Rosa, Melissa, "Bringing high resolution land cover products to the Puget Sound region and U.S." (2018). *Salish Sea Ecosystem Conference*. 529.

<https://cedar.wvu.edu/ssec/2018ssec/allsessions/529>

This Event is brought to you for free and open access by the Conferences and Events at Western CEDAR. It has been accepted for inclusion in Salish Sea Ecosystem Conference by an authorized administrator of Western CEDAR. For more information, please contact westerncedar@wvu.edu.

An aerial satellite image of a coastal region, likely the Puget Sound area, showing a mix of urban development, green spaces, and water bodies. A semi-transparent white rectangular box is overlaid on the center of the image, containing text. The text is in a clean, black, sans-serif font. The background image shows various land cover types, including buildings, roads, and vegetation, with some areas highlighted in yellow and blue, possibly representing specific land cover categories or water bodies.

Bringing High Resolution Land Cover Products to the Puget Sound Region and U.S.

NOAA Office for Coastal Management

2018 Salish Sea Ecosystem Conference

NOAA's National Land Cover Monitoring

Coastal Change Analysis Program (C-CAP)

- Regional Land Cover Products
 - Based on Landsat Imagery (30-meter)
 - 25% of the contiguous U.S. (CONUS)
 - Coastal expression of the NLCD
- High Resolution Land Cover
 - Based on imagery and Lidar (1 to 4-meter)
 - Pacific, Caribbean, and project based
 - Change not produced everywhere
 - Multiple dates in Pacific and USVIs
- Updated every 5 years
- Consistent, Accurate Products
 - FGDC National Geospatial Data Asset

Coastal Land Cover Classes

Developed

Impervious
Developed, Open Space

Agricultural

Cultivated Crops
Pasture/Hay

Rangeland

Grassland and Herbaceous
Scrub / Shrub

Forest Land

Deciduous Forest
Evergreen Forest
Mixed Forest

Barren Land

Barren Land
Perennial Ice/Snow

Wetlands

Woody Wetlands

Palustrine Forested Wetland
Palustrine Scrub/Shrub Wetland
Estuarine Forested Wetland
Estuarine Scrub/Shrub Wetland

Herbaceous Wetlands

Palustrine Emergent Wetland
Estuarine Emergent Wetland

Palustrine Aquatic Bed

Estuarine Aquatic Bed

Unconsolidated Shore

Water

Open Water

C-CAP High Resolution Land Cover Vision

Down Payment on the Future

- Starting with our current, 2016 update cycle
- Moving away from native 30-meter mapping
- Moving towards 1-meter mapping
- Cannot afford all at once
- Transition will be done in phases
- Over multiple update cycles
- May not be able to afford alone
- Able to offer partner cost share

1-meter Land Cover Production

Phase 1 (Baseline)

- 6 categories: Impervious, Bare, Grass, Shrub, Forest, and Water
- Based on 2015/2016 NAIP and available Lidar and ancillary data
- Limitations to accuracy and quality
- Restricted licensing (NOAA use only)

Phase 2 (Pilots)

- Refine limitations of above and add additional C-CAP categories
- Foundation for full high resolution future products

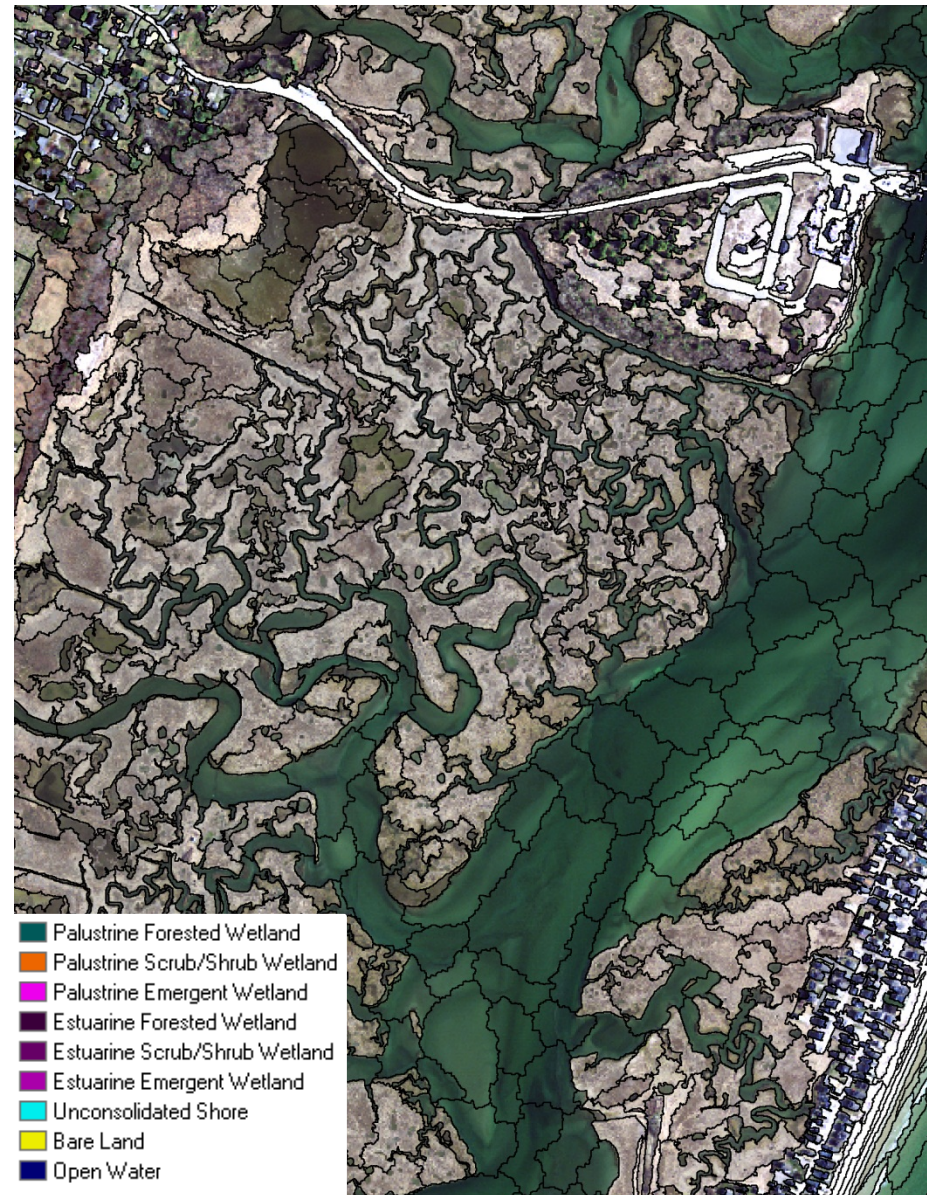

Image Objects and Classification

Wells NERR, Maine

Comparison of C-CAP Product Lines

Bay County, Florida (Panama City)

- Unclassified
- Developed, High Intensity
- Developed, Open Space
- Cultivated Crops
- Pasture/Hay
- Grassland/Herbaceous
- Deciduous Forest
- Evergreen Forest
- Mixed Forest
- Scrub/Shrub
- Palustrine Forested Wetland
- Palustrine Scrub/Shrub Wetland
- Palustrine Emergent Wetland
- Estuarine Forested Wetland
- Estuarine Scrub/Shrub Wetland
- Estuarine Emergent Wetland
- Unconsolidated Shore
- Bare Land
- Open Water

Regional

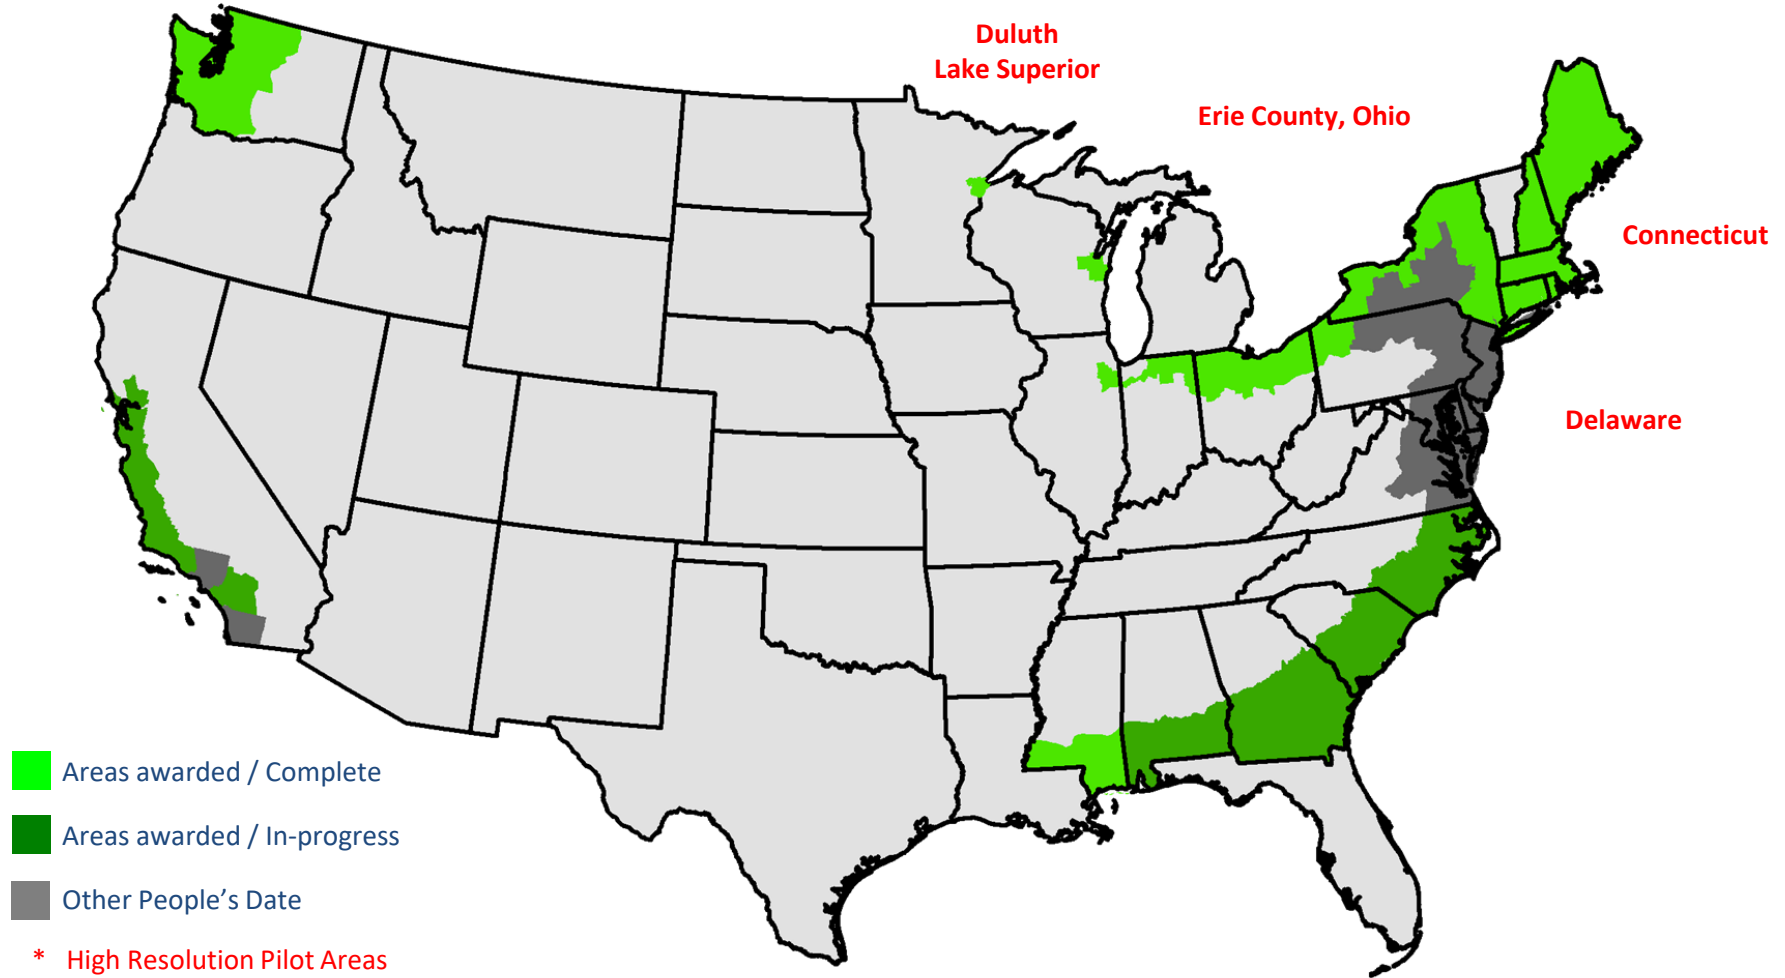

High Resolution

Baseline Status

4-5 Counties Washington

Snohomish, Island, San Juan, King, and Skagit

Washington State Example

36,000 square miles

SEATAC Airport - Seattle Tacoma, WA

1 meter Baseline Land Cover - Draft

- Developed / Impervious
- Grassland / Herbaceous
- Forest / Tree
- Scrub / Shrub
- Bare Land
- Water

1:25,000

SEATAC Airport - Seattle Tacoma, WA
30 meter Existing C-CAP

1:25,000

Seattle Tacoma, WA
Orthoimagery

1:10,000

Seattle Tacoma, WA
1 meter Baseline Land Cover - Draft

1:10,000

- Developed / Impervious
- Grassland / Herbaceous
- Forest / Tree
- Scrub / Shrub
- Bare Land
- Water

Seattle Tacoma, WA
30 meter Existing C-CAP

1:10,000

Pilot Status

- Initial baseline work has gone exceedingly well
 - No delays or quality concerns.
 - While not perfect, achieving accuracy of 90+%.
 - Each geography improves upon previous.
- Refinement pilots have been a bit of a struggle
 - All pilots are behind schedule.
- NOAA has taken on more of this work ourselves
 - Washington counties being completed in-house.
- First products expected in Spring (Snohomish, WA)
 - Subsequent products expected in the fall.

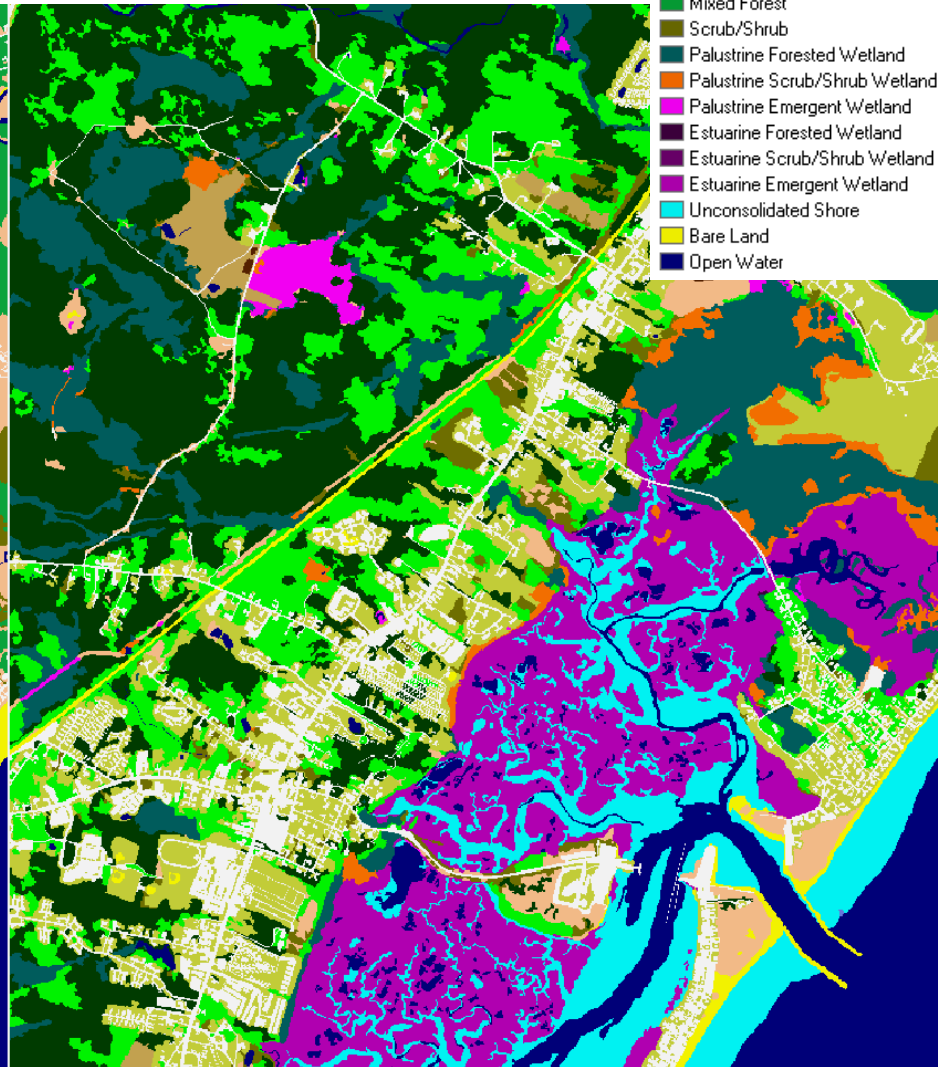

Example C-CAP Refinement

- Unclassified
- Developed, High Intensity
- Developed, Open Space
- Cultivated Crops
- Pasture/Hay
- Grassland/Herbaceous
- Deciduous Forest
- Evergreen Forest
- Mixed Forest
- Scrub/Shrub
- Palustrine Forested Wetland
- Palustrine Scrub/Shrub Wetland
- Palustrine Emergent Wetland
- Estuarine Forested Wetland
- Estuarine Scrub/Shrub Wetland
- Estuarine Emergent Wetland
- Unconsolidated Shore
- Bare Land
- Open Water

- Developed / Impervious
- Grassland / Herbaceous
- Forest / Tree
- Bare Land
- Water

6 Category "Baseline" Land Cover

C-CAP Full Classification Scheme

Findings from In-house Work

- 90% of area unchanged from baseline output
- Area of edits focused on:
 - Vegetation corrections: 75-80%
 - Impervious feature clean-up: 15-20%
 - Bare/Water/Other: 5-10%
- Time of edits
 - Impervious feature clean-up: 65%
 - Vegetation corrections: 20%
 - Bare/Water/Other: 15%

Automated (Baseline)

Refined (Pilot)

Notes on Costs

- Image quality is important
 - Shadows have been a big impact in Washington
 - Multiple dates/seasons of imagery helpful
- Up-to-date LiDAR coverage is a HUGE advantage
 - Imagery cannot pull out height in the same way
 - Differences in date are problematic
- Ancillary data can save you a lot of refinement time
 - Impervious, land use, agricultural
 - Updating/fixing existing is cheaper than starting over

NOAA's Partnership Opportunities "Pitch"

Ways Others can Leverage NOAA's Investment

- Utilize publicly available C-CAP data
 - 2016 regional update
 - High resolution pilot areas
- Help NOAA realize our vision faster
 - Share the cost of baseline licensing and/or C-CAP level development
 - Obtain land cover data at significantly reduced price
- Go statewide
 - Obtain statewide products
 - Volume discounts could still apply
- Add categories of specific interest
 - Customize products for specific need (salt marsh species mapping, buildings/roads/other impervious classification, etc.)

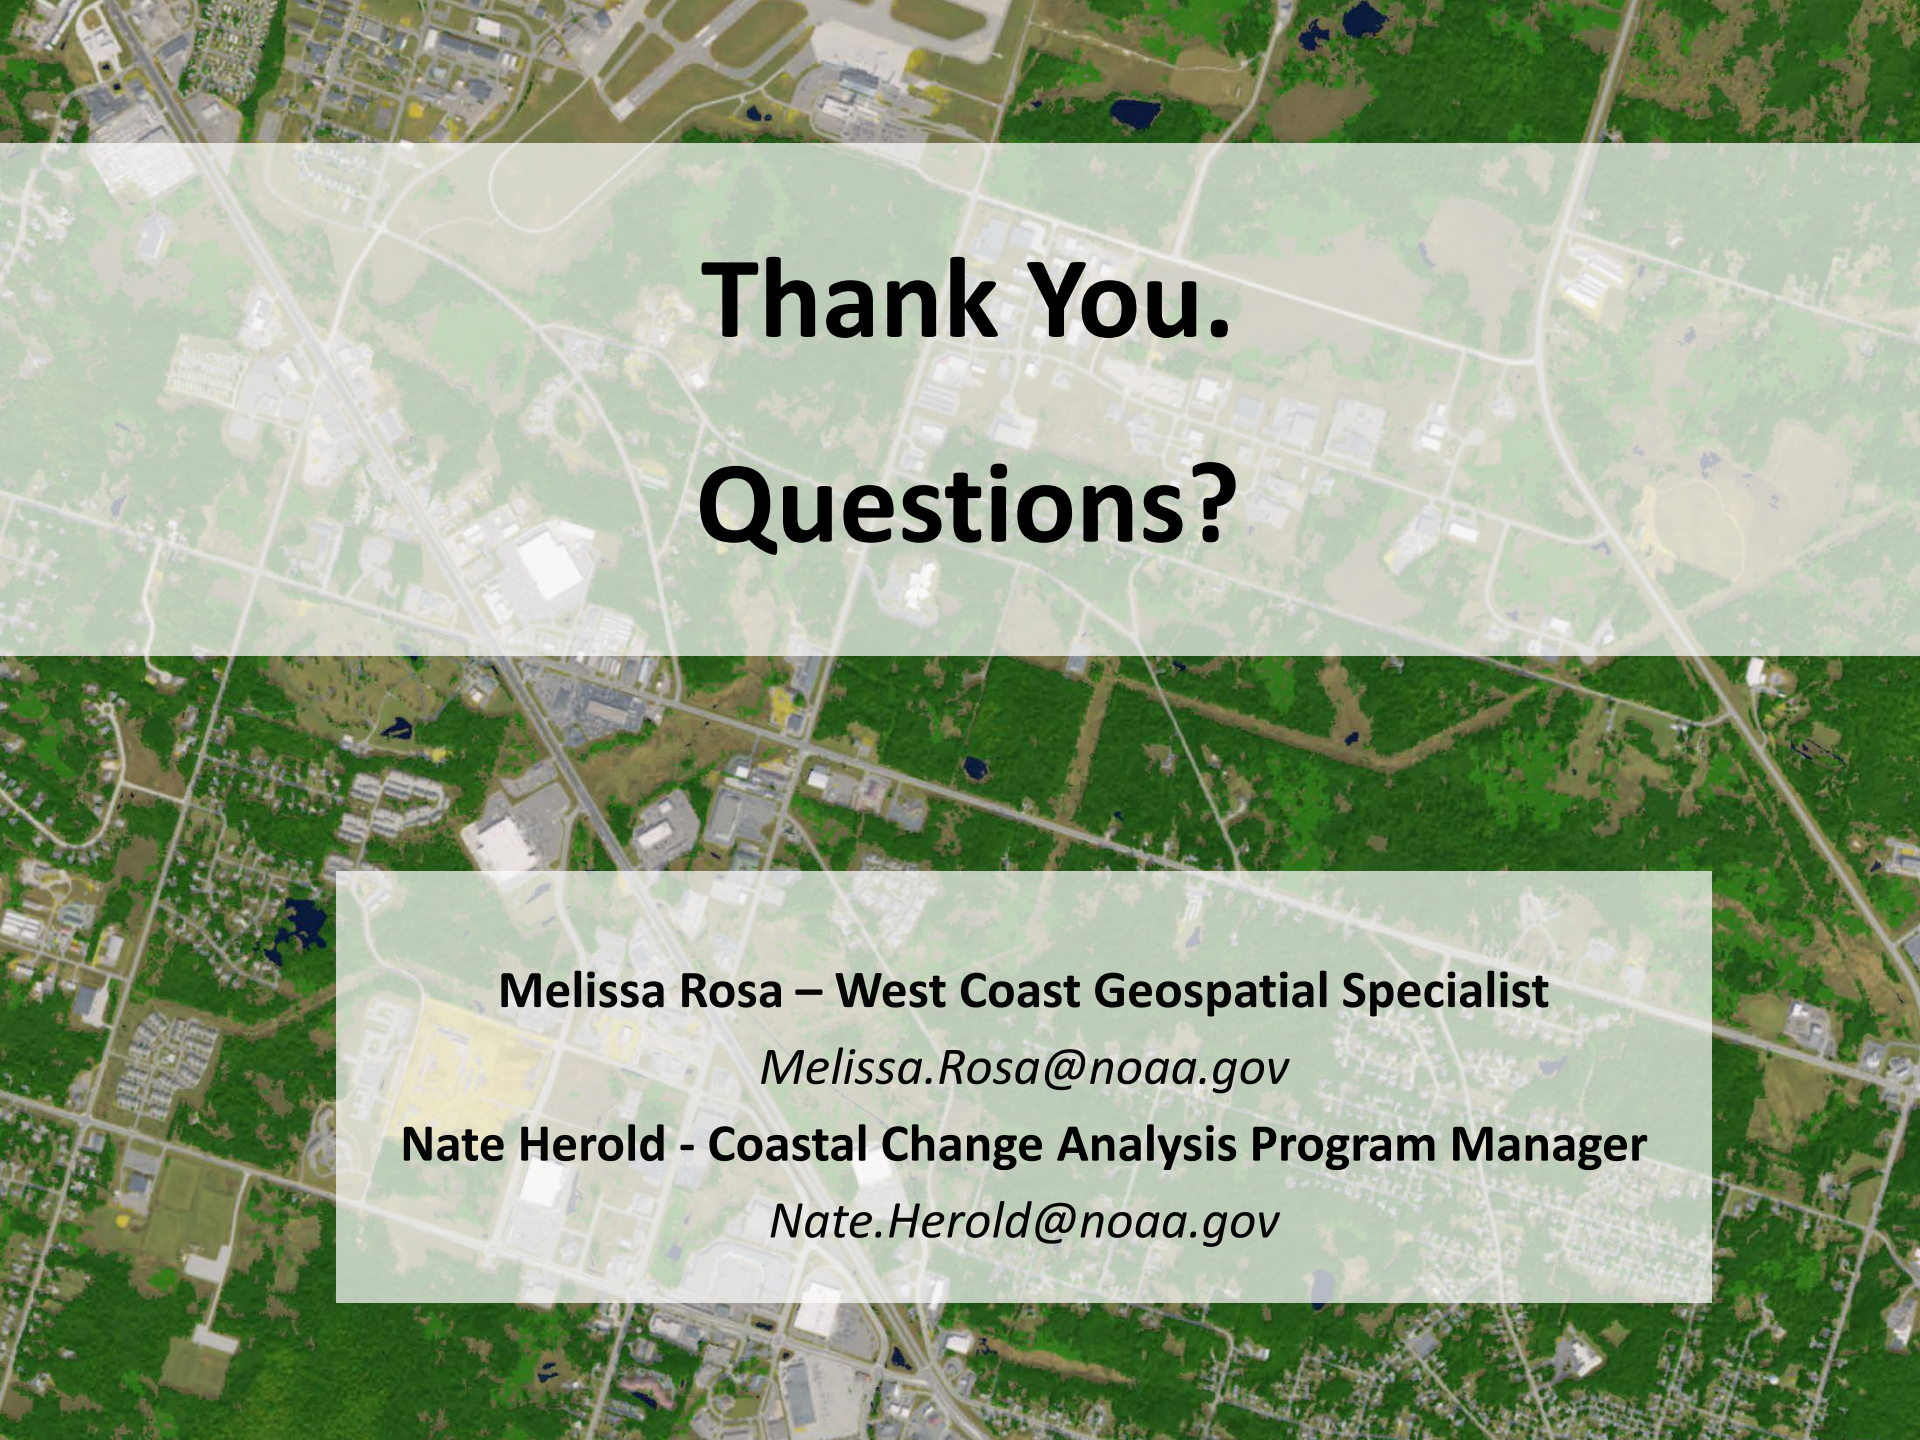

Next Steps

Short-term

- Snohomish, Island, and San Juan Counties, WA
 - Finalize final baseline (6 class) edits
 - Complete expanded C-CAP (wetland) class modeling/edits
 - Rollout final products at 2018 Washington URISA conference
- King and Skagit Counties, WA
 - Baseline editing (grass, shrub, forests)
 - Most of time on impervious
 - Draft stage at end of May
 - Looking for feedback from reviewers

Thank You. Questions?

High Resolution Baseline Classification Approach

Example Training
Regions (California)

Going Beyond 6 Categories

6 Baseline Categories

	Impervious	Grassland	Forest	Scrub/Shrub	Bare	Water	Note
Impervious	X						based on impervious classification
Open Space Developed	X	X					
Cultivated		X					detail added to grassland category
Pasture/Hay		X					
Grassland		X					
Deciduous Forest			X				based on spectral information (if avail)
Evergreen Forest			X				
Scrub/Shrub				X			direct from 6 class
Palustrine Forested Wetland			X				based on wetland ancillary data and/or additional classification
Palustrine Scrub/Shrub Wetland				X			
Palustrine Emergent Wetland		X					
Estuarine Forested Wetland			X				
Estuarine Scrub/Shrub Wetland				X			
Estuarine Emergent Wetland		X					
Unconsolidated Shore					X	X	
Barren Land					X		direct from 6 class
Open Water						X	direct from 6 class
Palustrine Aquatic Bed		X				X	based on wetland data or classification
Estuarine Aquatic Bed		X				X	

C-CAP Categories
