

# **CRISPR INTERFERENCE TECHNOLOGY FOR DEVELOPMENT OF MORE TOLERANT INDUSTRIAL YEAST STRAINS**

Elena Cámara, Ibai Lenitz, Lisbeth Olsson, Yvonne Nygård

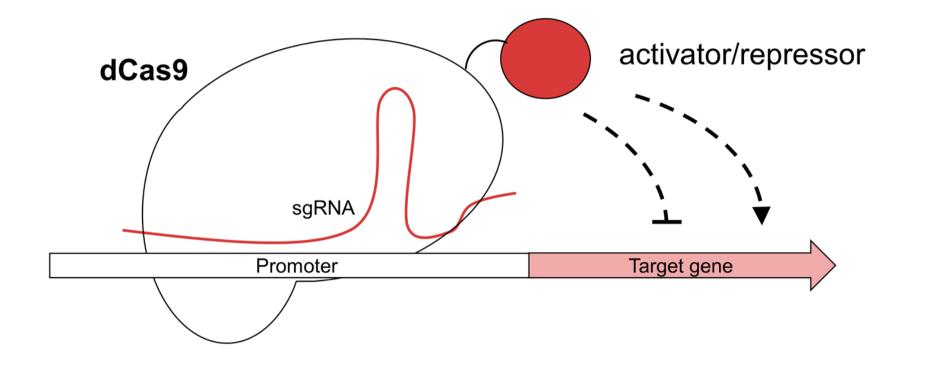

### **CRISPRi/a TECHNOLOGY**

The CRISPR interference / activation (CRISPRi/a) technology utilizes a catalytically inactive Cas9 (dCas9) to modulate the expression of genes targeted by an sgRNA, allowing the alteration of gene expression without altering the gene target sequence.

### **INDUSTRIAL STRAIN KE6-12**

Yeast strain optimized for ethanol production from lignocellulosic hydrolysates

Polyploid; optimized for xylose consumption by evolutionary engineering

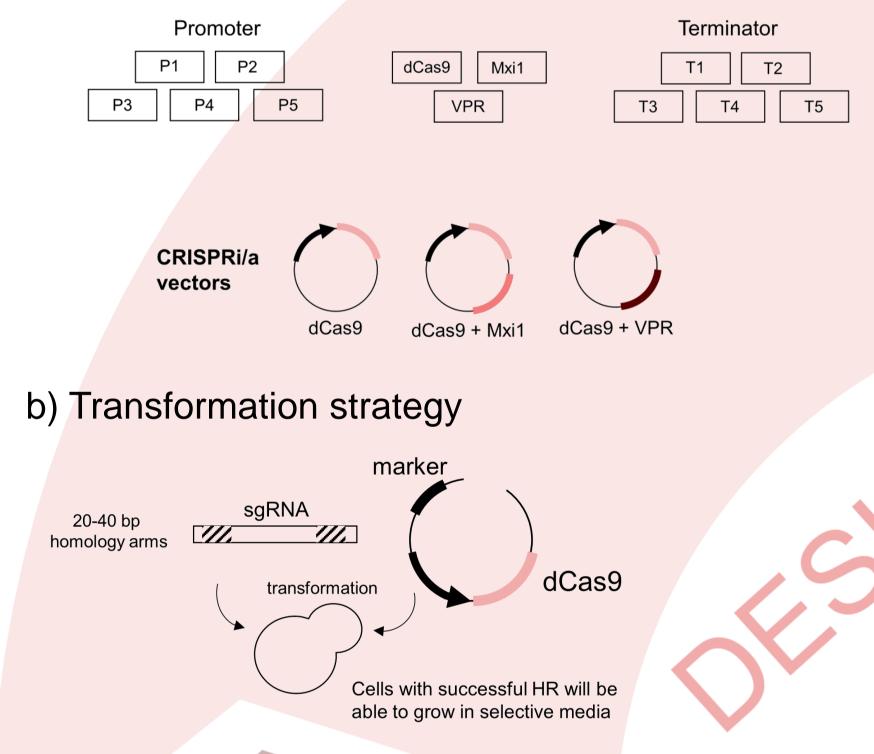

Is the CRISPRi/a technology suitable for industrial strains?

#### **Design of CRISPRi/a vectors** 1

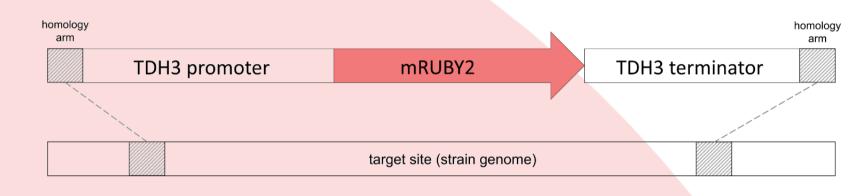

#### Vector construction a)

Assembly of vectors expressing dCas9 + activator or repressor by modular cloning (Moclo Yeast Toolkit).

## **2** Proof of Concept

a) Insertion of a red fluorescent gene by CRISPR/Cas9.

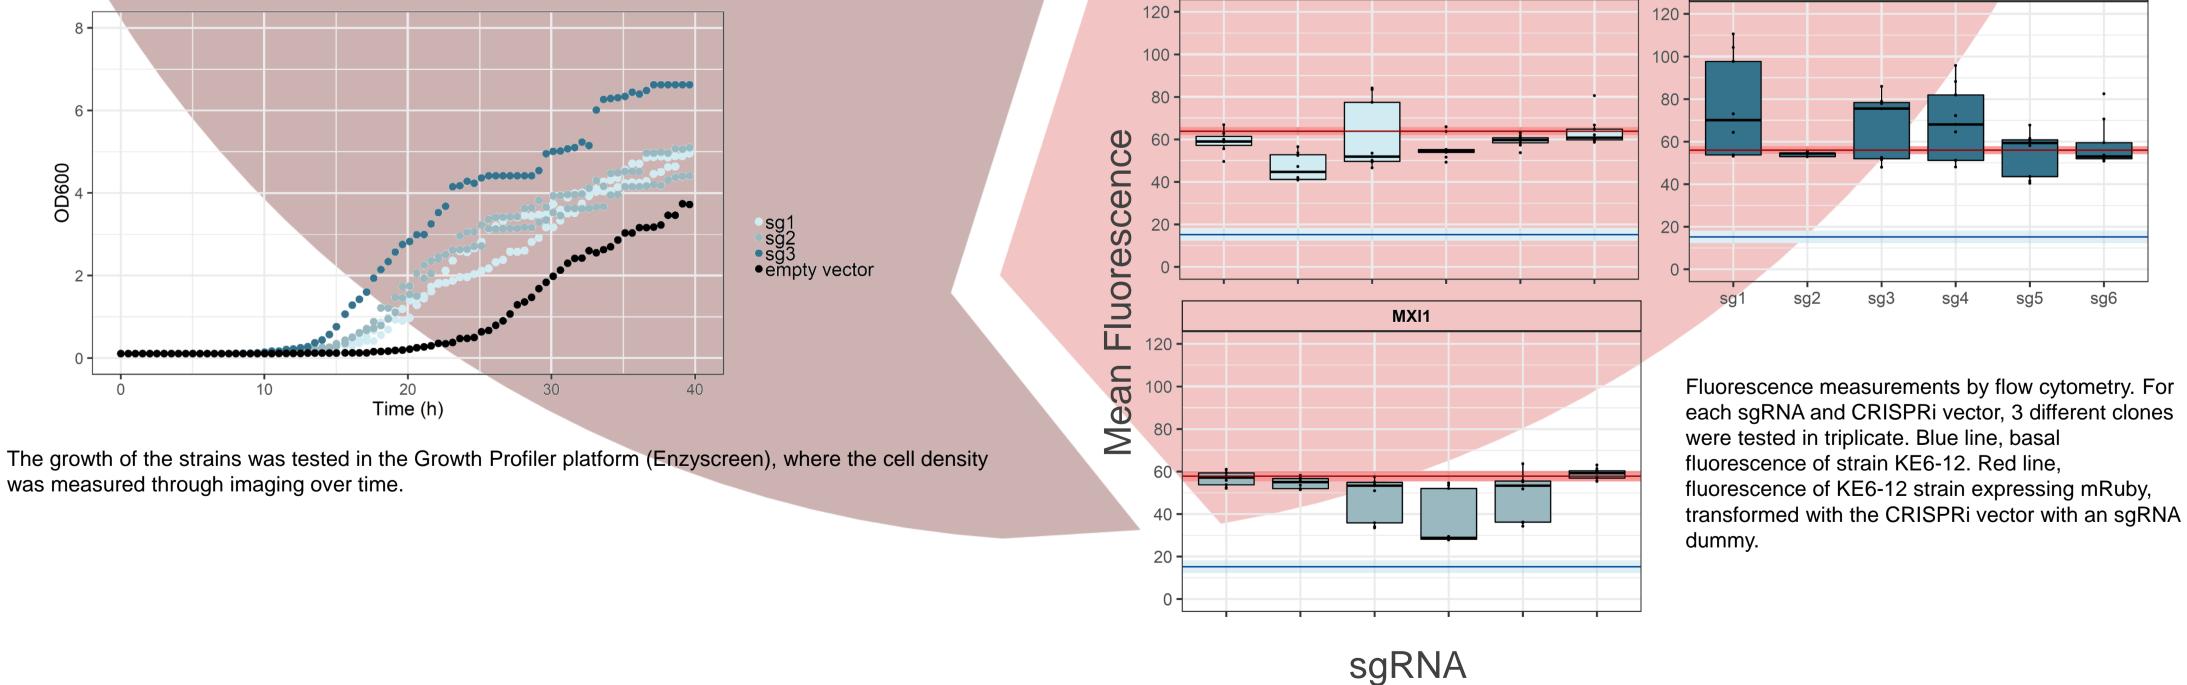

b) Transformation CRISPRi/a vectors + promoter targeting in different positions.

#### **TDH3** promoter dCas9/ Mxi1 vectors (-)sgRNA target site Expression mRuby2 KE6-12 (+)VP64/ VPR vectors

## **4** CRISPRi

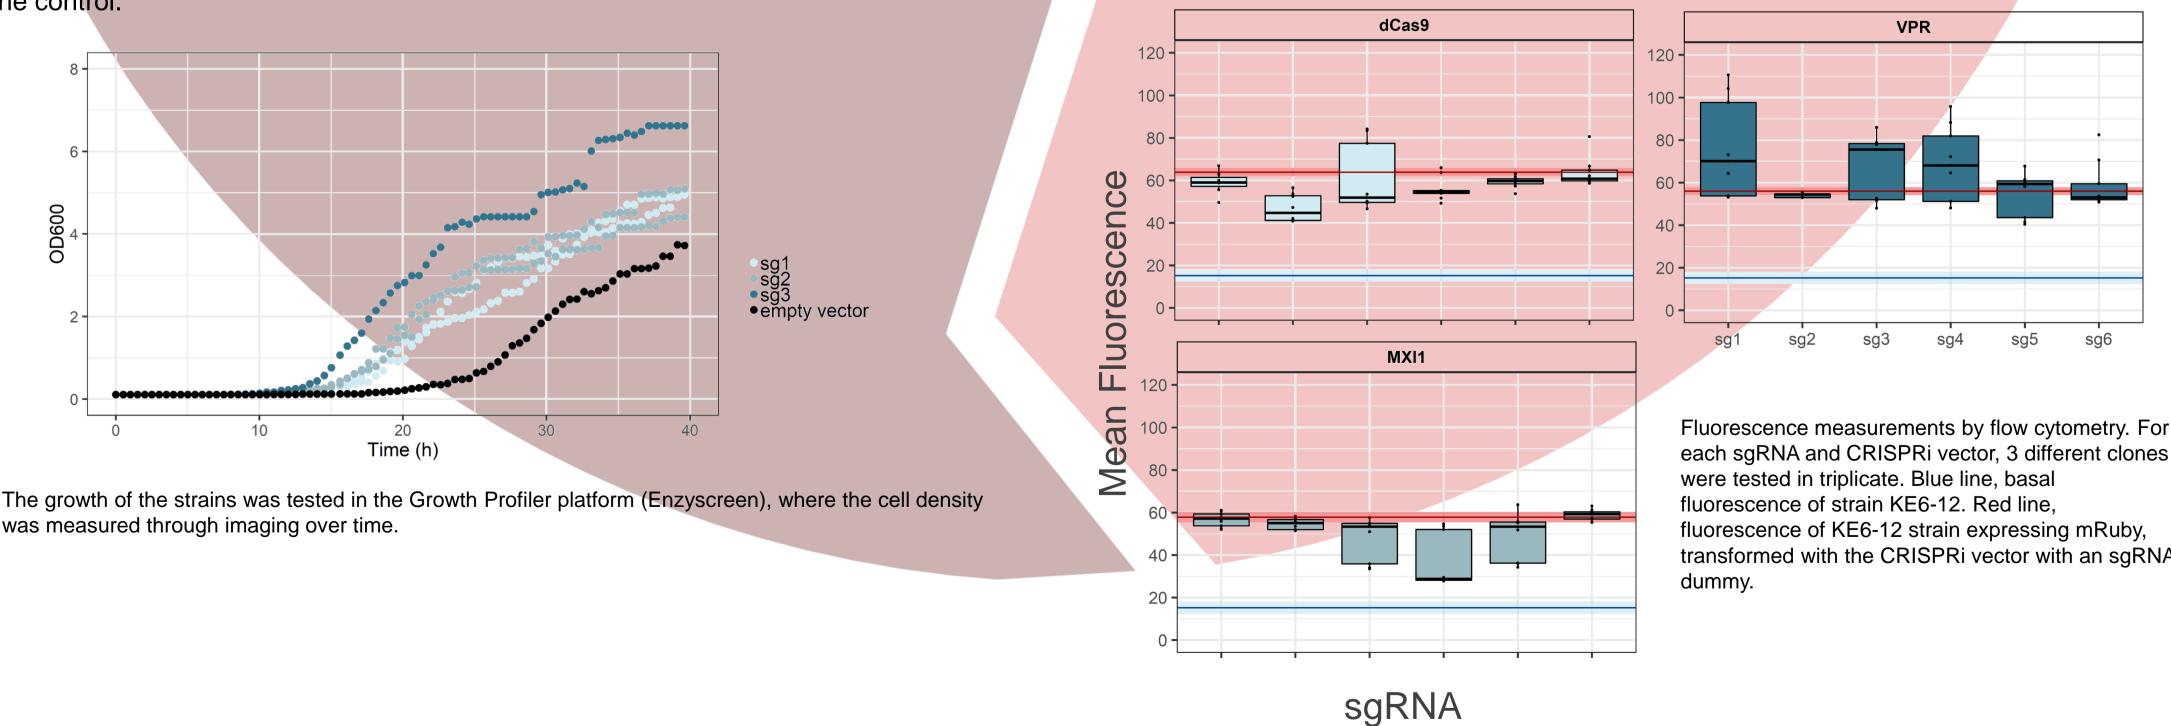

### improving tolerance

Downregulation of **SSK2** (gene involved in the Hog1 apoptotic pathway) has been shown to confer furfural resistance in laboratory yeast strains. When targeted by dCas-Mxi1, the **industrial** strain showed an improvement in growth in minimal media supplemented with 20mMof furfural, compared to the control.

## **3** Strain analysis

sgRNAs 3, 4 and 5 (-277, -351 and -469 bp relative to the promoter start) had a major impact on the strain expressing various CRISPRi vectors. A higher repression of mRuby2 was achieved with vectors containing dCas9-Mxi1 whereas in strains with dCas9-VPR the red expression of mRuby was highly upregulated.

- The CRISPRi technology was successfully implemented in an industrial strain.
- The change in expression achieved was highly dependent on the sgRNA and dCas9-variant used.
- Downregulation of SSK2 improves furfural tolerance in the industrial strain KE6-12.
