

Multisoliton hybrid generation of fiber lasers with anomalous dispersion

Submitted by François Sanchez on Fri, 09/27/2019 - 15:14

Titre Multisoliton hybrid generation of fiber lasers with anomalous dispersion

Type de publication Article de revue

Auteur Komarov, Andrey [1], Dmitriev, Alexander [2], Komarov, Konstantin [3], Meng, Yichang [4], Semaan, Georges [5], Sanchez, François [6]

Editeur American Physical Society

Type Article scientifique dans une revue à comité de lecture

Année 2019

Langue Anglais

Date Mai 2019

Numéro 5

Pagination 053848

Volume 99

Titre de la revue Physical Review A

ISSN 2469-9926

Résumé en anglais We have performed a numerical simulation study of a hybrid regime of anomalous-dispersion-fiber lasers in which passive mode locking occurs simultaneously with the regime of regular undamped spikes induced by an intracavity saturable absorber. Stabilization and reproducibility of the laser radiation is provided by a fiber optical delay line due to which each subsequent spike is formed from the seed radiation of the previous one. The transient evolution and steady-state generation are analyzed. It is found that the number of ultrashort pulses in the steady-state generation depends on the initial conditions of the transient process. In the investigated generation, the spatial-temporal concentration of radiation energy is due to both passive mode locking and Q-switch operation. The hybrid regime is of interest for obtaining reproducible high-energy light pulses
