

Experimental optimization of dissipative soliton resonance square pulses in all anomalous passively mode-locked fiber laser

Submitted by François Sanchez on Fri, 09/27/2019 - 10:42

Titre	Experimental optimization of dissipative soliton resonance square pulses in all anomalous passively mode-locked fiber laser
Type de publication	Article de revue
Auteur	Ben Braham, Fatma [1], Semaan, Georges [2], Bahloul, Faouzi [3], Salhi, Mohamed [4], Sanchez, François [5]
Editeur	Institute of Physics
Type	Article scientifique dans une revue à comité de lecture
Année	2017
Langue	Anglais
Date	Octobre 2017
Numéro	10
Pagination	105501
Volume	19
Titre de la revue	Journal of Optics
ISSN	2040-8978
Mots-clés	dissipative soliton resonance [6], square wave [7]
Résumé en anglais	We investigate experimentally the operational boundaries of dissipative soliton resonance in a double-clad Er:Yb co-doped dual amplifier passively mode-locked figure-of-eight fiber laser. While mode-locking with a nonlinear amplifying loop mirror, we present an exhaustive series of experiments in order to optimize the pulse energy and pulse width tunability. In addition to the pumping power of the amplifiers, several key experimental parameters have been identified such as the net cavity dispersion, the coupling ratio between the two loops of the cavity and the exact position of the long fiber coils. Under optimized conditions, the laser delivers square pulses with an energy varying between 8.5 and 10.1 µJ while the pulse width ranges from 84-416 ns.
