Rethinking Referral Pathways: Increasing Access to Intrauterine Contraception

GPIIN: General Practice IUD Inserter Network – a pilot project

Bell SFE¹, Harvey C², Mack F², Lambert S², Dean JA¹.

¹School of Public Health, The University of Queensland, Herston, Australia ²Iris Education, Brisbane, Australia

Background / Purpose

- Rates of unintended pregnancies in Australia high¹.
- Long Acting Reversible
 Contraception (LARC) methods
 (intrauterine devices (IUD)/implants)
 effective in reducing unintended
 pregnancy².
- LARC use in Australia is low compared to comparable middle-to-high income countries¹.
- Specialised training required to insert IUD training opportunities limited.
- Access to skilled IUD inserters in primary health settings is a barrier to wider IUD uptake by women³.
- GPs traditionally work in 'silos' and operate competitive businesses, only referring to specialists.

Aims of GPIIN Project:

- + identify, develop, train, implement, support and evaluate four General Practice (GP) Intrauterine Device (IUD) inserter networks in QLD/NSW
- + offer models for sustainable upscaling of GPIINs to other geographic locations across Australia

Approach

Identified 4 network locations (QLD, 3; NSW, 1).

Resources & Protocols Developed

- T Referral protocols and tools
- IUD Inserter Network kit

Network Implementation

Co-ordination, Education, Support

Mixed Methods Evaluation

- Quantitative analysis IUD activity
- T Qualitative interviews with Network facilitators and GPs

Trust to **Trusted** refer built and respected between GPs Network through GPIIN **Facilitators** networking increases GP **GPIINs** opportunities engagement need funds Inserting **GPs preferred 3** to support regular meetings appointments and facilitator with patient activities (Figure 2) **GPIIN** impact Broader dependent on **GPIIN** Network advertising & **Facilitator** recruitment engagement **Practice Engaging key** managers & nurses **local GPs** can encourage whole of practice engagement

Figure 1: Factors identified as contributing to successful GPIIN

Outcomes and Impacts

GP consults with patient; IUD chosen and need for insertion referral identified

Identification and referral to local network GP IUD inserter

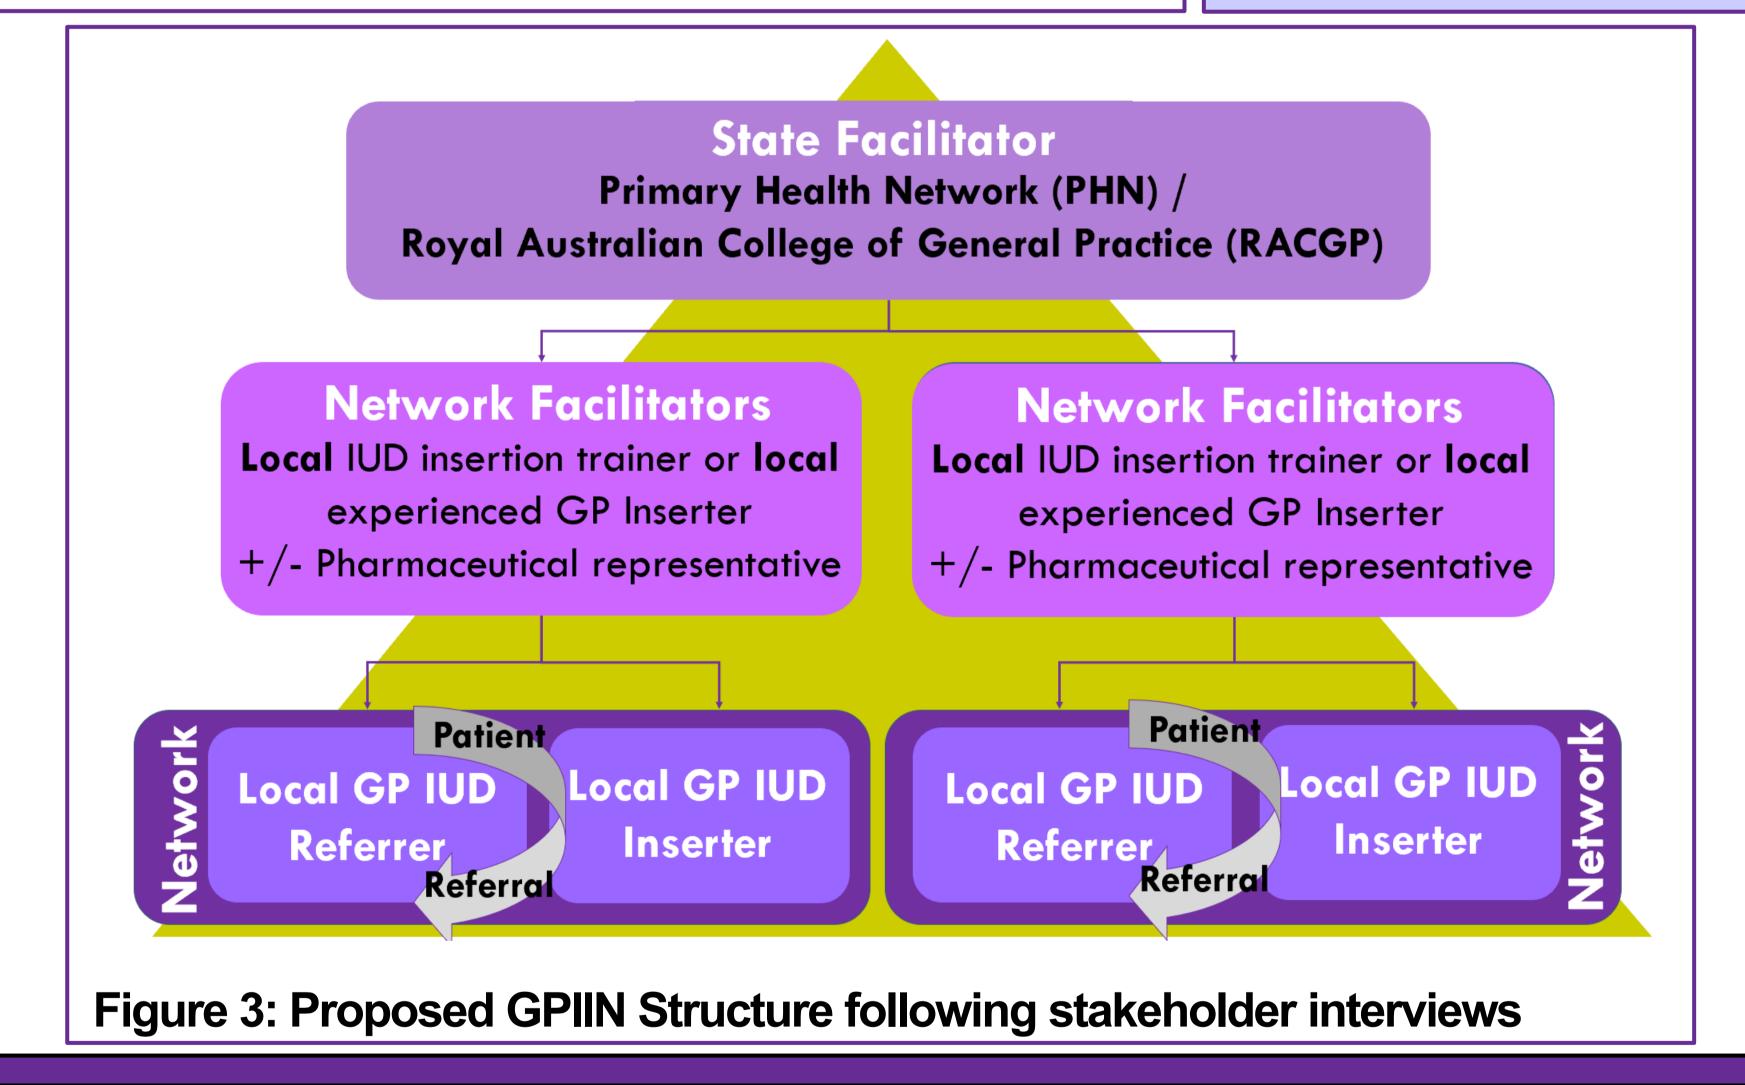

1st Consultation: Patient assessment preparation for insertion

2nd Consultation: IUD insertion

3rd Consultation: 2 week post IUD insertion follow-up

Patient returns with summary notes to care with Referrer GP

Figure 2: Refined GP-to-GP Referral Pathway

Innovation & Significance

- Timely innovative rethinking of "local referral pathways" to build and enhance GP-to-GP referral networks is needed to progress establishing GPIIN networks in different settings across Australia.
- Development of streamlined local referral pathways and GP communities of practice could increase IUD access for women.
- Future activity: Involve Primary Health Networks to continue building this GP-to-GP referral model.
