**ABSTRACT**

This report provides summary data on the number of fee-for-service Medi-Cal funded abortions performed during 2001, the type of facility where a procedure was performed, and Medi-Cal expenditures for these procedures. Only abortion claims received and processed for date-of-service January through December 2001 are included in this report. The term fee-for-service (FFS) used throughout this report refers to these claims. The data are presented at both county and state levels. *Estimates* of abortions for enrollees in Health Care Plans (HCP) are included since encounter data are not yet available. A distribution by county is provided.

This report, as well as previous years' abortion reports, are available at our web site, [www.dhs.ca.gov/MCSS](http://www.dhs.ca.gov/MCSS).

---

Questions regarding data provided in this report and any other inquiries related to Medi-Cal funded abortions in California may be directed to Jan Rains at (916) 657-0920 or [JRains@dhs.ca.gov](mailto:JRains@dhs.ca.gov).

---

## **HIGHLIGHTS**

- Medi-Cal funded a total of 49,571 fee-for-service (FFS) <sup>1</sup> abortions <sup>2</sup> in 2001 and paid an average of \$322 per procedure, totaling \$15,968,875 for all abortions.

There were an estimated 34,810 abortions for enrollees in HCPs, excluding San Mateo and Santa Barbara.

- The average monthly rate of abortions per 1,000 FFS eligible women aged 15-45 years was 5.75.
- Just over one-third, 34 percent, of Medi-Cal funded abortions were performed for women 20-24 years old.
- Abortion services to Hispanic females accounted for 35 percent of total FFS abortions, exceeding the percentage of white females for the ninth consecutive year.
- Undocumented alien eligible women accounted for 17 percent of FFS abortions, up from 15 percent in the previous year.
- Over half of the abortions, 53 percent, were done at a physician's office, averaging 30 abortions per office location.
- The cost of an abortion performed on a hospital inpatient basis averaged \$2,415 per abortion. Abortions done at a physician's office averaged \$288 per abortion. This is lower than the cost of abortions done in clinics and hospital outpatient settings.
- The number of Medi-Cal eligible women who received abortion services was 48,106. Ninety-seven percent of these women had only one abortion, the same percentage since 1998.

---

1 The term fee-for-service in this report refers to all abortion claims received and processed by the Medi-Cal fiscal intermediary for date-of-service January through December 2001, regardless of the enrollment plan.

2 The term abortion as used in this report refers to induced abortions only.

## **INTRODUCTION**

During calendar year 2001, there was a 15 percent increase in the average monthly number of Medi-Cal fee-for-service (FFS) eligible women due to a number of program expansions. Consequently, the actual number of Medi-Cal funded induced abortions has risen; however, the rate per eligible continues to decline. The number of induced abortions funded by Medi-Cal during 2001, on a FFS basis, was 49,571, 8 percent higher than in 2000. Medi-Cal payments for these abortions also rose 8 percent above the 2000 level. Although the number of FFS Medi-Cal funded abortions increased by eight percent, the average monthly rate of abortions per 1,000 FFS eligible women 15-45 years old dropped from 6.1 in 2000 to 5.75 in 2001. This average monthly rate has dropped substantially during the past decade, from a high of 10.01 in 1989.

The abortion rate for enrollees in Medi-Cal managed care plans is also assumed to have declined, but because of increased enrollment figures and aid-category specific adjustments, the projected abortions to Medi-Cal enrollees in health care plans (HCP) is 5,395 higher than last year. In 2001, there were an estimated 34,810 abortions provided to HCP enrollees, bringing the total estimated Medi-Cal funded induced abortions to 84,381.

Unfortunately, the total number of abortions for California women is unknown. This report, which encompasses services to Medi-Cal beneficiaries only, is based on a paid claims database and estimates from Medi-Cal managed care enrollment data.

### Data Qualifications

This report discusses induced abortions that occurred during calendar year 2001 and appear on the Medi-Cal paid claims file between January 2001 and September 2002. The 21-month file was used to allow for delays in submitting or processing claims.

Abortions performed for enrollees in health care plans (HCP), otherwise known as managed care, are included in this report only as estimates. Encounter claims for these HCPs, excluding San Mateo and Santa Barbara, are reported on a sporadic basis with an unknown level of completeness. Due to the limited reporting, it is not known exactly how many abortions these plans provided during 2001.

Beginning with the 1999 report, a revised methodology for estimating abortions provided by HCPs was developed due to information on trends in abortion rates by aid category over the past decade.

Counties participating in managed care require that beneficiaries in selected aid categories be placed into HCPs. These are referred to as "mandatory" aid codes. Although the abortion rates vary substantially by county, it was assumed that the **change** in rates from the base years prior to managed care (1991-1993) to the current year could be applied to counties without current year data. For example, the abortion rate for fee-for-service counties dropped 33 percent from the base years to calendar year 2001. This change in rate was applied to the base year rate for each of the managed care counties to project a current year abortion rate. The rate was then adjusted to reflect differing rates in the three major aid groups – Medically Indigent Children, Medically Needy Families, and Public Assistance Families. The estimates were derived by applying the projected abortion rates to the number of beneficiaries in the corresponding aid categories within each of the managed care counties. Table A displays these estimates by county.

To estimate the calendar year total, add the estimated 34,810 abortions to the reported 49,571 abortions. This yields an estimated total of 84,381 abortions for Medi-Cal beneficiaries in 2001.

**TABLE A

Yolo	65	318	383
All Other Counties	0	10,616	10,616

Estimates were derived by applying the average change from base years 1991-1993 to current year 2001 in the abortion rates in "mandatory aid codes" for fee-for-service counties to the eligibility data in managed care counties.

The abortion rates used in developing the estimates of abortions provided to women in HCPs are as follows:

Tulare	5.4032	5.9183	3.8305	3.1954	3.6280
Yolo	8.5431	9.3574	6.0565	5.0523	5.7363

**Medi-Cal FFS Eligibles, Induced Abortions and Expenditures**

The average monthly number of FFS eligible women ages 15-45 climbed fifteen percent from 2000 to 2001, while the number of abortions for the same group rose by eight percent.

The average monthly rate of abortions per 1,000 FFS eligible women continues to decline, from 6.10 in 2000 to 5.75 in 2001.

As mentioned in Data Qualifications, the availability of data from HCPs is extremely limited, which contributes to the long-term downward trend in the number of reported abortion services; however, data from counties that are solely fee-for-service support the assumption there has also been a true decrease in the abortion rate.

See Table 1 on next page.

**Distribution of Medi-Cal Funded Induced Abortions by Age and Ethnicity**

Women ages 20-24 accounted for the highest percent of abortions among all ethnic groups, 34 percent.

For the ninth year in a row, Hispanic women have accounted for the highest percentage of FFS abortions, fluctuating between 30 and 35 percent of the total. This apparent shift is most likely not an actual shift in the ethnicity of women seeking abortion services, but a reflection of the large number of Hispanic women eligible for emergency services as undocumented aliens. Women in these aid categories would be provided services via the FFS system rather than through HCPs.

Prior to 1993, white women represented the highest percentage, followed by black women.

Since 1990, the percentage of abortions for women of Asian and Pacific Islander origin to total abortions has fluctuated between four and five percent. Over the same decade, the percentage of abortions for black women has dropped from 26.5 percent in 1990 to 13 percent in 2001.

**Distribution of Medi-Cal Funded Induced Abortions by Age and Aid Category**

Eligible women in the aid category AFDC (Families) accounted for the highest percentage of Medi-Cal funded induced abortions, 43 percent; however, this aid category is the major component of managed care expansion, resulting in a declining representation in the FFS arena. Although the AFDC group still accounts for the greatest percentage of FFS abortions, the percent has dropped from 79 percent in 1994 to 43 percent in 2001.

The second largest group is the undocumented alien women, 17 percent of FFS abortions, up from ten percent in 1998. It is important to keep in mind that the majority of health care plans do not cover services for undocumented aliens, so this aid group is concentrated in the FFS delivery system.

The minor consent aid category follows closely with 13 percent of total FFS abortions.

Note: See Table 9 for aid category distribution by county.

Source: State of California, Department of Health Services, HR70 Summary, Maternal Care File, 2001.

**Distribution of Medi-Cal Funded Induced Abortions by Type of Facility**

During 2001, 53 percent of Medi-Cal funded abortions were performed at physicians' offices, followed by clinics, 33 percent. In comparison, 47 percent of Medi-Cal payments for abortion services were to physicians. Abortions performed at physicians' offices were the least costly. At an average cost of \$288 per abortion, it was \$8 less than the cost at a clinic and \$150 less than the cost at a hospital outpatient department.

The overall FFS average cost per abortion declined from \$368 in 1990 to \$322 in 2001, a 14 percent drop, and the same amount as in calendar year 2000.

Even though only two-tenths of one percent of all abortions were performed at hospital inpatient departments, Medi-Cal payments for these abortions accounted for four percent of total Medi-Cal FFS abortion expenditures, averaging \$2,415 per abortion. The average cost per abortion, excluding those done in hospital inpatient departments, was \$312.

Medi-Cal Funded Induced Abortions 2001

The number of facilities providing abortion services increased three percent from 2000 to 2001. The greatest change was in the number of inpatient hospitals providing abortions, which increased 17 percent, from 86 facilities in 2000 to 101 in 2001, a reversal of what occurred the prior year. These hospitals provided an average of two abortions per facility.

The average number of abortions performed in physicians' offices was 30, the same as in the two previous years.

The number of clinics providing abortion services rose twelve percent, from 172 to 192. The number of abortions done at these facilities increased thirteen percent from 14,428 in 2000 to 16,290 in 2001. The result is a one percent increase in the average number of abortions performed per clinic.

**Frequency of Medi-Cal Funded Induced Abortions**

During 2001, a total of 48,106 FFS eligible women had at least one abortion, which is a nine percent increase over calendar year 2000. Ninety-seven percent of these women, 46,686, had only one abortion, the same percentage as in 1999 and 2000.

**County Distributions of Medi-Cal Funded Induced Abortions**

The following four tables display the distribution of abortion services by county. Individual county data do not necessarily reflect the same number and expenditure distributions that exist statewide.

Data provided in Tables 7, 8, 9, 10 and 13 are distributed by county of eligibility; i.e., the county that appears on the Medi-Cal card of the beneficiary. It should be noted that this is not necessarily the county of residence at the time of service, since a beneficiary could have moved from one county to another, and her eligibility might have been transferred at the time the service was rendered. Data in these tables may also include services performed outside California for a Medi-Cal beneficiary.

Data provided in Tables 11 and 12 are distributed by county of provider; i.e., county of occurrence.
