## WESTERN EDUCATIONAL LONGITUDINAL STUDY (WELS) SPRING, 2006, FOLLOW-UP SURVEY OF STUDENTS WHO HAD ENTERED AS TRANSFERS IN THE FALL, 2005

### WELS BACKGROUND

The Western Educational Longitudinal Study (WELS) is a series of internal longitudinal surveys of all in-coming first-year and transfer students administered every two to three years. This study involves an initial assessment of students prior to entering Western and then a series of follow-ups at different points in their academic careers. The purpose of this study is threefold: (1) To assess student needs based on their self-reported characteristics, perceptions and concerns; (2) To provide data that can be used to better assess academic and co-curricular programs by providing baseline entry data that can be used as statistical controls in analyses to offset the inability to conduct randomized studies; and (3) To maintain an ongoing record of student knowledge acquisition, ability levels, and other general education outcomes to address concerns of accountability and accreditation.

The WELS is conducted by the Office of Survey Research (OSR) and uses a mixture of on-line and telephone survey methodologies. Since the data collected in these studies includes identifying information, these data can and are linked with data in student records, thus expanding their usefulness beyond what could be obtained using large national studies such as the National Study of Student Engagement (NSSE). Although WELS data cannot, like other national studies, be used for comparisons to other institutions, the surveys have more flexibility in content to allow them to be tailored to Western's needs.

### WELS 2003 COHORT

The first WELS was administered in the summer, 2003, and included only in-coming freshmen (no transfers)<sup>1</sup>. The baseline survey was developed as a result of meetings with various stakeholders across campus (the Provost's Office, student services, deans, the faculty senate, ATUS, etc.) as well as focus groups with students and a search for potentially useful items used on various national surveys. This baseline included 1580 out of 2225 incoming first year non-transfer students (a response rate of 71%). This cohort was then followed up at the end of their first quarter (fall, 2003: 42% response rate), the end of their first year (spring, 2004: 55% response rate), and the end of their second year (spring 2005: 70% response rate), and at the end of their third year (see details below). They will also be assessed at the end of their fourth year. Each follow-up survey is designed to address pressing concerns about student needs, programming, and accountability and accreditation standards pertinent to the students' year in college. (For example, the first quarter follow-up of the 2003 cohort was focused on how well students make the adjustment to college; and the first and second year follow-ups focused on GURs, since students were in the midst of completing most of their GURs and the requirement itself was under review at the time).

### WELS 2005 COHORTS

A second series of WELS baseline surveys was initiated in the summer, 2005, and again included all in-coming freshmen, although this time a separate baseline survey was developed for transfer students as well. The baseline for the 2005 survey of freshmen included 1691 out of 2386 incoming students (a response rate of 71%). The baseline for the 2005 survey of transfers included 875 out of 1029 entering transfer students (a response rate of 85%).

The end-of-fall-quarter, 2005, "transitions" survey for the freshmen cohort included 1371 students out of 2375 (a response rate of 58%). The end-of-fall-quarter, 2005, "transitions" survey for transfer students included 499 out of 1029 students (a response rate of 48%).

---

<sup>1</sup>Current definitions of the term "freshmen" include nowadays a small percentage of students who do not fit the traditional profile of a freshman. These include high school students who have earned Running Start and Advanced Placement (AP) credits. Technically, these students are entering college for the first-time, but may have earned as many as 90 college credits.

---

The one-year follow-up of freshmen entering Western in fall, 2005, was conducted in spring, 2006, and included 1061 out of 2261 still enrolled freshmen (a response rate of 47%). The one-year follow-up of transfers entering Western in fall, 2005, was also conducted in spring, 2006, and included 497 out of 992 still enrolled transfers (a response rate of 50%).

#### **CURRENT SURVEY**

This report presents findings from the spring, 2006, one-year follow-up survey of students who had entered as transfers in the fall, 2005. There were 497 completed surveys out of the 992 who were still registered in the spring (a response rate of 50%). Of these, there were 330 students who took the survey online and 167 who took the survey over the phone. Similar to the three-year follow-up survey of students who had entered as freshmen in the fall, 2003—students who also mostly have junior status—this survey focused on issues facing third-year students, for instance: choosing a major, upper division course experiences, study abroad, and general studies advising. In addition, the survey included questions from other time points and cohorts such as questions on academic advising and tutorial services, general student services usage, academic skills and competencies, work and other non-academic activities, academic and personal difficulties, and perceptions of Western.
