, we identified the Zones where the projects are implemented. Second, from each zone, we randomly or totally select districts (Woredas). Since some projects are implemented in a very few number of districts, all the districts are taken. Third, we selected villages (Kebeles) from the list of villages (Kebeles) in the district. The respondents are then chosen from the village lists. This was a procedure followed to select both treatment and control groups. However, there might

be some exceptions depending on the nature of the project. In areas where the project beneficiaries are very few, we chose treatment groups from the list of beneficiaries provided by the project implementers. The details are found in the specific report of each project.

3. Questionnaire

Depending on the type of respondents, each survey block had one or more sets of questionnaires. For example, we had three sets of questionnaires for C11 and C13 survey blocks; one for mothers, one for children and one for husbands. We had two for C2 & C3; one community conversation and the other for street girls and *edir* members. Similarly, a single questionnaire was used for two or three survey blocks. We used the same questionnaire for C1, C4 and C8. In total we had about eleven set of questionnaires. All the questionnaires were pretested prior to the baseline survey. Pre-testing was done by selected enumerators together with IFPRI researchers. In many cases, pre-testing was done in the areas where the project is implemented.

4. Enumerators and interviewing

Interviews are made using experienced and well-trained enumerators who speak the local language. We chose enumerators who have been working for IFPRI for many times. However, whenever we fail to get them to speak the local language, like the case of Afar and Benishanguel, enumerators are locally recruited. As a standard, five enumerators are supervised by an experienced supervisor who coordinates the field work and checks the quality of data every day. Local facilitators are used to identify and meet the sample respondents. The respondents were compensated for the time spent during the interview in the form small gifts. The type gifts depend on the type of projects. Whenever we interview students for education projects, we provide pens and notes books. Whenever we interview women for health projects, we give soaps. For farmers in the highlands we give sickles. Researchers from IFPRI made at least one field supervision during the data collection on top of the supervisors assigned to each team. In order to avoid data quality problems, enumerators were allowed to conduct only three interviews per day.

The enumerator training is organized separately for each set of questionnaires. Training to enumerators is conducted for two to three days by the IFPRI researchers. The first day is dedicated to explain the objective of the study and explain the questions point by point. On the second day, pairs of enumerators are asked to practice by assigning one as enumerator and the other as respondent and this will be done twice interchangeably. Any issues that arise during these practices are discussed latter in a joint session.

All interviews are conducted using the local language and are done within the village where only the interviewer and the respondent are present. Prior to the interview, enumerators are told to explain the rights of the respondents to refuse, terminate or leave questions unanswered. They also explain the privacy of the information as per the guidelines of research in social sciences.

During the baseline in 2012, all interviews were conducted using paper-questionnaires. As a result data entry is made in the office using experienced data entry personnel. Data entry usually starts with data re-coding and re-checking. We use a software program called CPro (Census and Survey Processing System) to transfer the paper data in to electronic data. During the follow up in 2014, all interviews except the ones for education project and projects in Afar region were conducted using Computer Assisted Personal Interview (CAPI). This method uses the same software, CPro, but tablets are used to enter the data directly from the respondents' response in the field. As soon as the interviews were completed, the data was ready. This approach helped us in reducing data processing time as well as in improving the quality of the data.

Kusters, C.S.L., T. van Ingen, E. Zerfu, D. Kefyalew, N.N. Buizer, 2014. *Endline report Ethiopia, Amref. Capacity of Southern Partner Organisations (5c) component*. Centre for Development Innovation, Wageningen UR (University & Research centre). Report CDI-15-031. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is Ethiopia, Amref. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation African Health Africa Ethiopia (Amref¹) and the Co-Financing Agency Stichting Amref Flying Doctors Netherlands (Amref NL) for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to Amref, Amref NL, consortia, the synthesis team, IOB and NWO/Wotro and other interested parties and other interested parties.

The Ethiopia 5C evaluation team

¹ In the course of 2014, Amref has changed its name from Africa Medical Research Foundation in **Amref Health Africa**. The correct name for the Ethiopia office is now **Amref Health Africa Ethiopia**, in this report referred to as "Amref".

List of abbreviations and acronyms

Amref	Former “African Medical Research Foundation”. In the course of 2014, Amref has changed its name in Amref Health Africa . The correct name for the Ethiopia office is now Amref Health Africa Ethiopia , in this report referred to as “Amref”.
Amref-NL	Amref Flying Doctors the Netherlands (name has not (yet) changed)
BARR	BARR Foundation
Causal map	Map with cause-effect relationships. See also ‘detailed causal map’.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CDI	Centre for Development Innovation, Wageningen UR, the Netherlands
CFA	Co-Financing Agency
CIDA	Canadian International Development Agency
CSO	Civil Society Organization
Detailed causal map	Also ‘model of change’. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
DWA	Dutch Wash Alliance
EU	European Union
EWA	Ethiopian WASH Alliance
GSK	GlaxoSmithKline
IFPRI	International Food Policy Research Institute
MDG	Millennium Development Goal
M&E	Monitoring and Evaluation

5 C	Capacity development model which focuses on 5 core capabilities

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

- Achievement of Millennium Development Goals (MDGs) & themes;
- Capacity development of Southern partner organisations (SPO) (5 c study);
- Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: Amref Health Africa in Ethiopia². The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in chapter 4.2.2.

² In the course of 2014, Amref has changed its name in **Amref Health Africa**. The correct name for the Ethiopia office is now **Amref Health Africa Ethiopia**, in this report referred to as "Amref".

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II interventions in these two capabilities, and how these changes have come about. More detailed information can be found in chapter 4.3.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Since the baseline, two years ago, many improvements took place under all capabilities.

In the capability to act and commit, Amref Health Africa Ethiopia (Amref) improved on many indicators. New leadership appointed in April 2012 introduced a new, matrix style, organisational structure and appointed new programme managers. This led to more timely decisions, and better technical support and strategic guidance for staff, including field staff. There was slightly less staff turnover due to better incentives, i.e. internal promotion of staff, ample opportunities for capacity building, and better hardship allowances and per diems. Skills of staff have improved. Fundraising procedures have improved, a fundraising manager appointed and Amref has diversified its funding base to 30 donors and has doubled its operational budget since the baseline.

In the capability to adapt and self-renew Amref also improved on all indicators. They improved their M&E implementation because of having a pool of M&E experts, a new Information Management System (AIMS), an M&E manual, an M&E manager who oversees the M&E at program level, more M&E staff with better skills, better critical reflection opportunities, better follow-up, and better involvement and responsiveness to stakeholders. All of this has also led to better reporting.

In terms of the capability to deliver on development objectives, Amref again shows some improvement in all indicators. Operational plans are regularly revised, there is a pull system for effective use of resources which has led to more cost-effectiveness, budgets are revised to be realistic and linked to timely planning, a beneficiary feedback mechanism strategy has been institutionalised, there are regional based assessments for joint monitoring of results, Amref has a quality assurance mechanism in place, and has better record keeping than during the baseline.

In the capability to relate, Amref has improved as well: stakeholders are better engaged during programme design, Amref is involved in new networks and programme sites are more regularly visited by Director and Deputy Director. Internal communications have improved due to the establishment a communications department with a communications manager who resolves disputes, a new HR and admin manager and shorter communication lines.

Finally, Amref has improved in its capability to achieve coherence because of the involvement of all staffs in revisiting the vision, mission and strategies of the organisation; and operational guidelines and manuals that are in place with field staff being informed about this. There is a knowledge management committee, and Amref's programmes are aligned with the new business plan which in turn is aligned to the strategic plan of the organisation.

The evaluators considered it important to also note down the SPO's story in terms of changes in the organisation since the baseline, because this would provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team.

During the endline workshop, changes that were perceived by SPO staff as the most important organisational capacity changes since the baseline in 2012 were improved leadership capacity, improved staff capacity and improved resource mobilization competences.

Leadership capacity improved because of a more active engagement of the new advisory council at national level and the international Board at corporate level; improved leadership knowledge and skills through continuous and short term training; and performance targets that were set for leaders. These performance targets were set to address the gaps identified in the "behavioural survey" conducted by Amref headquarters in Nairobi.

Staff capacity has improved because of improved staff competences in planning, M&E and PCM among others things, which resulted from recruiting more competent staff, training, and more regular experience sharing. Other improvements like the improved team coherence from the more regular experience sharing, and closer follow up and technical support by the renewed management also contributed to improved staff capacity.

Improved resource mobilisation competences happened because of improved concept and proposal writing skills of staff due to training and recruiting staff with fundraising skills; taking up business development as a special focus as a result of the organisational restructuring; increased capacity to create partnerships due to the assistance they had in networking from Amref-NL and other offices; and Dutch support in terms of salary, training, donor contacts and technical reviews.

Many of these changes have been brought about by the change in leadership at country level, and a behavioural survey by Amref global. There was no particular mention made of MFS II funded capacity development interventions but during process tracing these have clearly come up.

'Process tracing' was used to get more detailed information about the changes in these capabilities that were possibly related to specific MFS II capacity development interventions. For Amref Ethiopia, the organisational capacity changes that were focused on were "improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services" and "improved planning, monitoring and evaluation (PME) capacity". These are further explained below.

Based on the detailed causal map developed through process tracing, the changes that took place since the baseline in 2012 in terms of improved Amref ET staff competencies to deliver SRHR services can be largely attributed to MFS II supported capacity development interventions, such as multiple training and workshops on SRHR related issues, SRHR outcome measurement, and SRHR advocacy; and SRHR alliance review meetings. To a lesser extent the improved competences to deliver SRHR services can be attributed to other, non MFS II related reasons, i.e. the recruitment of already skilled staff & reproductive health professionals at organisational level; the regular scheduled visits and advice from programme managers; trainings organised by Amref HQ (Nairobi); and the sexual curriculum to train youth/ schools adopted from Rutgers WPF. The latter was adopted from another Dutch funded (non-MFS II) project at Amref ET.

On the whole it can be said that the improved PME capacity at Amref can be partly attributed to MFS II supported capacity development interventions, mainly through PME related and outcome measurement related trainings and review meetings from SRHR as well as WASH Alliances; and the OCA assessments that helped the organisation to identify issues that needed improvement. For the other part the improved PME capacity can be attributed to organisational structure changes and improved managerial guidance following the leadership change; the introduction and institutionalization of a number of PME and information management related manuals, procedures and tools; Amref HQ training; the recruitment of skilled staff; and donor requirements and feedback in general.

2 Context and General Information about the SPO – (Amref Health Africa Ethiopia)

Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Ethiopia is amongst the world's poorest countries. According to the HDI, the country ranks 169 out of 179 countries, and 39% of the population lives under 1\$ a day. With over 80 million people, Ethiopia has the second largest population in Africa. The annual growth rate amounts to 2.6%, which means that the population grows with about 2 million people per annum. Young people (10-24 years) make up almost one-third of the population, heavily pressuring the demand for health services, education and employment⁶. Eighty-four per cent of the population lives in rural areas, where poverty is more pronounced than in the urban areas. The adult literacy rate is only 36%.

Ethiopia is situated in a region that generally lacks peace, security and political stability. Ethiopia's political system shows close resemblance with a system of ethnic federalism with improvements towards democratic governance and civil participation.

³ In the course of 2014, Amref has changed its name in **Amref Health Africa**. The correct name for the Ethiopia office is now **Amref Health Africa Ethiopia**. The name of Amref Flying Doctors the Netherlands has not (yet) changed.

Recently the government of Ethiopia initiated an ambitious growth and transformation plan which will be used as an enabler to this programme. Recently two major developments have been observed. The government of Ethiopia has initiated an ambitious growth and development plan. In addition to its focus on economic growth the plan has addressed key issues in socio-economic changes including health. Moreover, the Health Sector Development Plan IV is also endorsed and communicated to partners. As a result basis for Woreda based planning are in place which will strengthen the complementarities, M&E and local and national accountability related to UFBR programme implementation.

Ethiopia has some of the lowest health indicators in the world. Most problems stem from infectious diseases and malnourishment associated with poverty. Such illnesses could be easily prevented. However, poor education, bad infrastructure, lack of access to safe water, bad sanitation and inadequate health care mean that in Ethiopia preventable illnesses too often prove fatal. However, there are signs of improvement. Ethiopia is one of the few countries to have recognised the importance of community health workers, who are providing vital basic health care and education in rural areas.

The Ethiopian health system is suffering from a human resource crisis. The World Health Organisation has warned that there are not enough doctors and health workers to care for the country's 75 million people. Many trained health staff are also migrating overseas or leaving to work in the private sector. The rural nature of much of the population means that it is especially difficult to deliver health care to hard-to-reach groups such as women and children from ethnic minorities and nomadic tribes living far from health facilities, towns, or even roads. 85% of the population live in rural areas where it is more difficult to access health care. Although 92% of the population has potential access to health care only a third actually use the health service. 60% of health workers leave their job within a year, many abandoning the public sector for better paid posts in the private sector. Infant mortality levels are 77 for every 1000 live births. Child mortality - deaths before the age of five- sits at 123 per 1,000 live births. Less than a quarter of the population have access to safe water. Health problems like HIV/AIDS, malaria, tuberculosis and water borne diseases are undermining the Ethiopian workforce, keeping people from earning and lowering productivity levels as a result.

Amref in Ethiopia is developing and implementing health education and training for mid-level and community health workers, training health workers among the nomadic pastoralist groups, training specialist health workers in hospitals around the country, supporting women affected by HIV/AIDSs by providing loans and business trainings, reducing malaria in remote region of Afar, and improving health education, awareness and promotion of trachoma prevention.

Afar Region (pop. 1.5m) is a pastoralist area characterized by conflict, food insecurity and drought. It has historically been sidelined by development policies and programmes which are designed to respond to the needs of urban and settled communities. Pastoralists mainly depend on the services of traditional health providers who are not formally trained and are not linked to the formal health referral system. Afari pastoralists are unable to participate in public policy making and policies have not taken their needs into account. These factors inhibit progress toward Ethiopia's poverty reduction strategy (PASDEP) and the MDGs. The overall health status of the Afar population is poor, with women and children particularly vulnerable to poor health, with high maternal mortality (720/100,000) and under-five child mortality (229/1,000) double the national average). Women have a particularly low status, undermining efforts to improve reproductive health, face heavy workloads, are exposed to severe risks during pregnancy/delivery and are unable to control safe sexual practices with partners, increasing their vulnerability to HIV/AIDS. Traditional practices, including FGM (94.5% in Afar) pose human rights and public health concerns. Low uptake of contraception and early pregnancy affect maternal health, leading to obstructed labour, vesico vaginal fistulas and foetal death. Currently there are low utilisation rates of reproductive health services, ANC and PNC (7.3%, 16.1% and 1.2% respectively). Few births (10%) are attended by skilled personnel, and Afar is not equipped to provide emergency care.

WASH trends: The exceptionally high under-five Mortality Rate of 123/1000 is largely due to unsafe water, inadequate sanitation and poor hygiene, resulting in diarrhoea, dysentery, schistosomiasis and malaria. The average child suffers five to twelve diarrhoea episodes a year. These repeated episodes are one of the contributing factors to malnutrition. The health situation is poor; Ethiopia has only one health worker per 47, 000 people.

The national water supply and sanitation coverage according to the Plan for Accelerated and Sustained Development to End Poverty (PASDEP) estimates 61% and 88.2% for rural and urban areas respectively. Ethiopia has no separate sanitation policy but a National Hygiene and Sanitation Strategy (NH&SS) and protocol that emanated from the Health Policy. The NH&SS was developed to enable 100% adoption of improved sanitation and hygiene practice, particularly in rural settings. Even though access to water is considered high (86% in 2007/2008), urban settlements suffer from unhealthy living environments with high contamination risks, due to a lack of improved water and sanitation systems, combined with insufficient environmental- and waste management. Ethiopia has explicitly enacted the 'right to water' in its constitution (art.90.1): "To the extent the country's resources permit, policies shall aim to provide all Ethiopians with access to public health and education, clean water, housing, food and social security".

Water supply and sanitation coverage in the Afar regions is considerably lower than the overall national coverage. Pastoralists have historically been sidelined by development policies and are unable to participate in public policy making. In Afar, the majority of the population of the region has no access to potable water. About 35,7% of the households get drinking water from rivers and lakes, 15,7% from unprotected wells and springs, 4,2% from protected wells and springs, 36,8% from public taps and only 7,6% from their own tap . Overall, the region exhibits the lowest latrine coverage; only 2.5% of the households own and utilize a latrine. Women have a particularly low status and are exposed to severe risks during pregnancy and delivery. Those communities without access to safe water depend on scarce surface water sources such as unprotected springs, ponds, streams and rivers. In most cases they are located at great distances from their households and very often represent sources of severe waterborne diseases. The quantity and distribution of existing surface and ground water supply schemes developed in the region are insufficient.

In all the regions, although adequate WASH facilities are relatively available in urban areas of the region compared to rural areas, there is a tremendous need for improved facilities as well as hygiene promotion in cities and towns as well. There are significant deficiencies in WASH facilities in these towns and work is proceeding at a relatively slow pace.

2.3 Contracting details

When did cooperation with this partner start:

With WASH Alliance: January 2010

With SRHR Alliance: 2000

What is the MFS II contracting period:

With WASH Alliance: January 2011 - December 2015

With SRHR Alliance: January 2011 - December 2015

Did cooperation with this partner end? YES/ NO

With WASH Alliance: NO

With SRHR Alliance: NO

If not, is there an expected end date?

With WASH Alliance: December 2015

With SRHR Alliance: December 2015

2.4 Background to the Southern Partner Organisation

History

The African Medical and Research Foundation⁴ (now Amref Health Africa) was established in 1957, and is an independent not-for-profit, non-governmental organisation (NGO) with its headquarters in Nairobi, Kenya. In the 1980s and early 1990s Amref began to expand its interests in specific disease control initiatives, focusing on disease prevention through immunization of children under five, malaria control using insecticide treated bed nets, epidemic surveillance, and prevention of HIV infection.

Today, Amref implements its projects through country programmes in Kenya, Ethiopia, Uganda, Tanzania, Senegal, South Sudan and South Africa. Training and consulting support are provided to an additional 30 African countries.

Amref in Ethiopia is a registered international NGO under the Ministry of Justice and Societies and Charities Agency of Ethiopia. Though the presence of African Health Africa (Amref) in Ethiopia dates back to the 1960s, for nearly 30 years it predominantly remained an ad hoc assortment of activities such as occasional trainings and surgical outreach visits. A project office was established in 1998, and in 2002 Amref established a full-fledged Country Programme in Ethiopia. In 2007/08, Amref in Ethiopia reached more than 75,000 (mostly women and children under five) people directly and more than 15 million indirectly through its partners and grassroots media networks in Addis Ababa, Oromia, Afar and Southern Nations. Since its registration with Government of Ethiopia (GoE) in 2002, the programme has grown significantly, from 2 programmes and 20 staff (in Addis Ababa) to over 20 programmes in four regional states with over 115 staff among which 50% are technical staff and 36% are women. The country office of Amref Ethiopia is based in Addis Ababa and has about 25 staff members. The other 90 staff members are based in field offices in Addis Ababa, Afar and the Southern Nations.

Amref Ethiopia key staff identified the following critical milestones that played a key role in the progress of the organization and have influenced the organizations' vision, mission, strategies, target groups and the like:

Critical changes					
1998	2002	2004	2007	2008	2011
Inception	Registered as international NGO	Geographic expansion	New strategy and new program implementation	New CSO legislation (re-registration)	New business plan and national program development

Vision

Amref's vision: "Lasting health change in Africa: communities with the knowledge, skills and means to maintain their good health and break the cycle of poor health and poverty".

Mission

Amref believes in the inherent power within African communities – that the power for lasting transformation of Africa's health lies within its communities. Amref believes that by focusing on the health of women and children, the health of the whole community can be improved. Amref is concerned with skilled care of mothers before, during and after childbirth; prevention and treatment of cervical cancer, and proper management of childhood illnesses. Amref's main areas of intervention are maternal and child health; HIV and Tuberculosis; safe water and sanitation; malaria; and essential clinical care.

⁴ In the course of 2014, Amref has changed its name in **Amref Health Africa**. The correct name for the Ethiopia office is now **Amref Health Africa Ethiopia**. The name of Amref Flying Doctors the Netherlands has not (yet) changed.

Amref shares knowledge gained from our grassroots programmes with others, and uses it as evidence to advocate appropriate change in health policy and practice. In all of its programmes, Amref partners with communities, civil society organisations, health practitioners, and the private and public sectors to establish a participatory health care system.

The building blocks of Amref's approach are in three key areas:

- Human Resources for Health – this includes training and re-skilling of community and other cadres of health workers
- Health Management Information Systems – Amref believes in the use of health information for planning and programming
- Community Systems Strengthening – this includes giving communities knowledge and skills to promote good health, engaging with grassroots structures, and strengthening linkages between communities and health facilities

Strategies

To realize its vision and mission the organization has put in place several successive strategies. In the beginning the strategy was addressing diseases in priority intervention areas. This continued until 2007 and was changed to community partnering, capacity building and health sector research. As of 2011, however, seven strategies were adopted. These were: (i) reproductive health (ii) mother and children health, (iii) HIV/TB and malaria response, (iv) water and sanitation, (v) clinical and diagnostic service provision, (vi) research, and (vii) building strong and unified Amref at global level.

At present the main activities are:

- Developing and implementing health education and training for mid-level and community health workers in partnership with the Open University (OU)
- Training health workers among the nomadic pastoralist groups in South Omo and providing mobile health clinics along migratory routes.
- Training specialist health workers in hospitals around the country.
- Supporting women affected by HIV/AIDS in Kechene slum in Addis Ababa, by providing loans and business training. The project also promotes HIV prevention and reduces stigma attached to HIV/AIDS.
- Reducing malaria in the remote region of Afar, through the distribution of 90,000 mosquito nets at household level, and community sessions using culturally-specific picture-based educational materials.
- Reducing waterborne diseases in Kechene slum through the provision of clean water, showers and toilets.
- Improving health education, awareness and promotion of trachoma prevention practices in Afar.

The MFS II projects are major projects for Amref Ethiopia.

In Afar a community based WASH programme is designed, focusing on strengthening the capacities of beneficiaries to realize and sustain access to and use of WASH facilities. Programme approaches include capacity building, implementation and construction of WASH facilities, community involvement and empowerment, strengthening collaboration with local authorities, identify and use simple, culturally acceptable local technologies, and awareness creation and behaviour change communication (BCC).

The pastoralist WASH project has the following objectives:

- Empowered communities, specifically women and girls, will demand and achieve sustainable access to and use of safe water, improved sanitation and hygienic living conditions. This result focuses on ensuring access to appropriate, affordable, safe and sustainable water supply services within 1 km of walking distance and to basic sanitation facilities among vulnerable and needy communities.
- Relevant service providers in the business sector, public sector and civil society will co-operate to respond to need for sustainable, accessible, and affordable and demand driven WASH services.

-
- Policy makers and key actors promote and enable the sustainable realization of the right to water and sanitation through their policies, programmes and budget allocations, and are held accountable for their achievements in WASH.
 - A stable, complementary, effective and accountable alliance (in North and South), in which participating actors feel ownership, share knowledge and coordinate work towards sustainable integration of WASH into policies, strategies and programmes, in order to increase the access to and use of WASH facilities (Shouldn't this be part of the capacity building evaluation).

Activities include:

- Construction of latrines for schools, health-centers, boreholes etc.
- Community mobilization, awareness
- Training for government and NGO staff
- Support for development of district plans
- Support for the private sector involved in the WASH service delivery

The Unite for Body Rights project from the SHRH alliance has the following program objectives:

- Increased utilization and quality of comprehensive Sexual and Reproductive Health (SRH) services
- Increased quality and delivery of Comprehensive Sexuality Education (CSE)
- Reduction of Sexual and Gender Based Violence (SGBV)
- Increased acceptance of Sexual Diversity and Gender Identity
- Related activities include:
 - Training of Formal and Informal Health Workers
 - • Improved Health Care Facilities
 - Service delivery points providing youth-friendly care
 - Trained/supported counsellors on SGBV counselling
 - Intermediaries trained/supported to deliver comprehensive sexuality education
 - IEC Materials developed and distributed
 - Community members participating in SRHR education and awareness raising
 - CSOs trained/supported
 - CSO staff trained/supported

NB: Amref itself is not providing health care services but capacitating (government) health facilities and health professionals to do so through technical support, training, providing commodities, equipment, renovating and constructing health facilities etc. In addition, Amref is raising awareness in communities on SRHR issues and working with schools and out of school youth on the provision of sexuality education. Amref is also raising awareness of policy makers on SRHR (through workshops and trainings) and trying to influence the government (although not officially due to the Ethiopian legislation).

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **“What factors explain the findings drawn from the questions above?”**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012⁵.

⁵ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

- Ethiopia: Amref, ECFA, FSCE, HUNDEE (4/9)
- India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)
- Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)
- Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop

have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when

analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team

has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of Amref Ethiopia that have taken place since the baseline in 2012 are described. The information is based on the information provided by Amref – NL and the EWA coordinator.

Table 1

Information about MFS II supported capacity development interventions since the baseline in 2012

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Policy/advocacy implementation intervention (SRHR)	<ul style="list-style-type: none"> - To jointly develop advocacy plan around a central issue - Better understanding of what advocacy is and could achieve. - To jointly develop advocacy plan around a central issue 	<ul style="list-style-type: none"> - What is advocacy, - different types of advocacy, - discussion on advocacy activities already carried out in ASK & UFBR, - overview of relevant Ethiopian laws and policies, - making of problem trees and identification of advocacy topics, - stakeholder analysis, - drafting of advocacy plan 	March 2014	3000 euro's from the joined activity budget of both UFBR as well as ASK programme. <i>Because this was a joint effort about half of the budget was MFS II and half "other" DGIS funds.</i>
Training on PCM & PME (SRHR)	No info	No info	June 2012	No info
PME (outcome measurement training) (SRHR)	<ul style="list-style-type: none"> - Increased M&E capacity, including qualitative methods - ensure a good execution of the mid-term evaluation of the UFBR programme. 	<ul style="list-style-type: none"> - What is outcome measurement, - outcome and output indicators in the UFBR programme, - review of the UFBR baseline results and tools, - how to facilitate a focus group discussion (including practical exercises), - planning of the outcome measurement in the UFBR programme 	September 2013	Approximately 3000 euro's from the joined activity budget of both UFBR as well as ASK programme.
SRHR training	<ul style="list-style-type: none"> - To increase general SRHR knowledge of Alliance partners - A more comprehensive sexuality curriculum, and more comprehensive and rights-based sexuality information in communities 	<ul style="list-style-type: none"> - Key concepts (sexuality, SRHR); - SRHR situation in Ethiopia; - adolescent development; - aims, objectives, principles of comprehensive sexuality education; - sensitive topics (abortion, sexual diversity, pornography and pre-marital sex) 	December 2013	Approximately 3000 euro's from the joined activity budget of both UFBR as well as ASK programme.
Linking and Learning workshop for Amref SRHR and WASH alliance implementing teams from Ethiopia, Uganda, Tanzania and Kenya	<ul style="list-style-type: none"> - To learn how the implementing teams experience working within an alliance and how this can be further improved. 	<ul style="list-style-type: none"> - Interaction between the teams and a field visit within Afar region 	November 2013	Approximately 20.000 euros.

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
	<ul style="list-style-type: none"> - provide the opportunity to improve the linkages between WASH and SRHR projects - Improvement in efficiency and effectiveness within both alliances, more knowledge exchange between different teams within Amref, more integrated projects and programmes covering both SRHR as well as WASH themes within Amref 			
Planning (EWA) Workshops	<ul style="list-style-type: none"> - enable to identify areas of integration, cooperation, avoid overlaps & fill gaps. Identify which stakeholder we need to work how and what, etc. - improved program integration implemented by different, working towards scaling of the best experiences among partner organizations and engage with sector actors/stakeholders to contribute for system change 	<ul style="list-style-type: none"> - Conducting Theory of Change (ToC) exercise so as to assess the program implementation so far and partnership; including briefing on the concept of ToC - Outlining key activities, roles, objectives, assumptions of WASH Alliance programme in Ethiopia - Review the performance of the EWA programme - Discuss next year activities and targets of the EWA programme - Discuss on the PME related matters (Logframe, indicators and formats) 	Annually in February	900-1000 euros for overall alliance
Gender Mainstreaming in WASH	<ul style="list-style-type: none"> - take the issues of gender at project idea development, study, planning, implementation and m&e - increasing the involvement of women in the operation and maintenance of the system 	Concept of gender, how it can be addressed in WASH, the framework, etc	February 2012	
Exchange/learning visits (WASH)	<ul style="list-style-type: none"> - scale up contributing to system change in the sector in addressing the issues of sustainability, benefits of allocating more budget to WASH and more involvement of the private sector in WASH sector 	<p>Multiple Uses of Water service (MUS), WASTE Management, and Community Led Total Sanitation & Hygiene (CLTSH), Recharge, Retention and Re-use (3R).</p> <p>After exchange visit partners included their lessons in their plan. For example Amref has taken the lesson from RiPPLE on waste management and working SMEs, CLTSH, approach are some of the examples.</p>		7194 euros overall cost at alliance level not only for Amref

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
WASH Financing	In trying to address the financial sustainability of WASH services, partners are expected to make WASH services more business oriented which are fundamental in ensuring financial sustainability which is one the main element in challenging the sector.	Framework of sustainable finance, overview of possible options in micro-finance, types of financing, etc	August 2012	
Monitoring and Evaluation with more focus on Outcome Measurement (WASH)	- to better understand outcome level indicators and their linkage with output level ones.	- Monitoring and evaluation, data and their types, data collection methods, sampling techniques, outcome and outcome indicators	October 2013	8000 euro overall for alliance

4.2 Changes in capacity development and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities (4.2.1). This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. In addition to this staff present at the endline workshop were asked to indicate what were the key changes in the organisation since the baseline. The most important is key organisational capacity changes have been identified, as well as the reasons for these changes to come about. This is described in a general causal map, both as a visual as well as a narrative. The detailed general map is described in 4.2.2.

4.2.1 Changes in the five core capabilities

Capability to Act and Commit

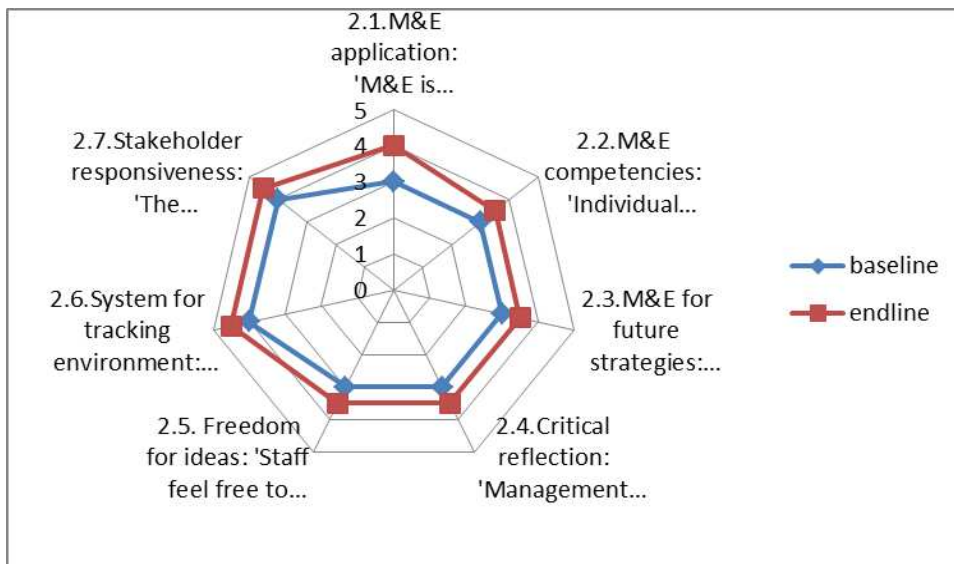

The new leadership has established a new, matrix style, organizational structure with the appointment of new managers and delegation of responsibilities. As a result, decisions are made more on time now, and the organizational structural change enables the management to give high technical support to the project staff.

There is more strategic and operational guidance to staff, which is related to the new organisational structure and improved feedback mess mechanisms. This has enhanced staff commitment. Additional mechanisms that have been put in place to enhance staff motivation and reduce staff turnover include: internal promotion reallocation to new projects; staff capacity building; institutionalization of hardship allowance (although field staff say they have low hardship allowances); equal per diem to all staffs; mechanism of sharing grievances to the management; regular job evaluation. Staff indicated that they still have low salaries compared to other partners. Strategies are well articulated and based on an improved monitoring and evaluation system, and the strategies are still the basis of daily operations. The skills of Amref staff has improved due to a range of trainings for project management and other staff, either on management related issues or technical issues. Amref has been able to diversify its funding and doubled its operational budget since the baseline. This diversification of funding has improved due to having a business development manager who spearheads program development and communication, and a fund raising manager to coordinate fund raising efforts. Amref has developed and implemented fundraising strategies.

Score: from 3.5 to 4.5

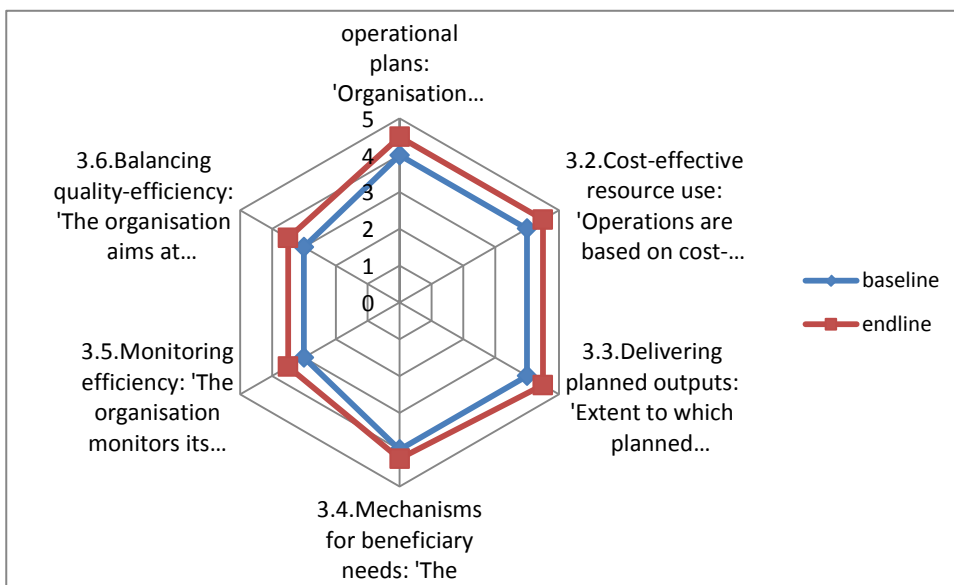

Capability to adapt and self-renew

Overall, the monitoring and evaluation, has improved within Amref since the baseline in 2012: more staffs are being trained in M&E and now have M&E responsibilities and there is a pool of experts working on M&E; and a M&E manual and M&E tools have been developed; Amref M&E systems are well integrated with the programs and projects; there is now a program database which is assessed on a monthly basis for compliance; and planning and review meetings are more regular and they now more involve staff, clients and other stakeholders in review and planning. However, there is still room for improvement in terms of using information for strategic decision-making, routine M&E and in terms of documenting progress and challenges.

Score: from 3.3 to 3.8 (slight improvement)

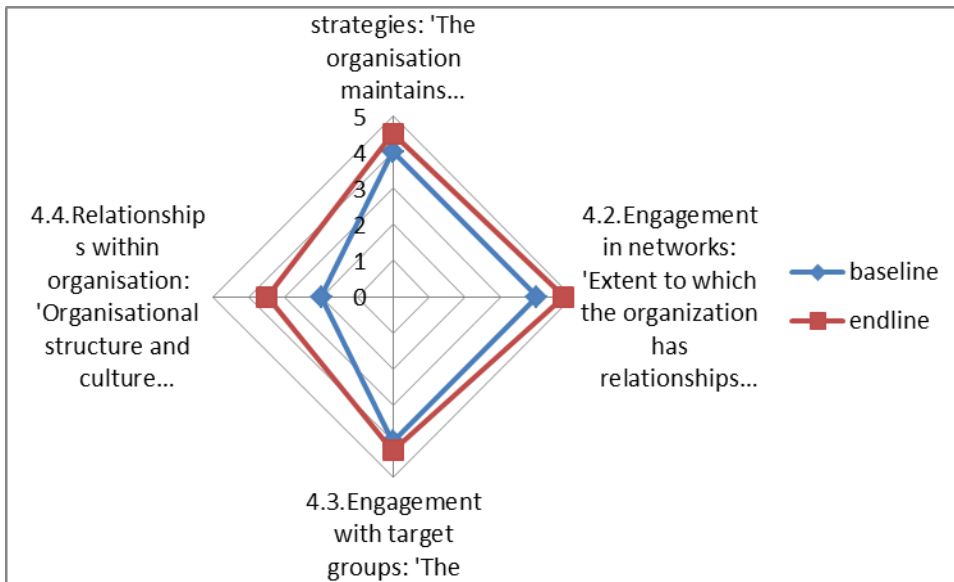

Capability to deliver on development objectives

On the whole this capability has slightly improved. There is an improvement in terms of having clear operational plans; using resources more cost-effectively; monitoring efficiency and balancing quality with efficiency due to having a quality assurance mechanism in place. Furthermore, outputs have been better delivered and the reserve very slight improvement in terms of having mechanisms in place to deal with beneficiary needs.

Score: from 3.7 to 4.1 (slight improvement)

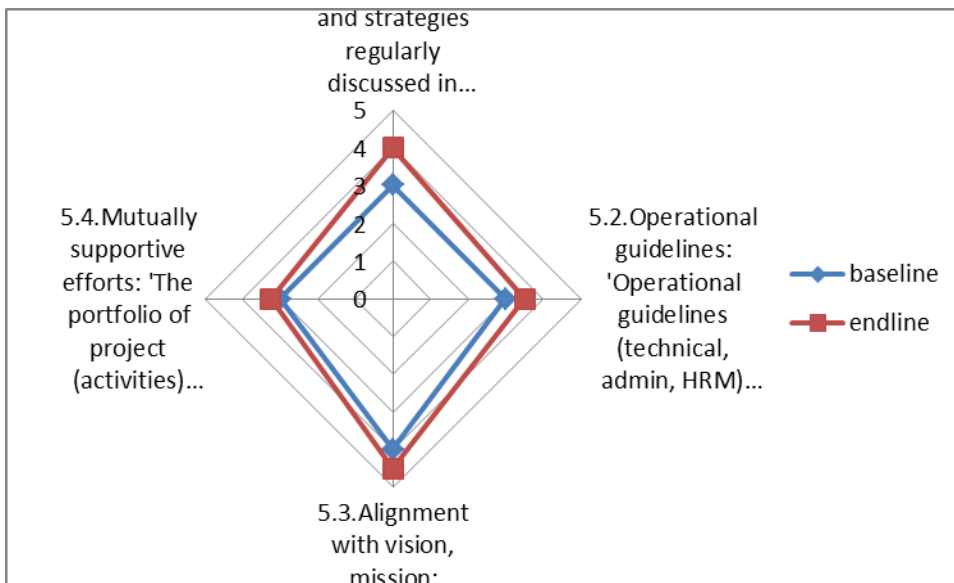

Capability to relate

Since the baseline Amref has improved engagement with stakeholders, by being more involved in networks, both at local as well as at international level. This engagement has also assisted Amref in developing their policies and strategies. Furthermore, there has been an improvement in terms of having senior management visiting the field more frequently, and engaging with staff in terms of providing the technical support, as well as engaging with beneficiaries. Amref has also improved effective communication within the organization through strengthening the communication department, regular meetings with staffs to internalize policies, regulation and create open environment for discussion among each other. There is also commitment of top management in encouraging team work documentation and communication of decisions and staffs are free to talk and share ideas among each other. Besides, the organization structure allows shorter communication lines, creating teams and supporting functionality, assigned program managers to decentralize roles.

Score: from 3.5 to 4.2 (slight improvement)

Capability to achieve coherence

Overall there has been a slight improvement in this capability. This is due to having a broadened vision and commitment to the society, and the Business plan was revisited with staff involvement. Staff are able to internalize the vision, mission, and statement through staff orientation and regular

meetings. Furthermore, there was revision and roll out of different manuals like procurement guidelines, HR manual and the development of the APMS guideline, quality assurance tools for strategic directions etc. , and staff has been oriented on this. Further alignment of projects, strategies and associated operations with the vision and mission of the organisation has been done by having a new business plan that aligns with the strategic plan and by having programs aligned with the Amref business plan. There are a little more mutually supportive efforts at operational level, but approaches to crosscutting issues have had little improvement.

Score: from 3.2 to 3.8 (slight improvement)

4.2.2 Key organisational capacity changes - general causal map -

Below you can find a description of the key changes in organisational capacity of Amref Health Africa Ethiopia since the baseline as expressed by Amref staff during the endline workshop. First, a description is given of how this topic was introduced during the endline workshop by summarising key information on Amref from the baseline report. This information included a brief description of the vision, mission and strategies of the organisation, staff situation, clients and partner organisations. This then led into a discussion on how Amref has changed since the baseline.

During the endline workshop, Amref staff agreed that the following key changes in terms of organisational capacity took place in the organisation since the baseline:

1. Improved leadership capacity (2)
2. Improved staff capacity (3)
3. Improved resource mobilization competences (4)

According to staff these three changes have contributed to improvement of the overall performance and implementation capacity of Amref (1). Each of these three key organisational changes are explained below.

Improved leadership capacity (2)

Leadership capacity has improved because of a more active engagement of the new advisory council at national level and the international Board at corporate level (6); improved leadership knowledge and skills (7) through continuous and short term training organised by Amref (9); and performance targets that were set for leaders [8].

A leadership change in country director as well as deputy director at Amref-ET has caused many positive changes. In April 2012 a new country director [10] was appointed. Earlier a new Deputy Director was appointed. The new country director initiated a “behavioural survey” [11] supported by Amref headquarters in Nairobi, to assess the capacity, needs and gaps of the staff. This helped to develop an organizational code of conduct based on the findings.

Also, performance targets were set for leaders [8] to close the gap that was identified through the behavioral survey conducted by Amref global (11) and this also contributed to improved leadership. According to staff examples of evidence of the improved leadership capacity can be observed in the Visibility, Growth and Competences (VGC) document that was initiated and developed by Amref-ET leadership; the staff consultation initiated by the (new) country director, and increased follow-up & technical support from management.

Improved staff capacity (3)

Staff capacity was another key change that was observed by Amref staff present at the endline workshop. They mentioned that this is evidenced by improved staff competencies in planning, M&E and PCM among others things (12). In addition, compared to the baseline the different teams are coherent (13) when given assignments and working in harmony to come up with better results. In addition there is closer follow-up and technical support by management (14);

According to staff the improved staff competences [12] happened because new and capable staff were recruited [18], e.g. in M&E, communication and fundraising skills, who helped to do the work as well as mentor the others. In addition staff capacity was improved through close follow-up and technical support by management (14); regular experience sharing meetings (weekly and monthly) [20] and staff training in PME and other topics [19].

The improved team coherence (13) resulted from the more regular experience sharing meetings (weekly and monthly) [20]. This more frequent experience sharing [20] as well as the closer follow-up & technical support from management (14) were resulting from the leadership changes at Amref country level [10]’.

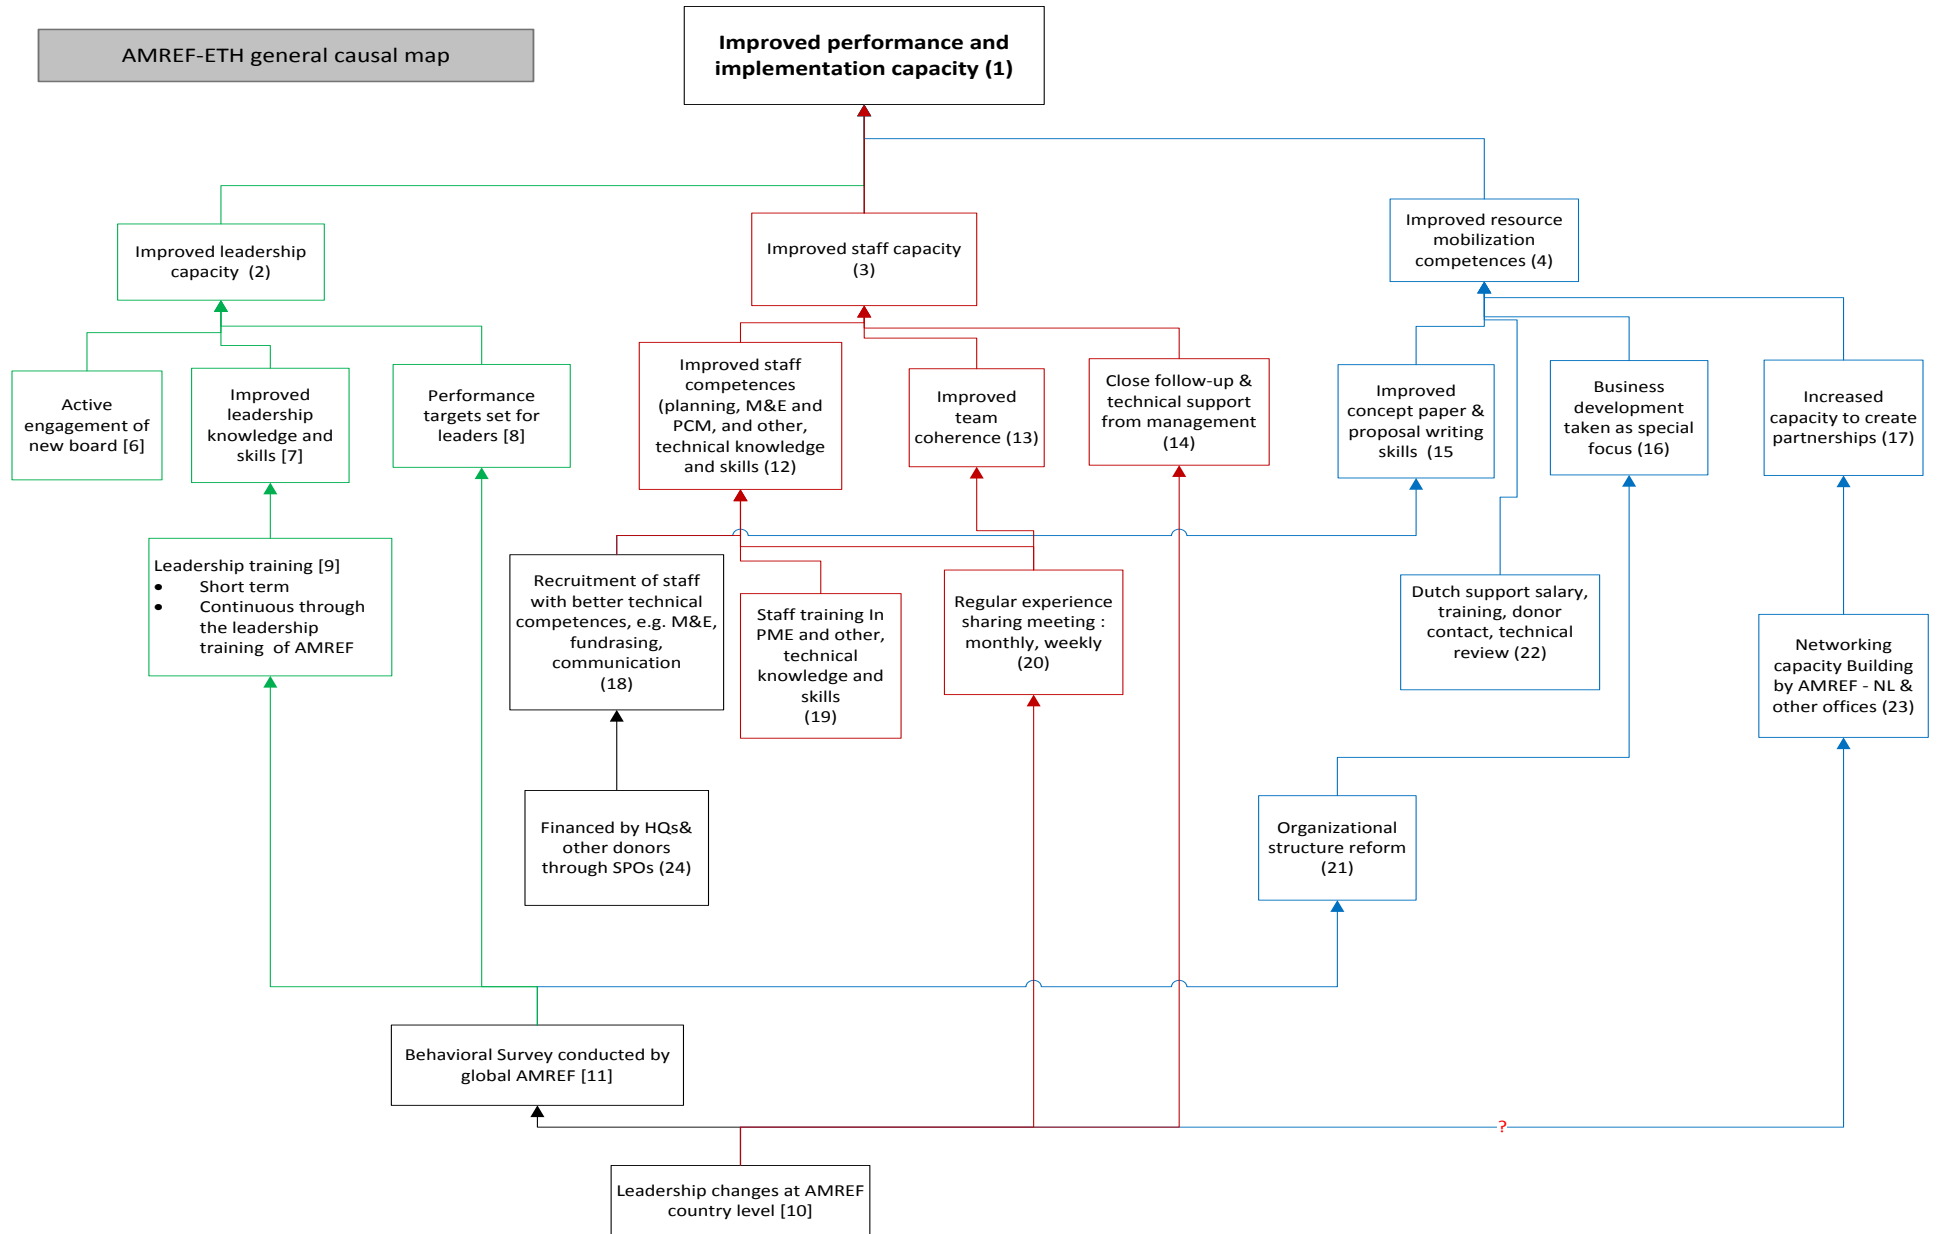

Improved resource mobilization competences (4)

Resource mobilization competences [4] have improved, which is evident by the donor diversification; the increased nr. of winning proposals, projects, and geographical coverage; and the strong partnerships both local and international.

According to Amref staff resource mobilisation has improved, because of improved concept and proposal writing skills of staff [15], which was due to training and of recruiting staff with fundraising skills [18]; taking up business development as a special focus [16]; and the increased capacity to create partnerships [17], from the assistance they had in networking by Amref-NL and other offices (23). But the most important factor is Dutch support in terms of salary, training, donor contacts, and technical reviews [22], which has contributed to a considerable extent to the improved resource mobilization competences).

Each of these areas are further explained below. The numbers correspond to the numbers in the visual.

AMREF-ETH general causal map

4.3 Attributing changes in organisational capacity development - evaluation question 2 and 4

Note: for each country about 50% of the SPOs has been chosen to be involved in process tracing, which is the main approach chosen to address evaluation question 2. For more information please also see chapter 3 on methodological approach. For each of these SPOs the focus has been on the capability to act and commit and the capability to adapt and self-renew, since these were the most commonly addressed capabilities when planning MFS II supported capacity development interventions for the SPO.

For each of the MFS II supported capacity development interventions -under these two capabilities- an 'outcome area' has been identified, describing a particular change in terms of organisational capacity of the SPO since the baseline. Process tracing has been carried out for each outcome area. The following outcome areas have been identified under the capability to act and commit and the capability to adapt and self-renew. Also the MFS II capacity development interventions that could possibly be linked to these outcome areas are described in the table below.

Table 2

Information on selected capabilities, outcome areas and MFS II supported capacity development interventions since the baseline

Capability	Outcome area	MFS II supported capacity development intervention
To act and commit	Improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services	SRHR workshop on sexual behavioural change, Dec 2013; Policy/advocacy implementation training workshop on SRHR, March 2014; Bi-annual UFBR review & planning meetings; SRHR Outcome measurement workshop, Sept. 2013; EWA (WASH) outcome measurement training in September 2013; Facilitation skills training mid-2012; Rutgers Foundation training on sexual taboos, December 2013; Annual SRHR Alliance review meetings in the Netherlands for national programme coordinating units; Workshop in Nairobi on sexual diversity, April/May 2012; Annual training in comprehensive sexual education (CSE) and gender: August 2012, Nairobi; March/ April 2013, Uganda; April 2014, Nairobi
To adapt and self-renew	Improved Planning, Monitoring and Evaluation (PME) capacity	Annual Ethiopian WASH Alliance (EWA) workshops on reporting and planning: 2011/2012, 2012/2013 and 2013/2014 ; PME training for MFS II project staff (SRHR & WASH) early 2012; PCM and PME training in June 2012; Organisational Capacity Assessments (OCA) MFS II (2011 and 2013); SRHR Outcome Measurement training workshop, Sept 2013; WASH PME/Outcome measurement training conducted in Awash in Nov 2012; WASH Outcome Measurement training workshop, Sept 2013

The next sections will describe the results of process tracing for each of the outcome areas. This includes describing the identified key organisational capacity changes, what these changes are expected to lead to and what are the underlying reasons for these organisational capacity changes.

4.3.1 Improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services

Both end line workshop Amref participants as well as the Amref-NL Portfolio holder consider the Amref staff to have improved their competence to deliver SRHR services [1] since the baseline in 2012 (*source: CFA assessment sheet A*). Participants during the endline workshop indicated that Amref is member of different alliances and networks. They also indicated that in a recent USAID publication Amref Ethiopia is mentioned as the main influential NGO on SRHR issues in Ethiopia particularly in pastoral areas of the country like Afar, South Omo and as of this year Somalia Region as asked by the government. Furthermore, Amref provides long-term training support in higher institutions for more than 1600 trainers from government and other partners on different topics like midwifery, nursing, etc. It developed training manuals and a national curriculum for upgrading health extension workers which is accredited by the Ministry of Health (MoH). Training health extension workers has started from the MFS II in 2011 and progressed up to now. According to workshop participants Amref is recognized and provides technical support to the government of Ethiopia to apply for the Global Fund in community strengthening, gender and human rights and is paid for doing that (*source: end line workshop*). An organisational capacity assessment (OCA) executed twice in 2011 and 2013 also recorded growth in thematic and programmatic aspects of SRHR (and WASH) (*source: OCA REPORT Amref ET Final 2013*).

Four key areas can be distinguished that contributed to this improvement:

1. Improved SRHR planning and implementation competences [4]
2. Improved networking skills for advocacy and lobbying on SRHR issues [25]
3. Improved knowledge on gender, sexuality and SRHR issues [3]
4. Change of attitude and more openness to talk about sex and sexuality [14]

Each of these areas are further explained below. The numbers correspond to the numbers in the visual.

Improved competences to plan and implement SRHR services [4]

One of the reasons for improved staff competencies to deliver SRHR services is that their competencies to plan and implement SRHR services have improved since the baseline. These improved competencies are the result of:

- Increased number of skilled staff and reproductive health professionals [28]
- Regular scheduled visits and advice from programme managers [11]
- Better understanding of the link between services, knowledge and enabling environment, including policy environment [24]
- Joint planning and coordination of activities with other Amref departments and with other Alliance members [34]
- Improved understanding of and focus on desired outcomes [37]
- Improved facilitation and ToT skills [12]
- Sexuality education curriculum to train youth/schools adopted from Rutgers WPF [43]
- Identified Program priority areas [42]

Each of these areas as further explained below.

Increased number of skilled staff and reproductive health professionals [28]: According to Amref staff present at the endline workshop, compared to the baseline in 2012 Amref-ET has now more skilled staff and reproductive health professionals (government employed) which leads to improved SRHR planning and implementation competences. This is the result of an increased number of health workers trained in SRHR issues [20] and the recruitment and training of more staff in SRHR issues at Amref [27]. The increased number of health workers and giving them appropriate training [20] has been a process that has started already during MFS I (*source: endline workshop; Logical Framework for UFBR project 2011-2015*). The appointment of more Amref staff and training them in SRHR issues was a result of the organisational restructuring in September 2013 [26], which involved creating different departments and delegation of responsibilities to newly appointed program

managers of these departments, thus creating an extra management layer which speeded up processes (*sources: endline workshop; CFA assessment sheet A*).

According to staff **the more regular scheduled field visits by organisational leadership and programme managers, including M&E, HR and financial managers, and also from the National Programme Coordinator** compared to the baseline [11] are another reason for improved staff SRHR planning and implementation competences (*source: endline workshop*). The more regular scheduled field visits help to provide staff onsite support and ground level problem identification and analysis. These more regular visits are the result of a “strong technical leadership” [30] (*sources: endline workshop; almost all staff assessment sheets and interviews*). With “strong technical leadership” Amref staff explained that they meant leadership that can consider political issues and the external environment and use this to give good actual information and technical guidance, in this case on SRHR issues. Amref’s strong technical leadership [30] is due to the assignment of dedicated managers and the creation of other support functions [29], as a direct result of the organisational restructuring in September 2013 [26] (*sources: endline workshop; CFA assessment sheet A*).

According to staff **the better understanding of the links between health services, knowledge and enabling environment, including policy environment [24]** (*source: endline workshop*) has also contributed to improved planning of SRHR services in the sense that the understanding of how one area influences the other also gives the understanding that actions have to be planned for all these areas to provoke positive behavioural changes in SRHR issues. This improved understanding was a direct result of two MFS II capacity development interventions: The SRHR workshop on sexual behavioural change in December 2013 [2] (*sources: endline workshop; CFA assessment sheet B*) and the workshop on the SRHR policy implementation training conducted in March 2014 [17] (*sources: endline workshop; CFA assessment sheet B; 2014.03.17 Policy implementation training minutes*), both from the SRHR Alliance. More about these two workshops is explained here beneath under “Improved networking skills for advocacy and lobbying on SRHR issues [25]”.

The **joint planning and coordination of activities within Amref and with other Alliance members [34]** was a result of jointly identifying issues and challenges for implementation [36] at the SRHR policy/advocacy training workshop in March 2014 [17, *see above*] and the UFBR (SRHR) bi-annual review meetings (in 2013, early 2014 in Addis Ababa, June 2014 in Hawassa [33] (*sources: endline workshop; 2013.10.02_Report bi-annual meeting UFBR and OM workshop; Logical Framework for UFBR project 2011-2015*). At the policy/advocacy training workshop [17] issues for lobbying and advocacy were identified. The UFBR bi-annual review meetings [33] are a joint review of progress, the way forward, and identifying and addressing problems. According to staff Amref had a problem of (lack of) complementarity/synergy with the two other UFBR partners before the baseline but the review meetings have led to better links between Amref activities and activities of the partners and planning for joint activities, like the joint preparation of Information Education and Communication/Behavioural Change Communication IEC/BCC materials, and a TV programmes on SRHR in Afar language. During the review meeting also a SWOT analysis was conducted to identify challenges for implementation (*sources: end line workshop; CFA assessment sheet B*)

According to staff **the improved understanding of, and focus on desired outcomes [37]** is another reason for improved SRHR services planning. This was the result of the outcome measurements training of the SRHR Outcome measurement workshop in September 2013 [6] (*sources: end line workshop; CFA assessment sheet B; 2013.10.02_Report bi-annual meeting UFBR and OM workshop*) and the annual Ethiopian WASH Alliance (EWA) review meetings and the outcome measurement training in 2013 in particular [7] (*sources: end line workshop; CFA assessment sheet B; Reflection on the Outcome Monitoring Process and Methodology@24122013-Tewelde Report on EWA workshop planning reporting ToC report 25 Feb.-1 Mar. 20032015*). More about these workshops is explained in the PME causal map.

The improved capacity to train others in facilitation skills [12] was also important according to Amref staff. These are a result of the facilitation skills training mid-2012, according to Amref staff MFS II funded [5] (*sources: end line workshop; 2012 Amref annual report*), and were further enhanced by a ToT training on youth friendly services in April 2014 by the Family Guidance Association of Ethiopia (FGAE) for Amref staff and local government partners [23] (*source: end line workshop*). According to

staff Amref used to facilitate training by externals but since the facilitation skill training of mid-2012 [5] some of the training was facilitated by internal staffs.

At the endline workshop staff mentioned that they **adopted the computer-based World Starts With Me (WSWM) sexuality education curriculum of Rutgers WPF to train youth/ schools [43]** which helped to improve planning and implementing SRHR services. Rutgers WPF is the lead partner of the SRHR Alliance (*source: end line workshop*). However, Amref ET started working with the WSWM curriculum in 2013 as part of another project (with ICCO, funded by Dutch Embassy) in the same geographical area as the UFBR project. It is complementing and linked to the UFBR programme, but it is not part of the programme. In the UFBR programme Amref has developed its own sexuality education and life skills manual (*source: feedback CFA*).

Program priority areas [42] were identified with the help of Amref's Strategy Reproductive Maternal Child Health (RMCH) developed in June/ July 2012 [41] (*source: end line workshop*). Programme priority areas are also identified during the annual SRHR Alliance review meetings for national programme coordinators [38] in the Netherlands (*source: end line workshop; Reflection on the Outcome Monitoring Process and Methodology@24122013-Teweld; Logical Framework for UFBR project 2011-2015*)

Improved networking skills for advocacy and lobbying on SRHR issues [25]

A second reason for improved staff competencies to deliver SRHR services is that staff have improved their networking skills for advocacy and lobbying on SRHR issues [25] (*source: endline workshop*). This is the result of better understanding of staff of the link between service provision, knowledge about SRHR issues and creating an enabling environment, which includes the policy environment [24] (*source: endline workshop*) to provoke positive behavioural changes in SRHR issues. According to Amref staff the better understanding of these relationships and their interaction were a result of two MFSII capacity development interventions: the SRHR workshop on sexual behavioural change in December 2013 [2] (*sources: endline workshop; CFA assessment sheet B*) and the workshop on the current policy environment on SRHR conducted in March 2014 [17] (*sources: endline workshop; CFA assessment sheet B; 2014.03.17 Policy implementation training minutes*), both from the SRHR Alliance.

The "SRHR workshop"/ training on sexual behavioural change in December 2013 (2)

provided the 18 participating staff members from Amref ET, YNSD, TaYA and FGAE, the four partners from the UFBR and ASK programmes, with more factual knowledge on key SRHR concepts, adolescent development, sensitive topics like homosexuality, the SRHR situation in Ethiopia; and on comprehensive sexuality education. In the longer term it is expected to lead to a more comprehensive sexuality curriculum [9], and more comprehensive and factual and rights-based sexuality information in communities [10]. (*source: CFA assessment sheet B*).

The Policy/ advocacy implementation training workshop [17] complemented this factual knowledge with knowledge about (different types of) advocacy, advocacy activities already carried out in ASK & UFBR, an overview of relevant Ethiopian laws and policies, making of problem trees and identification of advocacy topics, stakeholder analysis, and drafting of an advocacy plan. The training resulted in a better understanding among the 17 participating staff (from the four partner organisations of the UFBR and ASK programmes) of what advocacy is and could achieve. According to Amref staff at the endline workshop the training workshop has led Amref to team up with Alliance members like TaYA (Talent Youth Association) on policy advocating and lobbying on SRHR issues and helped to identify informed action for lobbying and advocacy. In the longer term it is expected from this training workshop that an advocacy action plan will be implemented with partners [8] (*Sources: CFA assessment sheet B; Final work plan UFBR 2014*).

Amref-ET is not lobbying & advocating itself due to legal restrictions, but is the interlinking organization that provides information to other organizations that do lobby & advocacy. However, they do their share of 'policy influencing' through their contacts with government officials, for instance by organising workshops on SRHR for government officials. E.g. in 2012 Amref conducted a workshop to strengthen SRHR networking at Awash town with partners and NGOs working in SRHR. The workshop

aimed to strengthen the network of these organizations in the region. The objective of the workshop was that the SRHR sector is better able to individually and jointly implement interventions, learn and carry out lobby/advocacy activities and achieve sustainable results. (*source: end line workshop; 2012 Amref annual report*). Nowadays, at the grassroots level community members like youth associations, community leaders, religious leaders, etc. are doing advocacy and lobbying to create awareness creation on communities' perception on SRHR service provision by Amref. Also, Amref is member of different alliances and member of networks and is mentioned as the main influential NGO on SRHR issues in Ethiopia particularly in pastoral areas of the country like Afar, South Omo and as of this year Somalia Region asked by the government. This influence helped to have more influence on policy advocacy and lobbying (*sources: end line workshop; Final work plan UFBR 2014*).

Improved knowledge on gender, sexuality and SRHR issues [3]

This is the third reason for improved staff competences to deliver SRHR services. This knowledge was improved because of the following reasons:

- Regular scheduled visits and advice from programme managers [11]
- The MFSII SRHR workshop on sexual behavioural change Dec 2013, MFSII [2]
- Cascaded training to other staff of MFSII Alliances (international) workshops and training [22]
- ToT in RSH/PCMT, April 2014 [40] – non MFSII

Staff indicated that especially the **regular visits and advice from organisational leadership and programme managers**, notably of the National Programme Coordinator [11] have contributed to a better exposure to sexual diversity issues [3] (*source: end line workshop*).

The improved knowledge on gender, sexuality and SRHR issues [3] was also gained at the **SRHR workshop on sexual behavioural change in December 2013 [2]**

Amref staff also benefitted from “**cascaded training**” [22]. These are often international training/workshops at which only few staff can participate [22] (*source: endline workshop*). These cascaded trainings included:

- Annual SRHR Alliance review meetings in the Netherlands [38] (*source: endline workshop; Logical Framework for UFBR project 2011-2015*). At these meetings all National Programme Coordination units of the Alliance come together and share experiences. According to Amref staff participation of the National Programme Coordination unit at these meetings helped staffs to better understand sexual diversity issues (*source: endline workshop*).
- Participation at an international workshop in Nairobi (April/May 2012) on sexual diversity, attended by steering committee members and the previous National Programme Coordinator [39] was mentioned as having improved staffs exposure and knowledge about sexuality issues [3] (*source: endline workshop*).
- The annual training in comprehensive sexual education and gender organised by the maternal neonatal and child health programme Amref HQ in Nairobi [21] (*source: endline workshop; CFA assessment sheet B*). These training workshops for Amref staff from different country offices took place in March 2012 in Nairobi, in March/April 2013 in Uganda and in April 2014 in Nairobi again. In 2012 workshop participants were introduced to gender and gender based violence. In 2013 participants were introduced to sexuality, sexual behaviour and violation of sexuality. In 2014 a field visit was made to a (SRHR?) trained area in Kenya. Especially at this training staff were expected to pass this on to other staff, e.g. the procurement officer who participated provided lessons and also went to south Omo programme area to discuss it with colleagues there [21] (*source: end line workshop*).

Furthermore, Amref staff enhanced their knowledge on sexuality and reproductive health issues by participating in the **ToT in Sexual and Reproductive Health (SRH) and Prevention of Child to Mother Transmission (PCMT) training in April 2014 [40]** (non-MFSII) (*source: end line workshop*).

Change in attitude and more openness to talk about sex and sexuality [14]

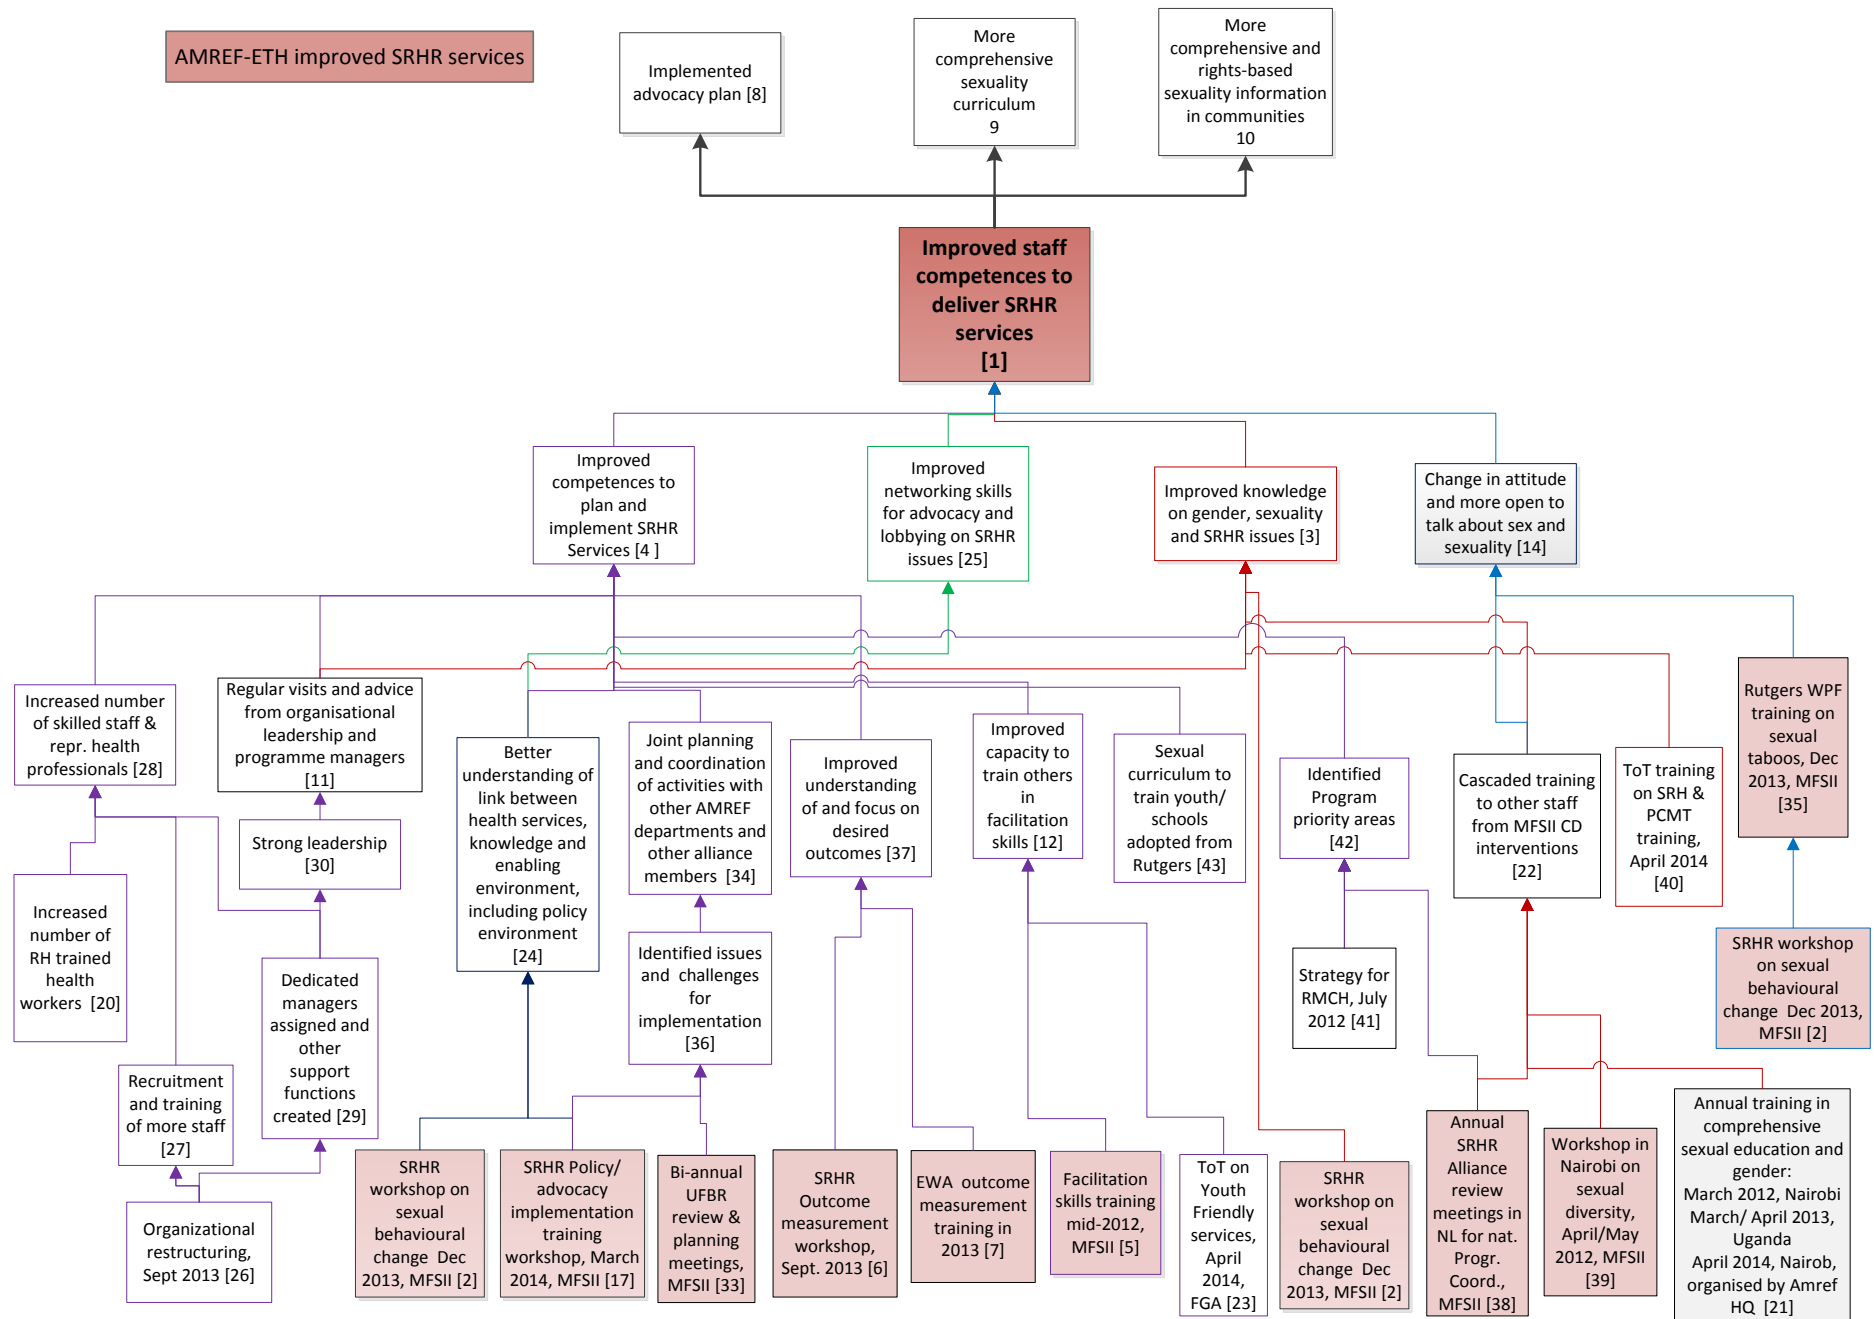

Staff's competences to deliver SRHR services are also influenced by a change in staff's attitude and more openness to discuss these sensitive issues. [14] (*sources: endline workshop; CFA assessment sheet A*). According to Amref staff and CFA this was achieved by the following interventions:

-
- Cascaded training to other staff from MFS II capacity development interventions [22]
 - the MFSII SRHR workshop on sexual behavioural change Dec 2013 [2], in particular the Rutgers WPF training on sexual taboos [35] that was given during that workshop

By passing on the information that was discussed at the international training workshops on sexuality, SRHR and sensitive and taboo issues to staff with “**cascaded training**” [22] (see above), staff automatically needed to discuss and be open about these issues themselves. At the endline workshop they acknowledged that this has caused changes in their attitude about sex and sexuality and that they became more open and free and less shy to discuss these issues, not only among colleagues, but also among family. It has also helped to discuss these issues at field level where they are often not well understood by the community (source: end line workshop).

The **Rutgers WPF training on sexual taboos in December 2013 [35]**, during the SRHR workshop on sexual behavioural change [2], was mentioned by the CFA, who indicated that there was a noticeable change in mind set because of training of Rutgers WPF about taboo subjects like abortion and homosexuality. With this training Rutgers WPF tried to make staff see the difference between facts and opinions about these subjects (*source: CFA assessment sheets A and B*).

Please note that the numbers in the visual below and the narrative above correspond to each other.

4.3.2 Improved planning, monitoring and evaluation (PME) Capacity

Based on Amref self-assessments, interviews and end line workshop discussions, improved Planning, Monitoring and Evaluation (PME) capacity came out as a prominent change/improvement since the baseline. Amref staff at the end line workshop as well as the Amref-NL programme officer specified the PME changes/improvements compared to the baseline as follows:

- M&E is now considered as the main agenda for higher management; M&E results and information are now used in new proposal writing and development; there is regular (monthly) and joint review of project performance of all projects instead of once or twice a year conducted by a separate unit or person; timeliness, completeness and quality of reports has improved; M&E is more outcome oriented now. Previously, the focus was just on monitoring activities and outputs, and reflective meetings and critical reflection were not regular.
- Amref-ET has evidence-based planning now based on M&E results: planning is more flexible and realistic, i.e. based on available resources and capacity; there is joint planning and reviewing within Amref departments, i.e. programme, project, finance, and M&E staff all develop proposals jointly. Previously this was done only by the programme manager. According to staff implementation performance of projects improved of 65-80% of the projects because of improved planning. Now they are able to make realistic plans as well as implementing as making the necessary follow up.
- Furthermore, stakeholders like government; local implementing partners and key international partners are now involved in project development and during annual evaluation and planning, which was not the case before.
- Amref-ET also has an enhanced role in supporting (financially) and participating in Woreda based planning (plan and budget preparation process) coordinated by the Ministry of Health (MoH). This means that Amref-ET is contributing to government planning by mapping its resources and sharing this at “platform level” (gatherings of organizations working on similar issue created by the government, mainly MoH and regional bureaus). In this platform programs are jointly implemented. Amref-ET contributed with ToT trainings (with financial & technical support) given to staff who are expected to give training to lower level implementers.
- The Organisational Capacity Assessment (OCA) report Amref ET of 2013 concluded that “PME systems that promote learning registered improvement from 2.41 in 2011 to 2.50 2013, the team indicated that there has been capacity building in PME, and reporting of results has improved”

Two key areas can be distinguished that contributed to these improvements:

1. Improved planning capacity (26)
2. Improved M&E capacity (2)

According to Amref-ET staff the biggest drivers for the improved PME capacity (1) in general were:

1. Leadership change (a new Director was appointed in April 2012 [31])
2. Reprogramming/ restructuring of the organization, effective from October 2013 [32]
3. Standardization of M&E tools and procedures [41], which Amref staff mentioned as ‘System strengthening’, including developing standards for different professionals on how to implement projects and systems.

How these “drivers” and other factors have led to the improved planning capacity [26] and improved M&E capacity [2] is described below.

Improved planning capacity (26)

Planning capacity of Amref-ET has improved due to 4 main reasons:

- Improved management support to field offices and planning exercises [37]
- Improved planning knowledge and skills [29]
- Change from regional, geographic planning/ geographic approach to programme-based planning [38]
- New PME organizational structure and new PME staff hired [33]

Also improved M&E capacity [2] is contributing to improved planning capacity [26], this will be described separately.

Improved management support to field offices and planning exercises [37]: according to Amref staff at the end line workshop, there is improved participation of management staff in the planning process (both technical and financial) with Amref-ET key departments (*Sources: end line workshop*). HQ management staff, i.e. Programme, HR and Finance staff as well as the National Program Coordinator pay more field visits to Amref field offices. The more regular scheduled field visits help to provide staff onsite support and ground level problem identification and analysis. More involvement of HR staff in field related activities has led to better understanding of the field situation and team work. Improved management support was a result of the organisational restructuring in September 2013 [32] (*Sources: end line workshop; CFA assessment sheet A; almost all assessment sheets and interviews with staff*), which came about as a result of a behavioural survey [39] (*Source: end line workshop*). This was initiated by the new country director, who was appointed in April 2012 [32] (*Sources: end line workshop*). The behavioural survey [39] helped to identify gaps and flaws in the organization and this led to restructuring of the organisation. The change in organisational structure involved creating different departments and delegation of responsibilities to the (newly appointed) program managers of these departments. Before all decisions had to be taken or needed to be approved by the (Deputy) Director, which caused delays in programme implementation. Since September 2013 decision making power has then partly been delegated to the new management layer. This resulted in more timely decision making and a more pro-active approach. (*Source: CFA assessment sheet A*). Now programs have their own focal persons. Everything is more structured with the new programme managers (*Sources: end line workshop; CFA assessment sheet A; almost all assessment sheets and interviews with staff; Amref Programme Management System (APMS) Guide 2013-June 28th*)

Improved planning knowledge and skills [29]: the improved planning knowledge and skills are a result of improved understanding of the concepts and use of the Theory of Change (TOC) [34] (*Sources: end line workshop; CFA assessment sheet A*), a shared understanding and coming to an agreement about previous year performance and coming year planning [11] (*Sources: end line workshop; CFA assessment sheet B*), and an improved understanding of theory and use of planning concepts like logframe, indicators, reporting & planning formats, etc. [13] (*Sources: end line workshop; CFA assessment sheet B*). According to Amref staff these improved planning knowledge and skills are to a large extent the result of the Ethiopian WASH Alliance (EWA) annual reporting and planning workshops [3A-Feb 2012, 3B-Feb 2013, 3C-Jan 2014] (*Sources: end line workshop; CFA assessment sheet B*). At these workshops the different EWA partners came to a common understanding of their performance in the previous year and the targets and activities for the coming year [11] (*Sources: end line workshop; CFA assessment sheet B*), with the help of visualizing this with a Theory of Change (ToC). Each year other PM&E subjects get special attention. In the 2013 workshop, the theory and concepts of ToC [34] were discussed and used for planning, as well as the common planning concepts and tools (logframe, indicators, reporting & planning formats)[13] (*Sources: end line workshop; CFA assessment sheet B; Report on EWA workshop reporting ToC report 25 Feb.-1 Mar.2013*). At the planning workshop of 2014 outcome measurement [16] got special attention. (*Sources: end line workshop; CFA assessment sheet B*).

Change from regional, geographic planning/ geographic approach to programme-based planning [38]: according to staff at the endline workshop this was a result of the organizational restructuring [32]. Before this, it was difficult to support the regions as there was bad communication between HQ and field. The field was more or less autonomous. Now there is better communication between the regions and HQ because the operations are planned programme based rather than geographically organized. (*Sources: end line workshop; self-assessment sheet F (management staff)*).

New PME organizational structure and new PME staff hired [33]: with the restructuring of the organisation [32] a PME department was created and a PME manager appointed which enhanced the focus on PME. New and more senior staffs were employed. The size of MFS II funding (which came from both SRHR and WASH Alliances) allowed Amref to hire new PME staff, which was needed because of a growing programme portfolio. Amref staff: "now we have both dedicated M&E officers and programme managers, before we had no programme managers. Now extra hands are serving under the head of programme: new and more senior staffs are employed" (*Sources: end line workshop; CFA assessment sheet A; Field trip report ML&GB 16-24 September 2013*)

Improved M&E capacity (2):

According to Amref staff at the endline workshop the M&E capacity of Amref improved because of:

- New PME organizational structure and new PME staff hire [33]
- Improved report writing skills [22]
- Improved M&E knowledge and skills [40]
- Use of standardized M&E procedures and tools [41]

The **new PME organizational structure and new PME staff hired [33]** are a direct result from the restructuring [32] and MFS II funds allowing hiring PME staff, for both see above. Both MFSII Alliances paid the salary for M&E managers and coordinators at national level but the salary for the top management came from the overhead cost of projects. In the first quarter of 2014, a new M&E manager was hired, who also plays an important role in the further professionalization of the organisation's M&E system, and its alignment with the overall Amref Health Africa M&E system. The SRHR Alliance⁶ has hired a PME coordinator for one year to assist the three organisations with the mid-term evaluation. This PME-Coordinator is supporting the National Programme Coordinator of the UFBR and ASK programmes. Both the National Programme Coordinator and the PME Coordinator are "hosted" by Amref, but are working for the SRHR Alliance (UFBR programme) and the Youth Empowerment Alliance (ASK programme). The PME coordinator started in October 2013. He is responsible for PME of the ASK & UFBR programme, including the outcome measurement of the UFBR programme and the baseline of the ASK programme. Furthermore, there was a PSO capacity building programme (Dutch funded but non-MFSII) [18] to build capacities of managers (3-year project) (*Sources: end line workshop; Baseline report*). This was meant to develop human resources and implement more projects. Because of this Amref-ET increased its overhead. One of the M&E officers was paid from the PSO funding (2009-mid 2012). Those positions were very critical, but this ended mid-2012. Hiring new M&E staff was also the result of two organizational capacity assessments (OCA) [21], requested by the Dutch Government as a condition for MFS II funding, and carried out for programmes within the SRHR and WASH alliances, to determine Amref-ET's ability to deliver results to their clients (*Sources: end line workshop; Baseline report*). The OCAs were internal and done twice, one in November 2011, one in November 2013 with Alice Lakati (Nairobi Amref office). During the OCA 2011 it was found out that M&E was one of Amref-ET's weaknesses. Staff rated their own capacity and problems, management followed up. This resulted in

⁶ Note: The SRHR alliance consists of three partners: Amref, YNSD and TaYA. The Youth Empowerment alliance consists of four partners: Amref, YNSD, TaYA and FGAE. Both programmes focus on SRHR, but are implemented in different geographical areas and have a different focus.

more resources for M&E, more M&E staff (33), and more (PSO funded) training [18] (*Sources: end line workshop; Baseline report; OCA report 2011*). The second self-assessment recorded growth in thematic and programmatic aspects of WASH and SRHR, resource mobilization, human resource management and PME systems that promote learning. (*Sources: end line workshop; CFA assessment sheet A; OCA Amref ET final report 2013*)

Improved report writing skills [22]: The improved quality of reports is mentioned by the CFA as a particular element of the improved M&E capacity. Also the OCA of 2013 concluded that compared to 2011 the reporting on results and quality of reporting had improved. It also concluded that PME has been strengthened because there are new systems [33] and reporting of results has improved (*Sources: end line workshop; CFA assessment sheet A*). Project staff has been trained by Amref HQ in report writing. According to Amref staff the continuous request and or/feedback from donors for timely and quality reporting [47], especially from the Amref-NL office, has pushed them to improve report writing. This request and/or feedback from donors was also made during the annual (MFSII funded) WASH workshops (3A, 3B, 3C) (*Sources: end line workshop; EWA workshop planning reporting ToC report 25 Feb-1 Mar 2013*). Amref-ET staff realizes that if reporting is done well, Northern Amref offices (US, Canada and Europe) can focus better on fundraising. Contact with donors is indirect through the intermediary offices in the North. There are visits and feedback from these offices and donors [53] about reporting, planning and evaluation and other general issues (*Sources: end line workshop; CFA assessment sheet A*). When they see a problem they alert Amref Ethiopia. They also alert Amref-ET to think about standardization and the need for timeliness and quality reports [47] (*Source: end line workshop*). On a quarterly basis some of these issues are further discussed with Amref-NL. Report writing skills have also improved because of checklists that have been developed for reporting [46] by the Amref-ET office as well as tools for customized/developed flowcharts for each project [52] (*Sources: end line workshop; 2014 annual plan; Amref Programme Management System (APMS)*), including time frame. Also, Amref staffs mention that there is a new quality assurance team [54] in addition to the new staffing – they are thinking about sending automated reminders in the future (the internal QA officer of Amref-ET learned about this from Amref Tanzania during an exchange visit). (*Source: end line workshop*). The SRHR alliance gave training on online reporting. However, the online reporting has been abandoned because it could not deliver what the Alliance had expected. In addition, outcome reporting training was given by Amref-NL to staff (*Source: 5c endline interview M&E staff*)

Improved M&E knowledge and skills [40]: Project staff has been trained by Amref HQ and Amref NL in M&E and this has increased staff's knowledge of and involvement in M&E. Compared to the baseline, field staff of the SRHR and WASH Alliances projects have more attention to regular monitoring of progress, and are more actively involved in data gathering. In 2013 both Alliances focused more on outcomes, for example in the mid-term evaluation of the UFBR programme, which focused on the functioning of the SRHR Alliance in Ethiopia and on the mid-term results of the programme. In addition to this, the (Amref-NL) M&E adviser and the country lead have been very active in providing M&E support and constructive comments on reports to the field teams. According to Amref-NL investments in the M&E knowledge of staff has paid off (*Sources: end line workshop; CFA assessment sheets A and B*).

In early 2012 PME training for MFS II project staff and partners (SRHR & WASH) (PME staff, project staff, government and local partners) was given to understand result areas, new formats, and familiarizing to new formats. [56] This training was customized and targeted to the reporting formats of the projects. Also general PME topics were introduced. After this training, the staff had internalized their knowledge for reporting (*Source: end line workshop*).

In June 2012 a PCM and PME training on M&E tools was given (MFS II, SRHR alliance)[6], familiarizing staff, local NGOs, and government partners with the new PME format and this has led to improved PME skills and knowledge on the UFBR project, internalization of M&E project components and performing as well as thinking up to outcome level/results [16] (*Sources: end line workshop*). An Amref ET manager found this training very useful because practicing PCM and PME helped on the project implementation

and monitoring at field level with colleagues and local partners. It also helped to discuss with government partners on the PCM and PME implementation at field level in the health facilities and communities, for example in the Regional Health Bureau (RHB) and at district level. At health facility level it improved recording, reporting and documentation. At organisational level he noticed an improvement in transparency, discussions with the team and follow up and analysis of result /outcomes of monthly performed activities against planned activities. (*Source: PCM and PME training June 2012_5c endline questionnaire training management perspective*).

Both SRHR and WASH Alliances invested a lot in training on outcome measurement which contributed to the improved knowledge and skills [40] and focus more on outcomes instead of only outputs [16] (*Sources: end line workshop; CFA assessment sheets A and B*). Starting from the end of December 2013 until mid-February 2014 a mid-term review of the UFBR programme [5] was carried out, which focused on the functioning and the results of the SRHR Alliance in Ethiopia. A one week outcome measurement training was conducted in September 2013 [7] in Addis Ababa for all staff involved in the mid-term evaluation. This PME-outcome measurement training was given to ensure a good execution of the mid-term evaluation of the UFBR programme. It enabled staff to do focus group discussions and increased M&E capacity for Outcome Measurement (16), including qualitative methods. This resulted in a combination of both quantitative and qualitative tools used to gather and triangulate information [4]. Field staff was actively involved in the evaluation (*Sources: end line workshop; CFA assessment sheets A and B; 2013.10.02_Report bi-annual meeting UFBR and OM workshop*). One of the project officers who participated to this training declared that the training had an effect on the organizational capacity because the organisation's objectives are to bring outcomes that benefit the community. Therefore, knowing how to measure those outcomes is very crucial. It even influenced his thinking in daily life: he realized the difference between outputs and outcomes, so when performing activities he now focuses on how to achieve the outcome. Another participant found the training very useful because it enabled them to identify weaknesses and strengths of their project and how to improve the project performances. However he claimed that time was too short to include all measurement tools and to practice the tools properly, and that additional outcome measurement training was desired. The participants said they improved their knowledge and skills in outcome measurement, and more specifically how to conduct in-depth interviews, develop questionnaires and conduct Focus group discussions. (*Sources: 2 X Outcome Measurement Sept 2013 5c endline training questionnaires participant perspective*)

Also the WASH alliance organised outcome measurement training:

- A PME/Outcome measurement training was conducted in Awash for one week in Nov 2012 by the WASH alliance [35]; (*Source: end line workshop*).
- Furthermore an Outcome Measurement Capacity Building training workshop was held in September 2013 [15] (*Sources: end line workshop; CFA assessment sheet B*); The report (*Reflection on the Outcome Monitoring Process and Methodology*) says: "Before embarking on the measurement of the outcome results for 2013 of the WASH interventions of the eight EWA partner organizations, the PME adviser of the DWA organized this capacity strengthening and support activity for the EWA partners. The rationale to initiate this capacity strengthening and support activities to partners was input from partner organizations on need for capacity strengthening and underlining of the same by the Country Coordinators during the DWA Country Coordinators Workshop held in October 2012". The training workshop included monitoring and evaluation, data and their types, data collection methods, sampling techniques, outcome and outcome indicators as the main topics. It also included FLOW for data collection [36] with the help of digital device such as tablets or smart phones. (*Sources: CFA assessment sheets B; Reflection on the Outcome Monitoring Process and Methodology@24122013-Tewelde*)

According to Amref staff there was experience sharing and learning in the international annual M&E managers meetings of country offices worldwide [42], in 2013 in Uganda and end of March/early April 2014 in Tanzania [44] (*Source: end line workshop*). At these meetings the M&E managers or training organizers provide training feedback for Amref offices which helps to correct PME gaps they have; M&E staff also participated in enriching different guidelines for Amref. Project areas are visited, looking at implementation of projects in relation to M&E. Some of the tools are practiced and shared between the

countries. In 2014 there was a special training topic on strengthening research linkages with M&E [45] (*Source: end line workshop*).

Amref staff at the endline workshop mentioned that the BMFS-foundation gave training on M&E, developing logframe and M&E tools [48] just after the start of the TB/HIV project in September 2012.

Staff M&E knowledge and skills were also improved by the PSO financed (Dutch, but not MFSII) capacity development programme [18], also mentioned above. This was developed as a result of an organizational capacity assessment (OCA) [21] in 2011, requested by the Dutch Government as a condition for MFS II funding. As mentioned above, this influenced the training that took place to address the identified capacity gaps, including M&E training as this was identified as a weak area (*Sources: end line workshop; CFA assessment sheet A; baseline report*).

Other training was funded out of a Training fund [49] arranged by Amref Ethiopia and funded from projects, e.g. to send people to trainings in Nairobi organized like a business venture. 2% of salary is put in a pot for learning. (*Source: end line workshop*)

Use of standardized M&E procedures and tools [41]: According to the CFA the M&E system of Amref-ET has continued to improve and has been professionalized. More qualitative tools are used now (*Source: CFA assessment sheets A*). According to Amref Programme staff as well as administrative and HRM staff, M&E systems are well integrated and linked with programs and projects. According to programme staff this was partly a result from financial MFS II support for M&E systems (*Sources: end line workshop; interviews with programme, and admin and HRM staff*). Also quality assurance guidelines have been developed and a Program Development Online data system.

Now there are Standardized M&E procedures and tools (41) for programme management (data collection, reporting, and presentation), developed by M&E departments, initiated/ adapted/ modified/ developed by HQ, and put in practice since March 2013. It was financed by NL. Some procedures and tools are new, others were pre-existing, but adapted and modified for Amref purposes. Thus, it was compiled by HQ, but funded with MFS II money (*Sources: end line workshop; self-assessment sheets of management, program and field staff; Amref Programme Management System (APMS)*).

The abovementioned Amref Programme Management Systems (APMS) [51] is mandatory to be used by the project managers for planning, follow up etc. The APMS existed before 2011, but was revised in 2013. The revision has integrated other Amref processes and information systems to minimise duplication of efforts and use one platform in designing as well as implementing projects and programmes in Amref. It has also summarised steps and milestones for each phase and linked to this draft. Additionally there are annexes and tools with links on the intranet for easier reference as well as the Technical Assistance Framework. According to Amref staff after revision this has become the “Bible/Koran”. It has 7 steps that each project manager needs to know. Before revision, the utilisation was poor. Management is now demanding staff to use the APMS and therefore PME is improving. It is not directly because of this guide, but to the focus of the manager to use the policy. (*Source: end line workshop; Amref Programme Management System (APMS)*)

As also explained under “improved reporting skills” (above), checklists have been developed for reporting [46] within Amref offices, and tools for customized/developed flowcharts for each project [52]. Earlier different formats were used for logframes or flowcharts for different projects, these are now standardized. (*Sources: end line workshop; 2014 annual plan; Amref Programme Management System (APMS)*). The reporting checklists that were developed for different staff functions [46] help the manager to monitor projects. (*Source: end line workshop*)

During the international Amref M&E annual meeting in March 2014 [42] there was practice with tools, and rolling out of standardized tools in the field (*Source: end line workshop*).

In Feb 2014 there was an M&E training based on Amref’s M&E training manual with principles, guidance, etc. on M&E [43], for middle level managers in Addis for Amref Ethiopia staff – the manual is focused on

standardizing M&E systems within Amref, how evaluation is taking place, how to develop ToRs, etc
(Source: end line workshop).

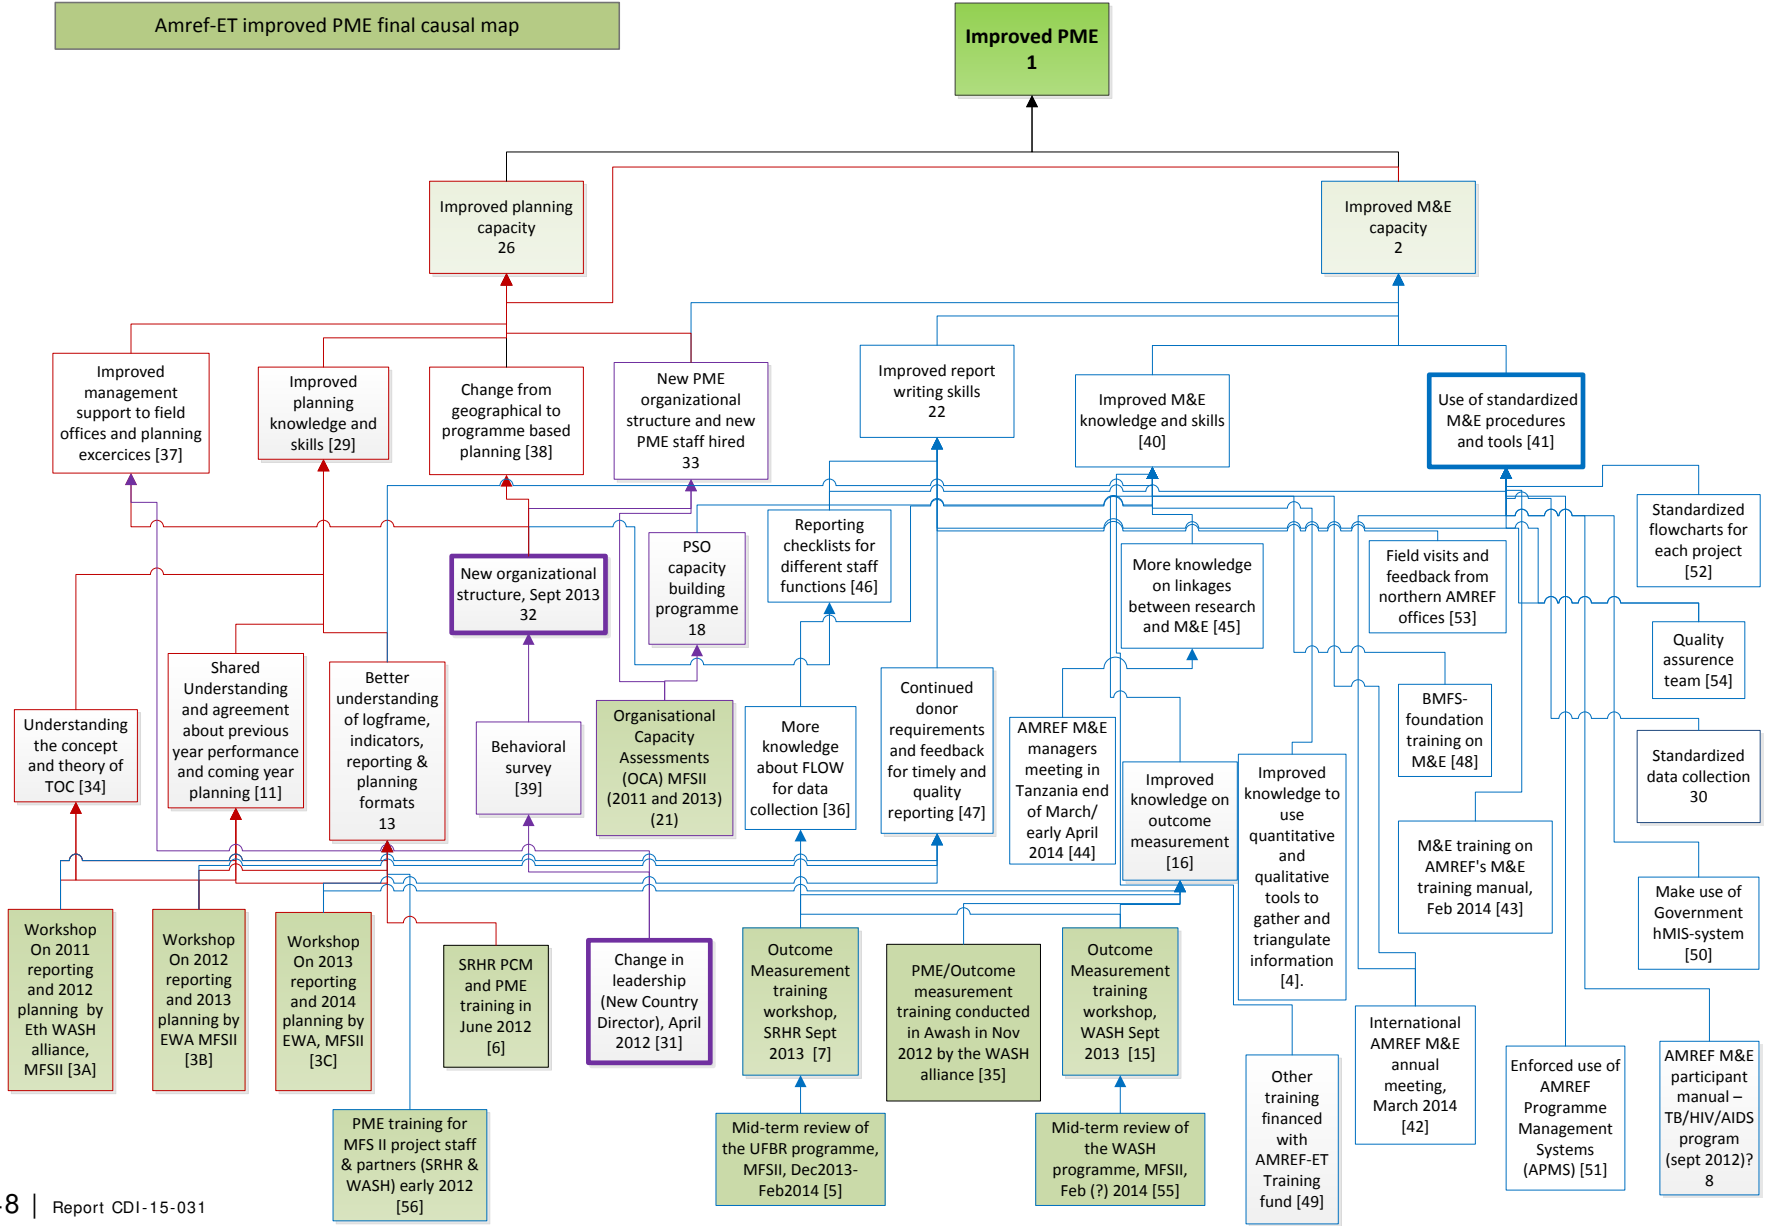

According to the APMS the M&E system must promote the use of nationally approved data collection tools including the Community Based Health Management Information System (CBHMIS) [50]. This was confirmed by Amref staff. Therefore they sometimes do not have to collect their own data. (Source: end line workshop). Also, there is a new quality assurance team [54] in addition to the new staffing, which has influenced the use of standard M&E procedures and tools. (Source: end line workshop).

In addition to the above mentioned issues, there is also the Amref M&E participant manual of the TB/HIV/AIDS program (sept 2012) [8] (source: Amref Monitoring and Evaluation Participant Manual 25092012): The manual is tailored towards Monitoring and Evaluation (M&E) capacity enhancement for Amref Ethiopia. This guide to planning, monitoring and evaluation has been developed to aid the management of TB⁷ programmes to equip Amref staff and partners to collect standardized data and help in the interpretation and dissemination of these data for programme improvement. Amref staff at the endline workshop mentioned that they “borrowed” from these monitoring tools for other programs.

Please note that the numbers in the visual below and the narrative above correspond to each other.

Amref-ET improved PME final causal map

5 Discussion and conclusion

5.1 Methodological issues

In preparation for the assessment, the Ethiopian 5C assessment team visited Amref Health Africa Ethiopia (Amref) staff in the organizations' head office in Addis Ababa and explained the purpose and the process of the 5C end line assessment. During the visit the team agreed on the workshop dates including the type and number of staff who would attend the workshop. In addition to this, the team also gave the "support to capacity development sheet" to be filled by Amref staff.

The Ethiopian 5C assessment team conducted the assessment in four visits. First visit, to conduct the self-assessment workshop with a total of 15 participants and ask the staff to fill the self-assessment form in their respective five subgroups (management (3); program (3); M&E (3); HRM and administration (4) and field staff (2)). Out of the 15 participants, 13 were present during the baseline study in 2012. This was followed by a second visit to carry out a brainstorming session and develop a general causal map that explains the key organisational capacity changes that have happened in Amref after the baseline in 2012. The third visit was made to conduct an interview with one representative from each subgroup to triangulate the information collected through the self-assessments and to better understand the organisational capacity changes in Amref's capacity since 2012. This was done after the 5C assessment team reviewed the completed self-assessment forms. Finally, the fourth visit was made to carry out the process-tracing workshop. In the process tracing workshop three change areas that were identified based on the review of the various documents received from the SPO and CFA, including the results of the self-assessment workshop, were presented to the workshop participants. First they were asked if they also agreed with the team's assessment in terms of this key organisational capacity change to focus on during process tracing. These were organisational capacity changes within the capability to act and commit and the capability to adapt and self-renew and which could possibly be linked to MFS II capacity development interventions. Whilst an initial causal map was drawn, a workshop causal map was drawn fresh, and after verification, information from the initial causal map was incorporated.

The process tracing exercise helped to get the information for description of changes in organisational capacity, and the attribution of changes in capacity of Amref to specific factors and (MFS II and non-MFS II funded) the capacity development interventions.

The evaluation team also collected data from staff that attended the different trainings they received since the baseline in 2012 and the change that has come about at personal or organizational level as a result of the trainings. The information generated from these training questionnaires was integrated into the process tracing causal maps.

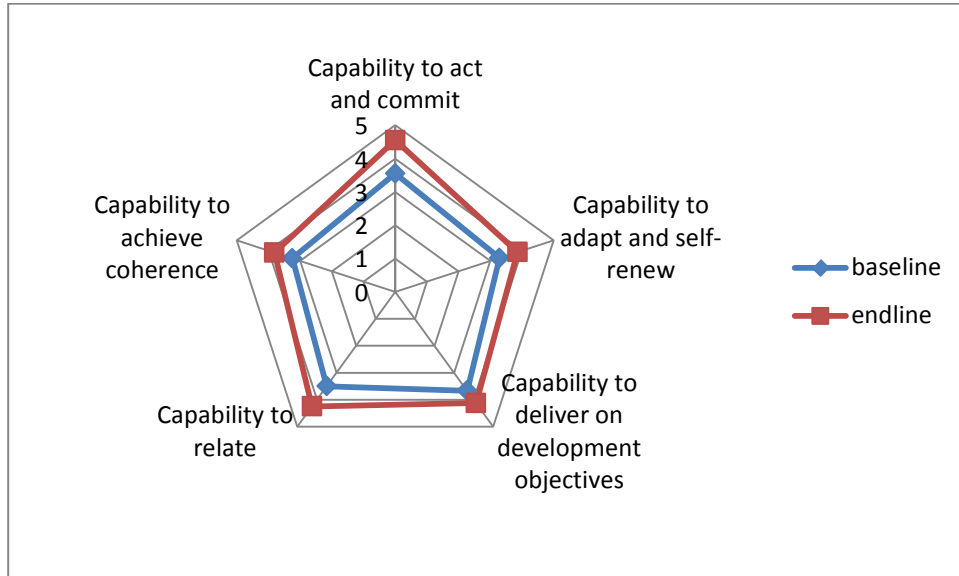

The plan of the evaluation team to also conduct two interviews with Amref partners materialized partially. One interview with a partner was conducted successfully through email. However, the interview with the other partner failed because the interviewee declined to respond to the questions because he had little knowledge about the questions asked.

By and large, there has been a lot of information available to be able to do adequate data analysis.

5.2 Changes in organisational capacity development

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Below the changes in each of the five core capabilities are further explained, by referring to the specific indicators that changed. In all of these capabilities improvements took place.

Over the last two years many improvements took place in the indicators under the capability to act and commit. The new leadership introduced a matrix style organisational structure and appointed new programme managers. This led to more timely decisions and better technical support and strategic guidance for staff. Field staffs are now also better guided by management. There was a slight improvement in the indicator on staff turnover as staff retention has been successful due to internal promotion of staff and ample opportunities for capacity building. With the new organisational structure, organisational management also improved. Amref now has a strategic document and a Visibility, Growth and Competency (VGC) document that has been developed based on situational analysis. The skills of staff improved in project cycle management, technical issues, finance, M&E and logistics. This was mainly due to training from e.g. the SRHR and WASH Alliances. Due to the reestablishment of the Training Committee the right staff go to the relevant trainings for them and the training budget is used in a better way. Staff financial incentives improved in terms of hardship allowances and per diem for staff. Amref has diversified its funding base to 30 donors and has doubled its operational budget since the baseline. The fundraising procedures also improved as there is now a fundraising manager and clear internal procedures for fundraising strategies.

In the capability to adapt and self-renew Amref also improved all indicators. They improved their M&E implementation because of having a pool of M&E experts, a new Amref Information Management System (AIMS) in place, an M&E manual, which all lead to better reports. In terms of M&E competences, there is more M&E staff who have improved their M&E skills in SRHR and WASH Alliances trainings. Following the new structure, there is now an M&E manager who oversees the M&E at program level. Management has worked on an overview of evaluation results to use for decision making. The new leadership has also established a forum to discuss performance and project implementation for critical reflections. Discussions are noted down in action points and action on these is tracked. Because of the delegation of decision making power (to programme managers) staff feel more free to discuss their ideas. Amref is now scanning its operating environment more systematically through e.g. increasing their representation at the Ministry of Health through Technical Working

Groups. The organisation is also more responsive to stakeholders like the government and community by involving them in problem identification and M&E.

In terms of the capability to deliver on development objectives, Amref again shows some improvement in all indicators. Operational plans are now regularly revised and staff is eager to learn from results and adhere to operational plans. Through the new project management structure there is a pull system for effective use of resources like vehicles and equipment which has led to more cost-effectiveness. Budgets are revised to be realistic and linked to timely planning which has helped in better delivering on planned outputs. A beneficiary feedback mechanism strategy has been institutionalised and is now being piloted. In terms of monitoring efficiency, there are regional based assessments for joint monitoring of results. For balancing quality and efficiency Amref has a quality assurance mechanism in place, works with its AIMS and has better record keeping than during the baseline.

In the capability to relate, Amref has improved as well. Stakeholders are now engaged during the programme design phase. Amref is involved in new networks due to its ASK programme with the Youth Empowerment Alliance. The new organisational structure has led the Country Director and Deputy Country Directors to visit the programme sites more regularly. In terms of internal relations, there is now a communications department with a communications manager who resolves disputes through subcommittees. There is also a new HR and admin manager and communication lines are shorter. This all has improved the relations within the organisation.

Finally, Amref has improved in its capability to achieve coherence because all staff have been involved in revisiting the vision, mission and strategies of the organisation and the VGC strategies have been developed. In terms of operational guidelines, manuals for HR, procurement and quality assurance are now in place and field staff is informed about this. There is also a new knowledge management committee. All Amref's programmes are aligned with the new business plan which in turn is aligned to the strategic plan of the organisation. There is programme integration during the design and implementation phases and some programmes are implemented in the same geographical areas. During the endline workshop some key organisational capacity changes were brought up by Amref's staff: improved leadership capacity, improved staff capacity and improved resource mobilization competences. The evaluators considered it important to also note down the SPO's story and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team.

According to Amref staff present at the endline workshop leadership capacity improved because of a more active engagement of the new advisory council at national level and the international Board at corporate level ; improved leadership knowledge and skills, through continuous and short term training; and performance targets that were set for leaders. These performance targets were set to address the gaps identified in the behavioural survey conducted by Amref headquarters in Nairobi. Staff capacity improved because of improved staff competences in planning, M&E and PCM among others things; improved team coherence and close follow up; and technical support by the management. Staff improved their competences because new staff was recruited; regular experience sharing meetings; and staff training in PME and technical topics. The improved team coherence resulted from the more regular experience sharing meetings. This more frequent experience sharing as well as the closer follow-up & technical support from management can be attributed to the leadership change at Amref country level. The last organisational capacity change that was considered an important change by Amref staff, improved resource mobilisation competences, happened because of improved concept and proposal writing skills of staff; taking up business development as a special focus; increased capacity to create partnerships and Dutch support in terms of salary, training, donor contacts and technical reviews. Staff improved their writing skills because of training and recruiting of staff with fundraising skills. The focus on business development came from organisational restructuring introduced by the new director at country level. The increased capacity to create partnerships can be attributed to the assistance they had in networking from Amref-NL and other offices. On the whole, the changes that were considered as most important organisational capacity changes since the baseline in 2012, were improved leadership capacity, improved staff capacity and

improved resource mobilization capacity. Many of these changes have been brought about by a change in leadership at country level, and a behavioural survey by Amref global. There is no particular mention made of MFS II funded capacity development interventions but during process tracing these have clearly come up and we therefore refer to 5.3, where the role of MFS II funded capacity development interventions in organisational capacity changes of Amref will be further explained.

5.3 Attributing changes in organisational capacity development to MFS II

This section aims to provide an answer to the second and fourth evaluation questions:

1. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
2. *What factors explain the findings drawn from the questions above?*

To address the question of attribution it was agreed that for all the countries in the 5C study, the focus would be on the capability to act and commit and the capability to adapt and self-renew, with a focus on MFS II supported organisational capacity development interventions that were possibly related to these capabilities. 'Process tracing' was used to get more detailed information about the changes in these capabilities that were possibly related to the specific MFS II capacity development interventions. The organisational capacity changes that were focused on were:

- Improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services⁸; and
- Improved planning, monitoring and evaluation (PME) capacity.

The first organisational capacity change falls under the capability to act and commit. The last one (PME) falls under the capability to adapt and self-renew. The organisational capacity change areas that were chosen are based on document review as well as discussions with the SPO and CFA. Each of these organisational capacity changes is further discussed below.

The following issues are discussed for the MFS II funded activities that are related to the above mentioned organisational capacity changes:

- a. Design: the extent to which the MFS II supported capacity development intervention was well-designed. (Key criteria: relevance to the SPO; SMART objectives)
- b. Implementation: the extent to which the MFS II supported capacity development was implemented as designed (key criteria: design, according to plans during the baseline);
- c. Reaching objectives: the extent to which the MFS II capacity development intervention reached all its objectives (key criteria: immediate and long-term objectives, as formulated during the baseline);
- d. the extent to which the observed results are attributable to the identified MFS II supported capacity development intervention (reference made to detailed causal map, based on 'process tracing').

Please note that whilst (d) addresses the evaluation question related to attribution (evaluation question 2), the other three issues (a, b and c) have been added by the synthesis team as additional reporting requirements. This was done when fieldwork for the endline process had already started.

⁸ Amref itself is not providing health care services but capacitating (government) health facilities and health professionals to do so through technical support, training, providing commodities, equipment, renovating and constructing health facilities etc. In addition, Amref is raising awareness in communities on SRHR issues and working with schools and out of school youth on the provision of sexuality education. Amref is also raising awareness of policy makers on SRHR (through workshops and trainings) and trying to influence the government (although not officially due to the Ethiopian legislation).

Improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services

The following MFS II capacity development interventions supported by Amref-NL were linked to the key organisational capacity, change “Improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services”:

1. SRHR workshop on sexual behavioural change, Dec 2013 [2]
2. Policy/advocacy implementation training workshop on SRHR, March 2014 [17]
3. Bi-annual UFBR review & planning meetings [33]
4. SRHR Outcome measurement workshop, September 2013 [6]
5. EWA (WASH Alliance) Outcome Measurement workshop, September 2013 [7]
6. Facilitation skills training mid-2012 [5]
7. Rutgers WPF training on sexual taboos, December 2013 [35]
8. Annual SRHR Alliance review meetings in the Netherlands for National Programme Coordinators (NPCs) [38]
9. Workshop in Nairobi on sexual diversity, April/May 2012 [39]

The numbers between brackets correspond to the numbers in the visual (causal map, see below this section).

The above mentioned MFS II funded capacity development interventions are included here as well as in the causal maps and narratives. This is because the effects of these interventions were observed during process tracing as related to the organisational capacity change area ‘improved staff competencies to deliver sexual reproductive health rights services’, and they came up during document review, endline workshop, interviews and self-assessments.

1. SRHR workshop on sexual behavioural change, Dec 2013 [2]

Design

This intervention was planned during the baseline. Details about the specific design cannot be provided, since this wasn’t the focus of the evaluation. The immediate objective stated during the baseline for SRHR training in general was to provide SRHR Alliance partners with SRHR knowledge, for this particular training it was to provide more factual knowledge on key SRHR concepts, adolescent development, sensitive topics like homosexuality, the SRHR situation in Ethiopia, and on comprehensive sexuality education. The long term objective stated during the baseline was to have a better implementation, for this particular training to have a more comprehensive sexuality curriculum and more comprehensive and rights-based sexuality information in communities.

This kind of knowledge was not mentioned as important in the Theory of Change (ToC) developed during the MFS II 5C baseline survey, but this ToC was very much geared towards managerial and support service topics, not to subject related topics. Two UFBR programme staff members who participated in this training mentioned this training as very relevant, because it increased their knowledge and skills in sexual reproductive health, so that they could improve project performance and achieve the project goals. They also mentioned that it was very useful to them for providing the SRHR services and to speak the same language on SRHR issues for and with the stakeholders, so that the quality of SRHR in their region could be improved.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). However, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

The training was given to 18 staff members of the UFBR and ASK programmes in Ethiopia (Amref ET, YNSD, TaYA and FGAE) and took place in December 2013. These participating staff members passed on their information to health care workers, school youth and other stakeholders. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn’t the focus of the evaluation.

Reaching objectives

Not having objectives that were defined as SMART objectives makes it difficult to assess this issue. However, based on the process tracing causal map it can be said that participating staff members have passed on knowledge gained at the training workshop and one staff member mentioned that changes can be observed in the activities in schools, volunteers, youth and health facilities and that this training was important for organizational capacity. It is not clear to what extent the long term objectives have been reached.

2. Policy/advocacy implementation training workshop on SRHR, March 2014 [17]

Design

This intervention was planned during the baseline. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. The immediate objective of this training workshop stated during the baseline was to improve knowledge on policy implementation by the SRHR alliance partners; during the endline the joint development of an advocacy plan around a central issue was also mentioned. The long term objective stated during the baseline was a better alignment of the work of the alliance partners to the policy framework of the Ethiopian government on SRHR. and stated during the endline an implemented advocacy plan was also mentioned.

This kind of knowledge was not mentioned as important in the Theory of Change (ToC) developed during the MFSII 5C baseline survey, but this ToC was very much geared towards managerial and support service topics, not to subject related topics. However, two UFBR participating staff members mentioned that the training was very relevant to them because they learned how to develop messages to advocate for young people at regional level. They thought the training was very useful for the organization because they are working on advocacy at different levels.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

The training was given to 17 staff members of the UFBR and ASK programmes in Ethiopia (Amref ET, YNSD, TaYA and FGAE) and was conducted in March 2014. The training was about (different types of) advocacy, advocacy activities already carried out in ASK & UFBR programmes, an overview of relevant Ethiopian laws and policies, making of problem trees and identification of advocacy topics, stakeholder analysis, and drafting of an advocacy plan. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Not having objectives that were defined as SMART objectives makes it difficult to assess this issue. However, based on the process tracing causal map it can be said that the training resulted in a better understanding among participating staff of what advocacy is and could achieve. According to Amref staff at the endline workshop the training workshop has led Amref to team up with Alliance members like TaYA (Talent Youth Association) on policy advocating and lobbying on SRHR issues and helped to identify informed action for lobbying and advocacy. It enhanced the capacity of the organisation to work closely with government officials and it improved transparency, and discussions with the team and follow up. It is too early to assess to what extent the long term objectives are achieved.

3. Bi-annual UFBR review & planning meetings [33]

Design

Review meetings were planned during the baseline. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. The objective of these meetings is a joint review of progress, the way forward, and identifying and addressing problems.

These meetings were mentioned as relevant in the Theory of Change (ToC) developed during the MFSII 5C baseline survey for an effective M&E system, notably for analysis and use of M&E findings.

These objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

These meetings are conducted bi-annually through joint review of progress and thinking through the way forward, and identifying and addressing problems. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Since the objectives were not formulated in a SMART way, it is difficult to assess whether the objectives have been reached. However, according to staff present at the endline workshop Amref had a problem of (lack of) complementarity/ synergy with the two other UFBR partners before the baseline, but the review meetings have led to better links between Amref activities and activities of the partners and planning for joint activities, like the joint preparation of Information Education and Communication/Behavioural Change Communication IEC/BCC materials, and the joint development of TV programmes on SRHR in Afar language.

4. SRHR Outcome measurement training workshop, Sept. 2013 [6]

This intervention was planned during the baseline and is described only briefly here for its relevance in relation to "improved competences to deliver SRHR services". It will be described in more detail under the "improved PME capacity" section of this chapter. The immediate objectives of this workshop stated during the baseline were to improve staff knowledge on outcome indicator measurement and of qualitative data gathering methods. It was also thought that it would ensure a good execution of the mid-term evaluation of the UFBR programme. The training was given to 13 staff members of the UFBR and ASK programmes in Ethiopia (Amref ET, YNSD, TaYA and FGAE) and was conducted in September 2013. The training was about what outcome measurement is, outcome and output indicators in the UFBR programme, review of the UFBR baseline results and tools, how to facilitate a focus group discussion (including practical exercises), and planning of outcome measurement in the UFBR programme. According to Amref staff present at the endline workshop, the training resulted in an improved understanding of, and focus on desired outcomes which contributed to improved competences to plan and implement SRHR Services. It was also indicated that the quality of reports had improved. One participating staff found the training very useful because it enabled them to identify weaknesses and strengths of the UFBR project and how to improve the project performances. It seems that the short term objective has been achieved and also the long term objective to some extent, but not having objectives that were defined as SMART objectives makes it difficult to assess this issue.

5. EWA (WASH Alliance) Outcome Measurement workshop, September [7]

This training was given before embarking on the measurement of the outcome results for 2013 of the WASH interventions of the eight EWA partner organizations. The training resulted in more outcome oriented planning and implementation in general, including SRHR services, as described above. This training will be discussed more in detail in the "Improved PME" section of this chapter.

6. Facilitation skills training mid-2012 [5]

Design

This intervention was not mentioned as planned for during the baseline survey. Details about the specific design are not known, but that wasn't the focus of this evaluation.

This kind of training was not mentioned as important in the Theory of Change (ToC) developed during the MFSII 5C baseline survey, but according to staff the usefulness of this training was to have the competences now to give facilitation skills training themselves instead of having to hire an external consultant for this.

Implementation

The evaluation team does not have details about the participants or the subjects of this training. As far as the evaluation team knows, it was implemented during the endline as an MFS II funded capacity development intervention that took place mid-2012.

Reaching objectives

Whilst details about the objectives of the workshop were not known to the evaluation team, since this wasn't the focus of this evaluation, the training capacitated staff to give facilitation skills training themselves, as can be observed in the process tracing causal map. This seems to be an important result of the training but since the objectives are not known it is not possible to say to what extent the objectives have been achieved.

7. Rutgers WPF training on sexual taboos, December 2013 [35]

Design

In fact this was not a separate training, but it was part of the MFSII SRHR workshop on sexual behavioural change in December 2013 (see above). According to the CFA the objective of this particular training was to make staff see the difference between facts and opinions about taboo subjects. Details cannot be provided, since this wasn't the focus of this evaluation.

This kind of training was not mentioned as important in the Theory of Change (ToC) developed during the MFSII 5C baseline survey, but this ToC was very much geared towards managerial and support service topics, not to subject related topics. Subject related topics are referred to in general terms: "technical competencies on strategic areas". However, it was mentioned as important by the CFA, because to provoke change in behaviour it was considered crucial to be able to distinguish between facts and opinions.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). However, the evaluation team did not ask for SMART objectives specifically.

Implementation

The training was given by Rutgers WPF to the 18 staff members of the UFBR and ASK programmes in Ethiopia (Amref ET, YNSD, TaYA and FGAE) participating in the SRHR workshop on sexual behavioural change that took place in December 2013. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Not having SMART defined objectives makes it difficult to assess this issue, but according to the CFA this particular training has provoked a change in mind set of Amref staff about taboo subjects. This has led to a change in staff's attitude and more openness to discuss these sensitive issues.

Participating staff members passed on their information and used it with health care workers, school youth and other stakeholders to discuss taboo subjects. In that sense the objective seems to be achieved.

8. Annual SRHR Alliance review meetings in the Netherlands for National Programme Coordinators (NPCs) [38]

Design

These review meetings were not mentioned as planned for during the baseline, although they are mentioned in the UFBR logical framework. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. At these meetings programme coordinators come together to share experiences and identify programme priority areas.

Annual review meetings in general were specifically mentioned as relevant in the Theory of Change (ToC) developed during the MFS II 5C baseline survey.

Objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline.

Implementation

These meetings are organised annually to share experiences and to share experiences and identify programme priority areas. Also specific SRHR subject related issues are discussed. SRHR programme coordinators attend. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Since the objectives are not known, it is difficult to assess whether the objectives have been reached. However, according to Amref staff they benefitted through "cascaded" training on the SRHR subject related matters, which helped staffs to better understand gender, sexuality and SRHR issues, and changed their attitude to talk more open about these issues.

9. Workshop in Nairobi on sexual diversity, April/May 2012 [39]

Training on SRHR issues was mentioned as planned for in general terms during the baseline, this training was not mentioned in particular. In general objectives for SRHR training were improved knowledge of alliance partners on SRHR (immediate) and better implementation of the UFBR project (longer term). Details about this particular training element cannot be provided, since this wasn't the focus of this evaluation.

This kind of training was not mentioned as important in the Theory of Change (ToC) developed during the MFSII 5C baseline survey, but this ToC was very much geared towards managerial and support service topics, not to subject related topics. Subject related topics are only referred to in general terms: "technical competencies on strategic areas".

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). However, the evaluation team did not ask the CFA for SMART objectives specifically.

Implementation

Three Amref staff from Ethiopia participated at this training: The Director of YNSD (UFBR partner organisation, also in the steering committee of the UFBR programme), the former NPC (Mr. Tilahun) and the Amref UFBR Project Manager. The training was facilitated by a technical advisor from Rutgers WPF and dealt with different issues related to sexual diversity, sexual identity, sexual minority groups, etc.

As far as the evaluation team knows, the training was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Since the objectives of this training are not known it is not possible to assess to what extent the objectives have been achieved. However, according to Amref staff at the endline workshop it improved their knowledge on gender, sexuality and SRHR issues because the participating staff passed on their information and knowledge to other Amref-ET staff members. In that sense the immediate objective seems to be achieved.

Attribution of observed results to MFS II capacity development interventions

The improved staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services were due to:

5. Improved SRHR planning and implementation competences [4]
6. Improved networking skills for advocacy and lobbying on SRHR issues [25]
7. Improved knowledge on gender, sexuality and SRHR issues [3]
8. Change of attitude and more openness to talk about sex and sexuality [14]

(see 4.3.1)

The improved networking skills for advocacy and lobbying on SRHR issues can be fully, and the other three organisational capacity changes can to a large extent be attributed to MFS II supported capacity development interventions.

1. The improved SRHR planning and implementation competences can partly be attributed to a better understanding of the link between SRHR services, knowledge and an enabling environment, including the policy environment; joint planning and coordination of SRHR activities with other Amref departments and other Alliance members; and an improved understanding of and focus on desired SRHR outcomes. These can all to a large extent be attributed to MFS II supported capacity development interventions. For another part the improved SRHR planning and implementation competences can be attributed to factors that can only be partly attributed to MFS II capacity development support, i.e. the competences to train others in facilitation skills; or cannot at all be attributed to MFSII interventions, i.e. the increased number of skilled staff & reproductive health professionals; the regular scheduled visits and advice from programme managers; and the sexual curriculum to train youth/ schools adopted from Rutgers WPF. Concerning the latter: Rutgers WPF is the lead partner of the SRHR Alliance. However, Amref ET started working with the WSWM curriculum in 2013 as part of another project (with ICCO, funded by Dutch Embassy) in the same geographical area as the UFBR project. It is complementing and linked to the UFBR programme, but it is not part of the programme. In the UFBR programme Amref has developed its own sexuality education and life skills manual, but this was not mentioned at the endline workshop, probably because it is in Amharic and hard copies are used in schools where no computer is available..

2. The improved networking skills for advocacy and lobbying on SRHR issues can be entirely attributed to MFS II capacity development interventions, notably the SRHR workshop on sexual behavioural change in December 2013, and the SRHR policy/advocacy implementation training workshop in March 2014, through improved understanding of the link between service, knowledge and enabling environment, including policy environment.

3. The improved knowledge on gender, sexuality and SRHR issues can to a large extent be attributed to MFS II capacity development interventions, notably the SRHR workshop on sexual behavioural change in December 2013, the annual SRHR Alliance review meetings in NL for National Programme Coordinators, the Nairobi workshop on sexual diversity, April/May 2012,. For another part this improved knowledge is due to regular scheduled visits and advice from programme managers, and the annual trainings in comprehensive sexual education (CSE) and gender and a more recent (April 2014) given training on SRH and Prevention of Child to Mother Transmission (PCMT).

4. The change of attitude of staff and more openness to talk about sex and sexuality can be almost entirely attributed to MFS II capacity development interventions, notably the annual SRHR Alliance review meetings in NL for National Programme Coordinators, the Nairobi workshop on sexual diversity, April/May 2012, and the Rutgers WPF training on sexual taboos, during the SRHR workshop on sexual behavioural change in December 2013.

On the whole, based on the process tracing causal map, the changes that took place since the baseline in 2012 in terms of improved Amref ET staff competencies to deliver Sexual and Reproductive Health Rights (SRHR) services can be largely attributed to MFS II supported capacity development interventions, such as training and workshops on SRHR related issues, SRHR outcome measurement, SRHR advocacy, and SRHR Alliance review meetings. To a lesser extent the improved competences to deliver SRHR services can be attributed to other, non MFS II related changes, i.e. training of Amref HQ, the recruitment of already skilled staff & reproductive health professionals at organisational level; the regular scheduled visits and advice from programme managers; and the sexual curriculum to train youth/ schools adopted from Rutgers WPF.

Improved planning, monitoring and evaluation (PME) Capacity

The following MFS II capacity development interventions supported by Amref-NL were linked to the key organisational capacity change “Improved planning, monitoring and evaluation (PME) Capacity”:

1. Annual Ethiopian WASH Alliance (EWA) workshops on reporting and planning: 2011/2012 [3A], 2012/2013 [3B] and 2013/2014 [3C]
2. PME training for MFS II project staff (SRHR & WASH) early 2012 [56]
3. PCM and PME training in June 2012 [6]
4. Organisational Capacity Assessments (OCA) MFS II (2011 and 2013) (21)
5. SRHR Alliance outcome measurement training in September 2013 [7]
6. WASH PME/Outcome measurement training conducted in Awash in Nov 2012 [35]
7. EWA (WASH Alliance) Outcome Measurement training workshop, September 2013 [15]

The numbers between brackets correspond to the numbers in the visual (causal map, see below this section).

The above mentioned MFSII funded capacity development interventions are included here as well as in the causal maps and narratives because the effects of these interventions were observed during the endline and they came up during document review, workshop, interviews and self-assessments.

1. *Annual EWA workshops on reporting and planning: 2011/2012 [3A], 2012/2013 [3B] and 2013/2014 [3B]*

Design

These review meetings were planned for during the baseline. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Short- and long-term objectives were indicated in the baseline: immediate objectives were “improved knowledge of planning and good quality work plans” and “quality planning throughout the remainder of the programme” in the long term. During the endline survey short and long term objectives were formulated as “come to a common understanding of their performance in the previous year and the targets and activities for the coming year” and at the long term an improved program integration implemented by different stakeholders, working towards scaling of the best experiences among partner organizations, and engaging with sector actors/stakeholders to contribute for system change is expected.

Annual review meetings were specifically mentioned as relevant in the Theory of Change (ToC) developed during the MFSII 5C baseline survey.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline in 2012, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

These review meetings are conducted annually in the first quarter of the year. Subjects at these workshops in general are to outline the key activities, roles, objectives, assumptions of the WASH Alliance programme in Ethiopia; to review the previous year performance of WASH Alliance programme; to discuss the coming year's activities and targets of the WASH Alliance programme and to discuss on PME related matters (logframe, indicators and formats). Also to identify areas of integration, cooperation, avoid overlaps & fill gaps; identify which stakeholder they need to work how and what, etc. Each year other PM&E subjects get special attention. In the 2013 workshop, the theory and concepts of Theory of Change (ToC) were discussed and used for planning, as well as the common planning concepts and tools (logframe, indicators, reporting & planning formats). As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Since the objectives were not formulated in a SMART way, it is difficult to assess whether the objectives have been reached. However, according to the CFA these workshops enabled Amref staff to understand who is doing what and a have led better cooperation among partners. Also, relevant

partners to work with are discussed and identified. The ToC for Amref helped to better visualize what they wanted to change as a program and work out in detail the different activities under program areas (sanitation, hygiene and water). According to Amref staff these workshops improved their planning skills, because they improved their understanding of the concepts and use of the Theory of Change (TOC), led to a shared understanding and agreement about previous year performance and coming year planning, and an improved understanding of theory and use of planning concepts like logframe, indicators, reporting & planning formats, etc. Thus the immediate objectives of these workshops seem to have been reached, but not having SMART indicators makes it difficult to assess to what extent long term objectives have been reached.

2. PME training for MFS II project staff (SRHR & WASH) early 2012 [56]

Design

This training was not mentioned as planned for during the baseline survey in 2012. The reason is perhaps that it took place before the baseline but it was nevertheless mentioned at the endline workshop. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. According to Amref staff at the endline workshop, this training was given to familiarise them with result areas and new reporting formats.

Training in and familiarising with reporting formats was not mentioned as relevant at the capacity building ToC of the baseline workshop, although M&E came up as an important issue and thereby makes the topic relevant to the SPO.

Implementation

This training was given to MFSII (SRHR & WASH) project staff and partners at the beginning of 2012 (just before the baseline). SRHR & WASH PME and project staff, government and local partners participated. Topics were understanding result areas, new formats, and to become customized and targeted to reporting formats of the projects. Also general PME topics were introduced. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Since the specific objectives are not known, it is difficult to assess whether the objectives have been reached. However, Amref staff at the endline workshop said that this training had given them a better understanding of logframe, indicators, reporting & planning formats, and that they had internalized their knowledge for reporting. In that sense the objective seems to have been reached.

3. SRHR PCM and PME training in June 2012 [6]

Design

This intervention was planned during the baseline. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. However, in the baseline the short-term objectives were formulated as follows: "improved quality of reporting", "better understanding of PCM and PME". Long-term objectives were formulated as "quality monitoring on objectives" and "quality progress reports".

Although it is not the same wording, M&E and project design competences were mentioned as relevant in the ToC developed during the MFS II 5Cbaseline workshop. A training participant thought the training was very relevant because he learnt to plan, implement and monitor project implementation with the stakeholders.

These objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound), but the evaluation team did not ask the CFA for SMART objectives specifically during the baseline.

Implementation

The training was given to staff, local NGOs, and government partners by the SRHR Alliance and was conducted in June 2012. As far as the evaluation team knows, it was implemented as designed,

however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

According to staff and the CFA the training resulted in improved PME skills and knowledge on the UFBR project, internalization of M&E project components and performing as well as thinking up to outcome level results. An Amref ET manager found this training very useful because according to him practicing PCM and PME helped on the project implementation and monitoring at field level with colleagues and local partners. It helped to discuss with government partners on the PCM and PME implementation at field level in the health facilities and communities, for example in the Regional Health Bureau (RHB) and at district level. At health facility level it helped to improve recording, reporting and documentation. At organisational level he noticed an improvement in transparency, discussions with the team and follow up and analysis of result /outcomes of monthly performed activities against planned activities. Based on this testimony it seems that objectives have been achieved, but not having objectives that were defined as SMART objectives makes it difficult to assess this issue.

4. Organisational Capacity Assessments (OCA) (2011 and 2013) (21)

Design

This activity was planned for, as requested by the Dutch Government as a condition for MFS II funding. These Organisational Capacity Assessments (OCA) allow organizations to reflect and carry out self-assessments to determine their ability to deliver results to their clients. The OCA was designed as a self-assessment with Amref staff. As indicated in the baseline report, the immediate objectives were formulated as "improvement on project management cycle, reporting, gender" and the long-term objective was formulated as "strengthening of the organisation towards maturing stage".

OCA was not mentioned specifically as relevant during the ToC workshop at the baseline survey, although assessment of technical gaps was mentioned. But during the endline workshop it was mentioned as important because it identified weaknesses and necessary training.

These objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound), but the evaluation team did not ask the CFA for SMART objectives specifically during the baseline.

Implementation

The OCA was organized twice for programmes within the SRHR and WASH alliance: in 2011 and 2013. In 2011, 13 staff participated and in 2013 10 staff. The 2013 one was a "light" version, with less subjects to assess (Thematic areas of WASH and SRHR; Resource mobilization and use; External Relations; Human resource management; PME systems to promote learning; Approaches and cross-cutting issues). Based on need, the staff also assessed three additional components for the purpose of providing the organization feedback. The components that were later included and assessed are: Governance; Organizational culture; Organizational management and administration.

Reaching objectives

The OCAs identified weaknesses and have directly or indirectly influenced the training that took place to address the identified capacity gaps, including M&E training in general as this was identified as a weak area, the hiring of new (M&E) staff, and a PSO funded capacity building programme for more managerial capacity. This was meant to develop human resources and implement more projects. The 2013 OCA noted improvements in the subjects assessed. Not having objectives that were defined as SMART objectives makes it difficult to assess this issue, and in the causal map a direct link with an improved project management cycle (most likely this was meant to be 'project cycle management'), reporting and gender has not been established as such in the PME causal map. As indicated above, there has been some influence in terms of strengthening planning, monitoring and evaluation. Therefore the long-term objective "strengthening the organisation towards maturing stage" has been partly reached.

5. SRHR Alliance outcome measurement training in September 2013 [7]

Design

This intervention was planned during the baseline. The immediate objectives of this workshop stated during the baseline survey were to improve staff knowledge on outcome indicator measurement and of qualitative data gathering methods. The long term objective was increased M&E capacity, including the use of qualitative methods and good quality reports on outcome indicators. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Although worded as outcome measurement, M&E competences were mentioned as relevant in the ToC developed during the MFS II 5C baseline workshop. A training participant thought the training was very relevant because it enabled them also to identify gaps, weakness and strength of project implementation, and to learn for the future how to improve project quality performance. To have these competences was also indicated as important during the baseline workshop.

These objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

The training was given to 13 staff members of the UFBR programme in Ethiopia (Amref ET, YNSD, and TaYA) and was conducted in September 2013. The training was about what outcome measurement is, outcome and output indicators, review of baseline results and tools, how to facilitate a focus group discussion (including practical exercises), and planning of outcome measurement in the UFBR programme. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

The training resulted in a better understanding among participating staff of, and focus on desired outcomes, and of how to use qualitative data gathering methods, e.g. how to conduct in-depth interviews, focus group discussions, develop questionnaires and other qualitative techniques. According to Amref staff the improved understanding of, and focus on desired outcomes contributed to improved SRHR services planning. It was also indicated that the quality of reports had improved. One of the project officers who participated to this training declared that the training had an effect on the organizational capacity because the organisation's objectives are to bring outcomes that benefit the community. Therefore, knowing how to measure those outcomes is very crucial. Another participant found the training very useful because it enabled them to identify weaknesses and strengths of projects and how to improve project performances. However he claimed that time was too short to include all measurement tools and to practice the tools properly, and that additional outcome measurement training was desired. The participants said they improved their knowledge and skills in outcome measurement, and more specifically qualitative data gathering methods. It seems that the short term objective has been achieved and also the long term objective to some extent, but not having objectives that were defined as SMART objectives makes it difficult to assess this issue.

6 WASH PME/Outcome measurement training conducted in Awash in Nov 2012 [35]

Design

This specific capacity development intervention was not mentioned in the baseline report. This training was mentioned at the MFSII 5C endline workshop by Amref staff, but very little information is available. No design or objectives are known. It was relevant because it contributed to improved M&E which was considered important during the baseline survey.

Implementation

This PME/Outcome measurement training was conducted in Awash for one week in Nov 2012 by the WASH alliance. It is not known to whom this training was given and how it was implemented.

Reaching objectives

According to Amref staff the training has led to a better understanding of outcome measurement. However, not having objectives makes it difficult to assess to what extent the objectives have been reached.

7. EWA (WASH Alliance) Outcome Measurement training workshop, September 2013 [15]

Design

This training workshop was not mentioned as planned for during the baseline. However, immediate and long-term objectives have been given during the endline survey: the immediate objective of this training was to improve the capacity in conducting outcome measurement, and guidance for the development of a joint approach to outcome monitoring for the Ethiopian WASH Alliance. The long term objective was to enhance the partner's capacity to improve outcome level results of different interventions. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Outcome measurement was not specifically mentioned as important at the baseline ToC workshop, but it was mentioned several times during the endline workshop, and can thus be considered as relevant to the organisation.

The objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound), but this also wasn't the focus of this 5C study.

Implementation

This intervention was conducted in 22-24 September 2013 before embarking on the measurement of the outcome results for 2013 of the WASH interventions of the eight EWA partner organizations. The PME adviser of the DWA organized this capacity strengthening and support activity for the EWA partners.. Three staffs – project coordinator, project assistant and WASH program manager were trained on outcome measurement. The training workshop included monitoring and evaluation, data and their types, data collection methods, sampling techniques, outcome and outcome indicators as the main topics. It also included FLOW for data collection with the help of digital device such as tablets or smart phones. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Immediate effects observed was an improved understanding of outcome indicators. It seems that short term objectives are (partly) reached but to what extent the long term objectives have been achieved cannot be assessed, by not having SMART formulated objectives.

Attribution of observed results to MFS II capacity development interventions

The "Improved planning, monitoring and evaluation (PME) Capacity" of Amref staff was due to:

1. Improved planning capacity [26]
2. Improved M&E capacity [2]

Both improved capacities can partly be attributed to MFS II supported capacity development interventions:

1. The improved planning capacity can be attributed to improved management support to field offices and planning exercises; improved planning knowledge and skills; change from regional, geographic approach to programme-based planning; and a new PME organizational structure and new PME staff hired. The improved planning knowledge and skills can be attributed to MFS II supported capacity development interventions, i.e. the review meetings of both Alliances and the SRHR PME and PCM training. The improved management support to field offices and planning exercises, and the change from a regional, geographic approach to programme-based planning cannot be attributed to MFS II interventions but are related to a process of organisational changes that started with changes in leadership in April 2012. The new PME structure and new PME staff hired can partly be attributed to MFS II capacity development support, because of financial MFS II support and the PSO capacity building programme as a result of the MFS II supported organisational capacity assessment. For the other part this change was due to the organisational changes mentioned above.

2. The improved M&E capacity can be attributed to the new PME organizational structure and new PME staff hired; improved report writing skills; improved M&E knowledge and skills; and the use of standardized M&E procedures and tools. The new PME structure and new PME staff hired can partly be attributed to MFS II capacity development support, as described above. The improved report writing skills was mainly due to Amref HQ training in report writing as a result of donor requests and developing a standardised system (APMS), as is the case for the use of standardized M&E procedures and tools. To some extent the improved report writing skills and the use of standardised M&E procedures and tools can be attributed to MFS II support, i.e. the attention paid to both issues at review meetings, the detailed assistance to in report writing to project officers of UFBR and WASH Alliances. and PME and outcome measurement trainings.

On the whole it can be said that the improved PME capacity at Amref can be partly attributed to MFS II supported capacity development interventions, mainly through PME and outcome measurement related trainings and review meetings from SRHR as well as WASH Alliances; and the OCA assessments that helped the organisation to identify issues that needed improvement and assistance in report writing. For the other part the improved PME capacity can be attributed to organisational structure changes and improved managerial guidance following the leadership change; the introduction and institutionalization of a number of PME and information management related manuals, procedures and tools; Amref HQ training, the recruitment of skilled staff and donor requirements.

List of Respondents

Alliance/ CFA officers:

No.	Name	Function
1	Marlijn Lelieveld	Country Lead Ethiopia for the SRHR Alliance and portfolio holder (Amref NL)
2	Gudule Boland	M&E Adviser (Amref NL)
3	Veerle Ver Loren van Themaat	former Country Lead Ethiopia and senior portfolio holder (Amref NL)
4	Noortje van Langen	junior portfolioholder (Amref NL)
5	Tamene Chaka	Country coordinator Ethiopia WASH Alliance (EWA)

Amref Ethiopia staff:

No.	Name	Position
1	Frehiwot Derbe	Program staff
2	Gadissa Hailu	Field staff
3	Yonathan Samuel	WASH program manager
4	Tezeta Meshesha	Communication & Fund Raising manager
5	Tsehay Birhanu	Field Office
6	Tedla Mulatu	Capacity Building manager
7	Samson Tadiwos	PME Manager
8	Jemal Yousuf	Project manager
9	Muluken Dessalegn	Project manager
10	Dawit Seyum	Program staff
11	Baye Deneke	M&E officer
12	Befekadu Bezabih	HR& Admin manager
13	Aoke Tasew	Deputy Country Director
14	Tigist Fantu	M&E office
15	Meseret Tamiru	HR Officer

Appendix 1 Methodological approach & reflection

1. Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.⁹ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

⁹ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.

- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets_– in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description_of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as "a complex system which produces an outcome by the interaction of a number of parts" (Glennan, 1996, p. 52). Process tracing involves "attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable" (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which 'theories' are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	Amref	CARE	ECFA	FSCE	HOA-REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: Amref,

ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Amref	Dec 2015	Yes	Yes	Yes	Yes	Amref NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India¹⁰

Capability to:	BVHA	COUNT	DRIST I	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

¹⁰ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya kologi	ECPAT	GSS	Lem baga Kita	Pl. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A detailed causal map (or model of change) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A causal mechanism = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or cause = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- **5C Indicators**: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

Figure 1 An imaginary example of a model of change

Step 5. Identify *types of evidence* needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, “*What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?*”. The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern, sequence, trace, and account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be

addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality of data and analyse data**, and develop the **final detailed causal map (model of change)** – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i> Description of causal relation	Confirming/ rejecting a causal relation (yes/ no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: “*To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*” and “*What factors explain the findings drawn from the questions above?*” It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

4. Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: “**What factors explain the findings drawn from the questions above?**”

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

5. Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in

the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a

result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

- **Capacity** is referred to as the overall ability of an organisation or system to create value for others;
- **Capabilities** are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);
- **Competencies** are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

1. The capability to act and commit;
2. The capability to deliver on development objectives;
3. The capability to adapt and self-renew;
4. The capability to relate (to external stakeholders);
5. The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Results - changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

1.1. Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

During the baseline Amref was in the process of a leadership change. Since then the experience of the management has considerably improved. The new leadership has established a new, matrix style, organizational structure with the appointment of new managers and delegation of responsibilities. The provision of technical support has improved as a result of the assignment of a program manager. As a result, decisions are made more on time now, and the organizational structural change enables the management to give high technical support to the project staff. Proactive engagement and positive relations of the management with Alliance members is well visible these days.

Score: from 3 to 4 (improvement)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

Compared to the baseline there are more frequent visits and guidance to the field staff, field offices and to program offices by top management including the country director and deputy country director. There is an improvement in internalization of organizational procedures and compliance to Performance Appraisals. Feedback mechanisms from staff to management and vice versa through weekly, monthly and joint review meetings, as well as by email are in place. New program managers are recruited and there is better strategic guidance and technical support by each team and the level of authority of the Program Manager is improved. Local partners are also involved in the project management cycle. All these changes resulted in a better staff commitment.

Score: from 3 to 4 (improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

Compared to the baseline there is a slight improvement in staff turnover. A number of retaining mechanisms are in place to retain staff such as reallocation of staff either to the new projects or promoted to a new position, capacity building by identifying the gaps and based on performance appraisal. In addition new job grading is also in place. A regular job evaluation and institutionalization of hardship allowance are also factors to retain staffs. However, field staffs argue that they have low competitive salaries compared to other partners and low hardship allowances are still a challenge in retaining competent staffs. Some also state that yet there is no real incentive that affects staff turnover.

Score: from 3 to 3.5 (slight improvement)

1.4. Organisational structure: 'Existence of clear organisational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

According to an organizational capacity assessment in 2013, governance had improved compared to 2011 due to the existence of an advisory council. The new leadership has established a new, matrix style, organizational structure with the appointment of new managers and delegation of responsibilities. Also human resources management has improved due to the improvement in defining clear job descriptions and assigning appropriate staff levels. There is an improvement in organizational management and administration which is reflected by a better organizational structure and organizational policies and procedures.

Score: (no score at baseline, but estimated to be 2.5 in hindsight) – 3.5 (improvement)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

Since the baseline, Amref-Ethiopia has developed Strategic documents and the VGC (Visibility, Growth and Competence) plan with goals and implemented them. Strategies are well articulated and based on an improved monitoring and evaluation system, Situational analysis is made before projects are designed

Score: from (no baseline information available) to 3.5.

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

Routine operations of the organization are guided by its strategic plan, business plan and annual plans. After the baseline, the visibility growth and competency plan (VGC) has been developed and became operational. In line with the strategic plan, quality assurance tools guidelines were developed. In addition, Amref's online Program development management system has been developed and become functional. At the moment Amref is developing its second business plan.

Score: from 5 to 5 (no change)

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

Compared to the baseline the availability of training opportunities has increased. Over 40% of the staffs got training in the last two years. Some trainings have been given after identifying the gaps. Leadership, management and governance trainings have been given to the project managers and partners. There has also been skill gap filling trainings to other staff members such as drivers and procurement committee members. There was also experience sharing for Amref staff. Project cycle management and technical subjects training have been given to staffs and project managers to fill the skill gap. As a result of the trainings, improvement in sharing information, handling finance and logistics including procurement and M&E capacity is reported. In addition, there is a noticeable change in mind set in "value clarification" because of a training by Rutgers WPF about taboo subjects like abortion and homosexuality. Support staffs report that they still need more training.

Score: from 4 to 4.5 (slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

Training is still provided by Alliances and Amref HQ. Amref is working in upgrading its staffs' academic status to the level of master's degree. The former Training Committee is re-established into a Staff Development and Training committee that has TORs that allow them to nominate/select training beneficiaries among staff. The committee request staffs to identify their annual training plan. Hence, staffs are getting an equal opportunity to get training. The reestablishment of the committee reduces selection bias and increased transparency of pertinent staff selection for trainings. In addition, from the VGC plan the competency component has identified strategic training needs of the staff. Now the 2% training budget is utilized in a better way and the number of trained staff has increased. Some of the trainings like MBA in leadership is now upgraded to Global Executive MBA level. Staffs have been trained on the following issues: leadership, management, and governance trainings for project managers and partners; project cycle management and technical subjects training (e.g. by Rutgers WPF) for project managers and other staff; specific trainings for drivers and procurement committee members.

Score: from 4 to 4.5 (slight improvement)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

In Amref, internal promotion has been institutionalized to staffs. Amref is working in upgrading its staffs' academic status to the level of master's degree. In terms of financial incentives, there has not been any change since the baseline except the institutionalization of hardship allowance and equal per diem to all staffs. Very recently salaries have been increased. Amref designed a mechanism of sharing grievances to the management and this creates a good working environment. The proper treatment of staffs in a reasonable manner by the respective managers results in improved networking among Amref offices. Additional mechanisms for keeping staff are reallocation of staff either to the new projects or promoted to a new position; capacity building by identifying the gaps and based on performance appraisal; regular job evaluation. However, field staffs argue that they have low competitive salaries compared to other partners and low hardship allowances.

Score: from 4 to 4.25 (very slight improvement)

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

Amref has diversified its sources of funding, in which the big donors such as UNICEF, Netherlands government, EC, DFID and EUROMONEY and others are becoming Amref's major partners. The operational budget of Amref is now doubled compared to its baseline situation; it's now operating with around 10 million USD budget per fiscal year. Together with its operational budget, Amref's geographic area of intervention has expanded from three to five regions mainly through clinical outreaches, LMG training and Health Workers training interventions. Currently, Amref is implementing over 24 projects with over 30 donors. As part of diversifying funds, the new organizational structure allows programs to work on proposal development.

Score: from 4 to 5 (improvement)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

Amref has now a business development manager who spearheads program development and communication, and a fund raising manager to coordinate fund raising efforts. Amref has developed and implemented fundraising strategies. The restructuring of Amref's program development helps the organization to have clear internal procedures of fundraising. Amref has done donor mapping and also organized a local fundraising event in October 2014. Amref has operationalized new software, which helps to access indicators of activity, output and outcome. The data validation and quality assurance process has also improved. Amref has established a fundraising department that is continuously searching for available funding opportunities.

Score: from 3 to 4 (improvement)

Summary capability to act and commit

The new leadership has established a new, matrix style, organizational structure with the appointment of new managers and delegation of responsibilities. As a result, decisions are made more on time now, and the organizational structural change enables the management to give high technical support to the project staff.

There is more strategic and operational guidance to staff, which is related to the new organisational structure and improved feedback mechanisms. This has enhanced staff commitment. Additional mechanisms that have been put in place to enhance staff motivation and reduce staff turnover include: internal promotion reallocation to new projects; staff capacity building; institutionalization of hardship allowance (although field staff say they have low hardship allowances); equal per diem to all staffs; mechanism of sharing grievances to the management; regular job evaluation. Staff indicated that they still have low salaries compared to other partners. Strategies are well articulated and based on an improved monitoring and evaluation system, and the strategies are still the basis of daily operations. The skills of Amref staff has improved due to a range of trainings for project management and other staff, either on management related issues or technical issues. Amref has been able to diversify its funding and doubled its operational budget since the baseline. This diversification of funding has improved due to having a business development manager who spearheads program development and communication, and a fund raising manager to coordinate fund raising efforts. Amref has developed and implemented fundraising strategies.

Score: from 3.5 to 4.5

Capability to adapt and self-renew

2.1. M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organizational).

There is a pool of experts working on M&E, sometimes individuals are assigned for specific projects. Also M&E tools have been developed. Amref M&E systems are well integrated with the programs and projects. The number of staffs who are engaged in M&E has increased. In Amref standardization and a quality assurance system is in place, together with this an Amref Information Management System (AIMS) is developed to replace Amref Program Data (APD), what happened in the third quarter of 2014. Improved quality of reports is reflecting the better M&E system of Amref. The staffs of the SRHR and WASH Alliances are actively working on regular monitoring and data collection. Amref has also developed an M&E manual. It has also put in place a program data base which is assessed on a monthly basis for compliance. Operational plans are revised on a regular basis (quarterly and annually) and higher level management more frequently monitors projects to follow their implementation. Strategic and routine M&E still remains a challenge and an OD consultant argues that documentation on what has been done and challenges were not available for easy tracking, and could be improved.

Score: from 3 to 4 (improvement)

2.2. M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

The number of staffs who are engaged in M&E has increased. Amref recruited a dedicated M&E manager for the Ethiopia office and performed M&E restructuring. The M&E system of Amref is now organized by program level not at the project level which resulted in project staffs lacking basic M&E skills. The M&E system has addressed individual M&E staff competences and these have improved through training in M&E and report writing and mentoring. The training provided by the SRHR and WASH Alliances on outcome measurement has also contributed to staffs improved knowledge of M&E. However, some staffs argue that Amref does not consider M&E an important tool and hence neither the training nor the equipment bring a difference. They argue that M&E has to be recognized as an important tool and then build the capacity and fulfil the equipment.

Score: From 3 to 3.5 (slight improvement)

2.3. M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

Most staff see little change since the baseline, although there has been a restructuring and an M&E tool has been developed. Sometimes effort is made to review the evaluation results and incorporate this into new proposals. Management has started to review the financial and physical reports and utilize it for decision making. However, some staffs argue that utilization of M&E results needs to be improved.

Score: From 3 to 3.5 (slight improvement)

2.4. Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

The new leadership of Amref has created a forum to discuss performance or project implementation status. Various formal platforms for staff engagement are in place such as regular SMT (Senior Management Team), Program Technical Team meetings, subcommittee meetings, monthly meetings. Annual and bi-annual meetings are also conducted. These meetings come up with action points with tracking mechanisms that are discussed with staff concerned and feedback is provided to the concerned departments. The Program Technical Team conducts technical reviews. Monthly performance review meetings are conducted and action points developed and shared. There are frequent meetings between program staff and supervisors. Although there is not a well-organized critical reflection system there are forums where M&E data are used. Some argue that although there are frequent meetings, actions are not taken frequently. However staff can talk freely about their mistakes.

Score: from 3 to 3.5 (slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives'

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

Amref Staffs are free to come up with ideas and they are encouraged to do so by creating different forums such as a suggestion box, monthly meetings, and direct email to the director. This is even more encouraged by the better motivation of Country Director and Deputy Country Director to

implement some of the ideas generated. Though staffs are still a bit shy, the delegation of decision making power made staff more comfortable to discuss ideas for the implementation of the programme with management. It was observed that staffs are more involved to discuss ideas. Various staff attended staff development trainings including group leadership trainings. This facilitated forums for considering staff input.

Score: from 3 to 3.5: (slight improvement)

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

Amref Ethiopia is a board member of CCRDA and CORHA (largest NGO and CSO networks). Its representation at the Ministry of Health level has increased through Technical Working Groups. Amref signed MOUs with universities and regional health bureaus to strengthen partnerships and align Amref with new initiatives and policy directions. Hence, Amref's participation in different government and non-government workshops and meetings has improved. Partial decentralization in both programs and support units has taken place. Nearly all program staff and management are interacting with the overall environment for tracking changes and progresses. The restructuring increased participation and scanning of the environment, which is done more systematically now.

Score: from 4 to 4.5 (slight improvement)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

Even though Amref has a broad agenda and also operates at community level, its role is not well known by the community. Recently, there has been a slight improvement in partnering with different stakeholders like government officials. Government officials are now participating in problem identification, monitoring and evaluation and redesigning of projects. This helps Amref to get the opinions of its clients and to be responsive to client needs. The community participation has also improved recently. Amref is now a member of influential networks and technical working groups. To increase stakeholders' responsiveness, Amref has improved its media utilization including social media. Amref has developed a VGC framework as well. Formal launching and exit events for projects and periodic reporting to partners including financial transparency have improved stakeholders responsiveness to Amref's presence.

Score: from 4 to 4.5 (slight improvement)

Summary capability to adapt and self-renew

Overall, the monitoring and evaluation, has improved within Amref since the baseline in 2012: more staffs are being trained in M&E and now have M&E responsibilities and there is a pool of experts working on M&E; and a M&E manual and M&E tools have been developed; Amref M&E systems are well integrated with the programs and projects; there is now a program database which is assessed on a monthly basis for compliance; and planning and review meetings are more regular and they now more involve staff, clients and other stakeholders in review and planning. However, there is still room for improvement in terms of using information for strategic decision-making, routine M&E and in terms of documenting progress and challenges.

Score: from 3.3 to 3.8 (slight improvement)

Capability to deliver on development objectives

3.1. Clear operational plans: 'Organization has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

Amref develops annual and quarterly operational plans. These are communicated to the staffs and staffs are expected to develop their own plan based on the overall plan. A results based work planning guiding tool (format) enables to prepare clear operational plans. Operational plans are revised on a regular basis (quarterly and annually) and higher level management more frequently monitors projects to follow their implementation. UFBR and WASH program plans are revised during the annual review meetings based on the annual plans. Because of this staffs were keen to learn from their results, share successes and challenges, and adherence to plans. Day to day implementation was good. There is also regular budget revision and improvement in operational budget planning and implementation. Amref has developed procurement guidelines. As a result, annual procurement plans are in place and Amref has recruited two procurement officers and assigned procurement committee members. However, to maintain qualified staffs for procurement in Afar remains a problem, since due to the remoteness and adverse conditions of the nomadic region where the SRHR and WASH Alliances programs are implemented. Amref management staff was committed to follow recommendations and provide trainings for staffs following MFS II – OCA support to identify gaps in terms of having realistic operational plans.

Score: from 4 to 4.5 (slight improvement)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

Amref has created a new project management structure and has facilitated different joint planning meetings, provided technical support and established a pull system for effective utilization of resources like office, vehicles, equipment, printers, etc. This structure helped to improve the cost effectiveness and efficiency of the organization. Amref has started selectively to invest money in high impact investments and integrate work to effectively use resources. Though more is needed to improve in this regard, Amref has identified and set priorities on what and when to spend and increased control mechanisms on the overall administration expenses compared with the time of the baseline survey. MFS II has assisted to improve cost effectiveness and efficiency efforts through OCA. Other funders have also set strict policies to adhere to cost effectiveness and efficiency.

However, the 30/70 CSO law of the Ethiopian government remains to be a challenge for the capacity development efforts in terms of operational issues, because this is considered to fall under the 30% organizational costs. This sometimes limits capacity development efforts.

Score: from 4 to 4.5 (slight improvement)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

Although routine monitoring and evaluation and documentation of interventions remains challenging, the organization has implemented its planned activities. Due to the existence of budget revision for realistic and timely planning, Amref has better performed in delivering planned outputs. It was pointed out that there is increased physical and financial performance and enhanced client satisfaction since the baseline. There is also monthly performance review and frequent monitoring of progresses up to field level which helped to deliver outputs as planned. However, even when planned outputs are delivered, there are concerns on the sustainability in relation to finances and continuity. Some staffs felt that there is not sufficient checking for cost effectiveness and that there is a need to improve periodic performances of projects.

Score: from 4 to 4.5 (slight improvement)

3.4. Mechanisms for beneficiary needs: 'The organization has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

Compared to the baseline most is the same in this regard. However, Amref has formally institutionalized and is piloting a beneficiary feedback mechanism strategy. The organization has introduced a data based beneficiary list and identified beneficiary selection criteria. Frequent review meetings with beneficiaries have been done. Program and financial documents are shared with local authorities at district level. As a result the credibility of the organization in delivering quality outputs and meeting the beneficiaries demand has increased. However, according to an OD consultant, Amref Ethiopia still appears weak in terms of engaging beneficiaries in planning, monitoring and evaluation; improving in this respect would sustain interventions and ensure ownership.

Score: from 4 to 4.25 (very slight improvement)

3.5. Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

Amref has given great attention to efficiency both at the operational and leadership level. One of the examples is field office level coordination of activities. Improved coordination, program integration and restructuring has been accomplished. Amref also developed a VGC framework for different geographic intervention areas. It also conducted regional based assessments with a joint monitoring system. However, some staffs stated that Amref has done a lot of contracting out.

Score: from 3 to 3.5: (slight improvement)

3.6. Balancing quality-efficiency: 'The organization aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

Amref Ethiopia has designed environmentally friendly projects with respect to geographic and thematic focus. In line with the strategic plan, quality assurance tools guidelines were developed. An appropriate quality assurance mechanism is in place where technical assistance and follow up from headquarter and project managers are given. Since 2012, there is an increasing attention to quality improvement in different levels of the project management. An improved database system has been established and training on Amref Information Management System (AIMS)) has also been provided. Since 2012, Amref has better record tracking, more diversified funds (although still mostly earmarked funds, and not all donors want to invest in M&E), and better awareness of information despite that the Amref data base is little used due to the serious flaws of internet connection. The malfunctioning internet and telephone connections hinder communications enormously. Email communications are mainly through private email addresses, and people work from internet cafés.

Score: from 3 to 3.5 (slight improvement)

Summary capability to deliver on development objectives

On the whole this capability has slightly improved. There is an improvement in terms of having clear operational plans; using resources more cost-effectively; monitoring efficiency and balancing quality with efficiency due to having a quality assurance mechanism in place. Furthermore, outputs have been better delivered and the reserve very slight improvement in terms of having mechanisms in place to deal with beneficiary needs.

Score: from 3.7 to 4.1 (slight improvement)

Capability to relate

4.1. Stakeholder engagement in policies and strategies: 'The organization maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organization'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

Since the baseline in 2012, Amref Ethiopia has improved its capacity in stakeholder engagement and consultation during program design, and became a member of various Alliances, networks and working groups at national and regional level. This has been considered as one of the strongest point of Amref-Ethiopia even at the time of baseline survey. However, since the baseline Amref has put in place the Visibility, Growth and Competency (VGC) plan to become a visible organization at all levels and hence the organization considerably improved stakeholder engagement in policies and strategies. Particularly membership with new professional associations and alliances, improvement in transparency on budgets and joint planning with local actors, more efforts in networking, partnership and alignment with government policies and strategies, and sharing available evaluation, research and best practices documents with stakeholders to mention some have contributed. This was evidenced by the fact that Amref has got awards by SNNPR Regional Health Bureau and Prime Minister of Ethiopia, Hailemariam Dessalegn, for its achievements especially in remote areas of Ethiopia. Having the Ministry of Water and Energy present at the EWA planning, reporting and ToC workshop indicated that the government recognized that EWA brought new approaches and activities (one WASH plan) to Ethiopia and was pleased to have EWA as a partner. It was mainly because of the support of MFS II and other funders to engage in one plan, report and budget initiatives as well as in networking with various forums and stakeholders.

Score: from 4 to 4.5 (slight improvement)

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

Amref Ethiopia joined new networks and alliances since the baseline in 2012. This was due to the fact that in 2013 Amref started implementing the ASK program of the Youth Empowerment Alliance and together with the partners of the ICCO Alliance the World Starts with Me (WSWM) program. Amref has become member of various networks and it's also serving as chair in some of the networks as a result of improved partnership with local and international stakeholders. Amref Ethiopia is Board member for three large consortiums (CANGO, CCRDA, and CORHA). Partnership and communications with different Embassies improved and partnerships with International organizations in Ethiopia (UNICEF, UNAIDS, WHO and other donor organizations) were strengthened. This was because of the strategic decision to develop essential networks at SPO level, the MFS II support in networking with various partners and lessons learned from MFS funding. There is active participation and also improvement in follow up in the organization due to enhanced commitment. The Amref-NL OCA report indicated strengthened external relations due to quality engagement with stakeholders and stronger relationship with stakeholders.

Score: from 4 to 4.75 (improvement)

4.3. Engagement with target groups: 'The organization performs frequent visits to their target groups/ beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

The situation is similar to the situation in the baseline. Amref still conducts regular site visits to engage with its target groups through conducting review meetings with target groups, and conducting supportive supervision. Amref works at grassroot level and project management offices are based close to communities, whilst members of those communities are being recruited as local staff. Amref

still follows a community based approach. There is a slight improvement since the baseline. Due to the new organizational structure and leadership change, the senior management team including the Country Director (CD) and the Deputy Country Director (DCD) now regularly visit program and project sites and beneficiaries (target groups). The regular field visit helped to provide technical support and supervision to field staffs.

Score: From 4 to 4.25 (very slight improvement)

4.4 Level of effective relationships within the organisation

Relationships within organization: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making.'

Amref has improved systems of communication by strengthening the communication department, i.e. before the baseline survey, the communication department was led by officer level but now the department is upgraded to manager level. Sub-committees are established to reduce or resolve disputes on time. As a result no legal cases were observed recently. There are regular meetings with staffs to internalize policies and regulations and to create an open environment for discussion among each other and with the management, i.e. there are weekly and monthly staff meetings and monthly performance review meetings with finance and program staff and there is an M & E unit in place. Amref has also recruited a new admin and HR manager and there is commitment of top management in encouraging team work, documentation and communication of decisions. Staffs are free to talk and share ideas among each other. Besides, the organization structure allows shorter communication lines now, by having created teams and supporting functionalities, and the assignment of Program Managers to decentralize roles. Amref has a clear vision to enhance effective communication as indicated in its business plan final version in 2011 where improved internal sharing of information on Amref programming and positioning is considered as one of the key outcome of the organization.

Score: from 2 to 3.5 (considerable improvement)

Summary capability to relate

Since the baseline Amref has improved engagement with stakeholders, by being more involved in networks, both at local as well as at international level. This engagement has also assisted Amref in developing their policies and strategies. Furthermore, there has been an improvement in terms of having senior management visiting the field more frequently, and engaging with staff in terms of providing the technical support, as well as engaging with beneficiaries. Amref has also improved effective communication within the organization through strengthening the communication department, regular meetings with staffs to internalize policies, regulation and create open environment for discussion among each other. There is also commitment of top management in encouraging team work documentation and communication of decisions and staffs are free to talk and share ideas among each other. Besides, the organization structure allows shorter communication lines, creating teams and supporting functionality, assigned program managers to decentralize roles.

Score: from 3.5 to 4.2 (slight improvement)

Capability to achieve coherence

5.1. Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

Amref has revised its brand identity with a broadened vision and commitment to the society. The Business plan was revisited and staffs were involved and have an active advisory council in business plan development. Staffs were involved in the vision, mission and strategies revision process which increased transparency. This is due to the fact that Amref itself facilitated the revision process and the development of the VGC strategies document, as well as the technical support from senior management during the process. Amref has improved its strategic planning and approaches due to the

revision of the organization comparative advantage survey and development of the VGC (visibility, growth and competence plan). The comparative advantage survey helped to developed the VGC. The VGC helped to identify gaps and causes, to improve the strategic plan and hence to revise the vision and mission of the organization. Staff are able to internalize the vision, mission, and statement through staff orientation and regular meetings.

Score: from 3 to 4 (improvement)

5.2. Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

Amref-Ethiopia has developed Strategic documents and the VGC (Visibility, Growth and Competence) plan with goals and implemented them. Amref Ethiopia has also set up a knowledge management committee with a clear TOR. There was also revision and roll out of different manuals like procurement guidelines, HR manual and the development of the APMS guideline, quality assurance tools for strategic directions etc. Amref shared the different operational guidelines with the field office with orientation, providing technical support, and facilitating sessions for experience sharing and established an information dissemination system. Periodic policy briefings are being done at the field office level through policy refresher training.

Score: from 3 to 3.5 (slight improvement)

5.3. Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organization'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

Amref Ethiopia staff structure has changed and has been better adapted to the strategic directions and running of programs. This has helped to provide better and more structural support to project officers, who can then be more productive. The new business plan is developed in alignment with the strategic plan and all programs are aligned with Amref business plan. Dedicated program managers are assigned to lead programs per strategic directions. There is also critical review of project documents and technical guidelines. Joint planning by involving staff concerned (program staff, finance, M&E) is becoming practice and situational analysis is made before projects are designed as well as discussions on startup of the project with concerned staffs are also conducted. Amref has developed community needs based programs and timely planning and budget revision is being done.

Score: from 4 to 4.5 (slight improvement)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

Amref has integrated livelihood projects and there is program integration during project design and implementation among the existing programs (WASH and MNCH Program, WASH and livelihood integration) etc. The ASK program and World Starts With Me (WSWM) programs are both implemented in the North Showa area of the Amhara region and complementarity of activities is sought. The same is true for the UFBR programme and the WSWM programme in Afar. As far as UFBR is concerned the organization has well aligned routine programs and interventions at operation level: this was well designed by management at the SPO level. However, according to the OCA between 2011 and 2013 approaches to cross-cutting issues had very little improvement.

Score: from 3 to 3.25 (slight improvement)

Summary capability to achieve coherence

Overall there has been a slight improvement in this capability. This is due to having a broadened vision and commitment to the society, and the Business plan was revisited with staff involvement. Staff are able to internalize the vision, mission, and statement through staff orientation and regular meetings. Furthermore, there was revision and roll out of different manuals like procurement guidelines, HR manual and the development of the APMS guideline, quality assurance tools for strategic directions etc. , and staff has been oriented on this. Further alignment of projects, strategies and associated operations with the vision and mission of the organisation has been done by having a new business plan that aligns with the strategic plan and by having programs aligned with the Amref business plan. There are a little more mutually supportive efforts at operational level, but approaches to crosscutting issues have had little improvement.

Score: from 3.2 to 3.8 (slight improvement)

Centre for Development Innovation
Wageningen UR
P.O. Box 88
6700 AB Wageningen
The Netherlands
T + 31 (0)317 48 68 00
www.wageningenUR.nl/cdi

Report CDI-15-031

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

An end-line questionnaire for Impact Evaluation of Sexual and Reproductive Health and WASH projects (C11 and C13) in Afar Region

International Food Policy Research Institute and Groningen University

For interviewing boys and girls

PART 1 – IDENTIFICATION

Dear Sir/Madam, we work for IFPRI. We would like to ask you some questions about reproductive health and water supply. Taking part in this study is voluntary. If you choose to take part, you have the right to stop at any time and there will be no consequences. We would like to thank you for your full cooperation in advance.

0.1	Name of the household head	
0.2	Sex of the household head	
0.3	Household number/ID (see the code from code book)	
0.4	Respondent mother ID (see the code from code book)	
0.5	Sample group	
0.6	Respondent boy/girl ID (see the code from the code book)	
1.1	First name of the respondent (boy/girl)	
1.2	Last name of the respondent	
1.3	Telephone no. of the household head or other household member	
1.5	Name of the mother (a woman) interviewed from the family	

1.6	Date of Interview (" dd/ mm/ yyyy ") <i>Gregorian calendar</i>	/ / 2014
1.7	Time the interview started, 24 hour clock (" hh: mm ")	--:--
1.8	Time the interview ended, 24 hour clock (" hh: mm ")	--:--

1.9	Region	
1.10	Zone: 1= zone 1; 3=zone 3; 5=zone 5	
1.11	District/woreda: (see the code from the code book)	
1.12	Peasant Association (PA, Kebele) (see the code from code book)	
1.13	Gote/village (see the code from code book)	

1.14	Enumerator's name	
1.15	Supervisor's name	
1.16	Data entry person's name	

PART 2- RESPONDENT CHARACTERISTICS

2.0 Characteristics of the respondent

Characteristics	The respondent		Codes
Sex (skip?)	2.0		0=female 1=male
Age (skip?)	2.1		
Religion (skip?)	2.3		1=Muslim 2=orthodox 3=other Christian 4=Others
Ethnicity (skip?)	2.5		
Education level	2.7		0=none 1=Adult education 2=some elementary 4=elementary finished 5=some secondary
Completed years of formal education	2.9		6=secondary finished 7=some tertiary 8=tertiary finished
Primary occupation	2.11		1=livestock keeping 2= crop production 3=Salaried, 4=Casual labor
Secondary Occupation	2.13.		5= Self-employed in business 6=Student, 7= Not employed, 8=Housekeeping and child care, 9=Other (specify):

2.15 How many months did you live in this kebele in the last 12 months?

PART 4-ACCESS TO SEXUAL AND REPRODUCTIVE HEALTH SERVICES

4.0. Have you ever participated in any sexual and reproductive health awareness campaign since January 2011?

Campaign conducted at	Yes=1, No=0	When- year (EC)	About what	Organizer
School	4.0.1.	4.0.2	4.0.3	4.0.10
Health centre	4.0.4	4.0.5	4.0.6	4.0.11
In the Community/village	4.0.7	4.0.8	4.0.9	4.0.12

4.1. Have you ever participated in any sexual and reproductive health training programme since January 2011?

Places	Yes=1, No=0	When- year (EC)	About what	Organizer
At School	4.1.1.	4.1.2	4.1.3	4.1.10
At Health centre	4.1.4	4.1.5	4.1.6	4.1.11
In the Community/village	4.1.7	4.1.8	4.1.9	4.1.12

4.2. Are the following health service providers available in your Kebele/Woreda?

Code	Service provider /services	Available Yes=1, No=0
4.2.1	traditional health service provider in your kebele	
4.2.2	Community Health Promoter (CHP) in your kebele	
4.2.3	Health Extension Worker active in your kebele	
4.2.4	Health Centre in your Woreda	
4.2.5.	Health post in your Kebele	

4.3. Are the following health services easy to access for you?

Services /facilities	Easy to access Yes=1, No=0	If not easy, why? (code A)
Pregnancy test	4.3.1	4.3.2
Counselling on pregnancy, child care and contraceptives	4.3.3	4.3.4
Medical treatment	4.3.5	4.3.6
Condoms for you and your partner	4.3.7	4.3.8
Other contraceptives for you and your partner	4.3.9	4.3.10

Code A: 1=costly 2=not available at all 3=far from my village 4=too long queue

PART 5: KNOWLEDGE ABOUT SEXUAL AND REPRODUCTIVE HEALTH

5.1. What are sexually transmitted infectious diseases you know?

- 5.1.1. -----
- 5.1.2. -----
- 5.1.3. -----
- 5.1.4. -----
- 5.1.5. -----
- 5.1.6. -----

5.2. Can HIV be transmitted through sexual intercourse?

Yes ₁ No ₂

5.3. Can HIV be transmitted by sharing food with someone who is infected?

Yes ₁ No ₂

5.4. Is it possible to protect oneself from HIV infection by only having sexual intercourse with an HIV-negative and faithful partner?

Yes ₁ No ₂

5.5. Is it possible for a healthy-looking person to have the HIV virus?

Yes ₁ No ₂

5.6. Can people get the HIV virus because of witchcraft or other supernatural means?

Yes ₁ No ₂

5.7. If two partners are not married, is it advisable to use a condom to avoid sexually transmittable infections?

Yes _1 No _2

5.8. What type(s) of contraceptives do you know?

(Tick each box that applies, so you can tick more than one box)

- | | |
|--|--|
| <input type="checkbox"/> _1 Pill | <input type="checkbox"/> _9 Male sterilization |
| <input type="checkbox"/> _2 Emergency contraception | <input type="checkbox"/> _10 Female sterilization |

| <input type="checkbox"/> _8 Norplant | |

PART 6-PERCEPTION ON SEXUAL AND REPRODUCTIVE HEALTH PRACTICES

6.01 I want you to give me a secretive answer for the following questions. I will give you 3(4) stones and you hold in your right hand and keep your hands (both) on your back side. If you agree on the statement I will soon be reading to you, you transfer one stone to your left hand behind you (I will not see it, you shouldn't also tell me), but if you don't agree, do not transfer any stone. At the end, I would like to know the number of statements you agreed. Now, I am starting reading the statements,

1. HIV can be transmitted through witchcraft or other supernatural means (all)
2. It is acceptable to use contraceptives to avoid pregnancy (all)
3. In a marriage both partners should decide on how many children they should have (all)
4. **A girl should be circumcised (only for Group 1)**

On how many of the statements do you agree, (show me your left hand)-----

6.02 We do this experiment in the same way but with different set of statements

1. Waiting in line for the minibus is nice because you meet new people (all)
2. I have never attended a wedding ceremony (all)
3. Everybody should fast (all)
4. **A girls should be circumcised (only for Group 2)**

On how many of the statements do you agree, (show me your left hand)-----

6.03 We do this experiment in the same way but with different set of statements

1. I like drinking ambo/bottled water (all)

- 2. Smoking cigarettes should be banned (all)
- 3. There is at least one mobile phone in the house where I currently live (all)
- 4. There are times when a wife deserves to be hit or beaten by her husband/partner (only for Group 1)

On how many of the statements do you agree, (show me your left hand)-----

6.1 Do you agree on the following statements? (Tick one box)

	Questions	totally agree 1	somehow agree 2	neither agree nor disagree 3	Somehow disagree 4	totally disagree 5
6.1.1	If someone dresses sexy, the person wants to have sex					
6.1.2	A boy/man can use force or pressure in a relationship, if he wants to have sex					
6.1.3	A woman/girl is allowed to refuse sex, even if her boy/man is sexually aroused and wants sex					
6.1.4	Husbands should punish their wives if they feel they have done something wrong					
6.1.5	A girl should not be given any information about sex before she marries					
6.1.6	A girl should be circumcised					
6.1.7	It is acceptable if a girl has sex before she marries					
6.1.8	It is acceptable if a boy has sex before he marries					
6.1.9	It is acceptable to use a					

	condom to avoid pregnancy					
6.1.10	It is acceptable to use contraceptives to avoid pregnancy					
6.1.11	It is acceptable if schools and health service providers give unmarried people information about the use of contraceptives					

IF THE RESPONDENT IS A GIRL/WOMAN ASK QUESTIONS 6.2, OTHERWISE SKIP TO 6.4

6.2. Have you yourself been circumcised?

Yes ₁ No ₂

6.3. If yes to 6.2, how old were you when this occurred?

.....

6.4. Do you think that a girl should be circumcised?

Yes ₁ No ₂

6.5. If yes to 6.4, what is the main reason? FOR THE ENUMERATOR, DO NOT READ THE ANSWER, LET THE RESPONDENT REPLY

- ₁ Get married/find a better husband
- ₂ Be accepted by the community
- ₃ Religion
- ₄ Pay respect to the elderly women
- ₅ Tradition
- ₆ Other : (specify)

6.6. Do you think that there are times when a wife deserves to be hit or beaten by her husband/partner?

Yes ₁ No ₂

PART 7-USE OF SEXUAL AND REPRODUCTIVE HEALTH SERVICES

7.01 Have you ever had sex?

Yes No , if no go to 7.6

7.02. At what age did you have sexual intercourse for the first time?.....

IF THE RESPONDENT IS MARRIED ASK 7.1, IF NO GO TO 7.2

7.1. At what age did you get married for the first time? -----

7.2. Were you ever forced to have sex when you did not want to?

Yes _1 No _2

7.3. What type of contraceptive method(s) have you ever used?

(Tick each box that applies, so you can tick more than one box)

- _1 I have never used any
- _2 Pill
- _3 Emergency contraception
- _4 Male condom
- _5 Female condom
- _6 IUD (Loop)
- _7 Injectable / Depo-Provera
- _8 Diaphragm/foam tablets/jelly/cream
- _9 Norplant
- _10 Male sterilization
- _11 Female sterilization
- _12 Non penetrative sex
- _13 Withdrawal
- _14 Calendar method
- _15 Traditional method: (specify): _____
- _16 Other contraceptive: (specify)

7.4. The last time you had sexual intercourse; did you and/or your partner use any contraceptive method?

Yes _1 No _2

7.5. If yes specify the method (see question 7.3):

7.6. Do you prefer traditional treatment or a health service provider to obtain services on reproductive and sexual health?

Health service provider (formal - HEW, HC, HP, CHP) _1

Traditional provider (e.g. TBA)

₂

7.7. How often did you visit the following health service providers in the last year to obtain services on reproductive and sexual health?

(Tick relevant boxes)

code	Service providers	Never	Once	More than once	If you visit, why? (Code A)	Were you satisfied? Yes=1, No=0
1	Traditional health provider					
2	Community promoter					
3	Health extension worker					
4	Health post/centre/hospital					
Codes A: 1= Pregnancy test, 2=HIV testing/counselling , 3= Testing sexual Infection, 4=To obtain contraceptives, 5=To get information/counselling, 6=Maternal/child health care, 7=Others:-----						

IF THE RESPONDENT IS A GIRL/WOMAN ASK 7.8

7.8. Maternal and child health

	Questions	Answer
7.8.1	Have you ever given birth? (1=yes, 0=no) (skip?)	
7.8.2	At what age did you give birth for the first time? (skip?)	
7.8.3	Number of children you born	

Comment [P1]: I think these questions can be important as many women give birth at a very young age. Due to the delicacy of the issue I think that we should not ask the other questions part of 7.8 we discuss with the mothers.

PART 8-INTENTIONS TO USE SEXUAL AND REPRODUCTIVE HEALTH SERVICES

8.1. How many children are you planning to have in total? *(fill in number of children)*

8.2. Who will decide about how many children you will have?

Myself

₁

- My partner ₂
- Myself together with my partner ₃
- My parents/ relatives ₄
- Other ₅

8.3. Do you plan to use contraceptives if you have sexual intercourse in the future?

- Yes ₁
- No ₂

8.4. Who will decide about whether you will use contraceptives or not?

- Myself ₁
- My partner ₂
- Myself together with my partner ₃
- My parents/ relatives ₄
- Other ₅

8.5. Who will decide about whether you will have sexual intercourse or not?

- Myself ₁
- My partner ₂
- Myself together with my partner ₃
- My parents/ relatives ₄
- Other ₅

8.6. If your next child is a girl, would you support her being circumcised?

- Yes ₁ No ₂

8.7. Who will decide about whether she will be circumcised?

- Myself ₁
- My partner ₂
- Myself together with my partner ₃
- My parents/ relatives ₄
- The community ₅
- Other ₆

8.8. If yes to 8.6, what is the main reason? FOR THE ENUMERATION, DO NOT READ THE ANSWER, LET THE RESPONDENT REPLY

- ₁ Get married/find a better husband
- ₂ Be accepted by the community
- ₃ Religion
- ₄ Pay respect to the elderly women
- ₅ Tradition
- ₆ Other : (specify)

I the undersigned supervisor have checked all the questions and they are complete.

Name of the supervisor -----

Signature: -----

Date: -----

FINAL PART: ENUMERATOR NOTE

<p>EN1 What main language did you use for the interview?</p>	<p>Amharic 1 Oromigna 2 Tigrina..... 3 Somali 4 Guaragigna 5 English 6 Other (SPECIFY:.....)..... 7</p>
<p>EN2 Did you use any other languages?</p>	<p>Yes 1 → SPECIFY: _____ No 0</p>
<p>EN3 Which one (anyone else) beside the respondent was present during the interview?</p>	<p>No one.....0 Husband/wife.....1 A child ≥ 5 years.....2 A child < 5 years3 An adult, household member.....4 An adult, non-household member.....5</p>
<p>EN4 Did the respondent find some of the questions difficult, embarrassing or confusing?</p>	<p>Yes 1 No 0</p>
<p>EN5 What is your evaluation of the accuracy of respondent’s answers?</p>	<p>Excellent.....1 Good.....2 Fair.....3 Not so good.....4 Very bad.....5</p>

An end-line questionnaire for Impact Evaluation of Sexual and Reproductive Health and WASH projects (C11 and C13) in Afar Region

International Food Policy Research Institute and Groningen University

For interviewing household husbands

PART 1 – IDENTIFICATION

Dear Sir/Madam, we work for IFPRI. We would like to ask you some questions about reproductive health and water supply. Taking part in this study is voluntary. If you choose to take part, you have the right to stop at any time and there will be no consequences. We would like to thank you for your full cooperation in advance.

0.1	Name of the household head	
0.2	Sex of the household head	
0.3	Household number/ID (see the code from code book)	
0.4	Respondent wife ID (see the code from code book)	
0.5	Sample group	
1.1	First name of the respondent (wife)	
1.2	Last name of the respondent	
1.3	Telephone no. of the household head or other household member	
1.4	Marital status of the respondent (1=married, 2=divorced 3=widow 4=never married)	
1.51	First name of the husband	
1.52	Last name of the husband	
1.53	Respondent husband ID	
1.6	Date of Interview (" dd/ mm/ yyyy ") <i>Gregorian calendar</i>	/ / 2014
1.7	Time the interview started, 24 hour clock (" hh: mm ")	__: __
1.8	Time the interview ended, 24 hour clock (" hh: mm ")	__: __
1.9	Region	
1.10	Zone: 1= zone 1; 3=zone 3; 5=zone 5	
1.11	District/woreda: (see the code from the code book)	
1.12	Peasant Association (PA, Kebele) (see the code from code book)	
1.13	Gote/village (see the code from code book)	
1.14	Enumerator's name	
1.15	Supervisor's name	
1.16	Data entry person's name	

PART 2- RESPONDENT CHARACTERISTICS

2.0. Can you please tell me some details about your occupation?

Characteristics	Husband /partner/respondent	Codes
Primary occupation	2.12	1=livestock keeping 2= crop production 3=Salaried, 4=Casual labor
Secondary Occupation	2.14	5= Self-employed in business 6=Student, 7= Not employed, 8=Housekeeping and child care, 9=Other (specify):

2.15 How many months did you live in this kebele in the last 12 months?

PART 4-ACCESS TO SEXUAL AND REPRODUCTIVE HEALTH SERVICES

4.0. Have you ever participated in any sexual and reproductive health awareness campaign since January 2011?

Campaign conducted at	Yes=1, No=0	When- year (EC)	About what	Organizer
School	4.0.1.	4.0.2	4.0.3	4.0.10
Health centre	4.0.4	4.0.5	4.0.6	4.0.11
In the Community/village	4.0.7	4.0.8	4.0.9	4.0.12

4.1. Have you ever participated in any sexual and reproductive health training programme since January 2011?

Places	Yes=1, No=0	When- year (EC)	About what	Organizer
At School	4.1.1.	4.1.2	4.1.3	4.1.10
At Health centre	4.1.4	4.1.5	4.1.6	4.1.11
In the Community/village	4.1.7	4.1.8	4.1.9	4.1.12

4.2. Are the following health service providers available in your Kebele/Woreda?

Code	Service provider /services	Available Yes=1, No=0
4.2.1	traditional health service provider in your kebele	
4.2.2	Community Health Promoter (CHP) in your kebele	
4.2.3	Health Extension Worker active in your kebele	
4.2.4	Health Centre in your Woreda	
4.2.5	Health post in your Kebele	

4.3. Are the following health services easy to access for you?

	Services /facilities	Easy to access Yes=1, No=0	If not easy, why? (code A)
	Pregnancy test	4.3.1	4.3.2
	Counselling on pregnancy, child care and contraceptives	4.3.3	4.3.4
	Medical treatment	4.3.5	4.3.6
	Condoms for you and your partner	4.3.7	4.3.8
	Other contraceptives for you and your partner	4.3.9	4.3.10

Code A: 1=costly 2=not available at all 3=far from my village 4=too long queue

PART 5: KNOWLEDGE ABOUT SEXUAL AND REPRODUCTIVE HEALTH

5.1. What are sexually transmitted infectious diseases you know?

- 5.1.1. -----
- 5.1.2. -----
- 5.1.3. -----
- 5.1.4. -----
- 5.1.5. -----
- 5.1.6. -----

5.2. Can HIV be transmitted through sexual intercourse?

Yes ₁ No ₂

5.3. Can HIV be transmitted by sharing food with someone who is infected?

Yes ₁ No ₂

5.4. Is it possible to protect oneself from HIV infection by only having sexual intercourse with an HIV-negative and faithful partner?

Yes ₁ No ₂

5.5. Is it possible for a healthy-looking person to have the HIV virus?

Yes ₁ No ₂

5.6. Can people get the HIV virus because of witchcraft or other supernatural means?

Yes ₁ No ₂

5.7. If two partners are not married, is it advisable to use a condom to avoid sexually transmittable infections?

Yes ₁ No ₂

5.8. What type(s) of contraceptives do you know?

(Tick each box that applies, so you can tick more than one box)

- | | |
|--|--|
| <input type="checkbox"/> ₁ Pill | <input type="checkbox"/> ₉ Male sterilization |
| <input type="checkbox"/> ₂ Emergency contraception | <input type="checkbox"/> ₁₀ Female sterilization |
| <input type="checkbox"/> ₃ Male condom | <input type="checkbox"/> ₁₁ Non penetrative sex |
| <input type="checkbox"/> ₄ Female condom | <input type="checkbox"/> ₁₂ Withdrawal |
| <input type="checkbox"/> ₅ IUD (loop) | <input type="checkbox"/> ₁₃ Calendar method |
| <input type="checkbox"/> ₆ Injectable / Depo-Provera | <input type="checkbox"/> ₁₄ Traditional: (specify): _____ |
| <input type="checkbox"/> ₇ Diaphragm/foam tablets/jelly/cream | <input type="checkbox"/> ₁₅ Other : (specify) |
| <input type="checkbox"/> ₈ Norplant | |

PART 6-PERCEPTION ON SEXUAL AND REPRODUCTIVE HEALTH PRACTICES

6.01 I want you to give me a secretive answer for the following questions. I will give you 3(4) stones and you hold in your right hand and keep your hands (both) on your back side. If you agree on the statement I will soon be reading to you, you transfer one stone to your left hand behind you (I will not see it, you shouldn't also tell me), but if you don't agree, do not transfer any stone. At the end, I would like to know the number of statements you agreed. Now, I am starting reading the statements,

1. HIV can be transmitted through witchcraft or other supernatural means (all)
2. It is acceptable to use contraceptives to avoid pregnancy (all)
3. In a marriage both partners should decide on how many children they should have (all)
4. A girl should be circumcised (only for Group 1)

On how many of the statements do you agree, (show me your left hand)-----

6.02 We do this experiment in the same way but with different set of statements

1. Waiting in line for the minibus is nice because you meet new people (all)
2. I have never attended a wedding ceremony (all)
3. Everybody should fast (all)
4. A girls should be circumcised (only for Group 2)

On how many of the statements do you agree, (show me your left hand)-----

6.03 We do this experiment in the same way but with different set of statements

1. I like drinking ambo/bottled water (all)
2. Smoking cigarettes should be banned (all)
3. There is at least one mobile phone in the house where I currently live (all)
4. There are times when a wife deserves to be hit or beaten by her husband/partner (only for Group 1)

On how many of the statements do you agree, (show me your left hand)-----

6.1 Do you agree on the following statements? (Tick one box)

	Questions	totally agree 1	somehow agree 2	neither agree nor disagree 3	Somehow disagree 4	totally disagree 5
6.1.1	If someone dresses sexy, the person wants to have sex					
6.1.2	A boy/man can use force or pressure in a					

	relationship, if he wants to have sex					
6.1.3	A woman/girl is allowed to refuse sex, even if her boy/man is sexually aroused and wants sex					
6.1.4	Husbands should punish their wives if they feel they have done something wrong					
6.1.5	A girl should not be given any information about sex before she marries					
6.1.7	It is acceptable if a girl has sex before she marries					
6.1.8	It is acceptable if a boy has sex before he marries					
6.1.9	It is acceptable to use a condom to avoid pregnancy					
6.1.10	It is acceptable to use contraceptives to avoid pregnancy					
6.1.11	It is acceptable if schools and health service providers give unmarried people information about the use of contraceptives					

6.4. Do you think that a girl should be circumcised?

Yes ₁ No ₂

6.5. If yes to 6.4, what is the main reason? FOR THE ENUMERATOR, DO NOT READ THE ANSWER, LET THE RESPONDENT REPLY

- ₁ Get married/find a better husband
- ₂ Be accepted by the community
- ₃ Religion
- ₄ Pay respect to the elderly women
- ₅ Tradition

₆ Other : (specify)

6.6. Do you think that there are times when a wife deserves to be hit or beaten by her husband/partner?

Yes ₁ No ₂

PART 7-USE OF SEXUAL AND REPRODUCTIVE HEALTH SERVICES

7.1. At what age did you get married for the first time? -----

7.3 What type of contraceptive method(s) have you ever used?

(Tick each box that applies, so you can tick more than one box)

- ₁ I have never used any
- ₂ Pill
- ₃ Emergency contraception
- ₄ Male condom
- ₅ Female condom
- ₆ IUD (Loop)
- ₇ Injectable / Depo-Provera
- ₈ Diaphragm/foam tablets/jelly/cream
- ₉ Norplant
- ₁₀ Male sterilization
- ₁₁ Female sterilization
- ₁₂ Non penetrative sex
- ₁₃ Withdrawal
- ₁₄ Calendar method
- ₁₅ Traditional method: (specify): _____
- ₁₆ Other contraceptive: (specify)

7.4 The last time you had sexual intercourse; did you and/or your partner use any contraceptive method?

Yes ₁ No ₂

7.5 If yes specify the method (see question 7.3): -----

7.6 Do you prefer traditional treatment or a health service provider to obtain services on reproductive and sexual health?

- Health service provider (formal - HEW, HC, HP, CHP) ₁
 Traditional provider (e.g. TBA) ₂

7.7 How often did you visit the following health service providers in the last year to obtain services on reproductive and sexual health?

(Tick relevant boxes)

code	Service providers	Never	Once	More than once	If you visit, why? (Code A)	Were you satisfied? Yes=1, No=0
1	Traditional health provider					
2	Community promoter					
3	Health extension worker					
4	Health post/centre/hospital					
Codes A: 1= Pregnancy test, 2=HIV testing/counselling , 3= Testing sexual Infection, 4=To obtain contraceptives, 5=To get information/counselling, 6=Maternal/child health care, 7=Others:-----						

PART 8-INTENTIONS TO USE SEXUAL AND REPRODUCTIVE HEALTH SERVICES

8.1. How many children are you planning to have in total? *(fill in number of children)*

8.2. Who will decide about how many children you will have?

- Myself ₁
 My wife/partner ₂
 Myself together with my wife/partner ₃
 My parents/ relatives ₄
 Other ₅

8.3. Do you plan to use contraceptives if you have sexual intercourse in the future?

- Yes ₁
 No ₂

8.4. Who will decide about whether you will use contraceptives or not?

- Myself ₁
 My wife/ partner ₂

- Myself together with my wife/partner _3
- My parents/ relatives _4
- Other _5

8.5. Who will decide about whether you will have sexual intercourse or not?

- Myself _1
- My husband/partner _2
- Myself together with my husband/partner _3
- My parents/ relatives _4
- Other _5

8.6. If your next child is a girl, would you support her being circumcised?

- Yes _1 No _2

8.7. Who will decide about whether she will be circumcised?

- Myself _1
- My husband/partner _2
- Myself together with my husband/partner _3
- My parents/ relatives _4
- The community _5
- Other _6

8.8. If yes to 8.6, what is the main reason? FOR THE ENUMERATION, DO NOT READ THE ANSWER, LET THE RESPONDENT REPLY

- _1 Get married/find a better husband
- _2 Be accepted by the community
- _3 Religion
- _4 Pay respect to the elderly women
- _5 Tradition
- _6 Other : (specify)

I the undersigned supervisor have checked all the questions and they are complete.

Name of the supervisor -----

Signature: -----

Date: -----

FINAL PART: ENUMERATOR NOTE

<p>EN1 What main language did you use for the interview?</p>	<p>Amharic..... 1 Oromigna 2 Tigrina 3 Somali 4 Guaragigna 5 English..... 6 Afar 7 Other (SPECIFY: _____)..... 8</p>
<p>EN2 Did you use any other languages?</p>	<p>Yes 1 → SPECIFY: _____ No 0</p>
<p>EN3 Which one (anyone else) beside the respondent was present during the interview?</p>	<p>No one.....0 Husband/wife.....1 A child ≥ 5 years.....2 A child < 5 years3 An adult, household member.....4 An adult, non-household member.....5</p>
<p>EN4 Did the respondent find some of the questions difficult, embarrassing or confusing?</p>	<p>Yes 1 No 0</p>
<p>EN5 What is your evaluation of the accuracy of respondent’s answers?</p>	<p>Excellent.....1 Good.....2 Fair.....3 Not so good.....4 Very bad.....5</p>

Thank you very much for your time and all your hard work.

An end-line questionnaire for Impact Evaluation of Sexual and Reproductive Health and WASH projects (C11 and C13) in Afar Region

International Food Policy Research Institute and Groningen University

For interviewing household women from 15 to 49 years old

PART 1 – IDENTIFICATION

Dear Sir/Madam, we work for IFPRI. We would like to ask you some questions about reproductive health and water supply. Taking part in this study is voluntary. If you choose to take part, you have the right to stop at any time and there will be no consequences. We would like to thank you for your full cooperation in advance.

0.1	Name of the household head	
0.2	Sex of the household head	
0.3	Household number/ID (see the code from code book)	
0.4	Respondent wife ID (see the code from code book)	
0.5	Sample group	
1.1	First name of the respondent (wife)	
1.2	Last name of the respondent	
1.3	Telephone no. of the household head or other household member	
1.4	Marital status of the respondent (1=married, 2=divorced 3=widow 4=never married)	
1.51	First name of the husband	
1.52	Last name of the husband	
1.53	Respondent husband ID	
1.6	Date of Interview (" dd/ mm/ yyyy ") <i>Gregorian calendar</i>	/ / 2014
1.7	Time the interview started, 24 hour clock (" hh: mm ")	__:__
1.8	Time the interview ended, 24 hour clock (" hh: mm ")	__:__
1.9	Region	
1.10	Zone: 1= zone 1; 3=zone 3; 5=zone 5	
1.11	District/woreda: (see the code from the code book)	
1.12	Peasant Association (PA, Kebele) (see the code from code book)	
1.13	Gote/village (see the code from code book)	
1.14	Enumerator's name	
1.15	Supervisor's name	
1.16	Data entry person's name	

PART 2- RESPONDENT CHARACTERISTICS

2.0. Can you please tell me some details about you and your husband?

Characteristics	The woman /respondent		Husband /partner		Codes
Age (skip?)	2.1		2.2		
Religion (skip?)	2.3		2.4		1=Muslim 2=orthodox 3=other Christian 4=Others
Ethnicity (skip?)	2.5		2.6		
Education level (skip?)	2.7		2.8		0=none 1=Adult education 2=some elementary 4=elementary finished 5=some secondary
Completed years of formal education (skip?)	2.9		2.10		6=secondary finished 7=some tertiary 8=tertiary finished
Primary occupation	2.11		2.12		1=livestock keeping 2= crop production 3=Salaried, 4=Casual labor
Secondary Occupation	2.13.		2.14		5= Self-employed in business 6=Student, 7= Not employed, 8=Housekeeping and child care, 9=Other (specify):

PART 3-HOUSEHOLD CHARACTERISTICS

3.1. Mode of household settlement (encircle one of them)

1. Sedentary
2. Semi-sedentary (some household members move in some periods of the year)
3. nomadic (no permanent place)

3.2. How many is the total family size (including husband and wife/wives)

		<5 years	5-15 years	>15 years
1	Male			
2	Female			

IF THE RESPONDENT IS CURRENTLY MARRIED OR LIVING TOGHETER WITH A MAN AS IF MARRIED THEN ASK 3.2.3 AND 3.2.4, OTHERWISE SKIP THEM.

3.2.3 Including yourself, in total, how many wives (or partners) does your husband live with now as if married?

.....

3.2.4. Are you the first, second, third...?

1. first
2. second
3. third

....

3.3. House type

1. Afar house (an oval house made from sticks covered with grasses and clothes)
2. Tukul house (wooden and mudded wall and roofed with grass)
3. Corrugated iron

3.4. Livestock holding of the household by different livestock class

	Livestock class	Number
1	Oxen	
2	Cows	
3	Heifers	
4	Bull	
5	Goats	
6	Sheep	
7	Camel	
8	Donkey	
9	Chicken	

3.5. Private land holding size in hectare of all household members, if any

Land use type	Size
3.5.1. Crop land rain fed-	
3.5.2. Crop land –Irrigated	
3.5.3. Private grazing land	
3.5.4. Communal grazing land	

3.6. What were your household income sources during the last 12 months

a) Income sources	b) 1=yes, 0=No	c) Total amount your family generated per year in ETB	d) Who generated? (1=only me, 2=me and other family member, 3=other family member)
1 Casual labour			
2 Salary			
3 Selling of livestock			
4 Selling agricultural products			
5 Trade			
6 Handcraft			
7 Remittance			
8 Aid (cash or food)			
9 Other, specify -----			

PART 4-ACCESS TO SEXUAL AND REPRODUCTIVE HEALTH SERVICES

4.0. Have you ever participated in any sexual and reproductive health awareness campaign since January 2011?

Campaign conducted at	Yes=1, No=0	When- year (EC)	About what	Organizer
School	4.0.1.	4.0.2	4.0.3	4.0.10
Health centre	4.0.4	4.0.5	4.0.6	4.0.11
In the Community/village	4.0.7	4.0.8	4.0.9	4.0.12

4.1. Have you ever participated in any sexual and reproductive health training programme since January 2011?

Places	Yes=1, No=0	When- year (EC)	About what	Organizer
At School	4.1.1.	4.1.2	4.1.3	4.1.10
At Health centre	4.1.4	4.1.5	4.1.6	4.1.11
In the Community/village	4.1.7	4.1.8	4.1.9	4.1.12

4.2. Are the following health service providers available in your Kebele/Woreda?

Code	Service provider /services	Available Yes=1, No=0
4.2.1	traditional health service provider in your kebele	
4.2.2	Community Health Promoter (CHP) in your kebele	
4.2.3	Health Extension Worker active in your kebele	
4.2.4	Health Centre in your woreda	
4.2.5	Health post in your Kebele	

Comment [I1]: It may be that the HEW and the health post in the kebele are the same – Getaw do you know this?

4.3. Are the following health services easy to access for you?

Services /facilities	Easy to access Yes=1, No=0	If not easy, why? (code A)
Pregnancy test	4.3.1	4.3.2
Counselling on pregnancy, child care and contraceptives	4.3.3	4.3.3
Medical treatment (4.3.4	4.3.5
Condoms for you and your partner	4.3.6	4.3.7
Contraceptives for you and your partner	4.3.8	4.3.9

Code A: 1=costly 2=not available at all 3=far from my village 4=too long queue

PART 5: KNOWLEDGE ABOUT SEXUAL AND REPRODUCTIVE HEALTH

5.1. What are sexually transmitted infectious diseases you know?

- 5.1.1. -----
- 5.1.2. -----
- 5.1.3. -----
- 5.1.4. -----
- 5.1.5. -----
- 5.1.6. -----

5.2. Can HIV be transmitted through sexual intercourse?

Yes ₁ No ₂

5.3. Can HIV be transmitted by sharing food with someone who is infected?

Yes ₁ No ₂

5.4. Is it possible to protect oneself from HIV infection by only having sexual intercourse with an HIV-negative and faithful partner?

Yes ₁ No ₂

5.5. Is it possible for a healthy-looking person to have the HIV virus?

Yes ₁ No ₂

5.6. Can people get the HIV virus because of witchcraft or other supernatural means?

Yes ₁ No ₂

5.7. If two partners are not married, is it advisable to use a condom to avoid sexually transmittable infections?

Yes ₁ No ₂

5.8. What type(s) of contraceptives do you know?

(Tick each box that applies, so you can tick more than one box)

- | | |
|--|--|
| <input type="checkbox"/> ₁ Pill | <input type="checkbox"/> ₉ Male sterilization |
| <input type="checkbox"/> ₂ Emergency contraception | <input type="checkbox"/> ₁₀ Female sterilization |

PART 6-PERCEPTION ON SEXUAL AND REPRODUCTIVE HEALTH PRACTICES

6.01 I want you to give me a secretive answer for the following questions. I will give you 3(4) stones and you hold in your right hand and keep your hands (both) on your back side. If you agree on the statement I will soon be reading to you, you transfer one stone to your left hand behind you (I will not see it, you shouldn't also tell me), but if you don't agree, do not transfer any stone. At the end, I would like to know the number of statements you agreed. Now, I am starting reading the statements,

1. HIV can be transmitted through witchcraft or other supernatural means (all)

2. It is acceptable to use contraceptives to avoid pregnancy (all)
3. In a marriage both partners should decide on how many children they should have (all)
4. A girl should be circumcised (only for Group 1)

On how many of the statements do you agree, (show me your left hand)-----

6.02 We do this experiment in the same way but with different set of statements

1. Waiting in line for the minibus is nice because you meet new people (all)
2. I have never attended a wedding ceremony (all)
3. Everybody should fast (all)
4. A girl should be circumcised (only for Group 2)

On how many of the statements do you agree, (show me your left hand)-----

6.03 We do this experiment in the same way but with different set of statements

1. I like drinking ambo/bottled water (all)
2. Smoking cigarettes should be banned (all)
3. There is at least one mobile phone in the house where I currently live (all)
4. There are times when a wife deserves to be hit or beaten by her husband/partner (only for Group 1)

On how many of the statements do you agree, (show me your left hand)-----

6.1 Do you agree on the following statements? (Tick one box)

	Questions	totally agree 1	somehow agree 2	neither agree nor disagree 3	Somehow disagree 4	totally disagree 5
6.1.1	If someone dresses sexy, the person wants to have sex					
6.1.2	A boy/man can use force or pressure in a relationship, if he wants to have sex					
6.1.3	A woman/girl is allowed to					

	refuse sex, even if her boy/man is sexually aroused and wants sex					
6.1.4	Husbands should punish their wives if they feel they have done something wrong					
6.1.5	A girl should not be given any information about sex before she marries					
6.1.6	A girl should be circumcised					
6.1.7	It is acceptable if a girl has sex before she marries					
6.1.8	It is acceptable if a boy has sex before he marries					
6.1.9	It is acceptable to use a condom to avoid pregnancy					
6.1.10	It is acceptable to use contraceptives to avoid pregnancy					
6.1.11	It is acceptable if schools and health service providers give unmarried people information about the use of contraceptives					

6.2. Have you yourself been circumcised?

Yes ₁ No ₂

6.3. If yes to 6.2, how old were you when this occurred?

.....

6.4. Do you think that a girl should be circumcised?

Yes ₁ No ₂

6.5. If yes to 6.4, what is the main reason? FOR THE ENUMERATOR, DO NOT READ THE ANSWER, LET THE RESPONDENT REPLY

- ₁ Get married/find a better husband
- ₂ Be accepted by the community
- ₃ Religion
- ₄ Pay respect to the elderly women
- ₅ Tradition
- ₆ Other : (specify)

6.6. Do you think that there are times when a wife deserves to be hit or beaten by her husband/partner?

- Yes ₁ No ₂

PART 7-USE OF SEXUAL AND REPRODUCTIVE HEALTH SERVICES

7.1. At what age did you get married for the first time? -----

skip?

7.2. Were you ever forced to have sex when you did not want to?

Yes ₁ No ₂

7.3. What type of contraceptive method(s) have you ever used?

(Tick each box that applies, so you can tick more than one box)

- ₁ I have never used any
- ₂ Pill
- ₃ Emergency contraception
- ₄ Male condom
- ₅ Female condom
- ₆ IUD (Loop)
- ₇ Injectable / Depo-Provera
- ₈ Diaphragm/foam tablets/jelly/cream
- ₉ Norplant
- ₁₀ Male sterilization
- ₁₁ Female sterilization
- ₁₂ Non penetrative sex
- ₁₃ Withdrawal
- ₁₄ Calendar method
- ₁₅ Traditional method: (specify): _____
- ₁₆ Other contraceptive: (specify)

7.4. The last time you had sexual intercourse; did you and/or your partner use any contraceptive method?

Yes ₁ No ₂

7.5. If yes specify the method (see question 7.3):

7.6. Do you prefer traditional treatment or a health service provider to obtain services on reproductive and sexual health?

Health service provider (formal - HEW, HC, HP, CHP) ₁
Traditional provider (e.g. TBA) ₂

7.7. How often did you visit the following health service providers in the last year to obtain services on reproductive and sexual health?

(Tick relevant boxes)

code	Service providers	Never	Once	More than once	If you visit, why? (Code A)	Were you satisfied? Yes=1, No=0
1	Traditional health provider					
2	Community promoter					
3	Health extension worker					
4	Health post/centre/hospital					
Codes A: 1= Pregnancy test, 2=HIV testing/counselling , 3= Testing sexual Infection, 4=To obtain contraceptives, 5=To get information/counselling, 6=Maternal/child health care, 7=Others:-----						

7.8. Maternal and child health

	Questions	Answer
7.8.1	Have you ever given birth? (1=yes, 0=no) (skip?)	
7.8.2	At what age did you give birth for the first time? (skip?)	
7.8.3	Number of children you born	
7.8.4	How many alive	
7.8.5	Have you had pregnancy during the last two years? <i>Year, Ethiopian calendar</i>	
7.8.6	If yes to 7.8.5., have you had antenatal check-ups during the last pregnancy, yes=1, no=0	
7.8.7	How did your last pregnancy ended? Codes: Normal delivery =1, Delivery with complication=2, Miscarriage=3, Abortion =4	
7.8.8	Where did you deliver/abort this pregnancy? At the hospital/health centre =1 , at home=2, on the way=3	
7.8.9	Who assisted you for the delivery/abortion? A health worker (HEW)=1, A community health promoter (CHP)= 2, A friend or parent=3, traditional midwifery=4, without any assistance=5	
7.8.10	After the delivery, have you had postnatal check-ups <i>Yes=1 , No=0</i>	
7.8.11	Is the child in good health at the moment? <i>Yes=1 , No=0</i>	
7.8.12	Does your child attend immunization (vaccination)?	

	Yes=1 , No=0	
7.8.13	Is your last child baby girl? Yes=1 , No=0	
7.8.14	If girl, did you circumcise her already	
7.8.15	Will you circumcise her in the near future? Yes=1 , No=0	

PART 8-INTENTIONS TO USE SEXUAL AND REPRODUCTIVE HEALTH SERVICES

8.1. How many children are you planning to have in total? (fill in number of children)

8.2. Who will decide about how many children you will have?

- Myself ₁
- My husband/partner ₂
- Myself together with my husband/partner ₃
- My parents/ relatives ₄
- Other ₅

8.3. Do you plan to use contraceptives if you have sexual intercourse in the future?

- Yes ₁
- No ₂

8.4. Who will decide about whether you will use contraceptives or not?

- Myself ₁
- My husband/ partner ₂
- Myself together with my husband/partner ₃
- My parents/ relatives ₄
- Other ₅

8.5. Who will decide about whether you will have sexual intercourse or not?

- Myself ₁
- My husband/partner ₂
- Myself together with my husband/partner ₃
- My parents/ relatives ₄
- Other ₅

8.6. If your next child is a girl, would you support her being circumcised?

Yes ₁ No ₂

8.7. Who will decide about whether she will be circumcised?

- Myself ₁
- My husband/partner ₂
- Myself together with my husband/partner ₃
- My parents/ relatives ₄
- The community ₅
- Other ₆

8.8. If yes to 8.6, what is the main reason? FOR THE ENUMERATION, DO NOT READ THE ANSWER, LET THE RESPONDENT REPLY

- ₁ Get married/find a better husband
- ₂ Be accepted by the community
- ₃ Religion
- ₄ Pay respect to the elderly women
- ₅ Tradition
- ₆ Other : (specify)

PART 9- HOUSEHOLD WATER SUPPLY

9.0. Is there any piped water or public tap facility in your Kebele? (yes/no)

9.0.1. If yes,

		Answer
1	Who constructed the facility? (CSO, AMREF, Local Government, myself)	
2	Who manages the facility? (CSO, AMREF, Local Government, myself)	
3	Are you or your husband a member or participating in the local water user group (WASHCO)? (yes/no)	
4	How do you rate the reliability of the service of this piped water or public tap facility? (very reliable, reliable, unreliable, very unreliable)	
5	How do you pay for the service (no payment, per single fetching, membership fee, voluntary contribution)	
6	If you paid, how much do you pay per year (ETB)	

9.1 What is your main source of water for the following purposes? (tick the sources)

Codes	Water sources	1. <i>Drinking</i>	2. <i>Cloth and bath (1.2)</i>	3. <i>Livestock</i>
1	Surface water (river/lake/pond, stream, canal)			
2	Piped water into the house/household tap			
3	Public tap/standpipe			
4	Protected dug well			
5	Protected spring			
6	Borehole			
7	Unprotected well			
8	Unprotected spring			

9	Household water facility (self-supply)			
10	Rainwater tank			
11	Cart with small tank			
12	Other: Specify			

9.2 What distance do you travel to collect water for (single trip)

Codes		Human (drinking)		Livestock	
		2.1. Dry season	2.2. Rainy season	2.3. Dry season	2.4. Rainy season
1	200 metres and less				
2	200-1000 metres				
3	1000-2000 metres				
4	2000-3000 metres				
5	More than 3000 metres				

9.3. How long do you queue at the water point for

Codes		Human (drinking)		Livestock	
		Dry season (3.1)	Rainy season (3.2)	Dry season (3.3)	Rainy season (3.4)
1	Less than 10 minutes				
2	10-20 minutes				
3	20-30 minutes				
4	30-40 minutes				
5	More than 40 minutes				

9.4. How do you store drinking water?

- Stored in a covered container ₁
 Stored in an open container ₂

9.5. What is the observed cleanness of the drinking water container used? (to be observed by the enumerator)

- Clean container ₁
 Not clean inside the container ₂

9.6. Who is mainly responsible for collecting water for domestic purpose?

- Men ₁ Women ₂ Boys ₃ Girls ₄

9.7. What household treatment do you use for drinking water?

- None ₁
 Boiling ₂
 Agar ₃
 Other, specify:.....

9.8. What problems do you face with the water supply? (you may tick 2 boxes max.)

- No problem ₁
 Water is dirty ₂
 Water is saline ₃
 Water supply is irregular ₄
 Water is far away ₅
 Water source dries up ₆
 Fluoride ₇
 Other, specify:.....

9.9. How much water does your household usually use daily for drinking, bathing and the kitchen

		Unit	amount
	Household use		

PART 10-HOUSEHOLD SANITATION

10.0. Did you participate in any sanitation or hygiene campaign (CLTS) since January 2011?

	Campaign conducted at	1. Yes=1, No=0	2. When- year (EC)	3. About what	4. Organizer
A	School				
B	Health centre				
C	In the Community/village				

10.0.1 Did the HEW visit your home to assess the wash situation since January 2011?

- Yes ₁ No ₂

10.1 Where do the household members defecate when they are at home?

- Shrubs/bush ₁
 Cat method ₂

- Own Latrine _3
- Community latrine _4
- Somebody takes the faecal matter away _5
- Other, specify:

10.2 What type of latrine facilities exist for household use?

- No latrine _1
- Traditional pit latrine _2 (uncovered, rudimentary, uneven, difficult to clean, flies exist)
- Improved pit latrine _3 (covered, cement slab/sand plate, cleanable, even, no flies)
- Flush toilet _4
- Other, specify:

10.3. Is there evidence of the use of a latrine at household level (observation)?

- (Faeces in the pit, maintained, visible access, no spider webs)
- Yes _1 No _2

10.4. Does your community have a latrine that is open for public use (community latrines)?

- Yes _1 No _2

10.5. Does anyone from your household ever use the public, community latrine?

- Yes _1 No _2
- If no, why not:

10.6. How do you dispose faeces of children under 5 years old?

- Own latrine _1
- Shrubs/bush _2
- Cat method _3
- Community latrine _4
- Deposit in the dumping pit _5
- Throw in the backyard/farmyard _6
- Throw in open spaces _7
- Other, specify:

10.7. Do you have a hand washing facility nearby to the latrine?

- Yes _1 No _2

10.8. Which cleansing agent do you use for hand washing?

- Water only _1
- Soap _2
- Ash _3
- Other, specify:

10.9. What is the time/regularity of hand washing in the household

After work	Yes <input type="checkbox"/> ₁	No <input type="checkbox"/> ₂
After cleaning vessels	Yes <input type="checkbox"/> ₁	No <input type="checkbox"/> ₂
Before handling food	Yes <input type="checkbox"/> ₁	No <input type="checkbox"/> ₂
After defecation	Yes <input type="checkbox"/> ₁	No <input type="checkbox"/> ₂
Before eating	Yes <input type="checkbox"/> ₁	No <input type="checkbox"/> ₂
After washing children's bottoms	Yes <input type="checkbox"/> ₁	No <input type="checkbox"/> ₂

Other, specify:

10.10. How frequent do the household members take shower?

	Weekly or less	monthly	More than a month
Husband	<input type="checkbox"/> ₁	<input type="checkbox"/> ₁	<input type="checkbox"/> ₁
You (mother)	<input type="checkbox"/> ₂	<input type="checkbox"/> ₂	<input type="checkbox"/> ₂
Children below 5	<input type="checkbox"/> ₃	<input type="checkbox"/> ₃	<input type="checkbox"/> ₃
Children above 15	<input type="checkbox"/> ₄	<input type="checkbox"/> ₄	<input type="checkbox"/> ₄

10.11. Where do you dispose of your household waste

Deposit in the dumping pit	<input type="checkbox"/> ₁
Throw in the backyard/farmyard	<input type="checkbox"/> ₂
Throw in open spaces	<input type="checkbox"/> ₃
Burning	<input type="checkbox"/> ₄

Other, specify:

I the undersigned supervisor have checked all the questions and they are complete.

Name of the supervisor -----

Signature: -----

Date: -----

FINAL PART: ENUMERATOR NOTE

<p>EN1 What main language did you use for the interview?</p>	<p>Amharic.....1 Oromigna2 Tigrina3 Somali4 Guaragigna5 English.....6 Afar7 Other (SPECIFY: _____)8</p>
<p>EN2 Did you use any other languages?</p>	<p>Yes 1 → SPECIFY: _____ No 0</p>
<p>EN3 Which one (anyone else) beside the respondent was present during the interview?</p>	<p>No one.....0 Husband/wife.....1 A child ≥ 5 years.....2 A child < 5 years3 An adult, household member.....4 An adult, non-household member.....5</p>
<p>EN4 Did the respondent find some of the questions difficult, embarrassing or confusing?</p>	<p>Yes 1 No 0</p>
<p>EN5 What is your evaluation of the accuracy of respondent's answers?</p>	<p>Excellent.....1 Good.....2 Fair.....3 Not so good.....4 Very bad.....5</p>

Thank you very much for your time and all your hard work.

SRHR Alliance

AE Project – Unite For Body Rights

Report MFS II Joint Evaluations (C11)

Achievement of MDGs

Country	Ethiopia
Consortium	SRHR Alliance
Responsible Dutch NGO	Amref Flying Doctors Netherlands
Project (if applicable)	AE Project – Unite For Body Rights
Southern partner organisation	Amref Health Africa Ethiopia

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

Evaluation team:

IFPRI/ESARO Ethiopia: Getaw Tadesse and Samson Jemaneh

University of Groningen: Clemens Lutz, Elisabetta de Cao and Steffen Eriksen

1. Introduction

The general aim of this project (C11) is to improve the sexual and reproductive health situation for people living in the Afar region in Ethiopia by increasing access to health services, providing comprehensive sexuality education and enhancing utilization of health services at community level. The project is implemented by Amref Health Africa Ethiopia.

To improve Sexual Reproductive Health and Right (SRHR) services in Afar, the programme was designed to train and support health workers at three levels in the health system: health centres, rural health extension posts, and within the communities through community health promoters. The program provides comprehensive sexuality education, training and support for districts and health management teams. Some health facilities are renovated and equipped. The project objectives target 4 result areas: civil society strengthening, MDG 4-5 and 6 regarding health, strengthened capacity of the southern partner organization and international lobby and advocacy. This report evaluates the effects of the project on the MDG targets (the MDG result area only).

Impact of this project is measured through a 'difference-in-difference' analysis. Households (control group and treatment group) have been interviewed in September 2012 and September-December 2014. The collected data allow us to calculate several treatment effects for specified indicators. The results show that attribution of results to project activities is quite challenging. However, some clear treatment effects are observed and these results form the basis for the positive assessment we make. Regarding knowledge, perceptions and intentions about SRHR issues we observe a treatment effect of project activities. Outcomes for use and access to health services are still lagging behind the targets.

The report is structured as follows. The next section describes the context of the project. Subsequently, an overview of project activities is provided. Section 4 presents the method and Section 5 discusses data collection. Section 6 provides the findings and section 7 discusses the results. The final section draws conclusions.

2. Context

Ethiopia has shown an impressive economic growth over the last ten years, but still remains to be among the poorest countries in the world. With 85% of the population residing in rural areas, access to health care has been the most complex and difficult undertaking for the health system in Ethiopia. Ethiopia's population face a high rate of morbidity and mortality and its health status is very poor (Amref Health Africa Ethiopia, proposal 2011).

This project is carried out in Afar, one of the most remote, isolated regions in the country. Afar pastoralist communities have difficulty in accessing mainstream public services and participating in policy making processes. The Afar region is a pastoralist area characterized by recurrent conflict, food insecurity, drought and flooding. Pastoralists mainly depend on the services of traditional health providers who are not formally trained and are not linked to the formal health referral system. The overall health status of the Afar population is poor, with women and children particularly vulnerable to poor health, with high maternal mortality (720/100,000) and under-five child mortality (229/1,000) double the national average. Women have a particularly low status, undermining efforts to improve reproductive health, face heavy workloads, are exposed to severe risks during pregnancy/delivery and are unable to control safe sexual practices with partners, increasing their vulnerability to HIV/AIDS. Traditional practices, including FGM, pose human rights and public health concerns. Low uptake of contraception and early pregnancy affect maternal health, leading to obstructed labour, vesico vaginal fistulas and foetal death. Currently there are low utilisation rates of reproductive health services (antenatal and postnatal care). Few births are attended by skilled personnel, and Afar is hardly equipped to provide emergency care. Children are affected by preventable illnesses such as malaria and diarrhoea, which results from a lack of community awareness of health promotion, low levels of immunisation, lack of knowledge of mothers to prevent childhood illnesses and of access to trained health workers.

The project proposal in 2011 observed a severe shortage of functioning health facilities and qualified health workers in Afar. Afar has 2 hospitals (the national hospital near Awash and the Dubti hospital near Semera) serving a population of 1.5m people; and a physician to population ratio of 1:132,140, against a WHO recommended 1:10,000. Until 2010 the Afar region had a total of 572 HEWs (Neijmudin et al., 2010), which is a very small number if compared to the total population and the size of the region. They face a lack of support and supervision and they are

not trained in service provision relevant to the pastoralist context (Amref Health Africa Ethiopia, proposal 2011).

The responsibilities of local authorities are increasing over time due to decentralization processes in Ethiopia. This is seen through a large increase of funds available at the Woreda level for healthcare from government and development partners. Woredas are responsible for design, planning, implementation, monitoring and evaluation of programs in line with the Woreda Health Plan. However, local authorities currently lack the capacity to absorb and manage these funds. With partners Amref Health Africa Ethiopia has identified low human resource capacity, poor management information systems, weak infrastructure, and little organizational capacity to implement participatory approaches to development.

3. Project description

In 2010 five Dutch organizations (Rutgers WPF, AMREF Flying Doctors, Simavi, dance4life and Choice) formed the Sexual and Reproductive Health and Rights Alliance (SRHR Alliance). The Alliance aims at working towards a society free of poverty in which all women and men, girls and boys, and marginalized groups have and enjoy their sexual and reproductive health and rights. The Alliance, in collaboration with partner organizations in developing countries formed the 'Unite for Body Rights (UFBR)' program, a five year (2011 – 2015), program implemented in nine countries: five in Africa (Ethiopia, Kenya, Malawi, Tanzania and Uganda) and four in Asia (Bangladesh, India, Indonesia and Pakistan).

In Ethiopia the UFBR program is implemented by three partners: Amref Health Africa Ethiopia, Youth Network for Sustainable Development (YNSD) and Talent Youth Association (TaYA joined the program in 2013). The three partners of the Ethiopian SRHR Alliance each have their own expertise and strengths and by closely working together aim at creating synergetic effects. For instance, schools in Afar where YNSD is implementing the dance4life program are referring students to health facilities where Amref is working. The three partners are also carrying out activities together: for instance a 8-serie TV program on SRHR in Afar language has been developed and broadcasted. In addition joint staff training on various topics, experience sharing visits and bi-annual review meetings are taking place.

Amref started project activities in the Afar region during MFS-I. In March 2010, the SRHR-Alliance conducted a context analysis workshop for a variety of civil society organizations, knowledge institutes, government officials, experts and the Embassy of the Netherlands. Additionally, consultations were held with the Regional Health Bureau in Afar, grassroots organizations and community representatives to further determine the specific needs and priorities of the selected target groups. These consultations, coupled with a review of relevant literature and experiences and lessons learned from existing SRHR-programs, provided the basis for the program.

To improve Sexual Reproductive Health and Rights (SRHR) services in Afar, the program trains and supports health workers at three levels in the health system: health centres, rural health extension posts, and within the communities through community health promoters. Trainings address, for example, SRHR/SGBV (sexual and gender based violence) issues, including emergency obstetric care, clean and safe delivery and referral (for traditional birth attendants), youth friendly service provision and counselling of victims of SGBV. The program provides training and support for district and health management teams. Some health facilities are renovated and equipped.

Besides focusing on strengthening the health system, the project also focuses on strengthening comprehensive sexuality education (CSE) for in and out of school youth. For this component of the project, Amref Health Africa Ethiopia also works in close collaboration with YNSD, partner of the Ethiopian SRHR Alliance, implementing the dance4life program in schools in Afar. In addition, the UFBR program is complemented by another project that Amref Health Africa Ethiopia and YNSD are implementing together with the ICCO Alliance since 2013. In this project Amref is organizing the computer-based 'Worlds Starts With Me' sexuality education classes in secondary schools in Afar.

The project is implemented in close collaboration with regional health bureaus to improve the supply chain of essential RH drugs and supplies. Health Extension Workers are supported in their capacity to provide youth-friendly services and improve their linkage with health centres. Given the particular poor status of women, all training packages include the promotion of gender-sensitive services. Outreach addresses remote communities with multidisciplinary health and education teams. A lot of attention is given to community mobilization and sensitization to

enhance knowledge, attitude and practice, in close collaboration with amongst other religious leaders, community leaders and local authorities. Amref is also organizing meetings on SRHR for representatives of the regional and local government.

Generally the project strives to improve the sexual and reproductive health situations of Afar by increasing access to health services and enhancing utilization of health services at community level. Specifically the project is aiming at:

- Objective 1: Increased quality and delivery of Comprehensive Sexuality Education
- Objective 2: Increased utilization and quality of Sexual and Reproductive Health Services
- Objective 3: Reduction of Sexual and Gender Based Violence (SGBV)

To improve the SRHR situation of young people, women and marginalized groups the UFBR programme combines three strategies:

1. Improving access to and quality of SRHR education (increasing SRHR demand)
2. Improving access to and quality of SRH services (increasing SRHR services supply)
3. Creating an enabling environment (increasing SRHR support)

Figure 1: Theory of Change and expected impact of the project

THEORY OF CHANGE

The theory of change is based on the premise that the benefits of the program for the target groups will be upmost when all three strategies are addressed in one program.

From the narrative semi-annual report January-June 2014 we derived the following set of output and outcome indicators. We observe that activities formulated in the project proposal have been reformulated in the course of time. In order to avoid confusion the indicators mentioned in the last semi-annual report are taken as the correct set of outputs and outcomes. Some final corrections regarding specific targets were made by Amref in the provisional version of this report. The outputs and outcomes cover the objectives but are related to the three strategies, presented above, that are part of the theory of change specified by the Alliance partners.

With regard to strategy 1, “increased quality and delivery of Comprehensive Sexuality Education”, the following output and outcome indicators are specified:

Output indicators (targets 2011-2015):

- 1 Two SRHR education programmes improved on quality standards of CSE
- 2 270 educators trained to deliver SRHR education
- 3 12,500 young people, women and men participated in SRHR education

Results until mid-2014 show that the targeted numbers for 2011-2013 are realized. A much larger number of people were trained according to the semi-annual report January-June 2014 (in total 93,860 persons).

Outcome indicators:

- 1 50% of the exposed target groups has an increased capacity to make safe and informed decisions on SRHR issues
- 2 related MDG 4-6: Young people have an improved knowledge of and/or behaviour concerning HIV/Aids and/or reproductive health

The outcome indicator is clearly specified. The related MDG is mentioned although this target is not explicitly formulated in the project documents.

With regard to strategy 2, “increased utilization of Sexual and Reproductive Health Services”, the following output and outcome indicators are specified:

Output indicators (targets 2011-2015):

- 1 5,600 service providers trained to deliver SRH services
- 2 12 health facilities renovated/constructed
- 3 SRH services provided by partner organizations to young people and adults
- 4 SRH services provided by subcontractors/government facilitated by partners

Results until mid-2014 show that the second output is on track but with regard to the first output realized numbers are below planned targets. In total 1,618 service providers were trained in 2011-2013. This output remains below targets (3,997 for 2011-2013) as there are less health workers in the region than initially thought. For the last two outputs no targets are specified. In the annual report for 2013 it is mentioned that the major responsible for an increase in the utilization of the services is the government, while it is AMREF’s major responsibility to increase demand.

Outcome indicators:

- 1 % of the SRHR targeted facilities increasingly comply with IPPF standards for youth friendly services
- 2 % of the SRHR health facilities realize an increase in satisfaction by young people
- 3 % of the targeted maternal health facilities increased their compliance to the (national) quality standard
- 4 % of the maternal health facilities with an increase in satisfaction by women
- 5 % increase in the use of targeted SRHR services by young people and women
- 6 % increase in the number of births attended by a skilled birth attendant in the targeted areas
- 7 % increase in targeted health facilities of women who have 1-4 antenatal consultations
- 8 Nr of facilities with increased availability of contraceptives, ART, ACT and antibiotics
- 9 related MDG 4-5: Improved availability of SRHR services (prevention, treatment and care)
- 10 related MDG 4: Increased use of public and private SRHR services

The outcome indicators are defined but we regret that no clear targets (numbers) are specified. We recall that the related MDGs are mentioned although these targets are not explicitly formulated in the project documents.

With regard to strategy 3, “creating an enabling environment”, the following output and outcome indicators are specified:

Output indicators (targets 2011-2015):

1. 3 partner organizations with an implemented advocacy strategy and advocacy work plan on SRHR
2. Nr of advocacy meetings conducted at local, regional or national level
3. 291,500 community members and community leaders participating in SRHR awareness raising activities at community level
4. Nr of persons reached by SRHR awareness raising activities through (new) media
5. Nr of persons trained in awareness raising activities

Results until mid-2014 show that most targets are realized (discussed in the annual report 2013). We note that some output targets were not specified in numbers. In the period 2011-2013, 151,708 community members were participating in SRHR awareness raising activities at community level, 232,709 persons were reached by SRHR awareness raising activities through (new) media and 13,814 persons were trained in awareness raising activities.

Outcome indicators:

1. SRHR policies and legislation implemented, changed, or adopted at local, institutional or national level, at least 2 per country
2. Increased involvement of community leaders in realisation of SRHR in x% of the targeted communities
3. Increased acceptance of SRHR at community level in x% of the targeted communities
4. related MDG 4-6: Changes in policies and legislation

The outcome indicators are defined but not always clear targets (numbers) have been specified. In the last progress reports we read that in 2011-2013, 80% of the community leaders were involved and that 100% of the targeted communities increased acceptance of SRHR. We recall that the related MDGs are mentioned although these targets are not explicitly formulated in the project documents.

We observe that quite a number of outcome indicators are specified at health facility level, the training of their staff, or the involvement of community representatives. These outcomes are important. However, the final objective of this project is to improve the sexual and reproductive

health situation: the attitudes, knowledge and access to services of the citizens. Therefore we gave priority to measure these outcomes at the level of the targeted individuals. The questions raised in the household survey allow us to test some outcome indicators at household level. We recall the following specific outcome indicators and translated them in expected effects at household level:

- 1 the target group has an increased capacity (increased knowledge and negotiation skills) to make safe and informed decisions on SRHR issues (questions regarding knowledge and perception)
- 2 the health facilities realize an increase in satisfaction on SRHR services by young people (questions regarding use/satisfaction)
- 3 the health facilities realize an increase in satisfaction by women (questions regarding use/satisfaction)
- 4 an increase in the use of targeted SRHR services by young people and women (questions regarding use)
- 5 number of births attended by a skilled birth attendant in the targeted areas is increased by 20% (questions regarding use)
- 6 an increase in the targeted areas of women who have 1-4 antenatal consultations (questions regarding use)
- 7 facilities have an increased availability of contraceptives, ART, ACT and antibiotics (questions regarding access)
- 8 an increased acceptance of SRHR at community level in the targeted communities (questions regarding intentions, perception)

Inputs

Financial and technical support comes from the project (2,515,000 Euro). In Zone 3 and 5 Amref Health Africa Ethiopia is a major NGO involved in SRHR activities. Their activities are closely linked to the health infrastructure supported by the government. We have the impression that it is difficult to distinguish investments made by the project, the government and other donor organizations as activities may concern the same health organizations and schools (hospitals, HEWs etc.). However, if we assume that government interventions are similar among all the regions a difference-in-difference analysis will be able to identify impacts related to the project.

Many other donors are active in the same field. However, most of these activities concern minor interventions. Only CARE plays an important role in the Afar region. In the same period they carried out a project (budget of about 500,000 Euro) on social and economic empowerment of pastoralist girls in Zone 1 and 3. This raises the question to what extent impact can be attributed to the project. As not all Kebeles are covered by the Amref Health Africa Ethiopia project and government is involved to make sure that NGOs do not target the same population we think it is appropriate to assume that observed impact can be related to the project. The Kebeles we selected for Zone 1 (our control group without treatment) have not been targeted by the CARE project.

A related project on drinking water and sanitation (WASH) in Zone 3

The SRHR project implemented by Amref Ethiopia in Zone 3 (C11) is combined with a water sanitation and hygiene (WASH) project also implemented by Amref Ethiopia and also selected for the MFS-II evaluation (C13). The latter project targets the same people and Kebeles. As a result it will be somewhat difficult to disentangle outcomes from both projects (C11 and C13) in Zone 3. However, the C13 project is not implemented in Zone 5. Therefore we conclude that the outcomes of project C11 are best observed in Zone 5. In Zone 3 we can control whether the combination of projects (a more intensive treatment on related issues) has an effect on the outcome indicators specified for project C11.

4. Method

The objective of this evaluation is to describe changes in outcome indicators that can be attributed to participation in the project. The challenge in any impact evaluation is to isolate the causal role of the intervention from other determinants (Armendariz, 2010). When comparing the situation of beneficiaries before and after an intervention, the observed changes in outcome variables cannot solely be attributed to the intervention, as there are many other changes in the environment of the respondents during the project period. Comparing beneficiaries with a control group of non-beneficiaries does not automatically provide the solution. Beneficiaries could for instance have been wealthier than non-beneficiaries when the program started or *vice versa*. This and other factors can make some people more likely to choose to participate in the program, thus causing self-selection bias. Besides self-selection bias, program placement bias is

also frequently observed in evaluation studies. NGOs target their projects purposely at specific, often disadvantaged, areas. If the control group's physical, economic and social environment does not match that of the beneficiaries, this will result in differences not caused by the intervention and thus in biased estimates of impact.

The standard approach to overcome these issues is to conduct a randomized control trial (RCT). Before the program starts two groups will be created at random. One group will receive the treatment (treatment group) while the other group will act as a benchmark (control group). Because of the randomization the members in the control group represent the members in the treatment group. After the treatment has taken place, both groups can be compared on the outcomes of interest. Differences in outcomes can now solely be attributed to the treatment. However, creating two groups at random, a necessary step for RCTs, is not always possible because of program implementation or ethical reasons.

As we were not involved in the design of the project, we use an alternative to RCTs: a so-called double difference (DD) model. In order to apply a DD model one needs to have information about relevant indicators of the treatment group and the control group at two points in time, preferably before (baseline) and after (end-line) the intervention. While the RCT methodology ensures that the only difference between members in the treatment and control group is the treatment, the DD method only eliminates differences between members of the two groups that do not change over time. So the disadvantage of the DD method over the RCT method is that it does not automatically distinguish between the impact of time-varying characteristics between members of the two groups and the impact of the treatment. A (partial) solution to this problem is to include as many time varying characteristics into the DD model as possible so that only the influence of unobserved time-varying characters remains.

The DD method works best if the treatment and comparison group are as comparable as possible. One popular method to achieve this is the propensity score method (PSM) (Rosenbaum, 1983). The basic idea is to match beneficiary households to households from the control group who are observationally similar in terms of characteristics that are not affected by the intervention. These include stable characteristics of the household. If there is a proper baseline, outcome variables during baseline can also be used for matching, because they were

not yet affected by the treatment. In practice, PSM involves running a binary regression of the project participation indicator on the relevant set of characteristics. The result is the propensity score: the estimated probability that a household is a beneficiary. The DD method is then applied to households with propensity scores in the range in which both beneficiaries and non-beneficiaries are observed (the *common support*): non-beneficiaries with a very low propensity score and beneficiaries with a very high propensity score are discarded.

As indicated above, we first applied PSM and then estimated a DD model. Econometrically speaking the double difference estimator is given by the following expression:

$$Y_{ijt} = \alpha + \beta_1 Post_t + \beta_2 D_j^T + \beta_3 Post_t D_j^T + \gamma X_{ijt} + \varepsilon_{ijt} \quad (1)$$

Where Y_{ijt} denotes an outcome variable for respondent i in group j at time t , D_j^T is a dummy variable equal to one if the respondent belonged to the treatment group, $Post_t$ is a binary variable that takes the value one if the observation corresponds to the post-treatment time period, X_{ijt} is a set of controls¹, and ε_{ijt} denotes the error term. Then, β_3 in (1) is the treatment estimate of the intervention's impact on outcome Y . That is, β_3 measures the difference between the treatment and control group in the growth of outcome Y , and is an unbiased estimate of the average impact on the dependent variable Y of being assigned to the treatment group provided the assumption of no selection on un-observables holds.

Although a combination of PSM and DD can solve many potential biases in the data, some bias may remain. As PSM assumes selection on observables, bias can still be caused by selection on un-observables. Adding DD to PSM helps picking up the time-invariant heterogeneity, but bias can still remain due to time-variant un-observables. We note that the possibility of time varying heterogeneity between control and treatment groups is less likely in this study as both groups are located in the same region and belong to the same agro-ecology and administrative system. We were also informed that no specific interventions were taking place in the Kebeles that are part of the control group. Yet, a positive significant effect in the DD model is a strong indication of an influential intervention. An insignificant effect (or even a significant negative effect),

¹ Additional covariates are included to control for various characteristics of the households. This not only helps with the precision of the estimates, but also reduces the problem of omitted variable bias. This is necessary to obtain unbiased measures of the treatment effects.

however does not necessarily imply that the intervention does not work, as in our analysis we only measure short-term effects.

Many of the outcome variables considered in the analysis are binary. In these cases, we estimated a linear probability model (LPM) and report the marginal effect of D_i^C for the impact of the project on outcome Y .

It is often the case that there is some level of attrition (or dropping out) and/or new entry in the dataset. The DD model presented in (1) can be estimated using an unbalanced panel, keeping in all observations, including the ones which we only observe in one time period. It can also be estimated using a balanced panel, dropping observations which we only observe in one period. Estimating (1) using an unbalanced panel increases the power, but as the sample becomes more heterogeneous the results might be distorted. As we deal with a number of new entries and drop-outs in the endline survey (Table 1) all estimations are done on the balanced panel.

5. Data collection

The project operates in two Zones in the Afar region. Two activities are key: comprehensive sexuality education programs (CSE) and the provision of health services. In 2012 activities were still in the start-up phase (somewhat delayed because of the drought in 2011). This implies that the data collected in August 2012 may be considered as a kind of baseline household level data, but certainly not a proper baseline. As the project intends to cover the whole Zone, control groups having no access to the treatment are identified in the neighbouring Afar Zone 1 (district not targeted by the project and selected Kebeles are expected not to benefit from investments of alternative donors). The data collected at the end of 2014 do not fulfil the criteria for an end-line study as project activities continue until the end of 2015. However, most of the intended impacts are expected to be visible in the data. We agree that it would have been better to organize the end-line data collection at the end of 2015. However, deadlines in the MFS-II evaluation project made it necessary to organize this evaluation earlier. Therefore, we note that the results should be seen as observed trends for the two year time lapse.

The outcome indicators identified in the last section are measured at household level in September 2012 and October-December 2014. The sampling units of the baseline survey are individuals such as women/mothers aged between 15 and 49, and unmarried girls/boys aged between 15 and 24 from the same household. The same household-members are interviewed for the baseline and the end-line. However, because of a limited number of boys and girls in the sampled households, some boys and girls from neighbouring households are interviewed. Some outcome indicators should be measured at community level. We expect that these data will become available in the annual reports.

Since the primary objective of the project is to change the behaviour of households through information dissemination and behavioural change campaigns, all households with children (10-24 years) and women of reproductive age (15-49 years) living in the targeted Zones may in principle be defined as the “treated group”. For the survey we interviewed mothers (15-49 years) and children (age 15-24 years). For younger children a different survey instrument is needed to avoid confusion of the interviewees. Moreover, asking children below 15 about sexual behaviour is generally not accepted. Taking budget constraints into account we decided to interview only the 15-24 age group of boys and girls.

We excluded married men from our base-line study. The husbands of the women (mothers) interviewed in the end-line study were asked to answer a limited set of questions. This allows us at least to compare knowledge and perceptions regarding SRHR issues between the wives and the husbands. We acknowledge that it would have been better to involve all target groups in our baseline, however if limited resources are taken into account a focus on mothers/girls and boys is to be the preferred option. Men participate in focus group discussions that were held prior to the individual interview in the village. The focus group discussion was conducted by the supervisor of the enumerators and helps to acquaint the community and husbands about the survey.

We use a multi-stage stratified sampling method in which strata are defined by zones which represent different target groups, Woredas, Kebeles and villages (hamlets). For efficiency reasons we used the same household survey for the evaluation of projects C11 and C13.

Selection of Zones

We have distinguished 3 groups depending on access to project services (both C11 and C13). As discussed with Amref staff the difference in treatment intensity (benefitting from 1 or 2 projects) may affect results. Consequently, we decided to distinguish two treatment groups in the analysis.:

- T1/Z3: A treatment group benefitting from both projects, that is, households having access to SRHR and WASH services (projects C11 and C13). This group is drawn from Zone 3.
- T2/Z5: A treatment group, having access to SRH services only. The results for Zone 5 reflect the situation for households having access to this project only (C11).
- C1/Z1: Control group without access to any of the services. This group is drawn from Zone 1. Zone 1 is selected taking into account the geographical proximity to the treatment zones. It is also physically accessible. Results for Zone 1 reflect the situation for households that do not have access to both projects.

Selection of Woredas

First we identified a list of intervention Woredas for each zone. From this list two Woredas per zone were selected. The selection of Woredas is not random because of the limited number of Woredas that receive both projects and their accessibility to conduct the survey. Thus, a convenient or purposive sampling is used to identify the Woredas. Samples are selected from the following Woredas in each zone

- a. Zone 3: Awash, and Amibara
- b. Zone 5: Dawe, and Telalak,
- c. Zone 1: Mile and Chifira

Figure 2: Map of the Afar region

Selection of Kebeles

Selection of Kebeles is somewhat challenging in the Afar region. Kebeles in this region are not always clearly demarcated and people only know the names of the village/hamlets (gote) they live in, but do not always know the name of the Kebele. Kebele names are usually assigned by Woreda officials. We selected the Kebeles at the Woreda office. At the Kebele level we selected a number of hamlets needed to obtain the required response rate. For each Woreda we selected three Kebeles: the Woreda center and two more rural Kebeles. We note that not all

Woreda centers can be considered as urban areas. Only the Kebeles Awash 01 (Woreda Awash Fentale), Werer (Woreda Amibara) and Mile 01 (Woreda Mile) do have some infrastructure and a concentration of population that can be considered somewhat urban.

Selection of households or women

Our sample concerned women within the age group of 15 to 49. In Kebeles where there was a list of residents available, we used the list to sample households (35 households were selected for each Kebele using lottery methods). However, in villages where there was no list, we randomly selected houses from the village. If the age of the woman in the house was out of the age range, we replaced the household by the neighbouring household.

Sampling of the unmarried girls/boys

We selected one boy and/or girl from the family of the interviewed women. Thus, we found families with a boy and a girl or a family with only a boy, or a family with only a girl or a family without a boy or a girl. We assumed that we could interview in one third of the sampled households a boy and in one third of the sampled households a girl. Accordingly, we expected to interview about 12 boys and 12 girls per Kebele. If we identified more than 12 boys and 12 girls we stopped adding new interviewees in that specific target group in the Kebele. If 12 boys and 12 girls were not identified (available) in the sample households, we interviewed boys/girls from the neighbouring household.

Table 1: Realized sample size

Woreda	Mothers			Boys/Girls			Huband	
	Baseline	Endline	Attrition	Baseline	Endline	Attrition	Endline	
Awash Fentale	106	83	22%	75	53	29%	67	
Amibara	106	105	1%	76	73	4%	81	
	T1/Z3	212	188	11%	151	126	17%	148

Mille	106	93	12%	76	62	18%	50	
Chifra	103	80	22%	75	61	19%	53	
	C1/Z1	209	173	17%	151	123	19%	103
Total		631	526	17%	451	352	22%	387

Attrition

Attrition is a challenge in these type of surveys and in particular in these type of regions where many inhabitants are pastoralists. In total 113 (18%) mothers dropped out (Table 1). We were not able to match 8 endline interviews with a baseline interview. Another 105 women interviewed for the baseline were not interviewed for the endline. Although our enumerators went twice to the villages they were not able to find the same persons back. Flooding played a role in the end-line study and quite a number of families evacuated for the search of grazing areas. We regressed the attrition on the control variables and observe that attrition is somewhat negatively related to the availability of salaried or casual labour and the family size. This is understandable as these families can be expected to be more sedentary. In general, we conclude that attrition is well distributed over different household characteristics and Zones and that no bias is expected from this problem.

Enumerators and interview

Female enumerators were used to interview women and girls and male enumerators to interview boys and husbands. All enumerators speak the local language, Afar. The enumerators were supervised by supervisors who checked the questionnaire every night. The supervisors and the enumerators conducted the focus group discussion together. Individual interviews were conducted in a location where only the interviewer and the respondent were present. Since many questions are private, no other person was supposed to be around during the interview. The interview took place in an area near to the home of the interviewee. Three supervisors, 15

enumerators for the baseline and 18 enumerators for the endline, were hired and trained, forming three teams going to two Woredas each.

The questionnaire

Ideas for the survey questions are drawn from the two baseline studies conducted by Amref Health Africa Ethiopia in the preparatory stage of the projects. If possible the same questions are addressed. This facilitates comparison between the Amref data and the efficient use of existing data. Three questionnaires are developed; one for women, one for boys/girls and one for husbands. The questionnaire for women consists of the following blocks of questions

1. Socio-economic background of the respondent and the household
2. Access to Sexual and Reproductive Health Services
3. Knowledge about Sexual and Reproductive Health Services
4. Attitudes towards sexual and reproductive health practices
5. Use of sexual and reproductive health services
6. Intentions to use Sexual and Reproductive Health Services
7. Household water supply
8. Household sanitation

The first part of the survey concerns information about the household. Part 2-6 concerns questions related to evaluate this project C11. Part 7 and 8 contains the relevant information for the evaluation of project C13 (see questionnaire in the annex).

6. Analyses and results

The descriptive statistics presented in Table 2 shows the number of observations in the baseline study in the three Zones for a set of household indicators. It is observed that the observations are well distributed over the 3 groups we distinguish (C1/Z1 = control, T2/Z5 = treatment C11 and T1/Z3 = treatment C11 and C13). The average age of the mothers interviewed is about 32 years, their husbands are on average about 7 years older. The number of observations for the husbands is lower as some women are divorced or widow. The large majority of the households have the Muslim religion and adhere to the Afar ethnic community. Completed years of education is similar for the three groups and very low. Most respondents are illiterate. The main

occupation for the women interviewed is housekeeping and childcare, others indicate the importance of livestock keeping. This question may have been somewhat confusing as housekeeping may indeed form the major activity but is not an occupation. Major sources of income for the household concern livestock revenues, but quite a number of households have a salary income or perform casual labor. In particular in the more urban Kebeles a relatively large group of interviewees receive salary income. The results show that the differences between averages for the three groups are small, although some differences between the groups are significant (balancing tests). In order to control for these differences propensity score matching is applied for the difference-in-difference analysis (see method section).

Note: Column 2, 4 and 6 presents the mean for Zone 1, 5 and 3. Column 7 and 8 display the coefficient from a separate OLS regression. ^oincludes: Oxen, Cows, Bulls, Camels and Donkeys. ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level.

Table 3 provides some descriptive statistics for control variables of the interviewed boys and girls. The sample is nicely distributed over the sexes. The average age is about 17-18. Nearly 90% of them never married. Like their parents the large majority adheres to the Muslim religion and the Afar community. Interestingly, the children have a much higher education level: 6 to 7 years, while their parents completed on average only 1 year of education. Moreover, a majority indicates that they continue their studies.

Table 3: Summary statistics and balancing tests for control variables: Boys & girls (baseline)

Dependent variable	Summary Statistics						Balancing tests

Note: Column 2, 4 and 6 presents the mean of the control and treatment group respectively. Column 7 and 8 display the coefficient from a separate OLS regression. Standard errors are clustered at the kebele level. °includes: Oxen, Cows, Bulls, Camels and Donkeys ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level.

Table 4 shows baseline and endline results for several outcome indicators. The results indicate differences between regions. The baseline was carried out in August 2012 while the project started January 2011. Consequently, results obtained may reflect some of the first outcomes of the project. However, we think that these effects are small as the start of the project was somewhat delayed by the drought in 2011 and only a few of the envisaged activities were implemented before September 2012. The endline data were collected in October-December 2014. Two data collection visits were organized to limit attrition. We recall that the endline is not a proper endline as the project continues until the end of 2015.

Access to health centers and health extension workers (HEW) is quite similar over the Zones in the baseline. A large majority of the respondents have access to them, showing that past health policies of the government and NGOs at least realized an effective distribution of these health centers and workers over the regions. The endline results indicate that treatment Zone 5 (T2/Z5) is somewhat lagging behind. Contraceptives were more easily available in Zone 3 (T1/Z3). This may reflect some first results of the project, but it may also be related to the fact that Zone 3 contains the answers of people in two more urban Kebeles (Awash 01 and Werer). The endline results confirm improved accessibility of contraceptives in all the Zones and in particular Zone 1 (C1/Z1: the control area!) catches up.

Table 4: Summary statistics and balancing tests for outcome variables (Mothers)

Notes: See Table 3 Column 2, 4 and 6 presents the mean of the control and treatment group respectively. Column 7 and 8 display the coefficient from a separate OLS regression. (b) concerns data from the baseline and (e) concerns data from the endline.

***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level.

Although health centers were accessible for many, the use rates are much lower in the baseline survey. The use of health centers improves in all the Zones and again Zone 1 (C1/Z1) shows a large improvement in the endline. Moreover, those who used health center facilities indicate that they are satisfied with the service provided. Similar results are shown for the question on antenatal check-ups for the last pregnancy in the baseline study. Zone 3 (T1/Z3) seems to be ahead of the other two regions. In the endline we asked women whether they were pregnant in the last two years and used an antenatal check-up. Nearly all pregnant women in Zone 3 and, remarkably, Zone 1 indicated that they made use of a check-up. The situation in Zone 5 (T2/Z5) improves but still lags behind the situation in the other two Zones. Remarkably a relatively large number of the girls born after the last pregnancy have been circumcised in Zone 1. In the endline this figure seems to increase even further in Zone 1. Also Zone 5 shows a disappointing trend. Mothers in Zone 3 (T1/Z3) show a more promising trend and indicate that a much smaller number of the baby-girls has been circumcised. It is also in this Zone that a relatively large part of the mothers participated in a reproductive health education or training program.

Regarding the knowledge variables we observe that on average people are informed about the transmission of HIV. This reflects the results of government/NGO initiatives in the past. In the endline the results further move in the right direction. The results on the question regarding the possibility for a healthy-looking person to have the HIV virus are somewhat ambiguous and show that further attention for knowledge training is appropriate. We compared the answers of women and their husbands in the endline data. Regarding these knowledge questions we observe similar patterns for women and husbands. Interestingly, more women indicate that you can protect yourself from HIV infection (79% of the women versus 69% of the husbands), husbands are better aware that healthy looking people may have the HIV virus (66% of the husbands versus 31% of the women) and also stronger agree with the statement that it is advisable to use a condom if you are not married (66% of the husbands versus 57% of the women).

The answers on the questions regarding perceptions show some trends in the desired direction. In all the three Zones an increasing group of women in the endline disagrees with statements like “if someone dresses sexy, the person wants to have sex”, “a boy/man can use force or pressure in a relationship, if he wants to have sex”, “a girl should be circumcised”. The Table presents averages which implies that still quite a number of persons support these practices. In particular the statement that “husbands should punish their wives if they feel they have done something wrong” is getting quite some support, although we observe a significant trend in the right direction. If we compare the answers of the husbands with the answers of the women in the endline survey again we observe similar patterns. Three questions show important differences as women more strongly disagree with the statements “if someone dresses sexy, the person wants to have sex”, “a boy/man can use force or pressure in a relationship, if he wants to have sex” and “a girl should not be given any information about sex before she marries”.

Intentions regarding related issues show similar averages for Zone 3 (T1/Z3) and Zone 5 (T2/Z5). The role of the husband in Zone 1 shows a confusing pattern as his role in the endline study seems to become more decisive. Moreover, if we compare the answers provided by the husbands with the answers of the women in the endline survey we observe that for all the questions regarding intentions the husbands more frequently indicate that they decide about the issue. For example, 44% of the husbands indicate that they individually decide whether they have sex, while 26% of the women confirm that their husbands decide about this. The most important question regarding circumcision shows that support for this practice is decreasing in particular in Zone 3 but also Zone 1 is showing an important decrease in support for this practice. Remarkably, 18% of the women indicate that they will circumcise the next baby-girl, while only 10% of the husbands provide this answer.

Table 5: Summary statistics and balancing tests for outcome variables (Boys/Girls)

Notes: Column 2, 4 and 6 presents the mean of the control and treatment group respectively. Column 7 and 8 display the coefficient from a separate OLS regression. (b) concerns data from the baseline and (e) concerns data from the endline. ***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level.

Table 5 shows the results for the boys and girls. The results regarding access to health extension are quite similar for the baseline. The availability of contraceptives is somewhat lower in the baseline for boys and girls. More boys and girls participated in SRHR education programs. The scores on the knowledge questions are quite similar. Regarding perceptions we also obtain similar scores. Interestingly, a larger number of children seems to disagree with the statement that “a girl should be circumcised”. If boys are compared with girls we see that for most questions regarding knowledge, perceptions and intentions, no significant differences are observed although some similarities exist with the opinion of husbands. Boys know much better that healthy looking people may have the HIV virus (54% of the boys versus 39% of the girls) and also stronger agree with the idea that it is advisable to use condoms if you are not married (72% of the boys versus 53 % of the girls). Although the difference is less clear than between mothers and husbands, we also observe that girls disagree more often with the statement that “if someone dresses sexy, the person wants to have sex”. Regarding the intentions the opinions of boys and girls are more similar. The only significant difference is observed regarding the decision to have sex: 38% of the boys indicate that they decide, while only 27% of the girls confirm that the partner decides.

We conclude that there are significant differences between the zones. In Zone 3 (T1/Z3) we selected two Woreda centers or two more urban Kebeles (Awash 01 and Werer). Awash 01 is a more urban Kebele where services are relatively well developed (a hospital) and more easily accessible. This may explain why Zone 3 provides generally the best averages. Remarkably, the control group (C1/Z1) shows some impressive improvements on several scores. This raises the question whether other governmental/NGO support has been given to these communities. Availability of HEWs and Health Centers is mainly determined by Government policy and it is well possible that the scores on these indicators do not so much result from project initiatives as well as from government policy (budget). We verified during the baseline study whether specific investments have been made, or were planned for, in Zone 1. At that time Zone 1 seemed to be an area not covered by specific projects. However, general health policy can be expected to be implemented by the government in all the Zones at the same time.

The next step in the analysis is to isolate the treatment effect for the period under study. The difference-in-difference method (see method section) will be applied to analyze differences

between Zones. Zone 3 (T1/Z3) and Zone 5 (T2/Z5) are compared with the control region (C1/Z1). The treatment in Zone 3 is more comprehensive than the treatment in Zone 5 as another project on drinking water and sanitation is carried out in the same villages in Zone 3. We already noted that the difference in treatment intensity may affect results. Consequently, two treatment groups are distinguished in the analysis.

Differences over time and between Zones can be allocated to three effects:

- the change in the outcome variable (endline minus baseline) for the control Zone 1 (C1/Z1)
- the difference in the outcome variable between the treatment and the control Zone 1 at the moment of the baseline
- the effect of the treatment during the period under study (endline minus baseline)

For our analysis the third effect is most important as it isolates the effect of the treatment on the treated. In the Annex the results of the analysis are given. First Zone 5 and 1 are compared and subsequently the results for Zone 3 and 1 are given. Tables 6 and 7 provide an overview of the significance of the treatment effect.

The difference in difference analyses for the mothers regarding their **access** to formal health services and contraceptives shows that the treatment effect for Zone 5 was negative. The treatment effect for Zone 3 was not significant, or somewhat ambiguous (access to HEWs decreased and access to CHP improved). We note that a negative treatment effect does not necessarily imply a worsening of the situation. In general availability of the services improved significantly over time (observe the positive coefficient for the year-effect in the annex). Moreover, for some services access was already high in the baseline survey, e.g. about 90% of the mothers indicated that they have access to the Woreda health center (observe the positive constant in the annex). The negative effect pertains to the isolated effect of project treatment. This disappointing (negative or non-significant) outcome is the result of the observed positive change in the control Zone 1 (C1/Z1). With respect to access to health services Zone 1 performed much better than Zone 5 (T2/Z5). The positive change in the control Zone 1 nullifies the treatment effects of the project. This raises the question whether the government or other NGOs increased their effort in this control area regarding these formal health services. As Amref and regional authorities confirmed us that no specific major investments have been made in the sampled Kebeles in Zone 1, we conclude that the project treatment in Zone 3 did not result in a

significant improvement if compared to the control area. In particular the treatment result for Zone 5 indicates that this Zone is lagging behind Zone 3 and Zone 1.

Table 6: Treatment effects for T2/Z5 and T1/Z3 – Access and Use

	Mothers		Boys/Girls	
	C1-T2	C1-T1	C1-T2	C1-T1
<i>Access to health services (yes=1, no=0)</i>

Notes: The first column compares results for the Control Zone1 and the treatment Zone 5 (C1-T2). - = a negative treatment effect, + = a positive treatment effect. ***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level and ns=not significant.

Regarding the **use** of the formal health services the picture is more diverse. In both Zone 3 (T1/Z3) and Zone 5 (T2/Z5) a positive treatment effect is observed as more people prefer a health service provider above traditional treatment. Moreover, people that got treated in the health center in Zone 3 and Zone 5 are more satisfied. We also observe that satisfaction with regard to the service provided by the HEW and the Health Center is quite high. With regard to the antenatal check-ups we observe that nearly all women indicate that they used this service. Remarkably, the treatment effect for this latter outcome indicator in Zone 5 is negative,

indicating again that this Zone seems to lag behind the others and project activities are not able to balance the difference.

Notes: The first column compares results for the Control Zone1 and the treatment Zone 5 (C1-T2). - = a negative treatment effect, + = a positive treatment effect. ***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level and ns=not significant.

Regarding **knowledge** we observe that the population has quite some information about whether HIV can be transmitted through sex or witchcraft. Already in the baseline the large majority indicated the correct answer. For the other questions the answers are more distributed but nearly half of the interviewed provide the correct answer. Although most

treatment effects are not significant, the treatment effects we observe in this knowledge category all confirm a positive effect in Zone 3 (T1/Z3) and Zone 5 (T2/Z5).

Perceptions on sexual and reproductive health practices show support for the statement that “husbands should punish their wives if they feel they have done something wrong” and disagreement with the statement that “it is acceptable if a girl has sex before she marries” (a more neutral stance is made for boys). Remarkably, disagreement exists with regard to the statement that girls should be circumcised. The treatment effects are in most cases not significant. For Zone 5 (T2/Z5) we observe two negative treatment effects (more people agree with the statement that women dressed sexy want to have sex and more people disagree with the statement that it is acceptable for girls to have sex before marriage). Positive treatment effects concern statements regarding information for girls about sex before marriage, use of force in a relationship to have sex, sex before marriage for boys (!), the use of condoms/contraceptives to avoid pregnancy.

The questions regarding **intended behavior** show that the project has some impact on the extent to which women decide about the number of children they get, the use of contraceptives and the decision regarding circumcision of the baby girl. The women intend to play a greater role in this decision. Although support for circumcision of the next baby girl is low (in line with the result we got on perceptions) we observe that there is relatively more support in Zone 5 for this practice.

7. Discussion

Summarizing the results we first want to recall that the baseline and endline data do not fulfill all the criteria for a proper baseline. The baseline was carried out 18 months after the start of the project, while the endline data were collected 1 year before the end of the project. This means that the data should be interpreted as an observed trend for the two year time lapse. It would be interesting to repeat the survey in one year time in order to get a better indicator for the final results.

The results obtained show various changes in the outcome variables. Recalling the specified outcome variables at the end of Section 3 we draw the following conclusions:

1. *the target group has an increased capacity (increased knowledge and negotiation skills) to make safe and informed decisions on SRHR issues (questions regarding knowledge, perception and intention)*

Regarding knowledge and perceptions we observe that the trend is in the right direction. Year-effects and/or treatment effects generally have the right sign. The results also show that treatment effects are not easily identified. For example, among the mothers no significant treatment effect is observed regarding the question “it is advisable to use condoms if partners are not married”. The good news is that among boys and girls a positive treatment effect for this issue is observed. Mothers do indicate that they know that it is possible to protect yourself from HIV infection if you have sex (a positive treatment effect). Remarkably this treatment effect is not significant among boys and girls. Regarding intentions and future decisions we observe a clear treatment effect among women: the numbers indicating that the ‘husband decides alone’ are decreasing. A similar effect is observed among boys and girls. Taking into account that the project is still in the implementation phase we conclude that results in the two-year time lapse contribute to the specified outcome indicator.

2. *the health facilities realize an increase in satisfaction on SRHR services by young people (questions regarding use/satisfaction)*

The boys and girls are satisfied about the health services (HEW and Health Center). Already baseline data were very positive (constant close to 1). Treatment effects are not significant. Regarding the use of these services most of the results do not confirm a treatment effect or result in some contradicting effects for the different Zones. Most important is perhaps the results on the question “did you use any contraceptive method the last time you had sexual intercourse”, showing no treatment effect. However, it should be kept in mind that figures in the endline show that the large majority of them indeed used some contraceptive method. We conclude that the boys and girls are satisfied with the services provided, but that this satisfaction exists regardless of the treatment.

3. *the health facilities realize an increase in satisfaction by women (questions regarding use/satisfaction)*

Nearly all women indicated that they are satisfied with the services of the HEW and the health center. Already for the baseline these figures were quite high (constant close to 1). With regard to the health center a further positive treatment effect is identified. We conclude that women are satisfied and that a further positive treatment effect is identified.

4. *an increase in the use of targeted SRHR services by young people and women (questions regarding use)*

Results on these issues are confusing. The use of contraceptives seems to decrease in treated areas. The HEW is more used due to the treatment in Zone 5, but less in Zone 3. The number of ante and postnatal check-ups decreased in Zone 5 (negative treatment effect), while in Zone 3 no significant treatment effect was identified. We conclude that the project does not (yet) contribute to the realization of this target.

5. *number of births attended by a skilled birth attendant in the targeted areas is increased by 20% (questions regarding use)*

The results on this question are disappointing as a negative treatment effect is observed. This indicates that the project's performance on this outcome indicator is even lower than the progress made in the control Zone (C1/Z1).

6. *an increase in the targeted areas of women who have 1-4 antenatal consultations (questions regarding use)*

The results on this question are disappointing. The number of ante and postnatal check-ups decreased in Zone 5 (negative treatment effect), while in Zone 3 no significant treatment effect was identified. This indicates that the project's performance on this outcome indicator in Zone 5 (T1/Z5) is even lower than the progress made in the control Zone (C1/Z1).

7. facilities have an increased availability of contraceptives, ART, ACT and antibiotics (questions regarding access)

Access to contraceptives in general is quite good. There is a strong year effect that confirms improved conditions. Regrettably the treatment effect for Zone 5 is negative and for Zone 3 not significant. Availability of condoms seems to be a problem. Moreover, no significant treatment effects are observed.

8. an increased acceptance of SRHR at community level in the targeted communities (questions regarding intentions, perception)

The results are not straightforward. On the question whether a girl should not be given any information about sex before she marries a strong treatment and year effect is observed for mothers in Zone 5, but not in Zone 3. Boys and girls strongly disagree with this statement but no treatment effect is identified. Mothers in Zone 3 “somehow agree” with the statement that it is acceptable if schools and health service providers give unmarried people information about the use of contraceptives. A treatment effect in the right direction is observed. The situation in Zone 5 is less favourable. Among boys and girls in Zone 5 a significant treatment effect is observed. In Zone 3 the boys and girls strongly agree with this statement although no significant treatment effect can be observed. We already discussed the results regarding decision making (intentions). Here we found some significant treatment effects showing that women intend to take a more active part in the decision making process. We conclude that project contributes to this outcome indicator.

From all these outcome variables we conclude that the project activities contribute to most of its objectives although it is not easy to attribute the effects to the project. We observe that for some objectives a major part of the investments is assumed by the government (salaries of health workers) or has been done in the past (infrastructure of health centers). As project investments in these resources are quite small, government investments can be expected to determine the scores on most of the “access to health services questions”. Therefore we conclude that the absence of straightforward positive treatment effects with regard to “access to health services” is not a good indicator for the performance of this project.

This project focuses on training and extension. With regard to the use of reproductive health services, knowledge, perceptions and intentions about reproductive health services we identified several positive trends and several treatment effects that can be attributed to the project. We conclude that the project contributes to most of its objectives. With regard to some 'use' indicators (use of ante and post-natal check-ups, attendance of skilled birth attendants, availability of contraceptives) the performance of the project is disappointing.

Reproductive health is a sensitive issue. Therefore we have to be careful if the answers are interpreted. It is interesting to analyze the results on questions regarding circumcision. In Part 6 of the questionnaire we asked whether a girl should be circumcised. The large majority of the mothers and husbands indicate that they disagree with this practice. On the question "if your next girl would be a baby-girl would you support her being circumcised" we see that only 18 % of the women and 10% of the husbands confirmed this statement. Despite all this we also observe that 66% of the baby-girls born in the last two years in the control Zone (C1/Z1) are already circumcised. In the treated Zone 5 this number is somewhat lower but still high (55%). Zone 3 is more promising (22%) although it seems that this cannot be attributed to the treatment of the project. We conclude that the practice of circumcision is still widespread in spite of the trend that more people claim that they do not support the practice.

Regarding the efficiency of the project it is not so easy to make a rigorous assessment. As already discussed this project is still in its last year of implementation and several confounding factors make it difficult to identify treatment effects properly. However, we recall that several positive treatment effects have been identified. At least we conclude that the project is effective with regard to several outcome indicators and that the trend regarding most of the outcome indicators is positive. The question whether these positive trends justify a budget of 2.5 million Euro is difficult to answer. With regard to knowledge, perceptions and intentions we see that some progress is made. A large set of activities contribute to these outcomes. We observe that the costs of trainings in general are quite low (per trainee). Larger amounts of money concern investments in renovation, equipment and upgrading. For example, if we focus at the larger cost components, the upgrading of 14 health facilities in project districts concerns an investment of 16,500 Euros per health facility, per district a budget for medical supplies of 14,583 Euros is

planned for and the support budgeted for 6 civil societies is 48,000 Euro each. In particular the last activity concerns a significant amount of money. However, taking into account the socio-cultural environment and the major theme of the intervention (SRHR) investment in these societies are justified. With regard to the efficiency of the project we conclude that a lot of money is involved. However, taking the positive trends and treatment effects into account, next to the challenging environment in which this project is carried out, we conclude that there is no reason to doubt about the efficiency of the project.

8. Conclusion

With regard to the project design we note that the project activities are well related to the objectives and the theory of change. The comment we make is that the targets were not made explicit (measurable) at the start of the project and some outcome indicators are still not specified. Unspecified targets hamper evaluation. The project was implemented as designed and annual reports provide information about the progress made. No major delays or changes occurred.

Table 8: Project Final Scores

On a scale of 1 to 10, with 1 being “not at all” and 10 being “completely”, for this project, how much do you agree with the following statements:	
The project was well designed.	7
The project was implemented as designed.	9
The project reached all its objectives.	7
The observed results are attributable to the project interventions.	7
The observed results are relevant to the project beneficiaries.	9
The project was implemented efficient.	8

It is not yet possible to answer the question whether the project reached all its objectives. The project is still in its last year of implementation. However, it is observed that several trends regarding knowledge, perception and intention indicate that the project is moving in the right direction. With regard to access and use of health services and in particular the use of ante and postnatal check-ups, the number of births attended by a skilled birth attendant and availability of contraceptives, we failed to observe positive treatment effects. Moreover, if we compare the

two treatment Zones it is clear that Zone 3 is doing much better than Zone 5. The question rises whether Zone 5 should get more attention from the project staff.

It is not easy to guarantee that the observed results are attributable to the project interventions. With regard to the availability and “access to health services” we observed that the scores mainly depend on general government policy (availability of HEWs, payment of salaries and infrastructure). The project budget invested in these activities is very small and, therefore, expected outcome indicators are too ambitious if related to the project activities. With regard to the other outcomes the identification of project influence is more straightforward. However, spillover effects require attention. Moreover, it is well possible that the government balances the investments in the health sector between the different zones as local governments approve NGO interventions and have the policy to avoid investments of different donors/NGOs in the same field of activities and even may increase their own investments in Zones that do not benefit from NGO support. The latter balancing effect reflects the fungibility of aid and can be justified from a policy maker perspective. However, if this effect is strong this could be a major flaw in the results as the difference-in-difference method assumes that the treatment is the difference between the treated and the control groups. This also implies that the results of the analysis should be interpreted with caution.

Even though not all objectives are already realized and even though the results cannot easily be attributed to the project we can confirm that the observed results are very relevant for the beneficiaries. Supply of health services in the region is still below national standards and requires more investment. Observed knowledge and perceptions about SRHR show that further action is needed. Treatment effects confirm that project activities contribute to the required change. With regard to the efficiency of the project we conclude that a lot of money is involved. However, taking the positive trends and treatment effects into account, next to the challenging environment in which this project is carried out, we conclude that there is no reason to doubt about the efficiency of the project. In line with this we conclude that we would advise to fund a similar project in the future (or to continue funding this one) as there is still enough work to be done.

Regarding the project evaluation we note that several limitations affected the evaluation. First of all we recall that a proper baseline study could not be made as the projects started 18 months before the baseline. Moreover, a proper endline study could not be made due to the

fixed deadline for the evaluation report. This makes it difficult to observe clear treatment effects and to identify the final results of the project intervention (there is still one of the five years to go). Another major limitation of this evaluation concerns the control group. During our first meeting in Addis we discussed this issue with Amref staff. We had the impression that no other major donors are active in the control area. We did not discuss the role of the local government or the potential 'balancing' measures they are taking. Results in Zone 1 show that SRHR is getting attention in all the Afar regions. Many donors do something, the government tries to coordinate the interventions, however, if you would like to have an overview of all the activities in the different Zones it is quite difficult to get that information. Consequently, unobserved spillover effects and 'budget balancing' effects may result. This lack of information makes it challenging to identify a proper control area.

Pastoralist WASH
Report MFS II Joint Evaluations (C13)
Achievement of MDGs

Country	Ethiopia
Consortium	WASH Alliance
Responsible Dutch NGO	Amref Flying Doctors Netherlands
Project (if applicable)	Pastoralist WASH
Southern partner organisation	Amref Health Africa Ethiopia

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

Evaluation team:

University of Groningen: Clemens Lutz, Elisabetta de Cao and Steffen Eriksen

IFPRI/ESARO Ethiopia: Getaw Tadesse and Samson Jemaneh

1. Introduction

The general aim of this project (C13) is to reduce poverty, improve health and environmental and economic conditions, by empowering people and creating an enabling environment, thus achieving increased sustainable access to and use of safe water and sanitation services and improved hygiene practices for women and marginalized groups in the Afar region in Ethiopia. The project is implemented by Amref Health Africa Ethiopia.

To Increase access and use of save water and sanitation the project addresses three target groups. First, communities, specifically women and girls, to increase awareness and demand. Second, relevant service providers in the business sector, public sector and civil society to organize supply of WASH services. Third, policy makers and key actors to promote and enable the sustainable realization of the right to water and sanitation. The project objectives target in particular the MDG 7C: Halve, by 2015, the proportion of the population without sustainable access to safe drinking water and basic sanitation.

Impact of this project is measured through a 'difference-in-difference' analysis. Households (control group and treatment group) have been interviewed in September 2012 and September-December 2014. The collected data allow us to calculate several treatment effects on specified outcome indicators. The results show that the treatment effects on outcome indicators for sanitation are quite promising. To date the results for drinking water are disappointing. However, it should be kept in mind that this project still has one year to go.

The report is structured as follows. The next section describes the context of the project. Subsequently, an overview of project activities is provided. Section 4 presents the method and Section 5 discusses the data collection. Section 6 provides the findings and Section 7 discusses the results. The final section draws conclusions.

2. Context

This project is carried out in Afar, one of the most remote, isolated regions in Ethiopia. Afar pastoralist communities have difficulty in accessing mainstream public services and participating in policy making processes. The Afar region is a pastoralist area characterized by recurrent

conflict, food insecurity, flooding and drought. In Zone 3 families settle in communities although even here most houses are semi-permanent. Among the pastoralists the men and boys follow the cattle to the pastures, depending on the season and the pasture conditions. Most females stay behind in semi-permanent communities.

In the project proposal we read that “Ethiopia is facing an exceptionally high under-five mortality rate of 123/1000, which is largely due to unsafe water, inadequate sanitation and poor hygiene, resulting in diarrhoea, dysentery, schistosomiasis and malaria. the average child suffers five to twelve diarrhoea episodes a year. These repeated episodes are one of the contributing factors to malnutrition”. “Water supply and sanitation coverage in the Afar region is considerably lower than overall national coverage. Pastoralists have historically been sidelined by development policies and are unable to participate in public policy making. In Afar, the majority of the population of the region has no access to potable water. About 35,7% of the households get drinking water from rivers and lakes, 15,7% from unprotected wells and springs, 4,2% from protected wells and springs, 36,8% from public taps and only 7,6% from their own tap. Overall the region exhibits the lowest latrine coverage; only 2,5% of the households own a latrine”.

Ethiopia has a National Hygiene and Sanitation Strategy (NH&SS) that is part of the Health Policy. A Water Sector Development program (WSDP) is developed to support the government’s water resources policy. In Afar a community based Water Sanitation and Hygiene (WASH) programme is designed, focusing on strengthening the capacities of beneficiaries to realize and sustain access to and use of WASH facilities. Programme approaches include capacity building, implementation and construction of WASH facilities, community involvement and empowerment, strengthening collaboration with local authorities, identify and use simple, culturally acceptable local technologies, and awareness creation and behaviour change communication.

The responsibilities of local authorities are increasing over time due to decentralization processes in Ethiopia. This sees increases in funds available to the Woreda for water and sanitation from government and development partners. Woredas are responsible for design, planning, implementation, monitoring and the evaluation of programs. However, local

authorities currently lack the capacity to absorb and manage these funds. With partners Amref has identified low human resource capacity, poor management information systems, weak infrastructure, and little organizational capacity to implement participatory approaches to development.

Periodic water quality and quantity monitoring, absent in Ethiopia, will be conducted in collaboration with partners WaterAid and HCS/RiPPLE. At community level the programme will collaborate with Addis Ababa University and the Ministry of Water Resources on removing excess fluoride from ground water. Since WASH is crucial in decreasing maternal and child mortality, the programme will cooperate with the Unite for Body Rights Programme (SRHR Alliance, project C11) that is implemented at the same time and in the same Afar Zone 3.

For further details we refer to the context as presented for project C11.

3. Project description

Amref Health Africa Ethiopia is implementing health development initiatives including WASH and trachoma prevention in Afar since 2004. The needs and constraints of the target group of the present project have been identified through a community needs analysis (2009) and a national consultation meeting (2010). Four major problems were identified: scarcity of water sources and sanitation facilities, women and girls are solely responsible for fetching water with severe implications for women safety, education and health, a weak capacity of local authorities, a low awareness on hygiene and sanitation.

The overall objective of this project is to contribute to halving the proportion of people without sustainable access to safe drinking water and basic sanitation. The approach followed seeks to close the gap by improving the capacity of the water and health (sanitation) system on the supply side, finding workable approaches to deliver services in hard to reach areas and empowering communities to participate in improving their water and sanitation needs. Core strategies are capacity building at all levels to strengthen service delivery, and learning/sharing of information to enhance replication of best practices. The WASH alliance follows the 'FIETS' approach to sustainability which consists of the following components:

- Financial sustainability - integration of activities into district development plans and budgets to allow for operation and management costs
- Institutional sustainability – training and mentoring of local authorities
- Environmental sustainability – unsustainable use of the resources, pollution and ecological damage are addressed
- Technological sustainability – appropriate and locally manageable technologies and hands on training on the operations and maintenance will be delivered
- Social sustainability – participation of local leaders, community members and project beneficiaries.

The theory of change, planned activities and expected outcomes of the project are related to the FIETS approach. Activities concern training and education to increase demand (awareness), construction of facilities and training of service suppliers and finally support to local and national services involved in water and sanitation services planning. These activities should lead to empowered communities, competent service suppliers and improved water and sanitation policy. The final outcome of these interventions should be a sustainable access and use of safe water and sanitation services and improved hygiene practices. In the project proposal we also read the following more comprehensive outcome: “reduced poverty and improved health, environmental and economic conditions by empowering people and creating an enabling environment”. It is claimed that the project contributes to the MDGs 7, 3, 4, 5 and 6. Although we agree that this may be true we note that the major target concerns the MDG 7c. In this evaluation we therefore focus on outcomes regarding this MDG (also selected by WOTRO/NWO for this evaluation).

The following objectives are specified in the project document:

- 1 Empowered communities, specifically women and girls, will demand and achieve sustainable access to and use of safe water, improved sanitation and hygienic living conditions.
- 2 Relevant service providers in the business sector, public sector and civil society will cooperate to respond to need for sustainable, accessible, and affordable and demand driven WASH services.

3 Policy makers and key actors promote and enable the sustainable realization of the right to water and sanitation through their policies, programmes and budget allocations, and are held accountable for their achievements in WASH.

4 A stable, complementary, effective and accountable alliance (in North and South), in which participating actors feel ownership, share knowledge and coordinate work towards sustainable integration of WASH into policies, strategies and programmes, in order to increase the access to and use of WASH facilities.

With regard to the first objective regarding “empowered communities” five result areas are specified and for each of them activities and outcomes are provided.

1. Increased access to and use of sustainable sanitation

The following activities are planned for this result area:

- a. Health facility and school and community latrine construction, and piloting ECOSAN (if feasible)
- b. Household sanitation realization by using CLTS¹: carry out sanitation and hygiene campaign, identify and train CLTS facilitators, identify and train community sanitation champions, facilitate and carry out village sanitation mappings, facilitate and conduct Open Defecation Free (ODF) declaration ceremonies, support and carry out ‘collective community reward schemes’, regional consultation meetings with Regional Health Bureau (RHB) and Regional Water Bureau (RWB).

Regarding these activities two output/outcome indicators are specified:

- In 70% of the intervention areas the use of improved sanitation facilities has significantly increased by the end of 2015 (target group 38122 persons)
- The % of the total population having access to sustainable sanitation systems at institutes like schools and health centers has significantly increased (target group 30494 persons)

2. Increasing use of sustainable and safe (drinking) water

¹ Community Level Total Sanitation and hygiene

The following activities are planned for this result area: community mobilization activities, a hydro-geological and geophysical survey, establishing and training water user groups (with special emphasis to the user groups leadership i.e. WASHCO), training water sources operators, water source development by drilling deep boreholes, sand dams, shallow wells and river water purification options, reticulation and distribution - focusing on facilities and communities.

Regarding this activity the following outcome indicators are specified:

- In 70% of the intervention areas the use of sustainable safe drinking water has significantly increased by the end of 2015 (target group 38147 persons)
- The % of the total population having access to safe drinking water has significantly increased (target group 38147 persons)

3. Improving hygiene and sanitation practices

The following activities are planned for this result area: community mobilization, hygiene education and hygiene and sanitation campaigns (combined with CLTS, in the selected pilot Kebeles), IEC material development and distribution

Regarding this activity the following outcome indicator is specified:

- In 70% of the intervention areas the target population has significantly improved its hygiene and sanitation practices by the end of 2015

4. Introducing new economic opportunities due to improved WASH services

The following activities are planned for this result area: encouragement of income generating activities (selling drinking water, irrigation of fruits, vegetables, washing of vehicles).

Regarding this activity the following outcome indicator is specified:

- In 70% of the intervention areas the target population benefits from new economic opportunities due to improved wash services by the end of 2015

5. Training and developing use of Integrated Water Resource Management tools

The following activities are planned for this result area: developing the use of integrated water resource management tools (2 tools), training of core personnel from the water office and water user groups on IWRM (24 trainees).

Regarding this activity the following outcome indicator is specified:

- In 70% of the intervention areas the target population benefits from new economic opportunities due to improved wash services by the end of 2015 (target set as benchmark: 20% of the population?)

With regard to the second objective regarding “service providers” six result areas are specified and for each of them activities and outcomes are provided.

1. Coordination to respond to the need for improved WASH services

The following activities are planned for this result area: establishment of district WASH teams (6 districts), establishment of WASH a forum.

Regarding this activity the following outcome indicators are specified:

- In 70% of the intervention areas the business sector, public sector and civil society improved their coordination significantly to respond to the need for improved wash services (6 districts)
- In 95% of the intervention areas active wash stakeholder coordination structures exist

2. Communities specifically women, claim and use their right to sustainable water and sanitation services

The following activities are planned for this result area: awareness creation towards the use of sustainable water and sanitation service at community level (6 districts), mobilization of communities to participate and use their sustainable water and sanitation schemes (6 districts), mobilizing/awareness creation of the community towards practicing demand driven wash services through their women or marginalized group representatives (6 districts).

Regarding this activity the following outcome indicators are specified:

- In 70% of the intervention areas community groups are successful in influencing policies, budget allocations, designs of wash infrastructure and services (12)
- In 95% of the intervention areas community groups exist with a recognizable voice/representation of women that are active in claiming their rights to affordable and equitable services

3. Effective role of NGOs to support communities to achieve their rights to WASH

The following activities are planned for this result area: supporting local CSOs to mainstream wash activities

Regarding this activity the following outcome indicators are specified

- In 70% of the target NGOs are more effective in terms of supporting communities to have access to wash services (6 districts)
- 95% of the country program partner NGOs are capacitated on relevant issues based on their capacity assessments (6 districts)

4. Effective role of the public sector in the WASH sector

The following activities are planned for this result area: coordination to respond to the need for improved wash services – supporting district plans, strengthening district wash teams to support the public sector to fulfill a leading role in the wash sector.

Regarding this activity the following outcome indicator is specified

- In 70% of the intervention areas the public sector fulfils a leading role in the wash sector

5. Supporting the private sector in the WASH sector

The following activities are planned for this result area: strengthening their capacity through training and supply of equipment for local producers, plumbers, solid waste collection crews, water group management committees.

Regarding this activity the following outcome indicator is specified

- In 95% of the intervention areas small producers, business and service providers are capacitated to play an increased role in sustainable wash service delivery

6. Improved private and public finance options for wash service construction, operation and maintenance.

The following activities are planned for this result area: mobilizing the private and public sector for raising more money for wash activities, strengthening local financing through training on income generating activities.

Regarding this activity the following outcome indicators are specified

- at least 3 local finance providers have institutionalized finance for WASH activities for consumers or service providers
- at least 6 local finance institutions are willing to finance pilot products for wash service , operation and maintenance

With regard to the third objective regarding “policy makers and key actors” four result areas are specified and for each of them activities and outcomes are provided.

1. Working with district Water offices to ensure that sufficient local finance is available to sustain and build upon WASH Alliance results.
2. Supporting districts on Budget Planning and tracking
3. Awareness raising on practical implications of the right to (drinking) water and sanitation (RTWS) and inclusion in WASH policy and programs
4. Mainstreaming ecosystem service provision into water resource management and WASH delivery is achieved

The activities formulated under this objective support the targets formulated under objective 1 and 2. The activities concern the strengthening of civil society. We recall that this evaluation concerns the contribution to the realization of MDG objectives and, therefore, will focus on the first two objectives and related outcomes.

With regard to the fourth objective regarding “the alliance” two result areas are specified and for each of them activities and outcomes are provided.

1. Supporting and working together with the WASH alliance members to adopt sustainable WASH ('FIETS') approach – joint planning, review and reporting
2. Integration of thematic issues and approaches of WASH alliance Members/partners

The activities formulated under this objective support the targets formulated under objective 1 and 2. The activities concern capacity building within the alliance which will be evaluated separately. This evaluation concerns the MDG objectives and, therefore, will focus on the first two objectives

We observe that quite a number of outcome indicators are specified for community groups, the business sector and public sector. These outcomes are important. However we gave priority to

measuring outcomes at household level. The final objective of this project is to improve the access and use of safe drinking water and sanitation at household level. These outcomes should be measured at the level of the targeted households/individuals. The questions raised in the household survey allow us to test some outcome indicators at household level. We recall the following specific outcome indicators and translated them in expected effects at household level:

- 1 the use of improved sanitation facilities has significantly increased by the end of 2015 (target group 38122 persons)
- 2 the population having access to sustainable sanitation systems at institutes like schools and health centers has significantly increased (target group 30494 persons)
- 3 the use of sustainable safe drinking water has significantly increased by the end of 2015 (target group 38147 persons)
- 4 the population having access to safe drinking water has significantly increased (target group 38147 persons- check this with log frame: sustainability of water points?)

Progress reports

Progress made is clearly presented in the quantitative planning format and the annual financial reports. The narrative annual reports provide further information and show that in general project implementation is in line with the planning. Some minor changes are reported, however, these are not expected to affect the final outcome indicators. Only with regard to borehole constructions more serious delays are observed in the first years of the project. The major reason for this delay is that it is difficult to find construction companies in the Afar region. The challenging environment is given as one of the explanations for this problem. However, we understand from the reports that these constructions have been realized by now.

Inputs

Financial and technical support comes from the project (1.245.000 Euro). In zone 3 Amref Health Africa Ethiopia is a major NGO involved in WASH activities. Amref closely works with the government and other agencies, directly and through the Zone 3 NGO Forum in order to avoid duplication of existing interventions. With regard to WASH activities we have the impression that the coordination between NGOs and the government results in a distribution of kebeles between the NGOs to avoid duplication, and also a tendency to make intervention of the

different organizations similar. In Zone 3 and in the districts of our household survey (Amibara and Fentale) Amref Health Africa Ethiopia is the leading organization. This implies that changes in sanitation and drinking water practices can be attributed mainly to its interventions.

Obviously, Amref's activities are closely linked to the health and drinking water infrastructure supported by the government. This makes it somewhat difficult to distinguish the outcomes of investments made by the project, the government and other donor organizations as activities may concern the same health organizations and schools (hospitals, HEWs etc.). However if we assume that government interventions are similar among all the regions a difference-in-difference analysis will be able to identify impacts related to the project.

A related project on Sexual and Reproductive Health and Right (SRHR) in zone 3 and 5

The SRHR project implemented by Amref Health Africa Ethiopia in zone 3 (C11) is implemented in the same period as the WASH project. The first project targets the same people and kebeles. As a result it will be difficult to disentangle outcomes from both projects (C11 and C13) in zone 3. This project will benefit from some synergies with respect to its local organization. Field staff may combine tasks, communities benefit from both projects and contacts with local authorities consider both projects. However, the activities and expected outcomes are quite different as this project focusses on drinking water and sanitation. The other project (C11) focuses on reproductive health. Therefore, the evaluation regarding the expected outcomes can be attributed to the project's intervention.

4. Method

The objective of this evaluation is to describe changes in outcome indicators that can be attributed to participation in the project. The challenge in any impact evaluation is to isolate the causal role of the intervention from other determinants (Armendariz, 2010). When comparing the situation of beneficiaries before and after an intervention, the observed changes in outcome variables cannot solely be attributed to the intervention, as there are many other changes in the environment of the respondents during the project period. Comparing beneficiaries with a control group of non-beneficiaries does not automatically provide the solution. Beneficiaries could for instance have been wealthier than non-beneficiaries when the program started or *vice*

versa. This and other factors can make some people more likely to choose to participate in the program, thus causing self-selection bias. Besides self-selection bias, program placement bias is also frequently observed in evaluation studies. NGOs target their projects purposely at specific, often disadvantaged, areas. If the control group's physical, economic and social environment does not match that of the beneficiaries, this will result in differences not caused by the intervention and thus in biased estimates of impact.

The standard approach to overcome these issues is to conduct a randomized control trial (RCT). Before the program starts two groups will be created at random. One group will receive the treatment (treatment group) while the other group will act as a benchmark (control group). Because of the randomization the members in the control group represent the members in the treatment group. After the treatment has taken place, both groups can be compared on the outcomes of interest. Differences in outcomes can now solely be attributed to the treatment. However, creating two groups at random, a necessary step for RCTs, is not always possible because of program implementation or ethical reasons.

As we were not involved in the design of the project, we use an alternative to RCTs: a so-called double difference (DD) model. In order to apply a DD model one needs to have information about relevant indicators of the treatment group and the control group at two points in time, preferably before (baseline) and after (end-line) the intervention. While the RCT methodology ensures that the only difference between members in the treatment and control group is the treatment, the DD method only eliminates differences between members of the two groups that do not change over time. So the disadvantage of the DD method over the RCT method is that it does not automatically distinguish between the impact of time-varying characteristics between members of the two groups and the impact of the treatment. A (partial) solution to this problem is to include as many time varying characteristics into the DD model as possible so that only the influence of unobserved time-varying characters remains.

The DD method works best if the treatment and comparison group are as comparable as possible. One popular method to achieve this is the propensity score method (PSM) (Rosenbaum, 1983). The basic idea is to match beneficiary households to households from the control group who are observationally similar in terms of characteristics that are not affected by

the intervention. These include stable characteristics of the household. If there is a proper baseline, outcome variables during baseline can also be used for matching, because they were not yet affected by the treatment. In practice, PSM involves running a binary regression of the project participation indicator on the relevant set of characteristics. The result is the propensity score: the estimated probability that a household is a beneficiary. The DD method is then applied to households with propensity scores in the range in which both beneficiaries and non-beneficiaries are observed (the *common support*): non-beneficiaries with a very low propensity score and beneficiaries with a very high propensity score are discarded.

As indicated above, we first applied PSM and then estimated a DD model. Econometrically speaking the double difference estimator is given by the following expression:

$$Y_{ijt} = \alpha + \beta_1 Post_t + \beta_2 D_j^T + \beta_3 Post_t D_j^T + \gamma X_{ijt} + \varepsilon_{ijt} \quad (1)$$

Where Y_{ijt} denotes an outcome variable for respondent i in group j at time t , D_j^T is a dummy variable equal to one if the respondent belonged to the treatment group, $Post_t$ is a binary variable that takes the value one if the observation corresponds to the post-treatment time period, X_{ijt} is a set of controls², and ε_{ijt} denotes the error term. Then, β_3 in (1) is the treatment estimate of the intervention's impact on outcome Y . That is, β_3 measures the difference between the treatment and control group in the growth of outcome Y , and is an unbiased estimate of the average impact on the dependent variable Y of being assigned to the treatment group provided the assumption of no selection on un-observables holds.

Although a combination of PSM and DD can solve many potential biases in the data, some bias may remain. As PSM assumes selection on observables, bias can still be caused by selection on un-observables. Adding DD to PSM helps picking up the time-invariant heterogeneity, but bias can still remain due to time-variant un-observables. We note that the possibility of time varying heterogeneity between control and treatment groups is less likely in this study as both groups are located in the same region and belong to the same agro-ecology and administrative system. We were also informed that no specific interventions were taking place in the Kebeles that are

² Additional covariates are included to control for various characteristics of the households. This not only helps with the precision of the estimates, but also reduces the problem of omitted variable bias. This is necessary to obtain unbiased measures of the treatment effects.

part of the control group. Yet, a positive significant effect in the DD model is a strong indication of an influential intervention. An insignificant effect (or even a significant negative effect), however does not necessarily imply that the intervention does not work, as in our analysis we only measure short-term effects.

Many of the outcome variables considered in the analysis are binary. In these cases, we estimated a linear probability model (LPM) and report the marginal effect of D_i^C for the impact of the project on outcome Y .

It is often the case that there is some level of attrition (or dropping out) and/or new entry in the dataset. The DD model presented in (1) can be estimated using an unbalanced panel, keeping in all observations, including the ones which we only observe in one time period. It can also be estimated using a balanced panel, dropping observations which we only observe in one period. Estimating (1) using an unbalanced panel increases the power, but as the sample becomes more heterogeneous the results might be distorted. As we deal with a number of new entries and drop-outs in the endline survey (Table 1) all estimations are done on the balanced panel.

5. Data collection

The project operates in Zone 3 in the Afar region. Two activities are key: improving access and use of safe drinking water and improvement of sanitation and hygiene practices. In 2012 activities were still in the start-up phase (somewhat delayed because of the drought in 2011). This implies that the data collected in August 2012 may be considered as a kind of baseline household level data, but certainly not a proper baseline. As the project intends to cover the whole Zone, control groups having no access to the treatment are identified in the neighbouring Afar Zone 1 and Zone 5 (districts not targeted by the project and selected Kebeles are expected not to benefit from investments of alternative donors). The data collected at the end of 2014 do not fulfil the criteria for an end-line study as project activities continue until the end of 2015. However, most of the intended impacts are expected to be visible in the data. We agree that it would have been better to organize the end-line data collection at the end of 2015. However, deadlines in the MFS-II evaluation project made it necessary to organize this evaluation earlier.

Therefore, we note that the results should be seen as observed trends for the two year time lapse.

The outcome indicators identified in the last section are measured at household level in September 2012 and October-December 2014. The same household-members are interviewed for the baseline and the end-line. For the survey we interviewed mothers (15-49 years). Men participate in focus group discussions that were held prior to the individual interview in the village. The focus group discussion was conducted by the supervisor of the enumerators and helps to acquaint the community and husbands about the survey. Since the primary objective of the project is to change the behaviour of households through information dissemination and behavioural change campaigns, all households living in the targeted Zone may in principle be defined as the “treated group”. Some outcome indicators should be measured at community level. We use data available in the annual reports to review these indicators.

We use a multi-stage stratified sampling method in which strata are defined by zones which represent different target groups, Woredas, Kebeles and villages (hamlets). For efficiency reasons we used the same household survey for the evaluation of projects C11 and C13.

Selection of Zones

We distinguished 3 groups depending on access to project services . As discussed with Amref staff the difference in treatment intensity (benefitting from 1 or 2 projects) may affect results. Consequently, we decided to distinguish two treatment groups in the evaluation of the C11 project. The second treatment group for project C11 is taken as an additional control group for the evaluation of project C13. A second control group provides information about the situation in Zone 5 in which Amref is active and can also be seen as a robustness check on the results given for the other control group (Zone 1):

- T1/Z3: A treatment group benefitting from both projects, that is, households having access to SRHR and WASH services (projects C11 and C13). This group is drawn from Zone 3.

- C2/Z5: A treatment group, having access to SRH services only. The results for Zone 5 reflect the situation for households having access to this project only (C11).
- C1/Z1: Control group without access to any of the projects C11/C13. This group is drawn from Zone 1. Zone 1 is selected taking into account the geographical proximity to the treatment zones. It is also physically accessible.

Selection of Woredas

First we identified a list of intervention Woredas for each zone. From this list two Woredas per zone were selected. The selection of Woredas is not random because of the limited number of Woredas that receive both projects and their accessibility to conduct the survey. Thus, a convenient or purposive sampling is used to identify the Woredas. Samples are selected from the following Woredas in each zone

- a. Zone 3: Awash, and Amibara
- b. Zone 5: Dawe, and Telalak,
- c. Zone 1: Mile and Chifira

Figure 1: Map of the Afar region

Selection of Kebeles

Selection of Kebeles is somewhat challenging in the Afar region. Kebeles in this region are not always clearly demarcated and people only know the names of the village/hamlets (gote) they live in, but do not always know the name of the Kebele. Kebele names are usually assigned by Woreda officials. We selected the Kebeles at the Woreda office. At the Kebele level we selected a number of hamlets needed to obtain the required response rate. For each Woreda we selected three Kebeles: the Woreda center and two more rural Kebeles. We note that not all

Woreda centers can be considered as urban areas. Only the Kebeles Awash 01 (Woreda Awash Fentale), Werer (Woreda Amibara) and Mile 01 (Woreda Mile) do have some infrastructure and a concentration of population that can be considered somewhat urban.

Selection of households or women

Our sample concerned women within the age group of 15 to 49. In Kebeles where there was a list of residents available, we used the list to sample households (35 households were selected for each Kebele using lottery methods). However, in villages where there was no list, we randomly selected houses from the village. If the age of the woman in the house was out of the age range, we replaced the household by the neighbouring household.

Table 1: Full sample size

Survey among household mothers			
Woreda	Baseline	Endline	Attrition
Awash Fentale	106	83	22%
Amibara	106	105	1%
Zone 3	212	188	11%
Telalak	106	90	15%
Dawe	104	75	28%
Zone 5	210	165	21%
Mille	106	93	12%
Chifra	103	80	22%
Zone 1	209	173	17%
Total	631	526	17%

Attrition

Attrition is a challenge in these type of surveys and in particular in these type of regions where many inhabitants are pastoralists. In total 113 mothers dropped out. We were not able to match 8 endline interviews with a baseline interview. Another 105 women interviewed for the baseline were not interviewed for the endline. Although our enumerators went twice to the villages they were not able to find the same persons back. Flooding played a role in the end-line study and quite a number of families evacuated for the search of grazing areas and their own safety. We regressed the attrition on the control variables and observe that attrition is somewhat negatively related to the availability of salaried or casual labour and the family size. This is

understandable as these families can be expected to be more sedentary. In general, we conclude that attrition is well distributed over different household characteristics and Zones and that no bias is expected from this problem.

Enumerators and interview

Female enumerators were used to interview women. All enumerators speak the local language, Afar. The enumerators were supervised by supervisors who checked the questionnaire every night. The supervisors and the enumerators conducted the focus group discussion together. Individual interviews were conducted in a location where only the interviewer and the respondent were present. The interview took place in an area near to the home of the interviewee. Three supervisors, 15 enumerators for the baseline and 18 enumerators for the endline, were hired and trained, forming three teams going to two Woredas each.

The questionnaire:

Ideas for the survey questions are drawn from the two baseline studies conducted by Amref Health Africa Ethiopia in the preparatory stage of the projects. If possible the same questions are addressed. This facilitates comparison between the Amref data and the efficient use of existing data. The questionnaire for women consists of the following blocks of questions

1. Socio-economic background of the respondent and the household
2. Access to Sexual and Reproductive Health Services
3. Knowledge about Sexual and Reproductive Health Services
4. Attitudes towards sexual and reproductive health practices
5. Use of sexual and reproductive health services
6. Intentions to use Sexual and Reproductive Health Services
7. Household water supply
8. Household sanitation

The first part of the survey concerns information about the household. Part 2-6 concerns questions related to SRHR to evaluate project C11. Part 7 and 8 contains the relevant information for this evaluation of project C13 (see the questionnaires in the annex).

6. Analyses and results

The descriptive statistics presented in Table 2 show the number of observations in the baseline study in the three Zones for a set of household indicators. It is observed that the observations are well distributed over the 3 groups we distinguish (C1/Z1 = control Zone 1, C2/Z5 = control Zone 5 and T1/Z3 = treatment Zone 3). The average age of the mothers interviewed is about 32 years, their husbands are on average about 7 years older. The number of observations for the husbands is lower as some women are divorced or widow. The large majority of the households have the Muslim religion and adhere to the Afar ethnic community. Completed years of education is similar for the three groups and very low. Most respondents are illiterate. The main occupation for the women interviewed is housekeeping and childcare, others indicate the importance of livestock keeping. This question may have been somewhat confusing as housekeeping may indeed form the major activity but is not an occupation.

Table 2: Summary statistics and balancing tests for control variables: Mothers (baseline)

Dependent variable	Summary Statistics						Balancing tests	
	Zone 1		Zone 5		Zone 3		Zone5 – Zone1	Zone3 – Zone1

Salaried labor	209	0.30	210	0.23	212	0.48	-0.069	0.175**

Note: Column 2, 4 and 6 presents the mean for Zone 1, 5 and 3. Column 7 and 8 display the coefficient from a separate OLS regression. ^oincludes: Oxen, Cows, Bulls, Camels and Donkeys. ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level.

Major sources of income for the household concern livestock revenues, but quite a number of households have a salary income or perform casual labor. In particular in the more urban Awash Fentale region a relatively large group of interviewees receive salary income. The results show that the differences between averages for the three groups are small, although some differences between the groups are significant (balancing tests). In order to control for these

differences propensity score matching is applied for the difference-in-difference analysis (see method section).

Table 3: Summary statistics and balancing tests for outcomes regarding drinking water

Notes: Column 2, 4 and 6 presents the mean of the control and treatment group respectively. Column 7 and 8 display the coefficient from a separate OLS regression. Standard errors are clustered at the kebele level.

***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level.

Tables 3 and 4 show baseline and endline results for several outcome indicators. The results reflect differences between regions. The baseline was carried out in August 2012 while the project started January 2011. Consequently, results obtained may reflect some of the first outcomes of the project. However, we think that these effects are small as the start of the project was somewhat delayed by the drought in 2011 and only a few of the envisaged activities were implemented before September 2012. The endline data were collected in October-

December 2014. Two data collection visits were organized to limit attrition. We recall that the endline is not a proper endline as the project continues until the end of 2015.

Table 3 presents some statistics about the use and access to drinking water. Already in the baseline survey more than 60% of the respondents (see also Table 4) indicate that they have access to drinking water from a protected water source (piped water into the house, public tap/standpipe, protected dug well, protected spring, borehole). The situation in Amibara was relatively good in the baseline but this advantage became less distinctive in the endline. On average no improvement of this situation in the endline survey is observed.

Table 4: Major drinking water source

	Baseline	Endline	
surface water (river/lake/pond/canal)	212	157	369
piped water into the house	222	142	364
public tap/standpipe	104	107	211
protected dug well	45	45	90
protected spring	13	2	15
borehole	14	0	14
unprotected well	1	13	14
unprotected spring	0	11	11
household water facility	1	0	1
rainwater tank	18	0	18
cart with small tank	0	7	7
other	0	11	11
Total	630	495	1125

The distance to the drinking water source is shortest in the Amibara Woreda and longest in Zone 5. In the treatment area, and in particular in Awash Fentale, an improvement in the situation is observed. We note that this drinking water source does not necessarily provide safe drinking water as the question simply refers to the 'main source'. A large majority stores drinking water in a covered, clean container. For the endline survey we observed an improvement in the cleanness of the drinking water container in all the Woredas under study. As expected, in general mothers are responsible for fetching the drinking water.

More than half of the respondents indicate that they do not have problems with the water supply. The major complaint of the other respondents concerns the cleanness of the water, salinity, irregularity or distance of water supply. Interestingly, in the control areas less problems with water provision were perceived than in the treatment area, in particular in the endline study (Table 3).

Table 5: Problems with water supply

Problems with water supply?	Baseline	Endline
no problems observed	326	221
water is dirty	187	116
water is saline	21	59
water supply is irregular	37	68
water is far away	44	50
water source dries up	11	3
fluoride	4	0
total	630	517

In the endline survey we asked whether there was a public tap or piped water facility in the Kebele. About 50% of the respondents confirmed that there is at least one piped water facility in the Kebele, which indicates a 50% coverage of safe water. The situation in Zone 5 (C2/Z5) seemed to be most attractive as 81% of the respondents affirm this question. Amref and the local government constructed the facilities in Zone 3 (T1/Z3). Local governments and other organizations constructed the facilities in the control areas. In Zone 3 quite a number of the interviewees participate in the WASHCO. The respondents in the endline indicate that the reliability of the water does not differ that much from what we observe in the control Zones. Rather disappointing is the observation that the majority of those who use piped water or a public tap indicate that they do not pay for the service (only endline data are available). This indicates that maintenance of the facilities may become a problem. This is disturbing as this may explain why so many drinking water facilities needed repairs and were refurbished by the project. We conclude that the situation regarding drinking water is quite similar in the different Zones. The treatment area seems to be in a somewhat better position. However, perceived problems with regard to drinking water are highest in the treatment area. It is not clear whether

this result reflect indeed more problems or that in this region people are more aware of the required drinking water standards.

Table 6: Summary statistics and balancing tests for outcomes regarding sanitation

Notes: Column 2, 4 and 6 presents the mean of the control and treatment group respectively. Column 7 and 8 display the coefficient from a separate OLS regression. Standard errors are clustered at the kebele level.

***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level.

The outcome indicators regarding sanitation show that the number of interviewees who use their own latrines or community latrines increased significantly in Zone 3 (T1/Z3) and Zone 1 (C1/Z1). About 50% of the respondents have a latrine facility at household level. Figures regarding evidence of use of the household latrine are somewhat lower. In the treatment area we observe an increase in the availability of community latrines. Figures about the availability of

a hand washing facility nearby the latrine are ambiguous. However, washing hands before eating seems to be a common practice. Washing hands after defecation is less common practice but an improvement is observed for the treatment area. The respondents indicate that they regularly take a shower. The use of the dumping pit for waste is a less common practice

It is observed that one third of the respondents in the treatment area participated in a Community Level Total Sanitation and hygiene (CLTS) campaign. For the control areas this figure is much lower. Similarly, the HEWs visited in particular the households in the treatment area to assess the WASH situation. We conclude that the treatment area seems to be in a somewhat better position. Access and use of latrine facilities are better and more people participated in the CLTS campaign.

The next step in the analysis is to isolate the treatment effect for the period under study. The difference-in-difference method (see method section) will be applied to analyze differences between Zones. Zone 3 (T1/Z3) is compared with two control regions (C1/Z1 and C1/Z3). The two control areas can be seen as a robustness check for the difference-in-difference analysis.

Differences over time and between Zones can be allocated to three effects:

- the change in the outcome variable (endline minus baseline) for the control Zones (C1/Z1 or C2/Z5)
- the difference in the outcome variable between the treatment and the control Zones at the moment of the baseline
- the effect of the treatment during the period under study (endline minus baseline)

For our analysis the third effect is most important as it isolates the effect of the treatment on the treated. In the Annex the results of the analysis are given. First Zone 3 and 1 are compared and subsequently the results for Zone 5 and 1 are given. Tables 6 and 7 provide an overview of the significance of the treatment effect.

Table 7: Treatment effects for T1/Z3 – Drinking water

	T1/Z3-C1/Z1	T1/Z3-C2/Z5
<i>Access to drinking water</i>		
Distance in dry season to drinking water source (1=less than 200m)	+***	ns
Distance in wet season to drinking water source (1=less than 200m)	+***	+***
Distance in dry season to drinking water source (1=less than 2000m)	+***	+***

Problems with water (1=no problem)	-***	ns
<i>Practice</i>		
Drinking water is stored in a covered container (1=covered)	ns	ns
Drinking water container is clean (1=clean)	ns	-**

Notes: The first column compares results for the Control Zone1 and the treatment Zone 3 (T1-C1). - = a negative treatment effect, + = a positive treatment effect. ***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level and ns=not significant.

Access to drinking water improved in the treatment area as the distance to the water source decreased and significant treatment effects are observed. We recall that this drinking water source does not necessarily provide safe drinking water. It is disturbing that, despite this improvement, there is no increase observed in the number of people that use a protected water source for their drinking water. This is disappointing as nearly 40% of the respondents in the endline study indicate that they do not take drinking water from a protected water source. A further disappointing negative treatment effect concerns problems with the water supply in Zone 3 (T1/Z3) if compared with Zone 1 (C1/Z1). Regarding drinking water storage we observe several non-significant treatment effects. Fortunately, the scores for these practices in all the Zones are very good for the endline study.

Table 8: Treatment effects for T1/Z3 – Sanitation

	T1/Z3-C1/Z1	T1/Z3-C2/Z5

Do you wash hands before eating? (yes=1)	ns	+***
How frequent do you take a shower? (1=weekly or less)	ns	+***
Where do you dispose of your household waste? (dumping pit=1)	ns	ns

Notes: The first column compares results for the Control Zone1 and the treatment Zone 3 (T1-C1). - = a negative treatment effect, + = a positive treatment effect. ***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level and ns=not significant.

Regarding sanitation we observe that access to latrines at household level did not improve as a result of the treatment. However, availability of public latrines did improve in the treatment area (T1/Z3). Availability of hand washing facilities near the latrine decreased in the treatment area and a negative treatment effect is observed. The use of latrines is increasing. Significant treatment effects are observed for several indicators. The CLTS campaigns seem to have the desired effect as a larger number of treated persons wash their hands after defecation and before eating. The use of the dumping pit is not benefitting from a treatment of the project

7. Discussion

Summarizing the results we first want to recall that the baseline and endline data do not fulfill all the criteria for a proper baseline. The baseline was carried out 18 months after the start of the project, while the endline data were collected 1 year before the end of the project. This means that the data should be interpreted as an observed trend for the two year time lapse. It

would be interesting to repeat the survey in one year time in order to get a better measurement of the final results.

The results show various changes in the outcome variables. Recalling the specified outcome variables at the end of Section 3 we draw the following conclusions:

1 the use of improved sanitation facilities has significantly increased by the end of 2015

The number of households with their own latrine is somewhat increasing. However, this change cannot be attributed to project activities as no treatment effect is identified. We note that the project did not invest directly in the construction of private household latrines. Nevertheless, we observe an increase in the use of the latrine and, if T1/Z3 is compared with C2/Z5 we even observe a treatment effect. Although the CLTS campaigns did not increase the availability of latrines at household level, it did influence some of the sanitation practices (washing hands and shower frequency).

2 the population having access to sustainable sanitation systems at institutes like schools and health centers has significantly increased

Significant treatment effects are observed regarding availability and use of public/community latrines. Direct investments of the project in these latrines seem to make a difference.

3 the use of sustainable safe drinking water has significantly increased by the end of 2015

Many households do have access to protected drinking water. However, the use of safe drinking water did not improve over time and no significant treatment effects are observed. Moreover, more problems regarding the water supply are observed in the treatment area.

4 population having access to safe drinking water has significantly increased

Access to drinking water did improve as the number of people having water available at a maximum distance of 200 meter (or 2km) increased in Zone 3. Significant treatment effects are observed for both control groups. However, taking into account that the use of safe drinking water did not increase it is quite doubtful whether all these resources provide safe drinking water.

From all these outcome indicators we conclude that project results are quite mixed. With regard to the use of safe drinking water we conclude that no treatment effect is observed.

Disappointing is the increase in problems with the water supply in the treatment area.

Regarding sanitation, the results are more favorable, several positive treatment effects are observed.

Regarding the efficiency of the project it is not so easy to make a rigorous assessment as final results are not yet known due to the fact that this project is still in its last year of implementation. In total a budget of 1.2 million Euro is involved in this project. A large set of activities are planned for. We observe that the costs of trainings in general are quite low (per trainee). Larger amounts of money concern investments in drinking water facilities: renovation and construction of boreholes (42,000 Euros per borehole). As private construction companies are involved in these constructions we expect that the investments reflect market prices. We have shown that the project is effective with regard to several outcome indicators regarding sanitation. As most activities concern relatively low-cost trainings and campaigns we conclude that this part of the project is also efficient. With regard to the drinking water activities the efficiency is less clear. The problem is not the high cost of some of the activities but the effectiveness. However, it could be argued that the high cost activities may explain part of this problem. The project has chosen to invest in a small number of costly borehole drillings. As the Afar live in small hamlets it could have been a better option to choose more simple technologies (hand-pumps) to realize a large outreach in a larger number of hamlets. A related advantage could be the maintenance problem. Many people do not pay for drinking water facilities, which, after some time, may explain why so many drinking water facilities break down.

8. Conclusion

With regard to the project design we note that the project activities are well related to the objectives and the theory of change. The project was implemented as designed and annual reports provide information about the progress made. No major delays or changes occurred. It is not yet possible to answer the question whether the project will reach its objectives. The project is still in its last year of implementation. The activities regarding sanitation show some

promising results. However, the drinking water interventions do not yet result in clear treatment effects.

Table 9: Project Final Scores

On a scale of 1 to 10, with 1 being “not at all” and 10 being “completely”, for this project, how much do you agree with the following statements:	
The project was well designed.	9
The project was implemented as designed.	9
The project reached all its objectives.	6
The observed results are attributable to the project interventions.	6
The observed results are relevant to the project beneficiaries.	9
The project was implemented efficient.	7

It is not easy to guarantee that the observed results are attributable to the project interventions. In Zone 3 (T1/Z3) and in the districts of our household survey (Amibara and Fentale) Amref Health Africa Ethiopia is the leading organization. This implies that changes in sanitation and drinking water practices can be attributed mainly to its interventions. Obviously, Amref’s activities are closely linked to the health and drinking water infrastructure supported by the government. This makes it somewhat difficult to distinguish the outcomes of investments made by the project, the government and other donor organizations, as activities may concern the same health organizations and schools (hospitals, HEWs etc.). At the start of the project we checked whether major investments regarding WASH activities were implemented in the control Zones. As far as we understood this is not the case and therefore we expect that government interventions are similar among all the regions. Consequently, a difference-in-difference analysis will be able to identify impacts related to the project.

Even though not all objectives are already realized and even though the results cannot easily be attributed to the project we can confirm that the observed results are very relevant for the beneficiaries. Supply of WASH facilities is still below standard and further investments in the region are needed. With regard to the efficiency of the project we conclude that a significant amount of money is involved. Positive treatment effects are observed for sanitation activities. Drinking water interventions are not yet effective. In line with this we conclude that we would

advice to fund a similar project in the future (or to continue funding this one) but recommend to assess the final outcomes of the drinking water activities and the major investments in borehole drillings in particular.

Regarding the project evaluation we note that several limitations affected the evaluation. First of all we recall that a proper baseline study could not be made as the projects started 18 months before the baseline. Moreover, a proper endline study could not be made due to the fixed deadline for the evaluation report. This makes it difficult to observe clear treatment effects and to identify the final results of the project intervention (there is still one of the five years to go).

Report CDI- 15-057

Kusters, C.S.L, T. van Ingen, E. Zerfu, D. Kefyalew, B. Peters, N.N. Buizer, 2014. *Endline report Ethiopia, CARE Ethiopia. Capacity of Southern Partner Organisations (5c) component*. Centre for Development Innovation, Wageningen UR (University & Research centre). Report CDI- 15-057. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is Ethiopia, CARE Ethiopia. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation CARE Ethiopia and the Co-Financing Agencies CARE Netherlands for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to CARE Ethiopia, CARE Netherlands, consortia, the synthesis team, IOB and NWO/Wotro and other interested parties and other interested parties.

The Ethiopia 5C evaluation team

List of abbreviations and acronyms

ADA	Austrian Development Agency
CARE NL	CARE Netherlands
Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CIDA	Canadian International Development Agency
CCA	Climate Change Adaptation
CDC	Centre for Disease Control
CDI	Centre for Development Innovation, Wageningen UR, the Netherlands
CFA	Co-Financing Agency
CS	Civil Society
CSO	Civil Society Organization
Detailed causal map	Also 'model of change'. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
DRR	Disaster Risk Reduction
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.
GTP	Government of Ethiopia's Growth and Transformation Plan
ECHO-Ethiopia	Every Church Organised in Ethiopia
EU	European Union
IFPRI	International Food Policy Research Institute
MDG	Millennium Development Goal
M&E	Monitoring and Evaluation
MoFA	Ministry of Foreign Affairs
MFS	Dutch co-financing system
MIS	Management Information System
NGO	Non-Governmental Organisation
OD	Organisational Development
PfR	Partners for Resilience
PME	Planning, Monitoring and Evaluation
PRA	Priority Result Area
Process tracing	Theory-based approach to trace causal mechanisms
RCT	Randomized Control Trials
SPO	Southern Partner Organisation
SSD	Support for Sustainable Development
SSI	Semi-structured Interview
ToC	Theory of Change
UNHCR	United Nations High Commissioner for Refugees (UN's refugees agency)
Wageningen UR	Wageningen University & Research centre
5 C	Capacity development model which focuses on 5 core capabilities

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
2. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
3. *Were the efforts of the MFS II consortia efficient?*
4. *What factors explain the findings drawn from the questions above?*

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: CARE Ethiopia in Ethiopia. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in chapter 4.2.2.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR); Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); (Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Since the baseline, two years ago, improvements took place in all of the capabilities.

Over the last two years some small improvements took place in the indicators under the capability to act and commit. The management of CARE Ethiopia is responsive and now receiving regular information from projects to use for taking action. In the last two years a substantial amount was budgeted for training of staff and staff are encouraged to seek education opportunities in-country and abroad. Many opportunities have been offered to staff, staff has taken CARE Academy courses and are offered in-country scholarships. Staff skills have therefore improved and the training opportunities are also seen as an important incentive. Staff salaries have increased and the merit-based salary increment policy has been further implemented.

In the capability to adapt and self-renew CARE Ethiopia saw many small improvements. The application of M&E improved slightly because more competent staffs were hired and the information system has been strengthened. Staff's M&E competencies were strengthened through MFS II funded training. CARE Ethiopia has established a knowledge centre through which learning takes place and lessons are shared. In this way M&E findings are used to inform future strategies. There has been a very slight improvement in terms of room for critical reflection which was triggered by feedback from CARE Netherlands. CARE Ethiopia has become more responsive to its stakeholders as they are now organising a yearly partnership day and are following a community development approach.

In terms of the capability to deliver on development objectives, CARE Ethiopia has improved in various indicators. Staff's awareness of the importance to work cost-effectively has increased. In various projects CARE Ethiopia has reduced costs by maximising the contribution of the community. The organisation is reaching or surpassing its planned outputs and the partners are satisfied with the results. There was a very slight improvement in ensuring that beneficiary needs are met because of the presence of qualified staff, regular monitoring and beneficiary consultations. Staffs have become more experienced e.g. through learning events, and are therefore better able to balance quality and efficiency. Hiring new staff for the program quality and learning unit has also helped in this regard. In the capability to relate, CARE Ethiopia very slightly improved in engaging with their target groups. The CARE PfR program manager visits projects and discusses with beneficiaries more frequently now. With regards to relations within the organisation, communication has improved due to Wi-Fi connection in the field offices with USAID funding.

Finally, CARE Ethiopia has shown slight improvements in some of the indicators under the capability to achieve coherence. There has been a very slight improvement in operational guidelines due to a revision of the HR manual and policy and development of implementation guidelines and transparent financial procedures. There is a slight improvement in staff's capacity to ensure the complementarity of the various projects to CARE's new program approach for a better impact.

During the endline workshop some key organisational capacity changes were brought up by CARE Ethiopia's staff in the general 'key changes in organisational capacity' causal map: better understanding and knowledge of disaster risk reduction and management; enhanced knowledge and understanding of options for local adaptation to climate change; enhanced M&E and learning capacity including automated data base management; enhanced capacity of staff in strengthening and utilizing school clubs for environment protection interventions; enhanced capacity in joint monitoring through partnership with government and community; and knowledge and awareness to carry out reconciliation of results versus expenses.

The evaluators considered it important to also note down the SPO's story about what they considered to be key organisational capacity changes since the baseline, and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team.

According to CARE Ethiopia's staff, they improved their knowledge on disaster risk reduction and management (DRRM) because of joint bi-monthly review meetings with PFR (Partners for Resilience) partners (MFS II funded); experience gained from implementation of the BREAD IV project (funded by DFID); a training on community management disaster risk reduction in 2013 (funded by MFS II), quarterly meetings of the agricultural task force organised by MoA and FAO; participation in the climate change strategy for CARE; and past experiences in joint monitoring with implementing partners.

The organisation enhanced its knowledge and understanding of options for local adaptation to climate change because of participating in the climate change strategy for CARE; participation in the CARE climate working group that discusses on local adaptation; and because of exploration of knowledge by contacting partners, experts and consulting documents.

CARE Ethiopia enhanced its M&E and learning capacity (including having automated data base management) because of a training on M&E in 2014 (funded by MFS II); CARE Ethiopia's robust M&E system and M&E unit; and support for planning and quality learning by a new impact measurement advisor since 2013.

CARE Ethiopia has enhanced its staff capacity in strengthening and utilising school clubs through partnership with the government and the community due to two midterm review meetings organised in Dire Dawa, Ethiopia and Uganda (MFS II funded); and past experience and knowledge on group formation and working with groups in different development interventions.

The organisation said to have enhanced its capacity in joint monitoring through their partnerships with government and communities because of past experiences in joint progress monitoring with implementing partners; and the nature of the MFS II funded program that required a multidisciplinary approach, community involvement and is implemented in partnership with a local NGO.

Finally, CARE Ethiopia improved its knowledge and awareness on carrying out reconciliation of results versus expenses because of exposure to the MFS II reporting system (reporting costs by activity and result area).

According to CARE Ethiopia's staff, MFS II funded capacity development interventions have thus played a role in better understanding and knowledge of disaster risk reduction and management; and enhanced M&E and learning capacity. This was through bi-monthly review meetings with PFR partners, training on M&E; and midterm review meetings. However, internal factors like participation in CARE's climate change strategy and climate working group; experiences in joint monitoring; hiring an impact measurement advisor, having a robust M&E system and unit; and exploring knowledge have also played an important role in the key organisational capacity changes that the CARE Ethiopia staff considered important since the baseline in 2012. Support from other funders, like, DFID, FAO and MoA, in terms of meetings and experience gained through projects, has also been mentioned among the underlying factors for these changes.

2 Context and General Information about the SPO – CARE Ethiopia

2.1 General information about the Southern Partner Organisation (SPO)

Ethiopia	
Consortium	Partners for Resilience
Responsible Dutch NGO	CARE Netherlands
Project (if applicable)	Climate Proof Disaster Risk Reduction Program (CPDRR) Project C6 in MDG sample
Southern partner organisation	CARE Ethiopia

The project/ partner is part of the sample for the following evaluation components:

Achievement of MDGs and themes	
Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

In 2010, Ethiopia embarked up on its third Poverty Reduction Strategy Paper, the Growth and Transformation Plan (GTP) for the period 2010/11–2014/15. The GTP has eradication of poverty and transformation at the centre of its focus, and it is most ambitious in incorporating sustainable development principles and objectives. The GTP's objectives are identified as: (i) Attaining high growth within a stable macroeconomic framework; (ii) Achieving the MDGs in the social sector; and (iii) Establishing a stable democratic and developmental state. To accomplish these objectives, the GTP defined a number of strategic pillars. These are: to sustain rapid growth; emphasize agriculture; promote industrialization; invest in infrastructure; enhance social development; strengthen governance; and empower youth and women.

Ethiopia is considered one of the least developed countries, ranked 171 out of 182 countries in the UNDP Human Development Index for 2009. In the 2010 Global hunger index which ranks developing countries and countries in transition based on proportion of undernourished people, proportion of underweight children under five, and child mortality rate, Ethiopia was given a 29.8, on a scale of 0-100, with 0 being the best and 100 the worst possible score. Ethiopia is one of the countries that made the most absolute progress improving its score between 1990 and 2010; in 1990 it had a score of 43.7, and now it's down to 29.8. However, despite this improvement this score is still troubling – Ethiopia still ranks 80th out of 84 countries.

The level of hunger in Ethiopia can also be measured based on child growth, which is “internationally recognized as an important indicator of nutritional status and health in populations.” In 2005, 20% of babies had low birth weight (less than 2500g at birth). 53.5% of children under five and 30.6% of pregnant women were anaemic. 34.6% of children were considered underweight, which contributes to child mortality. 50.7% of children suffered from growth retardation as a result of inadequate diets, and 12.3% were “wasting”, which refers to a condition brought on by severe under-nutrition and causes permanent impairment of the immune system, making them much more susceptible to

infectious diseases and death. These high levels of under-nutrition, particularly in children and mothers, have serious implications for Ethiopia's future. High child mortality, impaired immune system, and the results of stunting due to inadequate diet, which include delayed mental development and intellectual capacity and decreased performance in school, have long-term effects, not only for those children but for economic productivity as a whole. Small, undernourished women are also more likely to experience complications in during childbirth, and are more likely to give birth to low birth-weight babies, further "contributing to the intergenerational cycle of malnutrition

CARE started working in Ethiopia in 1984 in response to severe drought and famine that devastated the population and claimed the lives of nearly one million people. Since then, the organization's activities have expanded to address the root causes of poverty and vulnerability. CARE's programs focus on the areas of livelihoods and food security, sexual and reproductive health, HIV/AIDS, education, governance, water and sanitation, and emergency preparedness and response. As part of CARE Ethiopia's development of a focused and long-term program approach to poverty, the office targets three groups of people: pastoralist girls, chronically food-insecure rural women, and poor young girls living in cities and on the outskirts of urban areas. CARE Ethiopia's projects are implemented through field offices located in specific project zones in its geographic focus regions. Currently, CARE works in Oromiya, Amhara, Afar and Southern Nations and Nationalities Peoples Regional States.

CARE seeks a world of hope, tolerance and social justice, where poverty has been overcome and people live in dignity and security. CARE Ethiopia's mission is to work with poor women and men, boys and girls, communities and institutions, to have a significant impact on the underlying causes of poverty. The revised Strategic Plan 2010-2020 provides a unified direction for the Country Office based on the analytical foundation it has produced for the three identified Impact Groups, and based on changes in CARE Ethiopia's operating environment.

As one of CARE International's learning laboratories in making this shift, CARE Ethiopia has committed to develop programs around the following three impact groups which include chronically food insecure rural women; pastoralist school-aged girls; and resource-poor urban female youth. These three programs are grounded in deeper understanding of the particular vulnerabilities and opportunities of each group (as well as specific sub-populations) and involve a long-term commitment to positive social change. In mutually supportive alliances, CARE Ethiopia will contribute to economic and social transformation, unleashing the power of the most vulnerable women and girls, honouring their dignity. CARE Ethiopia's strategic directions are designed to support the UN Millennium Development Goals for Ethiopia (MDG) and the Government of Ethiopia's Growth and Transformation Plan (GTP).

2.3 Contracting details

When did cooperation with this partner start:

In 2009 CARE Nederland first worked together with CARE Ethiopia on the 'RESILIENCE' project, a multi-country programme aimed to field test different Disaster Risk Reduction (DRR) methods (other countries of participation are Indonesia and Bolivia). In 2010 CARE Nederland started contacting CARE Ethiopia to prepare for the Partners for Resilience Project, which commenced in 2011.

What is the MFS II contracting period:

1 January 2011 – 31 December 2015

Did cooperation with this partner end?

NO

If yes, when did it finish?

N.A.

What is the reason for ending the cooperation with this partner:

N.A.

If not, is there an expected end date?

31 December 2015 (for the MFS II project, not for cooperation)

2.4 Background to the Southern Partner Organisation

History

CARE started working in Ethiopia in 1984. It was in response to the severe famine that took place in many parts of the country. Since then, the organization's activities have expanded to address the root causes of poverty and vulnerability.

Influencing factors

The major influencing factors in most cases were related to government policies. The following influencing factors that shaped the involvement of CARE Ethiopia were identified.

- Change of government in 1991
- Decentralization of regions in 1994
- Economic policy reform in 1995
- CSO law in 2008.

The following years were critical in the development process of the organization:

Critical changes										
1984	1988-1989	1991	1995	2000	2001	2003	2005	2008	2011	2012
Inception due to severe famine	Relief and rehabilitation activity in response to	Change of government	Orientation to market economy which forced the restructuring of	Occurrence of major famine	Introduction of SCALA financial software	Work on livestock and feed	From REVIVE to PSNP	CSO law; from project to program	Closure of multi-year assistance program	Introduction of Pamodzi grant and finance software

Target groups

At present the organization targets three groups of people. These are pastoralist girls, chronically food-insecure rural women, and poor young girls living in cities and on the outskirts of urban areas. There have been changes in the target groups over the years. At inception and the following years, the target groups were people affected by drought, displaced/refugees from Somalia and the northern part of Ethiopia because of the war. In the 1990s, it was rural households in East Shoa and part of West Harargie. By the beginning of 2000 drought affected people in South Gonder and pastoralists were the main target groups.

Numbers of staff

The workshop participants could not recall the number of staff at the inception period. But it was stated that due to the government's orientation to market economy CARE was forced to restructure its transport system which led to the layoff of large number of staff. By 2000 to 2005, the number of staff reached about 800-1000. Although the number of staff reached more than 1000 in the following years, the introduction of new CSO law in 2008 made CARE Ethiopia to abandon governance and rights-related programs and retrench some staff. Furthermore, the closure of the Multi Year Assistant Program (MYAP) further brought about reduction in staff from 1500 in 2011 to 644 in 2012. The number of staff in 2013 and in 2014 was 481 and 503 respectively.

Total budget and funders

The participants were not able to tell the amount of budgets allocated for the whole period under discussion. They were able to state the budget for 2012. According to the finance department the budget of the organization was USD 27.7 million in 2007-08 budget year which grew to USD 32.7 million, in 2008-09. The recent three years budget were USD 36.2 million, USD 53.1 million, and USD 52 million for the budget years 2009-10, 2010-11, and 2011-12 respectively. The budget years 2012-13 and 2013-14 was USD 34,795,656.83 and USD 36,908,828.56 respectively

From inception to the current period, USAID remained to be the main source of funding. Other major funders were UNHCR, ECHO, EU, Norway Embassy, ADA (Austria Development), CIDA, governments of Germany, Luxemburg, and the Netherlands, Howard and Buffet foundation, Hilton foundation, Boeng foundation, Goldman, Starbucks, CDC France, JOCK, and MSF-II.

Capacity strengthening activities

CARE Ethiopia has been engaged in various capacity strengthening activities since inception. What the participants were able to remember were:

- At inception: thematic training to prepare staff for the work - household assessment, disaster response.
- In 2000: continuous training on safety and security.
- In 2003: long-term training, training on budget (online and face-to-face), and on-the-job training in USA.
- As of 2005: online training with CARE Academy in 10 thematic areas.
- In 2009: training on livestock emergency response guideline (LEG), and training on holistic management.
- As of 2010: induction training (quarterly and regularly).
- In 2011: GED training, CMDRR training, ToT on the use of participatory video
- In 2012: training on self-discovery, Outcome mapping Tot workshop and DRR/CCA & EMR training
- 2013: PfR Global Conference in the Netherlands
- 2014: Training on Monitoring & Evaluation; ToT training on Ecosystem & climate and communication training

Vision

To seek a world of hope, tolerance and social justice, where poverty has been overcome and people live in dignity and security (CARE International Vision).

Mission

To serve individuals and families in the poorest communities in the world. Drawing strength from our global diversity, resources and experience, we promote innovative solutions and are advocates for global responsibility (*CARE International Mission*).

CARE Ethiopia's mission is to work with poor women and men, boys and girls, communities and institutions, to have a significant impact on the underlying causes of poverty.

Strategies

At present the organization targets three groups of people. These are pastoralist girls, chronically food-insecure rural women, and poor young girls living in cities and on the outskirts of urban areas. CARE Ethiopia's programs focus on the areas of livelihoods and food security, sexual and reproductive health, HIV/AIDS, education, water and sanitation, and emergency preparedness and response, through:

- Building capacity to respond to disaster.
- Global diversity.
- Organization evolution.
- Information and knowledge management.
- Build shared expertise in key areas of competence.
- Strengthen governance and decision making processes.

CARE Ethiopia is committed to achieving the overall goal by:

- Generating and using knowledge, committing to continuous reflection and application of learning.
- Influencing the development and humanitarian agendas.
- Working in partnership and alliances.
- Changing the organization to become a more legitimate, effective, efficient, transparent and accountable contributor to social change in Ethiopia.

MFS II funded project in Afar Region

The MFS II funded project is taking place in Afar Region. CARE will work in partnership with one well established local NGO partner in Afar region-Support for Sustainable Development (SSD). Actually, this is the organisation that is targeted for capacity building with MFS II funding, with CARE Ethiopia as an intermediate organisation. On top of this, the focus of the project on development is to enhance communities' resilience, the policy context and cooperation between governmental and non-governmental actors. Other stakeholders are government counterparts (local/regional), NGOs, PfR consortium members, networks, knowledge institutions/resource organization.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **“What factors explain the findings drawn from the questions above?”**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012¹.

¹ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

- Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)
- India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)
- Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)
- Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop

have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have

come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled

countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of CARE ET that have taken place since the baseline in 2012 are described. The information is based on the information provided by CARE NL.

4.2 Changes in capacity development and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities (4.2.1). This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. See also appendix 4. In addition to this staff present at the endline workshop were asked to indicate what were the key changes in the organisation since the baseline. The most important is key organisational capacity changes have been identified, as well as the reasons for these changes to come about. This is described in a general causal map, both as a visual as well as a narrative. The summary results are described in 4.2.2 whilst the detailed general map is described in appendix 4.

4.2.1 Changes in the five core capabilities

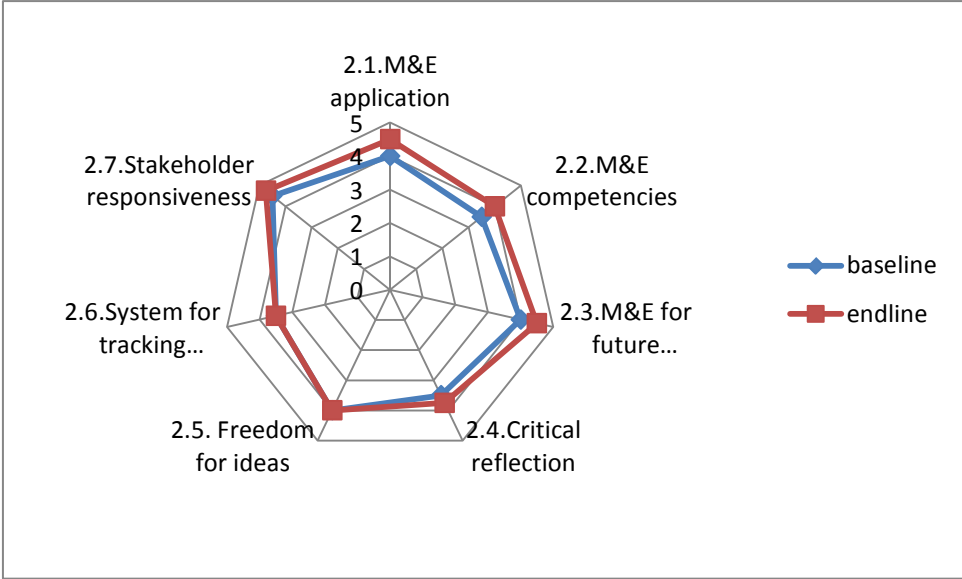

Capability to Act and Commit

The organization leadership is accountable to staff and stakeholders through meetings and sharing the minutes of meetings. The leadership is now getting regular information on the projects and programs in order to take action if necessary. However, some staffs indicated that the leadership style has not changed but involvement with the project has increased. The CARE Ethiopia HR unit is the lead coordinator to provide strategic guidance and organizes induction of policies and strategies for the newly recruited staffs. The leaders of CARE Ethiopia provided appropriate strategic guidance to support implementation of its programs similar with the baseline period. Changes have not been observed in terms of staff turnover, though some staff left and others joined the organization. Care Ethiopia has a clear organizational structure and clearly articulated strategies. CARE-Ethiopia has undertaken strategic planning, including more strategic analysis and goal setting, and daily operations of all programs and projects have been designed in line with this. The organization has showed some improvement in terms of staff skills. This is due to the fact that CARE Ethiopia are usually hires well-educated professionals, but also due to the fact that CARE Ethiopia has been providing different in-country and abroad trainings to its employees. Hence, CARE Ethiopia has been providing more training opportunities for employees and many employees have taken relevant CARE Academy courses to enhance their skills and capacity. They have disseminated the knowledge to other employees. CARE Ethiopia has put in place different incentive mechanisms for staff members that include improving structural job grades with increased staff salaries, and cost of living adjustments (COLA). There is an enabling working environment and the organization has set different reward policies that enable employees to comply with the organization requirements. On the other hand, the organization's funding sources and funding procedures have not significantly changed.

Score: from 3.8 to 3.9 (Very minor improvement)

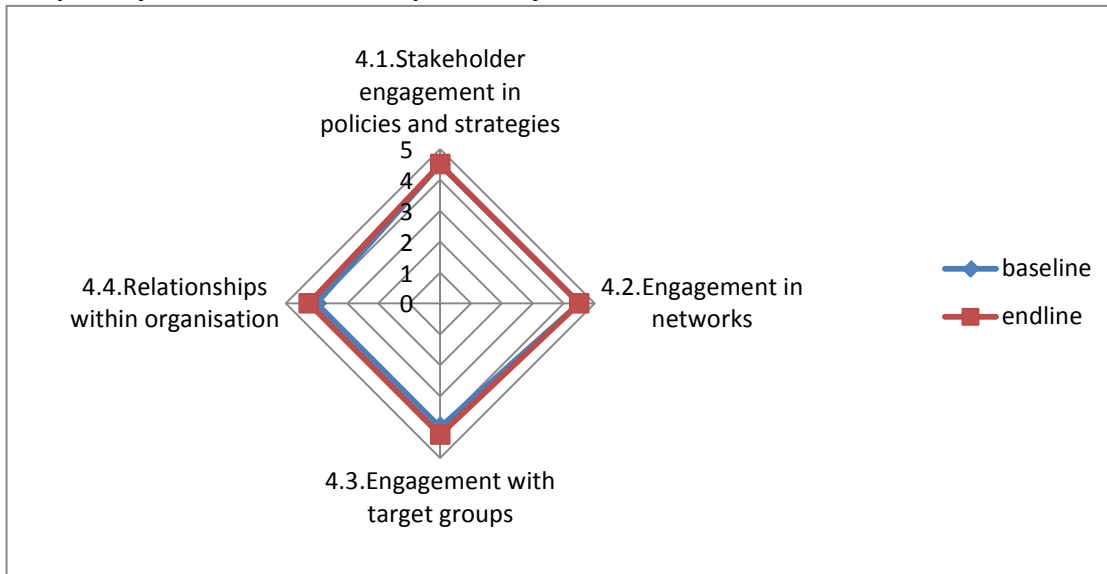

Capability to adapt and self-renew

The organization M&E unit has been strengthened due to the fact that more competent staffs were hired and a strengthened information system. The M&E tools were revised and a data base was developed for the country office in general and for individual projects in particular. Besides, the M&E training organized by the PfR project for CARE M&E staff and project managers/coordinators has helped to improve the M&E competences and enabled the HR department and other team members to generate and prepare reports as required. CARE Ethiopia has established a knowledge center through which learning and lessons are shared, e.g. through learning events and these can feed into future strategies. For example, documentation and sharing of good practices of the PfR results were very important to scale up good practices. Furthermore, critical reflection has taken place in a way that employees were highly encouraged to reflect their opinions regarding performance and benefit related issues through several discussion forums and experience sharing events. The organization has maintained its good practices in freedom of ideas as the organization has experience to welcome ideas of staff. Besides, there are complaint mechanisms put in place at both HQ and field level, and CARE Ethiopia consults on a regular basis with the donor and similar NGOs on strategic and operational issues as indicated in the baseline report. Furthermore, CARE has established a partnership day workshop, and this was conducted in 2014 where all CARE partners came together to acknowledge the partnership so far and to discuss the strengths, and challenges of current partnerships with CARE. An action plan was also developed to improve the partnerships. CARE has carried out an organizational Capacity Assessment aimed at building the capacity of partners. Thus responsiveness to stakeholders has increased in the collaboration with partners also supports the organisation in tracking the environment.

Score: from 3.8 to 4.1 (slight improvement)

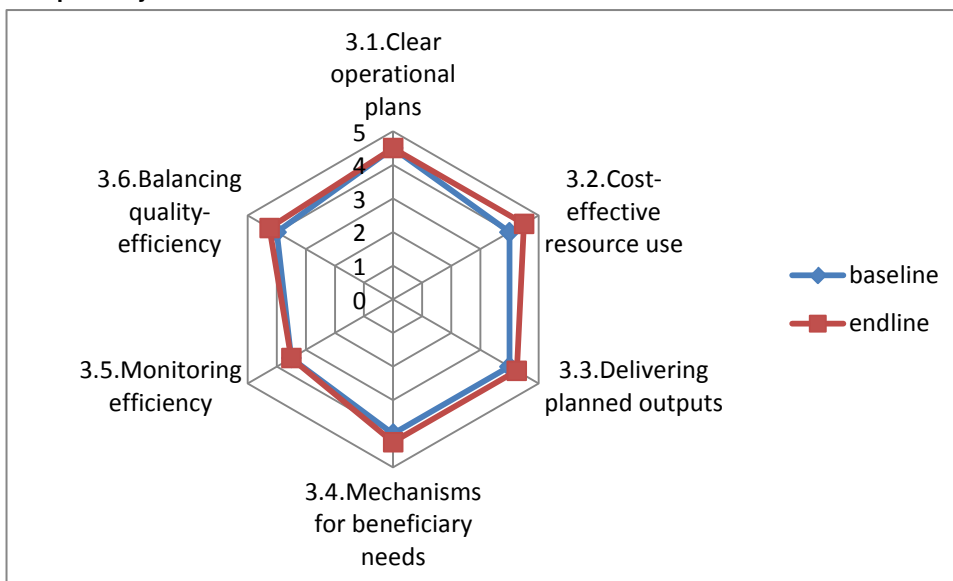

Capability to deliver on development objectives

CARE Ethiopia has good experience in designing projects based on a fully fledged project proposal that contains a clear operational plan. Besides, the organization has shown some progress in designing projects to complement each other to ensure cost effectiveness at times of project design and implementation phase. As a result CARE Ethiopia has made great progress with program implementation, resulting in impressive achievements in delivering planned outputs. This is due to the presence of qualified and committed staff and management, regular monitoring and beneficiary consultations. Also, the organization has been working very closely with the grass root beneficiaries. However, the organization has no mechanisms to monitor efficiency. Nevertheless, staff are more experienced to ensure balancing quality and efficiency in their work. Besides, new staffs was hired for the Program Quality and Learning Unit and a number of learning events like exchange visits, conferences, workshops, exchanges, etc., have also helped to improve capacity in balancing efficiency requirements with the quality of work.

Score: from 4.0 to 4.2 (very slight improvement)

Capability to relate

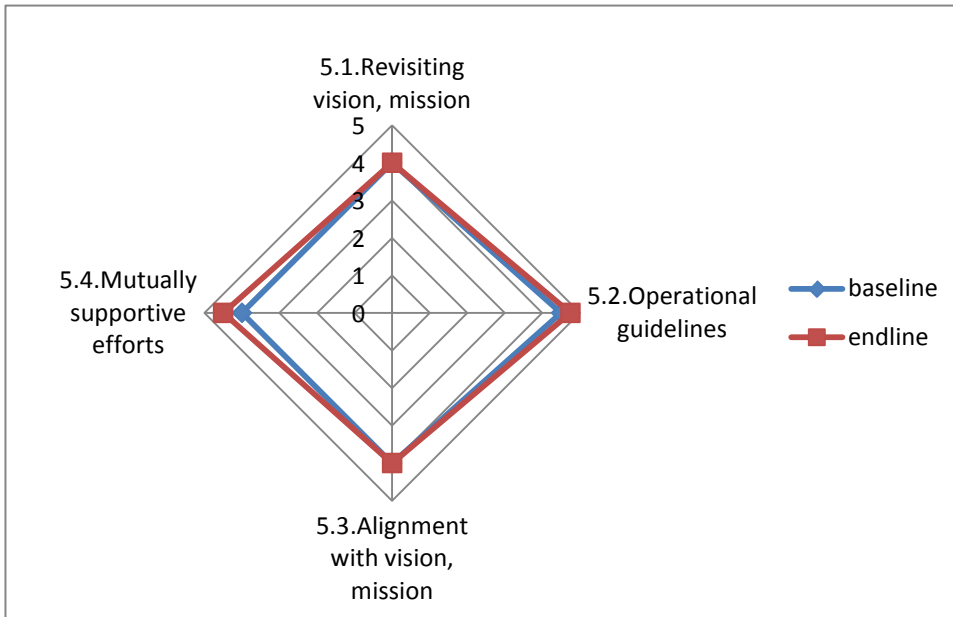

Most of the policies and strategies are designed at international level and CARE-Ethiopia designed policies and strategies based on that, and adapting these to the local context. Stakeholder involvement is an integral part of CARE's work at all stages, during strategy formulation and program design, implementation and evaluation. Besides, CARE has engaged with networks and established partnerships

with local NGOs, INGOs, universities, private companies and research institutes. However, no information was provided on the new networks and partners with which CARE Ethiopia has engaged. The CARE P4R program manager visits projects and discusses with beneficiaries more frequently now compared to the baseline in 2012. Meanwhile, though CARE-Ethiopia has moved its head office to a new building, all facilities demonstrated during the baseline are still present. Hence, the offices are well furnished and the layout is conducive for work. Besides, communication at field offices has improved through email communication using CDMA (a device for internet connection).

Score: from 4.2 to 4.4 (very slight improvement)

Capability to achieve coherence

CARE Ethiopia's strategic directions are designed to support the UN Millennium Development Goals for Ethiopia (MDG) and the Government of Ethiopia's Growth and Transformation Plan (GTP). CARE is a well-established organization and has all the technical guidelines in the different areas of operation. In this regard, small revisions have been made to the HR manual and policy. Besides, CARE Ethiopia has improved project documentation and is developing new guidelines and more systematic implementation strategies. The organization has developed implementation manuals and has transparent financial procedures and practice. All programs and projects have been designed in line with the organization's vision, mission and strategies. This was evident in the strategic document where CARE Ethiopia has identified three impact groups following CARE's decision to shift from project to program approach. Accordingly, program/project initiatives are intentionally designed to meet these requirements. Furthermore, there has been an improvement in terms of staff capacity to ensure the complementarity of the various projects to CARE's program approach for a better impact. Provision of trainings, learning and linking with partners, and learning from experience has helped with this. Projects are reviewed to ensure synergy during project design as well as in the implementation phase.

Score: from 4.1 to 4.3 (very slight improvement)

4.2.2 Key organisational capacity changes - general causal map

Below you can find a description of the key changes in organizational capacity of CARE since the baseline as expressed by CARE staff during the endline workshop. First, a description is given of how this topic was introduced during the endline workshop by summarising key information on CARE from the baseline report. This information included a brief description of the vision, mission and strategies of the organisation, staff situation, clients and partner organisations. This then led into a discussion on how CARE has changed since the baseline.

The endline workshop was conducted on 19th November 2014, at CARE headquarters in Addis Ababa. Six CARE staff of the following job categories participated: management, program and M&E. Following the self-assessment on December 4, 2014, staff brainstormed about and developed a causal map for the key changes that happened in CARE since the MFS II baseline survey in 2012 in the area of organizational capacity.

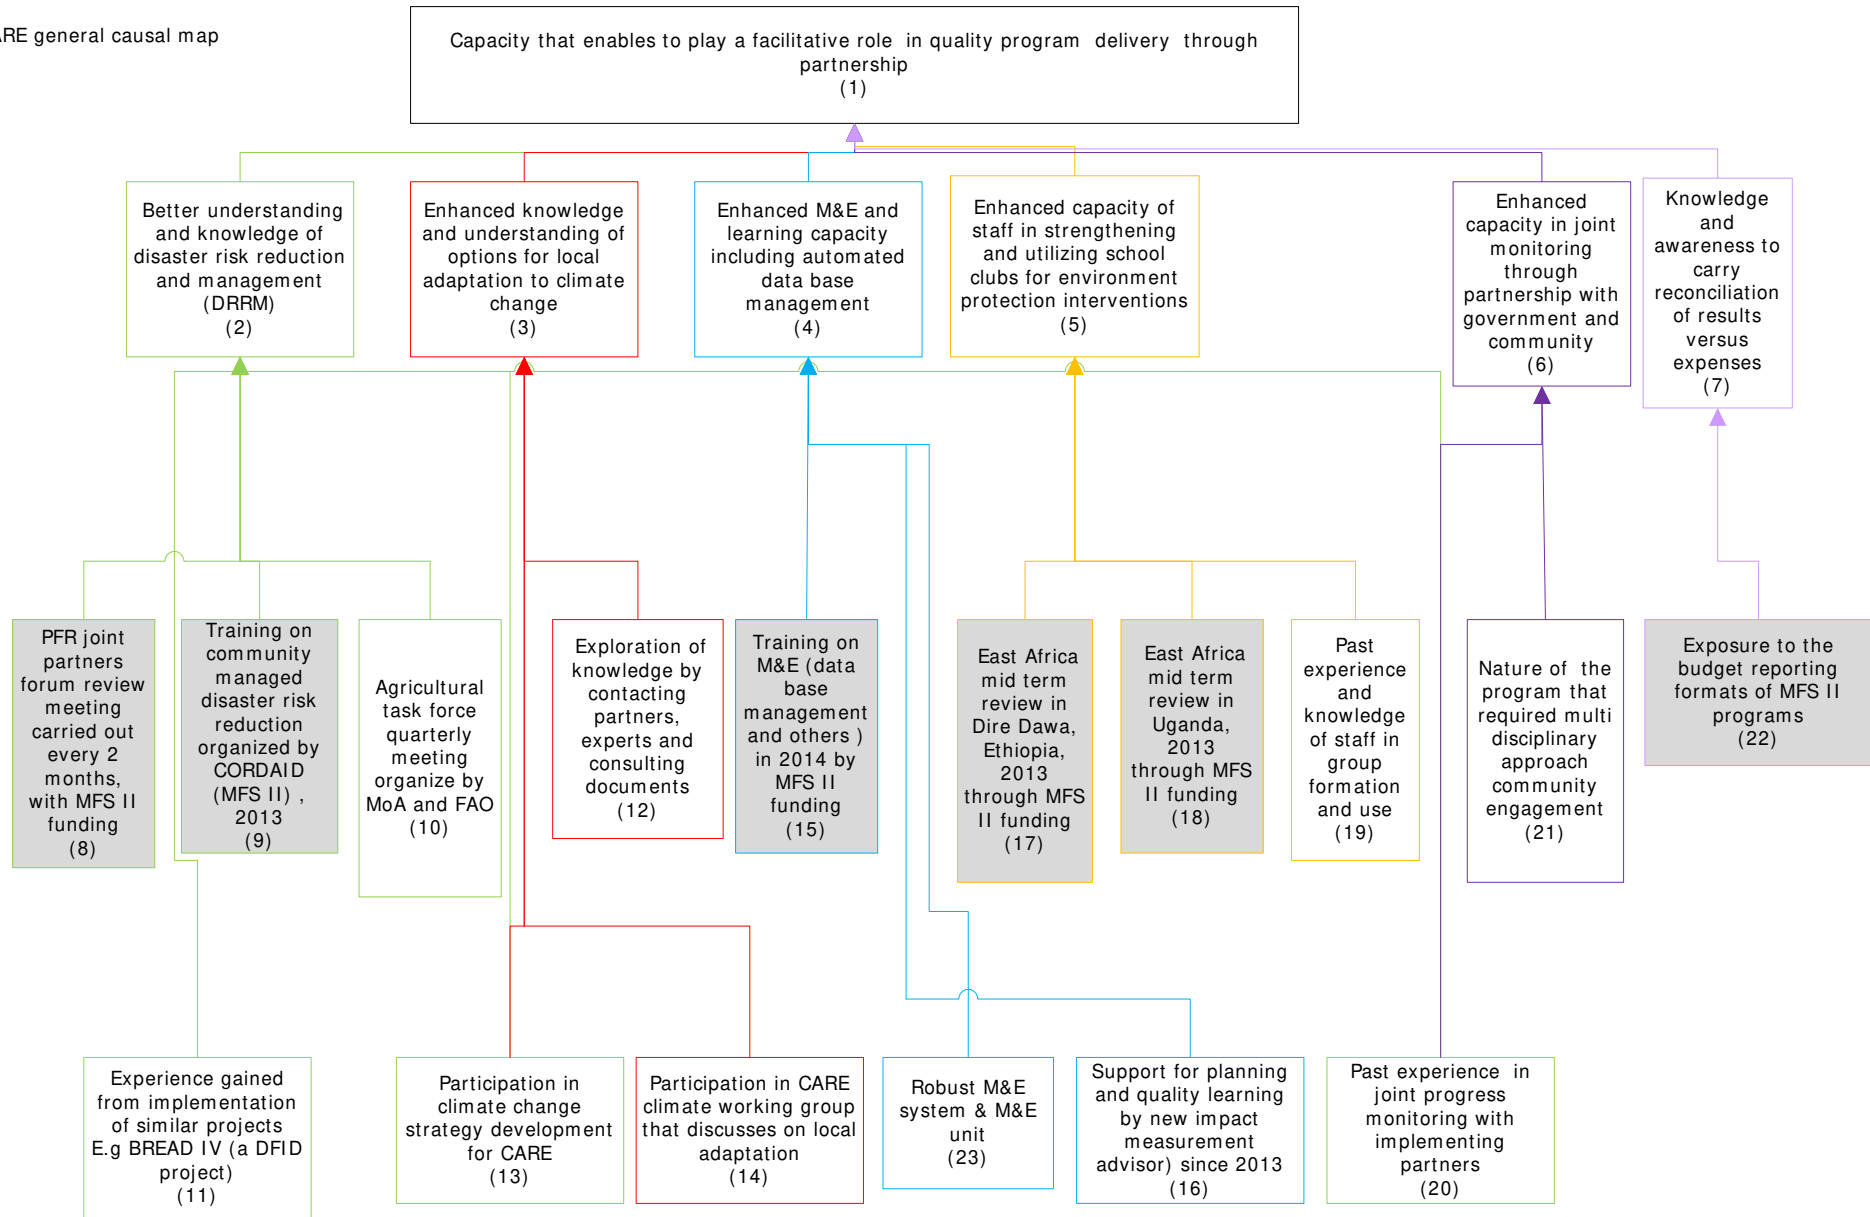

The workshop participants raised different points and finally agreed that “**capacity that enables to play a facilitation role in quality program delivery through partnership**” (1) be the final goal for CARE capacity building. To achieve this, CARE has made the following capacity changes since 2012:

- Better understanding and knowledge of disaster risk reduction and management (2);
- Enhanced knowledge and understanding of options for local adaptation to climate change (3);
- Enhanced M&E and learning capacity including automated data base management (4);
- Enhanced capacity of staff in strengthening and utilizing school clubs for environment protection interventions (5);
- Enhanced capacity in joint monitoring through partnership with government and community (6); and
- Knowledge and awareness to carry out reconciliation of results versus expenses (7).

CARE believes that the project which is supported by MFS II is small compared to what CARE is doing in the country. Therefore, the influence of MFS II in the capacity building of CARE as a whole is minimal but the focus with this endline process has been on the project and the relationship to headquarters.

Each of these key organizational capacity changes is further explained below. The numbers correspond to the numbers in the visual.

CARE general causal map

Better understanding and knowledge of disaster risk reduction and management (DRRM) (2)

The issue of disaster risk reduction and management is not new to CARE. Earlier to this, CARE was implementing interventions dealing with DRMM by itself and with partners. For example, in addition to the experiences it had while conducting the joint bi-monthly monitoring of PFR (Partners for Resilience – MFS II) intervention implemented by partners (8) it was implementing the BREAD IV project financed by DFID funding (11) in parallel with the MFS II project. In addition, the participation of the PFR implementing staff in the climate change strategy development for CARE (13) has helped the staff get the capacity. However, since the issue is complicated and involves different stakeholders, getting current information and experiences will help in the better implementation of it. In this regard, the PFR joint partners' forum review meeting carried out every two months with the MFS funding (8) has helped CARE to learn from the experiences of others and also share its experiences in relation to the implementation of PFR. Similarly the agricultural task force quarterly meeting organized by MoA and FAO (10) also gave the opportunity for CARE to learn about the experiences of other stakeholders. Furthermore, the training the staff received on community managed disaster risk management organized by CORDAID (9) (MFS II funded) also helped in improving the understanding and knowledge of disaster risk management (2). And past experiences in joint progress monitoring with implementing partners (20) also contributed to the improved understanding of DRRM.

Enhanced knowledge and understanding of options for local adaptation to climate change (3)

The issue of climate change has become the current issue in the organization because most of the operations of the organizations are in areas which are climate change prone and inhabited by pastoralists and agro-pastoralists. As a result CARE is doing its best to update itself regarding the issue of climate change through exploration of relevant knowledge by contacting partners, experts and consulting documents (12). In addition, the participation in the climate change strategy development for CARE (13) and the participation of the PFR staff in the CARE climate working group that discusses on local adaptation strategies to climate change (14) has helped the MFS II project implementing staff to have a better understanding and knowledge regarding the options for local adaptation to climate change (3).

Enhanced M&E and learning capacity including automated data base management (4)

CARE has a robust M&E system and an M&E unit (23) catering to the needs of the different projects within the organization. In line with this, the PFR project also receives M&E support from this unit. Since 2012 the unit has made improvement in terms of the way it is carrying out its M&E and learning. The main reason for the change is the support it is getting from the new impact measurement advisor hired in 2013 (16) and the training on M&E (with topics on data base management and other issues) with the support of MFS II funding. This training is for all M&E staff and has an influence on the overall CARE M&E operations, but this isn't reflected in the visual since this is mainly focuses on the project funded by MFS II.

Enhanced capacity of staff in strengthening and utilizing school clubs through partnership with the government and community (5)

In most schools the government has formed different kinds of clubs to support and improve the quality of education. In line with this, CARE has established new clubs or has strengthened the existing clubs so that they work on environmental protection issues; such as, planting trees inside their school compound, planting trees around their homesteads. Though CARE had past experience and knowledge in group formation and working with groups for different development interventions (19), the capacity of the staff implementing PFR was enhanced as a result of the two project midterm review meetings organized in Dire Dawa, Ethiopia (17) and Uganda (18) ; both in 2013 with the funding of MFS II. In the midterm review meetings the experiences of different stakeholders from different countries was presented. This helped the staff implementing the MFS II supported project to get better knowledge in establishing new clubs as well as strengthening the existing ones to use school clubs for the protection of the environment.

Enhanced capacity in joint monitoring through partnership with government and community (6)

Most of the interventions that CARE is implementing are carried out through local partners. For example, the current project which is financed by MFS II is also implemented in partnership with a local NGO. In addition, since the nature of program requires a multi-disciplinary approach and the involvement of the community (21) as it is an intervention implemented for pastoralists and with pastoralists, working with them is essential for the success of the project. Government partners who work with pastoralists were also involved to ensure the sustainability of the project after the end of the project time. The joint activity, among other things, requires not only implementing the project with the community and the Government but also monitoring the progress with them. Therefore, as a result of the repeated involvement in this kind of activity and the past experience in joint progress monitoring with implementing partners (20), CARE's capacity in the area of joint monitoring through partnership with government and community is enhanced and has become more after the baseline study in 2012.

Knowledge and awareness to carry out reconciliation of results versus expenses (7)

The financial reporting system that is being asked and used in the MFS II funding requires all costs to be reported by activity and result area. This helps to track the cost that is incurred to get a certain result. On the other hand this also helps to calculate the infancy and benefit cost ratio of the project. CARE staff implementing the MFS II project mentioned that their exposure to this reporting system has increased their knowledge (22). However, the staff is not sure how and when they will use this knowledge since CARE is having its own financial reporting system and also other funders have their own systems.

5 Discussion and conclusion

5.1 Methodological issues

In preparation for the assessment, the Ethiopian 5C assessment team visited CARE staff in the organization's HQs in Addis Ababa and explained the purpose and the process of the 5C end line assessment. During the visit, both teams agreed on the workshop dates including the type and number of staff who would attend the workshop. In addition to that, the assessment team also gave the "support to capacity development sheet" to be filled by CARE staff. The Ethiopian 5C assessment team conducted the assessment in three visits. The first visit was to conduct the self-assessment workshop and ask the staff to fill the self-assessment form in their respective four subgroups (management (1); program (1); M&E (3); and HRM and administration (1)). Six staff members participated in the workshop in which three were also present during the baseline. Since the implementation of the PfR project was outsourced and implemented by another SPO, the CARE field staff didn't participate in the endline workshop as was done in the workshops carried out with other SPOs. However, the opinion of the SPO was collected through partner interview. Therefore, a partner interview form was sent to them through email and the SPO was asked to complete the forms and send these to the assessment team.

This was followed by a second visit to carry out a brainstorming session and develop a general casual map that explains the key organisational capacity changes that have happened in CARE since the baseline in 2012. The third visit was made to conduct an interview with one representative from each subgroup to triangulate the information collected through the self-assessments and to better understand the organisational capacity change in CARE since the baseline in 2012. This was done after the 5C assessment team reviewed the completed self-assessment forms. Some of the interviews were done through emails because respondents were busy and this method was thought to be flexible so that they could fill the form whenever convenient for them.

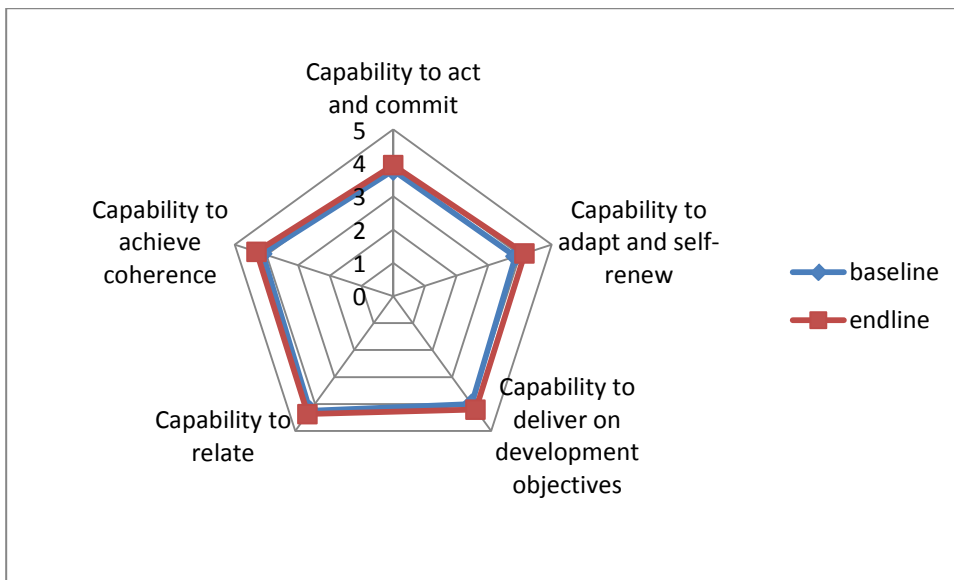

The plan of the evaluation team to also conduct two interviews with CARE partners (not PfR – implementing partner) didn't materialize because the interview overlapped with other activities that were to be carried out in the SPO.

It must be noted that the PfR project is very small compared to the rest of CARE's initiatives in Ethiopia. So whilst the 5C assessment team aimed to get an overall picture of CARE as an organisation, it must be noted that information received from the organisation is mainly based on information from HQ and the PfR project related documents and persons. Since the organisation is very large it was impossible to reach all the different project sites and this was also not the purpose of this 5c evaluation. The capacity development interventions by the CFA focused mainly on the people involved in the PfR project.

5.2 Changes in organisational capacity development

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Below the changes in each of the five core capabilities are further explained, by referring to the specific indicators that changed. In all of these capabilities improvements took place.

Over the last two years some small improvements took place in the indicators under the capability to act and commit. The management of CARE Ethiopia is responsive and now receiving regular information from projects to use for taking action. In the last two years a substantial amount was budgeted for training of staff and staff are encouraged to seek education opportunities in-country and abroad. Many opportunities have been offered to staff, staff has taken CARE Academy courses and are offered in-country scholarships. Staff skills have therefore improved and the training opportunities are also seen as an important incentive. Staff salaries have increased and the merit-based salary increment policy has been further implemented.

In the capability to adapt and self-renew CARE Ethiopia saw many small improvements. The application of M&E improved slightly because more competent staffs were hired and the information system has been strengthened. Staff's M&E competencies were strengthened through MFS II funded training. CARE Ethiopia has established a knowledge centre through which learning takes place and lessons are shared. In this way M&E findings are used to inform future strategies. There has been a very slight improvement in terms of room for critical reflection which was triggered by feedback from CARE Netherlands. CARE Ethiopia has become more responsive to its stakeholders as they are now organising a yearly partnership day and is following a community development approach.

In terms of the capability to deliver on development objectives, CARE Ethiopia has improved in various indicators. Staff's awareness of the importance to work cost-effectively has increased. In various projects CARE Ethiopia has reduced costs by maximising the contribution of the community. The organisation is reaching or surpassing its planned outputs and the partners are satisfied with the results. There was a very slight improvement in ensuring that beneficiary needs are met because of the presence of qualified staff, regular monitoring and beneficiary consultations. Staffs have become more experienced e.g. through learning events, and are therefore better able to balance quality and efficiency. Hiring new staff for the program quality and learning unit has also helped in this regard.

In the capability to relate, CARE Ethiopia very slightly improved in engaging with their target groups. The CARE PFR program manager visits projects and discusses with beneficiaries more frequently now. With regards to relations within the organisation, communication has improved due to Wi-Fi connection in the field offices with USAID funding.

Finally, CARE Ethiopia has shown slight improvements in some of the indicators under the capability to achieve coherence. There has been a very slight improvement in operational guidelines due to a revision of the HR manual and policy and development of implementation guidelines and transparent financial procedures. There is a slight improvement in staff's capacity to ensure the complementarity of the various projects to CARE's new program approach for a better impact.

During the endline workshop some key organisational capacity changes were brought up by CARE Ethiopia's staff in the 'general key changes in organisational capacity causal map': better

understanding and knowledge of disaster risk reduction and management; enhanced knowledge and understanding of options for local adaptation to climate change; enhanced M&E and learning capacity including automated data base management; enhanced capacity of staff in strengthening and utilizing school clubs for environment protection interventions; enhanced capacity in joint monitoring through partnership with government and community; and knowledge and awareness to carry out reconciliation of results versus expenses. The evaluators considered it important to also note down the SPO's story about what they considered to be key organisational capacity changes since the baseline, and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team.

According to CARE Ethiopia's staff, they improved their knowledge on disaster risk reduction and management (DRRM) because of joint bi-monthly review meetings with PFR (Partners for Resilience) partners (funded by MFS II); experience gained from implementation of the BREAD IV project (funded by DFID); a training on community management disaster risk reduction in 2013 (funded by MFS II), quarterly meetings of the agricultural task force organised by MoA and FAO; participation in the climate change strategy for CARE; and past experiences in joint monitoring with implementing partners. The organisation enhanced its knowledge and understanding of options for local adaptation to climate change because of participating in the climate change strategy for CARE; participation in the CARE climate working group that discusses on local adaptation; and because of exploration of knowledge by contacting partners, experts and consulting documents. CARE Ethiopia enhanced its M&E and learning capacity (including having automated data base management) because of a training on M&E in 2014 (funded by MFS II); CARE Ethiopia's robust M&E system and M&E unit; and support for planning and quality learning by a new impact measurement advisor since 2013. CARE Ethiopia has enhanced its staff capacity in strengthening and utilising school clubs through partnership with the government and the community due to two midterm review meetings organised in Dire Dawa, Ethiopia and Uganda (MFS II funded); and past experience and knowledge on group formation and working with groups in different development interventions. The organisation said to have enhanced its capacity in joint monitoring through their partnerships with government and community because of past experiences in joint progress monitoring with implementing partners; and the nature of the MFS II funded program that required a multidisciplinary approach, community involvement and is implemented in partnership with a local NGO. Finally, CARE Ethiopia improved its knowledge and awareness on carrying out reconciliation of results versus expenses because of exposure to the MFS II reporting system (reporting costs by activity and result area). According to CARE Ethiopia's, MFS II funded capacity development interventions have thus played a role in better understanding and knowledge of disaster risk reduction and management; and enhanced M&E and learning capacity. This was through bi-monthly review meetings with PFR partners, training on M&E; and midterm review meetings. However, internal factors like participation in CARE's climate change strategy and climate working group; experiences in joint monitoring; hiring an impact measurement advisor, having a robust M&E system and unit; and exploring knowledge have also played an important role in the key organisational capacity changes that the CARE Ethiopia staff considered important since the baseline in 2012. Support from other funders, like, DFID, FAO and MoA, in terms of meetings and experience gained through projects, has also been mentioned among the underlying factors for these changes.

List of Respondents

Alliance/ CFA officers:

No.	Name	Function
1	Cecile de Milliano	Programme Coordinator (Ad Interim) Partners for Resilience (PfR) CARE Nederland
2	Ijitsj Werman	Programme Coordinator CARE Nederland
3	Anne te Molder	CARE Nederland; Programme Coordinator Partners for Resilience (PfR)

CARE Ethiopia staff:

No	Name	Function in the organization
1	Amanuel Kassie	Pastoralists Livelihoods Resilience Program Manager
2	Sileshi Zewdie	Project Manager
3	Moges Tefera	Program quality and Learning Coordinator
4	Martha Rezene	Capacity Strengthening & Partnership Advisor
5	Eshetu Demisie	Program Monitoring and Impact Measurement Advisor
6	Endalemaw Ayalew	Human Resource Officer

Others:

Elizabeth Milten, Deputy General Manager, Support for Sustainable Development (SSD). A Partner of CARE Ethiopia.

Appendix 1 Methodological approach & reflection

1. Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.² Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;

² The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

- 5) **Observation:** similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

16. Provide the description of indicators in the relevant formats – CDI team
17. Review the descriptions per indicator – in-country team & CDI team
18. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
19. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
20. Organise the field visit to the SPO – in-country team
21. Interview the CFA – CDI team
22. Run the endline workshop with the SPO – in-country team
23. Interview SPO staff – in-country team
24. Fill-in observation sheets – in-country team
25. Interview externals – in-country team
26. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
27. Provide to the overview of information per 5c indicator to in-country team – CDI team
28. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
29. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
30. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

Step 1. Provide the **description of indicators** in the relevant formats – CDI team

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement

- +2 = Considerable improvement
- 2. *Please describe what exactly has changed since the baseline in 2012*
- 3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;

- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will code these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness) ?***

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as “a complex system which produces an outcome by the interaction of a number of parts” (Glennan, 1996, p. 52). Process tracing involves “attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable” (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which ‘theories’ are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of ‘explaining outcome process tracing’, since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on

17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India³

Capability to:	BVHA	COUNT	DRIST I	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

³ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew –by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA A

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya kologi	ECPAT	GSS	Lem baga Kita	Pt. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process:

management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ' general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or **cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- 5C Indicators: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused

the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

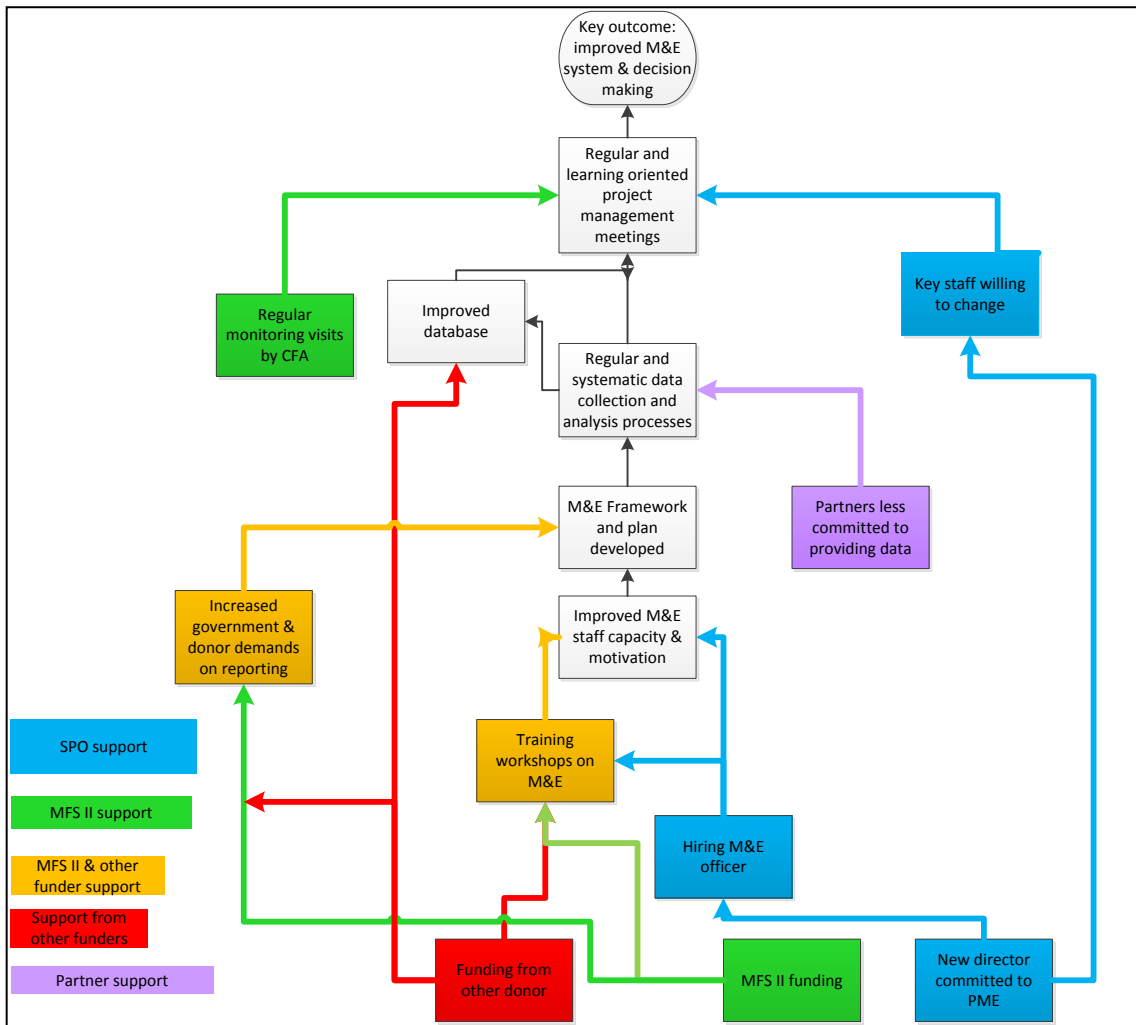

Figure 1 An imaginary example of a model of change

*Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team*

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, “*What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?*”. The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern, sequence, trace, and account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be

addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality of data and analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i> Description of causal relation	Confirming/ rejecting a causal relation (yes/ no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: “*To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*” and “*What factors explain the findings drawn from the questions above?*” It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

4. Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: “**What factors explain the findings drawn from the questions above?**”

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the ‘general causal map’ has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

5. Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has

provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is

crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

The capability to act and commit;

The capability to deliver on development objectives;

The capability to adapt and self-renew;

The capability to relate (to external stakeholders);

The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Results - changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Note: CARE-Ethiopia is a huge organization compared to other SPOs in the 5c evaluation. As much as possible the focus has been on CARE at large, and most of the information has been received from CARE HQ in Addis Ababa, but specific information can be related to the MFS II funded PFR project in Afar region.

Capability to act and commit

1.1. Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

According to the PFR annual report for 2013, the organization's leadership was accountable to staff and stakeholders through meetings and sharing the minutes of meetings. The leadership is now getting regular information on the projects & programs in order to take actions if necessary. However, some staff members indicated that the leadership style has not changed but rather the involvement with the PFR project has increased.

Score: From 4 to 4.25 (Very slight improvement)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

According to staff self-assessment, the leaders of CARE Ethiopia provide appropriate strategic guidance with the already existing clear strategic guidance to support implementation of its program. The CARE Ethiopia HR unit is the lead coordinator to provide strategic guidance and organized induction of policies and strategies for the newly recruited staffs. According to the PFR annual report in 2013, CARE Ethiopia's program management takes place through four levels of responsibility to ensure quality implementation and rapid problem solving. This includes a steering committee, technical advisory group, program management unit (PMU) and the field implementation teams. This management structure has helped to divide tasks and responsibilities, ensure integrated programming and a unified approach, prevent duplication of efforts, ensure effective communication, and established an enabling environment for information sharing and learning between the consortium members. CARE is a member of different networks and consortium both at national and international level like CARE Netherland, CARE UK, CARE Denmark, CCRDA, IWIMI, etc. On the other hand, an interview with a Care partner showed that in some cases staff members of this partner do not have a full understanding of the policies and guidelines of CARE ETHIOPIA.

Score: From 3.5 to 3.5 (No change)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

In this regard, most of the staff self-assessment results indicated that nothing has changed in CARE-Ethiopia since the baseline. However, the 5c evaluation team indicated that some staff members have left and other have joined the organization. However, it doesn't show that there was extreme change on both sides. Besides, the M&E unit also illustrated that there has been staff turnover but not sure if it's above or below the baseline time as there was no supporting document. The CARE NL self-assessment indicated that there has a stable CARE-ET team for the PfR project and staff turnover is generally high at the end of a project since staff are mainly contract that on the basis of a project.

Score: From 2 to 2 (No change)

1.4. Organizational structure: 'Existence of clear organizational structure reflecting the objectives of the organization'

Observable indicator: Staff have copy of org structure and understand this

There is no observable change with regard to this indicator. As indicated in the baseline report, staffs have a copy of organizational structure, understand this, and are operating in line with it at CARE-Ethiopia.

Score: From 4 to 4 (No change)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

In this regard, there are no observed changes in CARE-Ethiopia except the strategy was elaborated in work plans of projects. Management has shared the strategic plan with staffs, but there is no evidence whether internalization of the strategic plan has improved.

Score: From 4 to 4 (No change)

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

CARE-Ethiopia has undertaken strategic planning and daily operations of all programs and projects have been designed in line with this. The program descriptions are well documented and shared, including more strategic analysis and goal statements, theory of change and pathways of change. New projects are designed to complement missing components of existing projects. All the activities under the PfR project have daily operational plans in line with the strategic plan. However, the self-assessments showed that no changes were observed in this regard since the baseline.

Score: From 4 to 4 (No change)

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might they need.

CARE Ethiopia generally hires experienced and well-qualified people. The organization has also been providing different in country and abroad trainings to its employees. In order to meet the staff training needs, a substantial amount of funds were budgeted for the last 2 years and almost all employees who have a desire to improve their capacities have benefited this. Besides, the organization has encouraged employees to source education opportunities both in-country and abroad. Due to these opportunities many employees have upgraded their educational status. Staff members have also become more experienced and learned on the job regarding relevant themes, and there was cross learning with partners.

Score: From 4 to 4.5 (Slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

In order to retain and enhance the performance of employees, CARE Ethiopia has been providing more training opportunities for employees and many employees have taken relevant CARE Academy courses to enhance their skills and capacity. In addition, many staff members have attended different capacity building trainings in-country and abroad; and they have disseminated the knowledge to other employees. CARE Ethiopia has strengthened the mechanism of supporting staff through in country scholarship. Hence, a significant number of staffs are supported through the process. More staffs are getting training in the local training institutions both in Addis Ababa and other regional cities. Programs and projects have allocated budgets for staff development. CARE has sponsored the education fee of all staff who applied for various levels of local/in-country study (government and private institutions) in 2014. There is a continuous process of training needs assessments and learning. CARE and partners trained in Economic and Markets Development (EMD) approach and Rapid Market assessment methodology since the baseline.

Score: From 4 to 4.5 (Slight improvement)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

According to the response in the self-assessment some staff members feel that the in-country scholarship given to staff is considered as incentive. CARE Ethiopia structural job grades and thus salaries of staff have improved as well as cost of living adjustments (COLA) . There is an enabling working environment and the organization has set different reward policies that enable employees to comply with the organization's requirements. For example, in recognition of outstanding performance, behavior and adherence to CARE Ethiopia a Transport policy, appreciation and a one month bonus policy is put in place. In addition, a merit-based salary increment policy has been implemented. Though this policy is not new for CARE, orientations have been given to employees and the number of good performers during the last two years has significantly increased. Based on this policy, employees have been getting yearly merit increments and appreciation certificates.

Score: From 3.5 to 4 (Slight improvement)

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

In this regard, contradicted views were observed during the self-assessment. Some staff noted that CARE Ethiopia received a big fund from USAID through Mercy Corps for its five year program in the pastoral area and the organization Program management (program director, PQL & Pastoral program unit working with partners secured the fund from USAID). However, other staff members indicated that Care has lost major funding proposals such as PRIME and had some issues with major donors like USAID where the CARE-initiated joint fund soliciting (with SSD) has been interrupted as a result of disagreement between CARE and the donor agency, USAID. Again, others have said that less funding was available by donors, and thus a decrease in CARE programming.

Score: From 4 to 4 (No change)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

There are procedures used by CARE international in exploring new funding opportunities and the PfR project follows the funding procedures of CARE international. According to the self-assessment reports there is no change with regard to this indicator. Besides, staff of the SPO is not always fully aware of opportunities, and CARE Ethiopia needs to explore opportunities and increase capacity in exploring options.

Score: From 4.5 to 4.5 (No change)

Summary of capability to act and commit

The organization leadership is accountable to staff and stakeholders through meetings and sharing the minutes of meetings. The leadership is now getting regular information on the projects and programs in order to take action if necessary. However, some staffs indicated that the leadership style has not changed but involvement with the project has increased. The CARE Ethiopia HR unit is the lead coordinator to provide strategic guidance and organizes induction of policies and strategies for the newly recruited staffs. The leaders of CARE Ethiopia provided appropriate strategic guidance to support implementation of its programs similar with the baseline period. Changes have not been observed in terms of staff turnover, though some staff left and others joined the organization. Care Ethiopia has a clear organizational structure and clearly articulated strategies. CARE-Ethiopia has undertaken strategic planning, including more strategic analysis and goal setting, and daily operations of all programs and projects have been designed in line with this. The organization has showed some improvement in terms of staff skills. This is due to the fact that CARE Ethiopia are usually hires well-educated professionals, but also due to the fact that CARE Ethiopia has been providing different in-country and abroad trainings to its employees. Hence, CARE Ethiopia has been providing more training opportunities for employees and many employees have taken relevant CARE Academy courses to enhance their skills and capacity. They have disseminated the knowledge to other employees. CARE Ethiopia has put in place different incentive mechanisms for staff members that include improving structural job grades with increased staff salaries, and cost of living adjustments (COLA). There is an enabling working environment and the organization has set different reward policies that enable employees to comply with the organization requirements. On the other hand, the organization's funding sources and funding procedures have not significantly changed.

Score: from 3.8 to 3.9 (Very minor improvement)

Capability to adapt and self-renew

2.1. M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get at and at what level (individual, project, organisational).

The organization's M&E has been strengthened due to the fact that more competent staffs have been hired and the information system has been strengthened. The CARE PfR project has organized an M&E training for CARE M&E staff members and PfR project country member staff. There has been revision of the M&E tools and a data base is developed for the country office in general and for individual projects in particular. The SPO has automated the M&E system with new software.

Score: From 4 to 4.5 (Slight improvement)

2.2. M&E competencies: 'Individual competencies for performing M&E functions are in place'

This is about whether the SPO has a trained M&E person; whether other staff have basic understanding of M&E; and whether they know what information to collect, how to process the information, how to make use of the information so as to improve activities etc.

The M&E competence of CARE Ethiopia has improved due to the fact that the M&E system has been strengthened both in manpower and information system. Besides, competent staffs have been recruited and placed both in CARE Addis and field offices. Furthermore, an M&E training for CARE M&E staff and project managers/coordinators has helped to improve the M&E competence, and enabled the HR department and other team members to generate and prepare required reports easily. Staffs were trained on M&E with MFS II funds from the PfR project. According to the self-assessment by program staffs, CARE PfR project has organized an M & E training for CARE M&E staffs and PfR project country members staffs. . In addition, the training in M&E enabled them to track results, output and impacts of the projects and establish their database. As a result of this, PfR staff was able to collect and document case stories of the program. The CFA noted that there is more awareness on M&E and M&E procedures, and there are more clear plans for this now. However, local implementing partner staff still need more training on the subject (not specifically CARE as CARE Ethiopia is not the implementer).

Score: From 3.5 to 4 (Slight improvement)

2.3. M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

This is about what type of information is used by the SPO to make decisions; whether the information comes from the monitoring and evaluation; and whether M&E info influences strategic planning.

CARE Ethiopia has established a knowledge center through which learning and lessons are shared. Learning events (like by the WASH sector and other projects) have been conducted, including documentation, sharing of good practices and lessons learned has taken place. Hence, outcomes and lessons learned have been shared with projects since the baseline and these have informed future strategies. The training manual and the discussion minutes were kept for documentation and also for future reference. Moreover, documentation and sharing of good practices of the PfR results were very important to scale up good practices.

Score: From 4 to 4.5 (Slight improvement)

2.4. Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff talk formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

In this regard, employees are highly encouraged to reflect their opinions regarding performance and benefit related issues. In relation to these issues, several discussion forums have been conducted and experiences have been learnt. Senior management team members have also given response to essential matters. Critical reflection has taken place due to stimulation of by CARE Netherlands during their field visits and progress report feedback on the MFS II funded PfR project.

Score: From 3.5 to 3.75 (Very slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives

This is about whether staff feel that ideas they bring for implementation of the program are welcomed and used.

In this regard, management has welcomed and encouraged ideas of staff to be shared in in different forums including senior staff meetings. No change has been observed after the baseline because the organization has maintained its good practices in this regard.

Score: From 4 to 4 (No change)

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether it will affect the organization.

CARE Ethiopia conducts assessments in its impact groups (target groups). In addition, a forward accountability training was provided to new project staffs and its partners. CARE country offices abide by the international CARE standards of accountability and transparency towards all involved stakeholders. There are complaint mechanisms put in place at both HQ and field level, and CARE Ethiopia consults on a regular basis with donors and similar NGOs on strategic and operational issues as indicated in the baseline report.

Score: From 3.5 to 3.5 (No change)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

CARE has established an annual partnership day that involves all partners and stakeholders. Accordingly, a partnership day workshop was conducted in 2014 where all CARE partners came together to acknowledge the partnership so far and to discuss the strengths and challenges of current partnerships with CARE. An action plan was also developed to improve the partnerships. CARE has carried out organizational Capacity Assessments aimed at building the capacity of partners. Besides, CARE has followed a community development approach, where community committees define and realize their own priorities and needs. This bottom-up approach ensures ownership and commitment from the communities. According to the PfR annual report in 2013, the organization was accountable and responsive to stakeholders.

Score: From 4.5 to 4.75 (Very slight improvement)

Summary capability to adapt and self-renew

The organization M&E unit has been strengthened due to the fact that more competent staffs were hired and a strengthened information system. The M&E tools were revised and a data base was developed for the country office in general and for individual projects in particular. Besides, the M&E training organized by the PfR project for CARE M&E staff and project managers/coordinators has helped to improve the M&E competences and enabled the HR department and other team members to generate and prepare reports as required. CARE Ethiopia has established a knowledge center through which learning and lessons are shared, e.g. through learning events and these can feed into future strategies. For example, documentation and sharing of good practices of the PfR results were very important to scale up good practices. Furthermore, critical reflection has taken place in a way that employees were highly encouraged to reflect their opinions regarding performance and benefit related issues through several discussion forums and experience sharing events. The organization has maintained its good practices in freedom of ideas as the organization has experience to welcome ideas of staff. Besides, there are complaint mechanisms put in place at both HQ and field level, and CARE Ethiopia consults on a regular basis with the donor and similar NGOs on strategic and operational issues as indicated in the baseline report. Furthermore, CARE has established a partnership day workshop, and this was conducted in 2014 where all CARE partners came together to acknowledge the partnership so far and to discuss the strengths, and challenges of current partnerships with CARE. An action plan was also developed to improve the partnerships. CARE has carried out an organizational Capacity Assessment aimed at building the capacity of partners. Thus responsiveness to stakeholders has increased in the collaboration with partners also supports the organisation in tracking the environment.

Score: from 3.8 to 4.1 (slight improvement)

Capability to deliver on development objectives

3.1. Clear operational plans: 'Organization has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use it in their day-to-day operations.

According to staff self-assessments, each project was based on a fully fledged project proposal containing a clear operational plan. Staff were involved in planning at all levels in CARE Ethiopia and this has been practiced during and after the baseline. Hence, it was good and is still organized in an excellent way.

Score: From 4.5 to 4.5 (No change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

This is about whether the SPO has the resources to do the work, and whether resources are used cost-effectively.

Projects are designed to complement each other and share staff time that minimize costs. This is due to the increased awareness creation and learning created by staff to reduce costs. The first time an intervention costs more but after this, the intervention can be applied more cost-effectively using the previous experience. According to the annual report in 2014 for AusAID, that project has used the project budget efficiently by maximizing the community contribution. This is also the case for the PfR project (MFS II funded). Operational modalities are in place together with a good budget management system, proper internal auditing and compliance mechanisms.

Score: From 4 to 4.5 (Slight improvement)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

Considering the available resources CARE Ethiopia has made progress with program implementation, resulting in diverse achievements. All partners are satisfied with the results and provide guidance, feedback, coaching, and provision of trainings. The PfR Annual Report 2013 has also revealed that in all countries where the PfR project is implemented (MFS II funded), the partners have reached or even surpassed the set target. Project managers are actively monitoring the delivery of planned outputs which supports this implementation process.

Score: From 4 to 4.25 (Very slight improvement)

3.4. Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

According to staff, all the mechanisms mentioned at the baseline situation have been practiced in a strengthened way by CARE Ethiopia in this regard. The CFA and partner assessments showed that there was improvement in this regard due to the presence of qualified and committed staff and management, regular monitoring and beneficiary consultations, and the organization has been working very close with the grass roots beneficiaries directly. The community participation approach is the general/normal approach of CARE.

Score: From 4 to 4.25 (Very slight improvement)

3.5. Monitoring efficiency: 'The organization monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or not in their work.

CARE has improved in monitoring efficiency according to the CFA self-assessment but more needs to be done particularly for some staffs of the implementing partner, SSD, in this regard. However, no information was provided by staffs in this aspect.

Score: From 3.5 to 3.5 (No change)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work'

This is about how the SPO ensures quality work with the resources available

Currently staff are more experienced to ensure balancing quality with efficiency. Besides, new staff members were hired for the Program Quality and Learning Unit. The number of learning events like exchange visits, conferences, workshops, exchanges, etc. have also helped to improve capacity in balancing efficiency requirements with the quality of work. The monitoring visits and regular follow up by donors at different times has contributed to quality programming. For example CARE-Ethiopia pays quarterly field visits and CARE-NL has made annual follow-up/monitoring visits and provides feedback on progress, including quality and efficiency. However, some staffs have held the view that the organization has not changed in this regard since the baseline.

Score: From 4 to 4.25 (Very slight improvement)

Summary capability to deliver on development objectives

CARE Ethiopia has good experience in designing projects based on a fully fledged project proposal that contains a clear operational plan. Besides, the organization has shown some progress in designing projects to complement each other to ensure cost effectiveness at times of project design and implementation phase. As a result CARE Ethiopia has made great progress with program implementation, resulting in impressive achievements in delivering planned outputs. This is due to the presence of qualified and committed staff and management, regular monitoring and beneficiary consultations. Also, the organization has been working very closely with the grass root beneficiaries. However, the organization has no mechanisms to monitor efficiency. Nevertheless, staff are more experienced to ensure balancing quality and efficiency in their work. Besides, new staffs was hired for the Program Quality and Learning Unit and a number of learning events like exchange visits, conferences, workshops, exchanges, etc., have also helped to improve capacity in balancing efficiency requirements with the quality of work.

Score: from 4.0 to 4.2 (very slight improvement)

Capability to relate

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/ collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how.

Most of the policies and strategies are designed at international level and CARE-Ethiopia designed policies and strategies based on that, and adapting these to the local context. Stakeholder involvement is an integral part of CARE's work at all stages during strategy formulation and program design, implementation and evaluation. This was evident in the READ IV Good Practice Report where CARE Ethiopia conducted consultative workshops to document the Borana Indigenous Early Warning Indicators from 26-28 February 2013 at Moyale-Ethiopia. Thereafter, CARE Ethiopia and Kenya jointly carried out a cross border validation and dissemination workshop of the same at Moyale-Ethiopia, 25-26 March 2013. As follow up of the above mentioned events, CARE Ethiopia and Kenya organized a cross border Joint EW forum. Besides, part of the PfR program was about extensive beneficiary consultations and the target group is actively involved in decision-making. However, SSD, as a local implementing partner for the PfR project, has never been invited for such meetings and events according to the partners' assessment.

Score: From 4.5 to 4.5 (No change)

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; with they are local or international; and what they do together, and how do they do it.

Through other projects (e.g. PRIME) CARE has engaged with networks and established partnerships with local NGOs, INGOs, universities, private company and research institutes, facilitated by the CARE Ethiopia Program unit (Program Director, the Program Quality and Learning Unit, and the Pastoral Program). Besides, through its local partner SSD, CARE Ethiopia is engaged in other relevant networks locally and nationally. Also because of the PfR Alliance CARE-Ethiopia has enlarged its network globally. Both contribute indirectly to improved advocacy from the local to the international level. However, no information was provided on any of the new networks and partners with which CARE Ethiopia has engaged since the baseline in 2012.

Score: From 4.5 to 4.5 (No Change)

4.3. Engagement with target groups: 'The organisation performs frequent visits to their target groups/beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

The CARE PfR program manager visits projects and discusses with beneficiaries more frequently now. There were staff commitment and management measures to address the constraints mentioned during baseline that hold back program managers from visiting projects more often. Hence, frequency of field visits to communicate with target groups by the program managers has improved. Nevertheless, some staffs noted that CARE implements projects with partners, such as the PfR project which is implemented by SSD, and therefore CARE staff has less compulsion to visit the field frequently. However, the CFA assessment revealed that though SSD has responsibility for implementation, CARE has conducted field monitoring visits on a quarterly basis.

Score: From 4 to 4.25 (very slight improvement)

4.4. Relationships within organization: 'Organizational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

Though CARE-Ethiopia has moved its head office to a new building, all facilities demonstrated during the baseline, have continued to exist. Thus, the offices are well furnished and the layout is conducive for work. In addition to the provision of CDMA (a device for internet connection) to key staff, a Wi-Fi connection is established in field offices to improve communication. These facilities became available due to the start of a new big project, the PRIME project (funded by USAID).

Score: From 4 to 4.25 (Very slight improvement)

Summary capability to relate

Most of the policies and strategies are designed at international level and CARE-Ethiopia designed policies and strategies based on that, and adapting these to the local context. Stakeholder involvement is an integral part of CARE's work at all stages, during strategy formulation and program design, implementation and evaluation. Besides, CARE has engaged with networks and established partnerships with local NGOs, INGOs, universities, private companies and research institutes. However, no information was provided on the new networks and partners with which CARE Ethiopia has engaged. The CARE PfR program manager visits projects and discusses with beneficiaries more frequently now compared to the baseline in 2012. Meanwhile, though CARE-Ethiopia has moved its head office to a new building, all facilities demonstrated during the baseline are still present. Hence, the offices are well furnished and the layout is conducive for work. Besides, communication at field offices has improved through email communication using CDMA (a device for internet connection).

Score: from 4.2 to 4.4 (very slight improvement)

Capability to achieve coherence

5.1. Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organisation'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this.

According to the organization's strategic document, CARE Ethiopia's strategic directions are designed to support the UN Millennium Development Goals for Ethiopia (MDG) and the Government of Ethiopia's Growth and Transformation Plan (GTP). Staffs indicate that no changes occurred since the baseline which was that vision, mission and strategies are regularly discussed, including when formulating new

proposals, but that internalization of the mission and vision by all staff, particularly for staff at front line or field office level could be improved.

Score: From 4 to 4 (no change)

5.2. Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

CARE is a well-established organization and has all the technical guidelines in the different areas of operation. In this regard, small revisions were made to the HR manual and policy. Besides, CARE Ethiopia has improved project documentation and is developing new guidelines and more systematic implementation strategies. The organization has developed implementation manuals and has transparent financial procedures and practices, including transparent financial reporting.

Score: From 4.5 to 4.75 (Slight improvement)

5.3. Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

This is about whether the operations and strategies are line with the vision/mission of the SPO.

According to the organization's strategic document, CARE Ethiopia's mission is to work with poor women and men, boys and girls, communities and institutions, to have a significant impact on the underlying causes of poverty. Accordingly all programs and projects have been designed in line with the organization's vision, mission and strategies. To verify this CARE Ethiopia has identified three impact groups following CARE's decision to shift from project to program approach (according to the strategic plan 2010-2020). All the three impact groups consider women and girls as central point for impact measurement. Accordingly, program/project initiatives are intentionally designed to meet these requirements. For this to be effective, the organization has given more focus on developing new proposals due to better experience in the region and the thematic areas.

Score: From 4 to 4 (No change)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

There is an improvement in terms of staff's capacity to ensure the complementarity of the various projects to CARE's program approach for a better impact. Provision of trainings, learning and linking with partners, and learning from experience has helped with this. Similar to the baseline period, CARE has tried to look for mutually supportive efforts especially at a time of writing new proposals. Furthermore, CARE has moved from a project to a program-based approach, strengthening its ability to ensure impact and mutual complementarities among projects. Projects are reviewed to ensure synergy during project design as well as in the implementation phase.

Score: From 4 to 4.5 (Slight improvement)

Summary capability to achieve coherence

CARE Ethiopia's strategic directions are designed to support the UN Millennium Development Goals for Ethiopia (MDG) and the Government of Ethiopia's Growth and Transformation Plan (GTP). CARE is a well-established organization and has all the technical guidelines in the different areas of operation. In this regard, small revisions have been made to the HR manual and policy. Besides, CARE Ethiopia has improved project documentation and is developing new guidelines and more systematic

implementation strategies. The organization has developed implementation manuals and has transparent financial procedures and practice. All programs and projects have been designed in line with the organization's vision, mission and strategies. This was evident in the strategic document where CARE Ethiopia has identified three impact groups following CARE's decision to shift from project to program approach. Accordingly, program/project initiatives are intentionally designed to meet these requirements. Furthermore, there has been an improvement in terms of staff capacity to ensure the complementarity of the various projects to CARE's program approach for a better impact. Provision of trainings, learning and linking with partners, and learning from experience has helped with this. Projects are reviewed to ensure synergy during project design as well as in the implementation phase.

Score: from 4.1 to 4.3 (very slight improvement)

Report CDI- 15-057

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

PART 0 – INTRODUCTION

Dear Sir/Madam, we work for IFPRI. We would like to ask you some questions about your household food production, utilization and income. Taking part in this study is voluntary. If you choose to take part, you have the right to stop at any time and there will be no consequences. We would like to thank you for your full cooperation in advance.

(Enumerator: I have completed the informed consent process on the first page prior to administering the questionnaire. Enumerator's name and ID:

1	Name of the head of household	
	Gender of the head (0=female, 1=male)	
2	Telephone no. of the household head or other household member	
3	First name of the respondent (<i>given name</i>)	
4	Last name of the respondent (<i>father's name</i>)	
5	Relationship of respondent to head of household (<i>codes A</i>)	
6	Date of Interview (" dd/ mm/ yyyy ") <i>Gregorian calendar</i>	/ / 2012
7	Time the interview started, 24 hour clock (" hh: mm ")	__ : __
8	Time the interview ended, 24 hour clock (" hh: mm ")	__ : __

5	Kerosene		
6	Candles/Gas for lantern		
7	Other fuel (not electricity)		
8	Chat		

Identification code	Zone	District	PA	HH	Ind.

4 Monthly cash expenditures

	Item name	(4.1) In the last 30 days did your household spend money on this item? (0=no, 1=yes)	(4.2) How much did the household spend on the item in the <i>last 30 days</i> ? [ETB]
1	Grain milling charge		
2	Electricity		
3	Water bill		
4	Soap/washing & cleaning products		
5	Personal care (barber, hair dresser, toothpaste, etc)		
6	Transport expenses		
7	Communication (cell phone, mail, ...)		
8	Entertainment (socializing)		
9	House rent/mortgage payment		
10	Other, specify		

5 Less frequent expenditures (in the last 12 months)

	Item name	(5.1) In the past 12 months, did your household spend money on this item? (0=no, 1=yes)	(5.2) How much did the household spend on the item in the <i>last 12 months</i> ? (ETB)
1	Clothes and shoes (including school uniforms)		
2	Furniture (tables, chairs, beds, etc)		
3	Blankets/bedsheets		
4	School fees and other educational expenses		
5	Social events (wedding, funeral, etc)		
6	Contributions to IDDIR, mosque, church		
7	Housing improvement (latrine, new roof, etc)		
8	Human health expenses (medicine, hospital, ...)		
9	Vehicle purchase or repair (car, bicycle, motorcycle)		
10	Contributions & membership fees (associations/church/sports etc)		
11	Taxes		
12	Other, specify		

Identification code	Zone	District	PA	HH	Ind.

PART III –Livestock production

6 Livestock: Please describe your household’s livestock assets:

	(6.1) Animal type	(6.2) Do you own it? (1=Yes 0=No)	(6.3) Number owned by the household	(6.4) Have you sold ----- in the last 12 months? (1=Yes 0=No)	(6.5) If yes, how many	(6.6) Have you lost any animals due to death in the last 12 months (1=Yes 0=No)	(6.7) If yes no of livestock died
1	Cattle						
1.1	Cow						
1.2	Heifer						
1.3	Bull						
1.4	Oxen						
2	Goats						
3	Sheep						
4	Camel						
5	Donkey						
6	Horse						
7	Poultry						
8	Bee hives						
9	Calve						

7 Fodder Production

7.1	In the last 12 months have you or your household engaged in forage production? 1. Yes 0. No (go to 8)		
	<i>If yes to Q 7.1, please tell me what you produced and how much you produced</i>		
	(7.2) Type of fodder produced	(7.3) Amount/Quantity	
		a. Unit	b. Quantity

2		
3		
4		
5		

Identification code	Zone	District	PA	HH	Ind.

PART VI - FOOD SECURITY

10. Household Food Insecurity

10.1	In the last 12 months, did you at any time not have enough food? 0 = no; 1 =yes											
10.2	In the past 12 months, for how many months did you not have enough food to meet your family needs? <i>Check below</i>											
	1. JAN	2. FEB	3. MAR	4. APR	5. MAY	6. JUN	7. JUL	8. AUG	9. SEP	10. OCT	11. NOV	12. DEC
10.3	Did you receive any food aid during the past 12 months? 0 = no; 1 =yes											
10.4	If yes to Q6.12, in which months of the year did you receive food aid? <i>Check below.</i>											
	1. JAN	2. FEB	3. MAR	4. APR	5. MAY	6. JUN	7. JUL	8. AUG	9. SEP	10. OCT	11. NOV	12. DEC

For each of the following questions, consider what has happened in the **past 1 month**. Please answer whether this happened never, rarely (once or twice), sometimes (3-10 times), or often (more than 10 times) in the past 1 month? (*Circle the answer*)

Event	Frequency of event			
	Never (0 times)	Rarely (1-2times)	Sometimes (3-10 times)	Often > 10 times
10.5	0	1	2	3
10.6	0	1	2	3
10.7	0	1	2	3
10.8	0	1	2	3
10.9	0	1	2	3

Identification code	Zone	District	PA	HH	Ind.

	you needed because there was not enough food?				
10.10	Did you or any other household member eat fewer meals in a day because there was not enough food?	0	1	2	3
10.11	Was there ever no food at all in your household because there were no resources to get more?	0	1	2	3
10.12	Did you or any household member go to sleep at night hungry because there was not enough food?	0	1	2	3
10.13	Did you or any household member go a whole day without eating anything because there was not enough food?	0	1	2	3

10.14	ON AVERAGE, How many meals were eaten yesterday in this household, by children of less than 5 years old ?	<input type="text"/>
10.15	ON AVERAGE How many meals were eaten yesterday in this household by children of 5-15 years of age ?	<input type="text"/>
10.16	ON AVERAGE , How many meals were eaten yesterday in this household, by one household member with more than 15 years of age ?	

10.17 Which one of the following categories of food was eaten in this household during the last 7 days ? (Mark with x if a food category was present in the diet for that specific day, leave blank otherwise)							
Categories of food	Yesterd ay	2 days ago	3 days ago	4 days ago	5 days ago	6 days ago	7 days ago
01. Cereals and root-crops (rice, bread, millet, cassava, potatoes, etc...)	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
02. Pulses (peanuts, haricots, sesame, chick peas, lentilles, green peas, other peas...)	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
03. Fruit	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
04. Meat/Fish	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
05. Dairy products (milk, butter, cheese, yoghurt, etc...)	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
06. Eggs	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
07. Vegetable oil/fat (ghee, oils...)	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
08. Sugar, honey, drinks with sugar (coca cola, fanta, etc..)	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
09. Any other food item	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

PART VII – ACCESS to SERVICES

11. Water collection

How much do you and your household members travel for water collection?			
	Season	(11.1) Distance travelled	(11.2) Time
		kilometer	hrs minute
1	Dry Season		
2	Wet season		

Identification code	Zone	District	PA	HH	Ind.

12. Participation in rural institutions

	Are you currently a member of any of the following group?	0=no	1=yes
12.1	Savings and credit association		
12.2	EKUB (Merry go round)		
12.3	Input supply group, farmer cooperative or union		
12.4	Crop or seed production group

1. Introduction

This paper provides an evaluation of the Climate Proof-Disaster Risk Reduction program of CARE financed within the MFSII framework for the Dutch Ministry of Foreign Affairs, which runs from 2011 till 2016. In this evaluation, we try to answer the following questions:

1. What are the changes under MDG1 –to eradicate extreme poverty and hunger, and MFG7 – ensure environmental sustainability, during the 2012 – 2014 period?
2. To what degree are these changes at target group level attributable to the development interventions of CARE (i.e. measuring effectiveness)?
3. What is the relevance of these changes?
4. Were the development interventions of CARE efficient?
5. What factors explain the findings drawn from the questions above?

We find limited evidence of impact. During the research period 2012-2014, the key indicators did not improve more for respondent in the target kebeles than for similar respondents in comparison kebeles. There are two important reasons for this finding. First, the number of beneficiaries from irrigation and savings and credit groups, two important project activities, is too small to be detected by the evaluation. Second, the project runs until 1 January 2016 and DRR plans had not yet been implemented in 2014. Moreover, 2014 was a relatively good year, and DRR plans and activities are of limited use in such years. Yet we do find some suggestions of impact. During baseline, more people had received training in the project kebeles than in the comparison kebeles. This could be the effect on project activities in the year before the baseline. Moreover, the majority of the respondents in the project kebeles is aware of the existence of the DRR committees, and these committees have developed DRR plans.

The structure of the paper is as follows. We first present the context of pastoralists in Afar, Ethiopia and give a description of the project. Subsequently, we present the methodology and data. This is followed by an analysis of the results, a discussion, and a conclusion.

2. Context

The production system of the Afar region is dominated by pastoralism (90%) from which agro-pastoralism (10%) is now emerging, following some permanent and temporary rivers on which small scale irrigation is developed. Local status and clan relations regulate access to resources, and survival

and risk management rely importantly on sharing of food and other consumable resources between extended households and clan structures (Sabates-Wheeler et al., 2013).

For millennia pastoralism has been an appropriate livelihood for the unpredictable environment of the arid and semi-arid environments of the Afar Region. Common resource management practices include hay making (grass and straw collection), off-season and opportunistic cultivation, slaughtering of calves, looping and feeding animals on acacia leaves, settlement around water points, herd diversification and splitting, area enclosure, and negotiation with other ethnic groups for scarce resource utilization. However, since recent decades, pastoralist women and men face a series of climate-change induced challenges that hinder their way of life and stifle their ability to adapt to changes in their external environment. Over the last 20 years, the frequency and severity of man-made and natural disasters have increased substantially, and the livestock-based livelihood of the Afar pastoralists has been severely affected. Moreover, since the 1960s Ethiopian governments have established commercial farms in the Awash valley in Afar, thus removing vital drought and seasonal grazing reserves for mobile pastoralists and increasing the vulnerability of their livelihoods. While these farms generate substantial employment, most jobs are done by migrants from the highlands and not by the traditionally pastoralist population (Sabates-Wheeler et al, 2013). Moreover, irrigation has had serious negative spillover effects for the livestock sector: reduced access to water sources, rapid spread of an invasive plant species, water pollution from agrochemicals, deterioration of grazing lands, soil erosion, and increased in-migration of highlanders (Flintan, 2011).

Climate-change induced recurrent drought is the foremost natural hazard affecting both human and non-human life. Reports from the Afar Region Food Security bureau and from the communities show that in the past drought-related shocks used to occur every ten years and they are now occurring every two years. Due to these droughts, the largely livestock-based means of livelihood have not been able to sustain the lives of the pastoralists. Many households have had no opportunity to recover assets lost, including livestock, and have become trapped in a spiral of chronic food insecurity and poverty. Moreover, coping strategies that rely on short-term considerations can worsen environmental degradation and thereby diminish future adaptive capacity and livelihood options. For example, the traditional strategy of charcoal and firewood selling leads to massive deforestation, making this strategy obsolete in the long run, and leading to intensification of climate change impacts. The traditional resource sharing and asset redistribution mechanisms become infeasible if there are too many losses and too many people in need every year. As communities are less able to provide a reasonable

livelihood using their livestock resources, they have become more and more dependent on food aid programs. Yet food aid is often late and intermittent.

Especially women, children, and the elderly are highly vulnerable for food insecurity and poverty. In the communal and patriarchal society of Afar, the ownership of land and livestock is heavily biased in favor of men. As a result, user rights of women are highly restricted. Research evidence demonstrates that women that own assets and earn income are in a better position to improve their lives and their children eat healthier.

3. Project description

Though it is difficult to totally prevent the occurrence and adverse impacts of natural disasters, integrated Disaster Risk Reduction interventions could contribute towards reducing consequences of disasters through prevention, adaptation and mitigation. As part of the Partners for Resilience program, the CPDRR project focuses on reducing disaster risks through implementation of livelihood protection and diversification activities, enhancing capacities of community, CBOs and government to implement disaster risk reduction programs and sharing of DRR best practices to contribute for policy development. The program is initiated by CARE and implemented by CARE Ethiopia and SSD, an Ethiopian NGO. The total budget of the project is €607,241 for CARE Ethiopia, out of which €345,473 for SSD. This includes money for capacity building and civil society activities. The entire project is funded by MFS II and runs from 1 July 2011 until 1 January 2016.

The project targets four kebeles in Dewe Woreda of Afar Region, zone 5. This supposedly results in 10,400 direct and 20,000 indirect beneficiaries (200-500 households per kebele). The main project objective is to create disaster risk resilient communities through implementation of climate change adaptation, ecosystem management and disaster risk reduction interventions. In particular, it is expected that by the end of the project,

- Communities are increasingly resilient to the impact of identified hazards;
- Communities effectively adapt to climate change and promoted community based sustainable natural resources management;
- Assets and incomes of beneficiaries have increased and diversified;

- Effective disaster risk reduction/contingency plans are in place and operational at community and Woreda levels;
- There is increased community awareness of and capacity to adapt to climate change.

There are three strategic intervention areas: strengthening community resilience, civil society capacity building and policy dialogue at all levels. For this project evaluation, we will focus on those activities that affect the MGDs. Relevant actions can be grouped into three sets: women saving groups; irrigation; and natural resource and community risk management.

Activities in the area of women savings groups are: organization of the groups, promotion and diversification of livelihoods, training on saving management and business plan preparation, follow up and technical support. The philosophy behind this groups is that, in communal and patriarchal societies like Afar where the ownership and control of major assets such as land and livestock tend to be heavily biased in favor of men, women will be better positioned to improve their lives when they own assets such a land, livestock or small business firms. The groups supposedly enhance women’s economic and social status and build their entrepreneurial skills. The expectation is that when women own land and manage earnings, their productivity will increases and their will children eat healthier. Eighteen existing SAC groups consisting of a total of 90 women have been transformed into credit cooperatives.

Activities in the area of irrigation are relate to development of and management of infrastructure - Intake structure construction, main canal construction, secondary canal construction, canal structures, intake and division box gate purchase and installation, construction of gabion protection structures, establishment of water-user associations; and stimulation of irrigated agriculture – land distribution, extension and training, provision of crop seeds and hand tools to facilitate farming, provision of training on irrigation agronomy and scheme management, establishment and running of demonstration and nursery site, purchase and provision of oxen, farm inputs and tools. The purpose is to boost local food production. Only one kebele gets irrigation, one already has, two are not suitable. In total, 40 hectares have been brought under irrigation, and the number of directly benefiting households is about 160. The selection of beneficiaries has been made in cooperation with the local government. In the initial stage of the project, some households (around 100) have benefited from cash for work in the construction of the scheme. However, interest in the scheme was more limited than expected because of the pastoralist tradition of the population in the area. After some delays, the irrigation scheme became effective in 2013. It is considered the main project activity by the implementers and has absorbed most of the resources.

Activities for natural resource and community risk management potentially affect the entire community. A DRR committee has been established in each kebele. The committees have representatives from different community groups, such as clan leaders, youth, women, religious leaders, and kebele administration. Each committee has developed a DRR plan. The plan includes the following topics: Different DRR mitigation measures; the implementers of the plans; time frame or schedule of plan; and the required materials and resources for implementation of the plan. Examples of income and drought-related activities are: Awareness raising of pastoralists to carry out dry land farming; rangeland enclosure and pasture development; collecting and communicating of DRR information including drought early warning signs to the community and the district administration and pastoralist offices; and construction of water harvesting trenches at rangeland areas. However, the plans also include activities related to health awareness and malaria prevention; keeping water points clean and protected; and community awareness to send children to school and reduce dropout rates. The project provides the required tools and materials, such as axes, shovels, pick-axes, machetes, health posters, local fencing materials and cement. Cement cost will be covered by district government office. Moreover, SSD has provided training to the target community (intended total: 1,100 people) and DRR committee on climate change rangeland management, DRR and early warning systems and a community action plan.

4. Methodology

The objective of this report is to describe changes in wellbeing that could be attributed to participation in the Sustainable Energy project. The challenge in any impact evaluation is to isolate the causal role of the intervention from other determinants of wellbeing (Armendariz (2010)). When comparing the situation of beneficiaries before and after an intervention, the observed changes in outcome variables cannot solely be attributed to the intervention, as there are many other changes in the environment of the respondents during the project period. Comparing beneficiaries with a control group of non-beneficiaries does not necessarily provide the solution. Beneficiaries could for instance have been wealthier than non-beneficiaries when the program started or *vice versa*. This and other factors can make some people more likely to choose to participate in the program, thus causing self-selection bias. Besides self-selection bias, program placement bias is also frequently observed in evaluation studies. NGOs target their projects purposely at specific, often disadvantaged, areas. If the control group's

physical, economic and social environment does not match that of the beneficiaries, this will result in differences not caused by the intervention and thus in biased estimates of impact.

The standard approach to overcome these issues is to conduct a randomized controlled trial (RTC). Before the program starts two groups will be created at random. One group will receive the treatment (treatment group) while the other group will act as a benchmark (control group). Because of the randomization the members in the control group represent the members in the treatment group. After the treatment has taken place, both groups can be compared on the outcomes of interest. Differences in outcomes can now solely be attributed to the treatment. However, creating two groups at random, a necessary step for RTCs, is not always possible because of the program implementation or ethical reasons.

As we had no influence on the design of the DRR program, we use an alternative to RCTs: a so-called double difference (DD) model. In order to apply a DD model one needs to have information about relevant indicators of the treatment group and the control group at two points in time, preferably before (baseline) and after (endline) the intervention. One can then measure the difference in the changes in outcome indicators for treatment and control group –or project income between baseline and endline. While the RTC methodology ensures that the only difference between members in the treatment and control group is the treatment, the DD method only eliminates differences between members of the two groups that do not change over time. So the disadvantage of the DD method over the RTC method is that it does not automatically distinguish between the impact of time-varying characteristics between members of the two groups and the impact of the treatment. A (partial) solution to this problem is to include as many time varying characteristics into the DD model as possible so that only the influence of unobserved time-varying characters remains.

The DD method works best if the treatment and comparison group are as comparable as possible. One popular method to achieve this is the propensity score method (PSM) (Rosenbaum(1983)). The basic idea is to match beneficiary households to households from the control group who are observationally similar in terms of characteristics that are not affected by the intervention. These include stable characteristics of the household head and the household. If there is a proper baseline, like for this study, outcome variables during baseline can also be used for matching, because they were not yet affected by the treatment. In practice, PSM involves running a binary regression of the project participation indicator on the relevant set of characteristics. The result is the propensity score: the estimated probability that a household is a beneficiary. The DD method is then applied to households with

propensity scores in the range in which both beneficiaries and non-beneficiaries are observed (the *common support*): non-beneficiaries with a very low propensity score and beneficiaries with a very high propensity score are discarded.

After making the two groups comparable using PSM, a balancing test can be conducted. Although debated in the literature, a balancing test is generally used to determine if the observable controls are distributed similarly between the two groups in question.¹ If any significant difference exists between the two groups, a balancing test should pick up this difference and indicate that the current composition of the data could lead to a biased estimate of the treatment effect. The balancing test is conducted as a set of OLS regressions in which each control variable is individually regressed on a constant and the treatment dummy. The standard errors in the regressions are clustered at the kebele level to account for intraclass correlation. The coefficient of the treatment dummy now gives us an unbiased estimator of the difference between the control and treatment group at the time of the baseline survey.

As indicated above, we first applied PSM and then estimated a DD model. Econometrically speaking the double difference estimator is given by the following expression:

$$Y_{ijt} = \alpha + \beta_1 Post_t + \beta_2 D_j^T + \beta_3 Post_t D_j^T + \gamma X_{ijt} + \varepsilon_{ijt} \quad (1)$$

Where Y_{ijt} denotes an outcome variable for respondent i in group j at time t , D_j^T is a dummy variable equal to one if the respondent belonged to the treatment group, $Post_t$ is a binary variable that takes the value one if the observation corresponds to the post-treatment time period, X_{ijt} is a set of controls², and ε_{ijt} denotes the error term. Then, β_3 in (1) is the treatment estimate of the intervention's impact on outcome Y . That is, β_3 measures the difference between the treatment and control group in the growth of outcome Y . It is an unbiased estimate of the average impact of being assigned to the treatment group on the dependent variable Y provided there is only selection on the observed variables.

Although a combination of PSM and DD can solve many potential biases in the data, some bias may remain. As PSM assumes selection on observables, bias can still be caused by selection on unobservables. Adding DD to PSM helps picking up the time- invariant heterogeneity, but bias can still remain due to time-variant unobservables. Yet, a positive significant effect in the DD model is a strong

¹ For a summary of the literature and further discussion of balancing tests see Kleyman (2009)

² Additional covariates are included to control for various characteristics of the households. This not only helps with the precision of the estimates, but also reduces the problem of omitted variable bias. This is necessary to obtain unbiased measures of the treatment effects.

indication of an influential intervention. An insignificant effect -or even a significant negative effect, however does not necessarily imply that the intervention does not work -or even does harm, as in our analysis we only measure short-term effects.

Some of the outcome variables considered in the analysis are binary. In these cases, a linear probability model (LPM) is estimated and the marginal effect of D_t^C for the impact of the sustainable energy project on outcome Y is reported.³ In all models the standard errors are clustered at the kebele level. Clustering at the kebele level provides a relatively low amount of clusters (18), but big enough clusters. It is important to cluster the standard errors, as the data might be subject to intraclass correlation, that is, households in the same kebele are likely to be more similar on a wide variety of measures than households that are not part of the same kebele. The higher intraclass correlation, the less unique information each household provides. This has to be taken into account when running the regressions by inflating the standard errors.

It is often the case that there is some level of attrition (or dropping out) and/or new entry in the dataset. The DD model presented in (1) can be estimated using an unbalanced panel, keeping in all observations, including the ones which we only observe in one time period. It can also be estimated using a balanced panel, dropping observations which we only observe in one period. Estimating (1) using an unbalanced panel increases the power, but as the sample becomes more heterogeneous the results might be distorted. As in this case, the number of new entries and drop outs are very low, as will be seen in the following section, all estimations will be done on the unbalanced panel.

5. Data

The project targets four kebeles in Dewe Woreda of Afar Region. Within these kebeles, there are both direct and indirect beneficiaries. Only part of the direct beneficiaries was known at the start of the baseline. Moreover, for many activities, direct beneficiaries self-select, and their numbers are relatively small. We therefore evaluate the impact of the intention to treat and draw a stratified random sample of the population of the four target kebeles and four carefully selected comparison kebeles. Dewe woreda has a total of 10 kebeles: the four intervention and six non-intervention kebeles. In only four

³ In recent literature, Puhani (2012) shows that in a nonlinear difference-in-difference, such as the one used in this study, the cross difference is not equal to the treatment effect. Instead the treatment effect comes from the cross derivative (or cross difference) of the conditional expectation of the observed outcome minus the cross derivative of the conditional expectation of the potential outcome without treatment. Although this calculation of the treatment effect is appealing, this study will follow common practice in the field and report the estimate of β_3 in the case of a LPM.

non-intervention kebeles, the people have a relatively settled mode of living, comparable to the treatment kebeles and thus selected as comparison kebeles. The population in the remainder two kebeles had a nomadic mode of living. Two of the comparison kebeles are adjacent to the intervention kebeles, while the other two are situated in the Awash Valley settled along the Awash River. These kebeles are closer to the Hariresu Zone capital town Dalifagie than the woreda town.

Within each of the selected kebeles, we selected around 63 households amounting to 251 in the treatment area and 251 in the control area (see table 1). A formal sampling technique was difficult because of the nomadic nature of the area and a dependable sampling frame does not exist. That is, a complete list of households was not available either at kebele or woreda level. Hence, each village of the selected kebeles was considered. The households were then randomly selected by the supervisors who are outsiders to the community.

Table 1 Sampling frame

Treatment kebeles	Number of households interviewed
1. Kilinti na Derseda	63
2. Eyeledina na Gendewari	62
3. Wahelo na Gudele	64
4. Adalili na Woderage	64
total treatment	251
Control Kebeles	
1. Kehertu na Tutli	63
2. Dewe Bora na Kubet	64
3. Halibi na Sonkokor	60
4. Yemedu na Kebeakoma	64
total controls	251
Total interviews	502

Baseline data were collected in September 2012, a year after the start of the project. Yet, the irrigation scheme had not yet been finished, and the DRR plans had not yet been developed. The endline was collected in September 2014, which is fifteen months before the end of the project. This means that the project had not yet reached its full impact. Moreover, 2014 was not a particularly dry year, which makes it impossible to test for the impact of DRR plans and measures. However, we can test for awareness of the DRR committee and the potential impact of irrigation, training, and women's credit groups.

At endline, all but 89 households (18%) could be traced and re-interviewed. This is a relatively low attrition rates, especially for a pastoralist area. Livestock herders, especially those with slightly larger cattle herds, were most likely to drop out of the sample, as could be expected (See table A5). This means that this group is somewhat under-represented in our analysis. At the same time, these may be the people most difficult to reach by the project. Contrary to expectations, also quite some households who reported irrigation dropped out of the survey.

5.1 Descriptive statistics and balancing tests

The descriptive statistics and balancing tests presented here are based on the common support as a result of the estimated propensity score.⁴ The set of covariates chosen for the estimation of the propensity score is the same as the set of controls used in the DD regressions.

Figure 1 below displays the distribution of the propensity score in the treatment and control group. Plotting the distribution of the propensity score is helpful to see if there are any problems in the common support. The distributions seem to have a wide area from which they overlap, thus indicating a reasonably good common support. Specifically, the region of the estimated common support is given by [.003, .819] and 50 observations are outside this range.

Figure 1: Distribution of the propensity scores in the control and treatment group

⁴ The descriptive statistics and balancing test conducted here are based on the following set of covariates: Sex, age, marital status, ethnicity, years of formal education, Job, household size, Land, number of animals.

At baseline, most of the household heads in the sample had livestock herding as primary occupation (Table 2). Their family size was 6 and very low formal education. The average respondent owned 53 heads of cattle in the control group and 35 in the treatment group. The balancing tests revealed only a few imbalances across the treatment and control group for the variables in question. Overall the balance between the two groups is reasonably good, though livestock herding appeared to be more dominant in the control group.

Table 2: Summary statistics and balancing tests for controls

Dependent variable	Summary Statistics				Balancing tests
	Control		Treatment		Treatment
	N	Mean	N	Mean	
	(1)	(2)	(3)	(4)	(5)
<i>Characteristics of the household head</i>					
Sex (male=1)	241	0.86	200	0.81	-0.054 (0.037)
Age	241	39.54	200	40.00	0.465 (1.154)
Marital status (1=married)	241	0.90	200	0.81	-0.086** (0.034)
Formal education (yes =1)	213	0.50	176	0.56	0.065 (0.206)
Job (1=livestock herding)	241	0.70	200	0.54	-0.157*** (0.058)
<i>Characteristics of the household</i>					
Household size	241	6.30	200	6.06	-0.248 (0.342)
Number of cattle	241	53.51	200	34.53	-18.985*** (5.221)

Notes: Column 2 and 4 presents the mean of the control and treatment group respectively. Column 5 displays the coefficient from a separate OLS regression. Standard errors are clustered at the kebele level. The summary statistics and balancing tests are based on the common support as given by the propensity score with all the control variables used as covariates. Robust standard errors in parentheses ***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level.

For the outcome variables used in this study, an average household in the control group had total expenditures of about 42,803 birr, while the treatment kebeles had higher average expenditures of 54,696 birr (table 3). For the remaining outcome variables the average levels are higher for the treatment group than for the control group. Some of these differences could be early project impact, as will be discussed below. However, the difference in irrigation is caused by pre-project access to

irrigation in one of the project kebeles and not to the project irrigation scheme, which was not yet operational during baseline. The balancing tests thus indicate that the sample is relatively unbalanced at baseline in terms of the relevant outcome variables.

Table 3: Summary statistics and balancing tests for outcomes

Dependent variable	Summary Statistics				Balancing tests
	Control		Treatment		Treatment
	N	Mean	N	Mean	
	(1)	(2)	(3)	(4)	(5)
Does the household own land?	241	0.05	200	0.37	0.324*** (0.055)
Does the household engage in crop production?	241	0.02	200	0.26	0.230*** (0.051)
Does the household engage in irrigation?	241	0.02	200	0.17	0.353** (0.129)
Months without food	241	2.08	200	1.93	-0.149 (0.380)
Participation in savings and credit association?	241	0.04	200	0.17	0.124** (0.055)
Try to obtain loan?	241	0.05	200	0.06	0.010 (0.033)
Disaster risk reduction committee in kebele?	241	0.34	200	0.61	0.269*** (0.089)

Notes: Column 2 and 4 presents the mean of the control and treatment group respectively. Column 5 displays the coefficient from a separate OLS regression. Standard errors are clustered at the kebele level. The summary statistics and balancing tests are based on the common support as given by the propensity score with all the control variables used as covariates. Robust standard errors in parentheses ***Significant at the 1 percent level. **Significant at the 5 percent level. *Significant at the 10 percent level.

6. Results

Table 4 reports all the estimates for the outcomes considered in this project. Each column presents the results for a different approach used. Column 1 displays the results from the DD without any control variables added to the specification. Column 2 shows the results from the DD model including additional control variables. Column 3 shows the PSM+DD model without controls. In the final column the estimates from the PSM+DD model including controls are reported. The sample in these estimations of the final two columns is restricted to only include observations on the common support as given by the propensity score.

Table 4: Impact of program on main outcome variables

Variables	(1) DD – no controls	(2) DD	(3) PSM+DD - no controls	(4) PSM+DD
Does the household own land?	NI	NI	NI	NI
Does the household engage in crop production?	NI	NI	NI	NI

Months without food	NI	NI	NI	NI
Participation in savings and credit association?	NI	NI	NI	NI
Tried to obtain loan?	NI	NI	NI	NI
Disaster risk reduction committee in kebele?	NI	NI	NI	NI
<i>Trainings:</i>				
Improved livestock management	NI	NI	NI	NI
Improved crop production	NI	NI	NI	NI
Nutrition, Health and sanitation	SD	SD	SD	SD
Growth and Transformation Program (GTP)	NI	NI	NI	NI
Disaster Risk Management	NI	NI	NI	NI
Total monthly expenditures per capita	NI	NI	NI	NI

Notes: NI: no impact; NM: Not measured; SD: Significant increase; SI: significantly increase. 1 only significant for the estimates using unbalanced panels. Controls include: Sex, age, marital, #household members, education, ethnicity, job and #animals. See detailed estimation results in the appendix. *** p<0.01, ** p<0.05, * p<0.1

Considering column 4, few significant effects are found on the outcome variables. This cannot be easily attributed to the limited sample size, as detectable effect sizes are reasonably small (see table A5). Surprisingly, the number of households that had received training on nutrition, health and sanitation

decreased compared to the control group. However taking a more detailed look at the data, we see that at baseline significantly more households reported having received training on all topics except the GTP in the treatment area than in the comparison area (table 3 and table A4). This could be the result of early project activities, as the baseline data were collected a year after the start of the project. A lack of observed impact then means that not significantly more people have been trained, but the initially trained people may have received additional training. The negative “impact” for nutrition, health and sanitation training could be a catching-up of the comparison areas.

Similarly, the late baseline suggests possible early project impacts for other indicators. Participation in savings and credit associations was higher in the project kebeles during baseline and remained at this level. However, as the number of group members reported by the project partners is very low, this difference may well be caused by other reasons. More obviously, during the baseline survey already 61 percent of respondents in the project kebeles were aware of the existence of a DRR committee, compared to 34 percent of respondent in the comparison kebeles.

The results thus tentatively suggest that the project has reached part of its objectives in terms of output: a significant number of people seem to have received training and participate in the savings and credit groups. Moreover, the majority of the respondents in the project kebeles is aware of the existence of the DRR committees, and these committees have developed DRR plans. However, this evaluation is not suited to assess the impact of the committees and their plans and the risk-related trainings. Our endline survey was done before plans were implemented and 2014 was a relatively good year for the survey population: on average the number of months without sufficient food were lower and total expenditures higher than during baseline. The impact of the DRR plans will only become clear in drought years after implementation. We do not observe increased irrigation, nor increased expenditures due to participation in the savings and credit groups. The number of people affected by these activities is probably too small for possible impact to be taken up by the survey.

We did a rough efficiency analysis for a small number of outputs (see Table 5). This analysis indicates that project costs are on the high side of the benchmarks from the literature or above.

Table 5 Efficiency analysis

Activity	Unit costs	Unit cost benchmark	Source benchmark
Establishing savings/credit groups (per woman)	Int\$1,110	Int\$ 513.00 (SHG Ethiopia) Int\$ 105.00 - Int\$ 1,242.00 (SHG India)	Tearfund (2013) Harper (2002)
planting trees/vetiver grass (per ha)	Int\$17,116	Int\$ 21-Int\$ 350.00 per hectare (international data)	Grimshaw (1993)
Provision of oxen and other farm inputs	Int\$40,512 (total costs!!)	Int\$ 573.00 per oxen, Int\$ 9.70 for other inputs (Namibia)	Teweldmehidin et al (2010).

7. Discussion

The 2010-11 drought in the arid and semi-arid lowlands (ASAL) of the Horn of Africa left 13 million people in need of food. This has raised concerns that pastoralist livelihoods in the region are no longer viable, thus further justifying strategies that aim at sedentarization and diversification (Headey et al, 2012). Yet poverty is especially prevalent among those African pastoralists who are exiting mobile livestock-keeping, or who have become sedentary (Little, McPeak, Barrett, & Kristjanson, 2008), and opponents of sedentarization advocate protection of pastoralists livelihoods. They argue that pastoralists are innovative and rational managers who maximize the ‘human support capacity’ of the natural resources at their disposal (Davies and Bennet, 2007).

Based on an extensive review of the literature, Headey et al (2012) take an intermediate position. They conclude that pastoralism will remain the dominant strategy in the foreseeable future and that the growing demand for livestock products makes it potentially quite profitable. Most non-pastoralist livelihoods yield lower incomes, with the exception of urban livelihoods and irrigated farming. However, irrigated farming could only provide a livelihood to an estimated 4-6 percent of households in Ethiopia’s pastoralist areas. Also urban areas have a limited capacity. Moreover, urban and rural nonfarm employment requires some formal education, which is generally not (yet) available among the pastoralist community. According to Headey et al, the best way forward would therefore be a balanced path involving both movements out of pastoralism and the transformation of pastoralism into a more commercialized and resilient sector. The latter transformation would require the following overlapping investments: 1) commercializing pastoralism; 2) improving natural resource management; 3) economic diversification; 4) improved social infrastructure (health, education, nutrition); improved physical

infrastructure (roads, mobile telephony, irrigation); 6) more effective disaster risk management strategies; and improved governance (Headey *et al*, 2012).

The project activities nicely link to this analysis. The savings and credit groups aim at diversification, just like the irrigation component, which also involves improvement of infrastructure. Trainings focus on natural resource management, health, nutrition, and improved livestock management. Finally, the DRR committees and plan target disaster risk management.

Yet, the project choices seem to contradict the stress of Headey *et al* on transformation and commercialization of the pastoralist sector, as most activities focus on alternative income sources instead. Transformation and commercialization is not only important for poverty reduction and asset accumulation, which indirectly decreases vulnerability to shocks, but could also contribute to resilience when increased market integration allows destocking and restocking of herd around shock periods. Afars are experienced livestock sellers, and market interventions reducing transaction costs and increasing bargaining power of the seller would improve their capability to cope with crisis (Davies and Bennett, 2007). The project does not touch upon this option.

In addition, the balance of the project could be questioned. Most resources are allocated to activities that benefit few people. The irrigation scheme uses up most project resources. The total irrigated area developed is 40 hectares. According to Headey *et al* (2012), this would be sufficient to feed about 40 families. The project has distributed the area among 160 households, with the expectation that they will share the food with others according to Afar traditions. Still, this means that it only provides limited livelihood supplementation to a small part of the target population of about 1,500 households. An additional 90 households are involved in the savings and credit groups. The remainder, relatively small part, of the budget is used for training and DRR, though these potentially have much more widespread benefits. Yet one could also argue that irrigation is inherently expensive but still important, and will therefore logically absorb a large share of the budget. (Headey *et al*, 2012 estimate returns to irrigation in Ethiopia's ASAL to be 10-15%.)

8. Conclusion

While we did not find relevant changes in the target population in the period 2012-2014, some of the differences between treatment and control group could be the result of project activities in the year before the baseline: More people in project kebeles had received training. Moreover, the majority of the respondents in the project kebeles mentioned the existence of the DRR committees, and these committees have developed DRR plans. We do not observe the impact of the constructed irrigation scheme, probably because this affects only a small part of the target population. Relatedly, the relatively large participation in savings and credit groups in the project kebeles can probably not be interpreted as a project result: the project-initiated cooperatives are transformed existing SACs and have only 90 members spread over the four kebeles.

The evaluation is not suited to assess the relevance of the DRR committees, their plans and the risk-related trainings. The project runs until 2016 and DRR plans had not yet been implemented in 2014. Moreover, 2014 was a relatively good year for the survey population: on average the number of months without sufficient food were lower and total expenditures higher than during baseline. DRR plans and activities are of limited use in such years.

Table 6 Evaluation conclusions

Statement	Rating ¹	Comments
The project was well designed	7	Strong focus on alternatives to pastoralism (for small share of the target population), neglect of commercialization of pastoralism.
The project was implemented as designed	9	All planned activities were implemented, though some with delays
The project reached all its objectives	5	The endline data was collected two years before the project end, so the DRR plans were not yet implemented. Moreover, the endline year was not a drought year, which would be needed to test for the effectiveness of DRR measures.
The observed results are attributable to the project interventions	6	The significant results are based on the baseline only and could result from other factors than the project. No significant impact from dif-in-dif. We cannot show whether the savings and credit groups and the trainings benefit the participants. (There are too few participants in the savings and

		credit groups, and the project focusses on disaster coping, while 2014 was a good year.)
The observed results are relevant to the project beneficiaries	8	DRR and income diversification are highly relevant, but limited impact observed.
The project was implemented efficiently	4	Cost on the high side of benchmarks or above.

¹Our agreement on a scale for 1 (not at all) to 10 (completely)

Notes: All the columns present the coefficient estimate of the Double Difference regressions after first matching the baseline characteristics on their propensity score. The estimation is then done for observations on the common support. The model regresses the outcome variable on a treatment dummy (equaling 1 if the household belongs to the treatment group and 0 otherwise), a year dummy (equaling 0 for the recall period and 1 for the time of the survey) and an interaction of those. All regressions have the standard errors clustered at the kebele level and are estimated with controls, which include: Sex, age, marital, household size, years of formal education, ethnic, job, land and number of animals. Robust standard errors in parentheses *** p<0.01, ** p<0.05, * p<0.1

Table A5: Attrition

VARIABLES	(1) Attrition
sex	-0.027 (0.588)
age	-0.008 (0.012)

Report CDI- 15-054

Kusters, C.S.L, T. van Ingen, E. Zerfu, D. Kefyalew, D. Getu, N.N. Buizer, 2014. *Endline report Ethiopia, ECFA. Capacity of Southern Partner Organisations (5c) component*. Centre for Development Innovation, Wageningen UR (University & Research centre). Report CDI- 15-054. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is Ethiopia, ECFA. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Enhanced Child Focused Activities (ECFA) and the Co-Financing Agency Child Helpline International (CHI) for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to ECFA, CHI, consortia, the synthesis team, IOB and NWO/Wotro and other interested parties and other interested parties.

The Ethiopia 5C evaluation team

List of abbreviations and acronyms

Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CBO	Community Based Organisation
CC	Community Conversation
CDI	Centre for Development Innovation, Wageningen UR, the Netherlands
CFA	Co-Financing Agency
CFO	Co-Financing Organisation
CHI	Child Helpline International
CCRDA	Consortium of Christian Relief and Development Association
COPION	Korean Development Organization
Detailed causal map	Also 'model of change'. the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
ECFA	Enhanced Child Focus Activities
FSCE	Forum on Sustainable Child Empowerment
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.
GO	Governmental organisation
GPP	Girl Power Programme
IFPRI	International Food Policy Research Institute
IGA	Income generating activity
MDG	Millennium Development Goal
M&E	Monitoring and Evaluation
MoFA	Ministry of Foreign Affairs
MFS	Dutch co-financing system
MIS	Management Information System
NGO	Non-Governmental organisation
PANE	Poverty Action Network Ethiopia
PSP	Principles Standards & Practices (taskforce)
OAK	Swiss Development Aid Foundation
OD	Organisational Development
PIE	Plan International Ethiopia
PME	Planning, Monitoring and Evaluation
Process tracing	Theory-based approach to trace causal mechanisms
RCT	Randomized Control Trials
SPO	Southern Partner Organisation
SSI	Semi-structured Interview
ToC	Theory of Change
Wageningen UR	Wageningen University & Research centre
5 C	Capacity development model which focuses on 5 core capabilities

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

- Achievement of Millennium Development Goals (MDGs) & themes;
- Capacity development of Southern partner organisations (SPO) (5 c study);
- Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
2. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
3. *Were the efforts of the MFS II consortia efficient?*
4. *What factors explain the findings drawn from the questions above?*

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: ECFA in Ethiopia. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator, and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in chapter 4.2.2.

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II interventions in these two capabilities, and how these changes have come about. More detailed information can be found in chapter 4.3.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Since the baseline, two years ago, improvements took place in all of the capabilities.

In the capability to act and commit, ECFA improved on many indicators. Most important was a new organisational structure, especially the current division between administrative and program issues. This has resulted in the delegation of tasks from leadership to appropriate staff, so that the Director can focus more on programs and provide organisational directions to his staff. And it led to more clarity for staff on their roles and responsibilities. ECFA has taken measures to retain staff: increased salaries, sustain freedom at work, giving opportunities for staff to let their voices be heard, and hiring new staff. Staff competencies have improved because of hiring qualified new staff and training opportunities on resource mobilisation and M&E. ECFA has slightly better articulated strategies, due to improved M&E on which these strategies are based. Also daily operations have slightly improved and are more in line with strategic plans because of review meetings and improved stakeholder involvement in the annual planning meetings.

In the capability to adapt and self-renew, ECFA also improved in many indicators. M&E has improved because of a dedicated M&E officer and regular review and planning meetings with stakeholders and staff. The M&E officer is skilled and can coach the other staff members. Different tools are used for monitoring and supervision and M&E formats have been developed. ECFA makes more use of the CHI Principles and Standards Assessment to examine the quality of its work, on annual basis, and uses biannual review meetings to plan for the next six (6) months. The frequency of critical reflection meetings went up to weekly thus enhancing the opportunities for staff to share their ideas. There is a more free flow of ideas between different departments. ECFA has become more responsive to stakeholders, especially the Bureau of Women's and Children Affairs Office, one of ECFA's major stakeholders.

In terms of the capability to deliver on development objectives, ECFA shows some improvement in almost all indicators. There are new guidelines in place to minimise operational costs and become more cost-effective. The organisation has been delivering outputs in a more timely fashion because of restructuring of the program department and recruitment of new staff. ECFA has better organised its way of getting feedback from beneficiaries. Through the organisational restructuring, new staff has been hired with better efficiency and quality.

In the capability to relate, ECFA has improved as well. The organisation has improved its network with beneficiaries and stakeholders who continue to be engaged in project planning. ECFA has formed

strong local networks with the community, the Bureau of Women's and Children Affairs, regional finance offices and the social affairs office. The presence of a social worker in all the kebeles that ECFA works, has helped to connect more with the target groups. In terms of relations within the organisation, there are new weekly meetings which have been good for the working relations among staff and with the Director and have stimulated mutual sharing. Finally, ECFA has improved in one of the indicators under the capability to achieve coherence: a number of operational guidelines and manuals have been developed, e.g. financial guidelines, admin and HR manual.

The evaluators considered it important to also note down the SPO's story in terms of changes in the organisation since the baseline, because this would provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues, there may not have been relevant indicators available in the list of core indicators provided by the evaluation team.

During the endline workshop, the following key organisational capacity changes were brought up by ECFA's staff as the most important capacity changes in the organisation since the baseline: improved capacity for partnerships and networking with a large number of stakeholders; improved resource mobilization capacity; improved capacity to reach a larger number of beneficiaries; improved capacity to implement livelihood improvement activities; and improved leadership and management capacity. According to ECFA staffs present at the endline workshop, the improved capacity for partnerships and networking with a large number of stakeholders was due to ECFA's renewed and maintained memberships with different networks and associations; and improved lobbying and communication skills of the organisation, as a result of opportunities created by CHI (MFS-II related) in linking the organisation with its networks and partners and because of ECFA's own experience which created new opportunities.

The resource mobilisation capacity of ECFA improved because of the identification of the need and the recommendations to diversify and increase ECFA's financial resources by a consultant who did a MFS-II funded assessment in 2012; and improved capacity in preparing convincing proposals. ECFA improved this latter capacity because of MFS-II and other donors' training on resource mobilisation, and hiring qualified staff (partially funded by MFS-II), and improved capacity to identify the needs of the community. This capacity change is further detailed in a process tracing causal map.

ECFA improved its capacity to reach a larger number of beneficiaries because of improved capacity in preparing convincing proposals (as explained above) and improved community mobilisation capacity. This last capacity improved because of the enhanced capacity to design people engagement strategies, which in turn was triggered by the recommendations of a multi-sectorial project evaluation conducted in 2010.

The organisation furthermore improved its capacity to implement livelihood improvement activities because of the enhanced attention of ECFA to deploy livelihood interventions geared towards income generating activities (IGAs), because of its demand by communities and government.

Finally, the organisation felt it enhanced its leadership and management capacity because of improved follow up and supervision, past experience of the leadership and donor feedback and financial support. Manuals on organisational and operational management; and donor feedback helped in improved follow up and supervision.

All in all, there is some mention of MFS-II funded capacity development interventions which helped to improve the capacity to write convincing proposals, which is related to the enhanced resource mobilisation capacity and improved capacity to reach a large number of beneficiaries. Other external factors have also played a role in these organisational capacity changes as experienced by ECFA, i.e. trainings funded by other organisations; evaluation recommendations (2010); inputs from government, communities and other funders. To a lesser extent, internal factors played a role, such as organisational and operational manuals. During process tracing these and more MFS-II funded capacity development interventions have clearly come up which will be further explained below.

'Process tracing' was used to get more detailed information about the organisational capacity changes that were possibly related to specific MFS-II capacity development interventions. For ECFA, the organisational capacity changes focused on were: "improved fundraising capacity", "improved capacity to respond to child protection issues", and "improved capacity to implement M&E and provide quality M&E information". These are further explained below.

From the process tracing causal map, it can be said that ECFA's "improved fundraising capacity" can to a large extent be attributed to a range of MFS-II supported capacity development interventions, including: training on counselling, data management and reporting; training on resource mobilisation; Plan International Ethiopia (PIE) partners forum; regional and international consultation meetings; support from CHI in funding proposals; enhanced helpline infrastructure, employment of more counsellors, and general capacity development support of the CFA, like helping with planning and costing of activities and fundraising policies. All of this has helped the organisation to expand to four (4) other towns and thereby becoming more attractive to donors. Other factors to which these changes can be attributed include: experience gained in the past and in other activities; resource mobilisation training by PANE; and coaching and mentoring by senior staff and management. The underlying reasons for change included donor requirements and the precarious situation in the organisation in terms of funding, which triggered the organisation to develop a policy on how to diversify its funds.

On the whole, it can be said that the "improved capacity to respond to child protection issues" of ECFA can to a large extent be attributed to MFS-II supported capacity development interventions: training, and international and regional consultation meetings, the conference on sexual child abuse in Ghana and through learning visits to the Helplines of other African countries. The only other reasons for change included coaching, mentoring and follow-up by senior staff, employing staff with small scale business management skills, and the training on male engagement by Hiwot Ethiopia.

Overall, it can be said that the "improved M&E capacity" at ECFA can to a large extent be attributed to MFS-II supported capacity development interventions, through M&E related training, a (5C) baseline assessment by Plan International, feedback and advice from Plan International and CHI, and the provision of infrastructure and training for a digitalised data management system. The only non-MFS-II related reasons for this improved M&E capacity since the baseline in 2012, were an internally felt need to have a monitoring and evaluation unit, and the provision of three computers by Oak Foundation.

2 Context and General Information about the SPO – ECFA

2.1 General information about the Southern Partner Organisation (SPO)

Ethiopia

Southern Partner Organisation	Enhanced Child Focused Activities (ECFA)

The project/partner is part of the sample for the following evaluation components:

Achievement of MDGs and themes	
Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	X
Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

Millions of children worldwide are subject to violence, exploitation and abuse including the worst forms of child labour in families, communities, schools and institutions. They are also exposed to various forms of abuse during armed conflict; and to harmful practices such as female genital mutilation/cutting and child marriage. Millions more, not yet victims, also remain without adequate protection. Protecting children from violence, exploitation and abuse is an integral component of ensuring their survival, growth and development.

The situation of children in Ethiopia is not different than the international scenario. Thousands of children are subjected to different forms of physical and psychological abuses inflicted upon them by adults that are usually very close to them. The magnitude of the problem varies from region to region and from zone to zone and from Woreda to Woreda. However, the demand for community based child protection mechanisms is becoming paramount in many places in the country as the violence against children is gaining momentum in many parts of the country.

One of the big cities where child abuse is being witnessed is Adama city of Oromiya Region. Like in many Ethiopian cities and towns, the majority of girls and young women have a low status in the society. They are denied equal access to education, training and gainful employment opportunities and their involvement in policy formulation and decision making processes has been minimal in government organizations, community based organizations, civil society organizations as well as in schools and other sectors.

Oromiya Region is the operational area of the Enhancing Child Focused Association (ECFA). ECFA was established in 2004 and legally registered by the federal Ministry of Justice in 2006 by the name, Ethio Child Focused Association. Following the new CSOs and NGOs Legislation issued by the Government of the Federal Democratic Republic of Ethiopia, ECFA has been reregistered as an Ethiopian Residents Charity Organisations, with registration number 0308. ECFA is an indigenous, non-governmental organisation, with the aim to effectively respond to the protection, rehabilitation and integration needs of children and contribute to preventing children from any form of violence in all settings through a holistic manner of service delivery and creating an informed and enlightened target community.

ECFA commits itself to providing adequate protection to all children found under difficult situations in Adama City. ECFA promotes and supports the creation of a safe environment for children in partnership with the communities, local structures, government and non-governmental institutions, national and international partners, and other likeminded organizations.

To achieve its mission, the organization developed proposals which aim to protect children, girls and young women from violence. Among those projects, one is a project which intends to work for better protection of girls and young women against violence. This project specifically endeavours to sensitize the target communities and girls and young women on gender based violence; to establish child helpline centres that provide access to reporting cases of violence; to build the capacity of in-school and out-of-school girls and young women to become assertive and active in protecting themselves; to support the target community to create a community environment that protects girls and young women from violence; and to support W/C/A/offices to setup a child protection system and structures and to build the capacity of ECFA, CBOs and CSOs working for children and women in the target area.

The implementation of this Girl Power Programme (GPP) was for the period 2011-2015. The objective of the programme was to improve or strengthen the capacity of the Southern partners. Child Helpline International (CHI) worked closely with ECFA, an Ethiopia based non-governmental organisation to achieve the results of the GPP.

To implement this project, ECFA uses strategies such as selection and deployment of community social workers and CC¹ facilitators, community mobilization and empowerment, and helps government offices, civil society organizations and community-based organizations to mainstream activities related to preventing/curbing violence against girls and young women in their day-to-day development efforts. ECFA will also establish a network and forge partnership with different development actors and organizations.

Throughout and at the end of this project, ECFA expects that gender based violence against girls and young women will be reduced and a better protection mechanism for girls and young women will be in place. Also, awareness and skill of community members on gender based violence will be improved and the beneficiary/target communities will strongly protect girls and young women from violence. Government will act for better protection of girls and young women and finally, participation and representation of girls and young women in targeted civil society organizations will be enhanced. ECFA will exert maximum efforts to enhance community involvement and the empowerment of the targeted girls and young women in exploring and looking for possibilities to address the problems. In doing this, ECFA believes that the project can be sustained by being handled by the community members. Plan International Ethiopia (PIE) is supporting ECFA with MFS-II funding for this project.

Child Helpline International (CHI) has been working with ECFA since 2007. ECFA runs a child helpline service, among other services. The call centre of the child helpline run by ECFA is located in Nazareth city. In all countries of the world, child helplines including the Dutch *Kindertelefoon* in the Netherlands, target children of all ages, boys and girls alike. An organisation operating child helpline services addresses all problems or concerns raised by children and young people. CHI will work with ECFA in

¹ Community Conversation

the period 2011-2015 to improve the existing child helpline service so that the service reaches and benefits all marginalised children and young people in Ethiopia.

2.3 Contracting details

When did cooperation with this partner start:

Since 2008 (CHI)

In 2007 there was a partnership but no contract (members agreement)².

What is the MFS-II contracting period:

January 2011 – September 30th 2015³

Did cooperation with this partner end?

NO

If yes, when did it finish?

N.A.

What is the reason for ending the cooperation with this partner:

N.A.

If not, is there an expected end date?

December 31st 2015.⁴

2.4 Background to the Southern Partner Organisation

History

Enhancing Child Focused Activities (ECFA) is an indigenous, non-governmental organisation working in Oromiya regional state, to effectively respond to the protection, rehabilitation and integration needs of children and young people; and to contribute to protecting children from any forms of violence in all settings through a holistic manner of service delivery and creating an informed and enlightened target community.⁵

ECFA was established in 2004 in Adama town as a network for the various NGOs working in the area. Its former name was Ethio Child Focused Network.

The reasons for establishing the network were:

1. the need to reduce duplication of efforts among institutions,
2. the presence of poor networking conditions among the NGOs working in the same area,
3. the interest shown by the city administration and child based NGOs (FSCE, Goal Ethiopia, Vision), and
4. the need to address child migration, and HIV epidemics in the area

² CHI does not work with contracts but instead with members agreements

³ Please note that CHI MFS-II capacity building interventions ends on September 30th 2015

⁴ Please note that CHI MFS-II capacity building interventions ends on September 30th 2015

⁵ Country specific information Ethiopia, MFS II call for proposals, 2012.

ECFA was legally registered by the federal Ministry of Justice in 2006⁶ by the name Ethio Child Focused Association. Following the new CSOs and NGOs Legislation issued by the Government of the Federal Democratic Republic of Ethiopia, ECFA has been reregistered as an Ethiopian Residents Charity Organisations, with registration number 0308.

Enhancing Child Focused Activities (ECFA) is a coalition of NGOs and GOs (government organisations) working in the field of Child Rights in Adama. Established in 2004, ECFA initially spearheaded bringing child oriented organisations in Adama to pull resources together to celebrate the Day of African Child in the city. After the first celebration of the Day of the African Child together, it was observed and agreed that the coalition could act as a collective voice and an alternative organ for monitoring the implementation of programmes on the rights of the child in Adama.⁷

Among the many underlying factors for the establishment of the coalition are fragmented efforts among child oriented organisations, limited capacity with less impact & uncertainty of sustainability by individual efforts, presence of common vision and related mission among the organisations, healthy work relationship among organisations, positive attitude and acceptance of the government and donors to enhance the role of networking, and realisation of the coalition's better capacity to mobilise private, community, NGO's and GO's resources for better impact. To date, ECFA incorporates a membership of 35 GOs and NGOs among which 10 are full members, the remaining are corporate members.

The organisation put its base foundation aiming to see integrated efforts of GO, NGO's & CBO's that effectively respond to the protection, rehabilitation and integration rights of children through a holistic manner of service delivery.

As ECFA resumed operations to provide networking services, the target groups had been child focused institutions operating in the area. But, with the change of focus in 2009 (a change that was reinforced by new government law) the target groups were changed to schools, vulnerable children, community members, kebele administration, youth clubs, and health extension workers.

At inception, the organization did not have any staff. Rather, all activities were performed through a committee composed of the entities that constituted the coalition. When it established its office in 2005, a coordinator for the coalition was employed. The staff number increased to eight in 2007 and to nine in 2009 when the organization (coalition) started implementing programs. By including community volunteers and area coordinators, the number of workers at present (2012) has reached 15.

In its first year of operation, the organization did not have any budget. But following the opening up of the office in 2005 it started allocating budget that grew from Birr 60,000 (in 2005) to 100,000 (in 2006). When it started to implement projects in 2007, the budget grew to Birr 700,000 but declined to Birr 540,000 in 2009 due to the phasing out of indirect funds. Significant growth was seen in 2012 in which the budget reached Birr 4 million.

The organization has diversified its funding sources. In 2005 the only donors were only Goal Ethiopia and FSCE. But after that period, more funders were added, i.e. OAK foundation, Child Helpline International (CHI), Plan International, Corpion International, and Wereldkinderen.

ECFA has gone through various physical and financial capacity strengthening activities. In the initial years, it was mainly engaged in owning an office compound and furnishing it with various facilities. Once it recruited staff, it started to provide training on community facilitation, resource mobilization, and outreach program.

⁶ Other sources mention establishment in 2004

⁷ <http://www.crin.org/organisations/vieworg.asp?id=4585>

The following milestones were critical in the history of the organization:

- 2004: Inception
- 2005: Office establishment
- 2006: Legal registration
- 2007: Start with project implementation
- 2009: New NGO Framework/CSO Law introduced by Ethiopia government, and change of name

The important influencing factor that led to the establishment of the organization as a network was the need to improve the service delivery capacity of various stakeholders that were providing child focused services. Once it started operation, the new 2009/2010 NGO Framework/CSO law that made the organization drop its advocacy related activity was another important influencing factor. Other important factors were: the attachment of the ECFA child helpline service to the government office of the Bureau of Women and Children affairs in 2009, as well as becoming a member of CHI (that helped to diversify its funding), and the increased awareness of the community about the organization's activity.

Vision

The vision of ECFA at inception was to see rights protected children and this was pursued until 2009. The current vision, which was developed in 2009, is "to see the development of Ethiopia children with their basic needs realized and protected from any form of abuse"

Mission

Likewise, the mission in the beginning focused on addressing child rights. But as of 2009 it was changed to "working with children, families, communities, government agencies and national and international partners to prevent child abuse and ensure the protection, social and psychological needs of orphan and vulnerable, marginalized, abused and exploited children".

Strategies

ECFA developed various strategies to accomplish its vision and mission. At inception the strategy was to engage in advocacy, networking, capacity building, and information sharing activities. However, the CSO law introduced in 2008 forced the organization to abandon advocacy work. Following the reestablishment of the organization in 2009 as an independent entity, its strategy includes the following:

- *Networking*: support networks that are intended for the existence of a coordinated response on the issues of children at the grass root level.
- *Protection*: support children to get access to protection, education and health, psychological and rehabilitation services.
- *Capacity building*: build the capacities of child focused organisations to provide quality and child friendly services for their target children.
- *Child participation*: support children initiated collections and forums that are established to facilitate their involvement in the socio economic developmental activities of their community.
- *Access to information*: availability of child focused information and best practices that contribute to improve planning and implementation of child focused programs and projects.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report A detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline, and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **“What factors explain the findings drawn from the questions above?”**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs has perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012⁸.

⁸ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

- Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)
- India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)
- Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)
- Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop

have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be a perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have

come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled

countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of ECFA that have taken place since the baseline in 2012 are described. The information is based on the information provided by CHI.

Table 1

Information about MFS II supported capacity development interventions since the baseline in 2012

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Regional consultation (RC) of child helplines in Africa in Nairobi, 2011	Basis for more co-operation between the ECFA and agencies in the region. This may be in the form of the exchange of technical expertise or funding opportunities	<ul style="list-style-type: none"> - ICT usage globally and in Kenya. - Outcomes of Principles Standards & Practices (PSP) Task Force meetings as well as the achievements in the Africa region - Poster session about the work of the various child helplines - Open space session that enabled participants to choose topics/any issues not covered by the programme of the meeting. - Field visit to Childline Kenya, the national child helpline in Kenya and also a visit to the Gender Recovery Centre of the Nairobi Women's Hospital. 	Aug 30-Sept 2, 2011	Total cost of the Sixth RC was Euros (€) 70,818.99. CHI's contribution was Euros (€) 34,642.01
Workshop on Outreach and Community-based strategies that took place in Sri Lanka in 2012	- Expansion of the Adama child helpline service to other regions and districts in Ethiopia.	<ul style="list-style-type: none"> - Outreach and Community Based Strategies for child helplines: Ensuring a common understanding of concepts; Discussion about who are "difficult to reach" or "marginalized" children; - Brainstorm of challenges faced by child helplines to reach them. - Community based strategies in areas affected by conflict: Afghanistan (<i>working with community & religious leaders</i>); Sri Lanka (Don Bosco /NCPA/Save the Children) - Reaching the hard to reach: Sharing experiences from the field by: Pakistan (<i>working with burn centers, media tracking</i>); Nepal (<i>reaching child labourers</i>) 	June 2012	Euros 25,000 (i.e., from the MFS-II budgets of Ethiopia, Bangladesh, Nepal and Pakistan).
CHI MFS-II Monitoring and Evaluation (M&E) workshop 2012	ECFA to incorporate the M&E knowledge that was acquired from the workshop into the day-to-day operations of the child helpline. Ultimately, this should improve the quality of the service they provide.	<ul style="list-style-type: none"> - Introduction to M&E concepts - Girl Power; Activities, annual planning & reporting - CHI's Regional and Global Activities under Girl Power - 5 Core Capabilities, the PSA tool and its usage - Outcome measuring in Girl Power, choosing methods and tools - Learning Agenda under the Girl Power programme 	December 2012 in Amsterdam	Euros 3,000

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Second International Conference on Child Sexual Abuse in Accra, Ghana in 2012	- To strengthen their capacity in working with community-based approaches and outreach.	<ul style="list-style-type: none"> - Compare weak and strong CP9 systems - How to strengthen well-developed CP systems - Improve referral mechanisms and case management - Network with partners to strengthen child protection systems - The role of helplines in the prevention of child abuse - Brand management - Reaching out to marginalised children and young people 	March 2012	Euros 2000
Annual reflection meetings organized by Plan International Netherlands and Plan International Ethiopia,(CD5)	ECFA uses this knowledge to respond to children who contact the child helpline on matters related to sexual abuse	<ul style="list-style-type: none"> - Building organizational capacity to manage child sexual abuse in Africa - Role of legislation and policy on child sexual abuse in Africa - Strategies on child sexual abuse prevention - Child sexual abuse in institutions of care and learning in Africa - Good practices in research and practice on child sexual abuse 	Annually	Euros 4783.40 (i.e., MFS-II 1% and 4% budget allocation of the period 2011 to 2013)
Training in Fundraising conducted by CHI and The Resource Alliance in 2012	Increased protection of girls in Ethiopia as a result of the Girl Power Programme	<ul style="list-style-type: none"> - Understanding resource mobilisation - Trends and realities on the fundraising scene - Governance, transparency and accountability - Different techniques of resource mobilization - Developing and implementing an effective resource mob. strategy 	January 2012	Euros 2000

4.2 Changes in capacity development and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities (4.2.1). This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed

since the baseline. In addition to this staff present at the endline workshop were asked to indicate what were the key changes in the organisation since the baseline. The most important is key organisational capacity changes have been identified, as well as the reasons for these changes to come about. This is described in a general causal map, both as a visual as well as a narrative. The the detailed general map is described in 4.2.2.

4.2.1 Changes in the five core capabilities

Capability to Act and Commit

During the 2012 baseline, ECFA’s program leadership, implementation and monitoring was handled by one person. Now different tasks are given to different individuals with clear job descriptions. There are now a Program, and an Administration division in place. This has helped the organisation to perform better because problems are easily and timely addressed, since the director can now focus on programs and providing leadership. The Country Director oversees the overall operations of the organization. Newly added personnel are working closely with the Executive Director and they help in addressing administrative leadership issues timely and flexibly.

Mechanisms to improve incentives have been put in place, such as higher per diems and higher salaries; a good working environment, and a reshuffle of existing staff based on their qualifications and interests. Also, appointing new staff has helped to reduce the workload of some staff.

Daily operations are in line with the strategic plan, but this strategic plan expired. However, resources have been mobilised to update the strategic plan for the period of 2015-2019. In terms of staff skills, ECFA relies heavily on CHI for capacity building of their staff. Whilst some staff have been trained in resource mobilisation and monitoring and evaluation, and qualified and experienced staffs are now being hired for the right positions, further training is required in terms of leadership and management, project planning and management, and report writing¹⁰.

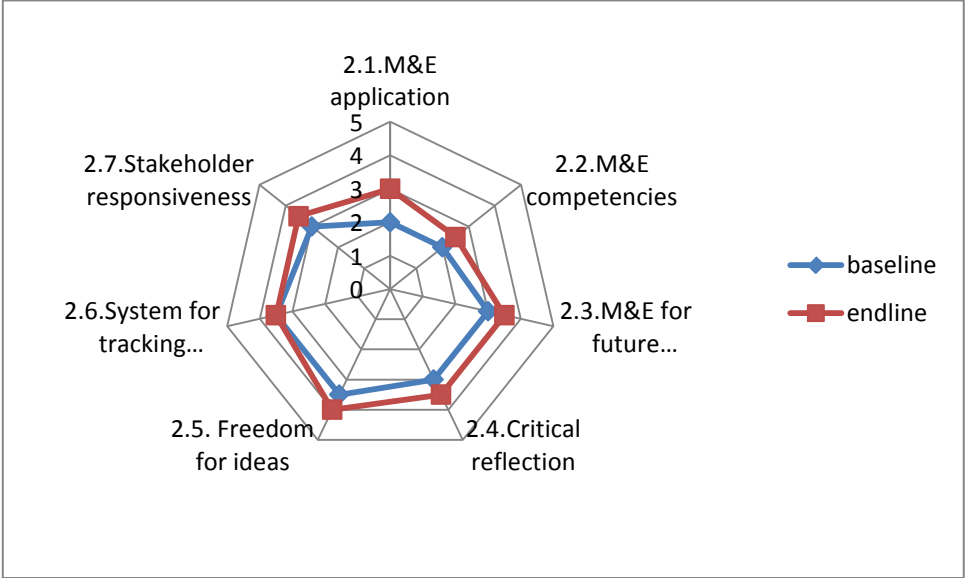

In terms of funding, the organisation has greatly increased the amount of funds since the baseline, which is related to ECFA collaborating with CHI, CCDRA and OSSA. A fundraising strategy still doesn’t exist,

¹⁰ The later could be attributed to language barriers, notably, the MFS-II reporting templates are in English and Ethiopia’s business/official language is Amharic.

although it is in the process of being developed. Having trained staff in resource mobilisation, and hiring more qualified staff has resulted in raising more funds for ECFA.

Score: from 3.1 to 3.7 (slight improvement)

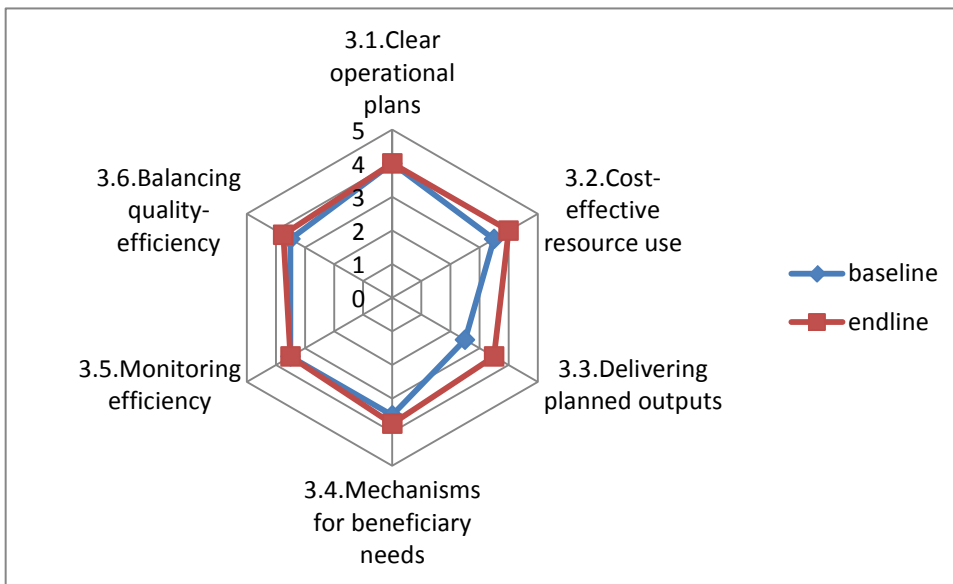

Capability to adapt and self-renew

There have been some slight improvements in terms of monitoring and evaluation, and using this for planning. An M&E policy and guidelines have been developed that are waiting for endorsement by the Board, and M&E formats are developed and are in place for action (notably, mission reporting format, training report format, monthly planning and reporting format, quarterly planning and reporting format). There is an M&E officer in the organisation now, but generally staffs still lack M&E knowledge and skills. The frequency of planning and review meetings has increased: periodic half-year review and planning meetings are of projects and organizational activities; field visits and beneficiary discussions on a quarterly basis; review meetings with community, volunteers, CBOs, CSOs and government offices are facilitated on a monthly basis. For each individual project there are midterm and final evaluations. Due to this increased frequency of meetings it is also easier for staff to critically reflect on issues and share their ideas. Furthermore, ECFA has improved its responsiveness to stakeholders due to increased stakeholder engagement, but the (limited) number and quality of staff is a hindrance to internalizing this principle.

Score: 2.9 to 3.4 (slight improvement)

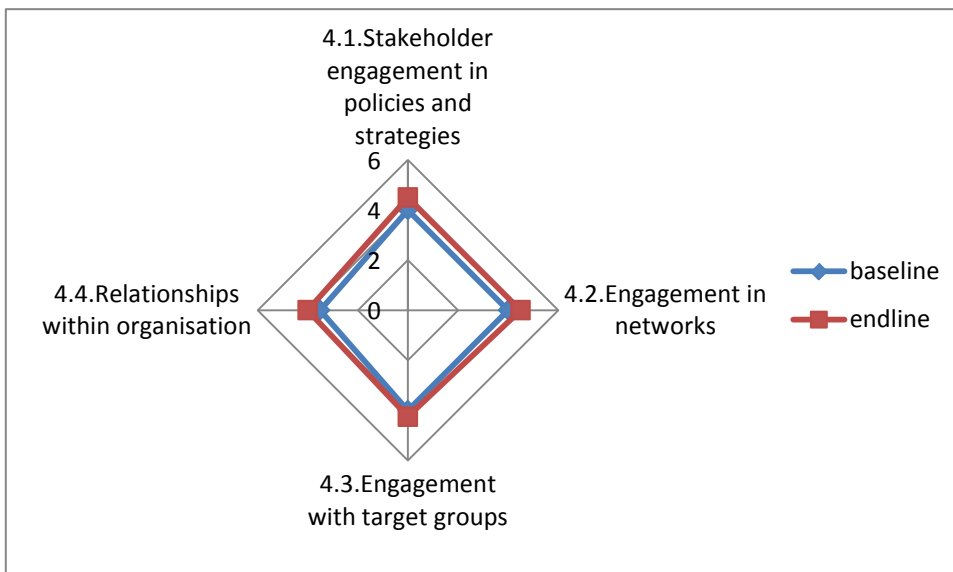

Capability to deliver on development objectives

ECFA still has clear operational plans in place, which guide daily activities and is still using its resources cost effectively making use of volunteers. Presently, ECFA also has guidelines in place to minimise operational costs and has improved upon delivering planned outputs timely due to the restructuring of the program department and having an M&E officer in place, who helps in reviewing progress, timely, and adapting plans accordingly. Also, there are, currently, fewer delays in approving budgets and in making agreements with government. The mechanism to assess whether beneficiary needs are being met is still the same as during the baseline, such as conducting field visits and beneficiary discussions at project levels on a quarterly basis; holding monthly review meetings with community, volunteers, CBOs, CSOs and government offices. The major change is that ECFA has hired a social worker in each target kebele which helps them to fully engage with beneficiaries. There is no formal system in place to monitor efficiency or balance quality with efficiency, but comparing planned with implemented activities helps in assessing executed activities, and having hired more qualified staff has improved the quality of work.

Score: from 3.4 to 3.7 (very slight improvement)

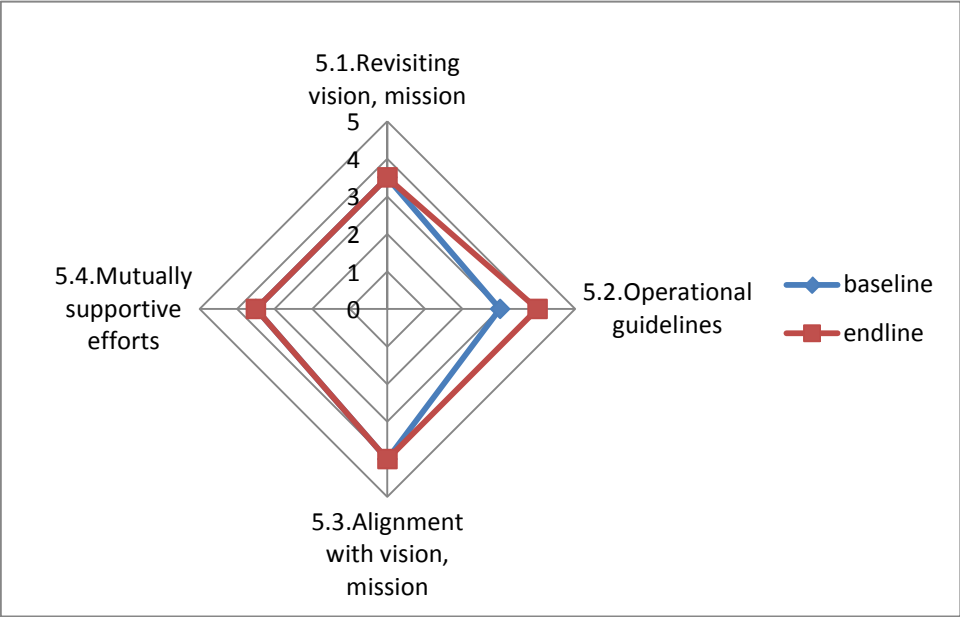

Capability to relate

Relationships have improved slightly, in terms of engaging with stakeholders especially communities, through hiring a social worker in each target kebele, and the government, especially the Bureau of Women and children affairs offices, Regional Finance Offices, Social affairs office. Internally relationships have improved slightly through having more frequent planning and review meetings.

Score: from 3.9 to 4.3 (slight improvement)

Capability to achieve coherence

On the whole, there has been some change in this capability, although most indicators under this capability scored the same compared to the baseline. Vision and mission of the organization are still the same, but the expired strategic plan is under revision. A number of guidelines and manuals are developed or under development compared to the baseline situation, such as financial guideline, per diem and allowance related manual, admin manual, procurement manual and human resource manual (waiting for the final draft) and all staffs are aware of what is included in the manuals and guidelines. Staffs are still acting according to the Vision, mission and goals to be reached by the projects, and projects, like the baseline, are still designed to be complementary to each other.

Score: from 3.5 to 3.7 (very slight improvements)

4.2.2 Key organisational capacity changes - general causal map

Below you can find a description of the key changes in organizational capacity of ECFA since the baseline as expressed by ECFA staff during the endline workshop. First, a description is given of how this the evaluation topic was introduced to ECFA and her staff during the endline workshop by summarising key information on ECFA from the baseline report. This information included a brief description of the vision, mission and strategies of the organisation, staff situation, clients and partner organisations. This then led into a discussion on how ECFA has changed since the baseline.

During the endline workshop, which was held on the 10th July 2014 at the ECFA’s office in Adama, ECFA staff agreed that the following key changes in terms of organisational capacity took place in the organisation since the baseline:

-
1. Improved capacity for partnerships and networking with a large number of stakeholders (2)
 2. Improved resource mobilization capacity (3)
 3. Improved capacity to reach a larger number of beneficiaries (4)
 4. Improved capacity to implement livelihood improvement activities (19)
 5. Improved leadership and management capacity [5]

According to ECFA staff these five improvements in capacity helped ECFA them to become a more prominent and visible organization in the child protection arena (1).

Each of these five key organisational changes is explained in the diagram below. The numbers in the text correspond to the numbers of the cards in the diagram/visual on page 32.

Improved capacity for partnerships and networking with a large number of stakeholders (2):

ECFA started with only one donor (i.e. Oak Foundation). During the baseline in 2012, ECFA had a limited number of donors who financially supported the organization. Currently, ECFA has increased its pool of funds and is working with more donors and implementing five projects. At the time of the baseline study, the organization had only two projects. The main reason for this improvement in networking and partnerships was lobbying and improved communication skills of the organisation (6) and the incessant contacts of the director with peer organisations. In addition, renewing its memberships with different networks and associations such as CCRDA, Child Helpline International (CHI) etc. (9) was also helpful. The lobbying and communication skills of the organization improved as a result of the opportunities created by CHI in linking ECFA with its networks and partners (7). In addition, the previous experience of the organization, the experience of the General Manager in particular (10), was also a major input to improve lobbying and communication. This happened mainly because of the training organized on lobby and advocacy in Ethiopia in 2010 by PANE (22).

Improved resource mobilization capacity (3):

The funding sources of the organization have increased compared to the baseline i.e. the number of donors increased since the baseline in 2012. The main reasons for the improved resource mobilization capacity are the identification of the need and the recommendations to diversify and increase its financial resources including steps to be taken to achieve this (29) received from a consultant who conducted a baseline assessment in 2012 for the MFSII alliance¹¹ (24) and the improved capacity of the organization to prepare convincing proposals (22).

The improved capacity in preparing convincing proposals (22) happened because of:

- The training on resource mobilization given in December 2012 by CHI for five African (i.e., Malawi, Mozambique, Kenya, Ethiopia and Uganda) child helplines hosted by ECFA in Adama, Ethiopia (11); and
- Training on Project Cycle Management (PCM) given to staff in 2013 by COPION (Korean Organization) (8).
- Hiring qualified and experienced staff (12). ECFA hired a Program Manager after the 2012 baseline. The new staff helped in coaching other staff in proposal development, and in identifying the needs of the community (13). The salary of the new staff, including the Program Manager, is partly covered from MFS-II contribution to the organization's pool of funds.

¹¹ This assessment (24) was about the situation of Gender Based Violence (GBV) and Girls participation in 5 selected towns of Oromiya Region, conducted for the Girls power project (MFSII funded).

-
- Improved capacity to identify the needs of the community (13) as a result of hiring experienced qualified staff (12) and engaging consultants (14) to conduct assessments (12 and 14 both MFS-II funded). This enabled the organization to identify the needs of the community and develop proposals that have better chance of being funded.

This capacity change is further detailed in the process tracing map on improved resource mobilisation capacity.

Improved capacity to reach a larger number of beneficiaries (4):

ECFA has increased its geographical area of operations, from Adama (one city) to six cities since the baseline, namely, Adama, Metehara, Bishoftu, Asella, Shashemene and Bekoji. This expansion was possible because ECFA developed the following capacities that supported this expansion. These were:

- Improved capacity in preparing convincing proposals (23) (see above).
- Improved community mobilization capacity (16) which is influenced by the improved capacity to design people engagement strategies (15). This was triggered by the recommendations of a multi-sectorial project evaluation conducted in 2010¹² (25). This study pointed out areas that ECFA should give attention to when mobilizing communities and engaging people (27). The outcomes of the study helped ECFA in improving its capacity to design participatory people engagement strategies (15).

Improved capacity to implement livelihood improvement activities (19):

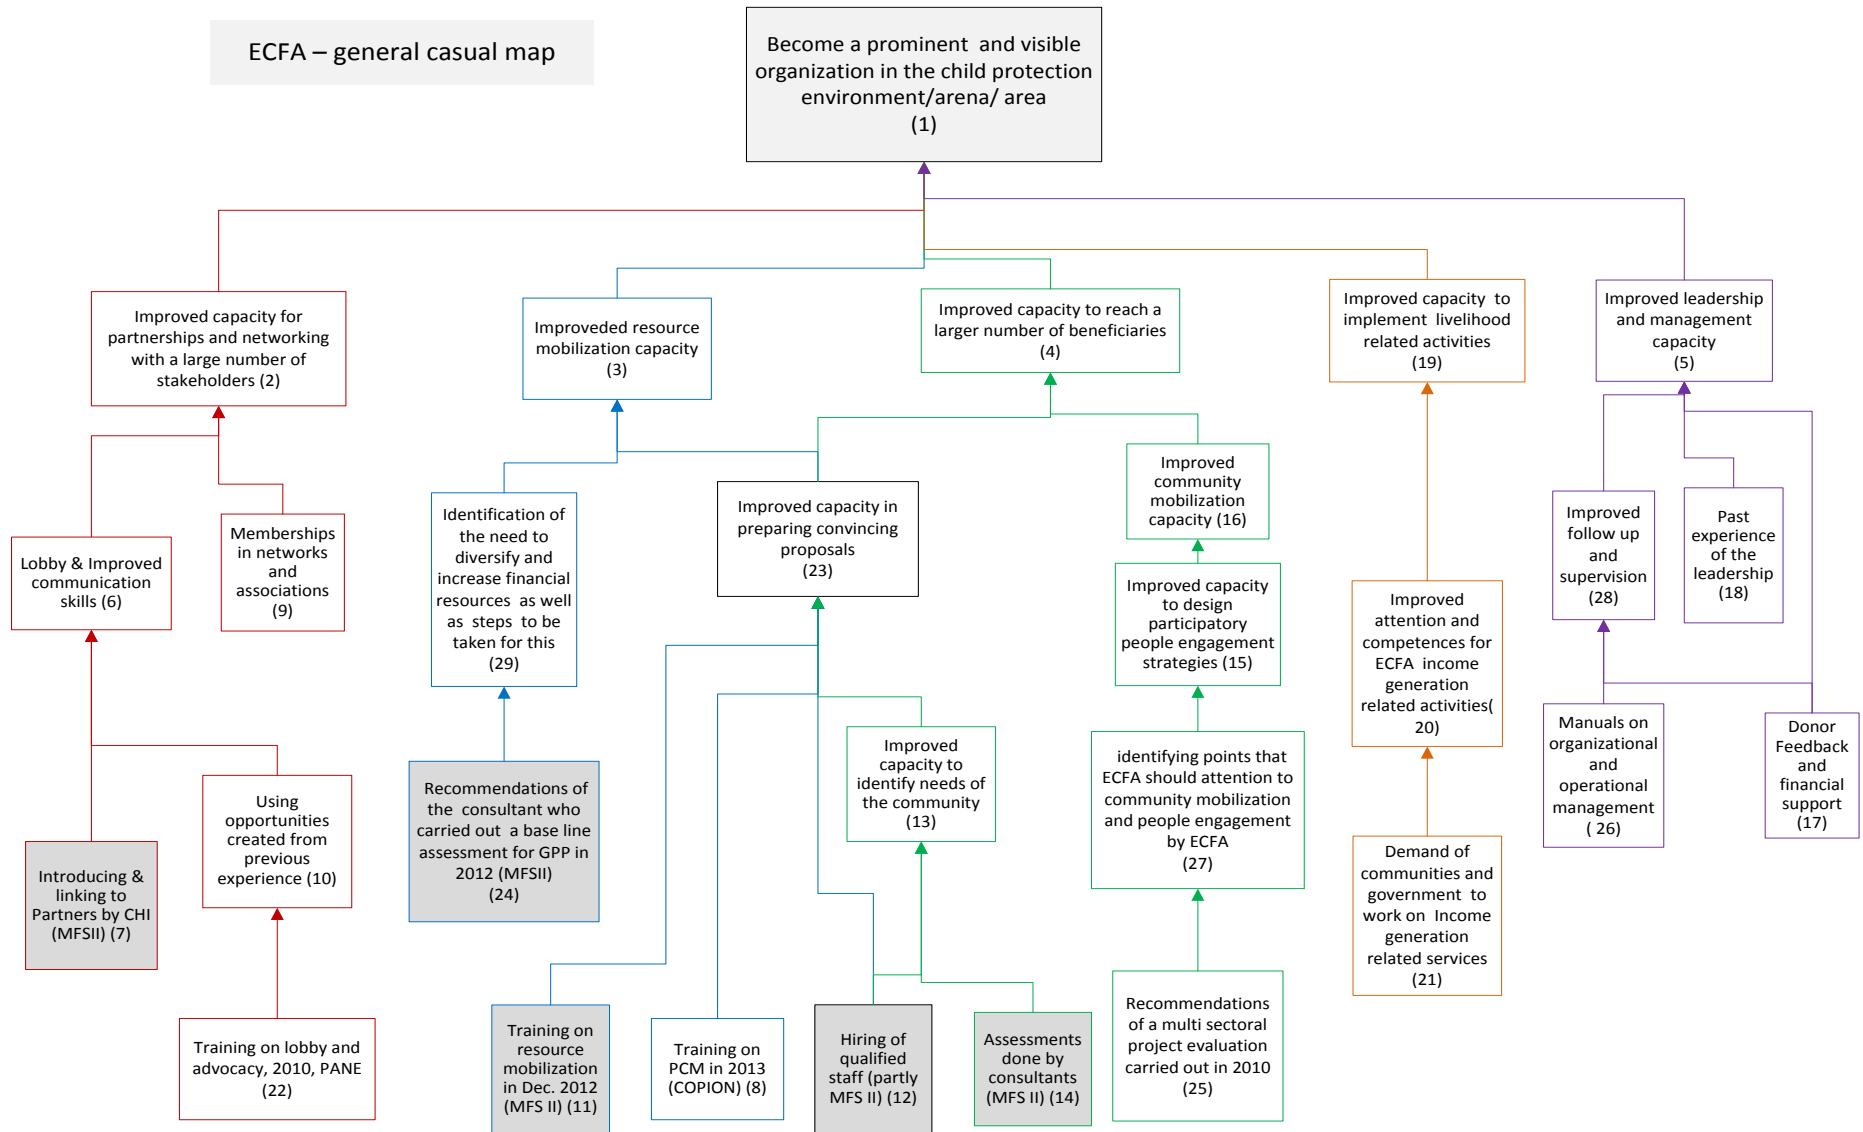

The continued demand by the community and the government on ECFA to work on poverty reduction interventions (21) forced the organization to deploy livelihood interventions geared towards income generation activities (IGAs) (20).

Improved leadership & management capacity (5):

ECFA has developed different manuals related to organizational and operational management (26). This has helped the leadership to easily follow up and supervise (28), and ultimately smoothen processes and operations. In addition, the past experience of the management (18), more specifically the director, has also influenced leadership and management capacity (5), as well as the feedback from MFS II partners and other implementers and their financial support (17). The financial support has improved mobility for follow up and supervision (28) was also instrumental in this.

¹² End-evaluation of the project " Multi-sectoral responses against child sexual abuse in Adama city", 2007-2009 (funded by OAK foundation).

ECFA – general casual map

4.3 Attributing changes in organisational capacity development - evaluation question 2 and 4

Note: for each country about 50% of the MFS II funded SPOs has been chosen to be involved in process tracing, which is the main approach chosen to address evaluation question 2. For more information please also see chapter 3 on methodological approach. For each of these SPOs the focus has been on the capability to act and commit and the capability to adapt and self-renew, since these were the most commonly addressed capabilities when planning MFS II supported capacity development interventions for the SPO.

For each of the MFS II supported capacity development interventions -under these two capabilities- an 'outcome area' has been identified, describing a particular change in terms of organisational capacity of the SPO since the baseline. Process tracing has been carried out for each outcome area. The following outcome areas have been identified under the capability to act and commit and the capability to adapt and self-renew. Also the MFS II capacity development interventions that could possibly be linked to these outcome areas are described in the table below.

Table 2

Information on selected capabilities, outcome areas and MFS II supported capacity development interventions since the baseline

Capability	Outcome area	MFS II supported capacity development intervention
To adapt and self-renew	improved capacity to implement M&E and provide quality M&E information	
To act and commit	improved capacity to respond to child protection issues	
	improved fundraising capacity	

The next sections will describe the results of process tracing for each of the outcome areas. This includes describing the identified key organisational capacity changes, what these changes are expected to lead to and what are the underlying reasons for these organisational capacity changes.

4.3.1 Enhanced capacity to attract funds from multiple sources

Below you will find a description of the 'Enhanced capacity to attract funds from multiple sources' and how this has come about. Numbers in the narrative correspond with numbers in the process tracing causal map further below.

Both ECFA endline workshop participants as well as the Dutch CFA (CHI) Programme Officers consider the ECFA staff to have improved their capacity to attract funds from multiple sources since the baseline in 2012 [1]. As a result ECFA has attracted a larger number of donors compared to the baseline in 2012 [35] (*sources: endline workshop; CFA support to capacity sheet B and a larger amount of funding for Child Helplines [36] (sources: endline workshop; CFA support to capacity sheet B).*

The participants of the endline workshop mentioned that the enhanced capacity to attract funds from multiple sources can be attributed to the following factors:

-
1. Increased visibility of the organization both nationally and internationally (2)
 2. Improved capacity to network with donors & CSOs (3)
 3. Improved knowledge and skills in resource mobilization (4)
 4. Improved access to information sharing on funding opportunities (5)
 5. Strengthened organizational policy systems (6)

These key areas are further explained below.

1. Increased visibility of the organization both nationally and internationally (2)

According to the endline workshop participants and the CFA (i.e. CHI) one of the reasons for the improved capacity to attract funds from multiple sources is that ECFA is now more visible and known inside the country and abroad [2] (*Sources: endline workshop; CFA Assessment sheet A; CHI ic_report_2012 (Durban)_-_final version*)

According to the endline workshop participants, ECFA's increased visibility [2] is caused by:

- a. The capacity to scale up child helpline activities in four other towns (9) (*Source: endline workshop*) as a result of the training on online counselling, face-to-face counselling, data management, and report writing in 2012/13 by an external consultant (MFS II financed) (11) (*Source: endline workshop*) and the infrastructure, such as telephones provided thorough MFS II funding related to helpline service provision (10) (*Source: endline workshop*) plus the employment of MFS II funded counsellors (12) that provide the counselling service (*Source: endline workshop*)
- b. The improved capacity to communicate ECFA's objectives and interventions verbally (7) (*Source: endline workshop*) as a result of experience gained in the past (13) (*Source: endline workshop*);
- c. The enhanced capacity to produce and present promotional materials, such as leaflets, flyers, etc. and the Oromia radio program (8) (*Source: endline workshop*) as a result of the new infrastructure provided (10), and the enhanced financial management capacity (planning and budgeting) of ECFA (14) (*sources: endline workshop; 2013 Ethiopia GP Country Projects Annual report ECFA for CHI_2013*). These improved due to the interaction with MFS-II implementers that were helpful with planning activities and costing them accordingly (37) (*Source: endline workshop*).
- d. In addition, the strengthened sub-regional child helpline partnerships e.g. with CHI/Plan International, Wereldkinderen, Oak foundation and COPION Int. (32) also contributed to the increased visibility of the organisation (*sources: endline workshop; CFA assessment sheet A; 2013 Africa PDRC Report (10)- FINAL; 2011_Africa RC Report 2011; 2012_Ethiopia CRA Annual report Ethiopia 2012 CHI; CHI Resource Mobilisation Training Report JANUARY 23RD TO 25TH 2012 ADAMA-ETHIOPIA*). These were due to the MFS II funded opportunities to establish and maintain relationships with other CSO leaders (20) (*source: endline workshop*), like the Partners forum organized by PIE (21) (*source: endline workshop; CFA assessment sheet B*) and the CHI Regional and International consultation meetings 2011, 2012 and 2013 (24) on the one hand, and to network opportunities given by other Non-MFS II donors (38) (*source: endline workshop*).

2. Improved capacity to network with donors and CSOs (3)

Another reason for the improved capacity to attract funds from multiple sources is the improved capacity to network with donors and CSOs (3) (*sources: endline workshop; CFA assessment sheet A*). The Executive Director persistently uses all available forums including international conferences to promote the organization (15) (*source: endline workshop*) as a result of the experience he acquired when being a member of the leadership committee of the Family Guidance Association of Ethiopia (16) (*source: endline workshop*). In addition, ECFA's membership in CHI implementers' networks and CCRDA (17) (*sources: endline workshop; 2012_Ethiopia CRA Annual report Ethiopia 2012 CHI*) including the Director's efforts to

sustain the collegial relationship he has with fellow CSO leaders (20) (*source: endline workshop*) was mentioned as important for improved networking capacity (3). ECFA was able to maintain its membership of CCRDA and CHI networks (17) because it had financial support from MFS-II (19) (*source: endline workshop*), and the recommendation to the CHI network by the OAK foundation including its financial support (18) (*source: endline workshop*). In addition, ECFA was able to sustain its collegial relationship with leaders of CSOs (20) as a result of the PIE (Plan International Ethiopia) partners' forum created with MFS-II funding (21) (*source: endline workshop; CFA assessment sheet B*), and the different CHI annual regional and international consultation meetings that were held with support from the MFS-II funds (24) (*sources: endline workshop; 2011_Africa RC Report 2011 Final (20111125); 2012_Ethiopia CRA Annual report Ethiopia 2012 CHI; 2013 Africa PDRC Report – FINAL; 2013 Ethiopia GP Country Projects Annual report_ECFA for CHI_2013*). These gatherings enabled the various SPOs leaders to meet frequently.

3. Improved knowledge and skills in resource mobilization (4)

The third reason for the improved capacity to attract funds from multiple sources is improved knowledge and skills in resource mobilization [4] (*sources: endline workshop; CFA assessment sheet B; CHI Resource Mobilisation Training Report JANUARY 23RD TO 25TH 2012 ADAMA-ETHIOPIA* such as:

- a. Improved negotiation skills with possible donors and stakeholders (22) as a result of the training on resource mobilization organized by CHI in Adama with MFS-II financial support (23) (*sources: endline workshop; CFA capacity sheet A; Bi-annual progress report on the Girl Power programme January – June 2012; CHI Resource Mobilisation Training Report JANUARY 23RD TO 25TH 2012 ADAMA-ETHIOPIA*), and the resource mobilization training organized by PANE (Poverty Action Network Ethiopia) in 2010/11 (27) (*source: endline workshop*). These trainings complemented each other;
- b. Improved knowledge of concept note and proposal writing (26) (*sources: endline workshop; CHI Resource Mobilisation Training Report JANUARY 23RD TO 25TH 2012 ADAMA-ETHIOPIA*), from the same training organized on resource mobilization (23); and
- c. The improved resource mapping capacity (28) (*sources: endline workshop; CHI Resource Mobilisation Training Report JANUARY 23RD TO 25TH 2012 ADAMA-ETHIOPIA*) that helped to know who is who in funding landscape, as a result of the above mentioned training on resource mobilization (23) which was facilitated by fundraising experts and attended by senior management staff. This generated lots of information about donors and mapped the funding landscape. Also the coaching and mentorship by senior management (25) (*source: endline workshop*) contributed. Mostly, within ECFA, the Director is the one who is continuously sharing information with staff. In addition, the CHI communication and information shared regarding calls for proposals, as part of the support from MFS-II (31) (*source: endline workshop*); has contributed to the increased information and resource mapping capacity.
- d. Additionally, ECFA developed partnerships [32] during the Resource Mobilisation Training held in 2012 mentioned above (23). Uganda, Mozambique, Kenya and Malawi also participated in the training which enabled ECFA (Ethiopia) to learn the resource mobilization approaches and good practices of its peers. This training was funded through MFS-II funds and benefitted Uganda, Ethiopia, Malawi, Kenya and Mozambique. Ethiopia and Uganda are MFS-II partners so their expenses were covered through MFS-II Girl Power and Conn@ct.Now. The costs incurred by Kenya, Malawi and Mozambique were paid by the OAK Foundation grant.

4. Improved access to information on funding opportunities (5)

Another reason for the improved capacity to attract funds from multiple sources is improved access to information on funding opportunities [5] (*Sources: endline workshop; 2013 Africa PDRC Report – FINAL*). Mainly this was gained through the strengthening of partnerships (32), also supported by the International Consultative meeting in Durban, October 2012 (34) (*Source: 2012_Ethiopia CRA Annual report Ethiopia 2012*

CHI) and communications on call for proposals received from CHI with the financial support from MFS-II [31].

5. Strengthened organizational policy systems (6)

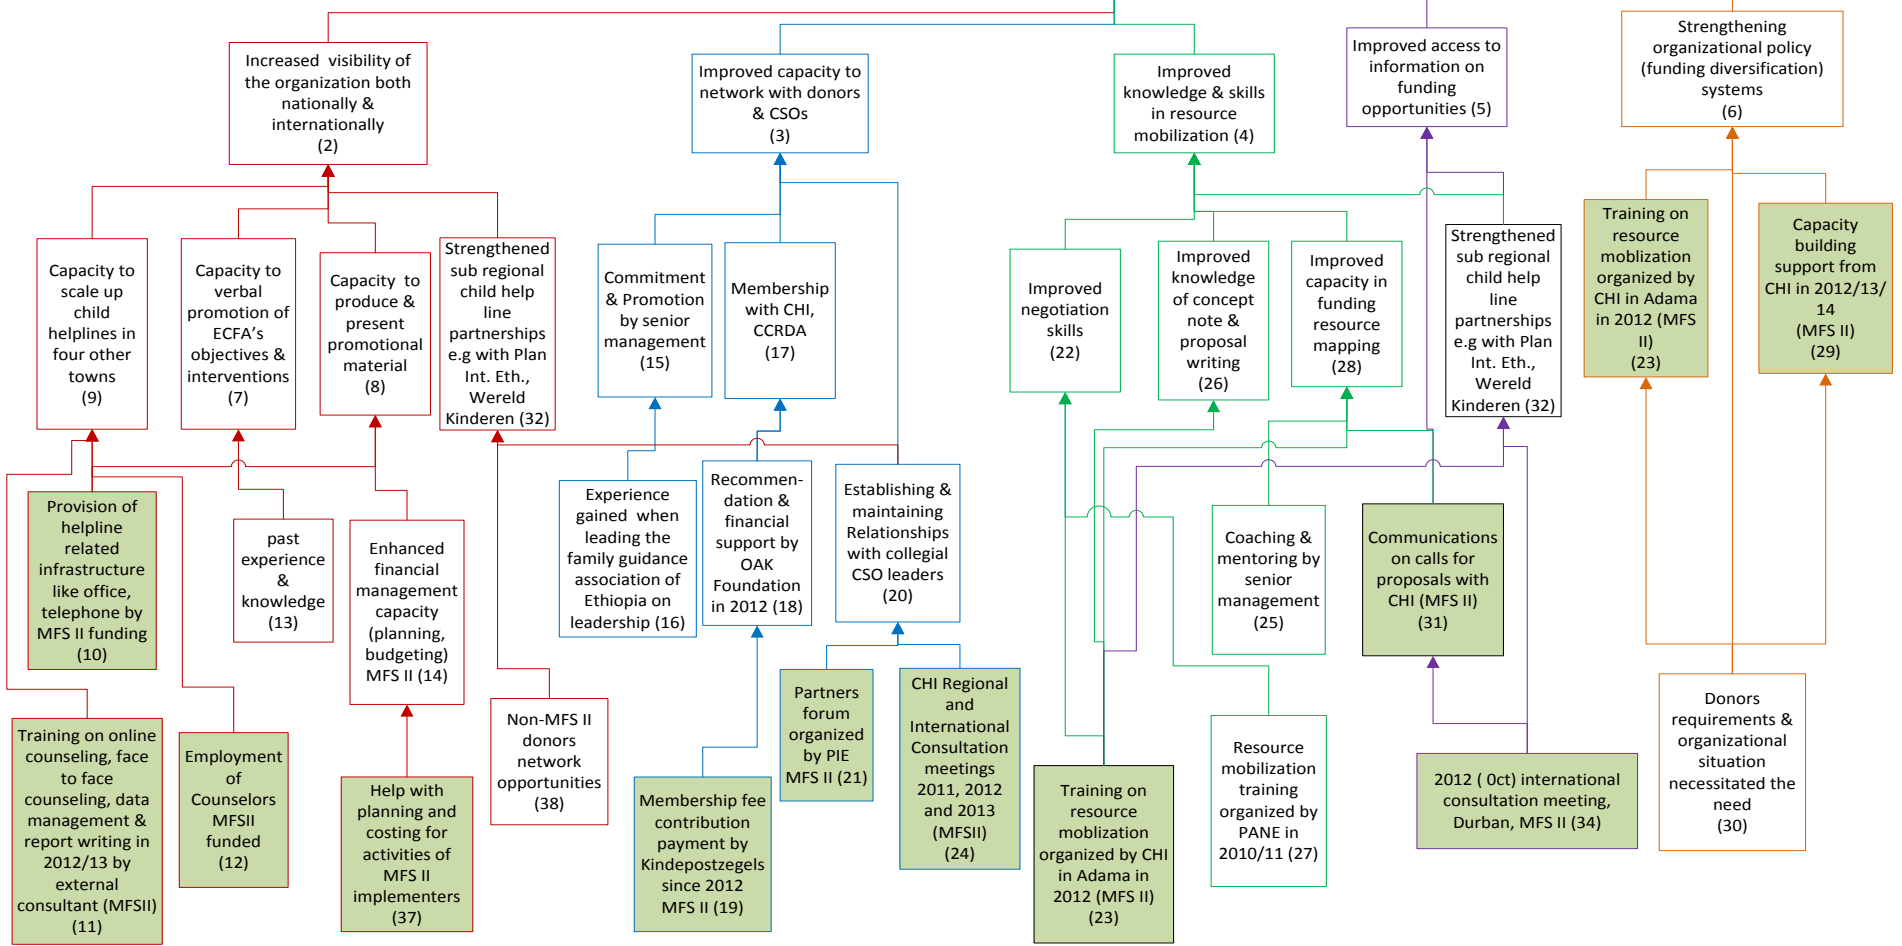

The last reason for the improved capacity to attract funds from multiple sources is the strengthened organizational policy systems (6) (*Source: endline workshop*), as a result of the capacity building support received by ECFA from CHI through the MFS-II programme for the period 2012, 2013 and 2014 (29) (*Source: endline workshop*) ECFA has created a positive attitude towards fundraising and established a policy to diversify funding sources and how to improve organizational branding and good governance. The Resource Mobilisation Training held in 2012 (23) and other capacity building support (29) helped in giving the skills needed to improve the organizational policy. The main pushing factors that necessitated this capacity building support were donor requirements and the organizational situation that necessitated improvement of the funding policy, focusing on diversifying the funding situation (30) (*sources: endline workshop; CHI Resource Mobilisation Training Report JANUARY 23RD TO 25TH 2012 ADAMA-ETHIOPIA*).

In addition, the different annual consultation meetings (24, CHI) and partner forums (21, PIE), at which ECFA participated with MFS II funding, were helpful for the overall improvement in resource mobilization, but it was difficult to associate directly to which change it is linked. Rather it was related with the overall change.

ECFA PT causal map on enhanced capacity to attract funds from multiple sources

Growing number of donors (35)
Additional funding for Child Helplines (36)

Enhanced capacity to attract funds from multiple sources (1)

4.3.2 Improved capacity to respond to child protection issues

Below you will find a description of the 'improved capacity to respond to child protection issues' and how this has come about. Numbers in the narrative correspond with numbers in the process tracing causal map further below.

ECFA endline workshop participants consider ECFA to have improved their capacity to respond to child protection issues since the baseline in 2012 [1]. Staff mentioned that this is even a major change that is directly associated with the goal of ECFA to which all interventions are geared to (*source: endline workshop*).

The staffs believe that this change happened because of:

1. A more lean, accessible and effective structure (3)
2. Improved program leadership and implementation capacity at all levels (5)

Each of these key change areas are further explained below.

1. A more lean, accessible and effective structure (3)

One of the reasons for the improved capacity to respond to child protection issues is a more lean, accessible and effective structure (3). In other words, ECFA has a good program structure that links to the grassroots level especially when handling the case referrals (i.e. victims referred for help). Clients (i.e., children) can now receive services from the organization easily and reports are easily submitted to ECFA from the city council and the *Kebele* (community) level (*source: endline workshop*).

This is due to improved physical infrastructure (2) (*source: endline workshop*), and having more staff (16). Staff mentioned that the physical infrastructure has improved due to having more offices and more office equipment (4), which is due to the progressive increment of the annual budget (6) (*source: endline workshop*). For example, the annual budget of ECFA before the baseline was 700,000 birr (about 28,000 Euro) but now it is about 4,000,000 (about 160,000 Euro). Since the organization has a better financial capacity this enabled ECFA to improve its infrastructure in terms of office space (i.e., five offices are under construction in five cities) and improvement in office facilities (4) (*source: endline workshop*). This way, ECFA is in a position to provide better child protection related services (1).

In addition to an improved physical infrastructure, the structure has also become more lean, accessible and effective because of an increase in staff number at all levels (that is, from the head quarter to the city, kebele and community levels) (16) (*source: endline workshop*). This was the result of having to cover an expanded project area which was supported by the increase in operational budget (6) (*source: endline workshop*).

2. Improved program leadership and implementation capacity at all levels (5)

Apart from the above-mentioned reasons, improved capacity to respond to child protection issues (1), can also be attributed to improved programme leadership and programme implementation capacity at all levels (5) (*source: endline workshop*).

The improved leadership and implementation capacity includes the capacity to run the child helplines (*sources: endline workshop; CFA assessment sheet B; 2011_Ethiopia Girl Power Annual Report 2011 CHI FINAL; 2011_Ethiopia Girl Power Annual Report 2011 CHI FINAL*): ECFA staff believes that their capacity to run the child helpline (CHL) has improved. Staffs have a better capacity now to help child abuse victims and give the required advice and to facilitate permanent rehabilitation of the victims.

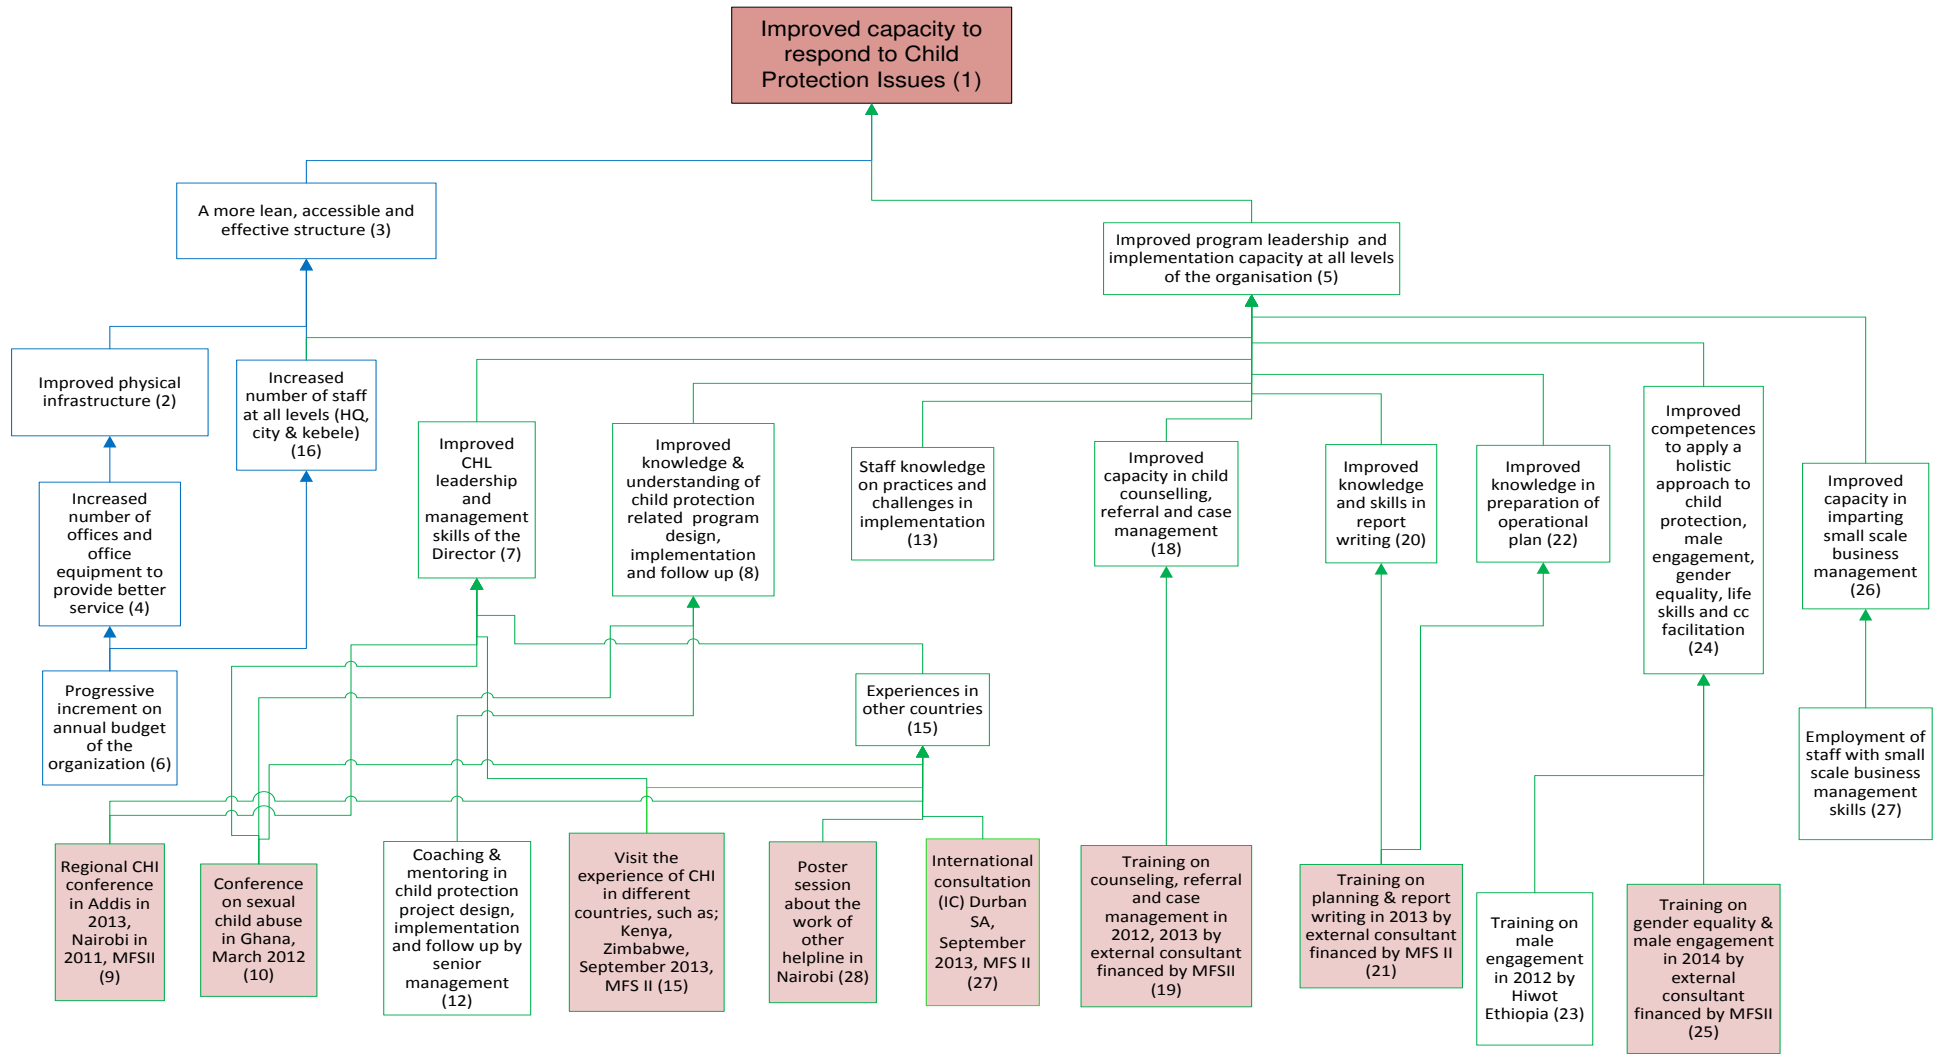

Staff present at the endline workshop indicated that the improvements in terms of leadership and implementation capacity (5) can be attributed to a variety of reasons. These are further described below:

- Increase in staff numbers at all levels (i.e., from the head quarter to the city, kebele and community level) (16) (*source: endline workshop*) to cover the expanded project area which was supported by the increase in operational budget (17) (*source: endline workshop*). This was also explained above. It is evident that having more staff helps in the coordination and implementation of the programs.
- Improved knowledge in leadership and programme management of the director (7): One of the reasons for ECFA's improved leadership and programme implementation capacity (5) is the improved knowledge and experience of the Director (7) (*source: endline workshop*), which is partly due to experiences he gained by visiting the programs of different countries (15) (*sources: endline workshop; CFA assessment sheet B; 2011_Africa RC Report 2011_Final (20111125); 2013 Ethiopia GP Country Projects Annual report ECFA for CHI*). The improved knowledge in terms of leadership and programme management of the Director(7), apart from his personal experiences, was also due to the Africa child helpline regional consultation meetings (MFS -II funded) in Addis Ababa in 2013, and in Nairobi in 2011 (9) (*sources: endline workshop; CFA assessment sheet B; 2011 Ethiopia Girl Power Annual Report 2011 CHI FINAL; 2011_Africa RC Report 2011 Final (20111125)*), and the conference on child abuse in Ghana, in March 2012 (10) (*sources: endline workshop; CFA assessment sheets A and B; Bi-annual progress report on the Girl Power programme January – June 2012*). The latter Conference was hosted by AMPCAN-Ghana (the CHI partner in Ghana). According to the CFA this conference helped to improve responses to children who contact the child helpline on matters related to sexual abuse (*source: CFA assessment sheet B*). The Regional Consultation meetings (9) offered the opportunity to learn from other child helplines (15) and also to learn ways in which the Ethiopia child helpline in Adama can be expanded (*source: 2011 Ethiopia Girl Power Annual Report 2011 CHI FINAL*). The international experiences included the CHI's Regional (9) and International Consultation meetings (27) (*sources: CFA assessment sheets A and B; CHI ic_report_2012 (Durban)*), where the Director could network and learn from the functioning and running of other Child helplines in general and more specifically from the poster session about the work of the various child helplines (28) and visiting the Child helpline in Nairobi (15) during the 2011 Africa Regional Consultation (RC) meeting (9), the 2012 visit to Childline KwaZulu-Natal (15) during the CHI International Consultation (IC) in Durban (27), and also the learning visit to Child line Zimbabwe in Sept 2013, (MFS-II funded) (15). According to the CFA, ECFA benefitted tremendously from their attendance to the Ghana Conference on Sexual abuse in 2012 (10), as well as to CHI's Regional (9) and International Consultations (27) because this provided an opportunity to network with other partners working in the area of child protection (*source: CFA assessment sheet A*). All of these international experiences are MFS-II funded activities by CHI.
- Staff knowledge about child protection related program design, implementation and follow up (8). This is cultivated by the Director and the newly hired experienced project manager through coaching and mentoring in child protection project design, implementation and follow (12) (*source: endline workshop*).
- Knowledge and practices and challenges in implementation of projects (13): in addition, staff indicated that the knowledge on practices and challenges in implementation of projects (13) also has a role which shouldn't be overlooked (*source: endline workshop*).
- Improved capacity in counselling, referral and case management issues (18) (*source: endline workshop*): the staff is now in a better position, in terms of knowledge and skills to offer counselling service to the cases that are referred to them by the city councils or other stakeholders. They believe they got this capacity through the training they received on counselling, referral and case management in 2012 and in 2013 by an external consultant financed by MFS-II (CHI) in Adama (19) (*Sources: endline workshop; 2012_Ethiopia Qualitative data report_(July – Dec 2012); 2013 Ethiopia*

GP Country Projects Annual report ECFA for CHI_2013). In this training, five child helpline (CHL) counsellors, three CHL assistants and other eight individuals from the head office participated. The training was offered with the objective of increasing the awareness of the target communities about the importance of ECFA's CHL for reporting and receiving services for child abuse cases.

- Improved knowledge and skills in report writing (20) (*sources: endline workshop*) Staff at the endline workshop state that they are now capable of preparing reliable plans and reports on time, which are mostly approved by stakeholders with minor comments. Though they had some knowledge on this before the baseline in 2012, they believe that the training that was given on planning and report writing in 2013 by an external consultant with financial support from MFS-II (21) (*sources: endline workshop*) helped in improving the quality of planning and reporting. This included collecting the required data for the reports.
- Improved knowledge in preparation of operational plans (monthly, quarterly, bi-annual and annual) (22) (*source: endline workshop*) This is again relates to the above, mainly, to the planning component and the skill development that is also as a result of the training on report writing given in 2013 by an external CHI consultant with financial support from MFS-II (21).
- Improved staff capacity in knowledge on child protection, male engagement, gender equality, community conversation (CC) facilitation and life skills (24) (*Sources: endline workshop; CFA assessment sheet B; progress report 2013*). This is holistic knowledge that was acquired by staff of ECFA, although they already had some knowledge on these issues. However, because of the training they received on male engagement in 2012 by Hiwot Ethiopia (Box: 23) (*source: endline workshop*) and the training on gender equality and male engagement in 2014 that was delivered by an external consultant with financial support of MFS-II (25) (*Source: endline workshop*), they stated that their knowledge has improved and that this was reflected on their implementation of CHI activities.
- Improved capacity in imparting small scale business management (26) (*Source: endline workshop*). This is a capacity, which is not directly related to the implementation of CHLs. However, since it is believed that one cause which is forcing children to be exploited for labour (i.e., child labour) is poverty within the family. Therefore, if the income of the parents raising the child is improved, there is high chance that children will get the opportunity to concentrate on their education with less probability of being exploited for labour. With this understanding, ECFA decided to build its capacity in imparting small scale business management (26) and this was done by employing a staff with knowledge of small scale business management skills (27) (*Source: endline workshop*). The budget for this activity was from ECFA's pooled funding, to which MFS-II has also contributed.

ECFA- Child Protection issues causal map (final) - draft

4.3.3 Improved capacity to implement M&E & provide quality M&E information

Below you will find a description of the 'improved capacity to implement M&E and provide quality M&E information' and how this has come about. Numbers in the narrative correspond with numbers in the process tracing causal map further below.

Both ECFA endline workshop participants as well as the Dutch CFA (CHI) Programme Officers consider ECFA staff to have improved their capacity to implement M&E & provide quality M&E information (1) (*sources: endline workshop; CFA assessment sheets A and B*), although staff present at the endline workshop do not consider the change as significant as the other two outcome areas (improved fundraising capacity and improved capacity to respond to child protection issues).

In terms of change what they consider as observable are: first, staff who used to work as the program officer is now transferred to the M&E unit to handle only M&E related tasks. Second; before the baseline, survey data used to be collected using case register formats in hard copy but now it is automated using an electronic data base management system. This has made information sharing to all interventions easier.

According to the staff key factors contributing to these changes can be detailed as follows:

1. Creation of an M&E unit and the assignment of a dedicated M&E officer (2)
2. Improved knowledge and skills in identifying and collecting data for all intervention areas (3)
3. The use of a digital system for data management (4)

These key factors are further explained below.

1. Creation of an M&E unit and assignment of a dedicated M&E officer (2)

The first reason for the improved M&E capacity of ECFA is having an M&E unit with a dedicated M&E officer handling M&E issues (2) (*sources: endline workshop; CFA assessment sheets A and B*). This person was earlier working in ECFA as Program Officer and therefore he is knowledgeable about the organization, and this is considered an advantage. The creation of the unit was the result of a capacity assessment carried out by Plan International (MFS-II funding) during a country wide baseline survey in 2011 (5) (*sources: endline workshop; Annex A GP Monitoring Protocol (revised 2013)*). The assessment identified the lack of a separate M&E unit as a gap and recommended its formation. The recommendation of the survey matched the need of ECFA to have an M&E unit (6) (*source: endline workshop; MFSII 5C baseline report*) and thus this unit was established.

2. Improved knowledge and skills in identifying and collecting data for all interventions (3)

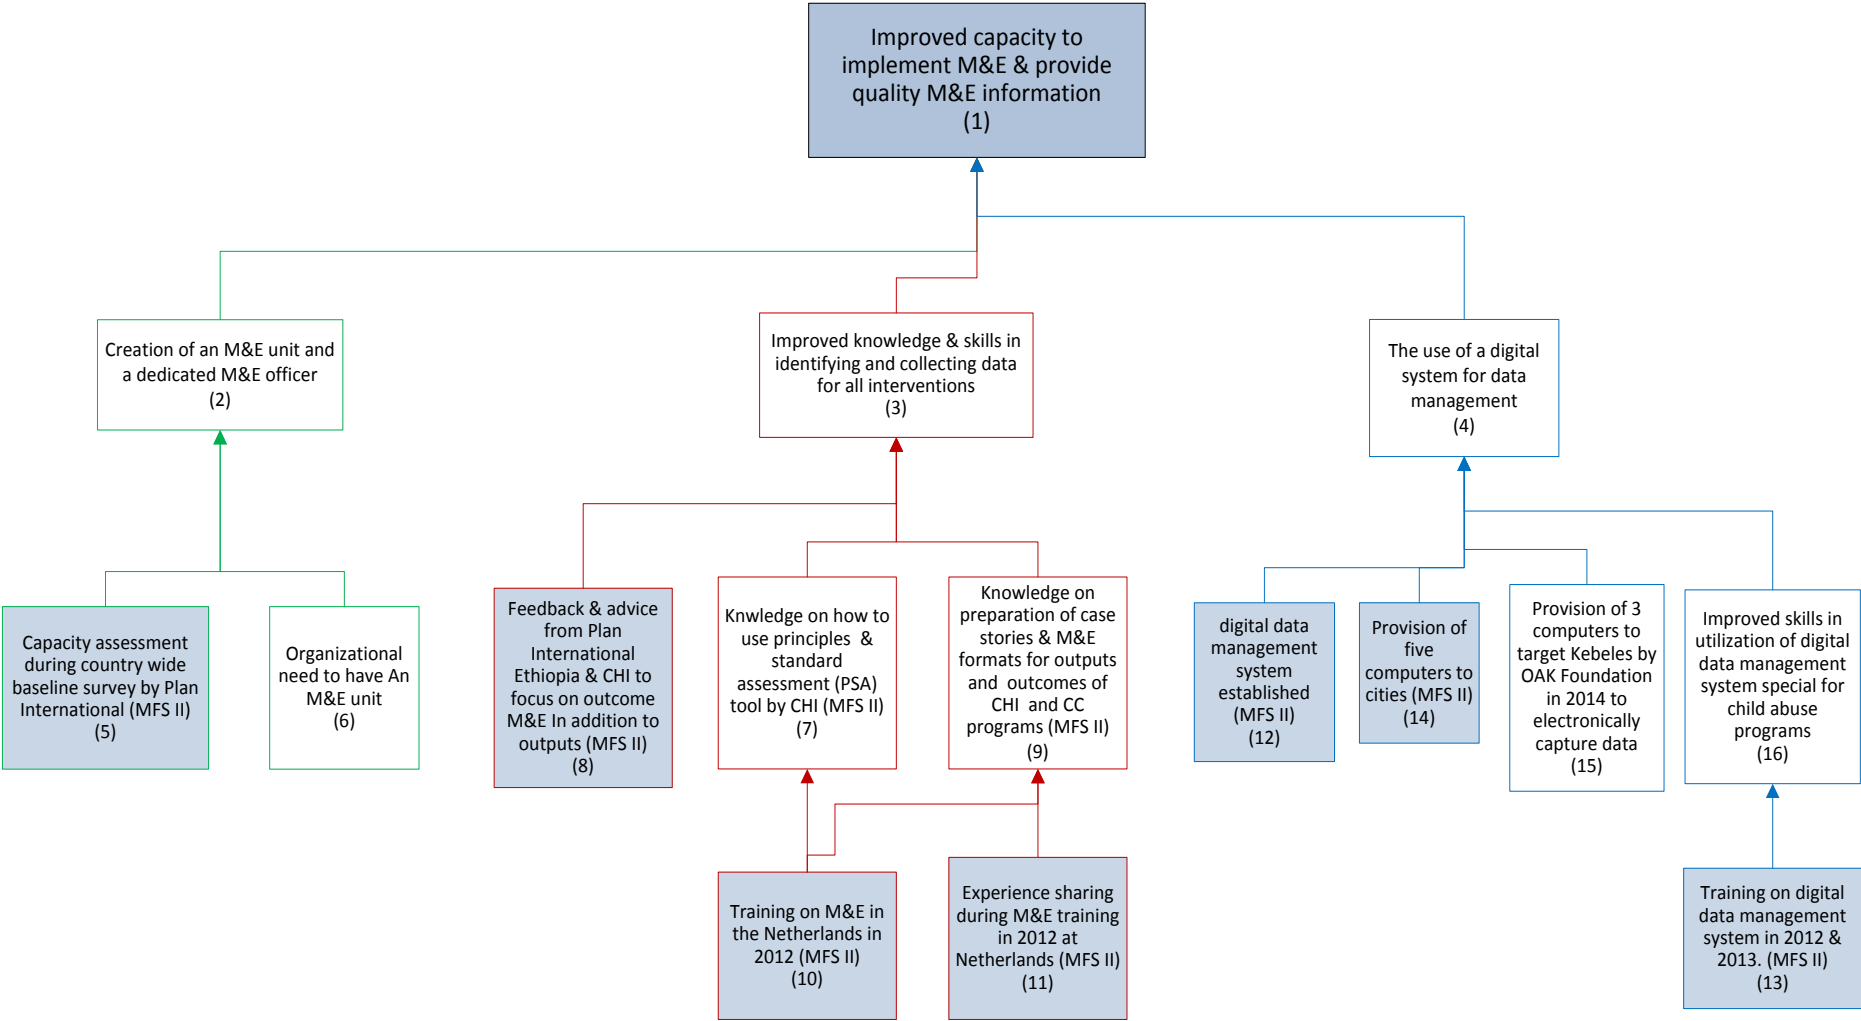

The second reason for the improved M&E capacity of ECFA is the improved knowledge and skills in identifying and collecting data for all interventions (3) (*Source: endline workshop; CFA assessment sheet A and B; REPORT Girl Power ME workshop CHI; 2012_Ethiopia CRA Annual report Ethiopia 2012 CHI*). Previously data was collected for a limited number of issues or indicators and from limited sources. Now it has become possible to identify and collect data about all aspects of children and interventions to change their conditions. In addition, data on outcomes has started to be collected. Earlier it was mostly output related data that was collected. This happened because Plan international and CHI advised and gave feedback to ECFA to focus on outcomes in addition to outputs (8) (*Source: endline workshop; proposal -PIE 2012; REPORT Girl Power ME workshop CHI; Annex A GP Monitoring Protocol (revised 2013)*). In addition, also the knowledge on preparation of case stories and M&E formats for CHI and CC (Community Conversation) programs (9) (*Sources: endline workshop; CFA assessment sheet A and B*) helped ECFA to improve their knowledge and skills in identifying and collecting data about all interventions (3). This knowledge was built by the M&E training that one staff of ECFA received in 2012 in the Netherlands. The training was organised by CHI as part of the MFS-II Girl Power Programme capacity building interventions (10) (*Source: endline workshop; CFA assessment sheet A and B; REPORT Girl Power ME workshop CHI; 2012_Ethiopia CRA Annual report Ethiopia 2012 CHI*). The experience sharing among the various child helplines during the same training contributed to the increased knowledge by ECFA staff (11) (*Sources:*

endline workshop; CFA assessment sheet A and B). The training focused on organizational and programmatic capacity building (i.e., 5Cs) and the use of the annually collected Principles and Standards Assessment (PSA) tool designed for CHI's members (7) (*Sources: CFA assessment sheet B; 2011_Africa RC Report 2011_Final (20111125); REPORT Girl Power ME workshop CHI; Ethiopia PSA Tool; Ethiopia Membership Agreement*). The training equipped ECFA with tools on how to measure outputs and outcomes of child helplines in the Girl Power Programme (9); and also on how to operationalize the M&E budget, incorporating clear time planning of the M&E cycles with a definition of roles and responsibilities. The participation of other CHI MFS-II partners also contributed to increased learning for ECFA, as a result of the sharing of knowledge, ideas and best practices (11).

3. The use of a digital system for data management (4)

Another reason for the improved M&E capacity of ECFA is the use of a digital system for data management (4) (*sources: endline workshop; 2012_Ethiopia CRA Annual report Ethiopia 2012 CHI 2013 Africa PDRC Report – FINAL*). Data collection, analysis and sharing of child abuse programs are now automated. Therefore, it is now possible to digitally collect and share data. With financial support from Plan International Ethiopia, ECFA developed a database for the Child Helpline (12) (*sources: endline workshop; 2012_Ethiopia CRA Annual report Ethiopia 2012 CHI 2013 Africa PDRC Report - FINAL*), and installed five new computers in the five call centres in Adama region (14) (*sources: endline workshop; 2012_Ethiopia CRA Annual report Ethiopia 2012 CHI*). This was complemented by three computers provided by OAK Foundation in 2014 to facilitate the digital data collection (15) (*source: endline workshop*). These being the physical infrastructure part of the capacity building, the knowledge and skills in the use of the digital data management system specially for child abuse programs were improved (16) (*sources: endline workshop*) with a training on data management in Adama delivered in 2012 and 2013 with the support of MFS-II funding (13) (*sources: endline workshop*). In this training (13) the way of properly using the electronic data base during data recording, analysis and reporting were clarified by the consultant who developed the data base (*source: 2012_Ethiopia Qualitative data report*). All these efforts and interventions, improved the capacity to utilize digital data management for child abuse programs. The organization plans to use this capacity to create a resource center which can be used by graduate students while doing their thesis.

ECFA PT
causal map on outcome area of M&E

5 Discussion and conclusion

5.1 Methodological issues

In preparation for this MFS-II endline evaluation, the Ethiopian 5C assessment team contacted, through telephone, ECFA's general manager located in the organizations HQs in Adama city to explain the process and the objective of the 5C endline assessment. In addition, the team also sent through the "support to capacity development sheet" to be filled by ECFA staff.

Thereafter, two field visits were made by the assessment team to the study area. During the first visit, the self-assessment workshop was conducted with a total of 13 participants and ECFA staffs were asked to fill the self-assessment form in their respective five subgroups, namely, management (1), program (1), M&E (1); HRM and administration (2) and field staff (2). Thus, seven ECFA staff members participated in the endline workshop, and five of these staff were also present during the baseline. Since HRM and administration were unable to fill the form on their own, the assessment team combined the self-assessment with a face-to-face interview. This was followed by a brainstorming session to develop a general casual map that explained the key organisational capacity changes that had happened in ECFA since the baseline in 2012. During the same visit, an interview was conducted with one representative from each subgroup to triangulate the information collected through the self-assessment and to better understand the organisational capacity changes in ECFA since the 2012 baseline. This was done after the 5C assessment team reviewed the completed self-assessment forms.

The second visit was carried out in order to conduct the process-tracing workshop. In the process tracing workshop, the result of the self-assessment workshop were presented to the workshop participant, and three organisational capacity change areas were identified based on the review of the various documents received from the SPO and CFA. First, the participants were asked if they were in agreement with the assessment team's findings in relation to the key organisational capacity changes, since those changes would be the focus of the process tracing workshop. These were organisation capacity changes within the capability to act and commit, and the capability to adapt and self-renewal and could possibly be linked to MFS-II capacity development interventions.

The process tracing exercise helped to get the information for the description of changes in organisational capacity, and the attribution of changes in capacity of ECFA to specific factors and (MFS-II and non-MFS-II funded) the capacity development interventions. The pathways for change were developed with workshop participants before showing them the pathways prepared by the Wageningen 5C assessment team.

After reviewing the pathway with the workshop group, the Ethiopian assessment team asked the participants to verify the differences between theirs and what was prepared by the Wageningen assessment team. The final pathway included the information that was verified by the SPO.

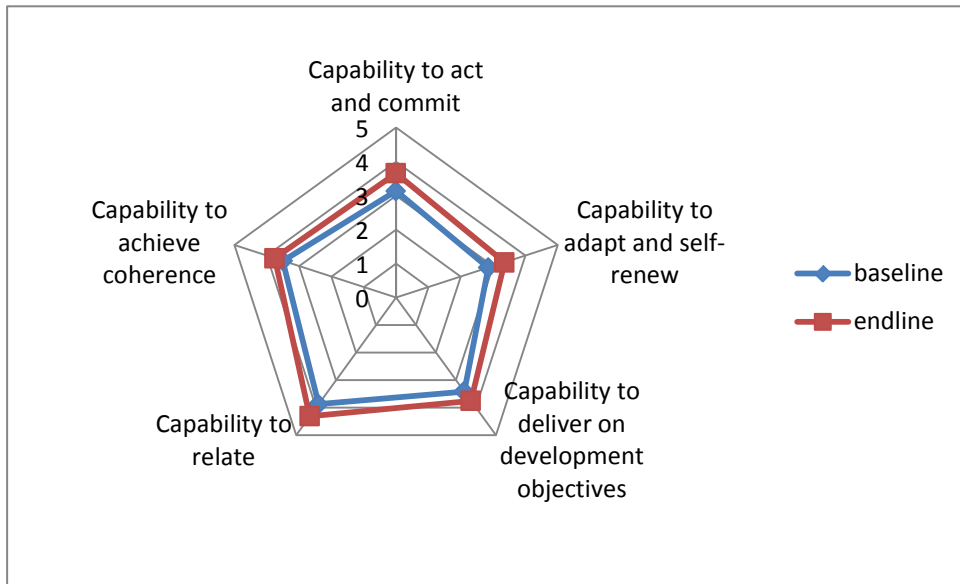

The plan of the evaluation team to conduct two interviews with ECFA partners partially materialized because it was only possible to have one interview. Another interview was not possible because of the availability of the partner due to partner's busy schedule.

By and large, there has been a lot of information available to be able to do adequate data analysis.

5.2 Changes in organisational capacity development

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Below the changes in each of the five core capabilities are further explained, by referring to the specific indicators that changed. In all of the above capabilities, there were noticeable improvements.

Over the last two years, many improvements took place in the indicators under the capability to act and commit. Leadership has delegated tasks of monitoring and implementation to appropriate staff so that the Director can focus more on programs and working on assuring proper leadership. Staff can now attend board meetings to let their voice be heard. There is now a division between administrative and program issues in the organisational structure, which allows the Director to focus on providing organisational directions to his staff. The revised organisational structure also provides more clarity for staff on their roles and responsibilities. ECFA has improved its strategies to retain staff and the hiring of new staff has lightened the work burden for existing staff. Salaries have increased and there is still a lot of freedom at work for staff. New staff members are qualified and existing staff has had the opportunity to attend trainings on resource mobilisation and M&E. In the CHI consultative meetings, which are considered as trainings, the Executive Director usually attends. The organisation improved very slightly on articulating its strategies, due to improved M&E on which these strategies are based. Daily operations are now slightly more in line with strategic plans because there are review meetings to adapt plans and stakeholders are invited to the annual planning meetings. ECFA has been receiving funding from five (5) different funders but the amount has drastically increased between 2011 and 2015. Although there are no written funding procedures, the organisation recently allocated budget to support fundraising and showcasing its work.

In the capability to adapt and self-renew, ECFA also improved in many indicators. The organisation improved its M&E application because they now have a dedicated M&E person and are having regular review and planning meetings for projects and organisational activities with stakeholders and staff. Currently, in monitoring and supervision, different tools are used and M&E formats have been developed. There is now an M&E officer, and this person is skilled and can coach the other ECFA staff. ECFA is making more use of the CHI Principles and Standards Assessment to assess the quality of its work and they use biannual review meetings to plan for the next six (6) months. The frequency of critical reflection meetings went up, as the meetings are now held on a weekly basis and are in the hands of the program

department instead of the Director. As there are more meetings, there are more opportunities for staff to share their ideas and there is a more free flow of ideas between different departments. ECFA has become more responsive to especially the Bureau of Women's and Children Affairs Office, which is one of their major stakeholders.

In terms of the capability to deliver on development objectives, ECFA shows some improvement in almost all indicators. There are new guidelines in place to minimise operational costs and in this way become more cost-effective. ECFA has been delivering outputs in a more timely fashion because of restructuring of the program department and recruitment of new staff. The organisation has better organised its way of getting feedback from beneficiaries through having a social worker in each Kebele. These social workers are hired to engage with beneficiaries in ECFA's project areas. Through the organisational restructuring, new qualified staff has been hired that has been better able to balance efficiency and quality.

In the capability to relate, ECFA has improved as well. The organisation has improved its network with beneficiaries and stakeholders and these continue to be engaged in ECFA's project planning. ECFA has formed strong local networks with the community, the Bureau of Women's and Children Affairs, regional finance offices and the social affairs office. Having a social worker in all the kebeles that ECFA works, has helped ECFA to connect more with their target groups. In terms of relations within the organisation, there are new weekly Monday morning meetings which have been good for the working relations among staff and have stimulated mutual sharing.

Finally, ECFA has improved in one of the indicators under the capability to achieve coherence. Since the baseline a number of operational guidelines and manuals have been developed, e.g. financial guidelines, admin and HR manual.

During the endline workshop, some key organisational capacity changes were brought up by ECFA's staff, namely: improved capacity for partnerships and networking with a large number of stakeholders; improved resource mobilization capacity; improved capacity to reach a larger number of beneficiaries; improved capacity to implement livelihood improvement activities; and improved leadership and management capacity. ECFA staff experienced these as the most important capacity changes within the organisation since the 2012 baseline. The assessment team considered it important to also note down the SPO's story as this would also provide more information about reasons for change, which were difficult to examine from the individual indicators. Also for some issues, there may not have been relevant indicators available in the list of core indicators provided by the evaluation team.

According to ECFA staff that were present at the endline workshop, the improvement in the capacity for partnerships and networking with a large number of stakeholders was due: to lobbying and improved communication skills within the organisation, and renewing its memberships with different networks and associations such as CCRDA and CHI. ECFA improved its lobbying and communication skills as a result of opportunities created by CHI in linking the organisation with its networks and partners and because of the previous experience of ECFA that also created opportunities. This latter happened mainly because of the training organised on lobby and advocacy in Ethiopia by PANE in 2010.

The resource mobilisation capacity of ECFA improved because of the identification of the need and the recommendations to diversify and increase ECFA's financial resources; and improved capacity in preparing convincing proposals. The identification of the need was done by a consultant who did an assessment of the situation of Gender Based Violence in 2012 (funded by MFS-II). ECFA improved its proposal writing capacity because of a training on resource mobilisation by CHI in December 2012 (funded by MFS-II); a training on project cycle management by COPION in 2013; hiring qualified staff (partially funded by MFS-II); and improved capacity to identify the needs of the community. This capacity change is further detailed in the detailed causal map, generated through process tracing, on improved resource mobilisation capacity.

ECFA improved its capacity to reach a larger number of beneficiaries because of its enhanced capacity in preparing convincing proposals (as explained above) and its improved community mobilisation capacity. This last capacity improved because of ECFA's intensified capacity to design people engagement

strategies, which in turn was triggered by the recommendations of a multi-sectorial project evaluation conducted in 2010.¹³

The organisation furthermore improved its capacity to implement livelihood improvement activities because of the attention of ECFA to deploy livelihood interventions geared towards income generation activities (IGAs). ECFA focussed on this because of a demand of communities and government to work on IGAs.

Finally, the organisation felt it improved its leadership and management capacity because of its enhanced follow-up and supervision, past experience of the leadership and donor feedback and financial support. Manuals on organisational and operational management, and donor feedback helped in improved follow-up and supervision.

All in all, there is some mention of MFS-II funded capacity development interventions which helped in enhancing the capacity to write convincing proposals, which is related to improved resource mobilisation capacity and improved capacity to reach a large number of beneficiaries. External factors have played a role in these organisational capacity changes as experienced by ECFA, i.e. trainings funded by other organisations; evaluation recommendations (2010); and inputs from government, communities and other funders. To a lesser extent, internal factors played a role, such as organisational and operational manuals. During process tracing, these and more MFS-II funded interventions have clearly come up and we therefore refer to Section 5.3, where the role of MFS-II funded capacity development interventions in organisational capacity changes of ECFA will be further explained.

5.3 Attributing changes in organisational capacity development to MFS II

This section aims to provide an answer to the second and fourth evaluation questions:

1. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS-II consortia (i.e. measuring effectiveness)?*
2. *What factors explain the findings drawn from the questions above?*

To address the question of attribution, it was agreed that for all the countries in the 5C study, the focus would be on the capability to act and commit and the capability to adapt and self-renew, with a focus on MFS-II supported organisational capacity development interventions that were possibly related to these capabilities. 'Process tracing' was used to get more detailed information about the changes in these capabilities that were possibly related to the specific MFS-II capacity development interventions. The organisational capacity changes that the assessment team focused on are:

- improved fundraising capacity
- improved capacity to respond to child protection issues
- improved capacity to implement M&E and provide quality M&E information

The first two organisational capacity changes fall under the capability to act and commit. The last one - M&E falls under the capability to adapt and self-renew. The organisational capacity change areas that were chosen are based on document review as well as discussions with the SPO and CFA. Each of these organisational capacity changes is further discussed below.

¹³ End-evaluation of the project "Multi-sectoral responses against child sexual abuse in Adama city", 2007-2009 (funded by OAK foundation).

The following issues are discussed for the MFS II funded activities that are related to the above mentioned organisational capacity changes:

- a. Design: the extent to which the MFS II supported capacity development intervention was well-designed. (Key criteria: relevance to the SPO; SMART objectives)
- b. Implementation: the extent to which the MFS II supported capacity development was implemented as designed (key criteria: design, according to plans during the baseline);
- c. Reaching objectives: the extent to which the MFS II capacity development intervention reached all its objectives (key criteria: immediate and long-term objectives, as formulated during the baseline);
- d. the extent to which the observed results are attributable to the identified MFS II supported capacity development intervention (reference made to detailed causal map, based on 'process tracing').

Please note that whilst (d) addresses the evaluation question related to attribution (evaluation question 2), the other three issues (a, b and c) have been added by the synthesis team¹⁴ as additional reporting requirements. This was done when fieldwork for the endline process had already started, and therefore inadequate information is available on this. But again, it wasn't the purpose of this 5C evaluation.

Improved fundraising capacity

The following MFS II capacity development interventions supported by ECFA were linked to the key organisational capacity change "improved fundraising capacity":

1. Training on online counseling, face to face counseling, data management & report writing in 2012/13 by external consultant (11)
2. Partners forum organized by Plan International Ethiopia (PIE) (21)
3. CHI Regional (RC) and International Consultation (IC) meetings in 2011 (Nairobi), 2012 (Durban) and 2013 (Addis) (24)
4. Training on resource mobilization organized by CHI in Adama in 2012 (23)
5. CHI International Consultation (IC) meeting, Durban, Oct. 2012 (34)
6. Help with planning and costing for activities of MFS II implementers (37)

The above mentioned MFS II funded capacity development interventions are included in the causal maps and narratives, since, during process tracing, a link was established between these MFS II supported capacity development interventions and the organisational capacity change area "improved fundraising capacity", and they came up during document review, endline workshop, interviews and self-assessments.

1. Training on online counseling, face to face counseling, data management & report writing in 2012/13 by external consultant (11)

This capacity development intervention was mentioned during the endline workshop in relation to fundraising capacity, because according to participating ECFA staff, this had contributed to scaling up child helplines to four other towns, thus contributing to increased visibility of the organization which helped to increase the capacity for fundraising. Visibility in the region, as well as resource mobilization, was considered very important in the Theory of Change (ToC) developed during the MFSII 5C baseline survey, which indicates that this intervention was very relevant. However, no further details are known. These might have been a series of interventions, together contributing to scale up child helplines, e.g. training on "counseling, referral and case management" in 2012 and 2013, and "training on planning and reporting" in 2013, both mentioned and discussed under "improved capacity to respond to child protection issues". The 5 C evaluation team has not been able to clarify this issue. Because no further details are known, this cannot be further analysed here.

¹⁴ The synthesis team is the team that is overseeing the process and "synthesizes" all the MFS II evaluations for the MDG, 5 C as well as the Civil Society evaluations carried out in all countries subject to this MFS II evaluation.

2. *Partners' forum organized by Plan International Ethiopia (PIE) (21)*

Design

This intervention was not mentioned as planned for during the baseline survey, although Plan International support with the Girl Power Programme was mentioned in general during the baseline. Probably the “annual reflection meetings” organized by Plan International Netherlands and Plan International Ethiopia in which ECFA participated are referred to here. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. During the endline the objectives given to organise these meetings were “to review progress and identify gaps in the implementation of the Ethiopia Girl Power Programme, and jointly with all Child Rights Alliance partners - Dutch Country Steering Committee (CSC) and also those in the Ethiopia CSC - to seek ways to address the challenges within the Ethiopia Girl Power Program” (immediate objective), and “as a result of the interventions under the Girl Power Programme (increased knowledge and policy actions), increased protection of girls in Ethiopia” (longer term expectation).

This capacity development intervention was mentioned during the endline workshop in relation to fundraising capacity, because, according to participating ECFA staff, this had contributed to establish and sustain its collegial relationships with leaders of other CSOs, which helped to network with donors. Resource mobilization and membership of networks were mentioned as important in the Theory of Change (ToC) developed during the MFSII 5C baseline survey, so this intervention was relevant to the organisation.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected immediate and long term effects of the interventions.

Implementation

These reflection meetings are organised annually. The executive director of ECFA participates. Topics dealt with include: review of progress in the implementation of the Ethiopia Girl Power Programme; identify gaps in implementation; jointly, find solutions to fill in the implementation gaps; agree on the way forward to improve implementation, address the gaps and the challenges. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, and are explained in the detailed causal map. Not having objectives that were defined as SMART objectives makes it difficult to assess this issue. However, based on the process tracing causal map it can be said that participation in these meetings resulted in establishing and sustaining collegial relationships with leaders of other CSOs, which improved the capacity to network with donors. However, this was not an explicit objective of this intervention. To what extent the objectives of the intervention have been reached cannot be assessed not having objectives formulate in a SMART way

4. *Training on resource mobilization organized by CHI in Adama in 2012 (23)*

Design

This intervention was planned during the baseline. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. During the baseline the objective given for this training was to put ECFA in a better position to solicit funds for the expansion and improvement of the ECFA child helpline service. The longer term expectation was to generate additional funding for the child helpline.

To develop a resource mobilization strategy was mentioned as important in the Theory of Change (ToC) developed during the MFSII 5C baseline survey, so this was relevant to the organisation.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected immediate and long term effects of the interventions.

Implementation

The training was conducted in Adama, Ethiopia, in January 2012. The executive director, program manager and a program officer participated. Also staff members from organisations managing child helplines in Uganda, Mozambique, and Malawi participated. Topics dealt with include: Understanding Resource Mobilisation; Current Trends and realities on the fundraising scene; Governance, Transparency and Accountability; Different Techniques of Resource Mobilisation; and Developing and Implementing an Effective RM Strategy. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

The focus of this evaluation has been the role of the MFS II funded capacity development interventions in the key organisational capacity changes that were identified, and are explained in the detailed causal map. Not having objectives that were defined as SMART objectives makes it difficult to assess this issue. However, based on the process tracing causal map it can be said that the training resulted in improved capacity in negotiation skills, improved knowledge of concept note & proposal writing; improved capacity in funding resource mapping; and strengthened sub regional child help line partnerships. These have led to improved knowledge & skills in resource mobilization, and improved access to information on funding opportunities. Furthermore, ECFA has managed to find additional funding. Therefore, it can be concluded that immediate as well as long term objectives have been achieved, even though these subjects were not formulated in a SMART way.

3. *CHI Regional (RC) and International Consultation (IC) meetings in 2011 (Nairobi), 2012 (Durban) and 2013 (Addis) (24)*

5. *CHI International Consultation (IC) meeting, Durban, Oct. 2012 (34)*

Design

This capacity development intervention was planned for during the baseline according to the CFA, although this was not mentioned in the baseline report. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. During the endline process, it was indicated by the CFA that the immediate objective of these interventions is to keep the network running and vibrant, exchange and increase knowledge on the role of child helplines in child protection, share ideas and best practices, and make contact with other actors working in this field. The long term objective was formulated as "more co-operation between ECFA and agencies in the region, this may be in the form of the exchange of technical expertise or funding opportunities."

These consultation meetings were not mentioned as such in the Theory of Change (ToC) developed during the MFSII 5C baseline survey. However, strong and expanding networks are mentioned as important in the ToC, therefore this intervention can be considered as relevant.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). However, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

Once every two years (uneven years) a CHI Regional Consultation (RC, African CHI countries) meeting is organised (in 2011 in Nairobi and in 2013 in Addis Ababa), and once every other two years (even years) an International Consultation (IC, worldwide CHI countries) meeting is organised. Usually ECFA's director participates at these meetings. In 2013, when the RC was held in Addis Ababa, 3 staff participated, including the director. The reason for mentioning the Durban meeting separately is that discussing funding models and fundraising for new helplines was a special subject at this meeting. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. However, not having SMART objectives makes it difficult to assess this. Based on the "improved fundraising capacity" process tracing causal map it can be said that this meeting has led to establishing & maintaining relationships with colleague CSO leaders, which was important for an improved capacity to network with donors and other CSOs. The CFA confirms that ECFA now collaborates with more partners in Ethiopia and elsewhere.

The Durban workshop resulted also in capacity in funding resource mapping. In relation to the fundraising capacity it can be said that the immediate and long term objectives of establishing and maintaining networks, have been reached.

6. Help with planning and costing for activities of MFS II implementers (37)

This capacity development intervention was mentioned during the endline workshop in relation to fundraising capacity, because according to participating ECFA staff, this had enhanced their financial management capacity (planning and budgeting) which enabled them to produce and present promotional materials, such as leaflets, flyers, etc. and the Oromia radio program. This increased their visibility, including to potential donors. Because the only information available comes from the endline workshop and no further details are known, this cannot be further analysed here.

Attribution of observed results to MFS II capacity development interventions

The improved fundraising capacity is due to:

1. Increased visibility of the organization both nationally and internationally (2)
 2. Improved capacity to network with donors & CSOs (3)
 3. Improved knowledge and skills in resource mobilization (4)
 4. Improved access to information sharing on funding opportunities (5)
 5. Strengthened organizational (funding diversification) policy systems (6)
- (Please see also 4.3.1)

The first two changes can partly, and the last three can to a large extent be attributed to MFS II supported capacity development interventions. This is further explained below.

1. The increased visibility of the organization both nationally and internationally can be attributed to:
 - a. the capacity to scale up Child Helpline activities in 4 other towns which can be fully attributed to MFS II supported capacity development interventions, i.e. the training on online counselling, face to face counselling, data management, and report writing in 2012 and 2013, child helpline related infrastructure, such as telephones and the employment of counsellors, all MFSII funded.
 - b. the improved capacity to communicate ECFA's objectives and interventions verbally, which can only be attributed to experience gained in the past.
 - c. the enhanced capacity to produce and present promotional materials, which can be fully attributed to MFS II supported capacity development interventions, i.e. the new infrastructure provided and the enhanced financial management capacity (planning and budgeting) of ECFA. These improved due to the interaction with MFS II implementers who helped to plan activities and cost them accordingly.
 - d. In addition, increased visibility of the organisation can also be attributed to the strengthened sub-regional child helpline partnerships e.g. with CHI/Plan Int., Wereld Kinderen, Oak foundation and COPION Int. (32). This is partly due to MFS II supported capacity development interventions, i.e. all the network opportunities that were provided like the PIE forum and the regional and international consultation meetings.

2. The improved capacity to network with donors & CSOs, can partly be attributed to the network opportunities provided with MFS II funding, such as financial support for membership of networks Partner forum, and the regional and international consultation meetings. On the other hand, this can be attributed to the commitment & promotion by senior management, because of the experience he gained in playing a leadership role in the family guidance Association of Ethiopia.

3. The improved knowledge & skills in resource mobilization can, to a large extent be attributed to MFS II supported capacity development interventions, notably the resource mobilisation training by CHI. This helped to improve competencies in terms of negotiation skills, proposal development and funding resource mapping. The improved negotiation skills can also be attributed to a resource mobilisation training by PANE in 2010/11, whilst the funding resource mapping has been further strengthened through coaching and mentoring by senior management.

4. Improved access to information on funding opportunities can be attributed to the strengthening of the sub regional helpline partnerships, which resulted from the international consultation meeting in Durban (MFS II) in 2012, the resource mobilisation training (MFS II) in Adama in 2012, but also from communications on funding proposals with CHI (MFS II). Therefore this change can be almost entirely attributed to MFS II supported capacity development interventions.

5. The strengthened organizational (funding diversification) policy systems can to a large extent be attributed to MFS II supported capacity development interventions: in the first place the capacity building support received by ECFA from CHI through the MFS-II programme for the period 2012, 2013 and 2014, has created a positive attitude to fundraising and led to establishing a policy to diversify funding sources and improve organizational branding and good governance. Secondly, the Resource Mobilisation Training held in 2012 helped in giving the skills required to improve the organizational policy. The main reasons that necessitated this capacity building support for the improvement of the funding policy were Donor requirements and the organisational need to diversify funding.

On the whole it can be said that ECFA's improved fundraising capacity can to a large extent be attributed to a range of MFS II supported capacity development interventions, including: training on counselling, data management and reporting; training on resource mobilisation; PIE partners forum; regional and international consultation meetings; support from the CHI in funding proposals (through email communication); helpline infrastructure, employment of councillors, and general capacity development support of the CFA like helping with planning and costing of activities and for fundraising policies. All of this has helped the organisation expand to 4 other towns and thereby become more attractive to donors. Other factors to which these changes can be attributed include: experience gained in the past and in other activities; resource mobilisation training by PANE; and coaching and mentoring by senior staff and management. The underlying reasons for change included donor requirements and the need to diversify funding, which triggered the organisation to develop a policy on diversifying its funds.

Improved capacity to respond to child protection issues

The following MFS II capacity development interventions supported by ECFA were linked to the key organisational capacity change "improved capacity to respond to child protection issues":

1. Regional CHI consultation (RC) conferences in Addis in 2013 & Nairobi in 2011 (9)
2. Second International Conference on Child Sexual Abuse in Ghana, March 2012 (10)
3. Visit the experience of CHI in different countries, such as; Kenya, Zimbabwe, September 2013 (15)
4. International consultation (IC) conference Durban SA, September 2013, (27)
5. Training on counselling, referral and case management in 2012, 2013 by external consultant (19)
6. Training on planning & report writing in 2013 by external consultant (21)
7. Training on gender equality & male engagement in 2014 by external consultant (25)

The above mentioned MFS II funded capacity development interventions are included in the causal maps and narratives, since, during process tracing, a link was established between these MFS II supported capacity development interventions and the organisational capacity change area "improved capacity to respond to child protection issues", and they came up during document review, endline workshop, interviews and self-assessments.

1. *Regional CHI consultation (RC) conferences in Addis in 2013 & Nairobi in 2011 (9)*
4. *International consultation (IC) conference Durban SA, September 2013, MFS II (27)*

These interventions are reviewed under "improved fundraising capacity". Based on the "improved capacity to respond to child protection issues" process tracing causal map it can be said that these meetings have resulted in improved knowledge about leadership and management of child helplines (CHL) of the Director because of being able to network and learn from the functioning and running of other Child helplines in general and more specifically from the poster session about the work of the various child helplines in Nairobi, and visiting the Child helpline in Nairobi in 2011, and the Child helpline KwaZulu in 2012.

2. Second International Conference on Child Sexual Abuse in Ghana, March 2012 (10)

Design

This intervention was not mentioned as planned for during the baseline survey. Details about the specific design are not known, but that wasn't the focus of this evaluation. Immediate and long term objectives were given during the endline survey: the immediate objective was to enhance ECFA's knowledge on Child Sexual Abuse. Additionally, it was seen as an opportunity for ECFA to learn about issues affecting children and young people not only in Ethiopia but in the entire African continent. The long term objective was improved knowledge to respond to children who contact the child helpline on matters related to sexual abuse.

This intervention was not mentioned as important in the Theory of Change (ToC) developed during the MFS II 5C baseline survey, but it was mentioned by SPO staff as having been useful during the endline workshop.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). However, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected immediate and long term effects of the interventions.

Implementation

This workshop took place in March 2012 and was attended by the executive director. Subjects discussed were: building organizational capacity to manage child sexual abuse in Africa; the role of legislation and policy on child sexual abuse in Africa; strategies on child sexual abuse prevention; child sexual abuse in institutions of care and learning in Africa; good practices in research and practice on child sexual abuse. As far as the evaluation team knows, this intervention was implemented as designed, but details about the specific design and not known to the evaluation.

Reaching objectives

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. However, not having SMART objectives makes it difficult to assess this. Based on the process tracing causal map it can be said that participation in the workshop resulted in an improved knowledge & understanding of child protection related program design, implementation and follow up and improved child helpline leadership, programme management and implementation skills of the Director.

3. Visit the experience of CHL in different countries, such as Kenya, SA, and Zimbabwe, September 2013 (15)

Design

The visits to the Child Helplines (CHL) in Kenya and South Africa took place during the CHI regional and international meetings. The study tour to Harare, Zimbabwe was a separate intervention that was not mentioned during the baseline survey. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. The reason for this study tour was that the outreach programme and Free-post service offered by Childline Zimbabwe was seen as very important for ECFA's new strategic direction 2015/2016. The long term objectives were an improved management of the ECFA Child Helplines and a better collaboration with government.

This kind of knowledge or study tours were not mentioned as important in the Theory of Change (ToC) developed during the MFS II 5C baseline survey, but this ToC was very much geared towards managerial and support service topics, not to subject related topics.

The objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected immediate and long term effects of the interventions.

Implementation

The study tour took place in September 2013. The ECFA director participated plus two staff from Plan Int. Ethiopia (PIE). Also people from Liberia and Zambia, other Girl Power countries, participated). CHI paid the costs for all participants. The learning visit to Childline Zimbabwe covered a total of five (5) days during which meetings and sessions were held with Childline Zimbabwe staff and volunteers; visits were

made at drop-in centers around Harare; meetings were held with different actors and partners of Childline Zimbabwe including the Department of Social Services; Telecommunications Authority, the Zimbabwean Police, specifically the Headquarters of the Victims Friendly Police Unit, Childline Zimbabwe Board of Trustees, UNICEF, and PLAN International, among others. Key itinerary manuals on Childline Zimbabwe were provided. Manuals from the Police and UNICEF were also given to ECFA, centered on child protection and operations standards. Other knowledge generated was on fundraising mechanisms including localized fundraising strategies through outsourcing of some expenditure items (e.g. internet subscription) to other willing organizations; volunteers management and motivation; how the Childline Zimbabwe has maintained good working relationship with Zimbabwean government; and working within the legal framework set by the Zimbabwean government and not acting as an advocacy organization. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. However, not having SMART objectives makes it difficult to assess this. Based on the process tracing causal map it can be said that the learning visit resulted in improved knowledge about CHL leadership and management of the Director. According to the CFA the immediate result was increased knowledge on the operation of a child helpline, especially on how to collaborate with government. ECFA sees government now more as a partner than as a threat. In that respect the long term objective seems to some extent achieved. For the rest it is too soon to draw any conclusions.

5. Training on counselling, referral and case management in 2012 and 2013 by external consultant (19) Design

This intervention was not mentioned as planned for during the baseline survey. However, it was mentioned during the endline workshop in relation to having improved competences to provide SRHR services, because according to participating ECFA staff, this had contributed to in a better position, in terms of knowledge and skills to give offer counselling service to the cases that are referred to them by the city councils or other stakeholders. Details about the specific design are not known, but that wasn't the focus of this evaluation. In the 2013 Ethiopia GP Country Projects Annual report of ECFA for CHI, the objective of this training is stated as "to increase knowledge within the target communities about the CHL being a tool for child protection".

This kind of training was not mentioned in the Theory of Change (ToC) developed during the MFS II 5C baseline survey, but having been mentioned twice in the endline workshop, in the "improved capacity to respond to child protection issues" as well as in the "improved fundraising capacity" causal map gives an indication of its relevance.

Implementation

A first round 5-days training was in 2012 and the second round, also 5 days, in March 2014. Subjects of the training were on online counselling, case referral, child abuse, gender based violence and life skills related issues with critical case examples given for child help line counsellors and their assistants. This training was also given to increase the awareness of target communities about the importance of ECFA's CHL for reporting and receiving services for child abuse cases. Also ways of properly using the electronic data base during data recording, analysis and reporting were clarified by the consultant who developed the data base. ECFA has hired a consultant and developed a training manual which focused on child counselling and other related issues. In this training, five Child Help Line (CHL) counsellors, three CHL assistants and eight other individuals from the head office participated. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Not having SMART objectives makes it difficult to assess this issue. However, based on the process tracing causal map it can be said that the training participants are now in a better position, in terms of knowledge and skills, to give counselling services to the cases that are referred to them by the city councils or stakeholders. To what extent the objective of "increased knowledge within the target communities about the child helpline being a tool for child protection" has been achieved cannot be assessed.

6. *Training on planning & report writing in 2013 by external consultant (21)*

Design

This training was not mentioned as planned during the baseline. However, it was mentioned during the endline workshop, because according to participating ECFA staff, this training had improved the quality of planning and reporting, included collecting the required data for the reports. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Also, no specific immediate or long term objectives are known.

This kind of training was not particularly mentioned as relevant in the Theory of Change (ToC) developed during the MFS II 5C baseline survey, but it was mentioned during the process tracing session of "improved capacity to respond to child protection issues".

Implementation

The evaluation team has no additional information about this training except that it took place in 2013, but it is unknown who participated at this training. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Not having objectives makes it difficult to assess this issue. However, based on the process tracing causal map it can be said that as a result of the training staff are now capable of preparing reliable plans and reports on time, which are mostly approved by stakeholders with minor comments. In that sense this training was relevant in relation to child protection because being trusted by the community was seen as very important by ECFA during the MFSII 5C baseline survey. This improved image of reliability, basis for trust, contributed to an improved implementation capacity including responding to child protection issues by means of the child helpline.

7. *Training on gender equality & male engagement in 2014 by external consultant (25)*

Design

This training was not mentioned as planned during the baseline. However, it was mentioned during the endline workshop, because according to participating ECFA staff, this training had improved their knowledge on these issues and therefore their implementation capacity on these issues. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. Also, no specific immediate or long term objectives are known to the evaluation team.

This kind of training was not mentioned as relevant in the Theory of Change (ToC) developed during the MFS II 5C baseline survey, but it was mentioned during the process tracing session of "improved capacity to respond to child protection issues".

Implementation

The evaluation team has no additional information about this training except that it took place in 2014, but it is unknown who participated at this training. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Not having objectives makes it difficult to assess this issue. However, based on the process tracing causal map it can be said that the training resulted in improved ability to apply a holistic approach on male engagement, gender equality, life skills and community conversation facilitation, which contributed to an improved implementation capacity including responding to child protection issues.

Attribution of observed results to MFS II capacity development interventions

The improved capacity to respond to child protection issues was due to:

1. A more lean, accessible and effective structure (3)
2. Improved program leadership and implementation capacity at all levels (5)
(see 4.3.1)

1. The more lean, accessible and effective structure can entirely be attributed to internal, organizational processes, since these were due to having more offices and office equipment and having more staff, and this was made possible all due to a progressive increment in the annual budget.

2. The improved program leadership and implementation capacity at all levels can to a large extent be attributed to MFS II supported capacity development interventions. It can be attributed to:

- Improved child helpline leadership and management skills of the Director, which to a large extent can be attributed to MFS II supported capacity development interventions, many of them in other countries: i.e., the director participated in the CHI regional and international consultation meetings, the conference on sexual child abuse in Ghana, and the learning visits to other child helpline s in Zimbabwe, SA and Kenya.
- Improved staff knowledge & understanding of child protection related program design, implementation and follow up, which can partly (indirectly) be attributed to the sharing by the Director of what he has learnt from his participation in the MFS II supported conference on sexual child abuse in Ghana (2012), but it can also be attributed to the coaching & mentoring in child protection project design, implementation and follow up by senior management of ECFA.
- Staff knowledge on practices and challenges in implementation, which was mentioned by staff at the endline workshop but not linked to particular capacity development interventions.
- Improved capacity in child counselling, referral and case management, which was entirely attributed to MFS II supported training in the subject.
- Improved knowledge and skills in report writing, and improved knowledge in preparation of operational plans, which were both attributed to MFS II supported training in these subjects.
- Improved competencies to apply a holistic approach to child protection, male engagement, gender equality, life skills and community conversation facilitation, which can be partly attributed to an MFS II supported training in the subject in 2014, and partly to another training on male engagement in 2012 by Hiwot Ethiopia.
- Improved capacity in imparting small scale business management, can be attributed to the employment of staff with small scale business management skills (non-MFS II). The relation with child protection issues is, that ECFA believes that if the income of the parents raising the child is improved, there is high chance that children will get the chance to concentrate on their education with less probability of being abused for labour.

On the whole it can be said that the improved capacity to respond to child protection issues of ECFA can to a large extent be attributed to MFS II supported capacity development interventions: training, and international and regional consultation meetings, the conference on sexual child abuse in Ghana and through learning visits to the Helplines of other African countries. The only other reasons for change included coaching, mentoring and follow up by senior staff, employing staff with small scale business management skills, and the training on male engagement by Hiwot Ethiopia.

Improved capacity to implement M&E and provide quality M&E information

The following MFS II capacity development interventions supported by ECFA were linked to the key organisational capacity change “improved capacity to implement M&E and provide quality M&E information”:

1. Capacity assessment during country wide baseline survey by Plan International (5)
2. Feedback & advice from Plan International Ethiopia & CHI to focus on outcome M&E In addition to outputs (8)
3. Training on M&E in the Netherlands in 2012 (10) (+ Experience sharing during M&E training in 2012 (11))
4. Training on digital data management system in 2012 & 2013 (13)
- 5.

The above mentioned MFS II funded capacity development interventions are included in the causal maps and narratives, since, during process tracing, a link was established between these MFS II supported capacity development interventions and the organisational capacity change area ‘improved capacity to implement M&E and provide quality M&E information’, and they came up during document review, endline workshop, interviews and self-assessments.

1. *Capacity assessment during country wide baseline survey by Plan International in 2011 (5)*

In general terms capacity development support of Plan International to ECFA was mentioned during the baseline survey, without details, so the above mentioned survey was not mentioned, probably also because it was already implemented in 2011. The survey was carried out by Plan International (with MFS II funding) during a country wide baseline survey in 2011. It was mentioned by ECFA staff during the endline survey because it was important for identifying the need for a separate M&E unit, or rather re-enforcing the already felt need for a separate M&E unit. Because no other information is available about this intervention it will not be further discussed in detail. Furthermore, it is not clear whether this capacity assessment was intended as a capacity development intervention since it wasn’t mentioned like that during the baseline.

2. *Feedback & advice from Plan International Ethiopia & CHI to focus on outcome M&E In addition to outputs (8)*

In the 2012 MFS II 5C baseline, report regular support (visits) on various capacity issues by the CFA is mentioned, but without specifications. However, it was mentioned by ECFA staff during the endline survey because to them, it was important for being able to identify and collect M&E data at outcome level: now data on outcomes has started to be collected. Earlier it was mostly output related data that were collected. This happened because Plan international and CHI advised and gave feedback to ECFA to focus on outcomes in addition to outputs. This improved the knowledge & skills of staff for identifying and collecting M&E data. Because no other information is available about this intervention it will not be further discussed in detail.

3. *Training on M&E in the Netherlands in 2012 (10), including the experience sharing during the M&E training (11)*

Design

Details about the specific design cannot be provided, since this wasn’t the focus of the evaluation. During the baseline it was mentioned that more M&E training might be needed but this particular training was not mentioned. So no objectives were given during the baseline. During the endline, the CFA mentioned that the immediate objective was to improve ECFA’s capacity in Monitoring and Evaluation and that the long term expectation was that ECFA would incorporate the M&E knowledge that was acquired from the workshop into the day-to-day operations of the child helpline and ultimately would improve the quality of the services they provide.

Not M&E competencies for or training but the need for a strong M&E system was specifically mentioned as relevant in the Theory of Change (ToC) developed during the MFS II 5C baseline survey. However, the wish for this training was expressed during the CHI International Consultation meeting held in Durban, October 2012. CHI provided this training for child helpline organisations under the (MFS II) Girl Power programme.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically, but rather asked about the expected immediate and long term effects of the interventions.

Implementation

This CHI MFS-II Monitoring and Evaluation (M&E) workshop was held in December 2012 in Amsterdam. Two programme managers of ECFA participated, along with staff from CHI organisations from Bangladesh Nepal, Ghana, Liberia, Zambia, Bolivia and Nicaragua. The training focused on organizational and programmatic capacity building (5Cs) and on the Principles and Standards Assessment tool designed for CHI's members. The trainer equipped ECFA with tools on how to measure output and outcomes of child helplines in the Girl Power Programme; and also on how to operationalize the M&E budget, incorporating clear time planning of the M&E cycles with a definition of roles. The participation of other CHI MFS-II partners also increased the learning of ECFA, as a result of the sharing of knowledge, ideas and best practices. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. However, not having SMART objectives makes it difficult to assess this. Based on the process tracing causal map and according to ECFA staff it can be said that the M&E training and the sharing of knowledge, ideas and best practices have resulted in knowledge on how to use the principles & standard assessment (PSA) tool of CHI, and on the preparation of case stories and M&E formats for outputs and outcomes of CHI and Community Conversation programs. In that sense the short term objective seems to have been reached but it is difficult to assess to what extent the long term objective has been reached.

4. Training in digital data management system in 2012 and 2013 (13)

Design

This intervention was planned during the baseline. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. The objective of this training given in the baseline report was to make ECFA better placed to document all calls/contacts received from children and young people and to make ECFA able to follow-up on cases in the best way possible¹⁵.

Training in digital data management was not mentioned as relevant at the capacity building ToC of the baseline workshop, but during the endline workshop it came up as important in combination with the data management infrastructure and thereby makes the topic relevant to the SPO.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound), but the evaluation team did not ask the CFA for SMART objectives specifically, since this wasn't the purpose of this evaluation.

Implementation

With financial support from Plan International Ethiopia, ECFA developed a database for the Child Helpline, and installed five new computers in the five call centres in Adama region. The knowledge and skills in the use of the digital data management system especially for child abuse programs were improved with training on data management in Adama, delivered in 2012 and 2013 with the support of MFS II funding. In this training the way of properly using the electronic data base, i.e. data recording, analysis and reporting were clarified by the consultant who developed the data base. This training was given during the 5 days training on counselling, referral and case management mentioned earlier. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

¹⁵ CHI did not make a distinction between immediate and long term objectives at the baseline.

Reaching objectives

Though not the focus of this evaluation, we can provide an indication of the extent to which the objectives as formulated during the baseline and endline, have been achieved. However, not having SMART objectives makes it difficult to assess this. According to ECFA staff at the endline workshop, everything together, i.e. infrastructure and training, improved the capacity to utilize digital data management for child abuse programs. Data collection, analysis and sharing of child abuse programs are now automated. Therefore, it is now possible to digitally collect and share data. The organization even plans to use this capacity to create a resource center which can be used by graduate students while doing their thesis. It seems that the objective of placing ECFA in a better position to document all calls/contacts received from children and young people has been reached. It is not possible to assess to what extent it enables ECFA to make better follow-ups on cases.

Attribution of observed results to MFS II capacity development interventions

The “improved capacity to implement M&E and provide quality M&E information” was due to:

1. The creation of an M&E unit and the assignment of a dedicated M&E officer (2)
2. Improved knowledge and skills in identifying and collecting data for all intervention areas (3)
3. The use of a digital system for data management (4)

The first change factor can be partly, the second (almost) entirely and the last to a large extent be contributed to MFS II supported capacity development interventions. This is further explained below.

1. The creation of an M&E unit and the assignment of a dedicated M&E officer can partly be attributed to the outcome and recommendation of an MFS II funded baseline study of Plan International that recommended the creation of a separate M&E unit. For the other part this can be attributed to the already felt need for creating such a unit.

2. The improved knowledge and skills in identifying and collecting data for all intervention areas can to a large extent be attributed to MFS II supported capacity development interventions: the training on M&E in the Netherlands in 2012; the experience sharing with other CHI supported organizations from all over the world during this training; and the feedback & advice from Plan International Ethiopia & CHI to focus on outcome M&E in addition to outputs. Other related factors were not mentioned.

3. The use of a digital system for data management can to a large extent be attributed to MFS II supported capacity development interventions: a digital data management system for the child helpline was developed, computers were provided and training on the use of this data management system were given with MFS II support. OAK Foundation also provided three computers.

On the whole it can be said that the improved M&E capacity at ECFA can to a large extent be attributed to MFS II supported capacity development interventions, through M&E related training, a (5C) baseline assessment by Plan International, feedback and advice from Plan International and CHI, and the provision of infrastructure and training for a digitalised data management system. The only non-MFS II related reasons for this improved M&E capacity since the baseline in 2012, were an internally felt need to have a monitoring and evaluation unit, and the provision of three computers by Oak Foundation.

List of Respondents

MFS II Alliance/ CFA officers:

No.	Name	Function
1	Alice Kubo	Programme Manager for Africa CHI
2	Helen Mason	Head of Operation CHI
3	Ann-Murray Brown	Monitoring and Evaluation Officer CHI
4	Helen Evertsz	Coordinator CRA Girl Power Programme PLAN

ECFA staff:

No.	Name	Function in the organisation
1	Yisrak Kebede	Executive director
2	Yilfashewa Taddesse	Secretary and cashier
3	Tigist Mesfin	Admin and finance officer
4	Teshome Maru	M&E Officer
5	Tamirat Abebe	Child helpline counsellor, Adama
6	Mekebeb H/Micale	Child helpline counsellor, Metehara
7	Eyob Kasse	Program Manager

Others:

Dita Tuke, Program Manager of FSCE, Partner of ECFA.

Appendix 1 Methodological approach & reflection

1. Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline

has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.¹⁶ Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

¹⁶ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*

3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
- Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;
- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;

- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will code these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets – in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description_of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation's capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as “a complex system which produces an outcome by the interaction of a number of parts” (Glennan, 1996, p. 52). Process tracing involves “attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable” (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which ‘theories’ are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of ‘explaining outcome process tracing’, since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for

different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India¹⁷

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

¹⁷ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya kologi	ECPAT	GSS	Lem baga Kita	Pl. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or **cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- **5C Indicators**: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
- Information related to the capacity development interventions implemented by the CFA (with MFS II funding) (see also Step 2) to strengthen the capacity of the SPO. For example, the training on financial management of the SPO staff could be related to any information on financial management of the SPO. This information was coded in Nvivo.

In addition, the response by the CFA to the changes in 5C indicators format, was auto-coded.

The in-country team was responsible for timely collection of information from the SPO (before the fieldwork starts). This set of information dealt with:

- MFS II supported capacity development interventions during the MFS II period (2011 until now).
- Overview of all trainings provided in relation to a particular outcome areas/organisational capacity change since the baseline.
- For each of the identified MFS II supported trainings, training questionnaires have been developed to assess these trainings in terms of the participants, interests, knowledge and skills gained, behaviour change and changes in the organisation (based on Kirkpatrick's model), one format for training participants and one for their managers. These training questionnaires were sent prior to the field visit.
- Changes expected by SPO on a long-term basis ('Support to capacity development sheet - endline - SPO perspective').

For the selection of change/ outcome areas the following criteria were important:

- The change/ outcome area is in one of the two capabilities selected for process tracing: capability to act and commit or the capability to adapt and self-renew. This was the first criteria to select upon.
- There was a likely link between the key organisational capacity change/ outcome area and the MFS II supported capacity development interventions. This also was an important criteria. This would need to be demonstrated through one or more of the following situations:
 - In the 2012 theory of change on organisational capacity development of the SPO a link was indicated between the outcome area and MFS II support;
 - During the baseline the CFA indicated a link between the planned MFS II support to organisational development and the expected short-term or long-term results in one of the selected capabilities;
 - During the endline the CFA indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities;
 - During the endline the SPO indicated a link between the implemented MFS II capacity development interventions and observed short-term changes and expected long-term changes in the organisational capacity of the SPO in one of the selected capabilities.

Reviewing the information obtained as described in Step 1, 2, and 3 provided the basis for selecting key organisational capacity change/ outcome areas to focus on for process tracing. These areas were to be formulated as broader outcome areas, such as 'improved financial management', 'improved monitoring and evaluation' or 'improved staff competencies'.

Note: the outcome areas were to be formulated as intermediates changes. For example: an improved monitoring and evaluation system, or enhanced knowledge and skills to educate the target group on

climate change. Key outcome areas were also verified - based on document review as well as discussions with the SPO during the endline.

*Step 4. Construct the **detailed, initial causal map** (theoretical model of change) – CDI & in-country team*

A detailed initial causal map was developed by the CDI team, in collaboration with the in-country team. This was based on document review, including information provided by the CFA and SPO on MFS II supported capacity development interventions and their immediate and long-term objectives as well as observed changes. Also, the training questionnaires were reviewed before developing the initial causal map. This detailed initial causal map was to be provided by the CDI team with a visual and related narrative with related references. This initial causal map served as a reference point for further reflection with the SPO during the process tracing endline workshop, where relationships needed to be verified or new relationships established so that the second (workshop-based), detailed causal map could be developed, after which further verification was needed to come up with the final, concluding detailed causal map.

It's important to note that organisational change area/ outcome areas could be both positive and negative.

For each of the selected outcomes the team needed to make explicit the theoretical model of change. This meant finding out about the range of different actors, factors, actions, and events etc. that have contributed to a particular outcome in terms of organisational capacity of the SPO.

A model of change of good quality includes:

- The causal pathways that relate the intervention to the realised change/ outcome;
- Rival explanations for the same change/ outcome;
- Assumptions that clarify relations between different components or parts;
- Case specific and/or context specific factors or risks that might influence the causal pathway, such as for instance the socio-cultural-economic context, or a natural disaster;
- Specific attributes of the actors e.g. CFA and other funders.

A model of change (within the 5C study called a 'detailed causal map') is a complex system which produces intermediate and long-term outcomes by the interaction of other parts. It consists of parts or causes that often consist of one actor with its attributes that is implementing activities leading to change in other parts (Beach & Pedersen, 2013). A helpful way of constructing the model of change is to think in terms of actors carrying out activities that lead to other actors changing their behaviour. The model of change can be explained as a range of activities carried out by different *actors* (including the CFA and SPO under evaluation) that will ultimately lead to an outcome. Besides this, there are also '*structural*' elements, which are to be interpreted as external factors (such as economic conjuncture); and *attributes* of the actor (does the actor have the legitimacy to ask for change or not, what is its position in the sector) that should be looked at (Beach & Pedersen, 2013). In fact Beach and Pedersen, make a fine point about the subjectivity of the actor in a dynamic context. This means, in qualitative methodologies, capturing the changes in the actor, acted upon area or person/organisation, in a non sequential and non temporal format. Things which were done recently could have corrected behavioural outcomes of an organisation and at the same time there could be processes which incrementally pushed for the same change over a period of time. Beach and Pedersen espouse this methodology because it captures change in a dynamic fashion as against the methodology of logical framework. For the MFS II evaluation it was important to make a distinction between those paths in the model of change that are the result of MFS II and rival pathways.

The construction of the model of change started with the identified key organisational capacity change/ outcome, followed by an inventory of all possible subcomponents that possibly have caused the change/ outcome in the MFS II period (2011-up to now, or since the baseline). The figure below presents an imaginary example of a model of change. The different colours indicate the different types of support to capacity development of the SPO by different actors, thereby indicating different pathways of change, leading to the key changes/ outcomes in terms of capacity development (which in this case indicates the ability to adapt and self-renew).

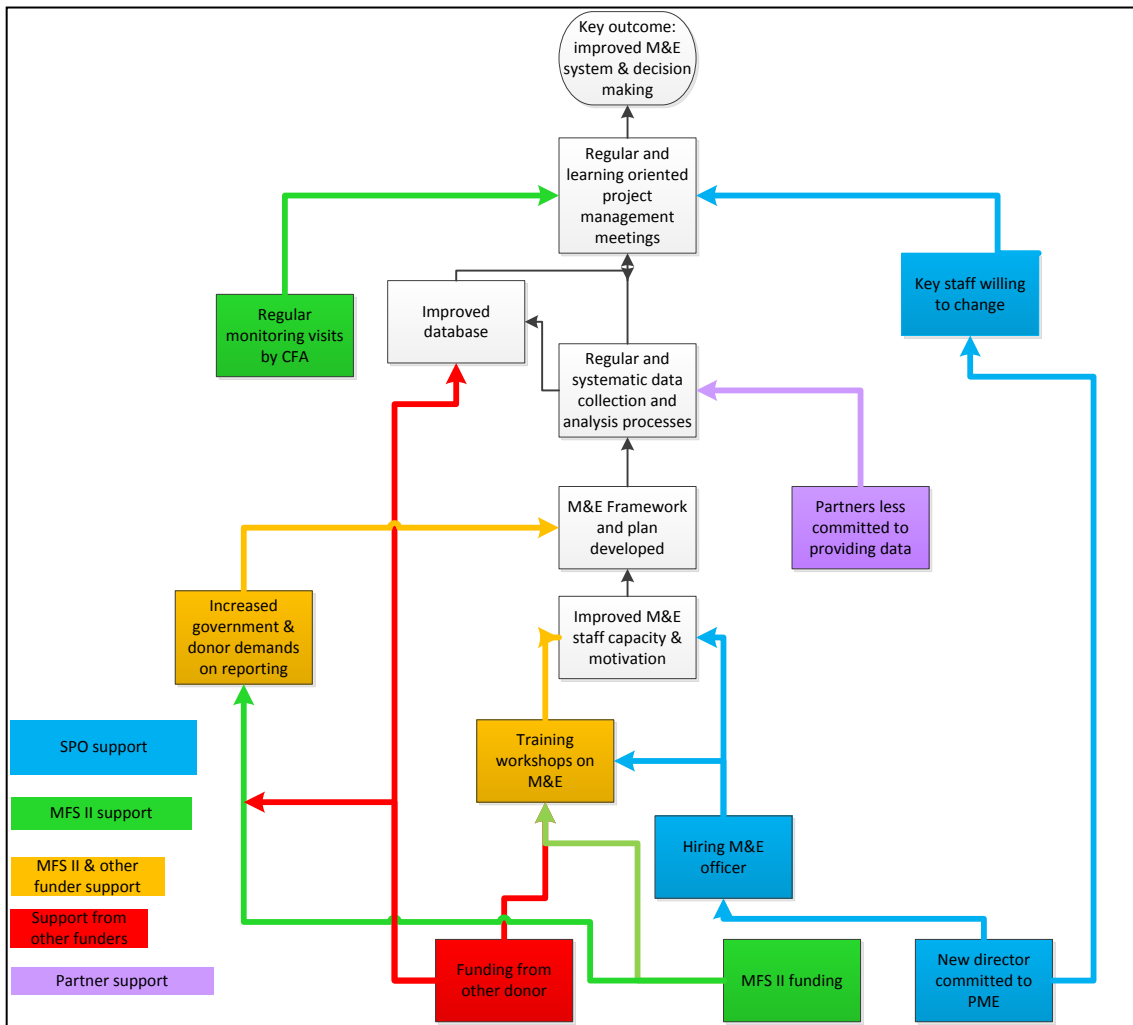

Figure 1 An imaginary example of a model of change

*Step 5. Identify **types of evidence** needed to verify or discard different causal relationships in the model of change – in-country teams with support from CDI team*

Once the causal mechanism at theoretical level were defined, empirical evidence was collected so as to verify or discard the different parts of this theoretical model of change, confirm or reject whether subcomponents have taken place, and to find evidence that confirm or reject the causal relations between the subcomponents.

A key question that we needed to ask ourselves was, “*What information do we need in order to confirm or reject that one subcomponent leads to another, that X causes Y?*”. The evaluation team needed to agree on what information was needed that provides empirical manifestations for each part of the model of change.

There are four distinguishable types of evidence that are relevant in process tracing analysis: *pattern, sequence, trace, and account*. Please see the box below for descriptions of these types of evidence.

The evaluation team needed to agree on the types of evidence that was needed to verify or discard the manifestation of a particular part of the causal mechanism. Each one or a combination of these different types of evidence could be used to confirm or reject the different parts of the model of change. This is what is meant by robustness of evidence gathering. Since causality as a concept can bend in many ways, our methodology, provides a near scientific model for accepting and rejecting a particular type of evidence, ignoring its face value.

Types of evidence to be used in process tracing

Pattern evidence relates to predictions of statistical patterns in the evidence. For example, in testing a mechanism of racial discrimination in a case dealing with employment, statistical patterns of employment would be relevant for testing this part of the mechanism.

Sequence evidence deals with the temporal and spatial chronology of events predicted by a hypothesised causal mechanism. For example, a test of the hypothesis could involve expectations of the timing of events where we might predict that if the hypothesis is valid, we should see that the event B took place after event A took place. However, if we found that event B took place before event A took place, the test would suggest that our confidence in the validity of this part of the mechanism should be reduced (disconfirmation/ falsification).

Trace evidence is evidence whose mere existence provides proof that a part of a hypothesised mechanism exists. For example, the existence of the minutes of a meeting, if authentic ones, provide strong proof that the meeting took place.

Account evidence deals with the content of empirical material, such as meeting minutes that detail what was discussed or an oral account of what took place in the meeting.

Source: Beach and Pedersen, 2013

Below you can find a table that provides guidelines on what to look for when identifying types of evidence that can confirm or reject causal relationships between different parts/ subcomponents of the model of change. It also provides one example of a part of a causal pathway and what type of information to look for.

Table 9

Format for identifying types of evidence for different causal relationships in the model of change (example included)

Part of the model of change	Key questions	Type of evidence needed	Source of information
Describe relationship between the subcomponents of the model of change	Describe questions you would like to answer a so as to find out whether the components in the relationship took place, when they took place, who was involved, and whether they are related	Describe the information that we need in order to answer these questions. Which type of evidence can we use in order to reject or confirm that subcomponent X causes subcomponent Y? Can we find this information by means of : Pattern evidence; Sequence evidence; Trace evidence; Account evidence?	Describe where you can find this information
Example: Training workshops on M&E provided by MFS II funding and other sources of funding	Example: What type of training workshops on M&E took place? Who was trained? When did the training take place? Who funded the training? Was the funding of training provided before the training took place? How much money was available for the training?	Example: Trace evidence: on types of training delivered, who was trained, when the training took place, budget for the training Sequence evidence on timing of funding and timing of training Content evidence: what the training was about	Example: Training report SPO Progress reports interviews with the CFA and SPO staff Financial reports SPO and CFA

Please note that for practical reasons, the 5C evaluation team decided that it was easier to integrate the specific questions in the narrative of the initial causal map. These questions would need to be addressed by the in country team during the process tracing workshop so as to discover, verify or discard particular causal mechanisms in the detailed, initial causal map. Different types of evidence was asked for in these questions.

*Step 6. **Collect data** to verify or discard causal mechanisms and develop workshop-based, detailed causal map – in-country team*

Once it was decided by the in-country and CDI evaluation teams what information was to be collected during the interaction with the SPO, data collection took place. The initial causal maps served as a basis for discussions during the endline workshop with a particular focus on process tracing for the identified organisational capacity changes. But it was considered to be very important to understand from the perspective of the SPO how they understood the identified key organisational capacity change/outcome area has come about. A new detailed, workshop-based causal map was developed that included the information provided by SPO staff as well as based on initial document review as described in the initial detailed causal map. This information was further analysed and verified with other relevant information so as to develop a final causal map, which is described in the next step.

*Step 7. **Assess the quality of data and analyse data**, and develop the **final detailed causal map** (model of change) – in-country team and CDI team*

Quality assurance of the data collected and the evidence it provides for rejecting or confirming parts of causal explanations are a major concern for many authors specialised in contribution analysis and process-tracing. Stern et al. (2012), Beach and Pedersen (2013), Lemire, Nielsen and Dybdal (2012), Mayne (2012) and Delahais and Toulemonde (2012) all emphasise the need to make attribution/contribution claims that are based on pieces of evidence that are rigorous, traceable, and credible. These pieces of evidence should be as explicit as possible in proving that *subcomponent X causes subcomponent Y* and ruling out other explanations. Several tools are proposed to check the nature and the quality of data needed. One option is, Delahais and Toulemonde's Evidence Analysis Database, which we have adapted for our purpose.

Delahais and Toulemonde (2012) propose an Evidence Analysis Database that takes into consideration three criteria:

Confirming/ rejecting a causal relation (yes/no);

Type of causal mechanism: intended contribution/ other contribution/ condition leading to intended contribution/ intended condition to other contribution/ feedback loop;

Strength of evidence: strong/ rather strong/ rather weak/ weak.

We have adapted their criteria to our purpose. The in-country team, in collaboration with the CDI team, used the criteria in assessing whether causal relationships in the causal map, were strong enough. This has been more of an iterative process trying to find additional evidence for the established relationships through additional document review or contacting the CFA and SPO as well as getting their feedback on the final detailed causal map that was established. Whilst the form below has not been used exactly in the manner depicted, it has been used indirectly when trying to validate the information in the detailed causal map. After that, the final detailed causal map is established both as a visual as well as a narrative, with related references for the established causal relations.

<i>Example format for the adapted evidence analysis database (example included)</i> Description of causal relation	Confirming/ rejecting a causal relation (yes/ no)	Type of information providing the background to the confirmation or rejection of the causal relation	Strength of evidence: strong/ rather strong/ rather weak/ weak	Explanation for why the evidence is (rather) strong or (rather) weak, and therefore the causal relation is confirmed/ rejected
e.g. Training staff in M&E leads to enhanced M&E knowledge, skills and practice	e.g. Confirmed	e.g. Training reports confirmed that staff are trained in M&E and that knowledge and skills increased as a result of the training		

Step 8. Analyse and conclude on findings– in-country team and CDI team

The final detailed causal map was described as a visual and narrative and this was then analysed in terms of the evaluation question two and evaluation question four: “*To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*” and “*What factors explain the findings drawn from the questions above?*” It was analysed to what extent the identified key organisational capacity change can be attributed to MFS II supported capacity development interventions as well as to other related factors, interventions and actors.

4. Explaining factors – evaluation question 4

This paragraph describes the data collection and analysis methodology for answering the fourth evaluation question: “**What factors explain the findings drawn from the questions above?**”

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This has been explained in the first section of this appendix. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information was procured for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the process of process tracing as described in the section above.

5. Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team.

Use of the 5 core capabilities framework and qualitative approach: this has proven to a be very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in

the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators, are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
- Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
- Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a

result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff were very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

Appendix 2 Background information on the five core capabilities framework

The 5 capabilities (5C) framework was to be used as a framework for the evaluation of capacity development of Southern Partner Organisations (SPOs) of the MFS II consortia. The 5C framework is based on a five-year research program on 'Capacity, change and performance' that was carried out by the European Centre for Development Policy Management (ECDPM). The research included an extensive review of the literature and sixteen case studies. The 5C framework has also been applied in an IOB evaluation using 26 case studies in 14 countries, and in the baseline carried out per organisation by the MFS II organisations for the purpose of the monitoring protocol.

The 5C framework is structured to understand and analyse (changes in) the capacity of an organization to deliver (social) value to its constituents. This introduction briefly describes the 5C framework, mainly based on the most recent document on the 5C framework (Keijzer et al., 2011).

The 5C framework sees capacity as an **outcome** of an **open system**. An organisation or collaborative association (for instance a network) is seen as a system interacting with wider society. The most critical practical issue is to ensure that relevant stakeholders share a common way of thinking about capacity and its core constituents or capabilities. Decisive for an organisation's capacity is the context in which the organisation operates. This means that **understanding context issues** is crucial. The use of the 5C framework requires a multi-stakeholder approach because shared values and results orientation are important to facilitate the capacity development process. The 5C framework therefore needs to **accommodate the different visions** of stakeholders and conceive different strategies for raising capacity and improving performance in a given situation.

The 5C framework defines capacity as '**producing social value**' and identifies five core capabilities that together result in that overall capacity. Capacity, capabilities and competences are seen as follows:

Capacity is referred to as the overall ability of an organisation or system to create value for others;

Capabilities are the collective ability of a group or a system to do something either inside or outside the system. The collective ability involved may be technical, logistical, managerial or generative (i.e. the ability to earn legitimacy, to adapt, to create meaning, etc.);

Competencies are the energies, skills and abilities of individuals.

Fundamental to developing capacity are inputs such as human, material and financial resources, technology, and information. To the degree that they are developed and successfully integrated, capabilities contribute to the overall capacity or ability of an organisation or system to create value for others. A single capability is not sufficient to create capacity. All are needed and are strongly interrelated and overlapping. Thus, to achieve its development goals, the 5C framework says that every organisation or system must have **five basic capabilities**:

1. The capability to act and commit;
2. The capability to deliver on development objectives;
3. The capability to adapt and self-renew;
4. The capability to relate (to external stakeholders);
5. The capability to achieve coherence.

In order to have a common framework for evaluation, the five capabilities have been reformulated in outcome domains and for each outcome domain performance indicators have been developed.

There is some overlap between the five core capabilities but together the five capabilities result in a certain level of capacity. Influencing one capability may have an effect on one or more of the other capabilities. In each situation, the level of any of the five capabilities will vary. Each capability can become stronger or weaker over time.

Appendix 3 Results - changes in organisational capacity of the SPO - 5C indicators

Below you will find a description for each of the indicators under each of the capabilities, what the situation is as assessed during the endline, how this has changed since the baseline and what are the reasons for change.

Capability to act and commit

1.1 Responsive leadership: 'Leadership is responsive, inspiring, and sensitive'

This is about leadership within the organisation (operational, strategic). If there is a larger body then you may also want to refer to leadership at a higher level but not located at the local organisation.

During the 2012 baseline, program leadership, implementation and monitoring was handled by one person. Now different tasks are given to different individuals with clear job descriptions. ECFA has assigned appropriate staff in the finance section and it has resulted in the organization having a program and finance division. Hence, the organization performs better because problems are easily and timely addressed. In addition, it enables the director to focus on programs and works in assuring proper leadership. He is also engaged in different kinds of partnership and networking and was nominated and served in CHI's Principles, Standards and Practices (PSP) Taskforce for two years (i.e., 2012-2014), and stepped down, voluntarily, in 2014 to offer other CHI members the opportunity to learn.. Unlike the baseline situation, board members and other stakeholders meetings are held together with the staffs, which enables the voices of the staffs to be heard.

Score: from 3.5 to 4.5 (improvement)

1.2. Strategic guidance: 'Leaders provide appropriate strategic guidance (strategic leader and operational leader)'

This is about the extent to which the leader(s) provide strategic directions

Over the last two years, the organization has changed its organizational and staffing structure, e.g. the Program Officer has been assigned, and M&E officer and a Program Manager have been hired. Subsequently, a Program and a Finance and Administration divisions are now in place. In the latter, all the finance and administrative issues are addressed by the Finance and Admin division and program issues are separately addressed by the Program Manager. The Executive Director oversees the overall operations of the organization. Newly added personnel are closely working with the Executive Director and help in addressing administrative leadership issues timely and flexibly. This enables the Executive Director to focus on organizational directions and arrangements. In addition, the management team shapes the relationships among staffs and avoids misunderstandings in a strategic way. Finally, the additional staff enhanced the team and led to more appropriate follow up on implementations.

Score: from 3 to 4 (improvement)

1.3. Staff turnover: 'Staff turnover is relatively low'

This is about staff turnover.

During the baseline, staff turnover was low but so were staff¹⁸. Compared to the baseline situation, ECFA has put different strategies in place to retain staff. New salary scales, which upgraded most salaries considerably, a capacity building strategy, a clear career path, attention to a positive work environment, a reshuffle of existing staffs based on their qualifications and interests and the appointment of new staff are mentioned as staff retention strategies. The appointment of new staff reduced the workload/burden of some staffs. Nevertheless, one finance staff and three program staffs left the organization since the baseline.

From 3 to 3.5 (slight improvement)

1.4. Organisational structure: 'Existence of clear organizational structure reflecting the objectives of the organisation'

Observable indicator: Staff have copy of org structure and understand this

Over the last two years, the organization has changed its organizational structure. Accordingly, a program and an administration division are in place. In the latter, all the finance and administrative issues are addressed by the finance and admin division and program issues are separately addressed by the program manager. This has provided more clarity and better coordination.

Score: from 3.5 to 4 (slight improvement)

1.5. Articulated strategies: 'Strategies are articulated and based on good situation analysis and adequate M&E'

Observable indicator: strategies are well articulated. Situation analysis and monitoring and evaluation are used to inform strategies.

ECFA's strategic plan has expired ECFA recognizes the importance of having an updated strategic plan. Resources have been mobilized and secured to update the strategic plan for the period of 2015-2019. The ToR has been shared among the partners and is in the process of collecting bids. The new strategic plan is considered to be post MDG.

Score from 3 to 3 (no change)

1.6. Daily operations: 'Day-to-day operations are in line with strategic plans'

This is about the extent to which day-to-day operations are aligned with strategic plans.

ECFA's strategic plan has expired Hence, the day to day operations of the organization has been guided by its strategic directions and from its annual action and budget plan. From the annual plans quarterly, monthly and weekly plans are developed and implemented.

Score: from 3 to 3 (no change)

¹⁸ During the baseline the number of permanent staffs was 10 and accompanied with 5 volunteers. Currently there are 18 permanent staffs and 25 partly paid volunteers.

1.7. Staff skills: 'Staff have necessary skills to do their work'

This is about whether staff have the skills necessary to do their work and what skills they might need.

Since 2012, efforts have been made to mobilize more funds (for project implementation) to increase the program budget and accordingly, to have sufficient administration to cover the capacity building costs. It seems that the new Ethiopian NGO framework/CSO law (70/30% rule) has repercussions on the budget allotted to capacity building. However, because of resource mobilization efforts, more than (four) 4 trainings were given on different topics such as resource mobilization and M&E approaches. In addition to this, staffs attended different trainings organized by the Dutch partner CHI. ECFA staffs are also exposed to different experience sharing platforms. But, there are still capacity gaps in terms of leadership and management, project planning and management, and report writing¹⁹. Qualified and experienced staffs are now being hired for the right position such as a program manager. Some existing staffs are now upgrading their qualifications. However, others argue that there is no significant change since the baseline, and that ECFA relies largely on CHI for its capacity building/training and that ECFA has no internal staff upgrading training.

Score: from 2.5 to 3 (slight improvement)

1.8. Training opportunities: 'Appropriate training opportunities are offered to staff'

This is about whether staff at the SPO are offered appropriate training opportunities

There is a slight improvement in the training opportunities at ECFA compared to the baseline situation. In most cases, the biennial consultative meetings organized by CHI are a form of trainings. In these consultative meetings, it is ECFA's Executive Director who usually attends. In trainings that are organized somewhere else, abroad, at least one staff attends. The organization has planned to assess training needs of its staffs annually and to organize need-based trainings. In 2012, training on resource mobilization was offered to three (3) ECFA staffs in Adama, and one ECFA staff participated in the monitoring and evaluation training organized by CHI in Amsterdam. ECFA has got an M&E Unit since early 2014 and this unit helps to set criteria for selecting staffs for training, which is good progress. Despite such improvements, there remains a need for conducting internal staff training.

Score: from 3 to 3.5 (slight improvement)

1.9.1. Incentives: 'Appropriate incentives are in place to sustain staff motivation'

This is about what makes people want to work here. Incentives could be financial, freedom at work, training opportunities, etc.

After the baseline with the approval of the Executive Board of ECFA, the organization amended its operations manual and increased the amount of per diem. Recently, the staff salary has also increased. A higher degree of freedom of work which creates an open and friendly working environment is also an incentive for staff and has resulted in higher levels of team spirit. ECFA staffs also support each other by having team discussions.

Score from 3 to 3.5 (slight improvement)

¹⁹ The later could be attributed to language barriers, notably, the MFS-II reporting templates are in English and Ethiopia's business/official language is Amharic.

1.9.2. Funding sources: 'Funding from multiple sources covering different time periods'

This is about how diversified the SPOs funding sources are over time, and how the level of funding is changing over time.

At the time of the baseline study, ECFA had different funding sources although the amount mobilized was very limited. Recently, the amount of funding increased a lot which leads to more capacity building of the organization. The number of projects implemented by ECFA in 2014 are six (6) compared to two (2) in 2012. It is expected that the annual budget of the organization will be more than 7 million birr in the next fiscal year (2015) compared to 750,000 birr in 2011 fiscal year. However, the organization has not yet a resource mobilization strategy and not enough staff to work on proposal development.

Score: from 3.5 to 4 (slight improvement)

1.9.3. Funding procedures: 'Clear procedures for exploring new funding opportunities'

This is about whether there are clear procedures for getting new funding and staff are aware of these procedures.

Currently, there is no clear written procedure (i.e., a resource mobilization strategy) to explore new funding opportunities but with the help of different networks such as CHI and CRDA and other NGOs like OSSA, ECFA has been able to access other funding. Only very recently, after understanding the importance of clear procedures for exploring funding opportunities, did the organization allocated a budget to support fundraising, and it is also developing a webpage to showcase its organizational successes and share other information. Also, the organization allocated budget for capacity development of staff on resource mobilization. The organization is in the process of developing its own resource mobilization strategy in line with the new strategic plan. Most staff undertook training in project proposal writing and ECFA also built its capacity in fundraising by hiring more qualified staff.

Score: from 3.5 to 3.75 (slight improvement)

Summary capability to act and commit

During the 2012 baseline, ECFA's program leadership, implementation and monitoring was handled by one person. Now different tasks are given to different individuals with clear job descriptions. There are now a Program, and an Administration division in place. This has helped the organisation to perform better because problems are easily and timely addressed, since the director can now focus on programs and providing leadership. The Country Director oversees the overall operations of the organization. Newly added personnel are working closely with the Executive Director and they help in addressing administrative leadership issues timely and flexibly.

Mechanisms to improve incentives have been put in place, such as higher per diems and higher salaries; a good working environment, and a reshuffle of existing staff based on their qualifications and interests. Also, appointing new staff has helped to reduce the workload of some staff.

Daily operations are in line with the strategic plan, but this strategic plan expired. However, resources have been mobilised to update the strategic plan for the period of 2015-2019. In terms of staff skills, ECFA relies heavily on CHI for capacity building of their staff. Whilst some staff have been trained in resource mobilisation and monitoring and evaluation, and qualified and experienced staffs are now being hired for the right positions, further training is required in terms of leadership and management, project planning and management, and report writing²⁰.

²⁰ The later could be attributed to language barriers, notably, the MFS-II reporting templates are in English and Ethiopia's business/official language is Amharic.

In terms of funding, the organisation has greatly increased the amount of funds since the baseline, which is related to ECFA collaborating with CHI, CCDRA and OSSA. A fundraising strategy still doesn't exist, although it is in the process of being developed. Having trained staff in resource mobilisation, and hiring more qualified staff has resulted in raising more funds for ECFA.

Score: from 3.1 to 3.6 (slight improvement)

Capability to adapt and self-renew

2.1. M&E application: 'M&E is effectively applied to assess activities, outputs and outcomes'

This is about what the monitoring and evaluation of the SPO looks at, what type of information they get and at what level (individual, project, organisational).

Recently, the previous program officer has been assigned as M&E expert, and an M&E manual is under development. Compared to the baseline situation, now there is a staff working on M&E. ECFA has begun with periodic half year (six months) review and planning meetings of projects and organizational activities. In the monitoring process of projects, ECFA conducts field visits and beneficiary discussions on a quarterly basis. Review meetings with community, volunteers, CBOs, CSOs and government offices are facilitated on a monthly basis. In the monitoring and supervision process, ECFA employs different monitoring tools such as focus group discussions, in-depth interviews and learning reviews. All the above mentioned activities were only plans during the 2012 baseline time and now much progress has been made. For each individual project there are midterm and final evaluations. An M&E policy and guidelines have been developed that are waiting for endorsement by the Board, and M&E formats are developed and in place for action (e.g., mission reporting format, training report format, monthly planning and reporting format, quarterly planning and reporting format).

Score: from 2 to 3 (improvement)

2.2. M&E competencies: 'Individual competencies for performing M&E functions are in place'

During the baseline time there was no M&E staff in ECFA, program staffs were in charge of doing M&E activities. Now ECFA has assigned an M&E officer. However, M&E skills of other staff are still lacking and the newly appointed M&E officer could coach the other staff.

Score: from 2 to 2.5 (slight improvement)

2.3. M&E for future strategies: 'M&E is effectively applied to assess the effects of delivered products and services (outcomes) for future strategies'

Compared to the baseline situation, the Executive Director of ECFA reported an increase in the use of the CHI PSA (Principles and Standards Assessment) tools in assessing the quality standards of his organization. ECFA reviews the outputs and outcomes internally and with partners. ECFA has begun with periodic half year review of projects and organizational activities. The six months/half year achievements are used to plan for the other half of the year. Forums have been conducted to review the collected information and discuss the next steps/part of the 'so what'. The organization understands the importance of M&E for assuring sustainability and measuring impact and also how M&E can contribute in raising additional funding. Therefore, the organization assigned an expert to develop the required manual and to help in implementing M&E measures. Similar to the baseline situation, periodic mid-term and final evaluations are conducted by outsourced consultants. The findings of these evaluations are used to improve future planning and to redesign/broaden the

intervention. In addition, there is a clear plan to use data for soliciting finance. Furthermore, ECFA is planning to undertake monitoring and evaluation for each future project.

Score: from 3 to 3.5 (slight improvement)

2.4. Critical reflection: 'Management stimulates frequent critical reflection meetings that also deal with learning from mistakes'

This is about whether staff speak formally about what is happening in their programs; and, if so, how regular these meetings are; and whether staff are comfortable raising issues that are problematic.

Compared to the baseline situation, the type and frequency of meetings have increased. ECFA has been facilitating weekly (i.e., Monday morning) meetings to share updates of the previous week and plans for the following week. ECFA also has a regular biweekly management meeting. Similarly, monthly, quarterly, biannual and annual regular meetings are taking place. Previously, it was the Executive Director who led these meetings. Currently, because of the presence of a capable program manager, the program department conducts its own reflection meetings which begin to contribute to improving implementation of activities both in time and quality. The monthly and quarterly meetings with program and finance staffs and volunteers help to discuss the monthly and quarterly reports and planned activities. In these meetings, everyone is free to express his/her idea and appropriate responses are given immediately. However, there are no critical reflection/review meetings at the project site.

Score: from 3 to 3.5 (slight improvement)

2.5. Freedom for ideas: 'Staff feel free to come up with ideas for implementation of objectives'

This is about whether staff feel that the ideas they bring for implementation of the program are welcomed and used.

The frequency of meetings has increased and this creates opportunities to discuss different issues freely. In the monthly and quarterly staff meetings, all staff can express their feelings and appropriate responses are given by the Director. Compared to the baseline situation, ideas flow freely from different departments. It has been observed that some of the issues raised in the meetings are implemented to some extent. However, some staffs are arguing that despite the recent improvement, not all meeting results are shared, in a timely manner, with the staffs, particularly, Board meeting results.

Score: from 3.5 to 4 (slight improvement)

2.6. System for tracking environment: 'The organisation has a system for being in touch with general trends and developments in its operating environment'

This is about whether the SPO knows what is happening in its environment and whether those changes will affect the organization.

Compared to the baseline situation, the number of projects has increased and so has the number of stakeholders that ECFA is collaborating with. As a result, ECFA started to participate in different stakeholders meeting. Furthermore, ECFA is now becoming an active participant in the GO-NGO forum. The meetings help ECFA to track if there are changes both in the policies and directions of ECFA's interest area and working environment. The organization's internal staff are nowadays engaged in conducting working environment assessments based on ECFA's program objectives. Similar to the baseline, before the development of new projects, rapid assessments and surveys are conducted. But

some staffs believe that ECFA do not have a formal means of tracking the environment due to lack of capacity to do so. Most respondents do not consider this indicator to have changed.

Score: from 3.5 to 3.5 (no change)

2.7. Stakeholder responsiveness: 'The organisation is open and responsive to their stakeholders and the general public'

This is about what mechanisms the SPO has to get input from its stakeholders, and what they do with that input.

ECFA has been collaboratively working with its stakeholders in a better pace than during the baseline. Particularly, ECFA's attachment to its major stakeholder, especially, is the Bureau of Women's and Children Affairs Office has improved. For a better collaboration and partnership with stakeholders, ECFA organizes annual planning sessions to plan and set targets. Stakeholders are also participating in the project planning. ECFA is trying to accommodate stakeholder's comments. However, although ECFA has started reviewing and planning sessions with stakeholders, the principle is not yet internalized because of number and quality of staff.

Score: from 3 to 3.5 (slight improvement)

Summary capability to adapt and self-renew

There have been some slight improvements in terms of monitoring and evaluation, and using this for planning. An M&E policy and guidelines have been developed that are waiting for endorsement by the Board, and M&E formats are developed and are in place for action (notably, mission reporting format, training report format, monthly planning and reporting format, quarterly planning and reporting format). There is an M&E officer in the organisation now, but generally staffs still lack M&E knowledge and skills. The frequency of planning and review meetings has increased: periodic half-year review and planning meetings are of projects and organizational activities; field visits and beneficiary discussions on a quarterly basis; review meetings with community, volunteers, CBOs, CSOs and government offices are facilitated on a monthly basis. For each individual project there are midterm and final evaluations. Due to this increased frequency of meetings it is also easier for staff to critically reflect on issues and share their ideas. Furthermore, ECFA has improved its responsiveness to stakeholders due to increased stakeholder engagement, but the (limited) number and quality of staff is a hindrance to internalizing this principle.

Score: 2.9 to 3.4 (slight improvement)

Capability to deliver on development objectives

3.1. Clear operational plans: 'Organisation has clear operational plans for carrying out projects which all staff fully understand'

This is about whether each project has an operational work plan and budget, and whether staff use the plan in their day-to-day operations.

Like during the baseline situation there are clear operational plans in place for each respective project and staff are familiarised with these plans to implement them in their day to day activities. In addition, each month the organization prepares its monthly, quarterly and annual plan in an understandable way. It is noted that now other stakeholders like the Woman's and children affairs office and finance office, participate in preparing the annual plan.

Score: from 4 to 4 (no change)

3.2. Cost-effective resource use: 'Operations are based on cost-effective use of its resources'

Similar to the baseline situation, ECFA gave due emphasis to work using volunteers to be more cost effective. What is different in the endline is that ECFA has guidelines to minimize its operational costs. Together with this, resources are now used optimally to accomplish planned activities.

Score: from 3.5 to 4 (slight improvement)

3.3. Delivering planned outputs: 'Extent to which planned outputs are delivered'

This is about whether the SPO is able to carry out the operational plans.

Compared to its baseline performance, the organization is in a better position to deliver planned outputs, in a timely fashion. ECFA staff mention a number of causes that contributed to this improvement. First and foremost, the restructuring of the program department, then followed by the recruitment of the required staff, including an M&E officer. This is manifested by the project supervisor's commitment to prepare timely action plans and implement the activities on the expected time where the role and responsibility of all program staffs are clearly stated. All are accountable for any failure in not timely implementing planned activities. The second cause is the reduction in delays in budget approval from the donor and in making strategic agreements with the government. ECFA's strong partnership with the Bureau of Women and Children Affairs office on the helpline counselling service, reunification service, referral service and medical support is also contributing to the better performance of the organization. However, some of the outputs are not delivered in a timely manner due to delays in agreement with donors and government offices.

Score: from 2.5 to 3.5 (improvement)

3.4. Mechanisms for beneficiary needs: 'The organisation has mechanisms in place to verify that services meet beneficiary needs'

This is about how the SPO knows that their services are meeting beneficiary needs

As determined during the baseline, ECFA conducts field visits and beneficiary discussions at project levels on a quarterly basis; holds monthly review meetings with community, volunteers, CBOs, CSOs and government offices. Social workers working in the kebele level child protection structure, CHL counsellors, youth and girls clubs prepare monthly reports and submit those to the head offices. At the head office, ECFA compiles all the reports and submits to donors and government offices as per reporting timeframes and requirements. Hence, compared to the baseline, ECFA goes one step to fulfil its beneficiaries' demands and start an IGA and vocational skill training in addition to the other services that were undertaken during the baseline period. Compared to the baseline situation, ECFA has hired a social worker in each target kebele that helps them to fully engage with beneficiaries.

Score: from 3.5 to 3.75 (slight improvement)

3.5. Monitoring efficiency: 'The organisation monitors its efficiency by linking outputs and related inputs (input-output ratio's)'

This is about how the SPO knows they are efficient or inefficient in their work.

Similar to the baseline situation, there is no formal way of measuring efficiency, but ECFA staff still compare planned activities with implemented activities which helps them to assess efficiency.

Score: from 3.5 to 3.5 (no change)

3.6. Balancing quality-efficiency: 'The organisation aims at balancing efficiency requirements with the quality of its work' - This is monitored by CHI

This is about how the SPO ensures quality work using available resources

The ECFA is using CHI's 'Principles, Standards & Practices' checklist to self-assess the work done by the child helpline and the areas for improvement. They use it once a year (as one of CHI's membership requirements) which is similar to the baseline. Compared to the baseline situation, the most prominent change is the revision of the organization structure which led to improved organization capacity, through hiring qualified and competent professionals. The new staff enabled to improve efficiency and balancing this with quality of work. However, other staffs argue that the organization is still striving to ensure quality of work in line with the scarce resource it has, even with the additional staffs.

Score: from 3.5 to 3.75 (slight improvement)

Summary capability to deliver on development objectives

ECFA still has clear operational plans in place, which guide daily activities and is still using its resources cost effectively making use of volunteers. Presently, ECFA also has guidelines in place to minimise operational costs and has improved upon delivering planned outputs timely due to the restructuring of the program department and having an M&E officer in place, who helps in reviewing progress, timely, and adapting plans accordingly. Also, there are, currently, fewer delays in approving budgets and in making agreements with government. The mechanism to assess whether beneficiary needs are being met is still the same as during the baseline, such as conducting field visits and beneficiary discussions at project levels on a quarterly basis; holding monthly review meetings with community, volunteers, CBOs, CSOs and government offices. The major change is that ECFA has hired a social worker in each target kebele which helps them to fully engage with beneficiaries. There is no formal system in place to monitor efficiency or balance quality with efficiency, but comparing planned with implemented activities helps in assessing executed activities, and having hired more qualified staff has improved the quality of work.

Score: from 3.4 to 3.7 (slight improvement)

Capability to relate

4.1. Stakeholder engagement in policies and strategies: 'The organisation maintains relations/collaboration/alliances with its stakeholders for the benefit of the organisation'

This is about whether the SPO engages external groups in developing their policies and strategies, and how that is done.

ECFA has maintained its strong relationship with the stakeholders and moved one step ahead during the last two years period by establishing a network of beneficiaries. Similar to the baseline, stakeholders have been participating in all aspects starting from policy formulation to problem identification while planning projects. ECFA has been preparing and holding planning workshops together with different stakeholders so as to work with them and make the bond stronger. ECFA has more experience and expertise now in working with stakeholders and managing relationships.

Score: from 4 to 4.25 (slight improvement)

4.2. Engagement in networks: 'Extent to which the organization has relationships with existing networks/alliances/partnerships'

This is about what networks/alliances/partnerships the SPO engages with and why; whether they are local or international; and what they do together, and how do they do it.

Like in the baseline, ECFA is still engaged in different networks, such as CHI (Child Helpline International), CCRDA (Consortium of Christian Relief and Development Association, the largest local network), and CORHA (consortium of reproductive health associations in Ethiopia). ECFA is also still a partner of Plan International Ethiopia, OAK foundation, Wereld-kinderen and COPION international (a Korean NGO), and works with local offices (e.g. kebele offices) to facilitate their work. Over the last two years, ECFA established strong local networks with the community and also developed good attachments with the Bureau of Women and children affairs offices, Regional Finance Offices, Social affairs office.

Score: from 4 to 4.5 (slight improvement)

4.3. Engagement with target groups: 'The organisation performs frequent visits to their target groups/ beneficiaries in their living environment'

This is about how and when the SPO meets with target groups.

Compared to the baseline situation, ECFA has hired a social worker in each target kebele that helps them to fully engage with beneficiaries. Presently, the social worker manages different activities as required and mobilizes the community together with the head office staff. In addition, the Program manager and M&E officer quarterly conduct field visits and beneficiary discussions, while field workers discuss with beneficiaries on a monthly basis. In the monthly discussions and visits with the beneficiaries, women and children affairs office, Kebele administrations, women league and other committee members also participate.

Score: from 4 to 4.25 (slight improvement)

4.4. Relationships within organisation: 'Organisational structure and culture facilitates open internal contacts, communication, and decision-making'

How do staff at the SPO communicate internally? Are people free to talk to whomever they need to talk to? When and at what forum? What are the internal mechanisms for sharing information and building relationships?

In addition to the regular meetings and the more frequent meetings such as the newly designed 'weekly Monday morning meetings' create good working relationships and bondages between staffs. The meetings offer an opportunity to review and plan activities/tasks. An improvement has been observed compared to the baseline where everyone was working based on their job description and reporting the progress they made to their immediate supervisor.

Score: from 3.5 to 4 (slight improvement)

Summary capability to relate

Relationships have improved slightly, in terms of engaging with stakeholders especially communities, through hiring a social worker in each target kebele, and the government, especially the Bureau of Women and children affairs offices, Regional Finance Offices, Social affairs office. Internally, relationships have improved slightly through having more frequent planning and review meetings.

Score: from 3.9 to 4.2 (slight improvement)

Capability to achieve coherence

5.1. Revisiting vision, mission: 'Vision, mission and strategies regularly discussed in the organization'

This is about whether there is a vision, mission and strategies; how often staff discuss/revise vision, mission and strategies; and who is involved in this process.

There is no change in the vision and mission of the organization, but the expired strategic plan is under revision. Staff mentioned that the Dutch government provides the funds (MFS-II funds?) to hire consultants to facilitate this process.

Score: from 3.5 to 3.5 (no change)

5.2. Operational guidelines: 'Operational guidelines (technical, admin, HRM) are in place and used and supported by the management'

This is about whether there are operational guidelines, which operational guidelines exist; and how they are used.

A number of guidelines and manuals are developed or under development compared to the baseline situation, such as financial guideline, per diem and allowance related manual, admin manual, procurement manual and human resource manual (waiting for the final draft) and all staffs are aware of what is included in the manuals and guidelines.

Score: from 3 to 4 (improvement)

5.3. Alignment with vision, mission: 'Projects, strategies and associated operations are in line with the vision and mission of the organisation'

As it was during the baseline, the staff are acting according to the vision, mission and goals to be reached by ECFA's projects. The vision, mission and project strategies are presented to new staff in various meeting/sessions and they are encouraged to know the content well.

Score: from 4 to 4 (no change)

5.4. Mutually supportive efforts: 'The portfolio of project (activities) provides opportunities for mutually supportive efforts'

This is about whether the efforts in one project complement/support efforts in other projects.

Since all projects are designed to be complementary to support each other, the same trend has been continuing over the last years.

Score: from 3.5 to 3.5 (no change)

Summary capability to achieve coherence

On the whole, there has been some change in this capability, although most indicators under this capability scored the same compared to the baseline. Vision and mission of the organization are still the same, but the expired strategic plan is under revision. A number of guidelines and manuals are developed or under development compared to the baseline situation, such as financial guideline, per

diem and allowance related manual, admin manual, procurement manual and human resource manual (waiting for the final draft) and all staffs are aware of what is included in the manuals and guidelines. Staffs are still acting according to the Vision, mission and goals to be reached by the projects, and projects, like the baseline, are still designed to be complementary to each other.

Score: from 3.5 to 3.7 (very slight improvements)

Report CDI-15-054

The Centre for Development Innovation works on processes of innovation and change in the areas of food and nutrition security, adaptive agriculture, sustainable markets, ecosystem governance, and conflict, disaster and reconstruction. It is an interdisciplinary and internationally focused unit of Wageningen UR within the Social Sciences Group. Our work fosters collaboration between citizens, governments, businesses, NGOs, and the scientific community. Our worldwide network of partners and clients links with us to help facilitate innovation, create capacities for change and broker knowledge.

The mission of Wageningen UR (University & Research centre) is 'To explore the potential of nature to improve the quality of life'. Within Wageningen UR, nine specialised research institutes of the DLO Foundation have joined forces with Wageningen University to help answer the most important questions in the domain of healthy food and living environment. With approximately 30 locations, 6,000 members of staff and 9,000 students, Wageningen UR is one of the leading organisations in its domain worldwide. The integral approach to problems and the cooperation between the various disciplines are at the heart of the unique Wageningen Approach.

FOLLOW-UP REPORT ON THE NAZRETH CHILD HELPLINE (CHL)

MDG PROJECT C2¹

Elisabetta de Cao, Marloes Huis, Samson Jemaneh and Robert Lensink

¹ Part of the report is based on Huis, Suhlmann, Lensink and Hansen (2013).

Basic Information:

Southern Partner Organisation (SPO): ECFA (Enhancing Child Focused Activities)

Name of Dutch organisation responsible for project: Child Helpline International

Name of Consortium: Child Rights Alliance

Name lead organization: Plan NL

Start Date project: January 2011

End Date project: January 2015

Selected MDG: MDG 3

1. Introduction

Violence against women and girls is probably the most widespread form of abuse worldwide. According to DFID (2012), about one third of all women and girls in the world have been affected by violence. A reduction in violence against women and young girls is one of the key development goals. This report presents results of an impact evaluation of a project funded by the MFS organization *Child Helpline International* (CHI) and conducted by the Ethiopian non-government and not-for profit making organization “Enhancing Child Focused Activities (ECFA)”. The main aim of the “Nazreth Child Helpline (CHL)” project is to offer protection, growth and development for children and young women. ECFA uses a so-called Multi-stakeholder child protection system (MSCPS) approach to establish child protection efforts in its child protection programming. In order to improve girls and young women’s protection against gender-based violence, ECFA conducts a series of activities, which are meant to supplement each other. This report focuses on the child helpline and the community conversations (CC). It should be noted that activities related to the community conversations, as well as the Child Helpline, are actually financially supported with MFS-funding by *Plan international*. Although the MFS organization that funds the C2 project -the *Child Helpline International* - only provides capacity building support for ECFA staff, we decided to focus on the major activities of ECFA, the helpline and the CC, which are only *indirectly* supported by CHI.

The project is part of the broader country-wide “Girl Power Programme.” Within the “Girl Power Programme” different MFS organisations and Southern Partner Organisations work together. The “Girl Power Programme” is designed by different partners in coordination and alignment. Sometimes activities of different projects within the “Girl Power Programme” are difficult to disentangle. For instance, the project “Girl Power: Protection of Girls and Young Women against Violence in Addis Ababa and Adama towns Child Helpline (C3)” is also part of the nation-wide “Girl Power Programme.” Both projects have similar aims, which the SPOs try to achieve by different types of activities. These activities are meant to complement and strengthen each other. Since the C2 and C3 projects are both part of the same country-wide programme, the impact evaluations for C2 and C3 complement each other. Thus, to get a more complete picture of the impact of the activities conducted within the country-wide “Girl Power Programme” it may be relevant to also consider the evaluation report for project C3.

The report takes a mixed method approach by using both quantitative and qualitative information. Regarding the child helpline, we present figures on the use of the child helpline during the project

period. We also document figures on whether people are aware of the existence of a child helpline, and examine whether awareness improved during the project period. With regard to the community conversations, we present a qualitative analysis, and, by using so-called “List” experiments we try to assess the relevance of the CC in terms of changing social values.

The report is organized as follows. Section 2 presents the context of the evaluated project. This section will also provide some relevant findings from the literature. Section 3 describes the project. It will provide information about the different activities that are organized as part of the project, and will present important project information. Section 4 explains the data collection, and presents some descriptive statistics. Section 5 explains the analysis and presents the main results of the quantitative and qualitative impact analyses. Subsequently, Section 6 provides a discussion of the evaluation results. Section 7 concludes the report.

2. Context²

Ethiopia has been one of the fastest growing non-oil economies in the World, with an annual average growth rate of GDP of 5.19 percent from 1982 until 2013 (NBOE, 2014). Yet, Ethiopia is still one of the poorest countries in the world, with a GDP per capita of 513 USD in 2011/2012 (MWCY, 2014). While the percentage of people living below the total poverty line is improving (from 46% in 1995 until 30% in 2010/2011), it is still very high (MWCY, 2014). The same holds for the under- five mortality rates, which declined from about 20% in 1990 to 7% in 2012 (MWCY, 2014).

The federal government of Ethiopia enacted in 2001 a new Family Code based on the principal of gender equality (OECD Development Centre, 2014). This Code e.g. stipulates a minimum age for marriage at 18 years. However, early marriages are still common, especially in rural areas. Moreover, in parts of Southern and Eastern Ethiopia, kidnaping young women for marriage purposes still happens. Domestic violence is a criminal offence. Yet, violence against women remains widespread. Estimates suggest that around 70% of Ethiopian women suffered physical violence from their partner (OECD Development Centre, 2014). Moreover, it appears that many women are prevented from seeking legal compensation if confronted with physical violence. There are no reliable figures available on the **actual** cases of rape

² This section is to a large extent similar to Section 2 in the evaluation report for the “Girl Power: Protection of Girls and Young Women against Violence in Addis Abeba and Adama towns”project (C3).

and sexual assault since many women remain silent. However, official figures suggest that many women are suffering from rape - in 2005, there were 938 reported rape incidents in Addis Ababa- while only 103 offenders were punished. Female genital mutilation (FGM) is forbidden according to the new Penal Code. Yet, estimates suggest that still between 70%-80% of women is subject to FGM (OECD Development Centre, 2014). Despite the fact that women and men have equal rights officially, there is still a severe gender disparity in Ethiopia. In 2013, Ethiopia is ranked 118 (out of a total of 136 countries) in the Global Gender Gap index (World Economic Forum, 2014). This index provides country rankings on gender disparity based on economic, political, education and health criteria.

There are several official legal provisions that aim to protect children. Yet the abuse and exploitation of children is common practice in Ethiopia. For instance, Ethiopia belongs to the group of countries with the highest percentages of child labor. A survey in 2001 even suggested that approximately 80 percent of the children, of which a considerable percentage is below 15, are engaged in child labor activities. Most of these children originate from the rural areas. Even more problematic is the growing phenomenon of sexual abuse and exploitation of children in Ethiopia. Child sexual abuse and exploitation mainly takes place in the form of abduction, early marriage, FMG, rape, incest, and child trafficking. Estimates show that each year around 1.2 million children in Ethiopia are victims of trafficking (UNICEF).

Particularly children from economically deprived families and street children are at risk. The term street child refers to a child who works on the streets to earn money for herself or her family, and to a child that lives on the streets and is homeless. Especially in urban areas there is an increasing number of street children. In 2011, in Addis Ababa there were about 12000 street children and in Adama nearly 4000, (UNICEF, 2014).

3. Project description

3.1 Activities

As stated above, the Child Helpline (CHL) project is part of broader country-wide “Girl Power Programme.” In line with the aim of the “Girl Power Programme” the CHL project tries to improve

protection for girls and young women. The Child Helpline project is run by the SPO “Enhancing Child Focused Association (ECFA)”. ECFA is a non-governmental organization, working in Oromiya regional state. It aims to contribute to preventing children from any forms of violence in all settings through a holistic manner of service delivery (ECFA, 2013). ECFA was established and legally registered by the federal ministry of justice in 2006 by the name Ethio Child Focused Association. The operational area of ECFA is primarily Adama City in the Oromiya region. ECFA promotes and supports the creation of a safe environment for children in partnership with the community, local structures, government and non-governmental institutions, national and international partners, and other like-minded organizations.

ECFA uses several instruments to improve protection of girls and young women. One of the main instruments relates to the establishment and strengthening of child protection structures both at the city level (in five cities) and kebele level (in 20 kebeles/grassroots administrative structures selected in the five cities). In order to improve protection of girls and young women, ECFA also organizes community conversations (CC) groups and runs a helpline service. Community conversations are organized to prevent violence against girls and young women in the community itself. The overall aim of the community conversations is to create awareness and raise the key child protection indicators in the target kebeles. They also help to induce behavioral changes with respect to violence against girls and young women. The community conversations offer participants the opportunity to increase their knowledge on children’s and women’s rights as well as child protection. In addition, the participants are trained to identify and refer cases of child abuse. At the first meeting the CC facilitator provides initial topics, but the participants determine the specific topics that will be discussed based on the relevance of the issues in their kebele. A selection of the topics that have been covered, according to ECFA’s CC facilitators and participants, are children’s and women’s rights, health, creating jobs, child abuse, family planning, child labour, child trafficking and sexual abuse.

The main purpose of this project is to improve the helpline service. The child helpline aims to be an instrument to respond to violence against girls and young women. The child helpline may be contacted by children directly in order to receive counselling – help and advice - and other services that the child may require. The child helpline aims to play a strong role in contributing and improving the child protection system in Ethiopia. The Adama toll-free child helpline is intended only for Adama town and it

does not work toll-free outside the Oromiya region. The child helpline started in January 2007 in Adama; the implementation of the CC groups began in 2010 in Adama city. Since August 2012 the CC groups expanded to four (4) new cities, namely, Assela, Bishoftu, Metehara and Shashemene. Currently, there are plans to expand the helpline coverage to these four (4) cities.

The MFS-II funds have been allocated to support the Adama CHL since January 2011. The Nazreth helpline project is a continuation of an earlier project. Child Helpline International (CHI) started working with ECFA in mid-2007 with the intention to develop a fully-fledged national child helpline in Ethiopia. ECFA was permitted to register a new helpline. However, due to the 2010 Ethiopia NGO framework, ECFA is no longer permitted by government to directly run the Adama helpline service. Since 2012, ECFA registered and is a technical partner and offers technical support to the Ethiopian government, especially the Bureau of Women and children affairs in Adama. This government agency has the mandate to run the Adama helpline service. ECFA has integrated the Adama helpline with the office of Women and children affairs of the respective cities for the following reasons: (1) to integrate the child helpline with the national child protection system - which is run by the Bureau of women and children affairs office; and (2) the Adama child helpline to be run and owned by the government for sustainability. This new development was very much welcomed by CHI because it ensures sustainability and it is also what CHI advocates for, that's buy-in from government. But the big question now is; will the government be able to expand the child helpline service to national level instead of the current regional helpline service? Furthermore, does the federal governance system in Ethiopia support a national child helpline service or is it better to have regional child helpline services linked together through a national office? Currently, Plan International Ethiopia is working with ECFA and CHI to oversee the expansion, but priority is given to the programme areas of the Girl Power/MFS-2 programme.

3.2 Theory of change

The different interventions of ECFA are meant to complement each other in terms of reducing violence against girls and young women. While the main purpose of this project is to improve the child helpline service, we focus in this report on two of the main activities of ECFA - the community conversations and the child helpline service - for CHI only provides capacity support funding, which may indirectly also support other activities for ECFA, i.e. also the CC. The child helpline aims to play a strong role in contributing to the improvement of the child protection system in Ethiopia. If girls (or boys) phone the

child helpline, the problems they face are addressed, and advice is given. Hence, if the child helpline service improves, better protection of girls (and boys) will be achieved. The community conversations offer participants the opportunity to increase their knowledge on children’s and women’s rights as well as child protection, and to identify and refer cases of child abuse to the child helpline. The aim is to enhance awareness raising of community members on violence against girls and young women, to encourage discussion among community members and to address violence against girls. Thus, community conversations are meant to induce behavioral changes with respect to violence against girls and young women. Eventually this will lead to a decline in violence against girls and young women.

A simple diagrammatic presentation of the theory of change is given in Table 1.

Table 1: Theory of change

Intervention	Outputs	Outcomes	Final outcome
Child Helpline	The service of the helpline (as well as the number of helplines running)	The number of girls and women that will be reached by the helpline. The amount of people that are aware of the helpline	Girls and young women are free from all forms of gender-based violence and the threat of such violence
Community Conversations	The amount of community conversations organized The number of girls and young women that are reached through community conversation campaigns.	Values, beliefs and attitudes start to change; Violence against women is beginning to be seen as unacceptable Different forms of abuse/ violence against women start to reduce Women empowerment increases; early marriages decrease; women are less confronted with requests to provide sexual favours	

Obviously there are several risks, which are actually not spelled out explicitly in the documentation of this project. A major assumption is that the helpline is operating and can be reached by phone or in-person (aka, face-to-face). However, this was actually not the case during part of the project period, e.g.

due to the relocation of the helpline service. During the period June-October 2012, the helpline was offline. One of the problems the helpline project is faced with is that, due to Ethiopian regulations, the helpline had to be removed from the police station to the premises of the Bureau of Women's and Children's Affairs office.

4. Data collection

4.1 The data collection

For this project, we collected data in several ways. First, in order to test whether people are aware of the existence of the child helpline, we added several questions in the questionnaire that was used for the C3 project conducted by FSCE. This questionnaire focuses on three of the main interventions by FSCE as part of the nation-wide Girl Power Programme: (1) Iddirs; (2) Girls Clubs and (3) Street girls. This questionnaire had been conducted twice, a baseline and a follow-up survey, and has sampled three groups (1) girls at girls clubs; (2) adults who are members of Iddirs and (3) street girls who followed the "recovery and reintegration programme" of FSCE. During baseline and endline, we sampled 150 persons per group. We also sampled comparison groups. We were faced with several caveats, such as high attrition (especially related to girls clubs) and the impossibility to sample valid comparison groups for street girls. Moreover, the baseline was not a real baseline for it was conducted after the start of the programme. The full questionnaire, details about the dataset, and the caveats, can be obtained on request. However, since we only use the questionnaire and the related dataset to obtain information about peoples' awareness of the Child Helpline, and not for measuring impact of the Child Helpline on end users, we will not present all details here.

Second, we gathered data about the use of Child Helpline services by using archives of the Adama Bureau of Women and Children affairs³. The constructed data set provides information about the use of the helpline services during the project period. More information will be given in Section 5 below.

Third, in order to test the relevance of the community conversations, we decided to conduct a new questionnaire in June 2014. We surveyed 200 persons that had recently followed community

³ The Adama Bureau of Women and Children affairs runs the Adama child helpline service since 2012. ECFA only offers technical support. A representative of ECFA kindly went with us to the Adama Bureau of Women and Children to obtain the relevant data.

conversations organized by ECFA and a comparison group of 200 persons that will follow community conversations of ECFA in the near future. The full CC questionnaire can be found in Appendix A.

4.2 Availability of financial data

Child Helpline International (CHI) provides technical support in the start and/or scale-up of the toll-free child helpline in Ethiopia. The entire budget for the project amounts to € 243,644.01. Part of this budget -approximately €170,000 – is funded by CHI. For the period 2011 to 2015, CHI will use these funds to annually fund trainings, exposure visits and ECFA’s participation in regional and international consultative meetings. Thus, CHI only provides capacity building and technical support of ECFA staff with MFS-II funds. Hence this project basically intends to improve the capacity of ECFA, in order to improve the existing helpline service, so that ultimately child protection will be improved.

A breakdown of the CHI funds provided to ECFA is given in Table 2. The table shows that the majority of the funds is spent on “managing relationship” with ECFA and for capacity support to ECFA.

Table 2: Country budget CHI (% of total forecasted)

	Year 1	Year 2	Year 3	Year 4	Year 5
Managing relationship with southern partner	0.40	0.29	0.20	0.30	0.22
Capacity support to southern partners	0.37	0.28	0.44	0.19	0.39
Total in Euros	34167	34166	38267	26285	37950

However, recall that the different organizations within the “Girl Power Programme” work closely together. It is important to note here that as a network body, CHI does not fund its members directly. It is also noteworthy that the activities we consider in this report, the activities related to the community conversations, as well as the Child Helpline itself, are financially supported with MFS-II funding from

Plan international, and thus not by the MFS-II organization, “Child Helpline International” (CHI). Yet, the funds provided by CHI *indirectly* fund these activities as well.

In order to assess the importance of CHI funding as part of the ‘Girl Power Programme’ it may be relevant to consider financial reports on the “Girl Power Programme” by ECFA. Table 3 provides total budgets for 2012 and 2013. The table also specifies the most important spending items.

Table 3: Most costly activities in 2012 and 2013 for the ‘Girl Power Programme’ (percentages of total)

	2012	2013
Purchase vehicle	0	0.26
Salaries programme staff	0.09	0.12
PIE-ECFA admin staff salary	0.10	0.04
Recruiting community worker	0.02	0.11

Office rent and phone charge ECFA office	0.06	0.004 ¹
Total (in USD)	996617 (800000Euro)	1.188.267 (956121Euro)

1 in 2013 no office rent specified.

Table 3 shows that in 2013, the purchase of a vehicle was the largest expense. In both years, salaries for programme staff as well as administrative staff form a large percentage of total expenses. The table also clearly signals the importance of the community conversations: almost 10% of the entire budget for the ‘Girl Power Programme’ is in both years directly allocated to CC. It is difficult to allocate costs to the child helpline service. Probably the furniture and renovation costs of the CHL office are directly related to the child helpline. The share of CHI funds in total funds provided as part of the ‘Girl Power Programme’ varies around 4%, and hence is relatively small.

4.3 Descriptive analyses

Due to the important role played by the community conversations (CC) as part of the ‘Girl Power Programme’, we pay specific attention to this activity. In this sub-section, we present some descriptive statistics on the persons we have interviewed for the community conversations analysis. A survey was conducted in June 2014. In total about 400 individuals were interviewed, of which half had just completed a round of community conversations, and half were on the list of people that were to start their community conversations soon. Table 4 shows the “treatment”⁴ group and the “comparison” group. The table also presents balancing tests, i.e. tests to compare whether “treatment” groups are similar to the “comparison” groups in terms of observable characteristics. The table shows that, on average, the persons in the treatment group are a bit older, and somewhat better educated. However, for most variables, there is “balance” implying that the treatment and comparison groups are similar.

Table 4: descriptive statistics Community Conversations

	<i>CONTROL</i>	<i>TREATMENT</i>	Differences
	<i>Mean</i>	<i>Mean</i>	<i>t-test/Chi2</i>
	<i>SD</i>	<i>SD</i>	<i>p-value</i>
Indicators/Variables	<i>N=198</i>	<i>N=206</i>	
<u><i>Descriptive Indicators</i></u>			

⁴ We use the term ‘treatment’ for the group of people who had completed the community conversations, i.e. those who are “treated” by an intervention. The ‘control’ group is the group that will start community conversations soon.

Gender (Male=0)	0,677	0,699	-0,022

	0,479	0,501	-0,171

5. Analyses and results

5.1 Methodology

We provide evaluations of the child helpline it-self and the community conversations. Below we explain the methodologies used for both interventions after each other.

Community conversations

For the evaluation of the community conversations, we use different types of analyses. We start with a qualitative analysis. The qualitative description and evaluation of the community conversation

programme is based on interviews with two important stakeholders of FSCE⁵ and data on community conversations gathered in four Focus Group Discussions (FGD) at ECFA with (1) eight participants of community conversations, (2) eight community conversation facilitators who are in charge of organizing and structuring the conversations in their kebele, (3) four kebele structure workers, and (4) seven staff members who are involved in the child helpline.

With respect to the CC, we also conduct an impact evaluation by comparing 200 individuals who have recently followed CC conversations with a “control” group of 200 individuals who intend to follow a CC conversation shortly. In line with the theory of change, the aim is to test whether CCs contribute to a change in awareness and start to induce behavioral changes. Since we mainly consider sensitive issues, which may be difficult to detect with direct questioning for people may try to give “politically” correct answers, we decided to conduct the so-called list experiments to measure changes in behavior. With a list experiment, a sensitive question is asked indirectly so that the respondent is more likely to reveal a truthful answer. In this way, respondents have a chance to report their sensitive behavior without allowing the interviewers to identify their responses. The list experiment is designed by adding a sensitive item to a list of other non-sensitive items (baseline list), see the questions in red in the questionnaire presented in the appendix. To conduct the list experiment, we randomly assigned half of the respondents to a set of base statements, and randomly the other half of the respondents to the set of base statements plus a statement related to the sensitive issue. Next, individuals’ from both groups are asked to state how many statements they agree to. By doing this, one receives the average amount of statements both groups agree with. Due to the random assignment of the “sensitive question” to one of the groups, the difference between the two groups provides estimates of the percentage of people that agree with the sensitive statement. We apply list experiments both to individuals that have followed the community conversations (the treatment group) as well as individuals who have not yet followed the community conversations (the control group). A difference in outcomes for the two groups gives an indication of the impact of the community conversations on the sensitive item.

⁵ Both ECFA and FSCE organize community conversations (CC) aiming at awareness creation in the community with regard to children’s and women’s rights. We pay attention to CCs in the evaluation reports for ECFA FSCE (C2 and C3 projects). Because of the similarity of the activities, we consider it relevant to also present the interviews with stakeholders of FSCE in this report dealing with ECFA.

In addition, we conducted a simple regression analysis with which we try to assess whether community conversations have changed behavior related to abuse, and/or whether community conversations changed the degree to which participants of community conversations were confronted with abuse.

Child helpline

The second activity under study is the child helpline offered by ECFA, the child helpline offers support and counselling for abused or otherwise affected children. With respect to the Child Helpline, we are not able to study behavioural changes that can be attributed to the CHL. Rather, by analysing observational data on telephone calls, we study developments in the use of the Child Helpline during the last few years. Moreover, by conducting surveys in Adama, we examine to what extent the child helpline has become more widely known and has become more visible during the last few years. The qualitative description and evaluation of the child helpline is based on data from the helpline's logbook and information about the child helpline which was gathered in four Focus Group Discussions (FGD) at ECFA with (1) eight participants of community conversations, (2) eight community conversation facilitators who are in charge of organizing and structuring the conversations in their kebele, (3) four kebele structure workers, and mainly (4) seven staff members who are involved in the child helpline. In addition to the FGDs, questionnaires were used to gain some insight in the experiences of children who received support from ECFA. Since children seek ECFA's support for sensitive issues, such as abuse or neglect, it was deemed unethical to ask the children to participate in a focus group discussion or undergo an in-depth-interview. The questionnaire was distributed by a child helpline counsellor and did not request very much detail about the reason why children sought help from ECFA to prevent secondary victimization and for confidentiality reasons.

5.2 Results

Community Conversations (CC)

Qualitative analysis

Both ECFA (this project) and FSCE (the C3 project) organize community conversations (CCs) aiming at awareness raising in the community with regard to children’s and women’s rights. Community conversations are organized for a group of approximately 60 kebele members in the target kebeles of the organizations. FSCE organizes a session every 15 days for at least eight consecutive months per group of participants. ECFA has organized a total of 35 community conversation programmes between 2010 and 2013. Most of the CCs participants are selected from different groups in the community because of their active role in the community and/or their believed ability to convince others. In addition a number of participants personally decides to participate. The facilitators try to include children in the community conversations to make the group representative of the kebele with an age range of 4 to 80 years old. The organizations are responsible for organizing the programme, training the community conversation facilitators, providing coffee, tea, and bread, dispersing correct and good information, and providing certificates when the participants completed all sessions. Ten sessions are organized per group of participants starting in January until the tenth session is planned. Per target kebele, 120 participants took part in the community conversations by ECFA (see Table 5) each year of whom approximately 80 received their certificates after participating in all ten sessions.

Table 5: Overview of the number of participants in ECFA’s community conversations (CCs) 2010-2013.

Year	Place of implementation	Kebele	Total number of participants
2010	Adama	06,07,08	360 participants
2011	Adama	02, 04, 06, 07, 08, 14	720 participants
2012	Adama	02, 04, 06, 07, 08, 14	720 participants
2013	Adama, Assela, Shashemane, Methara, Debreziet	02, 04, 06, 07, 08, 14 and 14 kebeles outside Adama	2400 participants

Note: In 2009 Community Conversations had not yet commenced.

Below, a description of the community conversation organized by ECFA on May 25th 2013 at the Kebele 08 administration office in Adama city is provided. This is the last meeting for this group of participants who will soon graduate during the CCs graduation ceremony.

“A group of people is sitting in a large circle on chairs and bamboo benches in front of the kebele administration office. There is one man who leads the discussion, the community conversation facilitator, one woman takes notes, the kebele structure coordinator, another woman makes coffee and tea, a third woman films and another man observes, both ECFA staff. The other 36 people are participants of the community conversation. Both men, 7 boys, 1 man, and women, 18 girls, 10 women, are present. The age ranges from about 10 until about 75 years old, with an average between 20 and 25 years of age. The community conversation facilitator tells something or asks questions and afterwards gives the participants the opportunity to react. When someone wants to say something he or she will raise his/her hand. When the facilitator gives them a turn to speak the participant thanks the facilitator and, encouraged by the other group members, stands up to make a comment or tell something. It appears as if the participants do not respond to each other but make their own comments. Some of the participants have notepads on their lap but nobody seems to take notes. Most of the participants listen to what is being said. The people who do react are both male and female and from different ages. In the 30 minutes we observed the conversation, 7 persons said something, namely, one (1) man aged around 40, 1 woman aged around 40, 2 boys aged around 16, 2 girls aged around 14, and 1 woman aged around 75. Halfway through the meeting, three girls and the kebele structure coordinator distributed coffee, tea and sweet bread. The total conversation takes one hour.”

As was mentioned above, the general goal of community conversations is to educate the community in order to prevent child abuse, improve child protection and empower girls and women. The community conversations aim at creating awareness by distributing the information gained at the conversations to the larger community through the formulation of action-points during the community conversations.

“The community is the cause for the abuse and [the community conversations] give lessons [to the community] and bring solutions from the community.” – CC participant ECFA

It is believed that the goal of the community conversations is achieved; women and children are now more aware of their rights and responsibilities, and attitudinal and behavioural changes are observed in the community. Moreover, the community conversations are seen as effective because they contribute to several changes in the community, such as decreased sexual harassment of girls, decreased child labour, increased educational attendance, and an increased awareness in the community to discuss rights and responsibilities and to support child protection.

“We tried to minimize the child labour, abuse and child trafficking through the community conversations by consulting with the community and also with brokers who traffic children.” – An example of a case in kebele 01 was about a domestic worker, she made long hours, received no schooling, no time for play and was physically abused. A neighbour identified the problem and notified the police and the kebele administration. The child was transferred to the temporary shelter and the man was taken to the police. [...] Community structures are needed to know what is going on. – FSCE stakeholder

In addition, the participants agree that the community conversations have improved their understanding of gender discrimination, gender equality and empowerment for girls.

“Before [the community conversations] I felt that we were not equal to males, but now I don’t feel that anymore” – CC participant ECFA

While it is believed that the community conversations benefit the wider community, the facilitators and participants mention that it remains necessary to reach the community at large because abuse is still occurring. In addition it is deemed necessary to work together with legal offices. Other groups, such as the police, child traffickers and government officials, should attend the community conversations and receive training on child abuse. The participants suggest grouping participants of CC into age groups, to change the location to places where more people can participate and to experiences from other cities.

“Some obstacles persists in the community, such as child traffickers who object the work of ECFA because they earn their living by trafficking children.” - CC facilitator ECFA

“Child traffickers pay 30 birr to take a child from his or her home and then sell the child at a different place, like Adama, where the child will [...]earn] the trafficker 100 birr per month.” – CC participant ECFA

In general however the community conversations seem to contribute to an increased awareness with regard to children’s and women’s rights and therefore seem to work towards the achievement of the goals of the Girl Power Programme.

Did community conversations change social values?

We turn to the question whether community conversations raised awareness of community members on violence against girls and young women. We used the so-called list randomizations to address this question. Recall that list randomization enables to illicit answers on sensitive issues. The list randomization allows the respondent to conceal the answer. The list experiment works as follows. The group of respondents (both for those who followed CCs as for the comparison group) is randomly divided into a group A and a group B. Next, Group A has been confronted with a set of statements, not including a sensitive issue, while Group B has been confronted with the same set of statements, but also with a statement related to a sensitive issue. Both groups have been asked to report how many statements, but not which, are true. An estimate of the proportion of the sample that is engaged with the sensitive issue is given by the difference in the mean true statements of the two groups. Table 6 reports the sensitive questions that we have tested. Table 7 presents the proportions of people in the treatment and the control group that agree with these sensitive issues.

Table 6: Sensitive questions

Question 1	Children should go to school, but only when their family doesn’t need them to help at home
------------	--

	or at work
Question 2	At times it is necessary to physically discipline children (such as: hit, slap, smack)
Question 3	Women and girls who are being sexually abused are at least partially responsible themselves
Question 4	There are times when a wife deserves to be hit or beaten by her husband
Question 5	A man should have the final word about decisions in the home
Question 6	A wife has a right to buy and sell things in the market without asking the permission of her husband
Question 7	If there are no other options prostitution is a reasonable choice.
Question 8	Girls should be circumcised.
Question 9	The practice of early marriage should continue

Table 7: proportions of the sample that agree with the sensitive statement

	Total	Treatment	Control
Question 1	23	23	22
Question 2	87	88	86
Question 3	48	34	63
Question 4	Ns	Ns	Ns
Question 5	31	25	37
Question 6	29	31	27
Question 7	23	21	24
Question 8	Ns	Ns	Ns
Question 9	Ns	Ns	Ns

Note: ns means not significantly different from zero. All other “percentages “are significant at the 0.01 % level.

The results are encouraging. There are big differences between the treatment group and the control group for questions 3 and 5, indicating that CCs help to change values and behavior regarding how people think about the responsibility of being sexually abused ((q3): Women and girls who are being sexually abused are at least partially responsible themselves) and about decision making ((q5): A man should have the final word about decisions in the home). The CCs also seem to affect bargaining power of females ((Q6): A wife has a right to buy and sell things in the market without asking the permission of her husband) and regarding prostitution ((Q7): If there are no other options, prostitution is a reasonable choice.) Thus, our list randomizations provide evidence that community conversations contribute to a change in social values and contribute to an increased awareness with regard to children’s and women’s rights. This is an encouraging first step in the process of behavioral change, and hopefully will ultimately lead to less harmful traditional practices, i.e. practices and cultures which affect the health and well-being of women.

We also conducted a simple regression analysis with which we tried to study whether community conversations affected actual behavior, and/or the degree of abuse experienced in the community during the last year. More specifically, we asked all individuals in the sample the following four questions:

- 1) Did you physically discipline (beat) your children last year? (beat_child)
- 2) Have you heard people beating their wife during the last year? (beat_wife)
- 3) Have you been physically abused in the last year? (physically_abused)
- 4) Have you been psychologically/emotionally abused during the last year? (psychologically_abused)

Next, as the dependent variable is binary, we conducted logit analyses, including control variables, to estimate the impact of community conversation on the (probability of) outcome variables. The results are given in Table 8.

Table 8: Impact of community conversations on different forms of abuse

	1	2	3	4
	beat_child	beat_wife	physically_abused	psycologically_abused
Treatment	-0.830**	-0.606**	-2.159***	-0.834***
	[0.317]	[0.215]	[0.466]	[0.238]
Male	2.049***	-0,317	-0,271	0,0154
	[0.565]	[0.234]	[0.375]	[0.261]
Age	- 0.0444**	- 0.0237*	-0.0686**	-0,00531
	[0.0151]	[0.0109]	[0.0239]	[0.0117]
ever married	0,966	0,133	1.085*	0,243
	[0.726]	[0.310]	[0.530]	[0.341]
Christian	0,0212	0.831**	1,07	0,384
	[0.456]	[0.315]	[0.636]	[0.354]

post- primary educ	0,291	0.476*	0,219	0,0422
	[0.349]	[0.221]	[0.354]	[0.244]
_cons	-1,196	0,104	-0,911	-0.932*
	[1.039]	[0.423]	[0.804]	[0.472]
N	228	404	403	403

The coefficient of interest is “Treatment”, which is a zero-one dummy with a one if somebody has followed a community conversation group, and a zero if not. The results are striking: in all cases “Treat” is significant with a negative sign, indicating that community conversations lead to beating children less, and less abuses experienced. However, it should be noted that the regressions may be biased due to self-selection effects since they do not control for possible fixed effects, or other forms of unobserved heterogeneity. Hence, it is not clear to what extent the impacts can indeed be attributed to the community conversations.

ECFA’s Child Helpline

We start by considering whether people are aware of the existence of the child helpline. We asked this question to 591 people during the baseline and 377 people during the endline. The results are presented in Table 9.

Table 9: Do people know the child helpline?

	Baseline	Endline
Percentage of people that are aware of existence of child helpline	44	37
Percentage of people that have phoned the helpline	5	4

Percentage of people, of those who have phoned, that was satisfied with the advice	59	71
Total	591	377

It appeared that less than 50% of the interviewed people have ever heard of the child helpline. It even seems as if this percentage is decreasing over time: during the baseline 44% knew of the existence of the helpline, at the endline this was only 37%. The percentage of people that actually phoned the helpline within our sample also declined during the project period, from 5 to 4 percent. Fortunately, the percentage of people of those who phoned that was satisfied with the advice increased from 59 to 71 percent. However, it should be noted that these figures are based on very small numbers. Yet, it is somehow disappointing to see that many people even don't know of the existence of the helpline, and that a substantial percentage of people who phoned the helpline was not satisfied with the advice.

The above figures are based on our sample. It seems relevant to have a closer look at the archives of the child help line, and study the entire population of children that has phoned the child helpline during the project period. Children or people contacting ECFA on a child's behalf contact ECFA for a variety of problems. The number of children helped by ECFA was rather high in 2008 and the beginning of 2009, this however drastically decreased as a result of the CSO legislation in 2009/government NGO framework (see Table 10 for the total number of beneficiaries per year). Since 2010 the number of calls seems to be slowly increasing again. Over the past years the number of girls and boys receiving support through ECFA seems to be rather equally divided and also the age seems to be randomly distributed between zero and eighteen (M= 8.6). ECFA is contacted for a large variety of cases, however alimony has been the most or among the most reported cases each year.⁶ Since in most alimony cases the father is identified as the perpetrator this could partly explain why the children's fathers are most often identified as the perpetrators. Child trafficking has become increasingly reported since 2009-2010 while the number of reports of abandonment and neglect seem to be decreasing, forced marriage and several types of sexual abuse remain among the most reported cases. Over the years most cases were reported

⁶ Alimony means that the perpetrator (mostly the father) does not pay alimentation (alimony). Divorce and sexual abuse cases are not necessarily linked to alimony cases.

by family members and concerned relatives at home (see Tables B1, B2 and B3 in Appendix B for a detailed overview of the reported cases).

Table 10: Number of children contacting the ECFA helpline per year.

Year	2008 - 2009	2009 – 2010	2010 - 2011	2011 – 2012	2012 - 2013
Number of cases	234	75	111	177	59 +

Note: The periods in the table run from September until August each consecutive year (e.g. 09/2008-08/2009).

The helpline is a free-of-cost service and can be reached through landline phones in Adama seven days a week during working hours. This can be an obstacle because children may be afraid to call from their homes. Unfortunately it is not yet possible to reach the helpline through mobile phone. Three formal workers and one volunteer work at the child helpline and answer the phone in shifts. A good education and skills related to counselling and interacting with children are required, as are skills to give psychological support. There are approximately four trainings each year focussing on (online) counselling, case management, interacting skills and child abuse. These trainings are mostly offered by other organizations and allow for a selected number of the staff members to participate.

In previous years the child helpline was located in an office near to the police stations and the number of calls steadily increased up to 20 calls a day. However due to problems with the telephone and because the location of the helpline was changed the number of phone calls has decreased. Due to the Proclamation to Provide for the Registration and Regulation of Charities and Societies (CSP) legislation the helpline was no longer allowed to work with the legal process and had to change its location (ICNL, 2012). The new location is at the Women’s and Child Affair office and it appears that people are rather reluctant to come to the new office because it is somewhat far from the city centre. As a significant

percentage of the reported cases is reported by physically visiting the ECFA office this can be a limitation. In addition, ECFA can no longer refer the victims to the different organizations themselves but refers all callers to the Women's and Child Affair office who then proceed to the actual referral or offering support.

“In previous times we followed the care to the end. Nowadays we are not able to know what happens at the end. We just give financial support. We don't know the end result because we are just allowed to report the cases but not to follow up. Maybe the network [police, Women's and Child Affair office, ECFA] will help us to know the end result.”

– Child helpline staff member

The staff members clarify that victims or callers can approach the helpline in three ways, firstly by calling 919, secondly by going to the helpline office in person (aka, in-person or face-to-face counselling) , and thirdly by using the suggestion boxes at school. However, these suggestion boxes are not functional at the moment. In addition, the telephone was not functional when this study was done due to a problem with the electricity.

It was stressed by the staff members that the advertisement should be increased in order to reach more children and discuss that it would be valuable to receive final reports about the support offered to the children who approached the helpline. In addition they state that it is necessary to increase the network with the stakeholders. The staff members regret that they can't receive immediate support from the police as in previous times because currently, the process goes through the Bureau of Women's and Children Affairs office. In addition, they mention that there is limited capacity at some occasions as only 10 children can receive medical support and only 15 children can stay at the safe shelter for trafficked children at a time/the same time.

There are some important recent developments for the child helpline as ECFA's activities, such as sport plays and community conversations, are being expanded to four additional cities: Asela, Debre Zeite, Shashemene and Methara. In addition, the request to provide access to the helpline through mobile phones is currently being processed. However, the telecom-company currently investigates the possibility to demarcate the calls to ECFA's interest area.

The most important achievement for the helpline in the last years was the fact that children nowadays claim their rights more often due to an increased awareness in the community. In addition, there has been increased networking with other organizations and stakeholders.

The child helpline members as well as the CC facilitators and kebele structure workers agree that the child helpline is valuable because it gives children the opportunity to report abuses and ask for their rights. In addition, it is seen valuable that 919 is an easy and free-of-cost/free-of-charge number which offers support to children who are abused, encounter cultural problems or are trafficked and need to be reunited with their family. Another important value of the child helpline is that it offers an opportunity to support those children who do not want to report their cases in-person/face-to-face. Contrary to the staff members and volunteers, only some of the community conversation participants agree that the helpline is valuable. They agree that the helpline is valuable for reporting sensitive topics such as sexual abuse but in general they do not find the helpline very valuable. It is mentioned that support is offered faster when one goes directly to the nearby-located police station. At the four different focus groups, all participants agreed that it would be good to increase access through mobile phones.

Beneficiaries of child helpline.

A questionnaire was distributed by a member of the child helpline staff to ten children who have received support from the helpline office. None of the children used the telephone to approach the office but nine out of ten did know about its existence. The children were between 7 and 15 years old, 4 were boys and 6 were girls. The children learned about the child helpline through different sources, such as friends, parents, teachers, posters or kebele structure workers. They contacted the helpline for a variety of problems, such as sexual abuse, problems at home or school, violence or emotional problems.

“My mother was not able to give food supply for all of us because we were three. The Bureau of Women and Child affairs office referred me to the hospital to get medical treatment [for malnutrition] and to another organisation [which] offers food support.”

– ECFA beneficiary

“When I went to shop at night the light was gone and somebody caught me and abused me sexually”- ECFA beneficiary

In general, the children rated the support offered by ECFA as both helpful and satisfactory. On a 10-point scale ranging from 1 (not at all helpful/satisfactory) to 10 (very helpful/satisfactory) the scores ranged from 5 to 10 with an average of 8 and 7.8 respectively. Overall, the child helpline office seems to offer a valuable opportunity for children to report several types of abuse or neglect.

6. Discussion

We initially intended to focus exclusively on the impact of the helpline as such as the main contribution of CHI was (indirectly) related to the helpline. The evaluation of the helpline appeared to be problematic, partly because the helpline could not be reached for some time, but also because clear “treatment” groups and “control” groups could not be identified for the helpline is in principle open for everybody. Therefore, we mainly referred to qualitative analyses, and some simple quantitative analyses using information on amount and background of children that phoned to the helpline. Obviously, this type of analyses is less rigorous in terms of attribution issues. Notwithstanding the methodological caveats, the analyses do not give a very positive picture about the helpline. The percentage of people that is aware of the existence of the child helpline is below 50% and even declined during the project period. Moreover, while programme staff was positive, most of the community participants that we interviewed did not see the helpline as valuable. According to them, support is often faster if one goes directly to the nearby-located police office. Moreover, the amount of children that phoned the helpline was rather low, far less than 1 per day on average. The amount of calls even decreased after 2008, partly due to a change in the law (i.e., the NGO framework introduced by the government in 2010). The helpline was also closed for some time during the project period, and possibilities to reach the helpline were not there. Thus, we don’t think that the helpline has contributed a lot to the protection of children. It is also difficult to understand why the helpline can only be reached by landlines, and still not by mobile telephones.⁷ The simple fact that landlines are needed makes it difficult, or even dangerous,

⁷ This can partly be explained by the difficulty in getting Ethiopia telecom’s permission for 919 to run free-of-charge on mobile phones.

for children to phone the helpline. It is therefore encouraging to see that the possibility to reach the child helpline via mobile phones is currently being pursued.

The above remarks do not imply that help offered by the helpline **office** has not been valuable. We spoke with some children who received help from the office, and they were rather positive. However, it is notable that almost none of these girls actually used the telephone but rather went to the Women's and children affairs office in-person (the so-called in-person/face-to-face service).

During the evaluation period we decided to also conduct an impact evaluation of the community conversation programme of ECFA. CHI does not directly fund these activities, and the project's main aim is to improve the service of the helpline. Yet, an evaluation of the CC seems important as ECFA pays much attention to community conversations as instruments to reduce harmful traditional practices and cultures that affect health and well-being of women and girls. Our findings are encouraging for they suggest that community conversations are important instruments to reverse the social convention. We even provide some evidence that community conversations improved actual behavior in line with the Girl Power Programme. Therefore, in our view it was a good decision of ECFA to start organizing community conversations, and to make community conversations such an important part of ECFA's interventions as part of the Girl Power Programme.

In our view, the interventions by ECFA are important, and contribute to increased protection of children. However, once again, this is not brought about by the child helpline, but merely due to community conversations and help at the office. We would advise funding a similar project in the future as protection of children is enormously important, and some of the activities, notably the community conversations, do contribute significantly. However, the helpline in itself needs a rethinking and some serious adjustments before it can become effective in our view.

The main aim of the child helpline protection project was to improve better protection for girls and young women. CHI aimed to contribute to this goal by helping to improve the existing child helpline

services so that the helpline could benefit all marginalized children and young people in Ethiopia. There are so many changes, namely, the 2010 government NGO framework that legally brought the changes of moving the helpline from the premises of ECFA to the premises of the Bureau of Women and Children's Affairs. The delays in the operations of the child helpline service after its relocation also contributed to its inadequate functioning. It is therefore hard to argue that the helpline service has been effective.

6.2 Financial efficiency

A financial efficiency analysis of the entire project is problematic, if not impossible, since it is extremely difficult to associate the funds provided by Child Helpline International (CHI) directly with one of the activities. CHI only funds capacity building, and hence only indirectly the main activities of ECFA. As a percentage of the entire budget for the 'Girl Power Programme' CHI does not contribute more than 3-4 percent. However, a simple comparison of CHI contributions per year and the amount of children that phoned the child helpline per year immediately shows that money would have been wasted if the helpline would have been the only activity of ECFA. During the entire project period less than 700 children phoned the helpline; hence per year on average $700/5 = 140$. The contribution of CHI per year equals on average 34167 Euros. This implies that for CHI, the costs per telephone call would be $34167/140 = 244$ Euros. The per telephone call costs for CHI become even much higher if it is taken into account that CHI contributes less than 5% of the entire budget.

However, it would not be fair to evaluate the financial efficiency of this project by only considering the amount of children that have phoned the ECFA helpline. It may be more important to have a closer look at the financial efficiency of the main activity of ECFA that we consider in this report, the community conversations. Table 5 has shown that in 2013, 2400 community members participated in community conversations.⁸ The total direct costs related to community conversations in 2013 amounted USD 106855 (calculated from Table 4). Per person, the costs of CC then ranges between $106855/2400 = 44$ USD and $106855/2160 = 50$ USD. According to Alem et al. (2013) the cost of community conversations in Ethiopia varied between USD 8.25 and USD 19.24 in 2011 (taken from , AIID, 2014, p.18). Obviously

⁸ Our 'updated' information on the amount of community members that followed CCs slightly differs from the 2013 progress report (ECFA, 2013). According to ECFA (2013) 2160 community members participated in community conversations.

costs will vary a lot depending on the contents and quality of the community conversations. Yet, the per capita costs of community conversations conducted by ECFA seem rather high.⁹ Thus, while community conversations seem to be quite effective in terms of changing social values, they also seem to be very expensive.

7. Conclusion

This report documents an impact assessment of a project implemented by ECFA and funded by Child Helpline International (CHI). The project is part of a nationwide programme in which also *FSCE* (project C3) participates. The main aim of the project is to reduce violence against girls and women. In order to contribute to this aim, ECFA conducts several activities, such as running a child helpline service and conducting community conversations.

The main findings are as follows: 1) the child helpline was not very effective during the project period. Due to several reasons, such as a change in government law governing NGOs in Ethiopia, that were not under control of ECFA, the child helpline could not be reached. It was also difficult to reach the helpline since only landlines could be used. Consequently, the number of children that phoned the helpline was on average, 140 per year, over the project period (i.e., 2011-2015). Moreover, only a low, and even over the last years a decreasing percentage of the people are aware of the existence of the helpline. In our view, an in depth further assessment of how the quality of the child helpline can be improved, combined with a cost-benefit analysis is recommendable; 2) the community conversations contribute to a change in social values and also contribute to an increased awareness with regard to children's and women's rights and therefore seem to work towards the achievement of the goals of the Girl Power Programme; 3) The support offered at the child helpline service is positively valued and also seems to contribute to the goals of the Girl Power Programme; 4) In terms of efficiency, this project seems to be rather costly. The unit cost of community conversations seem rather high when compared with a benchmark in Ethiopia. However, it should be realised that this type of comparisons are problematic e.g. since costs may vary considerably among cities, and further research is needed to find out whether the community

⁹ It would have been worthwhile to also compare the per capita community conversations costs for ECFA and FSCE. However, as we lack the information for FSCE, we are not (yet) able to make this comparison. Moreover, it should be taken into account that costs may vary considerably across cities and regions. For instance, goods are more expensive in Adama compared to Addis Ababa.

conversations conducted by ECFA are really high compared to the standard, and if so, why this is the case. If we would link the entire contribution of CHI –on average 34167 Euros per year - to the child helpline as such, the project seems very expensive for, on average per year, only 140 children phoned the helpline. Yet, it should be noticed that ECFA conducted several other activities in addition to running the helpline.

Overall, while we acknowledge the impact evaluation caveats we faced, and the difficulties in rigorously evaluating this programme, we are positive about the contents and quality of some of the interventions that are conducted by ECFA as part of the Girl Power Programme. The impression we got from the interviews with beneficiaries of the programme, and the results from the quantitative and qualitative analyses, suggests that the interventions via community conversations contribute to a change in values and attitudes, and help to reduce violence against children and women. Yet, during the project period the helpline in itself was not very effective.

We end this report by valuing the programme in terms of the main evaluation questions.

Table 10: Valuing the programme

Statement (How much do you agree with the following statements?)	Score 1 = not at all 10 = completely
The project was well designed	7
The project was implemented as intended	5
The project reached all its objectives	5
The observed results are attributable to the project interventions	7
The observed results are relevant to the project beneficiaries	9
The project was implemented efficiently	6

Appendix A: Questionnaire for community conversations

Identification: Information to be completed by interviewer:

1.1 Date interview: _____/_____/_____

1.2 Name of the enumerator -----

1.3 Location of interview: -----

1.4 Kebele of interview: -----

1.5. The respondent is: -----

- Community conversation participant (has completed community conversations previously; group 1)*
- Community conversation participant (has completed community conversations previously; group 2)*
- Control group (will start community conversations soon; group 3)*

1.6. Name of the respondent -----

A: Respondent's socio-demographic information

A1. Gender of the respondent: Female Male

A2. Age of the respondent: _____ years

A3. Marital status at this moment?

- Never married
- Currently married
- Widow/widower

Divorced/separated

Refused to answer

A4. Do you have children? Yes

No

A5. If yes to A4: How many boys -----

A6. If yes to A4: How many girls-----

A7. What is your religion?

Christian

Muslim

Atheist

Other, namely:

Refused to answer

A8. What is the highest level of schooling that you have completed?

Illiterate

First cycle primary school (1-4)

Second cycle primary school (5-8)

Secondary school

TVET

Bachelor

Post-Bachelor

Refused to answer

B. Participation in Community Conversation

B1. In which Kebele do you live? _____

B2. Have you ever taken part in a community conversation group?

Yes

No

B3. If yes to B2: When did you participate in a community conversation group for the first time?

Month----- year----- (EC)

B4. If yes to B2: When did you participate in a community conversation group for the second time?

Month----- year----- (EC)

B5. If yes to B2: Have you completed all sessions of the community conversations?

Yes

No

B6. If yes to B2: How many of the 10 sessions of the community conversations have you completed?

Number-----

B7. If yes to B2: When have you finished the community conversations?

Month----- year----- (EC)

B8. Will you take part in a community conversation group within the next two months?

Yes

No

C: List experiment

I want you to give me a secretive answer for the following questions. I will give you 3(4) stones and you hold in your right hand and keep your hands (both) on your back side. If you agree on the statement I will soon be reading to you, you transfer one stone to your left hand behind you (I will not see it, you shouldn't also tell me), but if you don't agree, do not transfer any stone. At the end, I would like to know the number of statements you agreed. I don't want to know which ones, just how many.

Version A:

C1. Now, I am starting reading the statements

- a. Religion is a guiding principle in everything I do
- b. Most times, I have enough money to buy what I want to buy
- c. Children should go to school, but only when their family doesn't need them to help at home or at work
- d. I only have one brother

Number of statements =

C2. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. Sometimes I think about moving to Addis
- b. At some point in my life I would like to engage in community-based voluntary work
- c. I have travelled outside of Ethiopia

Number of statements =

C3. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. I spend most of my free time with friends and family
- b. There has been an occasion when I forgot to return a borrowed item
- c. I have electricity in my home
- d. Women and girls who are being sexually abused are at least partially responsible themselves

Number of statements =

C4. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. I like to drink Ambo water
- b. Smoking cigarettes should be banned
- c. There is at least one mobile phone in the house where I currently live.

Number of statements =

C5. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. I always wait for my turn
- b. I know many persons with the same first name as me
- c. I often cut in line for the minibuses
- d. A man should have the final word about decisions in the home

Number of statements =

C6. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. I like to keep active and busy in my spare time
- b. Football is a much nicer sport than long-distance running
- c. Normally I don't eat breakfast

Number of statements =

C7. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. I have always lived at my current address
- b. Speaking English is important
- c. Everybody should go to church every Sunday
- d. If there are no other options prostitution is a reasonable choice.

Number of statements =

C8. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. Waiting in line for the minibus is nice because you meet new people
- b. I have never attended a wedding ceremony
- c. Everybody should fast.

Number of statements =

C9. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. I support the English soccer teams
- b. I can cook the traditional Ethiopian food
- c. Drinking milk is good for your health
- d. The practice of early marriage should continue

Number of statements =

VERSION B

C1. Now, I am starting reading the statements

- a. A Religion is a guiding principle in everything I do
- b. Most times, I have enough money to buy what I want to buy
- c. I only have one brother

Number of statements =

C2. You do the same thing for different types of questions. Now, I am starting reading the statements

- a. Sometimes I think about moving to Addis
- b. **At times it is necessary to physically discipline children (such as: hit, slap, smack)**
- c. At some point in my life I would like to engage in community-based voluntary work
- d. I have travelled outside of Ethiopia

Number of statements =

D: Perception on children and women rights:

	Do you agree on the following statements	1=Yes, 2=No 0=refused to answer
D1	Children should go to school, but only when their family doesn't need them to help at home or at work	
D2	Children have the individual right to go to school	
D3	Sons in a family should be encouraged more strongly to go to school than daughters	
D4	At times it is necessary to physically discipline children (such as: hit, slap, smack).	
D5	Women and girls who are being sexually abused are at least partially responsible themselves	
D6	Possible cases of sexual, emotional, or physical abuse should be reported	
D7	Child trafficking should be stopped	
D8	Girls/young women living on the street and involved in commercial sex work are unruly and difficult	
D9	There are times when a wife deserves to be hit or beaten by her husband	
D10	Women have the same right as men to work outside of the house	
D11	If a man sees another man abusing a woman, he should stop it	
D12	A man should have the final word about decisions in the home	
D13	A wife has a right to buy and sell things in the market without asking the permission of her husband	
D14	If there are no other options prostitution is a reasonable choice	
D15	Do you think that the practice of female circumcision should continue?	
D16	The practice of early marriage should continue	

D17. Among men and women, which one should have more status/power?

- Definitely women*
- Somewhat women*
- Equal status*
- Somewhat men*
- Definitely men*

E: Respondents experience on children and women abuse

E1. Did you physically discipline (beat) your children last year?

- Yes
- No

Refused to answer

E2. If yes to E1, how often during the last year?

- Every day
- Less than every day, but more than once a week
- Less than every week, but more than once a month
- Less than every month, but more than once
- Not at any time

E3. Have you heard or listen people beating their children in the 12 months

- Yes
- No
- Refused to answer

E4. If yes to E3, how often during the last year?

- Every day
- Less than every day, but more than once a week
- Less than every week, but more than once a month
- Less than every month, but more than once
- Not at any time

E5. Have you heard people beating their wife during the last year?

- Yes
- No
- Refused to answer

E6. If yes to E5, how often during the last year?

- Every day
- Less than every day, but more than once a week
- Less than every week, but more than once a month
- Less than every month, but more than once
- Not at any time

E7. Have you been physically abused in the last year?

- Yes
- No
- Refused to answer

E8. If yes to E7, how often during the last year?

- Every day
- Less than every day, but more than once a week
- Less than every week, but more than once a month
- Less than every month, but more than once
- Not at any time

I am going to read to you some examples of psychological/emotional abuses:

- 1) Somebody has done something to humiliate you in front of others
- 2) Somebody has threatened to hurt or harm you or someone close to you
- 3) Somebody has made you feel bad about yourself
- 4) Somebody ignored you/been indifferent to you

E9. Have you been psychologically/emotionally abused (in whatever way) during the last year?

- Yes
- No
- Refused to answer

E10. If yes to E9, how often during the last year?

- Every day
- Less than every day, but more than once a week
- Less than every week, but more than once a month
- Less than every month, but more than once
- Not at any time

THIS IS THE END OF THE SURVEY.

THANK YOU VERY MUCH FOR PARTICIPATING!

A QUESTIONNAIRE FOR THE IMPACT EVALUATION OF FARMERS MARKET ORGANIZATIONS IN ETHIOPIA

Project Location: Oromia Region

Type of survey: END line

Respondents: Farmer households

The survey is conducted by:
International Food policy research Institute,
Eastern and Southern Regional Office, Addis
Ababa, Ethiopia

A10	Enumerator's name	
A11	Supervisor's name	
A12	Data entry person's name	

Part A – Identifications

To be filed by the enumerator

A04	Date of Interview (" dd/ mm/ yyyy ") <i>Gregorian calendar</i>	
A05	Time the interview started, 24 hour clock ("hh: mm")	
A06	Time the interview ended, 24 hour clock ("hh: mm")	
A07	Zone	
A08	District/woreda:	
A09	Peasant Association (PA, Kebele) (Code D)	
A09a	Is the respondent from a Kebele where there is an FMO? 1=Yes, 2=No	
A09b	If yes, which FMO (Code D)

6	<i>Maize</i>								
7	<i>Chickpea</i>								
8	<i>Haricot bean</i>								
9	<i>Oil crops</i>								
10	<i>Vegetables</i>								
11	<i>Fruits</i>								
12	<i>Milk</i>								
13	<i>Butter</i>								

Type of buyer/seller: 1=consumer 2=wholesaler 3=retailer 4=cooperative 5=NGO 6=Government office
How many: 1=1-2 2=3-5 3=6-10 4= >10

Is there any person or company which sells the following commodities or services in your Kebele? (ask for each commodity or service)

	<i>Commodities or services</i>	<i>F05i. Yes/no</i>	<i>F05j. Type of buyer/seller</i>	<i>F05k. How many?</i>	<i>F0l. Certainty of the market 1=good 2=bad</i>	<i>F05m. If no, what about in your Woreda</i>	<i>F05n. Type of buyer /seller</i>	<i>F05o. How many?</i>	<i>F05p. Certainty of the market 1=good 2=bad</i>
1	<i>Fertilizer</i>								
2	<i>Improved seeds</i>								
3	<i>Herbicides/pesticides</i>								
4	<i>Machinery rental</i>								
5	<i>Grain bank</i>								
6	<i>Transportation service</i>								

Type of buyer/seller: 1=consumer 2=wholesaler 3=retailer 4=cooperative 5=NGO 6=Government office
How many: 1=1-2 2=3-5 3=6-10 4= >10

Market information:			Answer
I	Do you ask (search) price information prior to selling your output?	1=Yes 2=No	
J	If you want to know the market price Tef/wheat/maize today, can you get it?	1=Yes 2=No	
K	If yes, whom you ask	1=check from Radio or TV 2= other farmers 3=DAs/agricultural office 4= Traders in the village 5= traders in distant markets	6=relatives/friends 7= FMO 8= ECX 9=others
L	If the answer for F12 is 2 and above How do you ask them?	1=face to face contact 2 =through third person 3== through phone	
M	If the answer F13 is phone, how did you receive?	1= Calling 2=SMS 3=through special application software	
N	How reliable/relevant is the information you obtain through mobile phones?	1=perfect, 2= very good, 3= good, 4= somewhat reliable, 5= not reliable	
O	If you do not use mobile phones to ask for price information, why?	1=I do not have mobile phone 2=I do not have any reliable source to ask 3=The information through mobile phone is not reliable and relevant 4= others	

Output marketing : Describe the crops and animal products sold last year (2006 EC)								
	Commodity	F09 Have you sold the following agricultural products in 2006? √ = yes, × =no	F10 How frequent you sell	F11 Total quantity sold in 2006 in quintal	F12 Total Birr received	F13 Place of sale	F14 Buyer	F15 If not to the FMO, why?
1	Teff (qt)							
2	Wheat (qt)							
3	Maize (qt)							
4	Barley (qt)							
5	Chickpea (qt)							
6	Lentil (qt)							
7	Faba bean (qt)							
8	Field pea (qt)							
9	Haricot bean(qt)							
9.1	Grass pea (qt)							
10.1	Sesame (qt)							
10.2	Linseed (qt)							
10.3	Grape seed (qt)							
10.4	Niger seed (qt)							
11	Fruits (qt)							
12.1	Irish potato (qt)							
12.2	Sweet potato (qt)							
12.3	Potato (qt)							
12.41	Chat(qt)							
12.4	Onion (qt)							
12.5	Garlic (qt)							
12.6	Tomato (qt)							
12.7	Gesho (qt)							
12.8	Enset (kg)							
13	Milk (Litter)							
14	Butter (kg)							
15	Cheese (kg)							
16	Honey (kg)							
17	Eggs (No)							
18	Trees (No)							

F10	Frequency:	1=daily 2=weekly 3=monthly 4= quarterly 5=bi-annual 6=once in a year
F13	Place of sale	1=village market 2=Woreda market 3=zonal/regional market 4=central market
F14	Buyer	1=FMO, 2=trader 3= consumer 4= multi-purpose cooperative
F15	Reason	1= the FMO is not buying 2= the price is not attractive 3= they rejected the quality 4= there is no FMO in my place 5= other, specify -----

Input marketing:							
	Inputs	F16 Have you purchased the following inputs last year √ = yes, × =no	F17 Total quantity Purchased	F19 Total Birr paid	F20 Place(s) of purchase	F21 Seller(s)	F22 Reason for not buying form FMO?)
1	Fertilizer in quintal						
2	Seeds in kg						
3	Herbicides /insecticides in liter						
4	Tractor in ha (rent)						
5	Animal breeds number						
6	Concentrates (fagulo, furushka..etc.) quintal						
7	Vet services number of animals treated						
7a	AI & Bull service. Number of cows						
8	Forage (crop residue, grass etc) quintal						
9	Casual labor (unit=man-day)						
F20	Place of purchase	1=village market 2=Woreda market 3=zonal/regional market 4=central market					
F21	Seller	1=FMO, 2=trader 3= producer 4= multi-purpose cooperative 5= Government 6=Others					
F22	Reason	1= not selling this input 2=not selling at interesting price 3= no credit offered 4= Quality is poor 5= other, specify -----					

G. FMO and its services <<if A09a=2, scape to H >>

Membership to FMO			Answer
G03	Are you a member of the FMO in your Kebele?	1= yes 0=no	
G04	If no, why?	1= the FMO is very far 2= I am not eligible 3= No benefit of being member 4=others specify	
G05	If yes, since when you became a member	Year (E.C)	
G06	If yes; What is your role in the FMO?	1=Ordinary member 2=Committee member 3=Chair	
G07	If yes, do you participate in meetings (regarding activities of FMO, selling, finance)	1= yes, always 2= yes, regularly 3= yes, rarely 0=no	
G08	If yes, how much did you pay for the membership	ETB	
G09a	If yes, do you own shares in the FMO?	1=yes 0=no	
G09	If yes to G09a, how many shares do you own	number	
G10	Did you receive a dividend last year?	1= yes 0=no	
G11	If yes, how much	ETB	

Selling to the FMO: ask even if the respondent is not a member

G12. Have you sold any output to the FMO last year-2006?

1=yes 0=no

If yes, ask G14

	Commodity	G14 Total quantity sold in quintal	G15 Total Birr received	G16 When did you sell? (month)	G17 When did you receive the cash? 0= on cash, 1=within one week 2=more than one weeks	G18 Why did you choose to sell to the FMO and not to another buyer? (code A)
1						
2						
3						
4						
5						

Code A: 1= No other buyers available at that time, 2=they offered the best price, 3=they pay a dividend, 4=the FMO is an important organization for farmers, 5= we are obliged to sell to the FMO 6= they provide transport services, 7= they provide storage services, 8=they provide credit, 9= other, specify-----

Services obtained from FMO:

	Services	G19 Have you ever obtained/purchased the following services from the FMO? √ = yes, × =no	G20 Did you obtain the following services within the last 12 months? √ = yes, × =no	G21 How do you rate the services? 1=bad 2=fair, 3=good, 4= very good 5=excellent
1	Training on agricultural production			
2	Training on post-harvest skills			
3	Training on marketing and business development			
4	Price information			
5	Quality grading and standardization			
6	Seeds			
7	Fertilizer			
8	Insecticides			
9	Credit supply			
10	Tractor rental service			
11	Harvester rental service			
12	Consumer goods (sugar, edible oil)			

Perception on FMO performance: do you agree on the following statement? please tick one box						
		Totally disagree	Somehow disagree	Neither agree nor disagree	Somehow agree	Totally agree
		1	2	3	4	5
G22	The FMO is my preferred buyer of agricultural crops					
G23	The FMO strengthens the position of smallholders in the market					
G24	Farmers selling through the FMO receive better prices					
G25	I sell through the FMO because I think that farmers' organizations are important					
G26	The FMO is my preferred sources of input supplies					

		1=yes 0=no
G27	The FMO in my kebele strengthens the position of farmers in the market	
G28	The FMO is a weak organization as important decisions are not made by its members	
G29	Since the establishment of the FMO it is easier for me to get proper market information	
G30	The major task for the FMO is to provide the members access to inputs and consumer goods	
G31	The major task for the FMO is to provide the members access to good selling opportunities for their outputs	

LIST experiment (skip if A09a=2)

G31. Group of the respondent 1=A 2=B

G32. If A, I will read to you the following statements and you will tell me on how many of them do you agree.

1. I always sell to traders I know on the local market
2. Fertilizer is generally available for farmers in my kebele
3. Outputs are easily sold in the primary market close to the kebele
4. The FMO in my kebele strengthens the position of farmers in the market

Answer

G33. If B, I will read to you the following statements and you will tell me on how many of them do you agree.

1. I always sell to traders I know on the local market
2. Fertilizer is generally available for farmers in my kebele
3. Outputs are easily sold in the primary market close to the kebele

Answer

G34. If A, I will read to you the following statements and you will tell me on how many of them do you agree.

1. Private traders in my kebele generally cheat
2. Access to proper seeds for farmers is badly organized
3. The road infrastructure in my kebele makes it difficult to transport my crop

Answer

G35. If B, I will read to you the following statements and you will tell me on how many of them do you agree.

1. Private traders in my kebele generally cheat
2. Access to proper seeds for farmers is badly organized
3. The road infrastructure in my kebele makes it difficult to transport my crop
4. The FMO is a weak organization as important decisions are not made by its members

Answer

PART H-Non-farm Income and Household expenditures

Non-farm income:				
	Income sources	H01 Have you generated any income from the following sources last year (2006 E.C) √ = yes, × =no	H02 Total amount your family generated last year in ETB	H03 Who generated? (1=household head, 2= other family member, 3=both)
1	Casual labour			
2	Salary			
3	Trade			
4	Handicraft			
5	Remittance			
6	Aid (cash or food)			

Frequent cash expenditures (weekly)			
	Item name	H04 In the last 7 days did your household spend money on this item? √ = yes, × =no	H05 How much did the household spend on the item in the <i>last 7 days</i> ? [ETB]
1	Food and drinks (cash only)		
2	Cigarettes/tobacco etc)		
4	Fire wood		
5	Charcoal		
6	Kerosene		
7	Other fuel (not electricity)		

Monthly cash expenditures			
	Item name	H06 In the last 30 days did your household spend money on this item? √ = yes, × =no	H07 How much did the household spend on the item in the <i>last 30 days</i> ? [ETB]
1	Electricity		
2	Water and grabage disposal		
3	Soap/washing & cleaning products		
4	Personal care (barber, hair dresser, toothpaste,		
5	Transport expenses		
6	Communication (cell phone, mail, ...)		
7	Entertainment (socializing)		
8	House rent		

Less frequent expenditures (in the last 12 months)			
	Item name	H08 In the past 12 months , did your household spend money on this item? √ = yes, × =no	H09 How much did the household spend on the item in the <i>last 12 months</i> ? (ETB)
1	Clothes and shoes (including school uniforms)		
2	Furniture (tables, chairs, beds, etc)		
3	Blankets/bedsheets		
4	School fees and other educational expenses		
5	Social events (wedding, funeral, etc)		
6	Housing improvement (latrine, new roof, etc)		
7	Human health expenses (medicine, hospital , ...)		
8	Vehicle purchase or repair (car, bicycle, motorcycle)		
9	Contributions & membership fees (associations/church/sports etc)		
10	Taxes		

PART I - FOOD SECURITY

Household Food insecurity Scale: For each of the following questions, consider what has happened in the past 1 month. Please answer whether this happened never, rarely (once or twice), sometimes (3-10 times), or often (more than 10 times) in the past 1 month? (Circle the answer)					
Event		Frequency of event			
		Never (0 times)	Rarely (1-times)	Sometimes (3-10 times)	Often > 10 times
I01	Did you worry that your household would not have enough food?	0	1	2	3
I02	Were you or any household member not able to eat the kinds of foods you preferred because of a lack of resources?	0	1	2	3
I03	Did you or any household member eat a limited variety of foods due to a lack of resources?	0	1	2	3
I04	Did you or any household member eat food that you did not want to eat because a lack of resources to obtain other types of food?	0	1	2	3
I05	Did you or any household member eat a smaller meal than you felt you needed because there was not enough food?	0	1	2	3
I06	Did you or any other household member eat fewer meals in a day because there was not enough food?	0	1	2	3
I07	Was there ever no food at all in your household because there were no resources to get more?	0	1	2	3
I08	Did you or any household member go to sleep at night hungry because there was not enough food?	0	1	2	3
I09	Did you or any household member go a whole day without eating anything because there was not enough food?	0	1	2	3

Dietary Diversity Score: Which one of the following categories of food was eaten in this household during the last 7 days? (Mark with x if a food category was present in the diet for that specific day, X otherwise)

	Categories of food	I10 Yesterday	I11 During the last 7 days
1	Cereals and root-crops (rice, bread, injera, millet, potatoes, etc...)		
2	Pulses (peanuts, haricots, sesame, chick peas, lentilles, green peas, other peas...)		
3	Fruit		
4	Meat/Fish		
5	Dairy products (milk, butter, cheese, yoghurt, etc...)		
6	Eggs		
7	Vegetable oil/fat (ghee, oils...)		
8	Sugar, honey, drinks with sugar (coca cola, fanta, etc..)		
9	Any other food item Specify -----		

Please check if the questionnaire is complete

Southern partner organisation	Facilitators for Change

The project/partner is part of the sample for the following evaluation component(s):

Achievement of MDGs and themes	X
Capacity development of Southern partner organisations	
Efforts to strengthen civil society	

Evaluation team:

University of Groningen: Clemens Lutz, Nicolas Duran

IFPRI/ESARO Ethiopia: Getaw Tadesse and Samson Jemaneh

1. Introduction

The general aim of this project was to “upgrade household living standards of smallholder farmers in the five zones by improving production and market access. This will happen by promoting market oriented autonomous Farmers Organizations that will provide their members and other farmers in their vicinity with greater market access, which will, in turn, enhance their participation in local markets.”. The project was implemented by a consortium of 6 NGOs (ADAA, CDI, ERSHA, FC, HUNDEE, OSRA), each operating in a different region and promoting Farmers Marketing Organizations (FMOs). One of the NGOs (FC) represented the other NGOs and lead and managed the consortium. The core intention of the six NGOs was to stimulate market access strategies for poverty alleviation. Two projects proposed by the consortium and addressing the same target group were supported by Dutch NGOs. This project (this evaluation) focused on organizational support for FMOs and their Unions for which ICCO was the responsible Dutch NGO, while the second project, for which IICD was the responsible Dutch NGO, provided an ICT infrastructure for the involved Farmers Market Organizations (FMOs), their Unions and the NGOs supporting these farmers’ organizations (see Report MFSII Joint Evaluation C5).

The objective of this project was to improve the household living standards of smallholder farmers through the promotion of autonomous Farmers Organizations (111 FMOs and 7 Unions). The main activities concerned “the design and provision of tailor made capacity building, training, coaching and mentoring of FMOs, supporting the formation and strengthening of unions, linking farmers organizations with chain actors and chain supporters, introduction of new high value crops, supporting locally initiated rural service providers and capacity building of pro-poor and gender sensitive agro-business.”

Impact of this project is measured through a ‘difference-in-difference’ analysis. Farmers (control group and treatment group) were interviewed in September 2012 (base-line) and September 2014 (end-line). Several outcomes on specified indicators, as mentioned in the project document, are assessed and also some more general indicators for improved livelihoods (food security and income from agricultural activities) are analyzed. With regard to the outcome indicators we confirm a successful increase in sales to the FMO. However, at the same time we observe some serious weaknesses: 50% of the members in the endline study do not sell to the FMO and most of the surplus is sold to private traders. We conclude that it is too early to assess

the efficiency of the project as significant investments are made in the establishment of Unions but the effect on outcome indicators is still lacking or weak. It is too ambitious to expect that Unions could be established, an ICT infrastructure created and outcomes realized within a three year time-period.

The report is structured as follows. The next section describes the context of the project. Subsequently, an overview of project activities is provided. Section 4 discusses the data collection. Section 5 provides the findings and section 6 discuss the results. The final section draws conclusions.

2. Context

From the project document for the related ICT infrastructure project (C5, August 2011) we take the following description of the context of the project: “Ethiopia is one of the Sub-Saharan African countries which liberalized their economies and developed poverty reduction strategies that underpin market-led strategies for broad based agricultural development and economic growth. This strategy makes agriculture a top priority to bring about sustainable development. Within agriculture, these strategies place heavy emphasis on the grain sector for improved production, privatization and commercialization. While agricultural development policy of Ethiopia is designed to support market-led agricultural development, competitiveness of smallholder producers and commercialization of small scale production depends on the development of viable and remunerative market linkages which the policy actions still lack to address mostly at the lower end of value chains.

Agricultural productivity in Ethiopia is very low compared to other Sub-Saharan African countries. Various literatures indicate that inefficiency of domestic agricultural markets is mentioned as one of the factors held responsible for the reduced productivity of farmers and for the poor performances of the agricultural sector in the developing countries, particularly in Ethiopia. However, the capacity of smallholder farmers to produce the required quality and quantity of product as per demand of the buyers is not well developed due to the limited agricultural extension services. Audio-visual learning materials on different topics (textbooks, guidelines, CDROM, video and audio) on the improved agricultural practices could support for the increased production, productivity and quality of agricultural production.”

The government of Ethiopia provides support for the further development of cooperatives. The current poverty-reduction strategy confirms the need to support producer cooperatives as a means of strengthening and empowering smallholders' market participation in the liberalized market environment (FDRE, 2005). More recently, Ethiopia adopted an agricultural development strategy, called 'Agricultural Growth Program (AGP)', which gives the highest priority to the formation and strengthening of agricultural cooperatives.

This context is in line with a large body of literature showing that farmers market organizations reappeared on the international development agenda (Bernard et al., 2010; Bernard et al., 2008; Fisher and Qaim, 2011; World Bank, 2007). Some of the involved FMOs have a background in former cereal banks and have been re-established in the 90s. Now these organizations are seen as important instruments linking farmers to markets, increasing agricultural productivity, and ultimately reducing rural poverty. Through collective action, farmers' market organizations are expected to strengthen the farmers market position and to improve rural livelihoods . The empirical study of Bernard et al. (2010) on cooperatives in Ethiopia concluded that cooperatives can secure higher prices for their members' output although this ability does not necessarily lead to an increase in the quantity of output commercialized by the members. They also conclude that the poorest of the poor tend to face considerable constraints on membership in marketing cooperatives. However, poorer non-member households still benefit from positive spill-overs. The World Bank (2008, p155) addresses this as a challenge for producer organizations to resolve the conflict between efficiency and equity: "Producer organizations typically operate in the context of rural communities where they are subject to norms and values of social inclusion and solidarity. This may clash with the requirements of professional, business-oriented organizations that must help members compete to survive in the market place".

In particular this project promotes farmers' marketing organizations and their competitiveness in agricultural commodity value chains. The final objective is to address poverty in the targeted farming communities. The indirect objective formulated for this project is to improve the capability of the NGOs and the position of FMOs in agricultural value chains through ICT services. The direct beneficiaries are smallholders. The targeted smallholders have a weak position in agricultural markets. Their production was low in quantity and quality. They have no access to

reliable information. As a result they gained low income from the sales of their products, which in turn exposed them to transitory food insecurity.

ICCO has a longstanding relationship with most of the NGOs/FMOs. Since 2002 support was given to Cereal Banks (project: “Promotion of Cereal Banks and Farmers Access to Markets”). Since May 2008 the six NGOs implemented the project: “Promotion of Farmers Marketing Organizations Competitiveness on Agricultural Commodity Value Chains”. The present project can be seen as a follow-up of these interventions. In the last phase 115 FMOs were supported. 15 graduated “with full conviction that they can realize a lasting impact on the socio-economic situation of their members. 11 FMOs were dropped and 22 “cereal banks” that which were not included in the previous project joined the new project that supports in total 111 FMOs. FMOs get a lot of attention nowadays. Initially villagers were hesitant to join. It is claimed that now more people are interested than the FMOs can absorb (they want to grow organically). Moreover it has been concluded that the most effective FMOs are not smaller than 50 and not much more than 100 members, as management is voluntary and part-time.

3. Project description

6 NGOs, with FC as the lead agent, are building the capacity of 111 farmer marketing organisations reaching out to over 14,377 smallholders. FMOs are single purpose voluntary organised cooperatives of 35 to 200 members each (average 100), rather independent of direct government control (as far as possible in the Ethiopian context). These FMOs are working on becoming independent Value Chain actors bulking and sorting produce of farmer members and linking to reliable buyers. Using the cluster approach 111 FMOs will work together in groups of 3-5 FMOs focusing on one or two crops. Farmers will still grow other crops for home consumption or market, but the FMO focuses on developing these specific value chains. The most common crops are teff (FC, OSRA and HUNDEE), wheat (all NGOs), maize (CDI), barley (ADAA, CDI and FC) and haricot beans (CDI).

In the report of the last evaluation mission before the start of this project (February 2011) the following conclusions were drawn. Regarding the social impact the report concludes that a very important social contribution of the FMO is that they brought “the marketing service at the close proximity of the communities’ residences”. The report notes that “FMOs are more seen as social

organizations than organizations for profit even by their leaders. This strong social image is therefore still an important hurdle for the FMO to develop itself in an economic actor”.

Discussing the economic impact the report notes that “the anticipated linkage with a regular and sustainable market has not been attained”. Although many FMOs indicate that lack of working capital is a major constraint, the 2010 annual activity performance report of the consortium notes that the average working capital utilization of the FMOs is only 53%. In contrast to this the baseline report of 2009 shows that about 40% of the FMO members were not selling grains to their organizations and the major reason explaining this outcome was that the FMOs stopped buying, at the time they wanted to sell, due to limited working capital.

In the evaluation the following conclusions regarding the capacities of the FMOs (2011) are drawn:

- Despite their limited effectiveness in accessing regular markets for their products, the FMOs have got good understanding of the structure and operation of the market from their own position up to the end product markets,
- Development and adjustment of the strategic and business plan of the FMOs has helped the FMOs to understand their future directions,
- Awareness is created at the FMOs level on market information sources and how to access the mutual benefit for all chain actors and how to integrate in the chain, the possibility to access support services from other sources other than from the NGOs, etc.

This information about the results of interventions in the past suggests that for the new phase of the project (2011-2013) a network of FMOs was available, prepared business plans and were trained in value chain analysis to understand their position in different markets. The main aim now was to increase the turnover of the FMOs and to establish a stable and preferred market outlet for their members.

The project period for the project under study is 1-5-2011 until 30-7-2014. We understood that an extension to implement the project, until December 2014, has been approved recently. The overall goal was “to upgrade household living standards of target smallholder farmers by improving production and access to effective markets.” A general project purpose is specified in

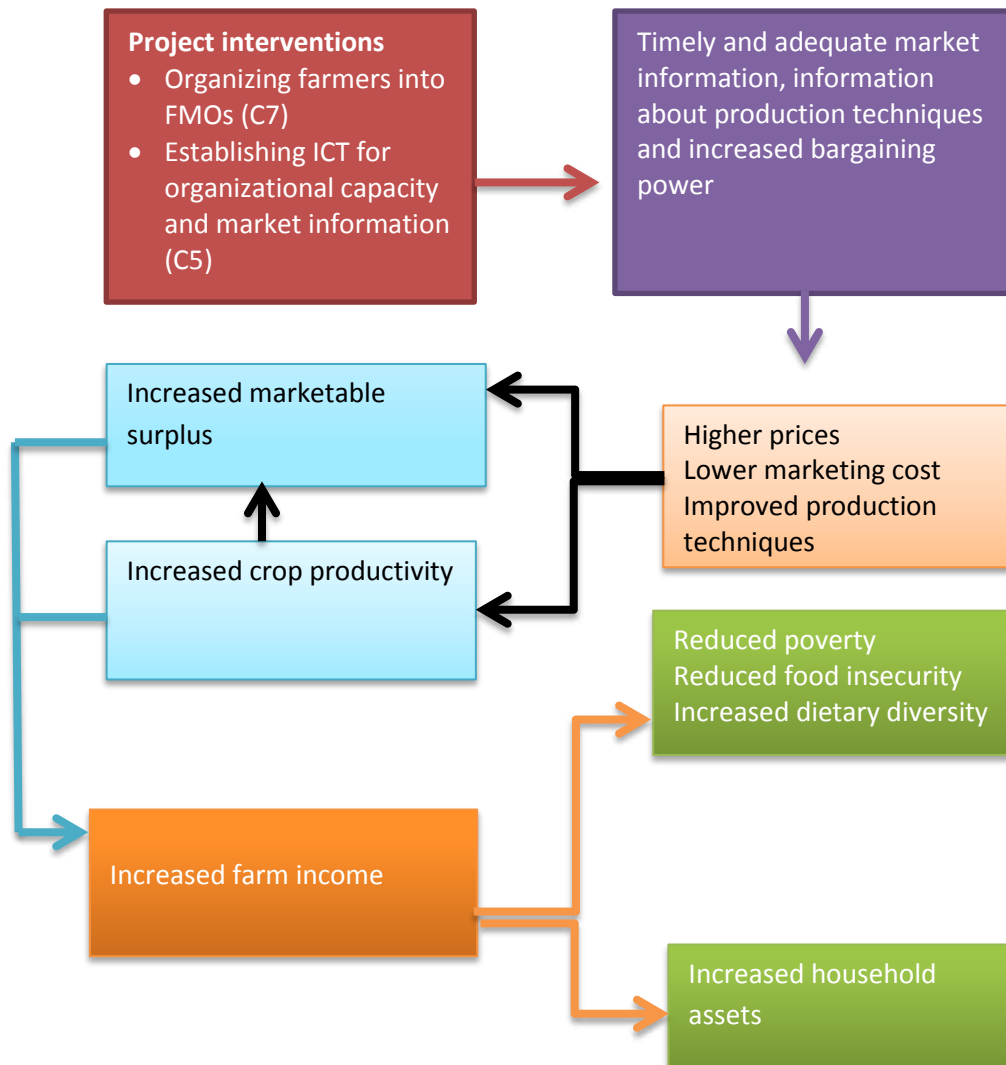

the project proposal as follows: “An increased income of 11500 members of 111 FMOs on average from birr 7000 to birr 10000 by the end of the project period.”

The project objectives for 2011-2013 are specified as follows:

1. Seven unions and 111 FMOs are profitable market channels and service rendering organisations for their 14,734 members.
2. 11,500 FMO members produce their selected/new high value commodities according to required quality specifications and raised yields by at least 30%.
3. 70% of the members have paid and used BDS and chain finance services for their farming operations.
4. Seven small and micro scale agro/processing enterprises provide quality upgrading services to local producers and FMOs, so that their produce fetch higher prices on specific markets.

The focus of the new project concerns capacity building of FMOs, establishing an apex organization (union) that provides services to member FMOs sustainably, initiating rural affordable BDS providers and strengthening the private sector providing embedded services to the smallholders. The overall goal is to upgrade household living standards of smallholder farmers in the five zones by improving production and market access. This will happen by promoting market oriented autonomous Farmers Organizations that will provide their members and other farmers in their vicinity with greater market access, which will, in turn, enhance their market participation in local markets. In line with the project objectives and activities as described in the project proposal we derive the following theory of change (Figure 1).

Figure 1: Theory of change and expected impact of the project:

Financial support from ICCO (1.297.188 Euro is the budget for the 6 NGOs). Major inputs concern support for the establishment of Unions, coaching and capacity development for FMO and Union leaders and support for some providers of Business Development Services.

In the following section we describe the project activities and expected outcomes. Available reports are sometimes confusing about the targets. From the project proposal we take the objectives (Section 4.3), activities (annex 12) and specified outcome indicators (Section 6).

With regard to **objective 1**, “seven unions and 111 FMOs are profitable market channels and service rendering organisations for their 14,734 members”, the following activities were envisaged:

- 1 Undertake an organizational diagnosis of 111 FMOs to design tailor made capacity building for level two and three FMOs and for dropping level one FMOs
- 2 Facilitate the establishment and legalization of seven unions through mobilizing resources
- 3 Develop a roadmap for union capacity development and exit strategy
- 4 Provide more tailor-made, customized coaching and targeted capacity development to 111 (3 from each) FMOs and 7 union leaders (1 board member each)
- 5 Organize bi-annually value chain development forums to ensure proper coordination among chain actors and facilitate the linkage of 111 FMOs with BDS, chain actors and supporters
- 6 Build capacity of all chain actors on identified constraints (learning by doing)
- 7 Rewarding best performing FMOs/Unions and field workers annually)

The following outcomes were specified in the project document regarding objective 1:

- 1 41000 quintals traded by FMOs/Unions per annum
- 2 75% of total tradeable surplus channelled through the Union and/or the FMO
- 3 At least 24600quintals of product sold to stable market outlets per annum in specific markets
- 4 Annual return on working capital is at least 25% per Union/FMO
- 5 14734 members (40% women) have accessed diversified services of the FMO/Union
- 6 30% of FMO leaders are women
- 7 90% of the members (35% women) are satisfied with trade and other services
- 8 84 level two and three FMOs are graduated from the programme

In the annual reports we read that the organizational diagnosis has been made and that a tailor made capacity building training programme has been developed to improve the management of the FMOs. The document notes that of the 119 FMOs involved in the organizational assessment, 94 FMOs will graduate mid-2014 and will get the required services from their unions without any external support. 115 FMO committee members are trained based on the needs identified as a result of the organizational diagnosis. The learning by doing approach was applied meaning that FMO leaders had to apply the insights learned and show the NGOs their progress. Cross learning between weaker and stronger FMOs was also applied to foster the learning process. NGOs also

provided training to union board members and value chain development forums have been organized. The 6 unions acted as the bridge between FMOs and chain actors to establish long lasting business relationships.

In total 6 legalized cooperative unions exist. Four unions were established in 2012 (Duro Abaro - ADAA, Mira - CDI, Torban Kuttaye - ERSHA, Handura Becho – FC and OSRA) and two other unions were previously established (Sof Umer and Shanaan Galaan – HUNDEE). As FC and OSRA are intervening in adjacent districts, the FMO committee members and government cooperative offices have decided that one union suffices for the 35 involved FMOs. All in all we conclude that the project activities are carried out in line with the planning. No major delays or changes have been reported.

With regard to the verifiable indicators the annual report for the year 2013 notes that the performance of FMOs in terms of trading was lower than expected. The data show that 31 of the involved 121 FMOs did not sell any crops in 2013. In total 18054 qtl was traded instead of 41000qtl expected. The reported annual return on working capital for 2013 was also below expectations: 7%. For unions this rate is somewhat higher: 16%. The 2013 results regarding women leadership seem to be close to the targets: 32% of the members are women and 27% of the leaders are female. Regarding the other indicators no information was provided in the 2013 annual report. We note that our household study will further discuss the results regarding indicators 2-5-7.

With regard to **objective 2**, “11,500 FMO members produce their selected/new high value commodities according to required quality specifications and raised yields by at least 30%”, the following activities were envisaged:

1. Assist the linkage of 111 FMOs/Unions with input suppliers
2. Identification and introduction of new high value crops to 719 farmers (contract farming)
3. Support 111 FMOs to apply product quality standards
4. Support in the multiplication of new high value products in each intervention area
5. Maintain and develop the linkage with extension services

The following outcomes were specified in the project document regarding objective 2:

- 1 80% of the members use improved seeds and other production enhancing technologies
- 2 5% of the FMO members have ventured into contract farming
- 3 85% of the members apply the customer quality standard (reject rate below 10%)
- 4 All farmers manage to raise yields by 30%
- 5 10% of the farmers have ventured into new high value crops
- 6 5% of the members got embedded services from the lead firm through the FMO
- 7 The income from value chain crops sale increased by 25%
- 8 90% of the members involved in HVC production are satisfied by the contract chain linkage

The annual report 2013 provides an overview of the activities and states that 119 FMOs are linked with research centres and other sources for agricultural inputs. Five unions have supplied agricultural inputs like fertilizer, herbicides and improved seed. New high value crops are identified and introduced to 11452 farmers (haricot bean, chickpea, garlic, malt barley, wheat and teff). In total 502 farmers are trained on pre and post-harvest management for improved production and quality of products.

Information about the indicators is somewhat confusing. It seems as if other indicators have been applied in the annual report 2013 (agreements at the level of outcomes). Information about some of the indicators specified in the project proposal is missing. The report notes that more than 70% of the members of the 115 FMOs use improved seeds and other enhancing technologies to raise yields. On the basis of focus group discussions it is claimed that production increased by more than 30% as a result of using improved seed and improved agronomic practices. We note that our household study will further discuss the results regarding indicators 1-4.

With regard to **objective 3**, “70% of the members have paid and used BDS and chain finance services for their farming operations” the following activities were envisaged:

- 1 Create awareness among 111 FMOs/Unions to stimulate demand for business service
- 2 Support six locally initiated rural service providers
- 3 Monitor/observe 111 FMOs to apply the skill acquired from various trainings for the profitability of the FMOs/Unions
- 4 Stimulate MFI/Bank to develop suitable financial products for FMOs/Unions

The following outcomes were specified in the project document regarding objective 3:

- 1 Six NGOs have practiced fee based cost sharing systems on trainings
- 2 6NGOs graduated 75% of the FMOs
- 3 84 of the FMOs/Unions have paid and used BDS
- 4 7 rural BDS providers are established/strengthened

In the 2013 annual reports not much information is given about the first two activities and the specified outcome indicators. It seems that the unions play a key role in this respect and that the unions will become responsible for organizing awareness and a cost sharing system. As already noted above, one outcome is indeed accomplished: 94 FMOs of the 119 involved will graduate mid-2014.

It is mentioned that the learning by doing approach of capacity building was applied and “brought great competition and change in FMOs”. With regard to BDS the 2013 report mentions that the six unions are able to pay and use BDS. They are employing more than six full time workers to provide services to the FMOs by covering all their costs. It is also noted that 80 FMOs have shared part of the training costs they provide. However, in most cases, FMOs are not willing to form linkages with BDS providers to purchase services as they are getting subsidized services from NGOs and government organizations. The report mentions that several unions have formed linkages with banks (Torban Kuttaye and Shanaan Galaan). Also some FMOs have been successful to get loans from MFIs.

With regard to **objective 4**, “seven small and micro scale agro/processing enterprises provide quality upgrading services to local producers and FMOs, so that their produce fetch higher prices on specific markets”, the following outputs were envisaged:

- 1 Identification/assessment of interested processors and entrepreneurs
- 2 Facilitate formation of seven agro-processing enterprises that need FMOs products as an input and support FMOs (financial, material, technical)
- 3 Link FMOs to these enterprises and facilitate trust building processes

The following outcomes were specified in the project document regarding objective 4:

- 1 7 operational micro-enterprises have been established/strengthened

- 2 7 operational micro-enterprises have provided upgrading services to FMOs/Unions
- 3 Profitability and profit share in total chain increased by 15%

The annual report 2013 is very brief about these activities and outcome indicators. No information is provided. As stated above we have the impression that unions play a key role in this respect and that the unions will become responsible for organizing contacts with processors and entrepreneurs.

The overall goal of the project is to upgrade household living standards by improving production and accessing effective markets. Alternatively this purpose was formulated as: 111 FMO members annual income increased, on average, from Birr 7000 to Birr 10000 by the end of the project period. Two verifiable indicators were formulated in the project proposal regarding this goal (project planning matrix): an increase in crop sales income and personal investment at HH level (new livestock asset, HH utensils, children at school, construction material etc.). In the household study (Section 5) we discuss the results we obtained regarding these indicators.

The household study allows us to test some outcome indicators at household level. We recall the following specific outcome indicators and translated them in effects at household level:

- 1 FMO/Union profitable channels – 75% of tradeable surplus channelled through FMO/Union. *Indicator: F12, F14, F18, G13-G18*
- 2 FMO/Union profitable channels - members have accessed diversified services of the FMO/Union. *Indicator: G19-G20*
- 3 FMO/Union profitable channels – 90% of the members are satisfied with the FMO/Union services. *Indicator: G21*
- 4 High value commodities – 80% of the members use improved seeds and other production enhancing technologies. *Indicator: D08, G19, G20*
- 5 High value commodities – All farmers manage to raise yields by 30%. *Indicator: D*

We also test the following more general outcome indicators derived from the overall goal of the project:

- 1 An increase in crop sales income (30%). *Indicator: F12, F14*

- 2 An increase in personal investment at HH level (new livestock asset, HH utensils, children at school, construction material etc.). *Indicator: livestock, mobile phone, radio*
- 3 Food security. *Indicator: I01 – I11*

4 Method

The objective of this evaluation is to describe changes in outcome indicators that can be attributed to participation in the project. The challenge in any impact evaluation is to isolate the causal role of the intervention from other determinants (Armendariz, 2010). When comparing the situation of beneficiaries before and after an intervention, the observed changes in outcome variables cannot solely be attributed to the intervention, as there are many other changes in the environment of the respondents during the project period. Comparing beneficiaries with a control group of non-beneficiaries does not automatically provide the solution. Beneficiaries could for instance have been wealthier than non-beneficiaries when the program started or *vice versa*. This and other factors can make some people more likely to choose to participate in the program, thus causing self-selection bias. Besides self-selection bias, program placement bias is also frequently observed in evaluation studies. NGOs target their projects purposely at specific, often disadvantaged, areas. If the control group's physical, economic and social environment does not match that of the beneficiaries, this will result in differences not caused by the intervention and thus in biased estimates of impact.

The standard approach to overcome these issues is to conduct a randomized control trial (RCT). Before the program starts two groups will be created at random. One group will receive the treatment (treatment group) while the other group will act as a benchmark (control group). Because of the randomization the members in the control group represent the members in the treatment group. After the treatment has taken place, both groups can be compared on the outcomes of interest. Differences in outcomes can now solely be attributed to the treatment. However, creating two groups at random, a necessary step for RCTs, is not always possible because of program implementation or ethical reasons.

As we were not involved in the design of the project, we use an alternative to RCTs: a so-called double difference (DD) model. In order to apply a DD model one needs to have information about relevant indicators of the treatment group and the control group at two points in time,

preferably before (baseline) and after (end-line) the intervention. While the RCT methodology ensures that the only difference between members in the treatment and control group is the treatment, the DD method only eliminates differences between members of the two groups that do not change over time. So the disadvantage of the DD method over the RCT method is that it does not automatically distinguish between the impact of time-varying characteristics between members of the two groups and the impact of the treatment. A (partial) solution to this problem is to include as many time varying characteristics into the DD model as possible so that only the influence of unobserved time-varying characters remains.

The DD method works best if the treatment and comparison group are as comparable as possible. One popular method to achieve this is the propensity score method (PSM) (Rosenbaum, 1983). The basic idea is to match beneficiary households to households from the control group who are observationally similar in terms of characteristics that are not affected by the intervention. These include stable characteristics of the household. If there is a proper baseline, outcome variables during baseline can also be used for matching, because they were not yet affected by the treatment. In practice, PSM involves running a binary regression of the project participation indicator on the relevant set of characteristics. The result is the propensity score: the estimated probability that a household is a beneficiary. The DD method is then applied to households with propensity scores in the range in which both beneficiaries and non-beneficiaries are observed (the *common support*): non-beneficiaries with a very low propensity score and beneficiaries with a very high propensity score are discarded.

As indicated above, we first applied PSM and then estimated a DD model. Econometrically speaking the double difference estimator is given by the following expression:

$$Y_{ijt} = \alpha + \beta_1 Post_t + \beta_2 D_j^T + \beta_3 Post_t D_j^T + \gamma X_{ijt} + \varepsilon_{ijt} \quad (1)$$

Where Y_{ijt} denotes an outcome variable for respondent i in group j at time t , D_j^T is a dummy variable equal to one if the respondent belonged to the treatment group, $Post_t$ is a binary variable that takes the value one if the observation corresponds to the post-treatment time

period, X_{ijt} is a set of controls¹, and ε_{ijt} denotes the error term. Then, β_3 in (1) is the treatment estimate of the intervention's impact on outcome Y. That is, β_3 measures the difference between the treatment and control group in the growth of outcome Y, and is an unbiased estimate of the average impact on the dependent variable Y of being assigned to the treatment group provided the assumption of no selection on un-observables holds.

Although a combination of PSM and DD can solve many potential biases in the data, some bias may remain. As PSM assumes selection on observables, bias can still be caused by selection on un-observables. Adding DD to PSM helps picking up the time-invariant heterogeneity, but bias can still remain due to time-variant un-observables. We note that the possibility of time varying heterogeneity between control and treatment groups is less likely in this study as both groups are located in the same region and belong to the same agro-ecology and administrative system. We were also informed that no specific interventions were taking place in the Kebeles that are part of the control group. Yet, a positive significant effect in the DD model is a strong indication of an influential intervention. An insignificant effect (or even a significant negative effect), however does not necessarily imply that the intervention does not work, as in our analysis we only measure short-term effects.

Many of the outcome variables considered in the analysis are binary. In these cases, we estimated a linear probability model (LPM) and report the marginal effect of D_i^C for the impact of the project on outcome Y.

It is often the case that there is some level of attrition (or dropping out) and/or new entry in the dataset. The DD model presented in (1) can be estimated using an unbalanced panel, keeping in all observations, including the ones which we only observe in one time period. It can also be estimated using a balanced panel, dropping observations which we only observe in one period. Estimating (1) using an unbalanced panel increases the power, but as the sample becomes more heterogeneous the results might be distorted. As we deal with a number of drop-outs in the endline survey (Table 1) all estimations are done on the balanced panel.

¹ Additional covariates are included to control for various characteristics of the households. This not only helps with the precision of the estimates, but also reduces the problem of omitted variable bias. This is necessary to obtain unbiased measures of the treatment effects.

5 Data collection

This project C7 is strongly linked to the MFS II C5 – project “Integration of Information and Communication Technologies”. C5 deals with the same regions, FMOs and SPOs (NGOs). The subset of FMOs that participated in the C5 project activities is sometimes smaller than the total number of FMOs involved in C7. Only 24 FMOs received an ICT infrastructure (treatment group 1) and only 44 FMOs participated in the trainings. However, the support given to the Unions, benefits all the FMOs as they have access to the market information and the information regarding production techniques. The projects are complementary. C7 is more oriented towards the strengthening of the organization of the FMOs and their Unions. This project (C5) focuses on the ICT service at Union/FMO level. Due to these linkages it is not possible to isolate the effects and impact of each project. Taking the complementarity into account it is also not useful to do that for the different indicators.

We conducted a survey of farmer households to measure the effects of the project. A first survey took place in September/October 2012 and a second survey in October/December 2014. The September 2012 survey can be considered as a kind of baseline but two limitations have to be taken into account. First, we described in Section 2 that most of the treated FMOs had already a relationship with the involved Ethiopian and Dutch NGOs and received support in the past to strengthen their organization. The performance of the FMOs may reflect the effects of earlier projects from which they benefitted. Moreover, implementation of the project activities (C5) started in January 2012. Knowing that it takes some time to observe the first effects of the intervention and that the data regarding the farming system resulted from decisions made before January, it seems to be reasonable to assume that the observations made for the first survey can be considered to be a baseline. The second survey can be regarded as a kind of end-line result. Although the project finished at the end of 2013 and the survey took place in October 2014, it is argued that the information obtained about the farming activities resulted from decisions made at the end of the project.

Next to the surveys we also did some qualitative studies at the level of the treated FMOs (ADAA - Abdi Rabii, Hawi Gudina, Borato Gaalo; CDI - Dolu Kersa, Jalela, Meda Gudina; HUNDEE – Kituma, Suqui Waqeyo, Goda Racha; FC – Siba Robe, Feyine, Rimessa). Five students of Groningen

University interviewed FMO responsables, NGO fieldstaff and farmers to describe project activities. These qualitative studies were used to interpret the results of the survey data.

C7 and C5 cover all FMOs. We distinguish 2 treatment groups:

- T1. The treatment group, smallholders member of the 'treated' FMOs C7 and C5 (ICT for market information and ICT for organizational strengthening – objective 2).
- T2. The treatment group, smallholders member of the 'treated' FMOs C7 and C5 (ICT for market information only – objective 3)

We expect that the first treatment group is getting a more intensive treatment as computers are made available at the FMO's office. This may facilitate transparency and information dissemination at FMO level. We also expect that the selected FMOs for the more intensive treatment are also the better performing FMOs. Therefore, a first assessment of outcome indicators will concern the analysis of differences between treatment 1 and treatment 2 groups.

We distinguish two control groups:

- C1. Control group: smallholders from the same Kebele/village non-members of the FMO. This will help us to capture spill-over effects.
- C2. Control group: smallholders in another Kebele/village without access to FMO services

We sampled 4 NGOs: Hundee, FC, ADAA and CDI. Hundee and FC are selected as they have been indicated as local SPOs in the project documentation distributed by WOTRO. ERSHA and OSRA are not sampled as they operate in the same areas where HUNDEE and FC are operating. Due to budget constraints we had to limit the number of FMOs and households interviewed.

Table 1: Distribution of the NGOs and FMOs across Woredas

NGO	Woreda	No. of FMOs supported by C7 and C5 (only ICT for market information)	No of FMOs supported by C7 and C5 (ICT for market information and organizational strengthening)	Total
HUNDEE	Sinana	4	1	5
	Agarfa	2	0	2
	Dinsho	0	1	1
	Goba	2	1	3
	Jeldu	1	4	5
	Dandi	5	0	5
	Dawo	3	0	3
FC	Seddán Sodo	8	3	11
	Becho	2	3	5
	Dewo	3	4	7
ADAA	Arsi Negele	5	5	10
	Shashemene	2	4	6
CDI	Shala	1	4	5
	Shashemene	5	4	9
	Siraro	5	0	5
Total		48	34	82

The Woredas are in different regions of the country (Table 1). The FMOs are selected in two steps: first the Woreda, then FMOs. Woredas are first selected to make our comparison groups similar. If we choose the treatment group from one Woreda and the other treatment and non-treatment control group from another Woreda, we may get very heterogeneous groups in terms of crops they produce, productivity, access to markets, roads etc. We select non-participating farmers (C1) in the same Kebele as farmers selected for T1 and T2. Random selection of Woredas is not followed due to uneven distribution of FMOs across Woredas. We purposely selected those Woredas with a reasonable number of FMOs.

We intended to take 32 farmers from each sampled FMO, giving 256 observations for each treatment (T1 and T2). For the control group C1, 16 farmers were selected from the same Kebele (16 FMOs), giving 256 observations. For control group C2, 32 farmers were selected per Kebele without an FMO (8 Kebeles giving 256 observations). Note that an FMO is organized per Kebele. Hence the FMO name and the Kebele name are the same. The FMOs/Kebeles marked with * are receiving both C7 and C5, the FMOs/Kebeles marked with ** receive only C5 ICT market information. The difference is interpreted as a difference in the degree of treatment. Two FMOs are selected for each treatment from Arsi Negele and Shashemene because of the large number of FMOs in these Woredas. Likewise two control Kebeles without an FMO are selected from these Woredas.

Table 2: Full sample baseline and endline

Woreda	Kebele/FMO	Full sample size				SPO

	Alelu Illu	-	-	32	31	-
Total		550	514	473	446	
Attrition rate			6.55%		5.71%	

The FMOs/Kebeles marked with * are receiving both C7 and C5, the FMOs/Kebeles marked with ** receive only C5 ICT market information.

The intended number of respondents somewhat differs from the realized numbers. Three reasons explain this deviation. First, in some villages and in particular in Jalela, it was difficult to find non-members of the FMO. As required investment for membership is quite small (50-100 Birr) and social pressure to become member may exist, it was difficult to find non-members in Jalela. Second, sampling of members and non-members was done on the basis of information provided by the FMO. During the interviews it sometimes became clear that a member (non-member) considered himself or herself a non-member (member). The third reason is attrition. About 60 observations were lost due to the decease of the household head, the household moved to another Kebele or the household was not available for the end-line interview. As attrition was relatively well distributed over the Kebeles (Table 2) and the total number is limited, it is expected that the results are not affected by attrition.

The questionnaire addressed characteristics of the household and the farming system and consisted of 8 blocks of questions: household composition, household assets, land and crop production, livestock, access to markets and marketing, the FMO and its services, non-farm income and household expenditures, food security (Annex).

6. Analyses and results

Table 3 presents some descriptive statistics for household characteristics in the baseline study. In general we observe only minor differences in the averages between the treatment and the control groups. This implies that comparison of these farmers to identify treatment effects is promising as the ‘common support’ can be expected to be large. The age of the household head in the control group is somewhat lower and the household size somewhat smaller (Table 3). Education levels are the same for the treatment and the control group. Quite a number of the farmers is illiterate (30%) and the average number of years of education is quite low (4 years). The main occupation for nearly all interviewees is farming. The farmers in the treatment group own a bit more land (1.8ha vs 1.5ha²). We conclude that differences between the averages for the two groups are quite small, although some differences between the groups are significant. In order to control for these differences propensity score matching is applied for the ‘difference-in-difference’ analysis (see method section).

Table 3: Household characteristics (control variables)

	Total	N	Treatment	N	Control	N	t-stat
<i>Demographics:</i>							
HH Head male (%)	92	1023	91	550	93	473	-1.16

<i>Assets</i>							
Land owned (ha)	1.7	1023	1.8	550	1.5	473	2.34**
Distance to Woreda market (km)	9.7	959	10.0	514	9.3	445	1.99**
Distance to all-weather roads (km)	4.6	1023	4.7	550	4.4	473	0.67

note: ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level.

² Land ownership is taken as a control variable as property rights are fixed over time. The government distributes the ownership right to farmers. Land use is more flexible as land can be rented-out or rented-in. Therefore we take the cultivated area (land area under crop) as an outcome variable (Table 5).

Table 4, 5, 6 and 7 provide descriptive statistics for several outcome indicators. Table 4 reports information about general assets and expenditures showing that the averages for the treatment and control groups are quite similar. Interestingly, food *insecurity* somewhat decreased (improvement) for the treated group and leads to a significant difference if compared with the score for the control group in the outline. Mobile phone ownership increased significantly among farmers and, in particular among farmers in the treatment group.

Table 4: Outcome indicators: Expenditures, Food Insecurity and Assets

	Total	N	Treatment	N	Control	N	t-stat
<i>Expenditures and Food Insecurity</i>							
Expenditures last 7 days ETB per capita (baseline)	34.5	981	31.9	524	37.4	457	-1.23
Expenditures last 7 days ETB per capita (endline)	40.3	959	38.0	514	42.9	445	-1.29
Food Insecurity (baseline)	15.7	1023	15.9	550	15.6	473	0.65
Food Insecurity (endline)	15.5	960	15.1	514	16.0	446	-2.63***
<i>Assets</i>							
Household access to electricity (%) (baseline)	16	1018	14	549	19	469	-1.96**
Household access to electricity (%) (endline)	18	943	15	508	23	435	-3.08***
Household access to piped water (%) (baseline)	12	1014	13	547	10	467	1.05

Do you own a radio? (%) (baseline)	47	1023	46	550	49	473	-0.78
Do you own a radio? (%) (endline)	49	960	50	514	49	446	0.30
Do you own a mobile phone? (%) (baseline)	46	1023	47	550	45	473	0.78
Do you own a mobile phone? (%) (endline)	69	960	72	514	66	446	2.24**

note: ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level.

Table 5 provides some indicators for the farming system. The average fertilizer use decreased for both groups. In line with the land owned the land area under crop is somewhat higher for the treatment group. We also observe an increase in the cultivated area in the endline survey. The percentage of farmers using improved seeds is larger among members of the FMO (treatment group). The average total quantity per hectare (in quintals) for four crops (teff, wheat, barley, maize) is quite stable and similar for treatment and control groups. We take the 4 most important crops together in order to get a reasonable amount of observations for each of the groups. The average total quantity sold and the total value of the sales are also quite similar for the treated and control groups. We observe an increase in production as a result of an increase in the cultivated area. This also explains part of the increase in sales value. Increasing prices explain the other part of the latter change.

Table 5: Outcome indicators: Farming System

	Total	N	Treatment	N	Control	N	t-stat
Fertilizer, Crops							
Fertilizer used (kg/ha) (baseline)	162	989	153	532	172	457	-1.05

Market information							
FMO most important source of information (%) (baseline)	0.5	928	0.8	500	0.2	428	1.17
FMO most important source of information (%) (endline)	5	779	8	424	1	355	4.36***
Market information received through mobile (%) (baseline)	27	1012	30	543	23	469	2.53**
Market information received through mobile (%) (endline)	20	960	22	514	17	446	2.01**

note: ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level.

We observe a small increase in livestock owned by the households in the period under study for both treated and control farmers. Treated farmers have on average a bit more livestock than farmers in the control group. In the baseline study only a few farmers indicated that the FMO was the most important source of market information. It is disappointing to observe that in the endline less than 10% of the farmers of the treated group (members of the FMO) indicate that the FMO is the most important source of market information. Interestingly the use of the mobile phone for getting access to market information seems to decrease among farmers (treatment and control group). This is somewhat disturbing as mobile phone ownership increased and the project invested in access to market information through mobile phones.

Table 6 provides information about the selling and buying behavior of farmers. Among members (treatment group) the use of the FMO to buy fertilizer and seeds is quite stable for the baseline and the endline. About 45% of the members buy these inputs through the FMO. Interestingly, the role of the FMO for these inputs increases in particular among non-members (control group). Less than 50% of the farmers is selling output to the FMO. Remarkably this percentage is not increasing over time. The difference between control and treated groups is significant.

Table 6: Outcome indicators: Selling to/buying from FMO

	Total	N	Treatment	N	Control*	N	t-stat
Buying inputs from the FMO

*We note that all questions regarding the FMO are not applicable to farmers in control group 2 as these villages generally do not have access to FMO services. The control group for these questions is C1. Only the questions regarding sales to traders provides the average for C1 and C2 (average quantity sold to traders, teff/wheat average and prices). ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level.

The total average quantity sold is quite similar for treatment and control groups (Table 5). Figures show an increase in total average sales for the period under study: 7.9 quintal to 10.7 quintal. The vast majority of the output is sold to private traders as the number of observations for sales to private traders is much higher than the number of sales to the FMO. We calculated this figure for the four most important crops (teff, wheat, barley, maize). For the two most popular crops we further analyzed the sales and the prices (Table 6). The quantity of teff and wheat sold increased significantly for all farmers. Interestingly, the FMO seems to play a relatively more important role as an increasing share is sold to the FMO, in particular by FMO members. At the same time we observe that, to date, most of the output is sold to private traders. In the endline 83 (83) farmers, members of the FMO, sold teff (wheat) to the FMO while

130 (222) farmers sold to private traders. It is also noted that the average quantities sold are quite similar. The table also indicates that the price differences between sales to the FMO and private traders are not very different. Some spillover effects become clear as non-members living in the FMO village (Control group 1) also sell to the FMO.

Major purpose of FMO is providing good selling opportunities	78	688	81	509	71	179	2.68***

*We note that all questions regarding the FMO are not applicable to farmers in control group 2 as these villages generally do not have access to FMO services. The control group for these questions is C1. ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level.

Table 7 provides information about the use of FMO services and perceptions regarding the importance of the FMO. Somewhat more than 50% of the members used the FMO during the last year to get training on agricultural production, training on marketing and business and price information. For some of these services spill-over effects are quite high. In the endline study a large number of non-members indicate that they also use the FMO for these services. Perceptions regarding the role of the FMO are quite good (somehow agree). We note that scores are acceptable but do not increase over time. About 36% of the farmers in the treatment group confirm the statement that the FMO is a 'weak' organization. In general we observe that the members are more positive about the FMO than the non-members living in the FMO village (control group 1).

The next step in the analysis is to isolate the treatment effect for the period under study. The difference-in-difference method (see method section) will be applied to analyze differences between the subgroups T1/T2/C1/C2. Differences over time and between Zones can be allocated to three effects:

- the change in the outcome variable (endline minus baseline) for the control C1/C2
- the difference in the outcome variable between the treatment T1/T2 and the control C1/C2 at the moment of the baseline
- the effect of the treatment during the period under study (endline minus baseline)

For our analysis the third effect is most important as it isolates the effect of the treatment on the treated. In the Annex the results of the analysis are given.

First we compare treatment differences between T1 and T2. We already explained that the treatment for T1 is more intensive as computer facilities are made available at FMO level. In order to test for the importance of these differences we check whether there is a significant difference in treatment effects that results from the different treatments. We do not present the results in the annex or the tables as we came to the conclusion that the different treatment does not lead to differences in the treatment effect. No significant differences in treatment are observed for expenditures, assets, farming system indicators and sales to the FMO. Remarkably, the effect on the food insecurity index and expenditures per capita was negative (5% level), meaning that the treatment effect for food insecurity was stronger (more negative meaning a further *reduction of food insecurity*), but negative on weekly expenditures. We conclude that the differences in the treatment between T1 and T2 are too small to result in significantly different outcomes.

Table 8 shows that only a few treatment effects are identified. If treatment groups T1 and T2 are compared with control group 1 the non-significance could be interpreted as the result of spillover effects. Only with regard to food insecurity and ownership of cows the treated groups show a somewhat better performance. However, most treatment effects are also not significant if the treated groups are compared with the farmers who do not have access to FMO services (C2). Food insecurity shows a treatment effect in the targeted direction. For fertilizer and improved seeds this effect is rather negative as increased use of these inputs in the C2 group is even stronger (also see tables 5 and 6). We see some improvement regarding the FMO as a

major source of information. This is a somewhat trivial result as FMOs are not operating in C2. We recall that less than 10% of the farmers in T1/T2 indicate that the FMO is their most important source for market information. Quite disappointing is that there are no treatment effects observed regarding the average quantity per hectare, the average quantity sold and the value of sales. We conclude that differences in the performance of treatment and control groups with regard to these indicators cannot be attributed to the treatment.

Table 8: Treatment effects: Expenditures, Food Insecurity, Assets, Farming System

FMO most important source of information (%)	ns	+***
Market information received through mobile	ns	ns

note: ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level, ns=not significant.

Table 9 confirms the average results already presented in Table 6. With regard to the buying of fertilizer we observe a negative treatment effect reflecting the steady increase of procurement of fertilizer from the FMO by non-members (C1) living in the same area. In Table 8 we compared the treated groups with farmers having no access to FMO services. Regarding total average sales and production per hectare no significant differences were identified between treated and control groups. The significant difference that exists is that there is an increase in the sales to the FMO by the members as well as the non-members living in the same Kebele.

Table 9: Treatment effects: Selling to/buying from FMO

	Control 1
Buying inputs from the FMO

qt of wheat sold to FMO	ns
Average quantity sold to traders	
qt of teff sold to trader	ns
qt of wheat sold to trader	ns

note: ns=not significant

Table 10 shows that the total estimated value of sales to the FMO more than doubled (147%) for members (T1 and T2). The value of sales to private traders increased with ‘only’ 31%. The figures are somewhat lower but still encouraging for the increase in quantities (control for price increases). The figures are derived from the information presented in Table 5. Here we would certainly find a significant treatment effect if T1/T2 would be compared with C2. The fact that none of the C2 farmers sells to the FMO makes this exercise somewhat trivial as farmers in this control group (C2) sell 100% of their output to private traders.

Table 10: Estimated distribution of sales to the FMO and private traders (four crops)

	Sales to FMO and private traders			
	Total Quantity (four crops, quintal)		Total Value (four crops, ETB)	
	FMO	Private traders	FMO	Private traders
Baseline	878	3360	560,880	2,327,150
Endline	1657	3942	1,384,248	3,061,593
% increase	89%	17%	147%	31%

note: as the number of observations in the endline is lower than the number of observations in the baseline (550 vs 514) we corrected the outcomes of the endline study with the factor $550/514 = 1.07$ (calculations are derived from figures presented in Table 2 and Table 6).

Table 11 shows effects on the use of services obtained. As indicated in Table 7 use of services was quite stable among members. Significant increases were observed for the non-members living in the same village (C1). This is confirmed by the negative treatment effects observed in Table 11. With regard to the perceptions no differences in treatment effects are identified, which is also in line with the averages presented in Table 7. We recall that we did not ask

farmers who have no access to FMOs (C2) to reply these questions as they have no experience with the services of an FMO.

Table 11: Treatment effect: Services obtained and perceptions regarding the FMO

	Control 1

Better prices through the FMO (baseline)	ns

note: ***=Significant at the 1 percent level, **=Significant at the 5 percent level, *=Significant at the 10 percent level, ns=not significant.

7. Discussion

We recall the following specific outcome indicators and translated them in effects at household level:

- 1 FMO/Union profitable channels – 75% of tradeable surplus channelled through FMO/Union.

Indicator survey: F12, F14, F18, G13-G18

This target is not realized for the members of the FMO. About 50% of the members do not sell at all to the FMO. The data also show that on average members sell less than 50% of the value through the FMO: on average they sell 8.9 quintal to the FMO and 11.3 quintal to private traders (data endline study). These figures were calculated for the most important four crops: wheat, teff, barley and maize (Table 6)

- 2 FMO/Union profitable channels - members have accessed diversified services of the FMO/Union. *Indicator survey: G19-G20*

Members use indeed the services provided by the FMO. About 50 to 60 % of the members indicate that they have used services (training or price information) from the FMO

- 3 FMO/Union profitable channels – 90% of the members are satisfied with the FMO/Union services. *Indicator survey: G21*

We observe that on average farmers are quite satisfied with the FMO (Table 7). Although the target of 90% is too ambitious (closer to 75-80%).

- 4 High value commodities – 80% of the members use improved seeds and other production enhancing technologies. *Indicator survey: D08, G19, G20*
Our data show that nearly 50% of the members use enhanced seeds and 59% of the farmers received training on agricultural production techniques the last year. Moreover, no positive treatment effects are identified.
- 5 High value commodities – All farmers manage to raise yields by 30%. *Indicator survey: D*
We fail to observe a significant increase in yields (Table 5). We also fail to identify a treatment effect, confirming that the treatment group did not outperform both control groups.
- 6 An increase in crop sales income (30%). *Indicator survey: F12, F14*
The increase in value is indeed large and close to the target of 30% (Table 5). We note that the increase is not the result of an increase in yield but the effect of price increases and an increase in the cultivated area. To some extent the result is disappointing as we are not able to identify a treatment effect, meaning that the improvement cannot be attributed to the project intervention.
- 7 An increase in personal investment at HH level (new livestock asset, HH utensils, children at school, construction material etc.). *Indicator survey: livestock, mobile phone, radio*
The ownership of livestock somewhat increased and, in particular the ownership of mobile phones became more popular. However, no treatment effects are identified, so this change cannot be attributed to the project.
- 8 Food security. *Indicator survey: I01 – I11*
Food security somewhat improved and our data indicate that this can be attributed to the project. This implies that food security improved more among the treated farmers if compared with the scores of the control groups (C1 and C2).

8. Conclusion

We conclude that this project realized some of its objectives. However, it also failed to realize others. We recall that 50% of the members in the endline study did not sell to the FMO and that

most of the surplus is sold to private traders. The FMOs' turnover increased, but the total turnover of the FMOs is still much lower than the marketable surpluses FMO members produce. We do not have any information about the financial position of the Unions. However, if the realized turnover of the FMOs is taken into account the question raises whether the involved costs of the Union organization can be recouped. In the start-up phase this may be accepted as donors and local governments are willing to provide a helping hand, but for the near future this may lead to serious problems. Increasing the turnover of Unions is key. Realizing this objective through an increase in the number of members is dissuaded as this will increase the agency cost, or cost of organization. More promising is aiming at a further increase in the share of the members' surplus sold through the FMO. This implies that the commitment of farmers to sell through the FMO has to increase further. It is exactly this commitment that may be questioned as many farmers prefer to sell to private traders and no incentive exists to reorient them towards the FMO.

The qualitative studies we carried out in several Kebeles show that this commitment concerns a serious challenge. The FMOs and Unions do have potential as their resources may solve some of the weaknesses in competitiveness of smaller farmers in the Ethiopian food market. This argument is in line with the literature we referred to in Section 2. However, we observed that members do not share a clear common vision regarding future goals. Ambiguity in this respect not only leads to confusion but also reduces the commitment among members to invest in the organization. Investment not only concerns financial means or shares, but also the commitment to sell through the FMO and the willingness to pre-finance its transactions for a couple of weeks. The challenge is to solve this issue as the future of these organization mainly depends on the commitment of the members and not on investments external donors are willing to make.

A related issue concerns the positioning of the FMO. Two questions require a clear answer as they will determine the willingness to invest of the members. A first question requires a clear differentiation from the government supported multipurpose cooperatives. The challenge is to make clear which additional services are needed. The second issue is to make clear whether the FMO is 'community oriented' or 'market oriented' (Bernard et al., 2008). The first type focuses on the provision of goods to all the members of the community while the second type focuses on services for club members. We know from existing literature that a focus on club members

makes it easier to ask farmers to invest more in their organization. We are *not* saying that this is indeed the best option, we only say that a clear choice has to be made in order to develop a consistent vision regarding the FMOs’ targets and the expected contributions of its members. This means that a focus on club members may also increase requirements regarding investment per member, while a focus on the community implies that only small contributions from individual members are expected.

Table 12: Project final scores

On a scale of 1 to 10, with 1 being “not at all” and 10 being “completely”, for this project, how much do you agree with the following statements:	
The project was well designed.	8
The project was implemented as designed.	8
The project reached all its objectives.	5
The observed results are attributable to the project interventions.	7
The observed results are relevant to the project beneficiaries.	6
The project was implemented efficient.	6

On the basis of the project proposal and the annual reports we conclude that this project was well designed and implemented. The project reached some of its objectives but also failed to realize others. In particular the members’ practice to sell most of the surplus to private traders concerns a major challenge. Moreover, we failed to identify several expected treatment effects (except for food security), showing that these results cannot be attributed to project interventions. The observed results are relevant for the project beneficiaries but further improvement is needed. It is too early to assess the efficiency of the project as the effect on most outcome indicators is still lacking or weak. Moreover, effective use and the realization of effects at farm level require a certain learning period. The project has been too ambitious in expecting that Unions could be established, an ICT infrastructure created and outcomes realized in a three year period. In line with this we would advise to fund a similar project in the future but to extend the implementation period in order to organize the FMOs/Unions and to introduce ICT facilities at FMO level properly. The FMOs/Unions still face serious challenges and cannot survive without external support. The worst thing that may happen is a sudden end of project support as this may jeopardize past investments.

Regarding the project evaluation we note that several limitations affected the evaluation. Most important is that the two year time difference between the baseline and the endline is very short. As mentioned above a learning period is required to assess the opportunities. It is well possible that the major outcomes of this project will become measurable only in the coming years.

Report CDI-15-055

Kusters, C.S.L., T. van Ingen, E. Zerfu, D. Kefyalew, N.N. Buizer, 2014. *Endline report Ethiopia, FSCE. Capacity of Southern Partner Organisations (5c) component*. Centre for Development Innovation, Wageningen UR (University & Research centre). Report CDI- 15-055. Wageningen.

This report presents the findings of the endline of the evaluation of the organisational capacity component of the MFS II country evaluations. The focus of this report is Ethiopia, FSCE. The format is based on the requirements by the synthesis team and NWO/WOTRO. The endline was carried out in 2014. The baseline was carried out in 2012.

Key words: 5C (five core capabilities); attribution; baseline; causal map; change; CFA (Co-financing Organisation) endline; organisational capacity development; SPO (Southern Partner Organisation).

Acknowledgements

We are grateful to all the people that have contributed to this report. We particularly would like to thank the Southern Partner Organisation Forum on Sustainable Child Empowerment (FSCE) and the Co-Financing Agency Stichting Kinderpostzegels Netherlands (SKN) for their endless patience and support during this challenging task of collecting the endline data. We hope that this endline report will provide useful insights to FSCE, SKN, consortia, the synthesis team, IOB and NWO/Wotro and other interested parties and other interested parties.

The Ethiopia 5C evaluation team

List of abbreviations and acronyms

Causal map	Map with cause-effect relationships. See also 'detailed causal map'.
Causal mechanisms	The combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome
CBOs	Community Based Organizations
CCRDA	Consortium of Christian Relief and Development Association
CDI	Centre for Development Innovation, Wageningen UR, the Netherlands
CFA	Co-Financing Agency
CLFZ	Child Labour Free Zone
CRA	Child Rights Alliance
CRDP	Child Resource Development Program
CRS	Catholic Relief Services
CS	Civil Society
CSO	Civil Society Organization
C&DA	Child and Development Alliance
Detailed causal map	Also 'model of change'. The representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change. In the 5C evaluation identified key organisational capacity changes and underlying reasons for change (causal mechanisms) are traced through process tracing (for attribution question).
DFID	UK Department for International Development
DCI/ECPAT	Defence for children/End child prostitution, Pornography and Trafficking
FGM/C	Female genital mutilation/cutting
FSCE	Forum on Sustainable Child Empowerment
General causal map	Causal map with key organisational capacity changes and underlying reasons for change (causal mechanisms), based on SPO perception.
GTP	Growth and Transformation Policy
ICCO	Interchurch organization for development cooperation
IFPRI	International Food Policy Research Institute
ILO	International Labour Organisation
KNH	Kindernothilfe
MDG	Millennium Development Goal
M&E	Monitoring and Evaluation
MoFA	Ministry of Foreign Affairs
MFS	Dutch co-financing system

1 Introduction & summary

1.1 Purpose and outline of the report

The Netherlands has a long tradition of public support for civil bi-lateral development cooperation, going back to the 1960s. The Co-Financing System (*Medefinancieringsstelsel*, or 'MFS') is its most recent expression. MFS II is the 2011-2015 grant framework for Co-Financing Agencies (CFAs), which is directed at achieving a sustainable reduction in poverty. A total of 20 consortia of Dutch CFAs have been awarded €1.9 billion in MFS II grants by the Dutch Ministry of Foreign Affairs (MoFA).

The overall aim of MFS II is to help strengthen civil society in the South as a building block for structural poverty reduction. CFAs receiving MFS II funding work through strategic partnerships with Southern Partner Organisations.

The MFS II framework stipulates that each consortium is required to carry out independent external evaluations to be able to make valid, evaluative statements about the effective use of the available funding. On behalf of Dutch consortia receiving MFS II funding, NWO-WOTRO has issued three calls for proposals. Call deals with joint MFS II evaluations of development interventions at country level. Evaluations must comprise a baseline assessment in 2012 and a follow-up assessment in 2014 and should be arranged according to three categories of priority result areas as defined by MoFA:

Achievement of Millennium Development Goals (MDGs) & themes;

Capacity development of Southern partner organisations (SPO) (5 c study);

Efforts to strengthen civil society.

This report focuses on the assessment of capacity development of southern partner organisations. This evaluation of the organisational capacity development of the SPOs is organised around **four key evaluation questions**:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
2. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
3. *Were the efforts of the MFS II consortia efficient?*
4. *What factors explain the findings drawn from the questions above?*

The purpose of this report is to provide endline information on one of the SPOs involved in the evaluation: FSCE in Ethiopia. The baseline report is described in a separate document.

Chapter 2 describes general information about the Southern Partner Organisation (SPO). Here you can find general information about the SPO, the context in which the SPO operates, contracting details and background to the SPO. In chapter 3 a brief overview of the methodological approach is described. You can find a more detailed description of the methodological approach in appendix 1. Chapter 4 describes the results of the 5c endline study. It provides an overview of capacity development interventions of the SPO that have been supported by MFS II. It also describes what changes in organisational capacity have taken place since the baseline and why (evaluation question is 1 and 4). This is described as a summary of the indicators per capability as well as a general causal map that provides an overview of the key organisational capacity changes since the baseline, as experienced by the SPO. The complete overview of descriptions per indicator and how these have changed since the baseline is described in appendix 3. The complete visual and narrative for the key organisational capacity changes that have taken place since the baseline according to the SPO staff present at the endline workshop is presented in chapter 4.2.2.

For those SPOs involved in process tracing a summary description of the causal maps for the identified organisational capacity changes in the two selected capabilities (capability to act and commit; capability to adapt and self-renew) is provided (evaluation questions 2 and 4). These causal maps describe the identified key organisational capacity changes that are possibly related to MFS II interventions in these two capabilities, and how these changes have come about. More detailed information can be found in chapter 4.3.

Chapter 5 presents a discussion on the findings and methodology and a conclusion on the different evaluation questions.

The overall methodology for the endline study of capacity of southern partner organisations is coordinated between the 8 countries: Bangladesh (Centre for Development Studies, University of Bath; INTRAC); DRC (Disaster Studies, Wageningen UR); Ethiopia (CDI, Wageningen UR); India (CDI, Wageningen UR; Indonesia (CDI, Wageningen UR); Liberia (CDI, Wageningen UR); Pakistan (IDS; MetaMeta); Uganda (ETC). Specific methodological variations to the approach carried out per country where CDI is involved are also described in this document.

This report is sent to the Co-Financing Agency (CFA) and the Southern Partner Organisation (SPO) for correcting factual errors and for final validation of the report.

1.2 Brief summary of analysis and findings

Since the baseline, two years ago, in all capabilities changes (improvements or deteriorations) took place.

Deteriorations took place in the indicators under the capability to act and commit, due to internal problems FSCE experienced. In May 2013 an organisational development (OD) study was initiated, that was completed in Dec 2013. This study concluded that to improve internal functioning a new director was required. This new director started in March 2014, only two months prior to the endline workshop. Many staffs are still frustrated and funding is still low due to this period of internal problems. Funding is said to have declined because of many different reasons, one being the internal problems, but others include restrictive NGO legislation and donors wanting to work in coalitions. As the positive changes of installing a new director were very recent, many staffs still felt that there was some delay in implementing the OD study's recommendations. The strategic plan has been revised but it is not yet guiding FSCE's daily operations. Due to the lower annual budget, staff turnover increased. Some staff resigned due to low salaries and staff performance evaluation is not well managed. Compared to similar organisations, the benefit package at FSCE is poor and training opportunities for staff have decreased since the baseline. Little training has been given since 2012 because there has been less emphasis on getting funding for trainings and the 30/70 rule, in which trainings fall under the 30% of the budget that can be spent on administrative costs, has not helped in this respect. Skilled staff has left the organisation so that, although staff that remained has gained some skills due to experience and self-organised trainings, overall there is a slight deterioration in staff skills. New staffs hired do have clear roles and responsibilities that fit in the organisational structure of FSCE.

In the capability to adapt and self-renew FSCE saw some deterioration and some improvements. Staff have improved their M&E competencies especially due to an M&E training during the Annual MFS II partner meeting in May 2014. There is a team of experts that works on M&E and support the area program offices. More emphasis is now given to reporting on outcome indicators. With the new leadership, organisational management is making use of M&E findings at organisational and program level to make timely decisions. While some improvements have been made in terms of creating moments for critical reflection, the general feeling among staff is that because of the internal problems and reorganisation process that followed not enough attention has been given to this. The same holds for staff's freedom to share ideas: there are some very recent positive developments but the internal communication problems under the previous management worsened the situation since the baseline.

In terms of the capability to deliver on development objectives, FSCE shows very slight improvement in its cost-effectiveness. In this regard, the organisation is developing guidelines on project proposal

development, project appraisal, realignment of activities and budgets in the annual action plan, and is undertaking financial activities with deadlines and reviewing the M&E system and M&E application.

In the capability to relate, FSCE has shown slight improvements in engaging its stakeholders in policies and strategies. The organisation is using Multi Stakeholder Child Protection Structures (MSCPS) to engage different stakeholders in the program process. The relations within the organisation have, however, deteriorated compared to the baseline situation. Due to change processes and leadership problems, at different levels relations between staff have not been free and open. While some positive developments are taking place at the head office (with the new director) this has not yet reached the Area Program offices.

Finally, FSCE has improved and deteriorated in indicators under the capability to achieve coherence. After the OD assessment in 2013 and the change in leadership in 2014, the mission and vision statement of FSCE were revised and significant improvements were made in organisational structure, communication, program, finance and HR strategies. There was however, a slight deterioration in programs being aligned to the vision and mission, and while projects are still aligned, realignment to the new organisational level strategies and program categorisations is required.

The evaluators considered it important to also note down the SPO's story in terms of changes in the organisation since the baseline, because this would provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team. During the endline workshop the following key organisational capacity changes were brought up by FSCE's staff: "improved implementation capacity in holistic approach"; "improved M&E capacity including reporting"; and "improved organizational system of operations".

According to FSCE staff present at the endline workshop, the capacity to implement a holistic approach improved because of improved knowledge of staff to apply a Multi Stakeholder (MS) approach and a more harmonious collaboration with and between staff from different departments; improved application of different strategies to support target groups; and improvement in working with target groups. FSCE's knowledge on MS improved because of a MFS II funded training on Multi-Stakeholder Processes (MSP) in September 2012, at CDI in the Netherlands, in which one FSCE Program staff member participated, who shared his knowledge with other staff in a workshop in December 2012. FSCE improved its application of different strategies to support target groups because of experience sharing visits to Tanzania and the Netherlands (MFS II funded) and coaching and mentoring of staff by FSCE Head Quarters (HQ). The organisation improved the way it works with target groups because of a training on SHG related implementation (Kinder Not Hilfe funded) and training on the area based approach and exposure visit to the Netherlands (MFS II funded).

Secondly, FSCE improved its M&E capacity, including reporting, because of increased intensity and frequency of visits to the target groups, and improvements in standard and concise reporting, which were both triggered by a training on outcome level reporting in 2012, organised by FSCE. M&E capacity also improved because of an improvement in outcome oriented reporting capacity due to the same training and the requirements of FSCE for outcome level information. Improved recording of case stories and publication capacity also contributed to improved M&E capacity. This was the result of regular mentorship given by the new director.

Finally according to FSCE staff, they improved their organisational operating system because there are now systems in place to apprehend the concerns of staff due to the new leadership and regular discussions; improved formal, interdepartmental communication due to improved joint planning and team work capacity; and improved multi stakeholder engagement capacity because of the MSP training at CDI (MFS II funded). FSCE improved its joint planning and team working capacity as a result of coaching and mentoring of staff by HQ and the experience sharing visit to the Netherlands and Tanzania (MFS II funded).

All in all, there is some mention of MFS II funded capacity development interventions in two of the three key organisational capacity changes that FSCE staff identified. During process tracing these and

more MFS II funded interventions, in particular training and experience sharing visits have clearly come up. However, internal factors like the change in leadership, training, coaching and mentoring, have also played an important role in the key organisational capacity. Some support from other funders in terms of training, has also been mentioned as one of the underlying factors to these changes.

'Process tracing' was used to get more detailed information about the organisational capacity changes that were possibly related to specific MFS II capacity development interventions. For FSCE the organisational capacity changes that were focused on were "Improved capacity to apply a Community Centred Multi Stakeholder (CCMS) approach", and "Improved M&E capacity using a Results Based Management (RBM) approach". These are further explained below.

Based on the process tracing causal map it can be said that the changes that took place since the baseline in 2012 in terms of improved capacity of FSCE to apply a Community Centred Multi Stakeholder Approach can be largely attributed to MFS II supported capacity development interventions, notably the above mentioned MSP training at the CDI in the Netherlands; life skills, facilitation leadership and conflict management training for FSCE area office staff and community, social workers and other stakeholders; and guidance and counselling for applying a child based community conversation approach. However, it must be noted that these approaches were already initiated in the organisation before the baseline with the support of Kinderpostzegels since 2010. The additional MFS II supported trainings that took place since 2012 helped to strengthen the MSP approach as well as to increase the capacity of FSCE to create, strengthen and engage CBOs for child protection.

In terms of improved M&E capacity for using RBM approach, can be partly attributed to MFS II capacity development interventions, such as providing formats for outcome reporting, M&E training with a focus on outcome reporting, and close follow-up by MFS II partners. However, there is also an important role for the organisation in developing its own M&E tools and formats, biannual monitoring meetings and establishing a separate PME unit.

Efforts to strengthen civil society	

2.2 The socio-economic, cultural and political context in which the partner operates

The Ethiopian Government is undertaking different development plans that focus on poverty reduction by the Growth and Transformation Policy (GTP). The plans incorporate the National Action Plan for Gender Equality (NAP-GE). It recognizes gender as a human right issue, a poverty reduction and development goal in its own right and as a means to ensure the attainment of the MDGs. Moreover, since the ratification of the UNCRC in 1989, very limited and segmented initiatives in the field of child participation were established by the Government. A notable government program in the area of child participation is the establishment of children's parliaments throughout the country with the supervision of the Institute of Ombudsman and the Ministry of Women Affairs. This structure has enabled children to participate in the development of child positive disciplining guidelines. The Government also set up a Child Rights Committees at national level that extends to the local administrative Woredas (districts), as well as Kebeles (neighbourhoods).

Under coordination and monitoring by the Ministry of Women's Affairs, these structures are responsible for promoting the protection needs of children, protecting children from various abuses and ensuring the protection of children from abuses and violation. There is no single and comprehensive policy that deals with the issue of violence against children that serves as a general directive regulating the child protection system. Many of the policies and guidelines do not give due attention to comprehensive protection of children from violence. The program aims to establish and

coordinate initiatives and agreements with relevant government institutions, stimulating implementation of laws and policies.

Focusing on improving the situation of girls and young women is not only necessary given the magnitude of the violation of rights and the difficulty Ethiopia is facing to meet MDG3 by 2015. Addressing the underlying problems of this group will also bring about a powerful intergenerational effect. The Ethiopian Alliance partners have expertise and experience in addressing the problem and have points of entry to reach this vulnerable group already in the selected areas.

CSOs in the country have contributed significantly in promoting good governance. However, as shown in a CCRDA/Consortium of Christian Relief and Development Association/ report¹⁹, interventions focusing on girl and young women (96 out of 2,046) are very limited in addressing the magnitude of the prevailing violations of the rights of children. Moreover, many of the CSO/ NGOs also operate on a small-scale/limited scope towards protection of girls and young women from various violations.

It is not that boys in Ethiopia do not experience violence at home by the family members, by the community, at school or at work places; but rather, it is girls that are often more vulnerable to violence in these settings. Cultural and structural factors in Ethiopia often put girls at a severe disadvantage: programmes and interventions must therefore target such factors directly, in order to reverse this state of affairs.

The majority of children in Ethiopia are exposed to some form of physical, sexual and psychological abuses at home, as well as in schools and community. Violence against girls and young women manifests itself in the form of harmful traditional practices such as FGM/C and forced and child marriage including abduction and rape. The average prevalence of FGM/C stands at 74%. In an Ethiopian study of 227 married women, 60% said they were abducted before the age of 15 years, while one in every two girls married before the age of 18 years and 30% reported that they have been raped. The abduction of minors, where men consummate the marriage with rape, is socio-culturally permitted in some rural parts of Ethiopia, despite the outlawing of abduction.

As a result of a weak social security system, children are regarded highly for the economic value they have as sources of additional labour, and for the social protection that they provide in old age and in times of sickness. In contrast to this high regard, children are seldom treated with sensitivity, consideration or respect in their everyday life. Similarly as different studies shows, a significant number of children in the country don't attend school due to different reasons. As the data shows, the gross enrolment rate in primary education (grades 1-8) in Ethiopia is estimated at 95.6 % (90.5 % for girls and 100.5% for boys) ²⁰ but the quality of education remains a key challenge. High dropout rates, coupled with high repetition rate have remained additional challenges for primary education and are higher for girls than boys. Average repetition rate for girls for grade 4 to 8 stood at 8.4% while it is 4.1% for boys. For secondary school for every 100 boys in grades 9 or 10, there are only 65 girls; for every 100 boys in grades 11 and 12, there are only 48 girls.

Description of the target areas and population

The City of Adama is under the Oromia National Regional State. Geographically, Adama city is located eastern parts of the country at 100 km east of the capital city Addis Ababa. Currently, the City consists of 18 kebeles (14 in the City and 4 in the surrounding rural areas). According to the 2007 Census result, the total population of the Regional State is 27,158, 000. Of this, Adama City has a total population of 228, 623, of which 114368 or 50.2% are females and 114255 or 49.8% males. The population of children below 19 years was estimated to be 49.6% of which 47.1% are males and 52.9% are females.

Available literature revealed that numerous and complex socio-economic factors have fuelled the rising presence of the problem of children in the city of Adama. This includes parental death, the breakdown of traditional support structures of the extended family; the increasing difficult circumstances of female headed households; rapid urbanization and migration to major urban centre to look for better opportunity, unemployment, trafficking and the likes. Results of desk top reviews, terminal evaluation feed backs of the 2002-2206 project accomplishments, discussion forums organized with relevant institutions by FSCE in 2007 has also confirmed the prevalence and growth of various social and economic problems in the City.

2.3 Contracting details

When did cooperation with this partner start:

SKN: January 1997

Defence for Children – ECPAT: 1 April 2011

What is the MFS II contracting period:

SKN: January 2011 - December 2015

Defence for Children – ECPAT: 1 April 2011 – 31 December 2015

Did cooperation with this partner end?

SKN: NO

Defence for Children – ECPAT: NO

If yes, when did it finish?

SKN: N.A.

Defence for Children – ECPAT: N.A.

What is the reason for ending the cooperation with this partner:

SKN: N.A.

Defence for Children – ECPAT: N.A.

If not, is there an expected end date?

SKN: In case of good performance Kinderpostzegels will renew its cooperation with FSCE for the period after 2015.

Defence for Children – ECPAT: N.A.

2.4 Background to the Southern Partner Organisation

History

Forum on Sustainable Child Empowerment (FSCE) previously named as Forum on Street Children-Ethiopia is an indigenous not-for-profit, non-governmental organization established at the end of 1989 by a group of social development professionals who thought and believed that they can make a difference in the lives of vulnerable children especially those who are forced to live and/or work on the streets of major cities and towns of Ethiopia due to various reasons.

FSCE, in its 25 years of service in promoting and implementing child protection work has accumulated an extensive expertise and experience that has helped the organization to evolve into one of the leading local child protection organizations in the country. Working on a wide spectrum of urban disadvantaged children's issues, FSCE has enjoyed successful track record of success stories

FSCE initiated the establishment of Community Based Arbitrators "Mekari shemagelies", at Woreda levels which is an initiation and collaborative effort of selected sub cities, Addis Ababa Police commission and Save the Children-Sweden. As a result of this initiative, it has been possible to establish model child protection units in selected kebeles of Arada sub city in Addis Ababa.

FSCE was also able to introduce Child Protection Units (CPU) in police station while also integrating child protection issues into the curriculum of the police training institutions. This has been a great help in having police officers that have enough knowledge on how to protect children. Currently, Child Protection Units (CPUs) are now fully accepted and are being scaled up at various levels by the Ethiopian Government.

In the absence of a national child policy in the country, in 2007 FSCE felt the inevitability of developing institutional child protection policy and developed its own "Child Protection Policy". This measure is a fundamental stride towards building consensus on the overall direction of the organization and setting minimum standard in service provision for children. As part of facilitating the

work of police stations, the second effective collaboration has been established with the Ethiopian policy college of developing training manual On Child Right and Child Protection by the then “Forum on street children in Ethiopia” in collaboration with Save the Children-Sweden and Ethiopia Police College with the objective of enabling the police force to be trained on the wellbeing and protection needs and other related issues pertaining to children. Save the Children Sweden (SCS) and Forum on Street Children-Ethiopia (FSCE) are the pioneering supporters of the police child protection units (CPUs), and child friendly courts (CFC) in the country.

Other peculiar achievements of FSCE include the establishment of Community Based Child protection/correction Centres (CBCC) in 2007, and development of multi-stakeholder approach in 2009-2010 that encompasses the active involvement of various government bodies, Community Based Organizations, communities, non-governmental bodies, and target children, which is very helpful in implementing the program and for ensuring sustainability.

FSCE area based multi-stakeholder child protection interventions expanded its foundation and proved to be an effective way of addressing the problems of children and at the same time strengthen the establishment of Multi-stakeholder Child Protection Councils. Currently the multi-stakeholder child protection council based interventions are rolled out in all area programme offices of FSCE.

Following the issuance of new Civil Society Organizations (CSOs) legislation issued in 2009, FSCE has redefined its Vision, Mission and program and reregistered as Forum on Sustainable Child Empowerment under the registration number 0064. The mission statement and FSCE programs is again rectified and revised during the evaluation of its fifth strategic plan (2010-2014) at its mid-term and the organizational development study conducted in 2013.

Our Vision

To see the well-being and protection needs of children fulfilled

Our Mission statement

FSCE as a child centred organization “Strives to protect and support vulnerable children through comprehensive system approach in collaboration with relevant stakeholders”

Description of the organisation:

The organisation is governed by a general assembly and a board that has an executive committee. The Executive Director runs the operations of the organisation and also officially represents FSCE. The Director is assisted by professionals who lead and coordinate different programs of the organisation.

FSCE, being a pioneering NGO, has built good reputations through promoting the protection of children and the provision of quality services for disadvantaged children in general and marginalized urban children in particular over a period of two decades.

Currently, we offer a continuum of child focused development works in five area program offices (Addis Ababa, Dire Dawa, Bahirdar, Dessie and Adama) located in two cities namely Addis Ababa and Diredewa, and two regional states Amhara and Oromiya respectively.

FSCE is working in partnership with various governmental and Non-governmental organizations and with the active involvement of the target community. FSCE closely works with the government agencies at federal, regional and local level (especially with the Ministry of Women’s Affairs, Education, Labour and Social Affairs, and law enforcement authorities), NGOs, communities and associations.

FSCE exemplar strengths (best practices) in this regard:

- Ex-post project follow up actions on the performance of community based organizations ‘Iddirs’, schools etc.
- Projects are in line with the government policies and priorities
- The capacity to manage huge amount of resources from diversified sources- currently it has more than 12 donors and projects.

-
- FSCE has experience of working with and maintaining donors for long periods-e.g; Save the Children previously based in 8 different countries now called Save the Children International (SCI), KINDER NOT HILFE (KNH), Every child (EVC) and End Child Prostitution, Child Pornography and Trafficking of Children (ECPAT)
 - Has created strategic partnership locally and internationally.
 - Have board members who are committed in the works of the organization
 - Uses community and government structures and systems when designing and implementing projects-e.g: Multi stakeholders unit.

Website: www.fsc-e.org

Strategies

Forum on sustainable child Empowerment has adopted a Community Based Multi-stakeholder Child Protection system as an umbrella strategy to realize its vision of seeing the well-being and protection needs of children fulfilled. This strategy is sought to attain this noble end in a more comprehensive and sustainable manner. The strategy stipulates the active involvement of all stakeholders, and also attempts to address all child protection problems children face in a more comprehensive and sustainable manner.

FSCE implements activities designed to promote the protection needs of urban disadvantaged children in general and sexually abused and exploited children, trafficked children, physically abused children, children without parental care, children in conflict with the law and that of children exposed to child labour in particular through comprehensive system approach.

FSCE makes a significant contribution to the benefit of the most at risk children through its major program areas which include its:

- Promotion and prevention
- Protection
- Recovery and Reintegration of children and
- Child Resource and Development programs.

3 Methodological approach and reflection

3.1 Overall methodological approach and reflection

This chapter describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around **four key evaluation questions**:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

Note: this methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report a detailed overview of the approach is described in appendix 1.

The first (changes in organisational capacity) and the fourth evaluation question are addressed together through:

- **Changes in the 5C indicators since the baseline:** standard indicators have been agreed upon for each of the five capabilities of the five capabilities framework (see appendix 2) and changes between the baseline and the endline situation have been described. For data collection a mix of data collection methods has been used, including self-assessments by SPO staff; interviews with SPO staff and externals; document review; observation. For data analysis, the Nvivo software program for qualitative data analysis has been used. Final descriptions per indicator and per capability with corresponding scores have been provided.
- **Key organisational capacity changes – 'general causal map':** during the endline workshop a brainstorm has been facilitated to generate the key organisational capacity changes as perceived by the SPO since the baseline, with related underlying causes. For this purpose, a visual as well as a narrative causal map have been described.

In terms of the attribution question (2 and 4), '**process tracing**' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to

focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

At the end of this appendix a brief methodological reflection is provided.

3.2 Assessing changes in organisational capacity and reasons for change - evaluation question 1 and 4

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?** And the fourth evaluation question: **“What factors explain the findings drawn from the questions above?”**

In order to explain the changes in organisational capacity development between baseline and endline (evaluation question 1) the CDI and in-country evaluation teams needed to review the indicators and how they have changed between baseline and endline and what reasons have been provided for this. This is explained below. It has been difficult to find detailed explanations for changes in each of the separate 5c indicators, but the 'general causal map' has provided some ideas about some of the key underlying factors actors and interventions that influence the key organisational capacity changes, as perceived by the SPO staff.

The evaluators considered it important to also note down a consolidated SPO story and this would also provide more information about what the SPO considered to be important in terms of organisational capacity changes since the baseline and how they perceived these key changes to have come about. Whilst this information has not been validated with sources other than SPO staff, it was considered important to understand how the SPOs have perceived changes in the organisation since the baseline.

For those SPOs that are selected for process tracing (evaluation question 2), more in-depth information is provided for the identified key organisational capacity changes and how MFS II supported capacity development interventions as well as other actors, factors and interventions have influenced these changes. This is integrated in the next session on the evaluation question on attribution, as described below and in the appendix 1.

How information was collected and analysed for addressing evaluation question 1 and 4, in terms of description of changes in indicators per capability as well as in terms of the general causal map, based on key organisational capacity changes as perceived by the SPO staff, is further described below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012¹.

¹ The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming session was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012; also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, and Liberia). The 5c country report is based on the separate SPO reports.

Please see appendix 1 for a description of the detailed process and steps.

3.3 Attributing changes in organisational capacity - evaluation question 2 and 4

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*** and the fourth evaluation question: ***“What factors explain the findings drawn from the questions above?”***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Below, the selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

3.3.1 Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

For the detailed results of this selection, in the four countries that CDI is involved in, please see appendix 1. The following SPOs were selected for process tracing:

- Ethiopia: AMREF, ECFA, FSCE, HUNDEE (4/9)
- India: BVHA, COUNT, FFID, SMILE, VTRC (5/10)
- Indonesia: ASB, ECPAT, PtPPMA, YPI, YRBI (5/12)
- Liberia: BSC, RHRAP (2/5).

3.3.2 Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop

have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained. More information can be found in Appendix 1.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

3.3.3 Methodological reflection

Below a few methodological reflections are made by the 5C evaluation team. These can also be found in appendix 1.

Use of the 5 core capabilities framework and qualitative approach: this has proven to be a very useful framework to assess organisational capacity. The five core capabilities provide a comprehensive picture of the capacity of an organisation. The capabilities are interlinked, which was also reflected in the description of standard indicators, that have been developed for the purpose of this 5C evaluation and agreed upon for the eight countries. Using this framework with a mainly qualitative approach has provided rich information for the SPOs and CFAs, and many have indicated this was a useful learning exercise.

Using standard indicators and scores: using standard indicators is useful for comparison purposes. However, the information provided per indicator is very specific to the SPO and therefore makes comparison difficult. Whilst the description of indicators has been useful for the SPO and CFA, it is questionable to what extent indicators can be compared across SPOs since they need to be seen in context, for them to make meaning. In relation to this, one can say that scores that are provided for the indicators are only relative and cannot show the richness of information as provided in the indicator description. Furthermore, it must be noted that organisations are continuously changing and scores are just a snapshot in time. There cannot be perfect score for this. In hindsight, having rubrics would have been more useful than scores.

General causal map: whilst this general causal map, which is based on key organisational capacity changes and related causes, as perceived by the SPO staff present at the endline workshop, has not been validated with other sources of information except SPO feedback, the 5C evaluation team considers this information important, since it provides the SPO story about how and which changes in the organisation since the baseline, are perceived as being important, and how these changes have come about. This will provide information additional to the information that has been validated when

analysing and describing the indicators as well as the information provided through process tracing (selected SPOs). This has proven to be a learning experience for many SPOs.

Using process tracing for dealing with the attribution question: this theory-based and mainly qualitative approach has been chosen to deal with the attribution question, on how the organisational capacity changes in the organisations have come about and what the relationship is with MFS II supported capacity development interventions and other factors. This has proven to be a very useful process, that provided a lot of very rich information. Many SPOs and CFAs have already indicated that they appreciated the richness of information which provided a story about how identified organisational capacity changes have come about. Whilst this process was intensive for SPOs during the process tracing workshops, many appreciated this to be a learning process that provided useful information on how the organisation can further develop itself. For the evaluation team, this has also been an intensive and time-consuming process, but since it provided rich information in a learning process, the effort was worth it, if SPOs and CFAs find this process and findings useful.

A few remarks need to be made:

- Outcome explaining process tracing is used for this purpose, but has been adapted to the situation since the issues being looked at were very complex in nature.
- Difficulty of verifying each and every single change and causal relationship:
 - Intensity of the process and problems with recall: often the process tracing workshop was done straight after the general endline workshop that has been done for all the SPOs. In some cases, the process tracing endline workshop has been done at a different point in time, which was better for staff involved in this process, since process tracing asks people to think back about changes and how these changes have come about. The word difficulties with recalling some of these changes and how they have come about. See also the next paragraph.
 - Difficulty of assessing changes in knowledge and behaviour: training questionnaire is have been developed, based on Kirkpatrick's model and were specifically tailored to identify not only the interest but also the change in knowledge and skills, behaviour as well as organisational changes as a result of a particular training. The retention ability of individuals, irrespective of their position in the organisation, is often unstable. The 5C evaluation team experienced that it was difficult for people to recall specific trainings, and what they learned from those trainings. Often a change in knowledge, skills and behaviour is a result brought about by a combination of different factors, rather than being traceable to one particular event. The detailed causal maps that have been established, also clearly pointed this. There are many factors at play that make people change their behaviour, and this is not just dependent on training but also internal/personal (motivational) factors as well as factors within the organisation, that stimulate or hinder a person to change behaviour. Understanding how behaviour change works is important when trying to really understand the extent to which behaviour has changed as a result of different factors, actors and interventions. Organisations change because people change and therefore understanding when and how these individuals change behaviour is crucial. Also attrition and change in key organisational positions can contribute considerably to the outcome.

Utilisation of the evaluation

The 5C evaluation team considers it important to also discuss issues around utility of this evaluation. We want to mention just a few.

Design – mainly externally driven and with a focus on accountability and standard indicators and approaches within a limited time frame, and limited budget: this MFS II evaluation is originally based on a design that has been decided by IOB (the independent evaluation office of the Dutch Ministry of Foreign Affairs) and to some extent MFS II organisations. The evaluators have had no influence on the overall design and sampling for the 5C study. In terms of learning, one may question whether the most useful cases have been selected in this sampling process. The focus was very much on a rigorous evaluation carried out by an independent evaluation team. Indicators had to be streamlined across countries. The 5C team was requested to collaborate with the other 5C country teams (Bangladesh, Congo, Pakistan, and Uganda) to streamline the methodological approach across the eight sampled countries. Whilst this may have its purpose in terms of synthesising results, the 5C evaluation team

has also experienced the difficulty of tailoring the approach to the specific SPOs. The overall evaluation has been mainly accountability driven and was less focused on enhancing learning for improvement. Furthermore, the timeframe has been very small to compare baseline information (2012) with endline information (2014). Changes in organisational capacity may take a long, particularly if they are related to behaviour change. Furthermore, there has been limited budget to carry out the 5C evaluation. For all the four countries (Ethiopia, India, Indonesia, and Liberia) that the Centre for Development Innovation, Wageningen University and Research centre has been involved in, the budget has been overspent.

However, the 5C evaluation team has designed an endline process whereby engagement of staff, e.g. in a workshop process was considered important, not only due to the need to collect data, but also to generate learning in the organisation. Furthermore, having general causal maps and detailed causal maps generated by process tracing have provided rich information that many SPOs and CFAs have already appreciated as useful in terms of the findings as well as a learning process.

Another issue that must be mentioned is that additional requests have been added to the country teams during the process of implementation: developing a country based synthesis; questions on design, implementation, and reaching objectives of MFS II funded capacity development interventions, whilst these questions were not in line with the core evaluation questions for the 5C evaluation.

Complexity and inadequate coordination and communication: many actors, both in the Netherlands, as well as in the eight selected countries, have been involved in this evaluation and their roles and responsibilities, were often unclear. For example, 19 MFS II consortia, the internal reference group, the Ministry of Foreign Affairs, Partos, the Joint Evaluation Trust, NWO-Wotro, the evaluators (Netherlands and in-country), 2 external advisory committees, and the steering committee. Not to mention the SPO's and their related partners and consultants. CDI was involved in 4 countries with a total number of 38 SPOs and related CFAs. This complexity influenced communication and coordination, as well as the extent to which learning could take place. Furthermore, there was a distance between the evaluators and the CFAs, since the approach had to be synchronised across countries, and had to adhere to strict guidelines, which were mainly externally formulated and could not be negotiated or discussed for the purpose of tailoring and learning. Feedback on the final results and report had to be provided mainly in written form. In order to enhance utilisation, a final workshop at the SPO to discuss the findings and think through the use with more people than probably the one who reads the report, would have more impact on organisational learning and development. Furthermore, feedback with the CFAs has also not been institutionalised in the evaluation process in the form of learning events. And as mentioned above, the complexity of the evaluation with many actors involved did not enhance learning and thus utilization.

5C Endline process, and in particular thoroughness of process tracing often appreciated as learning process: The SPO perspective has also brought to light a new experience and technique of self-assessment and self-corrective measures for managers. Most SPOs whether part of process tracing or not, deeply appreciated the thoroughness of the methodology and its ability to capture details with robust connectivity. This is a matter of satisfaction and learning for both evaluators and SPOs. Having a process whereby SPO staff was very much engaged in the process of self-assessment and reflection has proven for many to be a learning experience for many, and therefore have enhanced utility of the 5C evaluation.

4 Results

4.1 MFS II supported capacity development interventions

Below an overview of the different MFS II supported capacity development interventions of FSCE that have taken place since the baseline in 2012 are described. The information is based on the information provided by Stichting Kinderpostzegels Nederland (SKN) and Defence for Children – ECPAT.

Table 1

Information about MFS II supported capacity development interventions since the baseline in 2012

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
RBM refreshment and M&E training course for MFSII partners of Kinderpostzegels in Ethiopia	<ul style="list-style-type: none"> - To strengthen the capacities of FSCE in the field of Result Based Management, both with regards to project planning as later on with regards to reporting on output and outcome results - Better understanding of the importance and advantages of result based management of projects (compared to activity based) 	<ul style="list-style-type: none"> - Recap on Planning terminology and indicators - Concepts and purposes of M&E - Steps to design and conduct monitoring - Aspects and challenges in monitoring - Develop system for data compilation and analysis, reporting and communication - Develop timeline and action plan for monitoring 	June 2012	€ 4.845,00 for 16 participants of 8 partner organisations
Participation of one staff member of FSCE in Multi Stakeholder Processes (MSP) training at CDI, Wageningen	<ul style="list-style-type: none"> - Better impact results due to a more holistic approach of the complex problems some children (the target group of FSCE) are confronted with 	<ul style="list-style-type: none"> - Concept and rationale of multi-stakeholder processes, institutional change and social learning; - Different types of multi-stakeholder processes in terms of the issues at stake, the stakeholders, their interests, power relations, conflicts, external contacts, etc.; - How to use a broad range of participatory methodologies and tools in MSPs; - Types of institutional change and support necessary for effective MSPs; - Design and planning of an extended MSP; - The impact of personal style in facilitation, communication, leadership and dealing with conflicts. 	August 2012	€ 7.500,00
Annual MFSII CD Alliance Partners Meetings (2012, 2013, 2014) in Addis Ababa	<ul style="list-style-type: none"> - For information and experience sharing among MFSII partners of the C&D Alliance in Ethiopia and creating (more) synergy of actions through collaboration between partners. - Improvement of actions and strategies as a result of experience sharing and learning from each other's best practices. 	<ul style="list-style-type: none"> discuss and exchange information on project and program strategies, collaboration between C&D partner organizations in order to create synergy of actions, including a one day training on M&E with focus on reporting at outcome level in 2014: - Indicators - Baselines - Data collection in M&E (methods and techniques) - Data quality and data flow charts - Reporting 	Annually in 2012 and 2013 in October; 2014 in May	€ 3.141,44 (2012); € 3.280,00 (2013)

Title of the MFS II supported capacity development intervention	Objectives	Activities	Timing and duration	Budget
Review and discuss outcomes of mid-term project evaluation of FSCEs Community Based Multi Stakeholder CLFZ project in Adama	- Improved quality and effectiveness of the Adama project and improved performance of the project staff. Lessons learned from this project which are also of importance and value for similar projects of FSCE in other areas	- FSCE to learn from its own experiences and if necessary to correct in time errors in terms of strategy and action of the ongoing project. - Learn lessons also as donor organization of the project activities and performance of FSCE	October 2013	€ 2.500,00
participation of project staff of Adama and Dessie Area offices of FSCE in teachers training programme on Active Learning of DEC in order to improve quality of education in the schools and Non Formal Education Centers supported by FSCE	- To improve the capacities of FSCE Adama and FSCE Dessie to effectively contribute to the improvement of the quality of (basic) education in the intervention areas of the Child Labour Free Zone (through improving access to quality education of out-of-school working children) projects in Adama and Dessie - Improvement of the quality of education in the project areas concerned and improved performance of FSCE in contributing to this.	In June 2013 an assessment of knowledge and skills level has been done with all participants. Apart from selected teachers and project staff also TTC's directors and school inspectors (govt.) participate. Having all these people to participate provides insight in how to improve education and how to involve the local government. Topics: - Time management - Child Centred Approach - Prepare SMART lesson plans - Use of suitable learning media - Facilitation Skills - Active learning methodologies and M&E techniques	Since June 2013 each quarter 5 days training	€ 47.100,00 for 135 participants, of which 5 project staff of 4 partner organizations.

4.2 Changes in capacity development and reasons for change - evaluation question 1 and 4

Below you can find a description of the changes in each of the five core capabilities (4.2.1). This information is based on the analysis of the information per each of the indicators. This detailed information for each of the indicators describes the current situation, and how and why it has changed since the baseline. In addition to this staff present at the endline workshop were asked to indicate what were the key changes in the organisation since the baseline. The most important is key organisational capacity changes have been identified, as well as the reasons for these changes to come about. This is described in a general causal map, both as a visual as well as a narrative. The detailed general map is described in 4.2.2.

4.2.1 Changes in the five core capabilities

Capability to Act and Commit

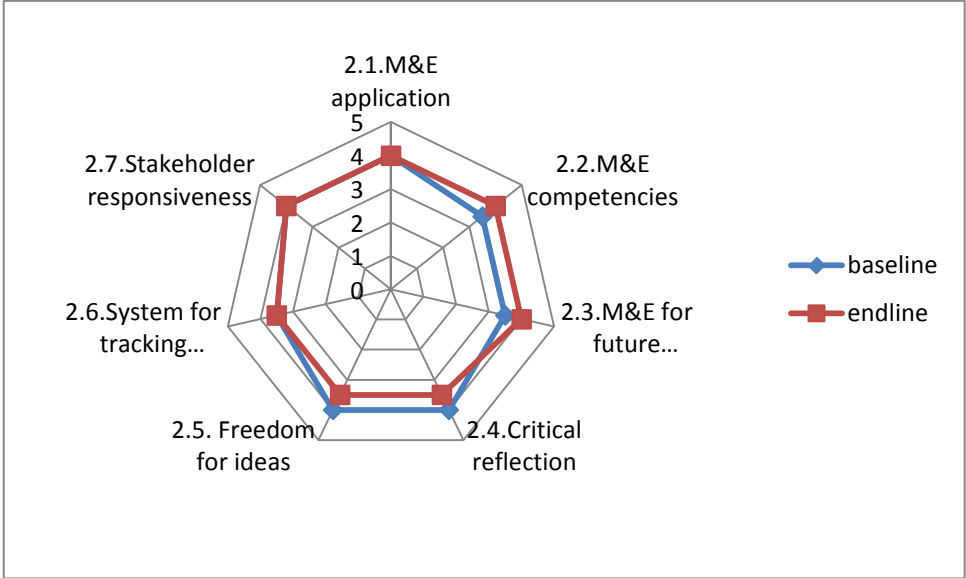

The key change observed since the baseline in FSCE was the change of leadership and the organizational development process (re-structuring of FSCE in terms of organizational set up) based on the findings from the organizational development (OD) study. In May 2013 this organisational development (OD) study was initiated, which was completed in Dec 2013. The previous leadership was blamed for lack of responsiveness in terms of timely decision making and solving internal communication problems. The director was laid off in February 2014 and a new Executive Director was appointed in March 2014. The overall functioning of the organization was missing coordination, a formal flow of performing obligations and there was weak communication between branch offices and the head office as well as with donors due to internal problems marked by poor collaboration and tensions between the program and finance department during the previous management. However, though the role/stimulus of the new leadership is not known yet, slight improvements have appeared in terms of communication and team work after the change in leadership, but at the head office level only. Despite these difficulties, FSCE managed to slightly improve program implementation, specifically in stopping child labour and promoting the area specific community based MS approach. FSCE has been guided by a strategic plan in its organizational directions and operations. This strategic plan has been revised and is in the process of being endorsed.

Some staffs are still frustrated because the implementation of the OD recommendation to restructure the organization was not immediately effective. Consequently, some staffs have resigned. Other staffs have resigned due to low salary scale and uncondusive working environment, particularly during the previous management. Staff performance valuation is not well managed and there is no performance based annual salary increment in the organization. On the other hand, some staffs said that staff turnover has not alarmingly changed compared to the baseline in FSCE, and that (recent) salary scale adjustments and increments have brought a positive impact on staff turnover. Some staffs stated that training opportunities have declined after the baseline and that FSCE has no proper strategy and means to motivate and appreciate staffs. FSCE conducts training need assessments; however, it mostly failed to conduct trainings as identified due to the provision of the 30/70 NGO legislation of the government. Only few trainings on selected thematic areas have been organized for selected staffs, but the organization has hired skilled and experienced staffs since 2012. FSCE has longstanding experience and working relationship with diversified funding sources at international and local level. However, it is gradually deteriorating resulting in a decreasing annual budget and losing partnerships with major donors. The organization was not able to attract new funding sources and new proposals were not developed.

Furthermore, there is no clear fundraising system or procedure: this is not well organized and a proper partner management strategy is lacking. FSCE has not yet developed a resource mobilization guideline or manual (RMG/M) to clarify approaches adopted at different levels

Score: from 3.6 to 3.1 (slight deterioration)

Capability to adapt and self-renew

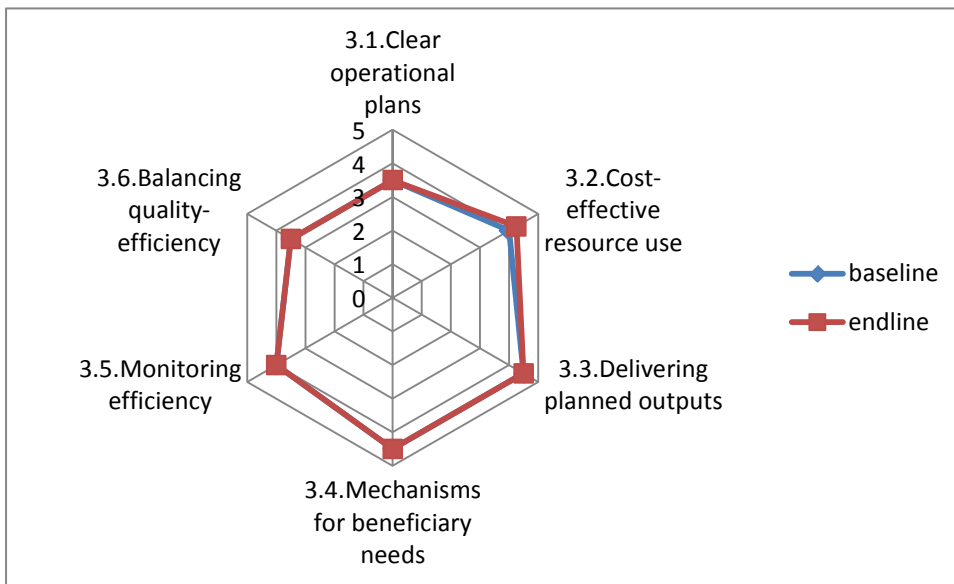

FSCE has well developed M&E guidelines and participatory M&E systems to ensure regular monitoring and evaluation. There is improvement in outcome oriented reporting and now Area Program Offices (APOs) are undertaking both program and project level monitoring by developing the necessary checklists, and started to document the findings. According to some staff the documentation system is gradually deteriorating, which is affecting the learning part and there is no data base M&E system. However, FSCE has established an M&E task force very recently since the hiring of the new Executive Director. There is improvement in implementing outcome measurement and frequent supervision and regular feedback processes are in place. After the change in leadership very recently in 2014, FSCE has established a data base to be used by management and program staffs for their day to day decision making purposes. The data base is now electronically installed and configured with the Wide Area Network (WAN) system in the organization to support the M&E systems. However, according to some staffs, there are issues that need attention, e.g. on the linkages between the head office and project level, where M&E is not applied for decision making purposes and the existing M&E is not systematized and consistent.

Since the change in leadership (March 2014) there is a slight improvement in critical reflection where regular meetings on weekly and monthly basis are in place and as a result ideas and information are shared smoothly among each other. Before this, this was weaker due to poor management. The frequency of meetings for the development of new ideas and an improvement in cooperation and collaboration among program and finance staffs have also been observed at present compared to the previous leadership. FSCE works in partnership with different likeminded organizations and stakeholders in its operational areas and this helps in scanning the environment. Key stakeholders are engaged in the community based multi-stakeholders child protection structures and a number of child protection issues are addressed in a holistic manner.

Score: 3.8 to 3.8 (no change)

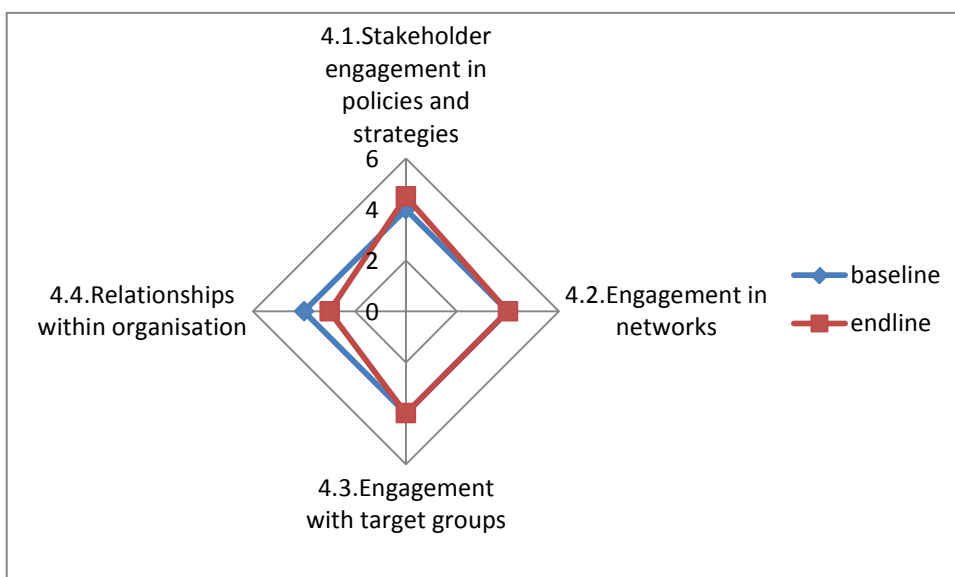

Capability to deliver on development objectives

As indicated in the baseline period, FSCE has a clear operational plan broken down on a quarterly basis; complementary project/ program interventions are found to be cost effective and the organization still has a comprehensive budget and budgetary control system. Besides, the organization still carries out its operational plans with minimum deviations from what has been planned and follows a multi-stakeholder approach to address beneficiaries' needs. Projects are designed with the logical framework based on donor requirements. In the last two years a better performance has been observed in utilization of budgets in terms of planned versus accomplished activities, and the organization has started to collect and follow outcome level information and reporting systems. FSCE doesn't have clear program quality guidelines or indicators. It rather uses different program management guidelines as an input for balancing program quality and efficiency

Score: from 4 to 4 (no change)

Capability to relate

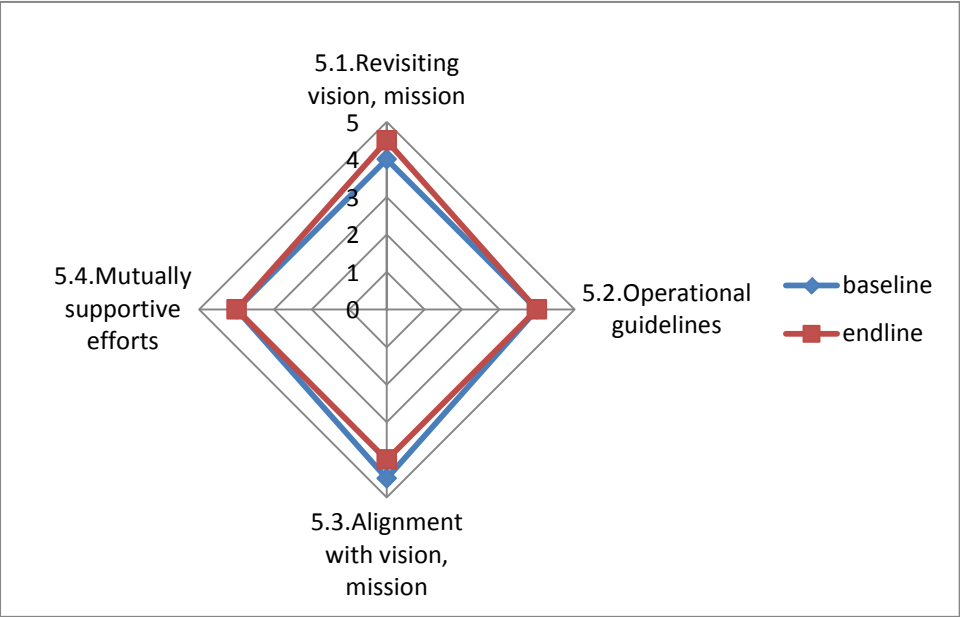

FSCE continues to use the existing stakeholder management guidelines that help to involve various stakeholders at different levels, not only in making policies and strategies but also in implementation.

The organization has also used MSCPS to engage different stakeholders in policies and strategies as well as program implementation. FSCE has a good track record and reputation that enables it to spearhead strong networking with other NGOs on issues of child labour and other child related activities and has also good relationship with government and donors. However, some staffs noted that FSCE has not engaged in new networks since the baseline period but rather maintained the existing networks. FSCE has maintained its good performance in engaging target groups. Relationships within the organization have deteriorated due to the change process and leadership problems at different levels. However, after the change in leadership in March 2014, regular staff meetings have created information sharing and better communication among staffs at head office level but this has not yet reached the Area Program Offices (APOs).

Score: from 4 to 3.9 (very minor deterioration)

Capability to achieve coherence

FSCE has revised its strategic plan in 2012. Hence, the Mission and Vision statements were revised also, and the core programs were reviewed. Moreover, an organizational development process was undertaken and improvements in the organizational structure, program and finance management, communication and human resource strategies have been observed. The organization has clear gaps in orienting staffs about the strategic plan and learn from each other. FSCE has revised its organizational structure, developed Human Resource Policy and Procedure, conducted Organizational Development (OD) assessment, revised its strategic plan, and changed leadership after the baseline. Review of the existing operational manuals and development of new guideline/directions is also in progress after the change in leadership in March 2014. FSCE has generally all the necessary operational guidelines which help the organization for technical administration and HRM operations. The organization has also been using a Planning, Budgeting, monitoring and evaluation manual. FSCE uses Peachtree Accounting software for recording and reporting its accounts. However, the organization lacks orientation and introduction of policies, working manuals, etc. to new staff. Though projects and associated operations are still in line with the vision and mission of the organization, realignment with the newly changed organizational strategy and program categorization is required. Cascading of changes and approaches of programs to area program offices is not yet done. Efforts are made to ensure complementarity of the child protection projects by giving attention to prevention, promotion, rehabilitation and integration. The organization uses shared offices, facilities and other resources and services and are mutually supportive according to some staffs.

Score: from 4.1 to 4.1 (no change)

4.2.2 Key organisational capacity changes - general causal map -

Below you can find a description of the key changes in organizational capacity of FSCE since the baseline as expressed by FSCE staff during the endline workshop. First, a description is given of how this topic was introduced during the endline workshop by summarising key information on FSCE from the baseline report. This information included a brief description of the vision, mission and strategies of the organisation, staff situation, clients and partner organisations. This then led into a discussion on how FSCE has changed since the baseline.

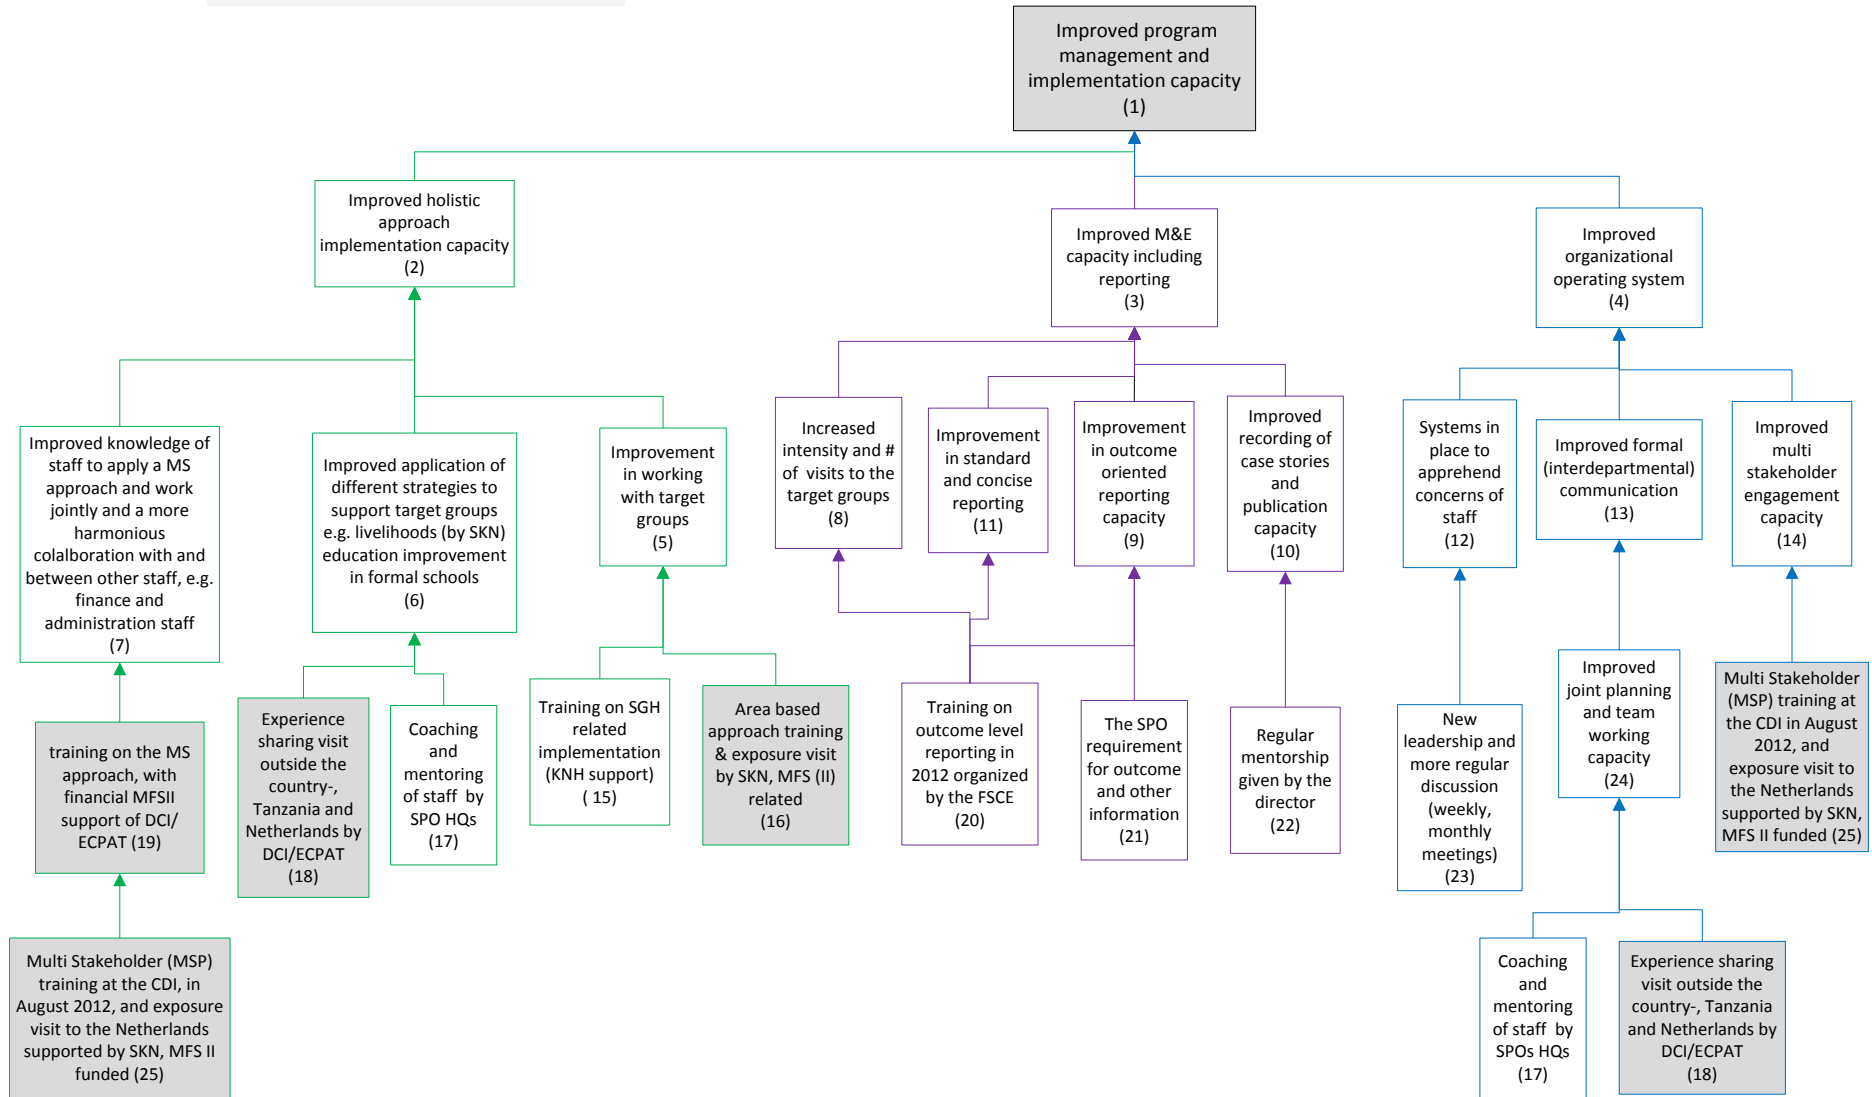

The endline workshop was conducted on 13 May, 2014 at FSCE HQ in Addis Ababa. FSCE staffs of five categories participated, namely: management staff, program staff, M&E staff, field staff and admin and finance staff. From the 15 participating staff 7 staff also participated during the baseline.

The main organisational capacity change identified during the endline workshop was improvement in program management implementation capacity (1). This means the organization has improved its program implementation capacity, not only to plan versus achievement but also to address the issue of impact. FSCE is now in a positive change process. According to staff present at the endline workshop, the following changes have led to the improvement in program management implementation capacity (1):

1. Improved implementation capacity in holistic approach (2)
2. Improved M&E capacity including reporting (3)
3. Improved organizational system of operations (4)

Each of these three key organizational capacity changes is further explained below. The numbers correspond to the numbers in the visual.

FSCE key organisational capacity changes

Improved implementation capacity in holistic approach (2)

This improved capacity to implement in holistic approach (2) was caused by the following factors:

Improvement in staff skills to carry out their duties holistically using a multi-stakeholder approach and more effectively and jointly in collaboration with other units e.g. with finance and administration staff (7). Staff acquired these skills to implement child related interventions holistically using a multi-stakeholder approach as a result training on the MS approach, with financial MFSII support of DCI/ECPAT (19). This training was given by one FSCE staff who participated in the Multi Stakeholder Processes (MSP) training at the CDI in September 2012, and exposure visit to the Netherlands supported by SKN, MFS II funded (25).

Another cause was the improved application of different strategies to support target groups e.g. in livelihood improvement as a result of support by Terre-des-Homes, DCI/ECPAT and SKN, MFSII funded, and education improvement in formal schools (6). The MFSII financial support by Terre-des-Homes, DCI/ECPAT and SKN gave FSCE the opportunity to further exercise their skills in implementing livelihood related activities, as well as the experience sharing visits to Tanzania and the Netherlands with DCI/ECPAT (18). Also coaching and mentoring of staff by FSCE HQs (17) helped to improve the capacity to apply different strategies to support target groups (6).

A third reason was the improvement in working with target groups (5) which was due to the training on SHG related implementation (with financial support of KNH) (15) and the area based approach training & exposure visit to the Netherlands supported by SKN (16) .

Improved M&E capacity including reporting (3)

This was partly due to the increased intensity and number of visits to the target groups (8) and improvement in standardised and concise reporting (11). These were both triggered by the training on outcome level reporting in 2012 organized by FSCE (20). Another cause was the improved outcome oriented reporting capacity (9) due to the training on outcome level reporting in 2012 organized by the SPO (20) and the requirement of FSCE for outcome level information (21). Improved recording of case stories and publication capacity (10) observed as a result of regular mentorship given by the (new) HO leadership (22) was also a cause of the improved M&E capacity including reporting capacity (3).

Improved organizational system of operations (4)

The operational system has improved (4) because there are systems in place now to apprehend the concerns of staff (12). This is due to the new leadership and more regular discussions among staffs (weekly, monthly meetings) (23). Also improved formal (interdepartmental) communication (13) contributed to the improved operational system (4). This improved formal communication was due to the improved joint planning and team working capacity (24) of the organization as a result of the coaching and mentorship of staff by the SPO HQ (17) and experience sharing visit outside the country (18). A third reason was the enhanced partnerships with government and non-government stakeholders at local and international level (improved in multi stakeholder engagement capacity) (14) as a result of the Multi Stakeholder Processes (MSP) training at the CDI, September 2012, by MFS II and exposure visit to the Netherlands supported by SKN (25).

4.3 Attributing changes in organisational capacity development - evaluation question 2 and 4

Note: for each country about 50% of the SPOs has been chosen to be involved in process tracing, which is the main approach chosen to address evaluation question 2. For more information please also see chapter 3 on methodological approach. For each of these SPOs the focus has been on the capability to act and commit

and the capability to adapt and self-renew, since these were the most commonly addressed capabilities when planning MFS II supported capacity development interventions for the SPO.

For each of the MFS II supported capacity development interventions -under these two capabilities- an 'outcome area' has been identified, describing a particular change in terms of organisational capacity of the SPO since the baseline. Process tracing has been carried out for each outcome area. The following outcome areas have been identified under the capability to act and commit and the capability to adapt and self-renew. Also the MFS II capacity development interventions that could possibly be linked to these outcome areas are described in the table below.

Table 2

Information on selected capabilities, outcome areas and MFS II supported capacity development interventions since the baseline

Capability	Outcome area	MFS II supported capacity development intervention
To adapt and self-renew	Improved M&E capacity using RBM approach	Training on M&E with focus on reporting on outcome level, May 2014; RBM refresher and M&E training, June 2012; (Close follow-up and supervision by MFS II partners)
To act and commit	Improved capacity to apply a Community Centred Multi Stakeholder (CCMS) approach	Multi Stakeholder Processes(MSP) training CDI, September 2012; Life skill and facilitation training for community and social workers with stakeholders in 2013; Leadership training for community and social workers with APOs management and stakeholders in 2013; Conflict management training for community and social workers with stakeholders in 2013; Workshop/ training on Community Conversation Group in 2013, MFSII (< - Annual MFSII partners meeting, Oct. 2013); Guidance and counselling for child based community conversation for community and social workers with stakeholders in 2012

The next sections will describe the results of process tracing for each of the outcome areas. This includes describing the identified key organisational capacity changes, what these changes are expected to lead to and what are the underlying reasons for these organisational capacity changes.

4.3.1 Improved M&E capacity using RBM approach

Monitoring and Evaluation (M&E) capacity for using the Results Based Management (RBM) approach, has improved since the baseline in 2012 [1]. The RBM approach is important because of the emphasis on results in this approach versus activity based PME. The RBM approach was already applied in 2012 as evidenced by the tools and formats developed by FSCE in 2010 [15] (*source: endline workshop*) to help collect RBM related data. As a result the area program offices (APOs) started to develop data collection tools on identified indicators that helped them to collect data on the activities they were implementing and also increased the number of APOs to use outcome based reporting. Furthermore, they started to develop baselines and periodically following the changes. (*Source: endline workshop*)

According to the 5C results of the Participatory Capacity Assessment Tool (PCAT) of the Child and Development Alliance carried out in July 2013, FSCE has an M&E plan that is used effectively; the

assessment also indicates that monitoring data on output and outcome level are regularly collected and that projects are evaluated at a regular basis (*source: 2013 PCAT 5C's FSCE Scores (05.07.13); 2013 FSCE - Assessment Results-Feedback sheet (05.07.13)*).

Although the process of RBM monitoring has started before the baseline in 2012, M&E capacity using the RBM approach did improve since the baseline in 2012 as a result of:

4. Improved M&E tools and formats (21)
 1. Enhanced knowledge and skills in identifying and reporting on outcomes (3)
 2. PME unit separate entity with clear authority/ responsibility since 2013-14 (5)
- (*Source: endline workshop*). Each of these changes is further described below.

Each of these changes is further described below.

Improved tools and formats for reporting on outcomes (21).

Tools and formats have been put in place and updated even before the baseline and this has assisted in improved M&E for RBM:

- **MFS II Result Based Reporting formats and follow-up of the MFS-II implementers [10]:** these were developed to help to get data according to MFS II requirements ((*sources: endline workshop; CFA support to capacity sheet B; Result Based Report Format 2012*)).
- **FSCE RBM tools and checklist updated in 2012 (11):** Though there were monitoring tools and checklists before 2012 these were geared towards collection of outputs, and donors demanded reporting also on the basis of outcomes (14). Starting in 2012, FSCE developed checklist indicators related to outcomes. Checklists and tools that were originally prepared in 2010 [15] by FSCE were updated to comply with the MFS II requirements for RBM reporting formats [10] (*sources: endline workshop; CFA support to capacity sheet B*).

Improved knowledge and skills on identifying and reporting on outcomes (3)

This was the second reason for improved M&E for RBM. According to FSCE staff during the endline workshop, what has changed since the baseline is that there is a larger number of staff now that have the knowledge and skills on outcome based reporting, that they have become more systematic and now know how to write reports, whilst before the baseline, most of the reporting coming from lower level staff was done orally (*source: endline workshop*). Outcome oriented reports of the area program offices are manifestations of this change (*source: management self-assessment sheet F*). The CFA mentions the improved quality of progress reports, in particular in terms of reporting on outcome results [2] (*source: CFA support to capacity sheet B; CFA self-assessment sheet A*).

Improved knowledge and skills on identifying and reporting on outcomes includes better understanding about how to fill in their result indicator forms of the MFS II C&D Alliance, improved knowledge and skills on data collection, compilation and analysis, and knowledge and skills on identifying outcomes. At the endline workshop FSCE staff mentioned that before 2012, the data collection was not systematic. However, since 2012 the staffs have clear knowledge on the sources of data, from where they have to collect data, and how and why they collect. For example, before 2012 they did not have the knowledge on how to collect data from minutes or records. Mostly, social workers used to collect data from community workers and triangulate this with community officers through client interviews. Now social workers are involved in most of the interventions and pick up information while participating in the intervention. They consider this as one source of data collection (*source: endline workshop*). According to M&E staff FSCE recently (2014) organized a team to filter/review the communication process from the source to the end (data collection, collation, analysis, reporting, sharing and documentation) and come up with a workable guideline to improve this

process plus directives and working manuals for proposal development, appraisal and financial follow up with schedule for deadlines (*source: H_5c endline self-assessment sheet M&E staff*).

These improved knowledge and skills in identifying and reporting on outcomes are the result of:

- MFS II training (6);
- training, coaching, supervision by HQ staff (8);
- biannual meetings (9)
- close follow-up and supervision by MFS II partners (16).

Each of these areas is further explained below.

MFS II training (6) included:

- **M&E training organized by MFS-II partners (17)**: this was a one day training that focused on base line data, indicators, reporting on outcome level and reporting quality (*sources: endline workshop; CFA support to capacity sheet B; ANNUAL MFS-II PARTNERS' MEETING 2014 CD Alliance Ethiopia; CFA self-assessment sheet A*). This training took place at the annual **MFS II Partners Meeting in May 2014 (20)** (*source: CFA support to capacity sheet B; ANNUAL MFS-II PARTNERS' MEETING 2014 CD Alliance Ethiopia*).
- **RBM refresher training organized by MFS II partners in 2012 (18)**: this was a training on planning, monitoring, data collection and compilation (18) (*sources: endline workshop; CFA support to capacity sheet B; Results Based Management report*). This training data covered: collection and tools; develop a system for data compilation and analysis, reporting and communication; the sequence/ hierarchy of reporting, for making decisions and communicating them to different stakeholders; and using a participatory approach to establish clear roles and responsibilities for data collection, analysis and reporting (*sources: endline workshop; CFA support to capacity sheet B; Results Based Management report; schedule of the RBM refreshment training June 2012*).

Bi-annual review meetings that identify gaps and action points [9] were another reason for FSCE staff to improve their knowledge and skills in identifying and reporting on outcomes (*sources: endline workshop; management self-assessment sheet F*). The MFS II reporting formats are used for the bi-annual outcome based monitoring (12) (*source: endline workshop*) that is carried out by the HQs staff in the field. This monitoring is based on a checklist that observes the capacity on reporting, including differentiating between immediate and intermediate outcomes (*source: endline workshop*). These and the checklist based appraisals are further discussed in the bi-annual meeting where gaps and action points are identified (9) (*sources: endline workshop; management self-assessment sheet F*). This helps FSCE staff in further understanding how to identify and report on outcomes.

Training, coaching and supervision by HQs staff [8] is another reason for assisting FSCE staff to improve their knowledge and skills to identify and report on outcomes. Training, coaching and mentoring activities are undertaken by program coordinators of FSCE head office. Checklist based appraisal of key skills are used to identify areas of improvement on outcome based report writing skills (*sources: endline workshop; management self-assessment sheet F*). There is close follow up and supervision by HQs staff to ensure the application of the above mentioned reporting formats [10] and tools and checklists [11] (*source: endline workshop*).

The close follow up and supervision of MFS-II partners (16) was the fourth reason for improved knowledge and skills to identify and report on outcomes, according to staff members present at the endline workshop, which is confirmed by the CFA (*sources: endline workshop; CFA self-assessment sheet A*).

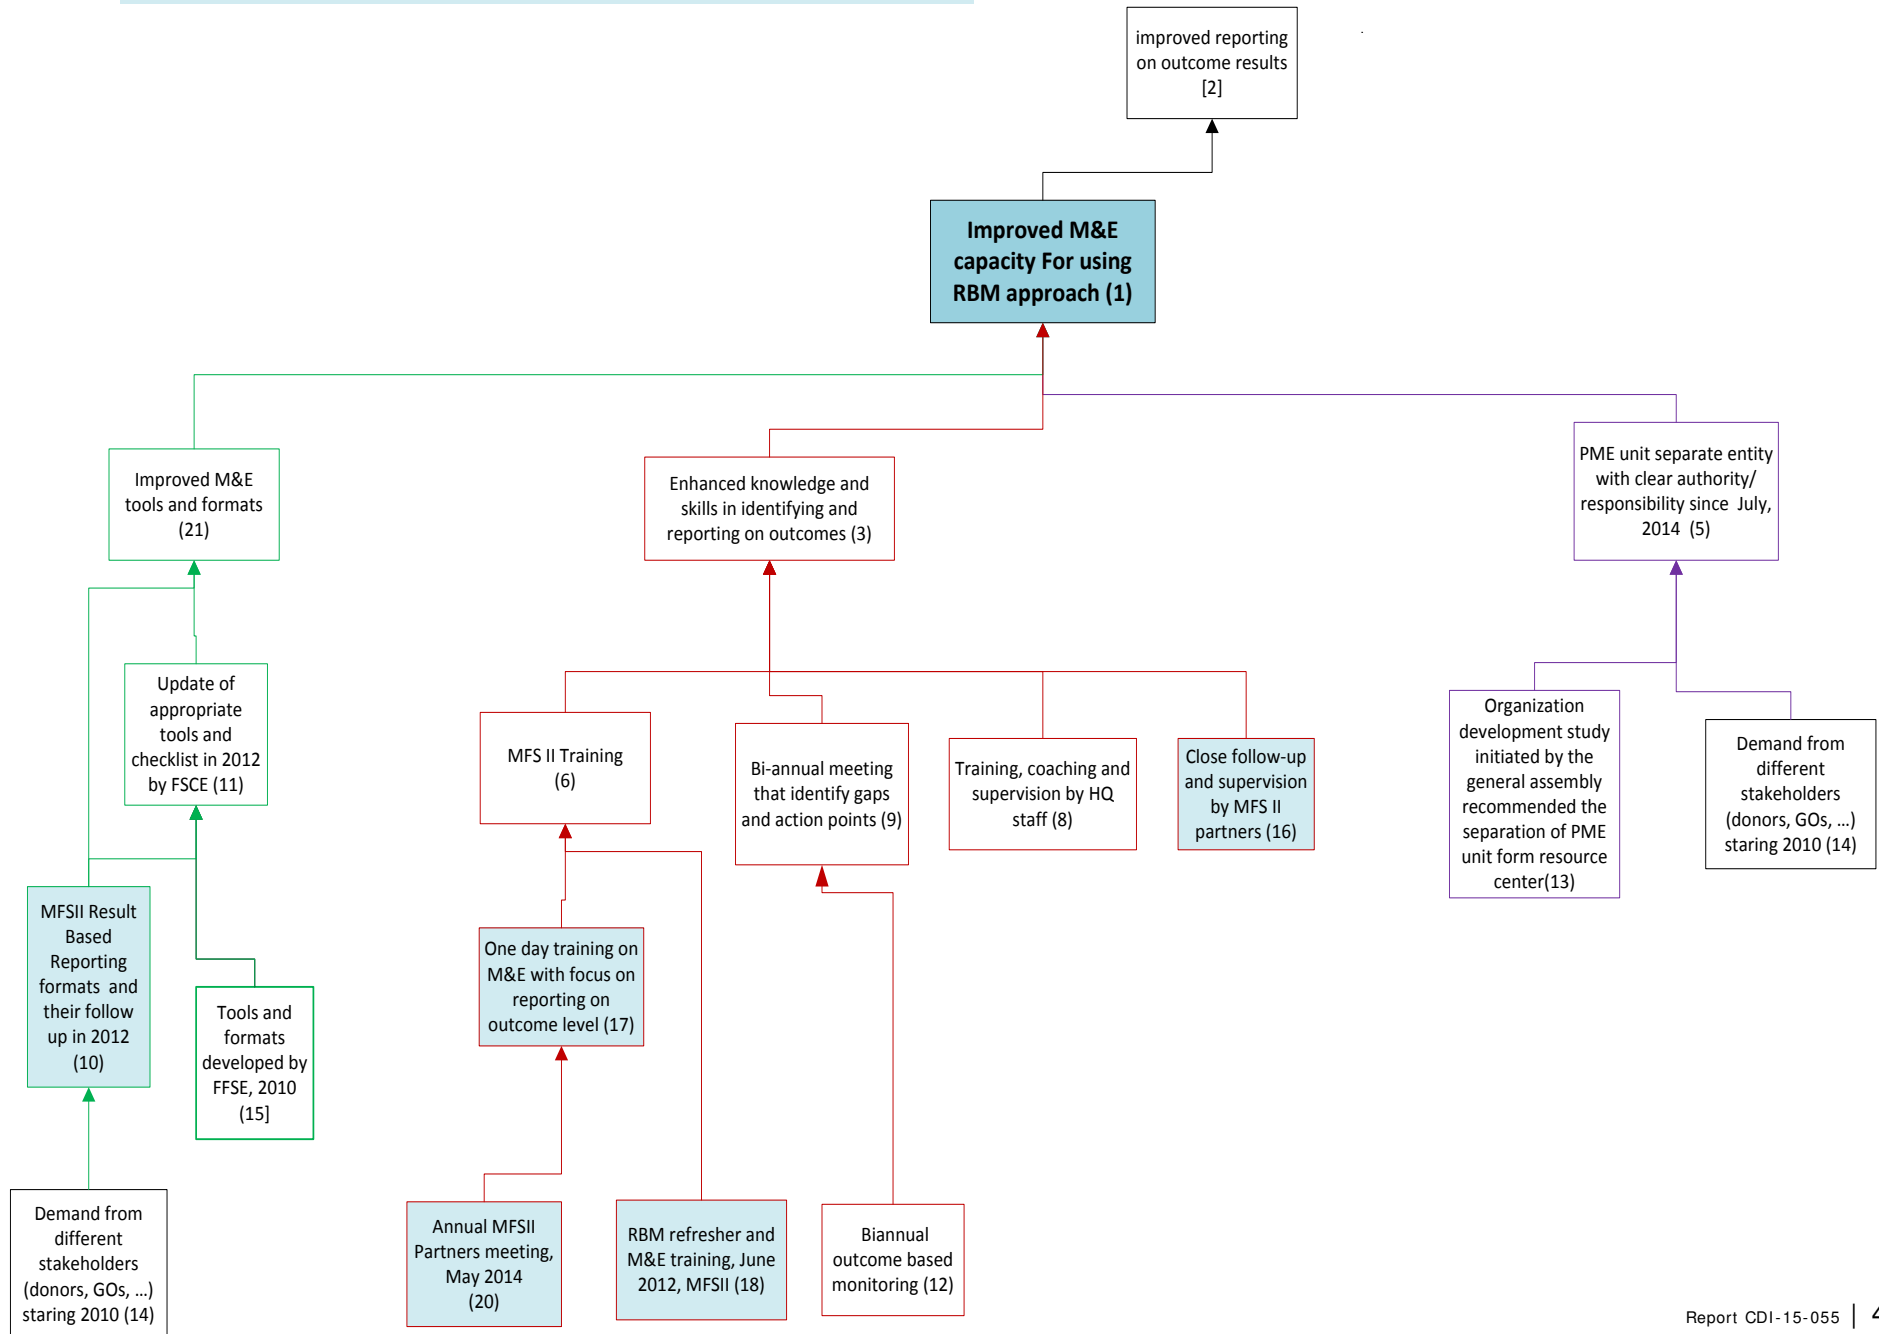

PME unit separate entity with clear authority/ responsibility since July 1, 2014 (5)

The third reason for improved M&E for RBM is that, since July 1, 2014 (5) the PME unit is a separate entity with clear authority and responsibility (5). Before being organized as a separate entity, M&E was with the child resource development unit. In July 1, 2014 (5) it was organized as separate unit. This helped to give more emphasis and time for M&E. The unit has two staff at HQ level. However, at APO level it doesn't have this structure: it is handled by the APO staff (source: endline workshop).

The establishment the separate PME unit happened as a result of:

- **The organization development study carried out in 2013 [13]**, which was initiated by the general assembly. The study recommended the separation of the PME unit from the resource centre. The study was financed by SAVE the Children (source: *endline workshop*). Also the CFA mentions that in May 2013 FSCE initiated an organizational development (OD) study as a response to internal problems, which affected a good functioning of the organization both at Head Quarters level as with regards to the relation between Head Quarter and Regional offices. Apart from organisational restructuring as a result of the OD study the Director of FSCE resigned in February 2014. In March 2014 a new Director was appointed who is now implementing the recommendations of the OD study. One of the first tasks of the new Director was to start a reorganization process based on the findings and recommendations of the OD Study. Objective of the reorganization is to improve the internal functioning of the organization and to ensure quality program development, implementation and reporting. In June the new director presented an action plan, which is now in the process of being implemented. Things appear to be better now but changes till so far are only at head office (FSCE has 3 regional & 2 city area program offices) (source: *CFA self-assessment sheet A*).
- **Demand by donors (14)**: Donors mentioned the need for a separate PME unit when they gave feedback about the improvement of the data collection and reporting system (source: *endline workshop*).

FSCE PT - improved PME capacity using RBM approach

4.3.2 Improved capacity to apply a Community Centred Multi Stakeholder (CCMS) Approach

During the endline process, key organisational capacity changes have been identified in the following capabilities: capability to act and commit; capability to adapt and self-renew. These two capabilities have been chosen for the purpose of process tracing since these are the two capabilities that have most frequently been targeted by the CFAs. The organisational capacity changes that have been identified are based on a potential link with MFS II supported capacity development activities in these two capabilities, and on a variety of sources (secondary data as well as endline workshop data). The process tracing methodology has been adapted to the purpose of this evaluation and to investigate closely the underlying causes for these identified organisational capacity changes, and the extent to which these changes can be attributed to MFS II supported organisational capacity strengthening activities.

The evaluation team carried out an endline assessment at FSCE from 16 to 17 October 2014. During this workshop, the team made a recap of key features of the organisation in the baseline in 2012 (such as vision, mission, strategies, clients, partnerships). This was the basis for discussing changes that had happened to the organisation since the baseline.

Both FSCE endline workshop participants as well as the Dutch CFA (Kinderpostzegels) Programme Officer considered the FSCE staff to have improved their capacity to apply a Community Centred Multi Stakeholder (CCMS) approach [1] since the baseline in 2012. This means the ability to coordinate and work with other partner organizations and stakeholders working on child protection through a holistic approach. In fact, FSCE staff has improved the CC MS approach that they already applied prior to the MFS II intervention, and they have decided to improve upon their own multi stakeholder approach (3) (*sources: endline workshop; CFA support to capacity sheet B*).

Due to this improved capacity (1), the FSCE (CC MS) approach is adapted to local context, and applied at a larger scale in FSCE projects (6) (*sources: endline workshop; CFA support to capacity sheet B*). Furthermore, it is leading to increased engagement and ownership of local stakeholders (18) and improved community based monitoring (19) (*sources: endline workshop; CFA support to capacity sheet B; Evaluation Report Adama project FSCE Oct 2013; Results Based Management (CD 1) report; The Annual MFS II Partners Meeting convened from October 3- Revised Edition (20.12.12)*).

The improved capacity to apply a community centred multi stakeholder approach has resulted from the following two changes:

3. Improved knowledge and skills about multi stakeholder processes (MSPs) (5)
4. Improved knowledge and skills about creating, strengthening and engagement of CBOs for child protection (12)

These two key areas are further explained below. The numbers correspond to the numbers in the visual.

Improved knowledge and skills about MSPs (5)

One of the reasons for the improved capacity to apply a Community Centred Multi Stakeholder (CC MS) Approach (1) is improved knowledge and skills about multi stakeholder processes (MSPs) (5). This is the result of a long process of developing and improving on this approach. Previous to the MFS II intervention, FSCE had already developed its own Community Centred Multi Stakeholder (CC MS) approach (3) (*sources: endline workshop; CFA support to capacity sheet B*), as a result of the decision taken to change its strategy from one issue projects to a more holistic strategy, i.e. a community based and location specific approach (9)) (*sources: endline workshop; CFA support to capacity sheet B*), after an internal Strategic Planning Workshop in 2011 (10). A reason for this planning workshop was the training on Multi-stakeholders programs in 2010 (24), given by Kinderpostzegels Netherlands (KPN) at the start of the Child labor free zone (CLFZ) program, which also introduced the 13 child protection indicators developed by UNICEF to FSCE (25) (*source: endline workshop*) . The rationale for this was to improve the

situation of children in difficult circumstances or at risk by involving all relevant actors in finding and creating a solution for the identified problems and in view of this to develop a Community Based Multi Stakeholder approach and apply this in all projects, adapted to local context (3). For that reason FSCE specifically asked if one staff member (Addis Tekle) could participate at the Multi Stakeholder Processes (MSP) training at the CDI, MFS II funded, in September 2012 (2) (*sources: endline workshop; CFA support to capacity sheet B; CFA assessment sheet A; 5c endline self-assessment sheet program coordinator*). Knowledge and skills of other MFSII staff was then improved [5] as a result of an internal staff training workshop shared with all (project) staff of both HQ and Area Offices of FSCE at the end of 2012 (4), (*sources: endline workshop; CFA support to capacity sheet B; Feedback letter from Kinderpostzegels to FSCE ref findings field visit to Adama*) At this workshop Addis Tekle shared his lessons learned from the Multi Stakeholder Processes (MSP) training at the CDI, MFS II funded, September 2012 (2). The existing approach was reinforced and is now applied at a larger scale in other FSCE programmes as well (6) (*sources: endline workshop; CFA support to capacity sheet B; FSCE Adama project 2013 Evaluation report*).

Improved knowledge and skills about the creation, strengthening and engagement of CBOs for child protection (12)

Another reason for the improved capacity to apply a Community Centred Multi Stakeholder (CC MS) Approach (1) is the improved knowledge and skills in creating, strengthening and engaging Community Based Organizations (CBOs) like Centre Management Committees (CMC), Parents Teachers Associations (PTA), Youth Clubs, Girls Clubs, anti-HTPs Clubs, Child Wellbeing Advisory Committees and Child Development Promotion Forums (12). In the Adama CLFZ (Child Labour free Zone) project FSCE plays a lead role in convening key players such as the education office, the MSCPs, CMCs/PTAs, school leaders, facilitators/teachers and child representatives together to discuss on issues, take decisions, establish follow-up and accountability mechanisms to monitor progress as well as muster the necessary resources to address the issues (*sources: The Annual MFS II Partners Meeting was convened from October 3- Revised Edition (20.12.12); FSCE Adama project 2013 Evaluation report*). Its strong community based and location specific interventions like the Multi Stakeholder Child Protection Structures (MSCPS) (17)) is mentioned as the most innovative approach of the Adama CLFZ project (*Source: FSCE Adama project 2013 Evaluation report*). This model is a context-based adaptation of the Indian MV Foundation learned from an exposure visit (16) organized by Kinderpostzegels in 2011. In 2009 this Indian NGO visited Ethiopia and in 2011 FSCE staff visited India (16). This was not financed with MFS II but with PSO funds. The area based CLFZ approach of the Indian SPO matched very well with the FSCE community based MS approach of leading children from labour to school and to make local government responsible. Now FSCE is a leading example of applying the CLFZ approach in Africa. In 2013 they were visited by West African NGOs for this (*source: CFA assessment sheet A*). FSCE creatively adapted the approach to the local context and facilitated and influenced the creation of the MSCPS (17) (*sources: endline workshop; FSCE Adama project 2013 Evaluation report; 5c endline self-assessment sheet programme staff; 5c endline self-assessment sheet M&E staff; Annual Report 2013 FSCE Adama CLFZ project 2013*) which is composed of existing CBOs and government institutions which have stakes in the protection and education of children. The experience of FSCE with the MS approach, the reputation that FSCE had built in its previous project involvements and the positive impacts that it made (9) has also contributed to the adaptation of the CLFZ approach and the smooth start-up, pilot and effective undertaking of the CLFZ (MFS II funded) project (*sources: endline workshop; FSCE Adama project 2013 Evaluation report*).

These MS Child Protection Structures (MSCPS) (17) are the cornerstone of the FSCE approach in addressing child's rights and protection issues. FSCE does not directly involve in advocacy due to the restrictions of the CSO legislation. However, the Organization has strongly influenced government and CBOs by creating MSCPS and strengthening and existing sub-structures of key stakeholders. The aim of the MSCPS's is to create a protective environment for children from various abuses and availing survival, developmental and rehabilitation needs of child labourers as well as those who are at risk. Any child right related issues are referred to the multi-stakeholder structure which could take up matters of child wellbeing. Children participate in (education) activities and in some committees (13) (*Source: FSCE Adama project 2013 Evaluation report*).

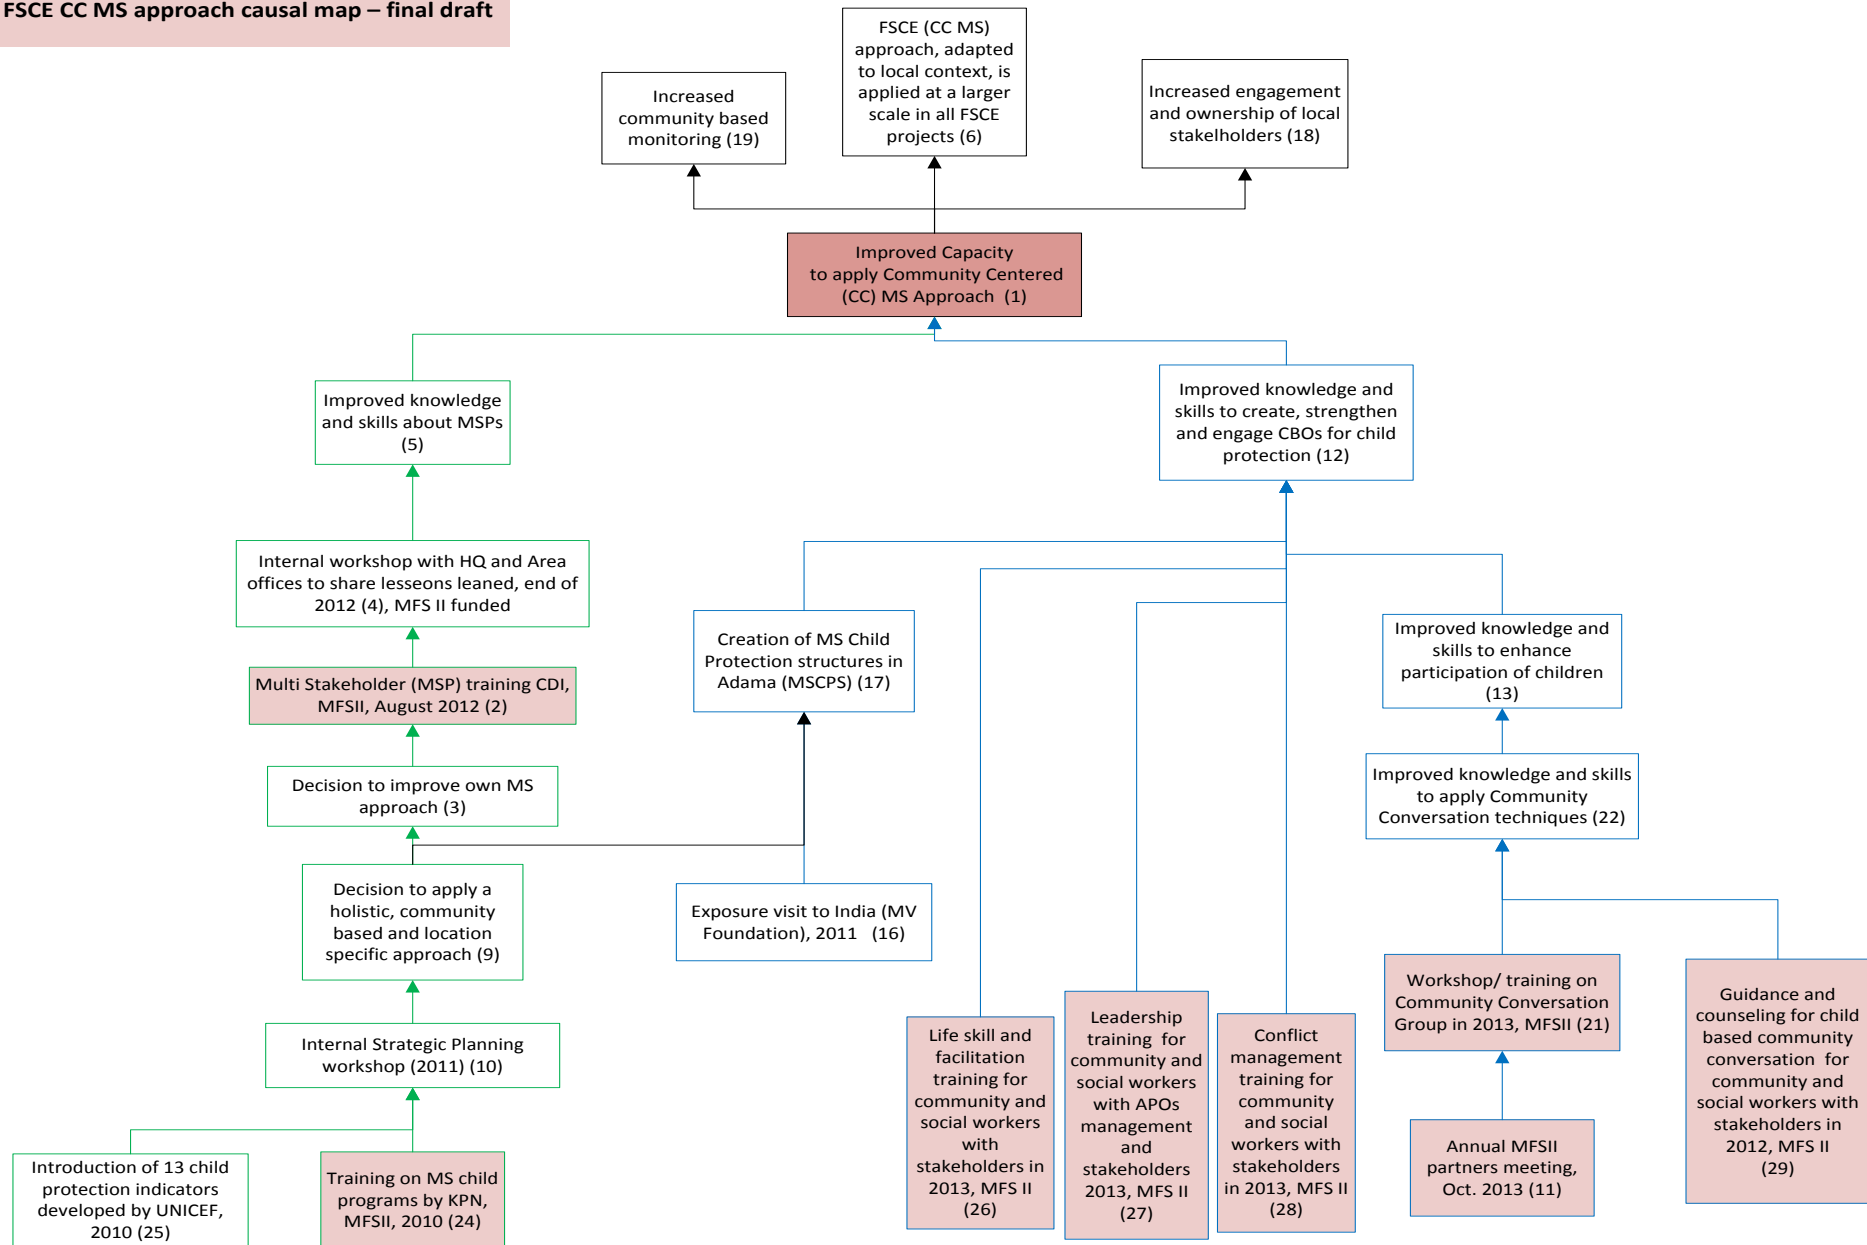

The MSCPS and the various committees under its coordination have become effective instruments for FSCE to engage CBOs, the community, and local government sector agencies in the operation and ownership of the project (18). There is also evidence for significant key stakeholder participation in monitoring (19).
(Source: *FSCE Adama project 2013 Evaluation report*)

The improvement in knowledge and skill to create, strengthen and engage CBOs (12) was also enhanced through leadership training given for community, social workers and area office staff with APO management and stakeholders in 2013 financed by MFS II (27) (source: *endline workshop*), life skill and facilitation training given for community and social workers with stakeholders in 2013, with the support of MFS II financial support (26) (source: *endline workshop*) and conflict management training for community and social holders with stakeholders in 2013 with financial support of MFS II (28).

Another reason for the improved knowledge and skills to create, strengthen and engage CBOs for child protection (12) is the improved knowledge and skills to enhance participation of children (13). Presently, children are participating in classrooms, teaching aid preparations, club activities and are also represented in some committees. Mechanisms for child participation are in place although they need strengthening and expansion (Source: *FSCE Adama project 2013 Evaluation report*).

This knowledge was enhanced through enhanced knowledge and skills to apply Community Conversation techniques [22] (sources: *endline workshop; CD Alliance Final Reserach Report Awareness Raising - Berhanu Berke- September 2013; Field Monitoring Visit Report Amakelew FSCE- April 2012; FSCE Adama CLFZ 2012 Annual Narrative Report*). This knowledge and skills to apply Community Conversation techniques [22] was improved by MFS II funded training in Community Conversation Groups (21) asked for during the Annual MFS II Partners meeting in October 2013 (11) (source: *Final Report Annual MFS II Partners Meeting 2013*). Before this partners meeting (11) there was MFS II financed guidance and counselling for child based community conversation for community and social workers with stakeholders in 2012 (29) (sources: *endline workshop; Annual Report 2013 FSCE Adama CLFZ project 2013; FSCE Adama CLFZ 2012 Annual Narrative Report*).

FSCE CC MS approach causal map – final draft

5 Discussion and conclusion

5.1 Methodological issues

In preparation for the assessment, the Ethiopian 5C assessment team visited FSCE staff in the organization's HQs in Addis Ababa and explained the purpose and the process of the 5C endline assessment. During the visit the team agreed on the workshop dates including the type and number of staff who will attend the workshop. In addition, the team also gave the "support to capacity development sheet" to be filled by FSCE staff.

The Ethiopian 5C assessment team conducted the assessment in four visits. First visit, to conduct the self-assessment workshop with a total of fifteen staff members and ask the staff to fill the self-assessment form in their respective five subgroups (management (2); program (3); M&E (1); HRM and administration (4) and field staff (5)). This was followed by a second visit to carry out a brainstorming session and develop a general causal map that explains the key organisational capacity changes that have happened in FSCE since the baseline 2012. The third visit was made to conduct an interview with one representative from each subgroup to triangulate the information collected through the self-assessment and to better understand the organisational capacity changes in FSCE since the baseline 2012. This was done after the 5C assessment team reviewed the completed self-assessment forms. Finally, the fourth visit was made to carry out the process-tracing workshop. In the process tracing workshop three organisational capacity change areas that were identified based on the review of the various documents received from the SPO and CFA including the result of the self-assessment workshop were presented to the workshop participants. First they were asked if they also agree with the team's assessment in terms of these key organisational capacity changes to focus on during process tracing. These were organisation capacity changes within the capability to act and commit and the capability to adapt and self-renew and could possibly be linked to MFS II capacity development interventions. During this process tracing workshop, the HQs staff decided to focus the discussion on the 'Improved capacity to apply Community Centred MS Approach' detailed causal map, on the Adama area office because most of the activities related to this change area are carried out in Adama and they also thought the Adama staff to be better placed for this. Therefore, this workshop focusing on this detailed causal map took place in Adama, and one program staff and seven field staff participated in this workshop.

The process tracing exercise helped to get the information for description of organisational capacity changes, and the attribution of these changes in FSCE to specific factors and (MFS II and non-MFS II funded) interventions.

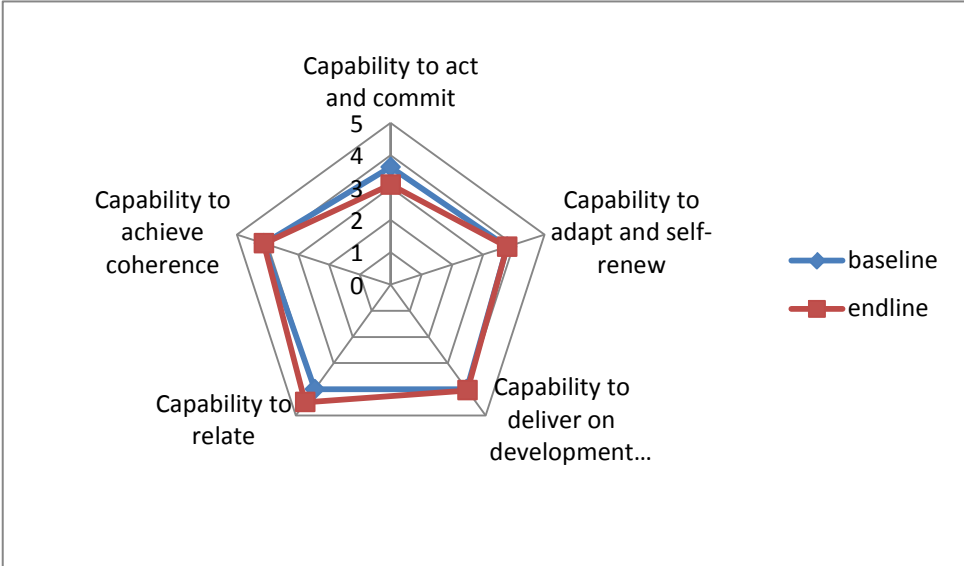

The plan of the evaluation team to also conduct two interviews with FSCE partners didn't materialize because the interview overlapped with other activities the assessment team was supposed to carry out with the SPO. No OD consultant has been interviewed. Due to the new CSO regulation, most of the SPOs are not involving consultants frequently because it puts a burden to their administrative cost (the agency categorizes consultancy as overhead). If consultants are hired at all, then is it mainly technical but not OD consultants.

By and large, there has been a lot of information available to be able to do adequate data analysis.

5.2 Changes in organisational capacity development

This section aims to provide an answer to the first and fourth evaluation questions:

1. *What are the changes in partner organisations' capacity during the 2012-2014 period?*
4. *What factors explain the findings drawn from the questions above?*

Below the changes in each of the five core capabilities are further explained, by referring to the specific indicators that changed. In all of these capabilities changes (improvements or deteriorations) took place.

Over the last two years deteriorations took place in most of the indicators under the capability to act and commit. In May 2013 an organisational development (OD) study was initiated, that was completed in Dec 2013. This study concluded that to improve internal functioning a new director was required. This new director started in March 2014, only two months prior to the endline workshop. Many staffs are still frustrated and funding is still low due to this period of internal problems. Funding is said to have declined because of many different reasons, one being the internal problems, but others include restrictive NGO legislation and donors wanting to work in coalitions. As the positive changes of installing a new director are very recent, many staffs still feel that there was some delay in implementing the OD study's recommendations. The strategic plan has been revised but is not yet guiding FSCE's daily operations. Due to the lower annual budget, staff turnover increased. Some staff resigned due to low salaries and staff performance valuation is not well managed. Compared to similar organisations, the benefit package at FSCE is poor and training opportunities for staff have decreased since the baseline. Little training has been given since 2012 because there has been less emphasis on getting funding for trainings and the 30/70 rule, in which trainings fall under the 30% of the budget that can be spent on administrative costs, has not helped in this respect. Skilled staff has left the organisation so that, although staff that remained has gained some skills due to experience and self-organised trainings, overall there is a slight deterioration in staff skills. New staff that has been hired does have clear roles and responsibilities that fit in the organisational structure of FSCE.

In the capability to adapt and self-renew FSCE saw some deteriorations and improvements. Staff have improved their M&E competencies especially due to an M&E training during the Annual C&D Alliance MFS II partner meeting in May 2014. There is a team of experts that works on M&E and support the area program offices. More emphasis is now given to reporting on outcome indicators. With the new leadership, organisational management is now making use of M&E findings at organisational and program level to make timely decisions. While some improvements have been made in terms of creating moments for critical reflection, the general feeling among staff is that because of the internal problems and reorganisation process that followed not enough attention has been given to this. The same holds for staff's freedom to share ideas: there are some very recent positive developments but the internal communication problems under the previous management worsened the situation since the baseline.

In terms of the capability to deliver on development objectives, FSCE shows very slight improvement in its cost-effectiveness. In this regards, the organisation is developing guidelines on project proposal development, project appraisal, realignment of activities and budgets in the annual action plan, and is undertaking financial activities with deadlines and reviewing the M&E system and M&E application.

In the capability to relate, FSCE has shown on most indicators slight improvements in engaging its stakeholders in policies and strategies. The organisation is now using Multi Stakeholder Child Protection Structures (MSCPS) to engage different stakeholders in the program process. The relations within the organisation have, however, deteriorated compared to the baseline situation. Due to change processes and leadership problems, at different levels relations between staff are not free and open. While some positive developments are taking place at the head office (with the new director) this has not yet reached the Area Program offices.

Finally, FSCE has improved and deteriorated in indicators under the capability to achieve coherence. After the OD assessment in 2013 and the change in leadership in 2014, the mission and vision statement of FSCE were revised and significant improvements were made in organisational structure, communication, program, finance and HR strategies. There was however, a slight deterioration in programs being aligned to the vision and mission, and while projects are still aligned, realignment to the new organisational level strategies and program categorisations is required.

During the endline workshop some key organisational capacity changes were brought up by FSCE's staff: improved implementation capacity in holistic approach; improved M&E capacity including reporting; and improved organizational system of operations. The evaluators considered it important to also note down the SPO's story about what they considered to be key changes in the organisation since the baseline, and this would also provide more information about reasons for change, which were difficult to get for the individual indicators. Also for some issues there may not have been relevant indicators available in the list of core indicators provided by the evaluation team.

According to FSCE staff present at the endline workshop, the capacity to implement an holistic approach improved because of improved knowledge of staff to apply a Multi Stakeholder (MS) approach and work jointly, and a more harmonious collaboration with and between staff from different departments; improved application of different strategies to support target groups; and improvement in working with target groups. FSCE's knowledge on MS improved because of a MFS II funded training on Multi-Stakeholder Processes (MSP) in September 2012, at CDI in the Netherlands, and in which one FSCE staff member participated. FSCE improved its application of different strategies to support target groups because of an experience sharing visit to Tanzania and the Netherlands (MFS II funded) and coaching and mentoring of staff by FSCE Head Quarters (HQ). The organisation improved the way it works with target groups because of a training on SHG related implementation (KNH funded) and a training on the area based approach and exposure visit to the Netherlands (MFS II funded). Secondly, FSCE improved its M&E capacity (including reporting) because of increased intensity and frequency of visits to the target groups, and improvements in standard and concise reporting, which were both triggered by a training on outcome level reporting in 2012, organised by FSCE. M&E capacity also improved because of an improvement in outcome oriented reporting capacity due to the same training and the requirement of FSCE for outcome level information. Improved recording of case stories and publication capacity also contributed to improved M&E capacity. This was the result of regular mentorship given by the new director. Finally according to FSCE staff, they improved their organisational system of operations because there are now systems in place to apprehend the concerns of staff (due to new leadership and regular discussions); there is improved formal (interdepartmental) communication (due to improved joint planning and team work capacity); and improved multi stakeholder engagement capacity (because of the MSP training at CDI, MFS II funded). FSCE improved its joint planning and team working capacity as a result of coaching and mentoring of staff by HQ and the experience sharing visit to the Netherlands and Tanzania (MFS II funded). All in all, there is some mention of MFS II funded capacity development interventions in all the key organisational capacity changes that FSCE staff identified. During process tracing these and more MFS II funded interventions (in particular training and experience sharing visits) have clearly come up. However, internal factors like the change in leadership, training, coaching and mentoring, have also played an important role in the key organisational capacity changes that the FSCE

staff considered important since the baseline in 2012. Some support from other funders in terms of training, has also been mentioned as one of the underlying factors to these changes. For more details, we therefore refer to 5.3, where the role of MFS II funded capacity development interventions in organisational capacity changes of FSCE will be further explained.

5.3 Attributing changes in organisational capacity development to MFS II

This section aims to provide an answer to the second and fourth evaluation questions:

1. *To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?*
2. *What factors explain the findings drawn from the questions above?*

To address the question of attribution it was agreed that for all the countries in the 5C study, the focus would be on the capability to act and commit and the capability to adapt and self-renew, with a focus on MFS II supported organisational capacity development interventions that were possibly related to these capabilities. 'Process tracing' was used to get more detailed information about the changes in these capabilities that were possibly related to the specific MFS II capacity development interventions. The organisational capacity changes that were focused on were:

- Improved capacity to apply a Community Centred Multi Stakeholder (CCMS) approach; and
- Improved M&E capacity using a Results Based Management (RBM) approach.

The first organisational capacity change falls under the capability to act and commit. The last one (M&E) falls under the capability to adapt and self-renew. The organisational capacity change areas that were chosen are based on document review as well as discussions with the SPO and CFA. Each of these organisational capacity changes is further discussed below.

The following issues are discussed for the MFS II funded activities that are related to the above mentioned organisational capacity changes:

- a. Design: the extent to which the MFS II supported capacity development intervention was well-designed. (Key criteria: relevance to the SPO; SMART objectives)
- b. Implementation: the extent to which the MFS II supported capacity development was implemented as designed (key criteria: design, according to plans during the baseline);
- c. Reaching objectives: the extent to which the MFS II capacity development intervention reached all its objectives (key criteria: immediate and long-term objectives, as formulated during the baseline);
- d. the extent to which the observed results are attributable to the identified MFS II supported capacity development intervention (reference made to detailed causal map, based on 'process tracing').

Please note that whilst (d) addresses the evaluation question related to attribution (evaluation question 2), the other three issues (a, b and c) have been added by the synthesis team as additional reporting requirements. This was done when fieldwork for the endline process had already started or was already done.

Improved capacity to apply a Community Centred Multi Stakeholder (CCMS) approach; and
The following MFS II supported capacity development interventions for FSCE that took place since the baseline in 2012, were linked to the key organisational capacity change "Improved capacity to apply a Community Centred Multi Stakeholder (CCMS) approach":

-
1. Multi Stakeholder (MSP) training CDI, August 2012 (2)
 2. Life skill and facilitation training for community and social workers with stakeholders in 2013 (26)
 3. Leadership training for community and social workers with APOs management and stakeholders in 2013 (27)
 4. Conflict management training for community and social workers with stakeholders in 2013 (28)
 5. Guidance and counselling for child based community conversation for community and social workers with stakeholders in 2012 (29)

The numbers between brackets correspond to the numbers in the visual (causal map, see below this section).

The above mentioned MFS II funded capacity development interventions are included here as well as in the causal maps and narratives because the effects of these interventions were observed during the endline and they came up during document review, workshop, interviews and self-assessments.

1. Multi Stakeholder (MSP) training CDI, August 2012 (2)

Design

This capacity development intervention was planned during the baseline. Details about the specific design are not relevant because this was not an intervention developed by the CFA, and wasn't the focus of the evaluation. During the baseline, the immediate objective was formulated as "Staff has improved understanding of how to facilitate Multi-Stakeholder approach and how to improve the social learning activities in the Community Based Multi-Stakeholder projects of FSCE". The long term expectation was formulated as "Improvement of the community based multi-stakeholder strategy that FSCE already is implementing". Also, during the endline survey it was mentioned that the long term expectation was to have better impact results due to a more holistic approach of the complex problems some children (the target group of FSCE) are confronted with.

This kind of knowledge or training was not mentioned as important in the Theory of Change (ToC) developed during the MFS II 5C baseline survey, but this ToC was very much geared towards organisational and project management topics, not to subject related topics. However, the participation of one staff member at this training was at the request of FSCE itself, which indicates that it was considered relevant for the organisation. This request was the result of an earlier taken decision in the organisation to change its strategy from one issue projects to a more holistic strategy, i.e. a community based and location specific approach.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). But, the evaluation team did not ask the CFA for SMART objectives specifically during the baseline, but rather asked about the expected or observed immediate and long term effects of the interventions.

Implementation

This capacity development intervention took place at the Centre of Development Innovation (CDI), Wageningen University and Research centre in the Netherlands. One staff member participated at this 3-week training course from 3-21 September 2012. At the end of 2012 an internal workshop for HQ and area based staff was organised to pass on the lessons learnt. Also two other Community & Development Alliance (C&DA) partners, that also practice the Child Labour Free Zones (CLFZ) approach, were invited to participate. As far as the evaluation team knows, this was implemented as designed, i.e. that one staff member would participate and that he would pass on what he had learnt to other staff members.

Reaching objectives

Previous to the participation of one staff member of FSCE in the Multi Stakeholder Processes (MSP) training, FSCE had developed its own Multi Stakeholder Processes approach. This was combined with the lessons learned from the MSP Training of CDI Wageningen and at the end of 2012 during an internal staff training workshop shared with all (project) staff of both HQ and Area Offices of FSCE. Since then all projects of FSCE follow more or less the Multi Stakeholder Processes approach. The short term objective seems to be achieved. It is difficult to assess to what extent the long term objective has been achieved,

since this objective was not defined as a SMART objective (also not the purpose of this evaluation), although it can be said that the organisation has adapted its MSP approach since the end of 2012

1. *Life skills and facilitation training for community and social workers with stakeholders in 2013 (26)*
2. *Leadership training for community and social workers with APOs management and stakeholders in 2013 (27)*
3. *Conflict management training for community and social workers with stakeholders in 2013 (28)*

Design

These interventions were not mentioned as planned for during the baseline survey, but they were mentioned during the endline as MFS II interventions that took place in 2013. Details about the specific design are not known, but that wasn't the focus of this evaluation. Also, these trainings were not only meant for staff but also for community, social workers and other stakeholders. The intention of these trainings was to improve knowledge and skills to create, strengthen and engage CBOs.

This kind of knowledge was not mentioned as important in the Theory of Change (ToC) developed during the MFS II 5C baseline survey, but this ToC was very much geared towards managerial and support service topics, not to subject related topics. But the fact that they were specifically mentioned at the endline workshop indicates that they have been important for improving staff competences.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives since this wasn't the purpose of this 5C evaluation.

Implementation

These interventions were conducted in 2013 for FSCE area office and APO management staff but also for community, social workers and other stakeholders. As far as the evaluation team knows, they were implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Not having objectives that were defined as SMART objectives makes it difficult to assess this issue, but these trainings were mentioned as having contributed to improved knowledge and skills to create, strengthen and engage CBOs.

5. *Guidance and counselling for child based community conversation for community and social workers with stakeholders in 2012 (29)*

This MFSII capacity development intervention was not mentioned as planned for during the baseline survey. So no details about design or objectives are known. However, it was mentioned during the endline workshop as having been important for staffs' improved knowledge and skills to apply Community Conversation techniques and enhance the participation of children. This technique plays an important role in creating, strengthening and engaging CBOs for child protection. Since no further details are known, this cannot be further analysed.

Attribution of observed results to MFS II capacity development interventions

The improved capacity to apply a Community Centred Multi Stakeholder (CCMS) approach was due to:

1. Improved knowledge and skills to apply multi stakeholder processes (MSPs) (5)
2. Improved knowledge and skills about creating, strengthening and engagement of CBOs for child protection (12)

(see 4.3.1)

The improved knowledge and skills to apply multi stakeholder processes can partly be attributed, and the improved knowledge and skills about creating, strengthening and engagement of CBOs for child protection (12) can to a large extent be attributed to MFSII supported capacity development interventions:

-
1. The improved knowledge and skills to apply Multi Stakeholder Processes (MSP's) (5) can be attributed to the improvement and streamlining of FSCE's own Community Centred Multi Stakeholder (CC MS) approach by means of MFSII funded capacity development interventions: previous to the MFS II supported capacity development intervention, FSCE had already developed its own Community Centred Multi Stakeholder (CC MS) approach, as a result of the decision taken to change its strategy from one issue projects to a more holistic strategy, i.e. a community based and location specific approach, after an internal Strategic Planning Workshop in 2011. One of the reasons for this planning workshop was the training on Multi-stakeholder programs in 2010, given by Kinderpostzegels Netherlands (KPN) at the start of the Child labor free zone (CLFZ) program, which also introduced the 13 child protection indicators developed by UNICEF to FSCE. The rationale for this was to improve the situation of children in difficult circumstances or at risk by involving all relevant actors in finding and creating a solution for the identified problems, adapted to local context. For that same reason FSCE specifically asked if, with MFS II funding, one staff member could participate at the Multi Stakeholder Processes (MSP) training at the Centre for Development Innovation (CDI), Wageningen University and Research centre in the Netherlands, in September 2012. This staff member passed on his knowledge and lessons learnt to other FSCE staff. As a result the existing approach was reinforced and is now applied at a larger scale in other FSCE programmes as well.
 2. Improved knowledge and skills about creating, strengthening and engagement of CBOs for child protection can be attributed to a large extent to MFS II supported capacity development interventions like the leadership training; life skills and facilitation training and conflict management training for FSCE area office field and management staff, and community, social workers and other stakeholders; and guidance and counselling for child based community conversation for community and social workers with stakeholders in 2012. To some extent it can also be attributed to the experience in creating MS Child Protection structures in Adama (MSCPS) already present in the organisation.

On the whole, the changes that took place since the baseline in 2012 in terms of improved capacity of FSCE to apply a Community Centred Multi Stakeholder Approach can be largely attributed to MFS II supported capacity development interventions, notably the MSP training at the CDI in the Netherlands; life skills, facilitation leadership and conflict management training for FSCE area office staff, and community, social workers and other stakeholders; and guidance and counselling for applying a child based community conversation approach. However, it must be noted that these approaches were already initiated in the organisation before the baseline with the support of Kinderpostzegels since 2010. The additional trainings that took place since 2012 helped to strengthen the MSP approach as well as to increase the capacity of FSCE to create, strengthen and engage CBOs for child protection.

Improved M&E capacity using a Results Based Management (RBM) approach

The following MFS II capacity development interventions supported by Kinderpostzegels Netherlands (KPN)/ C&D Alliance were linked to the key organisational capacity change “Improved M&E capacity using a Results Based Management (RBM) approach”:

1. MFSII Results Based Reporting formats in 2012 and the follow up on these (10)
2. Training on M&E with focus on reporting on outcome level, May 2014 (17)
3. RBM refresher and M&E training, June 2012 (18)
4. Close follow-up and supervision by MFS II partners (16)

(see also 4.3.1)

The numbers between brackets correspond to the numbers in the visual (causal map, see below this section).

The above mentioned MFS II funded capacity development interventions are included here as well as in the causal maps and narratives because the effects of these interventions were observed during the endline and they came up during document review, workshop, interviews and self-assessments.

1. MFSII Results Based Reporting formats in 2012 and the follow up on these (10)

This is not a capacity development intervention as such, but it was mentioned at the endline workshop as having contributed to developing and improving M&E tools and formats, focused on results: FSCE checklists and tools that were prepared in 2010, but were output oriented, were updated to comply with the MFS II requirements for RBM reporting formats. There was a close follow up and supervision by HQs staff to ensure the application of these reporting formats. Since there are no specific objectives formulated for this intervention, it cannot be further assessed.

2. Training on M&E with focus on reporting on outcome level, May 2014 (17)

Design

This was a one day training, as part of the annual MFS II Partners Meeting in May 2014. The annual (C&D Alliance) partner meetings are planned for. During these Annual MFS II Partner Meetings partners share information, exchange experiences, work towards synergy of actions and plan joint activities. However, it was specified that capacity development interventions in 2014 and beyond still, like this M&E/outcome training, still needed to be specified at the time of the baseline. Details about the design cannot be provided, but this wasn't the focus of the evaluation. However, during the endline survey it was indicated that the objective of giving this one day training was to strengthen the capacities of the MFSII partners of the C&D Alliance, including FSCE, to report on output and outcome results. In the longer term this was expected to contribute to improvement of actions and strategies.

In general M&E training was mentioned as important at the capacity development ToC, as described in the baseline report, but reporting at outcome level was not mentioned in particular. However, being mentioned at the endline workshop indicates that it had relevance to FSCE.

The expected effects were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound). Then again, the evaluation team did not ask the CFA for SMART objectives specifically since this was in the objective of this 5C study.

Implementation

This one day training was given at the annual (Ethiopian C&D Alliance) partner meetings in May 2014. Three FSCE staff participated at this workshop. Topics dealt with are: baselines and base line data; indicators; data collection in M&E (methods and techniques); data quality and data flow charts; reporting on outcome level and reporting quality. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

Since the objectives were not formulated in a SMART way, it is difficult to assess whether the objectives have been reached. However, related to the objective stated above, it can be said that staff knowledge and skills have been enhanced in terms of identifying and reporting on outcomes, as indicated in the PME causal map. Thereby, this objective has at least been partly met.

3. RBM refresher and M&E training, June 2012 (18)

Design

This intervention was planned during the baseline. Details about the specific design cannot be provided, since this wasn't the focus of the evaluation. However, the following immediate objective was indicated in the baseline report: "Staff has improved understanding of how to monitor and evaluate the results (at output and outcome level) of projects formulated according to the RBM-approach". The long-term objective was stated as "FSCE will be better equipped to monitor the results of the projects that are formulated according to the RBM approach". During the endline survey the immediate objective of this training was formulated as "to strengthen the capacities of FSCE in the field of Result Based Management, both with regards to project planning, as to reporting on output and outcome results" and the long term objective as "a better understanding of the importance and advantages of result based management of projects (compared to activity based)".

In general M&E training was mentioned as important at the capacity development ToC in the baseline, but RBM not in particular. However, being mentioned at the endline workshop indicates that also RBM had relevance to FSCE.

The objectives were not formulated in a SMART way (specific, measurable, achievable, relevant and time-bound), but the evaluation team did not ask the CFA for SMART objectives specifically during the baseline.

Implementation

Two FSCE staffs participated at the workshop that was conducted in June 2012. The training workshop addressed topics like recap on Planning terminology and indicators; concepts and purposes of M&E; data collection and tools; developing a system for data compilation, analysis, reporting and communication; the sequence/ hierarchy of reporting, for making decisions and communicating them to different stakeholders; and using a participatory approach to establish clear roles and responsibilities for data collection, analysis and reporting. As far as the evaluation team knows, it was implemented as designed, however, details about the specific design cannot be provided, since this wasn't the focus of the evaluation.

Reaching objectives

An immediate effect observed by the CFA was a better understanding of how to fill in the (output and outcome) results indicator forms of the MFSII Programme of the C&D Alliance. Staff mentioned that it enhanced their knowledge and skills in identifying and reporting on outcomes. It seems that the short term objective was more or less reached, particularly in terms of knowledge and skills for identifying and reporting on outcomes, but to what extent the long term objectives have been achieved cannot be assessed, not having SMART formulated objectives. Then again, this wasn't the objective of this 5C evaluation.

4. Close follow-up and supervision by MFS II partners (16)

This intervention is mentioned in the baseline survey as a bi-annual monitoring visit of the Program Officer or of the local advisor of Kinderpostzegels in Ethiopia. During these monitoring visits the progress of the project implementation and the project strategy are discussed as well as the institutional development of the organization, both at the level of the head office in Addis Ababa and at the level of FSCE's field office in Adama (project site). During these monitoring visits also technical assistance is given in the form of recommendations and advice. According to staff members present at the endline workshop this follow-up and supervision was mentioned at the endline workshop as having contributed to improved knowledge and skills to identify and report on outcomes, which was confirmed by the CFA. Since there are no specific objectives formulated for this intervention, it cannot be further assessed.

Attribution of observed results to MFS II capacity development interventions

The "Improved M&E capacity using a Results Based Management (RBM) approach" of FSCE staff was due to:

1. Improved M&E tools and formats (21)
2. Enhanced knowledge and skills in identifying and reporting on outcomes (3)
3. PME unit separate entity with clear authority/ responsibility since July 2014 (5)

The first two capacities can partly be attributed to MFSII supported capacity development interventions; the third one cannot be attributed to MFSII supported capacity development interventions:

1. The improved M&E tools and formats can on the one hand be attributed to updated tools and formats by FSCE itself, and on the other hand to the provision of MFS II Results Based Reporting formats in 2012 and the follow up on these. These formats were developed to help to get outcome oriented data according to MFS II requirements.
2. The enhanced knowledge and skills in identifying and reporting on outcomes can also be partly attributed to MFS II supported capacity development interventions, i.e. MFS II training interventions like the outcome oriented M&E training organised during the annual C&D Alliance partner meeting in May 2014 and the RBM refresher and M&E training in June 2012; and also close follow-up and supervision by MFS II partners on sharing experiences and outcome oriented planning and reporting. On the other hand these enhanced knowledge and skills can be attributed to training, coaching, supervision of FSCE HQ staff; and the biannual review meetings that identify gaps and action points, all non-MFS II related, internal affairs. However, the MFS II reporting formats are used for this bi-annual outcome based monitoring, which is carried out by HQs staff in the field. This monitoring is based on a checklist that observes the capacity on reporting, including differentiating between immediate and intermediate outcomes. These checklist based appraisals are further discussed in the bi-annual meeting where gaps and action points are identified.
3. The creation of a PME unit as a separate entity with clear authority and responsibilities cannot be attributed to MFS II capacity development interventions: this was the result of an organisational change process as a result of an organisational development study and donor demands in general. Before being organized as a separate entity, M&E was with the child resource development unit. In July 2014 it was organized as separate unit. This helped to give more emphasis and time for M&E. The unit has two staff at HQ level. However, at APO level it doesn't have this structure with a separate M&E unit. Donor demands have further influenced the decision to have a separate PME unit.

On the whole, improved M&E capacity for using RBM approach, can be partly attributed to MFS II capacity development interventions, such as providing formats for outcome reporting, M&E training with a focus on outcome reporting, and close follow-up by MFS II partners. However, there is also an important role for the organisation in developing its own M&E tools and formats, biannual monitoring meetings and establishing a separate PME unit.

13	Dereje Girmachew	PME & CRDC Coordinator
14	Mekonnen Seyoum	Finance resource Manager
15	Zemzem Jemal	Program Coordinator

Appendix 1 Methodological approach & reflection

1. Introduction

This appendix describes the methodological design and challenges for the assessment of capacity development of Southern Partner Organisations (SPOs), also called the '5C study'. This 5C study is organised around four key evaluation questions:

1. What are the changes in partner organisations' capacity during the 2012-2014 period?
2. To what degree are the changes identified in partner capacity attributable to development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?
3. Were the efforts of the MFS II consortia efficient?
4. What factors explain the findings drawn from the questions above?

It has been agreed that the question (3) around efficiency cannot be addressed for this 5C study. The methodological approach for the other three questions is described below. At the end, a methodological reflection is provided.

In terms of the attribution question (2), 'process tracing' is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. This approach was presented and agreed-upon during the synthesis workshop on 17-18 June 2013 by the 5C teams for the eight countries of the MFS II evaluation. A more detailed description of the approach was presented during the synthesis workshop in February 2014. The synthesis team, NWO-WOTRO, the country project leaders and the MFS II organisations present at the workshop have accepted this approach. It was agreed that this approach can only be used for a selected number of SPOs since it is a very intensive and costly methodology. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process.

Please find below an explanation of how the above-mentioned evaluation questions have been addressed in the 5C evaluation.

Note: the methodological approach is applied to 4 countries that the Centre for Development Innovation, Wageningen University and Research centre is involved in in terms of the 5C study (Ethiopia, India, Indonesia, Liberia). The overall approach has been agreed with all the 8 countries selected for this MFS II evaluation. The 5C country teams have been trained and coached on this methodological approach during the evaluation process. Details specific to the SPO are described in chapter 5.1 of the SPO report. At the end of this appendix a brief methodological reflection is provided.

2. Changes in partner organisation's capacity – evaluation question 1

This section describes the data collection and analysis methodology for answering the first evaluation question: **What are the changes in partner organisations' capacity during the 2012-2014 period?**

This question was mainly addressed by reviewing changes in 5c indicators, but additionally a 'general causal map' based on the SPO perspective on key organisational capacity changes since the baseline

has been developed. Each of these is further explained below. The development of the general causal map is integrated in the steps for the endline workshop, as mentioned below.

During the baseline in 2012 information has been collected on each of the 33 agreed upon indicators for organisational capacity. For each of the five capabilities of the 5C framework indicators have been developed as can be seen in Appendix 2. During this 5C baseline, a summary description has been provided for each of these indicators, based on document review and the information provided by staff, the Co-financing Agency (CFA) and other external stakeholders. Also a summary description has been provided for each capability. The results of these can be read in the baseline reports.

The description of indicators for the baseline in 2012 served as the basis for comparison during the endline in 2014. In practice this meant that largely the same categories of respondents (preferably the same respondents as during the baseline) were requested to review the descriptions per indicator and indicate whether and how the endline situation (2014) is different from the described situation in 2012.² Per indicator they could indicate whether there was an improvement or deterioration or no change and also describe these changes. Furthermore, per indicator the interviewee could indicate what interventions, actors and other factors explain this change compared to the baseline situation. See below the specific questions that are asked for each of the indicators. Per category of interviewees there is a different list of indicators to be looked at. For example, staff members were presented with a list of all the indicators, whilst external people, for example partners, are presented with a select number of indicators, relevant to the stakeholder.

The information on the indicators was collected in different ways:

- 1) **Endline workshop at the SPO - self-assessment and 'general causal map'**: similar to data collection during the baseline, different categories of staff (as much as possible the same people as during the baseline) were brought together in a workshop and requested to respond, in their staff category, to the list of questions for each of the indicators (self-assessment sheet). Prior to carrying out the self-assessments, a brainstorming sessions was facilitated to develop a 'general causal map', based on the key organisational capacity changes since the baseline as perceived by SPO staff. Whilst this general causal map is not validated with additional information, it provides a sequential narrative, based on organisational capacity changes as perceived by SPO staff;
- 2) **Interviews with staff members**: additional to the endline workshop, interviews were held with SPO staff, either to provide more in-depth information on the information provided on the self-assessment formats during the workshop, or as a separate interview for staff members that were not present during the endline workshop;
- 3) **Interviews with externals**: different formats were developed for different types of external respondents, especially the co-financing agency (CFA), but also partner agencies, and organisational development consultants where possible. These externals were interviewed, either face-to-face or by phone/Skype. The interview sheets were sent to the respondents and if they wanted, these could be filled in digitally and followed up on during the interview;
- 4) **Document review**: similar to the baseline in 2012, relevant documents were reviewed so as to get information on each indicator. Documents to be reviewed included progress reports, evaluation reports, training reports, etc. (see below) since the baseline in 2012, so as to identify changes in each of the indicators;
- 5) **Observation**: similar to what was done in 2012, also in 2014 the evaluation team had a list with observable indicators which were to be used for observation during the visit to the SPO.

² The same categories were used as during the baseline (except beneficiaries, other funders): staff categories including management, programme staff, project staff, monitoring and evaluation staff, field staff, administration staff; stakeholder categories including co-financing agency (CFA), consultants, partners.

Below the key steps to assess changes in indicators are described.

Key steps to assess changes in indicators are described

1. Provide the description of indicators in the relevant formats – CDI team
2. Review the descriptions per indicator – in-country team & CDI team
3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)
4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team
5. Organise the field visit to the SPO – in-country team
6. Interview the CFA – CDI team
7. Run the endline workshop with the SPO – in-country team
8. Interview SPO staff – in-country team
9. Fill-in observation sheets – in-country team
10. Interview externals – in-country team
11. Upload and auto-code all the formats collected by in-country team and CDI team in NVivo – CDI team
12. Provide to the overview of information per 5c indicator to in-country team – CDI team
13. Analyse data and develop a draft description of the findings per indicator and for the general questions – in-country team
14. Analyse data and develop a final description of the findings per indicator and per capability and for the general questions – CDI team
15. Analyse the information in the general causal map –in-country team and CDI-team

Note: the CDI team include the Dutch 5c country coordinator as well as the overall 5c coordinator for the four countries (Ethiopia, India, Indonesia, Liberia). The 5c country report is based on the separate SPO reports.

Below each of these steps is further explained.

*Step 1. Provide the **description of indicators** in the relevant formats – CDI team*

- These formats were to be used when collecting data from SPO staff, CFA, partners, and consultants. For each of these respondents different formats have been developed, based on the list of 5C indicators, similar to the procedure that was used during the baseline assessment. The CDI team needed to add the 2012 baseline description of each indicator. The idea was that each respondent would be requested to review each description per indicator, and indicate whether the current situation is different from the baseline situation, how this situation has changed, and what the reasons for the changes in indicators are. At the end of each format, a more general question is added that addresses how the organisation has changed its capacity since the baseline, and what possible reasons for change exist. Please see below the questions asked for each indicator as well as the more general questions at the end of the list of indicators.

General questions about key changes in the capacity of the SPO

What do you consider to be the key changes in terms of how the organisation/ SPO has developed its capacity since the baseline (2012)?

What do you consider to be the main explanatory reasons (interventions, actors or factors) for these changes?

List of questions to be asked for each of the 5C indicators (The entry point is the the description of each indicator as in the 2012 baseline report):

1. *How has the situation of this indicator changed compared to the situation during the baseline in 2012? Please tick one of the following scores:*
 - -2 = Considerable deterioration
 - -1 = A slight deterioration
 - 0 = No change occurred, the situation is the same as in 2012
 - +1 = Slight improvement
 - +2 = Considerable improvement
2. *Please describe what exactly has changed since the baseline in 2012*
3. *What interventions, actors and other factors explain this change compared to the baseline situation in 2012? Please tick and describe what interventions, actors or factors influenced this indicator, and how. You can tick and describe more than one choice.*
 - Intervention, actor or factor at the level of or by **SPO**:
 - Intervention, actor or factor at the level of or by the **Dutch CFA (MFS II funding)**:
 - Intervention, actor or factor at the level of or by the **other funders**:
 - **Other** interventions, actors or factors:
 - Don't know.

Step 2. Review the descriptions per indicator – in-country team & CDI team

Before the in-country team and the CDI team started collecting data in the field, it was important that they reviewed the description for each indicator as described in the baseline reports, and also added to the endline formats for review by respondents. These descriptions are based on document review, observation, interviews with SPO staff, CFA staff and external respondents during the baseline. It was important to explain this to respondents before they filled in the formats.

Step 3. Send the formats adapted to the SPO to CFA and SPO – in-country team (formats for SPO) and CDI team (formats for CFA)

The CDI team was responsible for collecting data from the CFA:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet – CFA perspective.

The in-country team was responsible for collecting data from the SPO and from external respondents (except CFA). The following formats were sent before the fieldwork started:

- 5C Endline support to capacity sheet – SPO perspective.
- 5C Endline interview guides for externals: partners; OD consultants.

Step 4. Collect, upload & code the documents from CFA and SPO in NVivo – CDI team

The CDI team, in collaboration with the in-country team, collected the following documents from SPOs and CFAs:

- Project documents: project proposal, budget, contract (Note that for some SPOs there is a contract for the full MFS II period 2011-2015; for others there is a yearly or 2-yearly contract. All new contracts since the baseline in 2012 will need to be collected);
- Technical and financial progress reports since the baseline in 2012;.
- Mid-term evaluation reports;

- End of project-evaluation reports (by the SPO itself or by external evaluators);
- Contract intake forms (assessments of the SPO by the CFA) or organisational assessment scans made by the CFA that cover the 2011-2014 period;
- Consultant reports on specific inputs provided to the SPO in terms of organisational capacity development;
- Training reports (for the SPO; for alliance partners, including the SPO);
- Organisational scans/ assessments, carried out by the CFA or by the Alliance Assessments;
- Monitoring protocol reports, especially for the 5C study carried out by the MFS II Alliances;
- Annual progress reports of the CFA and of the Alliance in relation to capacity development of the SPOs in the particular country;
- Specific reports that are related to capacity development of SPOs in a particular country.

The following documents (since the baseline in 2012) were requested from SPO:

- Annual progress reports;
- Annual financial reports and audit reports;
- Organisational structure vision and mission since the baseline in 2012;
- Strategic plans;
- Business plans;
- Project/ programme planning documents;
- Annual work plan and budgets;
- Operational manuals;
- Organisational and policy documents: finance, human resource development, etc.;
- Monitoring and evaluation strategy and implementation plans;
- Evaluation reports;
- Staff training reports;
- Organisational capacity reports from development consultants.

The CDI team will coded these documents in NVivo (qualitative data analysis software program) against the 5C indicators.

Step 5. Prepare and organise the field visit to the SPO – in-country team

Meanwhile the in-country team prepared and organised the logistics for the field visit to the SPO:

- **General endline workshop** consisted about one day for the self-assessments (about ½ to ¾ of the day) and brainstorm (about 1 to 2 hours) on key organisational capacity changes since the baseline and underlying interventions, factors and actors ('general causal map'), see also explanation below. This was done with the five categories of key staff: managers; project/ programme staff; monitoring and evaluation staff; admin & HRM staff; field staff. Note: for SPOs involved in process tracing an additional 1 to 1½ day workshop (managers; program/project staff; monitoring and evaluation staff) was necessary. See also step 7;
- **Interviews with SPO staff** (roughly one day);
- **Interviews with external respondents** such as partners and organisational development consultants depending on their proximity to the SPO. These interviews could be scheduled after the endline workshop and interviews with SPO staff.

General causal map

During the 5C endline process, a 'general causal map' has been developed, based on key organisational capacity changes and underlying causes for these changes, as perceived by the SPO. The general causal map describes cause-effect relationships, and is described both as a visual as well as a narrative.

As much as possible the same people that were involved in the baseline were also involved in the endline workshop and interviews.

Step 6. Interview the CFA – CDI team

The CDI team was responsible for sending the sheets/ formats to the CFA and for doing a follow-up interview on the basis of the information provided so as to clarify or deepen the information provided. This relates to:

- 5C Endline assessment Dutch co-financing organisation;
- 5C Endline support to capacity sheet - CFA perspective.

Step 7. Run the endline workshop with the SPO – in-country team

This included running the endline workshop, including facilitation of the development of the general causal map, self-assessments, interviews and observations. Particularly for those SPOs that were selected for process tracing all the relevant information needed to be analysed prior to the field visit, so as to develop an initial causal map. Please see Step 6 and also the next section on process tracing (evaluation question two).

An endline workshop with the SPO was intended to:

- Explain the purpose of the fieldwork;
- Carry out in the self-assessments by SPO staff subgroups (unless these have already been filled prior to the field visits) - this may take some 3 hours.
- Facilitate a brainstorm on key organisational capacity changes since the baseline in 2012 and underlying interventions, factors and actors.

Purpose of the fieldwork: to collect data that help to provide information on what changes took place in terms of organisational capacity development of the SPO as well as reasons for these changes. The baseline that was carried out in 2012 was to be used as a point of reference.

Brainstorm on key organisational capacity changes and influencing factors: a brainstorm was facilitated on key organisational capacity changes since the baseline in 2012. In order to kick start the discussion, staff were reminded of the key findings related to the historical time line carried out in the baseline (vision, mission, strategies, funding, staff). This was then used to generate a discussion on key changes that happened in the organisation since the baseline (on cards). Then cards were selected that were related to organisational capacity changes, and organised. Then a 'general causal map' was developed, based on these key organisational capacity changes and underlying reasons for change as experienced by the SPO staff. This was documented as a visual and narrative. This general causal map was to get the story of the SPO on what they perceived as key organisational capacity changes in the organisation since the baseline, in addition to the specific details provided per indicator.

Self-assessments: respondents worked in the respective staff function groups: management; programme/ project staff; monitoring and evaluation staff; admin and HRM staff; field staff. Staff were assisted where necessary so that they could really understand what it was they were being asked to do as well as what the descriptions under each indicator meant.

Note: for those SPOs selected for process tracing an additional endline workshop was held to facilitate the development of detailed causal maps for each of the identified organisational change/ outcome areas that fall under the capability to act and commit, and under the capability to adapt and self-renew, and that are likely related to capacity development interventions by the CFA. See also the next section on process tracing (evaluation question two). It was up to the in-country team whether this workshop was held straight after the initial endline workshop or after the workshop and the follow-up interviews. It could also be held as a separate workshop at another time.

Step 8. Interview SPO staff – in-country team

After the endline workshop (developing the general causal map and carrying out self-assessments in subgroups), interviews were held with SPO staff (subgroups) to follow up on the information that was provided in the self-assessment sheets, and to interview staff that had not yet provided any information.

Step 9. Fill-in observation sheets_– in-country team

During the visit at the SPO, the in-country team had to fill in two sheets based on their observation:

- 5C Endline observation sheet;
- 5C Endline observable indicators.

Step 10. Interview externals – in-country team & CDI team

The in-country team also needed to interview the partners of the SPO as well as organisational capacity development consultants that have provided support to the SPO. The CDI team interviewed the CFA.

Step 11. Upload and auto-code all the formats collected by in-country team and CDI team – CDI team

The CDI team was responsible for uploading and auto-coding (in Nvivo) of the documents that were collected by the in-country team and by the CDI team.

Step 12. Provide the overview of information per 5C indicator to in-country team – CDI team

After the analysis in NVivo, the CDI team provided a copy of all the information generated per indicator to the in-country team for initial analysis.

Step 13. Analyse the data and develop a draft description_of the findings per indicator and for the general questions – in-country team

The in-country team provided a draft description of the findings per indicator, based on the information generated per indicator. The information generated under the general questions were linked to the general causal map or detailed process tracing related causal map.

Step 14. Analyse the data and finalize the description of the findings per indicator, per capability and general – CDI team

The CDI team was responsible for checking the analysis by the in-country team with the Nvivo generated data and to make suggestions for improvement and ask questions for clarification to which the in-country team responded. The CDI team then finalised the analysis and provided final descriptions and scores per indicator and also summarize these per capability and calculated the summary capability scores based on the average of all indicators by capability.

Step 15. Analyse the information in the general causal map –in-country team & CDI team

The general causal map based on key organisational capacity changes as perceived by the SPO staff present at the workshop, was further detailed by in-country team and CDI team, and based on the notes made during the workshop and where necessary additional follow up with the SPO. The visual and narrative was finalized after feedback by the SPO. During analysis of the general causal map relationships with MFS II support for capacity development and other factors and actors were identified. All the information has been reviewed by the SPO and CFA.

3. Attributing changes in partner organisation’s capacity – evaluation question 2

This section describes the data collection and analysis methodology for answering the second evaluation question: ***To what degree are the changes identified in partner capacity attributable to (capacity) development interventions undertaken by the MFS II consortia (i.e. measuring effectiveness)?***

In terms of the attribution question (2), ‘process tracing’ is used. This is a theory-based approach that has been applied to a selected number of SPOs since it is a very intensive and costly methodology, although it provides rich information and can generate a lot of learning within the organisations. Key organisational capacity changes/ outcomes of the SPO were identified, based on their relationship to the two selected capabilities, the capability to act and commit the capability to adapt and self-renew, and an expected relationship with CFA supported capacity development interventions (MFS II funding). It was agreed to focus on these two capabilities, since these are the most targeted capabilities by the CFAs, as established during the baseline process. The box below provides some background information on process tracing.

Background information on process tracing

The essence of process tracing research is that scholars want to go beyond merely identifying correlations between independent variables (Xs) and outcomes (Ys). Process tracing in social science is commonly defined by its addition to trace causal mechanisms (Bennett, 2008a, 2008b; Checkle, 2008; George & Bennett, 2005). A causal mechanism can be defined as “a complex system which produces an outcome by the interaction of a number of parts” (Glennan, 1996, p. 52). Process tracing involves “attempts to identify the intervening causal process – the causal chain and causal mechanism – between an independent variable (or variables) and the outcome of the dependent variable” (George & Bennett, 2005, pp. 206-207).

Process tracing can be differentiated into three variants within social science: theory testing, theory building, and explaining outcome process tracing (Beach & Pedersen, 2013).

Theory testing process tracing uses a theory from the existing literature and then tests whether evidence shows that each part of hypothesised causal mechanism is present in a given case, enabling within case inferences about whether the mechanism functioned as expected in the case and whether the mechanism as a whole was present. No claims can be made however, about whether the mechanism was the only cause of the outcome.

Theory building process tracing seeks to build generalizable theoretical explanations from empirical evidence, inferring that a more general causal mechanism exists from the fact of a particular case.

Finally, explaining outcome process tracing attempts to craft a minimally sufficient explanation of a puzzling outcome in a specific historical case. Here the aim is not to build or test more general theories but to craft a (minimally) sufficient explanation of the outcome of the case where the ambitions are more case centric than theory oriented.

Explaining outcome process tracing is the most suitable type of process tracing for analysing the causal mechanisms for selected key organisational capacity changes of the SPOs. This type of process tracing can be thought of as a single outcome study defined as seeking the causes of the specific outcome in a single case (Gerring, 2006; in: Beach & Pedersen, 2013). Here the ambition is to craft a minimally sufficient explanation of a particular outcome, with sufficiency defined as an explanation that accounts for all of the important aspects of an outcome with no redundant parts being present (Mackie, 1965).

Explaining outcome process tracing is an iterative research strategy that aims to trace the complex conglomerate of systematic and case specific causal mechanisms that produced the outcome in question. The explanation cannot be detached from the particular case. Explaining outcome process tracing refers to case studies whose primary ambition is to explain particular historical outcomes, although the findings of the case can also speak to other potential cases of the phenomenon. Explaining outcome process tracing is an iterative research process in which ‘theories’ are tested to see whether they can provide a minimally sufficient explanation of the outcome. Minimal sufficiency is defined as an explanation that accounts for an outcome, with no redundant parts. In most explaining outcome studies, existing theorisation cannot provide a sufficient explanation, resulting in a second stage in which existing theories are re-conceptualised in light of the evidence gathered in the preceding empirical analysis. The conceptualisation phase in explaining outcome process tracing is therefore an iterative research process, with initial mechanisms re-conceptualised and tested until the result is a theorised mechanism that provides a minimally sufficient explanation of the particular outcome.

Below a description is provided of how SPOs are selected for process tracing, and a description is provided on how this process tracing is to be carried out. Note that this description of process tracing provides not only information on the extent to which the changes in organisational development can be attributed to MFS II (evaluation question 2), but also provides information on other contributing factors and actors (evaluation question 4). Furthermore, it must be noted that the evaluation team has developed an adapted form of 'explaining outcome process tracing', since the data collection and analysis was an iterative process of research so as to establish the most realistic explanation for a particular outcome/ organisational capacity change. Below selection of SPOs for process tracing as well as the different steps involved for process tracing in the selected SPOs, are further explained.

Selection of SPOs for 5C process tracing

Process tracing is a very intensive methodology that is very time and resource consuming (for development and analysis of one final detailed causal map, it takes about 1-2 weeks in total, for different members of the evaluation team). It has been agreed upon during the synthesis workshop on 17-18 June 2013 that only a selected number of SPOs will take part in this process tracing for the purpose of understanding the attribution question. The selection of SPOs is based on the following criteria:

- MFS II support to the SPO has not ended before 2014 (since this would leave us with too small a time difference between intervention and outcome);
- Focus is on the 1-2 capabilities that are targeted most by CFAs in a particular country;
- Both the SPO and the CFA are targeting the same capability, and preferably aim for similar outcomes;
- Maximum one SPO per CFA per country will be included in the process tracing.

The intention was to focus on about 30-50% of the SPOs involved. Please see the tables below for a selection of SPOs per country. Per country, a first table shows the extent to which a CFA targets the five capabilities, which is used to select the capabilities to focus on. A second table presents which SPO is selected, and takes into consideration the selection criteria as mentioned above.

ETHIOPIA

For Ethiopia the capabilities that are mostly targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 1

The extent to which the Dutch NGO explicitly targets the following capabilities – Ethiopia

Capability to:	AMREF	CARE	ECFA	FSCE	HOA- REC	HUND EE	NVEA	OSRA	TTCA
Act and commit	5	4	5	5	5	3	4	4	3
Deliver on development objectives	2	1	1	1	2	1	1	2	1
Adapt and self-renew	4	2	3	4	2	5	3	3	3
Relate	3	1	2	2	3	2	1	3	1
Achieve coherence	2	2	1	1	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Ethiopia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Based

on the above-mentioned selection criteria the following SPOs are selected for process tracing: AMREF, ECFA, FSCE, HUNDEE. In fact, six SPOs would be suitable for process tracing. We just selected the first one per CFA following the criteria of not including more than one SPO per CFA for process tracing

Table 2

SPOs selected for process tracing – Ethiopia

Ethiopia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
AMREF	Dec 2015	Yes	Yes	Yes	Yes	AMREF NL	Yes
CARE	Dec 31, 2015	Partly	Yes	Yes	Yes – slightly	CARE Netherlands	No - not fully matching
ECFA	Jan 2015	Yes	Yes	Yes	Yes	Child Helpline International	Yes
FSCE	Dec 2015	Yes	Yes	Yes	Yes	Stichting Kinderpostzegels Netherlands (SKN); Note: no info from Defence for Children – ECPAT Netherlands	Yes
HOA-REC	Sustainable Energy project (ICCO Alliance): 2014 Innovative WASH (WASH Alliance): Dec 2015	Yes	Yes	Yes	Yes - slightly	ICCO	No - not fully matching
HUNDEE	Dec 2014	Yes	Yes	Yes	Yes	ICCO & IICD	Yes
NVEA	Dec 2015 (both)	Yes	Yes	Yes	Yes	Edukans Foundation (under two consortia); Stichting Kinderpostzegels Netherlands (SKN)	Suitable but SKN already involved for process tracing FSCE
OSRA	C4C Alliance project (farmers marketing): December 2014 ICCO Alliance project (zero grazing): 2014 (2 nd phase)	Yes	Yes	Yes	Yes	ICCO & IICD	Suitable but ICCO & IICD already involved for process tracing - HUNDEE
TTCA	June 2015	Partly	Yes	No	Yes	Edukans Foundation	No - not fully matching

INDIA

For India the capability that is mostly targeted by CFAs is the capability to act and commit. The next one in line is the capability to adapt and self-renew. See also the table below in which a higher score means that the specific capability is more intensively targeted.

Table 3

The extent to which the Dutch NGO explicitly targets the following capabilities – India³

Capability to:	BVHA	COUNT	DRISTI	FFID	Jana Vikas	Samar thak Samiti	SMILE	SDS	VTRC
Act and commit	5	3	4	4	4	4	4	3	5
Deliver on development objectives	1	5	1	1	1	1	1	2	1
Adapt and self-renew	2	2	1	3	1	1	4	1	4
Relate	3	1	1	1	1	1	2	1	2
Achieve coherence	1	1	1	4	1	1	1	1	2

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, India.

Below you can see a table describing when the contract with the SPO is to be ended and whether SPO and the CFA both expect to focus on these two selected capabilities (with MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BVHA, COUNT, FFID, SMILE and VTRC. Except for SMILE (capability to act and commit only), for the other SPOs the focus for process tracing can be on the capability to act and commit and on the capability to adapt and self-renew.

Table 4

SPOs selected for process tracing – India

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BVHA	2014	Yes	Yes	Yes	Yes	Simavi	Yes; both capabilities
COUNT	2015	Yes	Yes	Yes	Yes	Woorden Daad	Yes; both capabilities
DRISTI	31-03-2012	Yes	Yes	No	no	Hivos	No - closed in 2012
FFID	30-09-2014	Yes	Yes	Yes	Yes	ICCO	Yes

³ RGVN, NEDSF and Women's Rights Forum (WRF) could not be reached timely during the baseline due to security reasons. WRF could not be reached at all. Therefore these SPOs are not included in Table 1.

India – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Jana Vikas	2013	Yes	Yes	Yes	No	Cordaid	No - contract is and the by now; not fully matching focus
NEDSF							No – delayed baseline
RGVN							No - delayed baseline
Samarthak Samiti (SDS)	2013 possibly longer	Yes	Yes	Yes	No	Hivos	No - not certain of end date and not fully matching focus
Shivi Development Society (SDS)	Dec 2013 intention 2014	Yes	Yes	Yes	No	Cordaid	No - not fully matching focus
Smile	2015	Yes	Yes	Yes	Yes	Wilde Ganzen	Yes; first capability only
VTRC	2015	Yes	Yes	Yes	Yes	Stichting Red een Kind	Yes; both capabilities

INDONESIA

For Indonesia the capabilities that are most frequently targeted by CFAs are the capability to act and commit and the capability to adapt and self-renew. See also the table below.

Table 5

The extent to which the Dutch NGO explicitly targets the following capabilities – Indonesia

Capability to:	ASB	Daya kologi	ECPAT	GSS	Lem baga Kita	Pl. PPMA	Rifka Annisa	WIIP	Yad upa	Yayasan Kelola	YPI	YRBI
Act and commit	4	4	4	5	4	4	5	3	3	2	5	4
Deliver on development objectives	1	1	1	2	2	1	2	1	1	1	1	1
Adapt and self-renew	3	1	2	4	2	3	4	4	1	1	4	3
Relate	1	1	2	3	3	2	1	2	2	2	3	2
Achieve coherence	1	1	1	2	1	1	2	2	1	1	2	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Indonesia.

The table below describes when the contract with the SPO is to be ended and whether both SPO and the CFA expect to focus on these two selected capabilities (MFS II funding). Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: ASB, ECPAT, Pt.PPMA, YPI, YRBI.

Table 6

SPOs selected for process tracing – Indonesia

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
ASB	February 2012; extension Feb,1, 2013 – June,30, 2016	Yes	Yes	Yes	Yes	Hivos	Yes
Dayakologi	2013; no extension	Yes	Yes	Yes	No	Cordaid	No: contract ended early and not matching enough
ECPAT	August 2013; Extension Dec 2014	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	Yes
GSS	31 December 2012; no extension	Yes	Yes	Yes, a bit	Yes	Free Press Unlimited - Mensen met een Missie	No: contract ended early
Lembaga Kita	31 December 2012; no extension	Yes	Yes	No	Yes	Free Press Unlimited - Mensen met een Missie	No - contract ended early
Pt.PPMA	May 2015	Yes	Yes	No	Yes	IUCN	Yes, capability to act and commit only
Rifka Annisa	Dec, 31 2015	No	Yes	No	Yes	Rutgers WPF	No - no match between expectations CFA and SPO
WIIP	Dec 2015	Yes	Not MFS II	Yes	Not MFS II	Red Cross	No - Capacity development interventions are not MFS II financed. Only some overhead is MFS II

Indonesia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
Yayasan Kelola	Dec 30, 2013; extension of contract being processed for two years (2014-2015)	Yes	Not really	Yes	Not really	Hivos	No - no specific capacity development interventions planned by Hivos
YPI	Dec 31, 2015	Yes	Yes	Yes	Yes	Rutgers WPF	Yes
YRBI	Oct, 30, 2013; YRBI end of contract from 31st Oct 2013 to 31st Dec 2013. Contract extension proposal is being proposed to MFS II, no decision yet.	Yes	Yes	Yes	Yes	ICCO	Yes
Yadupa	Under negotiation during baseline; new contract 2013 until now	Yes	Nothing committed	Yes	Nothing committed	IUCN	No, since nothing was committed by CFA

LIBERIA

For Liberia the situation is arbitrary which capabilities are targeted most CFA's. Whilst the capability to act and commit is targeted more often than the other capabilities, this is only so for two of the SPOs. The capability to adapt and self-renew and the capability to relate are almost equally targeted for the five SPOs, be it not intensively. Since the capability to act and commit and the capability to adapt and self-renew are the most targeted capabilities in Ethiopia, India and Indonesia, we choose to focus on these two capabilities for Liberia as well. This would help the synthesis team in the further analysis of these capabilities related to process tracing. See also the table below.

Table 7

The extent to which the Dutch NGO explicitly targets the following capabilities – Liberia

Capability to:	BSC	DEN-L	NAWOCOL	REFOUND	RHRAP
Act and commit	5	1	1	1	3
Deliver on development objectives	3	1	1	1	1
Adapt and self-renew	2	2	2	2	2
Relate	1	2	2	2	2
Achieve coherence	1	1	1	1	1

Note: Number 1 stands for not targeted, 5 for intensively targeted. These scores are relative scores for the interventions by the CFA to strengthen the capacity of the SPO. The scores are relative to each other, a higher score means that this capability gets more attention by the CFA compared to other capabilities.

Source: country baseline report, Liberia.

Below you can see the table describing when the contract with the SPO is to be ended, and whether both SPO and the CFA expect to focus on these two selected capabilities (with MFS II funding). Also, for two of the five SPOs capability to act and commit is targeted more intensively compared to the other capabilities. Based on the above-mentioned selection criteria the following SPOs are selected for process tracing: BSC and RHRAP.

Table 8

SPOs selected for process tracing – Liberia

Liberia – SPOs	End of contract	Focus on capability to act and commit – by SPO	Focus on capability to act and commit – by CFA	Focus on capability to adapt and self-renew – by SPO	Focus on capability to adapt and self-renew – by CFA	CFA	Selected for process tracing
BSC	Dec 31, 2015	Yes	Yes	Yes	Yes	SPARK	Yes
DEN-L	2014	No	No	Unknown	A little	ICCO	No – not matching enough
NAWOCOL	2014	Yes	No	No	A little	ICCO	No – not matching enough
REFOUND	At least until 2013 (2015?)	Yes	No	Yes	A little	ICCO	No – not matching enough
RHRAP	At least until 2013 (2014?)	Yes	Yes	Yes	Yes	ICCO	Yes

Key steps in process tracing for the 5C study

In the box below you will find the key steps developed for the 5C process tracing methodology. These steps will be further explained here. Only key staff of the SPO is involved in this process: management; programme/ project staff; and monitoring and evaluation staff, and other staff that could provide information relevant to the identified outcome area/key organisational capacity change. Those SPOs selected for process tracing had a separate endline workshop, in addition to the ‘ general endline workshop. This workshop was carried out after the initial endline workshop and the interviews during the field visit to the SPO. Where possible, the general and process tracing endline workshop have been held consecutively, but where possible these workshops were held at different points in time, due to the complex design of the process. Below the detailed steps for the purpose of process tracing are further explained.

Key steps in process tracing for the 5C study

1. Identify the planned MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
2. Identify the implemented MFS II supported capacity development interventions within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team
3. Identify initial changes/ outcome areas in these two capabilities – CDI team & in-country team
4. Construct the detailed, initial causal map (theoretical model of change) – CDI team & in-country team
5. Identify types of evidence needed to verify or discard different causal relationships in the model of change – in-country teams, with support from CDI team
6. Collect data to verify or discard causal mechanisms and construct workshop based, detailed causal map (model of change) – in-country team
7. Assess the quality of data and analyse data and develop final detailed causal map (model of change) – in-country team with CDI team
8. Analyse and conclude on findings– CDI team, in collaboration with in-country team

Some definitions of the terminology used for this MFS II 5c evaluation

Based upon the different interpretations and connotations the use of the term causal mechanism we use the following terminology for the remainder of this paper:

A **detailed causal map** (or **model of change**) = the representation of all possible explanations – causal pathways for a change/ outcome. These pathways are that of the intervention, rival pathways and pathways that combine parts of the intervention pathway with that of others. This also depicts the reciprocity of various events influencing each other and impacting the overall change.

A **causal mechanism** = is the combination of parts that ultimately explains an outcome. Each part of the mechanism is an individually insufficient but necessary factor in a whole mechanism, which together produce the outcome (Beach and Pedersen, 2013, p. 176).

Part or **cause** = one actor with its attributes carrying out activities/ producing outputs that lead to change in other parts. The final part or cause is the change/ outcome.

Attributes of the actor = specificities of the actor that increase his chance to introduce change or not such as its position in its institutional environment.

*Step 1. Identify the **planned MFS II supported capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

Chapter 4.1 and 4.2 in the baseline report were reviewed. Capacity development interventions as planned by the CFA for the capability to act and commit and for the capability to adapt and self-renew were described and details inserted in the summary format. This provided an overview of the capacity development activities that were originally planned by the CFA for these two capabilities and assisted in focusing on relevant outcomes that are possibly related to the planned interventions.

*Step 2. Identify the **implemented capacity development interventions** within the selected capabilities (capability to act and commit and capability to adapt and self-renew) – CDI team*

The input from the CFA was reviewed in terms of what capacity development interventions have taken place in the MFS II period. This information was found in the 'Support to capacity development sheet - endline - CFA perspective' for the SPO, based on details provided by the CFA and further discussed during an interview by the CDI team.

The CFA was asked to describe all the MFS II supported capacity development interventions of the SPO that took place during the period 2011 up to now. The CDI team reviewed this information, not only the interventions but also the observed changes as well as the expected long-term changes, and

then linked these interventions to relevant outcomes in one of the capabilities (capability to act and commit; and capability to adapt and self-renew).

*Step 3. Identify **initial changes/ outcome areas** in these two capabilities – by CDI team & in-country team*

The CDI team was responsible for coding documents received from SPO and CFA in NVivo on the following:

- **5C Indicators**: this was to identify the changes that took place between baseline and endline. This information was coded in Nvivo.
