Closing Statements by CHAIRMAN HART

163

Adjournment

165

Certificate of Reporter

166

P R O C E E D I N G S

--oo0oo--

CHAIRMAN HART: We'll call the hearing to order.

I'm Senator Gary Hart from Santa Barbara. With me is Assemblyman John Burton from here in San Francisco. We are expecting later this morning Senator Milton Marks, also from Francisco, and Assemblyman Bill Filante to be joining us either later this morning or in the afternoon.

The purpose of our hearing today is to understand the progress that's been made on the development of a State plan for battling AIDS and HIV infection. This plan is a result in part of legislative budget language that was adopted last year in the adoption of the State budget. The plan is due to be presented under this legislation by April 1st, that is tomorrow. So, we're here to understand the progress that's been made on this report, understand what the report is saying, and try to get a better understanding of where we are in dealing with this awful disease that has caused us much pain and suffering and death, and how much it also has cost the State of California and local agencies.

We have a number of outstanding witnesses. I want to thank all of them for joining us today.

Assemblyman Burton, would you like to say anything before we get underway?

ASSEMBLYMAN BURTON: No, I'd just like to commend the Chairman for bringing this hearing to San Francisco. I look forward to hearing Dr. Kizer's comments and look forward to trying to get the administration as involved in the problem of

1 dealing with AIDS, both in research, prevention, care and
2 treatment, as the legislative branch of government is. I look
3 forward to Dr. Kizer's testimony.

4 CHAIRMAN HART: With that ominous introduction, let me
5 ask Dr. Kizer, our Director of Health, to come forward. He's our
6 first witness, the Co-Chair of the California AIDS Leadership
7 Committee.

8 Dr. Kizer, thank you very much for joining us this
9 morning.

10 DR. KIZER: Good morning, Senator, Mr. Burton.

11 It's a pleasure to be here. I've spoken with your
12 staff. The document that is the subject of discussion today is
13 in an advanced stage of completion, but it's not yet finalized.
14 Comments are still being received by members of the AIDS
15 Leadership Committee. They're being incorporated into the
16 document.

17 What I thought would be useful to do in the minutes that
18 I have with you this morning is talk a little bit about where
19 we've been; how -- what the process has been in development of
20 this; where that fits in with the overall other efforts that have
21 been undertaken; what you can expect as far as the completion of
22 the document; some of the general concepts that have guided our
23 thinking in development of this document; and then what some of
24 the priority recommendations are that you will see when the
25 document is completed, realizing that the document will contain a
26 long list -- probably a hundred or more -- more specific
27 recommendations. I want to focus on probably a dozen or so
28 primary recommendations.

1 I think it's perhaps useful to just reiterate a point,
2 and then I don't want to take a lot of time to do this, but much
3 has been done in the State of California, and certainly in cities
4 like San Francisco, to combat the AIDS epidemic in the past
5 several years.

6 When I joined the Department of Health Services in 1984,
7 the Department had a budget of \$500,000 to deal with AIDS, and we
8 did not have a single individual that was specifically devoted to
9 AIDS. Since that time, the budget has grown markedly; the State
10 AIDS budget now exceeds \$100 million. We have an Office of AIDS
11 that has about a hundred staff and numerous other people in other
12 parts of the Department that are working on AIDS, either
13 primarily or as a corollary to their other activities within the
14 Department of Health Services.

15 Much planning has occurred in the State. We've issued
16 numerous documents. These are just some of the things. You've
17 seen many of these we've shared with the Legislature. Many of
18 the planning documents we have developed have been submitted to
19 peer review medical literature. I've enclosed copies of three of
20 these articles in the packets that were prepared for you today.
21 It's not my intent to go back through all that.

22 The point I would like to leave with you here is that I
23 ~~think the efforts that we are talking about in the document that~~
24 we have had under development for the past several months builds
25 upon those, and, indeed, in many cases, underscores the value of
26 things we've undertaken, why we need to continue certain things,
27 where we need to refocus or enhance, other things that we have
28 undertaken in the past.

1 Let me just be a little bit more specific about the
2 process that we have undertaken in the past several months. The
3 Department has utilized a variety of advisory committees to deal
4 with AIDS, beginning in about 1983, prior to my joining the
5 Department. Since then, a number of groups were convened. It
6 was apparent to me last winter, early spring, that we needed a
7 new vehicle, a new advisory group, that combined certain other
8 elements and also was a little broader based. That was the
9 genesis and thinking of the California AIDS Leadership Committee,
10 which is a group of about 35 individuals that covers a wide
11 spectrum of expertise in the State. I think it's representative
12 of the major factions that are involved in combatting the AIDS
13 epidemic. And that was formally -- invitations went out in the
14 spring, and as I recall, our first meeting was in June of 1988.

15 Since then, we have met on a monthly basis and have
16 produced a number of things. Again, I'm not going to take the
17 time to review all the things that the Committee has done;
18 focusing instead just on the plan document that is the focus of
19 this Committee.

20 Well, in addition to the Leadership Committee, we also
21 have set up a number of subcommittees that also have broad
22 representation. There are nine subcommittees. In addition,
23 there have been several ad hoc subcommittees set up. Those have
24 memberships ranging from anywhere from 15 to 25, and in some
25 cases a few more than that, individuals.

26 So, throughout the development process of this
27 comprehensive plan that we've been working on, I think it's fair
28

1 to say that at least 250 individuals have been involved in that
2 process -- indeed, many more in one way or another -- so that
3 what we are working on has broad based input. It really has
4 tried to incorporate the views and perspectives, the thinking,
5 and the wisdom of a whole lot of folks who have been involved
6 with this from the beginning.

7 All of that was pulled together earlier this year. An
8 initial draft document was reviewed by the Executive Committee of
9 the AIDS Leadership Committee, and that produced a first draft
10 document of the overall plan that was reviewed last month for the
11 first time by the overall AIDS Leadership Committee. They had a
12 number of comments and things they wanted -- and I should step
13 back a minute and say that the purpose of that first document was
14 to make sure that all of the important things that had evolved
15 from the subcommittees were indeed incorporated in the first
16 document. I think that's largely the case. Now we're working on
17 some of the editing, tying it all together. Anything that has as
18 much input as that needs to be pulled together to a document that
19 will truly be useable, will be succinct, something that, indeed,
20 Legislators will read as well as everybody else. I don't think
21 it serves any purpose to produce a document like New York City
22 has, two inches thick, that probably no one would read.

23 But in any case, where we are is that the next iteration
24 of that will be reviewed by the AIDS Leadership Committee on
25 April 12th. Subsequent to that meeting, we will make whatever
26 revisions or fine tuning is necessary based on input at that
27 time. We will then proceed, assuming that the Committee agrees
28

1 with this, to disseminating the document more widely, schedule
2 some public hearings on it, and again revise it based on that,
3 and hopefully have the final document to you and to the Governor
4 in about June.

5 So, that is what I think you can expect as far as a time
6 line.

7 It's probably worth mentioning a few of the general
8 concepts or some of the thinking that has gone into this.

9 CHAIRMAN HART: Dr. Kizer, if I could just interrupt on
10 this point about the completion date.

11 I'm a little concerned. It's sort of a complex process,
12 but part of what we were hoping would come out of this, with this
13 report, would be some assistance to us this year during our
14 legislative deliberations on adoption of the State budget, on
15 hearing bills, and we're right now getting into the heart of that
16 process.

17 If we do not have a final document before us, say,
18 before the Legislature adjourns in early summer, we're going to
19 lose a substantial opportunity this year to react to the advice
20 that the Committee sets forward.

21 DR. KIZER: I understand what you're saying, and this is
22 something we've discussed with your staff and with other
23 legislative staff. I do -- I understand that many Legislators
24 are interested in this, have copies already of this, based on
25 calls I've received from the Members.

26 We expect that with the next iteration that will go out
27 in April that it will be further along, and that the further
28

1 process will be more fine tuning it and letting a wider audience
2 see it than has been involved with it to date.

3 I think that what will be in it, though, will be
4 certainly sufficient to guide and provide directions to the
5 Legislature and the administration on both budget matters as well
6 as legislative matters. Indeed, one of the points or requests
7 that was made at the last meeting was that we go through and
8 specifically look at what things require legislation and make
9 that a little bit more clear, as opposed to things that may be
10 able to be achieved by administrative action or may not even be
11 State government focused at all.

12 So, your point is well taken, and it's appreciated, and
13 I think that you will have something that can be useful in a time
14 frame that will be needed.

15 CHAIRMAN HART: All right.

16 One thing, in looking through the draft, that is
17 appealing to me is the degree of specificity. There are some
18 very specific recommendations.

19 Sometimes plans are so kind of conceptual that they
20 aren't much help. In this regard, in many respects, this plan is
21 quite specific. That's very helpful to us, I think, in the
22 Legislature.

23 You mentioned impacting the budget process. One thing
24 in the report that strikes me is how little attention is given to
25 money -- I know that's a difficult issue with the Gann Limit and
26 the Governor's positions -- but how do you see this plan
27 impacting the budgetary process when there is so little
28

1 attention, almost no attention, given to what this plan is going
2 to cost? What are our costs going to be a year from now? What
3 do you see our costs being three or five years from now?

4 DR. KIZER: That is a good point, actually. It saves me
5 from having to initiate that discussion.

6 That was a conscious decision that was made on the part
7 of the Committee as we went through this process, to not get hung
8 up on -- to not prepare a document that was budget-driven.

9 In other words, we would prepare a document that we
10 thought charted where we needed to go in dealing with the AIDS
11 epidemic in California, realizing that we will not have funds to
12 do everything that's recommended in the document this year.
13 Certainly in the context of current budget constraints this year,
14 we're not going to be able to do everything that's in there, nor
15 should we necessarily, maybe, expect to.

16 But having been involved in some of this planning
17 process before, and realizing that when you start with a
18 budget-driven document, you may not be able to lay out quite the
19 vision and the recommendations that you may want to, it was a
20 conscious decision on our part early on in the development of
21 this that we would ignore some of that, realizing that you can't
22 ignore it in the long term, but that we would be able to produce
23 a better document if we laid out where we thought we needed to
24 go, realizing that we would lay out priorities, lay out agendas
25 that, as resources became available, we could then fill in some
26 of those gaps.

27
28

1 If we started with the idea that we had X number of
2 dollars, and that it was going to cost this, then we might not be
3 able to provide the guidance and the agenda that we'd hoped to be
4 able to.

5 CHAIRMAN HART: Just one other question on that area.

6 If you've got a whole series of recommendations, are you
7 willing, after you've completed the reports, to prioritize those?

8 Again, as we're dealing with the budget, we obviously
9 have to make some very difficult choices in terms of priorities.
10 Are you willing to say, "Of our recommendations, these are the
11 ones that we think are most important and the ones that, for
12 whatever dollars are available, are our highest priorities in
13 terms of funding." Is that spoken to in the report?

14 DR. KIZER: I don't see how we can escape doing that,
15 although I'm not sure that we'll see all of that discussion in
16 the document. Indeed, I think often that's the sort of
17 discussion that occurs at forums such as this as we talk about
18 specific issues, whether they be specific pieces of legislation
19 or specific items in the budget.

20 So, we would hope that the document that's being
21 prepared lays out a template for where we should go and puts
22 priorities in there, and then as we look at the specific resource
23 questions, that we would use that as guidance to decide where
24 monies and personnel and other things are going to fit in.

25 CHAIRMAN HART: Mr. Burton.

26 ASSEMBLYMAN BURTON: Thank you, Mr. Chair.
27
28

1 If we don't have some monies, either allocated or
2 whatever, I mean, this is like a document some college could put
3 out and say this is what the government ought to do if it feels
4 like doing it.

5 I mean, this thing is an agent of government. It's a
6 result of a law, if you will -- you know, the Legislature and the
7 Governor agreeing -- and to come up with a great plan for which
8 there is no funding, I mean, to me -- and I know the State is
9 broke. I think it's broke; the Governor doesn't -- doesn't make
10 a lot of sense because we'll have a great document that will sit
11 there with all of the great documents that government has
12 created, and there's no follow-through program.

13 We had a State law -- we have a State law that I think
14 requires counties to come up with a comprehensive plan on AIDS.
15 I put, you know, some money in the budget so that could be
16 implemented. That money goes out.

17 In a report, we can still say we have a plan that says
18 something should be done, but if there's no gasoline to drive the
19 engine, you know, it's just going to be a great historical
20 document, but we've got to have -- I agree very much with the
21 Chairman -- we've got to have something to bring it into focus in
22 this budget process to see what we can do, given the limited
23 resources that the State has.

24 I don't know. I mean, I know you don't want to be
25 driven by the budget, but that's what we're driven by; otherwise,
26 we've got a hell of a document, and it's all over and nothing
27 happened.
28

1 DR. KIZER: In a way, I think we're all on the same
2 thinking here, but also I think there are -- one of the other
3 conscious decisions and thought processes that we went through
4 early on in conceptualizing how we would develop this -- well,
5 there are two things, I think, that are worth pointing out so
6 that you understand where we're coming from.

7 One is that this is intended to be a State of California
8 guidance document, not necessarily or solely the State of
9 California government document. There's a lot in here --
10 recommendations are made that may or may not apply to State
11 government per se. State government may have a role there, may
12 be able to facilitate things, but there's also direction being
13 given to other players in the State of California.

14 By the same token, one of the concepts or thinking that
15 went into this is that we have to view AIDS within the overall
16 context of public health and the health care system that we have,
17 and the problems that exist there. To perhaps make it a little
18 bit more specific, one of the recommendations that you may or may
19 not have seen has to do with providing grief counseling for
20 individuals who are HIV infected or who have partners who are
21 infected. We support that.

22 But by the same token, if you can't provide funding for
23 many of the mentally ill people who are roaming the streets of
24 San Francisco and elsewhere, somewhere that balance, or those
25 sorts of considerations are going to have to be made with you
26 all, and, hopefully, in context with the administration, and that
27 we have to look at these things. While that may be very
28

1 desirable in the overall State priorities, we may not be able to
2 do that this year, but that'll be a target for next year or the
3 year after, or as resources become available.

4 So again, your points are well taken. Those are things
5 that were discussed, how we should do this, early on. The
6 overwhelming consensus of the group that has been working on this
7 was that we should lay out a template that would be for the State
8 of California. It would not be budget-driven, realizing that we
9 can't escape those things as we actually implement the different
10 recommendations that are made.

11 CHAIRMAN HART: There were some other points I think you
12 wanted to make.

13 DR. KIZER: Well, I think some of them we've kind of
14 touched on already as far as some of the general thinking that
15 has gone into the development of this.

16 I guess two other points that I would make, and one of
17 them follows on the heels of what I just said about AIDS has
18 occurred in a very -- the epidemic has occurred at a very
19 difficult time in health care overall. There is, indeed, a
20 revolution going on in health care. There are many, many serious
21 problems in the health care system over all, and indeed, AIDS
22 probably couldn't come at a worse time as far as stability in the
23 health care system.

24 So, one of the other thoughts or general concepts that
25 has guided our thinking on this is that we would like to use AIDS
26 also as a vehicle to perhaps develop some better models of how we
27 provide health care over all. There are other conditions out
28

1 there that are analogous to this, and we think that, using AIDS,
2 we can also provide some overall guidance to how the health care
3 system might be changed in the future, as it certainly is
4 changing. We think AIDS can be very useful in that regard.

5 The other point I would make is that the changing nature
6 of the epidemic, and that information about the epidemic, and the
7 wide array of situations and circumstances that exist in
8 California, require that there be considerable flexibility in the
9 document. And that certain things may be more or less applicable
10 to different parts of this very large and heterogeneous State.

11 I think with those -- those were some of the general
12 concepts, the five or six of them, that I wanted to lay out for
13 you. It may be worthwhile in going down some of the more
14 specific priority recommendations that will be contained in this,
15 and indeed, I think you may already have gotten a flavor for this
16 by your review of it. And these are not necessarily in a
17 priority order. I'm going to list them.

18 One, we think that we should implement coordinated
19 State-local HIV disease planning throughout California. We have
20 previously prepared a document that was a State document; it was
21 also one of the articles that you have in your packets in the
22 peer-reviewed medical literature that lays out an agenda or a
23 framework by which the State and local government can join
24 together in a partnership. It is at this time largely a concept
25 which we think needs to be implemented throughout the State. So,
26 that is -- will be one of our priority recommendations.

27
28

1 Building on one of the -- some of the comments already
2 made, both by yourselves as well as me, that we need to develop a
3 comprehensive statewide system of ambulatory, community-based
4 health care for persons with HIV infection, expanding on existing
5 models and programs where needed, and focusing on elevating the
6 role of primary care physicians within managed care delivery
7 systems in particular.

8 We need to look at the financing of health care for HIV
9 infected persons through a combination of public and private
10 means that distributes the burden of that care equitably among
11 the payers and encourages a cost effective and compassionate
12 delivery of services. We have a number of specific
13 recommendations in there, even with that, some of which are
14 currently undergoing review and further analysis.

15 We need to continue to emphasize prevention of HIV
16 infection through education, taking particular advantage of the
17 work site. We think there's a -- much that can be done through
18 the work site in HIV prevention and education.

19 I think we -- in the general rubric of education, some
20 of the specific activities in this regard that we should focus
21 on, including continuing the general public education campaign
22 about HIV disease that we previously embarked upon, we need to
23 look at expanding programs, some current, and both current and
24 projected: high-risk persons, including teenagers, intravenous
25 drug users, closet or fast-lane gays, bisexual men, minorities,
26 homeless youth, high-risk heterosexuals, persons having other
27 sexually transmitted diseases, correctional facility inmates, and
28 public safety and emergency response personnel.

1 Indeed, you may have read comments that I made
2 previously that we believe every incarcerated person should
3 receive HIV prevention education and have the opportunity to be
4 tested for HIV infection.

5 A fifth recommendation, we believe that all the schools
6 should have an age-appropriate HIV disease prevention program,
7 beginning no later than the fifth grade. That's not to preclude
8 earlier, but we think that as a minimum, all schools should have
9 that beginning at the fifth grade.

10 We think we need to --

11 CHAIRMAN HART: Could I ask on that point.

12 I've had bills that, as you know, on a couple of
13 occasions have not been as ambitious as that, have suggested
14 seventh grade. That that's when we ought to start, we ought to
15 require it. The Governor has vetoed the legislation.

16 In that context, when this report is completed, what's
17 going to be the process? Is this hand-delivered by you to the
18 Governor? Is this something that's going to be debated in the
19 cabinet by the Governor? Or, do you sort of deliver it and hold
20 your breath, and see if anyone reacts to it?

21 Do we have any kind of sense as to what the process will
22 be on some of these recommendations, such as this, that the
23 Governor previously has rejected?

24 DR. KIZER: Well, again, going back to some of the
25 comments made before, the conscious decision was made that we
26 would provide a document that provided the best advice and
27 thinking of people who have been involved in AIDS and health care
28 in dealing with this epidemic in California.

1 It is my intent, certainly, to present this to the
2 Governor. He's my boss; he's my primary boss. We will provide
3 it to the Legislature as well. And we -- I will advance it up
4 through the chain, and I expect that there certainly will be
5 discussion and review within the administration. I do not at
6 this time know exactly what course that will take.

7 But again, the thinking here is that we would provide a
8 document that reflected the best thinking that we can at this
9 time. And it's quite possible that not all the recommendations,
10 or not everything that is in it, will be acted upon immediately,
11 but certainly that would be our hope. These are recommendations
12 that we think need to be taken to combat the epidemic here in
13 California.

14 CHAIRMAN HART: Would you hope that the Governor would
15 basically accept and endorse the recommendations? Maybe not
16 dotting every "i" and crossing every "t", but like the
17 President's Commission, I think President Bush has basically
18 embraced the recommendations of his Presidential Commission.

19 Will you be hoping and lobbying for the Governor to
20 endorse these recommendations?

21 DR. KIZER: Well, I suspect, not dissimilar to anyone
22 that puts a lot of work into something, that they hope that the
23 product will be well received and embraced by those that it's
24 presented to.

25 ASSEMBLYMAN BURTON: Kind of a nonresponse.

26 Are you going to go in and, I mean, lobby? Fight for
27 it?

1 Let's take a simple one. The Senator's bill that is
2 more modest than yours, saying that this education should be
3 started in the seventh grade. It's down on the Governor's desk,
4 you know. Be kind of a piece of cake deal for him to sign it.
5 He's not committing future generations of Californians to
6 impoverishment through taxation; he's probably doing something to
7 provide there will be future generations of Californians.

8 Are you going to go heavy?

9 DR. KIZER: Well, Mr. Burton, your --

10 ASSEMBLYMAN BURTON: You and [U.S. Surgeon General]
11 Everett Koop, you know, could go down in history.

12 DR. KIZER: We certainly could go down.

13 (Laughter.)

14 DR. KIZER: You're very familiar with the process by
15 which bills or positions are recommended on bills, and reviewed,
16 and critiqued. We will be asked for our input on that bill, and
17 obviously we'll be espousing the position of the Department.

18 I cannot speak for the Governor.

19 ASSEMBLYMAN BURTON: No, I know that.

20 But I think the thing is forcefully espouse it. I'm not
21 saying, "Sign the bill or I quit," but --

22 DR. KIZER: I know what you're saying. All I can do is
23 say that I will advocate to the best of the ability that we can.

24 CHAIRMAN HART: Let me ask, if I could, another
25 question.

26 One of the things that strikes me in my limited
27 knowledge of this is, when you deal with a plan, one of the
28

1 things in addition to, I think, sort of establishing your
2 priorities, both legislatively and funding-wise, is kind of
3 organizationally.

4 You've got a lot of different government agencies, both
5 State and local, that are involved in dealing with the AIDS
6 issues. I'm struck by a lack of focus on, like, should there be
7 an overall person, like an "AIDS czar", for example. I'm
8 wondering if that was discussed?

9 You've got a prison policy. Some of the prison policies
10 seem to be somewhat inconsistent with what's in this report.

11 You've made reference to mental health, and what's going
12 on in mental health areas.

13 You've got a lot of different agencies in State
14 government that are grappling with this issue in one sense or
15 another. But is there someone that's overall in charge? Is that
16 the Director of Health, or is it the Office of AIDS, is there
17 really no one in charge in the sense of trying to resolve some of
18 the turf and policy differences that may exist on a variety of
19 AIDS issues?

20 Were those kind of organizational issues of who's in
21 control, who's in charge, or how will these things be resolved
22 when there are differences among departments? Is there a process
23 through the plan, like an ongoing steering committee that's going
24 to be meeting and that's going to try and resolve these kinds of
25 matters?

26 DR. KIZER: You raised several points there.
27
28

1 To the last point, yes. One of the recommendations and
2 discussion that has occurred among meetings is that this will be
3 an ongoing process. We will deliver something to you; that is
4 not the end of the story. This will continue to be reviewed,
5 critiqued.

6 Of the many lessons that have been learned with AIDS,
7 one of the ones that clearly jumps out is how much the situation
8 changes over time. There's been tremendous change. So, we're
9 going to have to continue to look at that, whatever
10 recommendations we make, in the context of changing circumstances
11 with regard to the epidemic, with regard to resources, with
12 regard to everything else here in California. So that will be an
13 ongoing process.

14 Now, your question, should there be an AIDS czar, or
15 whatever, I personally have mixed feelings and am generally not
16 all that supportive about that, because I think the way that you
17 make things happen in government and within any large
18 organization is that you have to institutionalize them within the
19 organization. You have to make the individuals that are managing
20 little, specific parts of the program part of the overall team.
21 And that is, I'm not convinced, most effectively done certainly
22 with something that touches as broad a cross section as this
23 does, with one individual.

24 While the Director of the Department of Health Services
25 has been designated as a point person on the epidemic, he
26 certainly does not administer the several other departments that
27 are involved with AIDS. The best way that we can do this in the
28

1 long term is to get all those departments involved. At times it
2 may take a little longer, may be a little bit more arduous, a
3 little bit more painful as we argue and debate these things, and
4 not everyone shares the same perspective that either the Director
5 of the Department of Health Services, or the AIDS Leadership
6 Committee, or members of the Department of Health Services might
7 have, but through discussion and working through the process,
8 that's the way that ultimately we will institutionalize the
9 changes that need to be made.

10 ASSEMBLYMAN BURTON: Two questions.

11 You mentioned what is really, I guess, the most rapidly
12 growing population right now, in the minority communities. And
13 you talked about targeting some educational things here.

14 Do you have specific plans in mind, or are they things
15 that are in, like, formulation?

16 DR. KIZER: Well, if I understand your question
17 correctly, there are some things that we have done, and there are
18 other things that we would like to see done.

19 One, two years ago we made at that time what was
20 somewhat of an arbitrary decision that we would put 35 percent of
21 all the money, the information-education-prevention monies, into
22 minority communities, minority contractors. Although, at that
23 time you certainly could not justify it based on caseloads that
24 existed at that time, but it was our thinking that, given where
25 we thought things were going, that's where we needed to focus
26 attention. So there has been that policy direction in place.
27 And indeed, our concerns, unfortunately, are being realized.

1 Likewise, we think that within the local planning
2 processes, that that has to be brought into it. We think local
3 planning and local development is so critical, and while San
4 Francisco has done a very good job there, I'm not sure that they
5 are the norm throughout the State. And in different communities,
6 there are different circumstances with regard to minority
7 communities that have to be addressed. So, we think that that
8 should be and really must be in the future incorporated into the
9 local planning process in addition to overall State guidance,
10 State policy, both as far as where we're going to direct monies
11 as well as other guidance to encourage education.

12 ASSEMBLYMAN BURTON: Could you comment on the -- I'm
13 trying to phrase it right -- the desirability of the State at
14 least approving a pilot project concerning the San Francisco
15 Health Department's free needle exchange program?

16 DR. KIZER: Well, you may have read in the Chronicle my
17 comments on that a few weeks ago.

18 ASSEMBLYMAN BURTON: No, I didn't.

19 DR. KIZER: Okay. A couple weeks ago I --

20 ASSEMBLYMAN BURTON: I mean, I didn't happen to see
21 them.

22 DR. KIZER: One, that is an area that clearly requires
23 statutory change. There is no way, based on my own reading as
24 well as my attorneys' reading, that I or the Health Department
25 could authorize any sort of needle exchange program.

26 I understand that my counterpart in New York State was
27 able to do that, but the law in California is very strict or very
28 explicit as to what can be done.

1 Now, I personally would support that within certain
2 parameters. I think that the literature is not altogether clear,
3 so I think there would be several conditions that I would put on
4 them.

5 First, I think it has to be done as a control
6 demonstration project so that whatever information comes out of
7 it, we have some confidence and reliability that indeed it was
8 done in a way that we knew that the results were meaningful.

9 Secondly, I think it can only be done, or should only be
10 done, in the context of a campaign that is both anti-AIDS and
11 anti-drugs. We have two epidemics in this State. Clearly, we
12 have the AIDS epidemic, but by the same token, we have a drug
13 epidemic that is starting to create major problems in a number of
14 other areas of health care. So, I think that this could only be
15 done with the context of an anti-AIDS, anti-drug, comprehensive,
16 education program that brought people in to get them off drugs.

17 Third, I think that it would have to be done within the
18 context of strong local community support. It's something that
19 the community would have to accept and want and implement it.

20 And lastly, it by no means could be a substitute for
21 drug treatment. As I said before, it has to be way of getting
22 people off drugs, bring them into the system of care, and could
23 not be viewed as a substitute for getting them off drugs.

24 ASSEMBLYMAN BURTON: What I'm hearing is that it's not a
25 program that is without merit as a prevention.

26 DR. KIZER: Well --
27
28

1 ASSEMBLYMAN BURTON: And I understand your conditions
2 and your concerns.

3 Unfortunately, I think the growth of the drug epidemic
4 is not with needles but with pipes, with free base, or crack
5 cocaine.

6 But the thought, the free needle program, the free
7 needle exchange program is not a program without merit as far as
8 prevention, and I'm not trying to put words in your mouth.

9 DR. KIZER: No, I know what you're talking about. Let
10 me just expand on that a little bit.

11 The AIDS epidemic, and I think in many ways the drug
12 epidemic, both are making us rethink what may have been
13 conventional wisdom. It has been conventional wisdom, at least
14 among many folks, for a long time that providing free needles
15 would encourage or somehow put the stamp of approval on drug
16 abuse. That -- I can understand why people would come to that
17 conclusion; however, I'm unaware of any evidentiary base that
18 actually supports that.

19 So, what it is, it is a view that has been long held by
20 a lot of folks, and now we're put in a context of saying, well,
21 is that really true? Let's find out.

22 That's where I think that it has merit as a
23 demonstration project to answer the question of whether it really
24 does have a role, or whether the preconceived notion may be
25 actually true. That's why I think it has to be done in a
26 controlled way so that we get reliable information that we can
27 then generalize and make sound public policy on.

1 ASSEMBLYMAN BURTON: I don't -- I mean, I wouldn't know
2 that I would think the needle would be the easiest part of, you
3 know, the fix to get. In other words, I don't -- I would think
4 it's tougher to go out and buy the drug than it is to figure out
5 a way to scam a needle. Just personal comments.

6 Thank you, Mr. Chairman.

7 CHAIRMAN HART: Dr. Kizer, if I could, I wanted to ask a
8 couple other questions.

9 I also wanted to welcome Senator Marks, who represents
10 this area, as well. He's also a Member of the Select Committee
11 on AIDS. Welcome.

12 Two other questions that I wanted to ask, things that I
13 don't believe are in the report that I wanted to just get your
14 reaction to.

15 I was reading the President's Commission's report, and
16 one of the recommendations made in the Executive Summary of that
17 report, one of the major recommendations, was to focus on the
18 shortage of nurses, and particularly in areas where there is a
19 high AIDS incidence. The report recommended scholarship
20 programs, sort of an active recruitment and subsidy program for
21 nurses.

22 Was that issue looked at by your Committee, and are
23 there any recommendations that you have as it relates to either
24 financial or other enticements to get people to become nurses and
25 serve in areas?

26 The implication being that in the future, with
27 increasing cases, and nurses providing the brunt of the health
28 care in a sense, we're going to have a special need in this area.

1 DR. KIZER: Yes, it has been looked at. It was
2 discussed at considerable length at the last meeting of the
3 Committee.

4 And I would agree with you that one of our priority
5 recommendations -- and it would appear, based on time, that I
6 probably won't get through the list of things that I was going to
7 -- but one of the recommendations is that we have to ensure that
8 the resources are here to deal with AIDS, and resources includes
9 health care personnel, which includes nurses, but it also
10 includes physicians and a wide array of other folks. And we do
11 have -- although some of these are things that came out of our
12 last meeting, we will be making some specific recommendations on
13 areas that will deal with this, having to do with programs to
14 reduce the needle sticks.

15 Let me just step back a minute. The nursing shortage
16 here, and again, what I said at the outset, we have to view this
17 in the context of what's happening in the overall health care
18 system, and there is a nursing shortage overall, and AIDS just
19 adds another dimension or another complication to that. So, when
20 we look at dealing with nurses and AIDS, we have to look at how
21 that fits in overall in increasing the supply of nurses, or at
22 least returning nurses to the bedside as opposed to, maybe,
23 something else that they've chosen to do because of work
24 circumstances, family concerns, or other things.

25 So, we have to look in that context, but there are some
26 very specific concerns that health care workers have in dealing
27 with AIDS patients. And I think there are some things we'll be
28

1 recommending there as far as programs to reduce needle sticks,
2 testing of persons who may have been exposed to contaminated
3 needles or other body fluids, post exposure programs for health
4 care workers that may have been injured, as far as getting them
5 on AZT, or whatever else may be appropriate based on current
6 thinking at the time.

7 We think that this may be an area where legislation is
8 required in having to do with workmen's compensation benefits for
9 health care workers, and they'll ask for the confidentiality of
10 those injured health care workers to be maintained.

11 There are some other things, and I don't have those all
12 laid out for you, but your basic question is yes, we've looked at
13 it. Yes, there will be recommendations dealing with it, and it's
14 quite likely that some of those may require legislative remedy.

15 CHAIRMAN HART: Maybe one last thing I'd like to ask,
16 and maybe it would be a way of beginning to sum up. You've been
17 involved in dealing with this AIDS epidemic now for a number of
18 years. This planning process that you've gone through in the
19 last six months or nine months period, it's not like we're
20 starting from scratch.

21 I'd be interested to know, as a result of this process
22 that you and your Committee members have gone through, is there
23 anything that really particularly strikes you as an important
24 finding or recommendation, perhaps, that's different from what
25 your assessment and your recommendations were, say, two or three
26 years ago?

27

28

1 You mentioned earlier that the disease is changing
2 rapidly, and with that our assessment and recommendations change.
3 Is there one thing or two things that particularly strike you as
4 important that we need to acknowledge at this point in time as
5 opposed to two or three years ago in our understanding and battle
6 against the disease?

7 DR. KIZER: Well, I think the concerns or many of the
8 things that we've been talking about recommending for some time
9 are still there. We're also in the position of seeing some of
10 what we were talking about and being concerned about two or three
11 years ago coming true.

12 Probably the most difficult area has to do with AIDS and
13 IV drugs. And I have been saying for quite some time, looking at
14 some materials that were written a couple of years ago, making
15 this forecast, I think it's becoming very clear that the
16 long-term course of the AIDS epidemic in California depends on
17 what we do with IV drug use. We have historically not had the
18 impact that New York City, Newark, other East Coast cities have
19 had in that regard. Clearly, our numbers are changing.

20 We feared this and had made some comments about it quite
21 some time ago, and then have continued to. I think that that's
22 probably also the most difficult area to deal with since so much
23 is related to crack and cocaine use. There is no methadone
24 equivalent for cocaine. The ability to deal with cocaine use is,
25 I think, more difficult than with opiate abuse.

26 But clearly, in our view, in the long-term, it's what we
27 can do where it will substantially influence the long-term course
28 of AIDS in California.

1 ASSEMBLYMAN BURTON: Do you find -- in other words, I
2 don't think one does crack IV; do they? Have they been doing it
3 IV instead of smoking it?

4 DR. KIZER: Yes.

5 ASSEMBLYMAN BURTON: IV cocaine, but I mean free basing
6 would be smoking it.

7 DR. KIZER: Free basing is smoking it, yes.

8 ASSEMBLYMAN BURTON: And crack is base; right?

9 DR. KIZER: That's correct, but the issue --

10 ASSEMBLYMAN BURTON: Let me get the question.

11 Do you see, in other words, that if somebody's, let's
12 say, free basing, using the crack, smoking it, that then, you
13 know, I mean, I happen to know, unfortunately, that it alters
14 everything they do, but then that gets them into at-risk sexual
15 behavior?

16 DR. KIZER: That's correct. There is the disinhibiting
17 effect. There's also the effect that -- well, to give you a
18 specific case, not AIDS, but in the last five years, congenital
19 syphilis has increased 460 percent in California from 1984-1988.
20 The primary reason for that is the young girls' prostitution, who
21 are selling themselves for crack.

22 So, certainly, insofar as this encourages prostitution,
23 it encourages unsafe sex behavior, it's encouraging the spread of
24 the disease.

25 But the other thing we're seeing, as I started to say,
26 when we were on the East Coast last December or thereabouts, on
27 the day prior to our meeting in New York City, I visited some of
28

1 the drug treatment programs over in Newark. And one of the
2 concerns that they had at that time, and since we've had some of
3 the same concerns here in California, that even people who were
4 undergoing methadone treatment are [sero-]converting -- becoming
5 HIV seropositive -- because they're in the methadone treatment,
6 but they're going out and shooting up with cocaine.

7 So, the issue is just not a simple or straightforward
8 one to deal with, but it is one that has tremendous importance as
9 far as the long-term course of this epidemic.

10 CHAIRMAN HART: Any other concluding comments that you'd
11 like to make, Dr. Kizer?

12 DR. KIZER: Well, there's a probably a number of things,
13 but I think that in fairness to the other people who have come
14 here to make some comments, let me sit down.

15 There are a number of other priority recommendations
16 that are likely to be touched on during the course of the day,
17 and I'll be around for some further time this morning as well.

18 CHAIRMAN HART: Well, we thank you very much for your
19 testimony and your work on this particular Committee report.

20 I'd just like to again emphasize the importance of the
21 Committee concluding its work. We have the draft document, and
22 we'll work with that, but the extent to which this can be
23 finalized in a timely fashion is going to allow us to make, I
24 think, better use of the document and have its impact be more
25 influential this year.

26 I also want to encourage you, as we have before, to the
27 extent to which you can be an all-forceful advocate with the
28

1 other key individuals in the administration and, obviously, the
2 Governor, we desperately need that leadership.

3 DR. KIZER: Thank you, sir.

4 CHAIRMAN HART: Thank you.

5 Our next person to testify is Dr. David Werdegar, who's
6 also a member of the Executive Committee of the California AIDS
7 Leadership Committee, and he's the Director of the San Francisco
8 Department of Public Health.

9 DR. WERDEGAR: Senator Hart, Senator Marks, Assemblyman
10 Burton, thank you very much for holding these important hearings.
11 Ms. Duke, thank you for your help in preparing for this hearing.

12 I would like to congratulate the Co-Chairs, Dr. Kizer
13 and Professor Conant, for the effort that has led to the
14 three-year AIDS plan for the State of California. I think it
15 will be of great value to the State.

16 I share your view, Senator Hart, that it has to be a
17 document that's available to the public, to health professionals,
18 but most certainly available to government, to the Legislature,
19 and I hope it will be a guide both to policy issues and funding
20 issues. A lot of my interest in the project was that it would
21 have that particular value.

22 I was asked to comment on two items or two broad areas.
23 One was the San Francisco experience, and community response in
24 San Francisco to AIDS, which I will do quite briefly, tying it
25 into the three-year plan. And then, most importantly, talk about
26 drug abuse and AIDS, and that's where the full force of my
27 comments will be.
28

1 First about the San Francisco experience. It's been
2 well described. Let me say it's guided by a five-year -- a
3 detailed five-year AIDS plan with careful financial projections,
4 policy statements. It's updated annually. It's approved by the
5 Health Commission. It's delivered to the Mayor and to the Board
6 of Supervisors, who review it and accept it. And it serves as a
7 document for the public and for health professionals.

8 Our plan is of no value, however, if it is not
9 coordinated with State plans and federal plans. We can't do it
10 by ourselves. So that in the attack on AIDS, we need
11 coordinated, synchronized local, State and federal plans, and
12 ones that mutually reinforce one another and are consistent with
13 one another.

14 I think the three-year HIV plan that has been presented
15 in draft form is a great step in that direction for the State.

16 In the San Francisco experience, some of the salient
17 features are that we have the Public Health Department serving as
18 a coordinating vehicle.

19 You had raised in a question, Senator Hart, where is the
20 focal point or center of gravity? Should there be a czar? How
21 do you deal with the multiple agencies?

22 By common consent here in California -- here in San
23 Francisco, the Health Department has served as the focal point.

24 You need a point of coordination. So, there are many agencies,
25 many health professionals, volunteer organizations, but the focal
26 point for coordinating it rests with the Health Department.

27

28

1 We have always used education as the cornerstone of our
2 prevention program. We have tried to give care as much as
3 possible out of the hospital and in the community. Those, I
4 would say, are strong planks of the local program.

5 And furthermore, we have always encouraged research at
6 all levels, not just basic research and clinical research with
7 new drugs, but research on how more effectively to reach into the
8 community educationally, how to improve prevention programs.

9 Our Mayor has provided leadership in the City, as he had
10 when he was in the State Legislature, where he sought a
11 coordinated State plan to battle the epidemic.

12 Now let me comment about -- good morning, Dr. Filante --
13 let me comment about the next three years of the epidemic in
14 California, which I regard as posing great difficulty and great
15 danger. And I say this even though there are some points of
16 optimism. Drug treatment is improving. We have found that
17 education can, indeed, prevent new HIV infection, and in our
18 community has reduced new HIV infection to very low levels.

19 But I see the great danger to California because of
20 rising numbers of cases. There will be a major burden of care
21 reflecting infections that were acquired years ago and are now
22 becoming clinically symptomatic, people developing illness and
23 AIDS and needing care.

24 And the next one, which is the main point of my
25 presentation, is that the epidemic is changing. Substance abuse
26 in all forms, IV substance abuse, but substance abuse in all
27 forms is becoming intertwined with the AIDS epidemic, and it
28

1 poses a very great danger. In Northeastern States -- New York,
2 New Jersey -- it has led to health and social devastation of very
3 significant proportions.

4 We have an opportunity still to check it in California,
5 but the window of opportunity, I would say, is fairly narrow.
6 And we really have to pursue our attack on substance abuse/AIDS,
7 the double-headed monster, in a very vigorous way and without any
8 delaying measures.

9 The drug addiction-related AIDS -- incidentally, I
10 regard drug addiction of itself as the number one public health
11 problem in the State, probably in the nation. And substance
12 abuse has as a corollary: it causes illness and social
13 devastation in many ways, and one of the ways in which substance
14 abuse causes illness, death, and social devastation is through
15 HIV infection.

16 The drug addiction epidemic has fallen most heavily on
17 the minority communities, and in the minority communities, most
18 heavily on the Black community. It affects men, women, newborn
19 children. We are quite fearful that it could very easily involve
20 large numbers of teenagers, and teenagers who use drugs orally,
21 taking them orally, smoking as well as intravenously. We're
22 concerned here in the city right now about a crack cocaine
23 epidemic that has teenagers in the Black community with very high
24 rates of other sexually transmitted diseases, notably gonorrhea,
25 and in the setting of other sexually transmitted diseases, it is
26 quite conceivable -- in fact, there's a body of evidence that
27 says it's much easier for AIDS transmission to occur.
28

1 So, between drugs, other sexually transmitted diseases,
2 and AIDS, you really have a three-headed monster.

3 Now, a State plan for preventing HIV infection from drug
4 abuse has to be vigorous, has to be underway yesterday, has to be
5 well-funded, and it will have to have imaginative approaches. We
6 don't know fully how to prevent addiction. And we don't know how
7 to fully prevent HIV infection in the setting of drug addiction.
8 I can certainly name some of the elements that will be required.

9 We need greatly expanded capacity for drug addiction
10 treatment. At the same time that you're educating individuals
11 about the dangers of substance abuse, the dangers that they
12 expose themselves to with regard to AIDS, you have to have the
13 door open and immediately available for drug abuse treatment.

14 We have used an outreach program to teach hard-core drug
15 addicts --

16 CHAIRMAN HART: Dr. Filante has a question.

17 ASSEMBLYMAN FILANTE: Doctor, can I interrupt you for
18 just a moment.

19 DR. WERDEGAR: Please.

20 ASSEMBLYMAN FILANTE: While you're talking about drug
21 treatment, and drug abuse, and AIDS, the President's Commission
22 came up with some numbers that I thought were, although general,
23 were very striking in terms of what we need to do for treating
24 drug abuse. And the percentage that was of what we're going to
25 have to do for AIDS treatment if we don't.

26 Do you have those numbers, or do you have an update on
27 that? I think that's crucial.

1 DR. WERDEGAR: Dr. Filante, in California, perhaps these
2 numbers will be pertinent.

3 In California, it is estimated that there are close to
4 half a million IV drug users. That's one in 50 people, or
5 thereabouts. Then you add to it those that are using crack
6 cocaine or using drugs, not intravenously, and using alcohol.

7 I think we've had to recognize that the drug abuse
8 problem is a polydrug abuse problem, and that while intravenous
9 drug abuse has caught our attention because through the
10 contaminated needles, the AIDS epidemic has certainly spread,
11 other drug addiction leads to sexually transmitted diseases and
12 sets the stage as well for AIDS transmission.

13 I would say that half a million in California of IV drug
14 users is a highly pertinent number, and it is included in the
15 three-year AIDS report. It also says that of that close to half
16 a million there, perhaps 200,000 that have been long-term,
17 chronic IV drug users. And of that population, perhaps only
18 10-15 percent are in treatment at any given time.

19 So, it's quite obvious that it's a big problem with a
20 lot of work to do.

21 ASSEMBLYMAN FILANTE: Specifically, though, and I hate
22 to beat this, but it was so striking to me, they were talking
23 about -- and this is one of the members of the Commission --
24 talking about maybe the need to spend \$5 billion to treat or try
25 to do away with the drugs -- now, I know it's all poly abuse, but
26 still it's a drug abuse problem -- as opposed to 15 billion or
27 more. And when you're dealing with big numbers like that, I
28

1 think they need to be either refined or repeated, or what have
2 you, because, like you say, it's a desperate situation and that
3 small window of opportunity in a short budget time.

4 The question is, do you spend a dollar now or \$10 later?

5 DR. WERDEGAR: Well, I know you and I share some similar
6 views on this, Dr. Filante. The dollars spent now, even in a
7 tough budget year, because they step in early and they are
8 preventive, obviously, save many, many more dollars some years
9 later.

10 This is just one of those kinds of budget expenditures
11 where the Governor, the Legislature, the body politic has to grit
12 its teeth and do it, quite frankly.

13 I'll depart from my testimony in this regard and just
14 say, because I am a health director with a lot of --

15 CHAIRMAN HART: Doctor, Senator Marks had a question.

16 SENATOR MARKS: I'm a San Franciscan. I'm very pleased
17 with what you're doing.

18 I'm also very concerned with the problems affecting our
19 budget, our San Francisco budget.

20 Is your program in any way being hampered by the effect
21 on the budget?

22 DR. WERDEGAR: Surely is. Let me tell you, I'm greatly
23 worried. That was the vein of conversation I was just going to
24 open, and it departs slightly from the discussion of AIDS and
25 HIV.

26 As Director of a health department in a city that has a
27 big public hospital, the San Francisco General Hospital, which is
28

1 still the main resource for AIDS care, and has community clinics,
2 and has mental health clinics in the community, we are greatly
3 concerned about what's happening at this juncture up in the State
4 in terms of all health care programs; principally, the medically
5 indigent adult programs, which is one of the main sources of
6 support and revenue for our Health Department program.

7 If we were to lose the medically indigent adult support
8 -- and the Governor's budget, as you know, the proposed budget
9 has eliminated it and partially substituted the tobacco tax -- we
10 would not be able to fund health services in San Francisco
11 adequately. And unless we are providing overall health services
12 adequately, there's no way we can take care of the particular
13 problems of substance abuse and AIDS. It has to be part an
14 overall system of health care.

15 So, we're greatly concerned.

16 SENATOR MARKS: Has your budget, the budget of your
17 Department, been cut by the Mayor?

18 DR. WERDEGAR: The budget of our Department at the
19 moment, because it's a fluid situation that will depend on the
20 Legislature, has in it some assumptions that MIA funding, and
21 perhaps even some additional money through the tobacco tax,
22 [Proposition] 99, will come through.

23 If the MIA funding isn't there, we will -- there is not
24 any way that we can --

25 SENATOR MARKS: Some of us feel that the use of the
26 money from the tobacco tax is not proper.

27

28

1 DR. WERDEGAR: For supplementing health care to the
2 underinsured?

3 SENATOR MARKS: It's thought some of the money that's
4 being taken out of the tobacco tax, we feel, at least some of us
5 feel, is not appropriately being done.

6 DR. WERDEGAR: Well, our sense, just looking at it from
7 a local Health Director's point of view -- and I'm speaking for
8 myself in this -- is that I read the ballot measure and spoke for
9 it, as did all others, as supplementing existing funding for
10 health services, and not substituting for.

11 SENATOR MARKS: That's why some of us are not very happy
12 with the proposal.

13 DR. WERDEGAR: Thank you, Senator Marks.

14 I know there are other speakers, so let me just say a
15 few more words about IV drug abuse and the AIDS epidemic.

16 This is the most serious turn of the epidemic. I
17 mentioned how much devastation it has caused in Eastern States,
18 Northeastern States.

19 We have a chance still in California if we get busy.
20 The programs will have to be quite imaginative.

21 Three years ago, we started a program which at that time
22 was highly controversial. Dr. Harvey Feldman gets credit for
23 introducing the idea: teaching drug users how to sterilize their
24 needles and syringes with bleach. That was something we could do
25 immediately; it was legal. It was done as part of the
26 educational effort, combined with AIDS education as we did it.
27
28

1 And it has helped us, we think, hold down the rate of
2 increase of HIV infection in IV drug users in this community.
3 And the model has been copied throughout California, in fact,
4 throughout the world, these bleach reaching out programs where,
5 if you don't want the sterilization of the needles with bleach to
6 be a substitute for overall health care and --

7 SENATOR MARKS: Have you taken a position regarding the
8 issuance of new needles?

9 DR. WERDEGAR: I've given my own personal view. This
10 subject has been reviewed by the members of the HIV Task Force.
11 My position, I think, is consistent with theirs, and the entire
12 matter is going to come before hearings and seek approval of the
13 Health Commission in San Francisco.

14 Basically it's this -- I would say it's quite consistent
15 with what Dr. Kizer described. I think needle exchange should be
16 provided as a demonstration project. There is at least enough
17 evidence from different cities that needles exchange -- and the
18 emphasis, I might say, is not so much on the needle as on the
19 educational process that occurs with the needle exchange -- may
20 be very, very helpful in holding down HIV transmission amongst
21 drug users. It should be a demonstration program.

22 It obviously needs community support. It will only work
23 if it's part of a more comprehensive program with access to
24 general health care and substance abuse treatment for those
25 requiring it, AIDS testing, and counseling, and so on.

26 But I support the concept and am hopeful, in fact, that
27 it will receive, after proper testimony and review, Health
28 Commission support here in San Francisco.

1 And we then will need some support from Sacramento,
2 because the laws governing needles and syringes are State law.

3 We believe we can apply for a permit to the Department
4 -- to the Pharmacy Board, but even there it's not clear if that
5 will suffice, or whether clarifying legislation might be needed
6 for demonstration programs.

7 But again, given the danger, given the suggestive
8 evidence that it can be helpful, given the narrow window of
9 opportunity that we have, the need to really apply any and all
10 possibly helpful approaches, I myself would strongly urge it.

11 CHAIRMAN HART: Doctor, could I ask on that point, the
12 focus has been on needle exchange and getting a change in State
13 law for a demonstration project.

14 But it seems to me as if, from what little I know of
15 this, the cleansing of the needle, bleach kits, that's something
16 that currently is allowed under State law. It's something that
17 has been used here in San Francisco, and I presume pretty
18 effectively.

19 Shouldn't we be focusing, perhaps, more of our attention
20 on cleaning the needles rather than exchanging the needles?

21 Exchanging the needles, from a politician's standpoint,
22 is a little more complicated and controversial than something
23 that's already in place.

24 I guess my question is, is this bleach program that you
25 have here, is that being replicated throughout the State? Are
26 other communities doing that? Is there a down side to really
27 focusing our efforts on cleaning the needles rather than to
28 exchanging needles?

1 DR. WERDEGAR: The program has been widely replicated
2 throughout the State. We have evidence that it is at least
3 partially effective, and many drug users are cleaning needles and
4 syringes, if they have needles and syringes, with the bleach.
5 It's combined with education, and education about condom use, and
6 how AIDS is transmitted sexually as well.

7 But I don't think it's the complete answer, and we see
8 that in still rising numbers of HIV infected. And I would view
9 the needle exchange as a complementary -- as a program that adds
10 to what's done through the bleach program.

11 I know it's difficult politically, and I know it's
12 controversial. But if one views the needle exchange, really, as
13 an opportunity to bring somebody drug-addicted into the health
14 care system, if it's done under Health Department auspices, if
15 it's done legally as a demonstration program and evaluated, I
16 think for the political representatives it becomes more
17 acceptable. It becomes then a symbol of a way of bringing a
18 person in to the health care system, rather than as some way of
19 condoning drug use.

20 And the symbol of the needle, which has been in the past
21 a symbol of drug use, the needle exchange, I would say, could
22 become truly a symbol of a way of bringing the addict into the
23 health care system, where eventually the individual may seek drug
24 treatment. The individual certainly could get general health
25 care, and if continuing the drug habit, could do so not only with
26 safety to himself or herself, but preventing infection of a
27 sexual partner, and prevention of the birth of newborn children
28 with AIDS.

1 I think the risks are so awesome that I'm hoping there
2 will be the political courage to support the demonstration
3 program. And it should be understood by all that it would be
4 done to see how much it works, and if it really works, and I
5 think scientists in the community can apply themselves to proper
6 evaluation.

7 ASSEMBLYMAN FILANTE: On the subject of the tremendous
8 risk and cost in newborns, let me just ask you one more, because
9 this is as necessary for Legislators as it is for doctors.

10 You're talking about the window of opportunity, and
11 comparison with the Northeastern part of the country, where there
12 are some staggering statistics for the incidence of HIV in
13 newborns, especially in some of the hospitals.

14 DR. WERDEGAR: Yes.

15 ASSEMBLYMAN FILANTE: What is the incidence here today?
16 What is it there? And what are the prospects with or without
17 whatever education prevention we can do? Do you have those
18 numbers, Doctor?

19 DR. WERDEGAR: I don't have them all in front of me. In
20 fact, I think within the next couple of months, Dr. Kizer's
21 office will report on -- you know, they studied all newborns, did
22 blood tests on all newborns throughout the State, and those
23 figures are not yet available. They'll be available statewide
24 and then by areas.

25 In parts of New York City, there's some staggering
26 numbers where one in every 50 children born is AIDS positive.
27 And of those, perhaps some 50 percent eventually do go on to
28 reach clinical AIDS.

1 ASSEMBLYMAN FILANTE: That's the horrible number. That,
2 as I recall, was the low number. There were some hospitals that
3 exceeded 2 percent incidence; maybe as high as 5 or 10 percent in
4 some samplings of kids who were going to be AIDS patients and
5 probably die, representing, you know, just a part of that
6 community.

7 I think that's what we have to look forward to if we
8 don't stop it now, as you described it, with the window of
9 opportunity.

10 DR. WERDEGAR: I appreciate the question, Dr. Filante,
11 because in looking for ways of explaining to political
12 representatives -- you're a physician and understand it -- but
13 political representatives generally, if they can see that this
14 program is a way of preventing children from being born with
15 AIDS, and is a way of bringing addicts into health care, I think
16 they would be more comfortable in championing the demonstration
17 programs.

18 CHAIRMAN HART: I should mention that Dr. Grossman is
19 also associated with this Committee and Chairman of San Francisco
20 General Hospital Department of Pediatrics, is also going to be
21 speaking this afternoon. I think he'll probably amplify.

22 I just might mention, I heard the Attorney General, John
23 Van de Kamp, testify at a budget subcommittee hearing a couple of
24 days ago, and his testimony to our subcommittee was -- and I
25 hesitate a little bit because I can't remember the specifics well
26 enough, but it was a shocking statistic. He said one-quarter of
27 the babies born in Oakland today are born, I believe, with either
28

1 a heroin or a cocaine addiction; 25 percent in one of our leading
2 cities of children are being born at that rate with this kind of
3 addiction.

4 Staff just indicated to me that at the UC Davis Medical
5 Center in Sacramento, they are doing screening of all infants
6 that are born, and that 25 percent of the infants born in
7 Sacramento are, through urine testing, determined to have some
8 kind of a substance abuse in their system.

9 So, this is not something that is no longer just Newark
10 or New York City. We're seeing it now.

11 DR. WERDEGAR: It's quite true.

12 Dr. Grossman is the Dean of Pediatrics in our city,
13 really. At the San Francisco General Hospital, those numbers are
14 similar. Somewhere around 25 or 30 percent of all children born
15 at that hospital are born of mothers who are addicted, themselves
16 have some degree of addiction, acquired in utero. Not only IV
17 drug abuse, of course, but now it's crack cocaine and other
18 forms.

19 It's why I really regard the substance abuse problem per
20 se as the number one public health problem of the nation.

21 A final word. I've said most of the things I wanted to
22 say about drug abuse, but back to what you said earlier about
23 general funding of health care.

24 If we're to help our communities, and help our city as a
25 whole, the Health Department needs the necessary funding. We
26 can't be taking care of those who are uninsured and underinsured
27 just with regard to their substance abuse or potential for AIDS.
28

1 There is prenatal care, childhood nutrition, there's general
2 health care. You have to provide general services to the
3 community, otherwise you won't be able to do these more
4 specialized forms of care.

5 And unless we get the base funding to enable us to do
6 that, then to talk about special funding programs for initiatives
7 in these areas almost becomes pointless.

8 In any event, thank you very much for this opportunity.

9 CHAIRMAN HART: Thank you very much, Doctor, for some
10 excellent testimony. We appreciate it greatly.

11 Our stenographer needs a five-minute break, and perhaps
12 the rest of us do as well.

13 (Thereupon a brief recess was taken.)

14 CHAIRMAN HART: We want to reconvene. We're running a
15 little bit late, as normally happens at these hearings.

16 We have two other witnesses that we want to hear before
17 breaking for lunch. Our next witness is Mr. Peter Carpenter,
18 who's a member of the Executive Committee that did the work on
19 this report, and he's Chairman of the Strategic Planning
20 Committee with the ALZA Corporation.

21 MR. CARPENTER: Thank you, Senator, and thank you and
22 the staff for allowing me to testify before you this morning.

23 Let me first introduce myself. I am, unlike my
24 predecessors, I am in the private sector: a philosopher,
25 businessman, concerned citizen. I was formerly the Executive
26 Director of the Stanford University Medical Center, and prior to
27 that was in the federal Office of Management and Budget and
28 served as the Deputy Director of the federal Price Commission.

1 I also spent two years as Chairman of the American
2 Foundation for AIDS Research, in addition to my service on the
3 Leadership Committee here in California.

4 Fortunately, I am an officer of a publicly-held
5 corporation which is more than supportive of my efforts in this
6 area, for which I'm deeply appreciative.

7 However, I'm here today to speak primarily for myself,
8 which in many respects is liberating because I'm not constrained
9 by other individuals in who I report to or who, of necessity,
10 might constrain my views.

11 What I'd like to do this morning is to give you a broad
12 philosophical view of the epidemic from the standpoint of someone
13 who's watched it closely over the years; to try to give you some
14 facts regarding the magnitude of the epidemic, an issue about
15 which I think there's great lack of knowledge in the public in
16 general; to speak to the financial implications of the epidemic.
17 What's it going to cost Californians this year, next year, the
18 year after? Talk about some of the issues that we see in the
19 workplace, and then perhaps make some recommendations, if I may
20 be so bold.

21 The first point, a philosophical view of the epidemic.
22 This is truly a crisis. The AIDS epidemic in California is, in
23 my opinion, equivalent to having an 8.5 earthquake. The only
24 difference is, it's taking place much more slowly, and as a
25 consequence, I think the public's reaction to it, and certainly
26 the reaction of the leadership of this State, has in fact been,
27 perhaps, very, very slow in coming, and is still, in my opinion,
28 inappropriate.

1 How we deal with this epidemic is the true test of our
2 humanity, our wisdom, and our compassion as a society. It is a
3 reminder to us that science and medicine are not all-powerful.

4 Had this disease occurred 30 years ago, it would have
5 been even more devastating because our ability to understand it
6 would have been dramatically limited in comparison to what it is
7 today. But even our understanding of this disease has not given
8 us very effective tools in stopping it.

9 The good news is that it's not transmitted by casual
10 contact. The bad news is that it is transmitted by sex and by IV
11 drug abuse, two habits which we know are very difficult to
12 change.

13 The long incubation period means that we are looking --
14 we are trying to fight a fire by looking at where the fire was
15 six or seven years ago. We can't see the fire as it truly exists
16 today. And the absence of good epidemiological data with respect
17 to the incidence of and the prevalence of this infection in our
18 society is a crucial problem for all policy makers.

19 It's important that we be aware of the HIV epidemic, and
20 here, the people gathered in this room, we're preaching to the
21 converted. It's even more important that we do something about
22 it.

23 We begin with a health care system which is under great
24 strain, and which is already failing to meet the needs of many
25 non-HIV patients, and with governments at all levels which
26 perceive themselves as being out of money.

27
28

1 Now, let's look at some of the facts. And I apologize
2 to you, because many of the things that I would like to be able
3 to tell you, literally we don't know.

4 There are about 9,000 patients who will be alive with
5 CDC-defined AIDS at the end of 1989 in California. We predict
6 about 12,000 in 1990, and about 15,000 in 1991.

7 How many are there with mildly symptomatic disease?
8 Having talked to a number of experts, looked at lots of different
9 data, I would estimate for each AIDS patient, there would be at
10 least 5 patients who are mildly symptomatic.

11 How many will be HIV positive and asymptomatic? Here
12 again, my estimate is based on the consensus of discussion with
13 experts. For each AIDS patient, there will be 10 individuals who
14 are HIV positive but asymptomatic.

15 What does this add up to? That says by the end of this
16 year in 1989, there will be 144,000 people in the State of
17 California in one of those three categories; 200,000 by 1990; and
18 240,000 by 1991.

19 CHAIRMAN HART: Mr. Carpenter, just on that point.

20 Somehow I had in my head that there were 250,000 to
21 300,000 people, the projections were, that are HIV infected in
22 California as of today.

23 As I understood you, I thought you were saying it was
24 about half that number.

25 MR. CARPENTER: Well, given my assumptions, which are
26 for every -- see, the thing that we do know with a relatively
27 high degree of accuracy is how many CDC-defined AIDS patients
28

1 there are. Beyond that, there have literally been no studies
2 that have been done on the population at large that can tell us
3 how many patients -- how many people have this infection. And
4 we've all seen the figures at the national level of a million and
5 a million-and-a-half, and then those were estimates that were
6 made a few years ago and for which we still don't have good
7 scientific data.

8 The CDC has yet to do a totally random sample of the
9 U.S. population. And as a consequence, we don't have, as policy
10 makers and as concerned citizens, the information that we need.

11 I was about to go on to say that some of the people with
12 whom I've consulted feel that the ratios which I've used are in
13 fact conservative, and that for each AIDS patient, we're more
14 likely to have 7 mildly symptomatic patients, and 15 who are HIV
15 positive and asymptomatic. That would say that by the end of
16 this year, we would have approximately 200,000 patients in
17 California; 275,000 in 1990; and about 345,000 in 1991.

18 Now, these numbers have lots of limitations with them.
19 My gut feeling is, as your question suggests, that even these
20 figures may well be on the low side, because I think they're
21 looking at -- again, my analogy of looking at the fire, where it
22 was seven years ago, and trying to tell where the fire is today
23 -- an awful lot of what we know today is based on infections that
24 took place seven, eight years ago.

25 As we see it here today, lots of different things are
26 happening which bear very little relationship to that. You've
27 talked with your previous speakers about infants being born with
28

1 a very high incidence of HIV infection. We know that the rate of
2 sexually transmitted diseases in this State continues to rise.
3 And there's every good reason to believe that that's a very good
4 marker for what's going to happen with HIV infection.

5 So, this is very much the tip of the iceberg. I think
6 these figures are going to continue to rise. I think the figures
7 that I've given you are conservative, even perhaps the higher
8 ones that I've given you.

9 As we look into the future, I'm very pessimistic as to
10 where we're going to end up.

11 Moving from what I think is happening, and I think
12 you've heard this from some of the previous speakers, it clearly
13 began in the gay population, moved very quickly on the East Coast
14 and a little more slowly on the West Coast to the IV drug
15 population. The next big group that's going to be hit hard by
16 this is minority teenagers. And right behind the minority
17 teenagers, in my opinion, it will move into the White teenage
18 population. And at the same time, it's going to be moving
19 sideways from each one of these groups into partners and babies.

20 And so, we are seeing an epidemic which, in my opinion,
21 is exploding. We're looking at the results of what happened
22 seven or eight years ago. We have gotten a little bit blase
23 about it, because we've heard so much about it, and yet it hasn't
24 visibly exploded it yet. But I think the data that each of you
25 were speaking about indicates that that explosion is, in fact,
26 taking place. Perhaps we simply aren't looking at it as
27 carefully as we should.
28

1 ASSEMBLYMAN FILANTE: Mr. Chairman, if I may.

2 When you talk about the spread, as we're seeing already,
3 from the IV community into the people of color, minorities, the
4 teenagers, is that separate from the drug abuse?

5 MR. CARPENTER: No, I think --

6 ASSEMBLYMAN FILANTE: As I understand it, it's just a
7 part of that.

8 MR. CARPENTER: I think what we're seeing primarily in
9 the teenaged community is, we have three factors which make that
10 community an ideal place for this disease to move rapidly.

11 First, there is sufficient drug abuse to provide a
12 vector into the population.

13 Second, it is a sexually active group of individuals.

14 And third, as we all were when we were that age, they're
15 convinced they're invulnerable.

16 And these three things come together to create an
17 incredible basically petri dish, if you will, for this disease.

18 ASSEMBLYMAN FILANTE: The reason I asked the question
19 is, to me it's logical, as you've made these different
20 characteristics, it started with the drug abuse.

21 But I have problems thinking about it in the future
22 because I'm thinking about some of the studies the federal
23 government has done in the Armed Forces in terms of inductees,
24 and these are not, for the most part, homosexuals vis-a-vis the
25 gay community. These are heterosexuals and young people. And
26 the incidence in these people, although it's low as the national
27 population, is still rising today. And I'm not looking at the
28 future; this is the past.

1 MR. CARPENTER: Yes, I agree entirely.

2 ASSEMBLYMAN FILANTE: So, I wonder how you look upon
3 this as something that's going to happen. Or, do you mean it's
4 happening, but it's going to explode?

5 MR. CARPENTER: I think it's happened, and it will
6 continue to happen if we don't yet really fully appreciate the
7 magnitude of this problem.

8 The preliminary data from the CDC survey of 20 colleges
9 indicates that 1 out of every 300 students is HIV positive. Now
10 again, that's not a random sampling, so you can't generalize that
11 that's the population as a whole. They predictably used students
12 who were presenting to infirmaries for other reasons, so there's
13 still some bias.

14 There's a bias in the other direction of the data that
15 you suggested. Clearly, the inductees are a self-selecting
16 population. One would expect that the incidence amongst that
17 population, given the concern that the military is known to have
18 about both homosexual behavior and drug abuse, that that
19 population would be biased on the down side. And yet, those
20 figures are still frightening when you begin to extrapolate them
21 into the country at large.

22 I would stress, however, so that my remarks not be
23 misunderstood, that this is not a disease of groups. This is a
24 disease of behavior. It happens to be behavior which has been in
25 groups which I've just described.

26 From a medical standpoint, the question is not whether a
27 particular behavior is right or wrong, but what are its
28 consequences both for the individual and for society?

1 What are the implications of this for California in
2 financial terms? Again, there's very little data. It's also
3 important to point out that we cannot project simply from the
4 very limited data that we have available, much of which is drawn
5 from the experience here in the City of San Francisco.

6 San Francisco, in my opinion, is a truly unique city.
7 The sociology, the demography, and the level of volunteerism in
8 this community I don't think is matched any place else in this
9 country.

10 Even in San Francisco, I think the efforts that we've
11 seen to date cannot be expected to continue as the epidemic
12 grows. We have exhausted to a large degree the base of volunteer
13 support. We have exhausted those few little niches of
14 underutilized medical care resources, and the problem this year
15 is going to be substantially greater than it was last year.

16 I estimate that on a statewide basis, for each AIDS
17 patient we will spend approximately \$50,000 per year. For each
18 AIDS-related complex, or mildly symptomatic patient, I will
19 estimate that it will cost at least \$4,000 without continuous
20 drug therapy.

21 If, as suggested by some of the studies, the provision
22 of drugs such as AZT have a substantial impact in slowing down
23 the onset of a more serious disease and more serious symptoms,
24 then this figure will probably go up to something in the range of
25 \$11,000 per year per patient.

26 For those patients who are asymptomatic, if we simply
27 provide them with counseling, with support, we're talking about
28

1 approximately \$2,000 a year. If a substantial fraction of those
2 patients receive continuous drug therapy, we're talking about
3 approximately \$6,000.

4 To aggregate this for you, I would estimate that if each
5 of these patients that I've described receives the appropriate
6 level of care, the total cost in California in 1989 would be
7 approximately \$800 million. If we add to that continuous drug
8 therapy for many ARC and HIV positive patients, that figure goes
9 to \$1.4 billion in 1989. If the higher figures that I gave you
10 earlier in terms of 7 rather 5, and 15 rather 10, ARC and HIV
11 positive patients for AIDS patients are assumed, then we're
12 looking at approximately \$2.0 billion in 1989.

13 Now, I would stress that these are just the dollars that
14 would be required to provide the health care levels that I've
15 described to you. The real issue is health care resources.
16 You've talked earlier about nurses and other types of health care
17 resources.

18 Those are long leadtime items, and simply providing the
19 money -- and I recognize that simply providing the money is not a
20 simple thing to do -- we also need to realize that providing the
21 resources to provide the health care is something that will take
22 more time: to increase the number of nurses; to increase the
23 number of outpatient facilities; to increase the number of
24 physicians is tough.

25 So, what's going to happen, as a society we have three
26 choices. We can either fail to care for these patients, which I
27 think has profound implications in terms of our own image as a
28

1 society. Or, we can begin -- or we can continue to do something
2 which I think we've already begun to do, we can begin to see
3 these patients displace patients who have other diseases from the
4 health care system, creating tensions within our society which
5 will be profound. Or, finally, we can view this as the crises
6 which it truly is, and find the new resources and new money which
7 are essential for us to solve this problem while we still have an
8 opportunity.

9 In my opinion, over the course of the next four to five
10 years, education and prevention are the only really important
11 weapons we have to control this disease. Once we have provided
12 appropriate levels of care for the people who are already
13 infected, society's first and most important priority must be
14 education and prevention.

15 The lifetime costs for somebody who gets the HIV
16 infection will be at least \$75,000 and probably significantly
17 higher. The stakes in preventing individuals from getting this
18 infection are, therefore, profound. We can afford as a society
19 to spend a great deal of money on education and prevention if,
20 for each individual that we prevent getting this disease, we save
21 that \$75,000.

22 The difficult question is, who will pay these costs? In
23 looking at the workplace, the health care worker is, in my
24 opinion, a crucial element in this whole process. It is
25 essential that health care workers take appropriate steps to
26 protect themselves, but having done so, if they are exposed, then
27 I think society has a special obligation to them to assist them,
28

1 both in monitoring their condition and providing them with
2 whatever care is appropriate.

3 Casual contact in the work environment, clearly that is
4 not a problem. However, there's a tremendous need for education
5 to eliminate inappropriate fears. The risk to uninfected
6 employees is virtually nonexistent. The paradox is that the risk
7 to the infected employees is, perhaps, substantially greater.

8 Those of us who walk around each day with minor
9 infections and colds represent a much more significant risk to
10 our colleagues who may have the HIV infection than they do to us.

11 There are issues with respect to employability,
12 discrimination, confidentiality, and health insurance which will
13 be addressed in the report, and which I think require diligent
14 attention by both the Legislature and the executive branch.
15 Health insurance, in particular, we need to find creative
16 solutions. The current log jam and confrontation regarding the
17 testing issue flies in the face of the whole basis of insurance
18 in terms of trying to group people by risks. We need to take a
19 page out of our booklet with respect to drivers and assigned
20 risks and find ways to properly and appropriately insure people
21 who are infected with this disease.

22 In conclusion, what are my recommendations? First, do
23 as you're doing here today, but most importantly, try to do it in
24 a way which will reach out to your fellow Legislators. It's
25 crucially important that you, as our elected public officials, be
26 well informed.

27
28

1 It's equally important that you speak up on the
2 importance of dealing with this epidemic. For too long the
3 elected political leaders in this country have chosen to ignore
4 this crisis. This is an epidemic, and it will not wait. It is
5 essential that you take specific actions.

6 The plan which the California AIDS Leadership Committee
7 is preparing will include a number of recommendations for
8 actions, some of which have been discussed and will be discussed
9 by other speakers here today.

10 I hope that the plan will serve as the basis for joint
11 executive, legislative, and private sector action. I hope we
12 would find, as a point of departure, for the citizens of this
13 State to say, "Fine. We understand what the problem is. Now,
14 let's go about solving it."

15 It's important that you as leaders set the tone for
16 public policy making. In dealing with individuals who are
17 infected, it is essential that we put compassion before judgment.

18 We should never forget the high human and financial
19 costs of delay in taking action. We know enough to do a lot.
20 More studies are not necessary to make the big decisions, just
21 courage and leadership. This is not just a problem for the
22 people with the disease; this is a problem for all of us, and
23 your leadership is essential.

24 Thank you.

25 CHAIRMAN HART: Mr. Carpenter, thank you very much for a
26 particularly clear and eloquent statement.

27

28

1 I wanted to ask you two questions. One, in going
2 through these costs, you were talking about \$800 million per
3 year, up to, maybe, \$2 billion, depending on how you judge the
4 number of people that are infected.

5 Now, this is if we do the right thing, as I understand
6 it?

7 MR. CARPENTER: That's correct.

8 CHAIRMAN HART: Did your committee, or do you
9 personally, have an assessment of how much we are actually
10 spending here in California today?

11 MR. CARPENTER: It's an exceedingly small fraction of
12 those figures. I don't have a good estimate for you today,
13 because to a large degree, it isn't kept track of by disease
14 category.

15 I would estimate that for each AIDS patient, where I
16 said that \$50,000 a year would be the appropriate level -- let me
17 stress that I think that San Francisco, for example, is providing
18 very good care to those patients at significantly lower figures,
19 but they're doing it with a very high level of volunteerism in
20 the city. They're doing it with -- by stretching resources that
21 can't continue to be stretched.

22 I think that probably of the 9,000 patients that we
23 would anticipate being alive at the end of the year, I would
24 expect that a substantial fraction of them are not receiving
25 anywhere near the quality of care that we as a society think they
26 should be receiving.

27

28

1 CHAIRMAN HART: Can you give me a seat-of-the-pants
2 estimate as to what you think we are spending?

3 In the State budget, we've got like \$100 million plus
4 for AIDS, and a lot of that's in research, which I'm not sure is
5 factored into your figures.

6 MR. CARPENTER: It's all to patient care. I didn't
7 speak to research at all. I think that my own --

8 CHAIRMAN HART: You're just talking patient care.

9 MR. CARPENTER: -- personal opinion, with respect to
10 research in both the federal and other levels, is that we have
11 probably ramped up the investment in research to about the right
12 level, and further investments in research, in my opinion, are
13 much less important in terms of providing value than investments
14 in patient care and in education and in prevention.

15 My own guess in the patient care area is that with
16 respect to AIDS patients, we're probably spending about half of
17 what we should be spending. And with respect to ARC and HIV
18 positive and asymptomatic patients, we're probably spending maybe
19 a tenth of what we ought to be spending.

20 And what bothers me the most about that is that you can
21 only get this disease from somebody who's already got it. And if
22 we developed a program that could reach out to every single
23 infected person, provide them with good care and with good
24 counseling, we would maximize our chances of preventing those
25 people from giving this disease to other people.

26 There are lots of complex issues there in terms of
27 confidentiality and all sorts of other things, but that, to me,
28

1 is where the greatest challenge is: make sure that every person
2 in this State who is HIV positive knows it; and make sure that we
3 have available to each one of those people the right kind of
4 support to help them deal with their situation, and to counsel
5 them in such a way that they don't give this disease to other
6 people. And if we don't do that, the figures that we're going to
7 see in 1995 and the year 2000 will make our heads spin.

8 CHAIRMAN HART: The other question that I had was on
9 education. You focused on the importance of education.

10 I think there was a recent study done by the Department
11 of Education here in California that indicated -- and I may have
12 this wrong; I've just thought of a news story, and it's kind of
13 vague, so I wouldn't want to be held to this -- but it was
14 something like 90 percent plus of teenagers are aware of how AIDS
15 is transmitted sexually. Yet, with over half of the teenage
16 population or close to it being sexually active, when asked the
17 question, "Do you practice safe sex? Do you use condoms in
18 heterosexual sex," they answer was like 7 percent, 10 percent, 15
19 percent, way below that.

20 So the issue in terms of education, as I understand it,
21 if you believe those figures, is not saying, you know, this can
22 be transmitted this way; use a condom. It's not an informational
23 issue; it's a behavioral issue. And making that kind of jump
24 from information to behavior change is extremely difficult, as
25 you point out, and, I presume, extremely costly.

26 If you agree with that analysis --

27 MR. CARPENTER: What should we do?
28

1 CHAIRMAN HART: Yes, what do we do, and what are the
2 effective ways to change behavior in a so-called education
3 setting?

4 MR. CARPENTER: I think the most effective way to change
5 behavior, we know in our society how you change behavior. And
6 all you have to do is look at Coca-Cola, or some other consumer
7 product. Being aware of Coca-Cola doesn't sell Coca-Cola. It's
8 the constant repetition.

9 We've seen in the United Kingdom, where they had a
10 tremendous blitz on AIDS for about two weeks a year-and-a-half
11 ago, and then there was a long, quiescent period in which nothing
12 happened. We know from educational studies and education
13 research that you don't change behavior from one-time
14 pronouncements. You change behavior from a message which is
15 given consistently and often.

16 Now, our first problem is that those of you who are
17 leaders and who have been elected to public office have been very
18 reluctant to deal with questions having to do with AIDS, dealing
19 with questions having to do with sex, dealing with questions
20 having to do with condoms, et cetera. And there's tremendous
21 pressure at the local level of, you know, let's not talk about
22 these things.

23 We pride ourselves as a country of having given the
24 responsibility to local school boards who are dealing with
25 education issues. I can't imagine a more conservative force in
26 our society right now. This is a group of people that just don't
27 want to deal with this kind of issue because it makes us all feel
28 uncomfortable.

1 We have to realize that either we have the comfort of
2 not dealing with messy issues, or we're going to have a lot of
3 our children die. That's a tough decision, but we as a society
4 have to stand up and say the time has come to put aside our
5 scruples on dealing with these issues.

6 And we have to be prepared in the schools to deal with
7 this issue up-front and consistently. We have to be prepared to
8 give Dr. Werdegar and his colleagues support when they want to do
9 needle exchange programs and they want to get out there and talk
10 about these things in vivid terms.

11 We know you can't change people's behavior by talking to
12 them in scientific terms. You have to talk to people in terms
13 that they understand and appreciate. And yet, you as Legislators
14 and people in the executive branch get pretty upset when people
15 start using State money or federal money to give sexually
16 explicit messages. But we can't have it both ways. We can't say
17 we want to change your behavior, but you have to do it in real
18 nice words, because it isn't going to change people's behavior if
19 you do it in real nice words.

20 CHAIRMAN HART: Dr. Filante.

21 ASSEMBLYMAN FILANTE: On that last point, I want to
22 follow up immediately because it brings all too clear to many of
23 us who have been fighting for this; that is, the education as you
24 were talking. We were kind of saying, "Here are the messages:
25 dollars and death."

26 You have to be very explicit, granted; you're right.
27 But in terms of education, I totally agree it's got to be
28 Coca-Cola.

1 Do you see -- and I'm looking for cost effective, I'm
2 looking for the big fight, you know, because you're talking about
3 sex and other things, pregnancy prevention; it's the same thing:
4 pregnancy and HIV prevention.

5 But as I see it, being someone who has to vote on
6 dollar, and being a physician I've got to get the message out, I
7 see it with teenagers as requiring the family, because you can't
8 afford to be telling the teenager or the student this every day,
9 but maybe if we got the family hooked up in it, that would help.

10 Is there some possibility that you see, or some
11 technique that you see, where we could do that, because it is
12 Coca-Cola. In other words, it's a message that needs to be
13 repeated, but we don't have the dollar resources that Coca-Cola
14 does, because we've got to do other things, where you can bring
15 in the community, individuals, and what have you.

16 We were lucky, you know, with our misfortune here in San
17 Francisco. We had a humane, tight, related society in our gay
18 community here that could do a job for us and help. That won't
19 be here, I don't think, for the drug community.

20 But in the school community, where maybe you've got
21 families or something, and PTAs, and what have you, is there some
22 way that you can see the way through to what you're talking
23 about, or what I'm describing: death and dollars.

24 MR. CARPENTER: The solution from my standpoint is that
25 I think the people that we have in leadership positions simply
26 have to put this at the top of their agenda. And if you're a
27 superintendent of a school district, if you're on a school board,
28

1 if you're involved in local decisions with respect to education,
2 you have to just simply say, as the Surgeon General said, he
3 said, "I'm the Surgeon General of the United States. I'm not the
4 chaplain of the Public Health Service." He said, "My job is to
5 help this country deal with the health care crisis."

6 And I think that we're going to have to ask the people
7 at all levels who are in leadership positions, in the private
8 sector and in the public sector, to just simply say this is an
9 issue we've got to talk about. This is an issue that has to be
10 on the agenda. And we do it in our families. We do it in our
11 schools. We do it at the State level.

12 I don't think there's a simple answer to this, but the
13 simple answer if we don't do it is that it's going to destroy our
14 health care system, and, I think, in the process it's going to do
15 a lot to destroy our society.

16 CHAIRMAN HART: Senator Marks.

17 SENATOR MARKS: I think that I agree with what you just
18 said, the leadership has to do this.

19 But unfortunately, the leadership of the Legislature
20 basically is in this Committee. Those who believe in trying to
21 do something about AIDS are on this Committee. Unfortunately,
22 there are a lot of Members of the Legislature who don't want to
23 do anything. That's the basic problem we have. It's very
24 tragic.

25 Unfortunately, we have to do an awful lot more, those of
26 us who want to do something in our State are here on this
27 Committee, and Assemblyman Filante also.

1 MR. CARPENTER: Well, my sense is that perhaps what we
2 can do is, when the document from the Leadership Committee is
3 delivered, that we can use that as a rallying point and bring
4 together the people from the executive branch, the legislative
5 branch, and the private sector, and recognize that we have a
6 full-scale crisis on our hands, and commit ourselves to doing
7 something about it because it cannot be business as usual.

8 If it's business as usual, in three to four years this
9 problem will be so severe that we will have no hope of catching
10 up with it, and all you have to do to see what that looks like is
11 look at New York City today. That's where we're going to be in
12 four and five years if we don't make the intellectual, the
13 emotional, and financial investment in fighting this disease.

14 ASSEMBLYMAN FILANTE: And if your report doesn't say
15 dollars and death, headlined on every page, we're not going to be
16 able to avoid New York City, Newark, and whatever else.

17 MR. CARPENTER: I'm certainly not going to be hesitant
18 to speak out, both in the report and on my own in conjunction
19 with the report. In that respect I welcomed the opportunity of
20 chatting with you this morning, and I will work with you to carry
21 this message to your colleagues.

22 ASSEMBLYMAN FILANTE: Thank you.

23 CHAIRMAN HART: Thank you very much, Mr. Carpenter.

24 I think we should break now. It's the intention of the
25 Chair to return and begin our afternoon testimony promptly at
26 1:30. So, let's take an hour and seven minutes break, and we
27 will be back at 1:30.

28 (Thereupon the luncheon recess was taken.)

AFTERNOON PROCEEDINGS

--oo0oo--

1
2
3 CHAIRMAN HART: I said we were going to start at 1:30.
4 It's 1:35. That's pretty close by politicians' standards; isn't
5 it?

6 We have a full agenda this afternoon, so I want to
7 begin.

8 Is Pat Franks here? Thank you.

9 Ms. Franks is the Coordinator for the AIDS Resource
10 Program with the UCSF Institute for Health Policy Studies.

11 We really appreciate you joining us this afternoon.

12 MS. FRANKS: Thank you for having me, Mr. Chairman,
13 Senator Marks.

14 I'm a health policy analyst, and for the past 13 years,
15 I've worked at the Institute for Health Policy Studies at UCSF
16 and in the community on a number of health issues. My interests
17 are in health promotion and disease prevention, primary care, and
18 community-based health services, also intergovernmental health
19 issues, and public-private partnerships in health. I've always
20 had a special interest in the health of special populations:
21 refugees and immigrants, minority populations, elders, and the
22 medically indigent.

23 For the past three years, I have had a special interest
24 in people affected by the HIV epidemic. And through the AIDS
25 Resource Program, I have worked daily with communities, and
26 counties, and states across the country to help them plan and
27 implement a continuum of HIV prevention, treatment, and support
28 services.

1 Today I want to speak to five questions: first, what is
2 the purpose of planning? We talked about planning this morning.
3 I would like to talk a little bit more about it and lend some
4 context.

5 What are other states doing related to HIV planning?
6 What are counties and communities doing, especially in
7 California, related to HIV planning?

8 What is my perspective on California's draft HIV plan:
9 the process of developing the plan and the plan itself; its
10 structure and content?

11 What in my view are the next steps for California with
12 the planning process and with its HIV plan?

13 I will not address another major question -- what is the
14 federal government doing related to developing a comprehensive
15 HIV plan -- because I do not know the answer to that question.
16 Our administration has not yet made clear its course of action
17 related to developing a plan to respond to the HIV epidemic. The
18 Congress, to the best of my knowledge, has not yet required this
19 administration or the previous administration to develop a
20 comprehensive plan.

21 What is the purpose of planning? For me, planning is a
22 way for people to think things through, to work things through,
23 and to get things done.

24 Different types of planning serve different purposes.
25 First, there's policy planning. And the purpose of this type of
26 planning is to answer the question: what should we do?
27
28

1 At this level, planning is goal-oriented. People are
2 trying to figure out in a broad sense how to respond to a
3 problem. Often, they are trying to create a new system in
4 response to a new problem. And here, technological information
5 -- demographic data, epidemiologic data, health systems data,
6 health manpower data, and cost data -- is helpful in describing
7 the nature and the extent of the problem, as well as some of the
8 potential solutions. So is information about how the current
9 system is organized to respond, and how the system works and
10 doesn't work, and who does what. It helps, too, to know what
11 other people are doing to solve the problem, people in other
12 states and people working at the community level. The outcome of
13 this type of planning is often a statement of goals or priorities
14 and recommendations about how they should be met.

15 Second, there's strategic planning, and the purpose of
16 this type of planning is to answer the question: what can we do?

17 At this level, planning is objective-oriented. People
18 are trying to develop objectives related to their goals and to
19 explore different strategies for achieving them. Here,
20 information about opportunities and constraints, costs and
21 benefits, efficiency and effectiveness, including cost
22 effectiveness, of different strategies is helpful.

23 Third, there is what we might call tactical, or
24 operational, or implementational planning. The purpose of this
25 type of planning is to answer the question: what will we do?

26 At this level, planning is action-oriented. People
27 decide not only what they will do, but also how they will do it;

1 it; who will do it; when it will be done; and how much it will
2 cost; how to measure, monitor and evaluate the results. Here
3 tasks, methods and procedures, responsibilities, timelines,
4 costs, anticipated effects or outcomes, and monitoring and
5 evaluation are laid out.

6 The planning process helps to build consensus. One of
7 the major challenges of planning at all levels is to build as
8 broad a consensus as possible. Without some degree of consensus
9 about the nature and the extent of the problem, and what to do
10 about it, we can't have a plan.

11 To build consensus, we must invite and involve, at some
12 point in the planning process, all the people who are touched by
13 the problem, and who will have responsibility for solving it,
14 carrying out the plan, getting things done. If we don't invite
15 or involve them in the planning process, when the plan is done
16 and we want them to act on it, they'll just say, "No."

17 The planning process helps fill gaps in knowledge. A
18 plan is as good as what we know about what's happening in the
19 present, and what we think will happen in the future. Again, one
20 way to fill these gaps is to ask a broad range of people to
21 contribute their knowledge and expertise to the planning process.

22 What are other states doing related to HIV planning? We
23 know the HIV epidemic now touches all states and U.S.

24 territories. Five areas are now being hardest hit. These areas
25 have the highest incidence rates from March, '88 through
26 February, '89, or the greatest number of new cases, new AIDS
27 cases, reported per 100,000 people. These hardest hit areas are:

1 the District of Columbia, Puerto Rico, The Virgin Islands, New
2 York, New Jersey.

3 The next hardest hit are: Florida, California, Georgia,
4 Texas, Maryland, Connecticut, Massachusetts, Nevada, Delaware.
5 California follows only New York in the total number of AIDS
6 cases reported since 1981, another way to gauge the impact of the
7 epidemic.

8 How are states and U.S. territories responding? In
9 terms of planning, only New York and Georgia, among the high
10 incidence states, have five-year plans. New Jersey is working on
11 a plan. The State of Washington is implementing its regional
12 system of planning and delivering services. Other states are
13 reorganizing their AIDS efforts, either by elevating them to a
14 higher level, or creating new divisions in their health
15 departments.

16 The great majority of states do not yet have five-year
17 plans, nor are the plans that exist implementation plans.
18 However, a large number of high incidence and low incidence
19 states, approximately 35, have begun a planning process, and they
20 have produced policy documents and other special reports. These
21 reports often have been mandated by state legislatures or by
22 governors, and they are often the work of governors' advisory
23 councils, legislative task forces, or departments of health and
24 human services.

25 With or without the guidance of state HIV plans, more
26 and more states are taking an active role in establishing
27 policies, passing laws, and appropriating more state dollars to
28 respond to the HIV epidemic.

1 What are counties and communities doing related to HIV
2 planning, especially in California? The HIV epidemic now touches
3 all of California's counties. If we look at the cumulative
4 incidence -- the number of AIDS cases reported per 100,000 people
5 over the course of the epidemic -- clearly, the City and County
6 of San Francisco has been hardest hit. Here, cumulative
7 incidence now stands at 717 AIDS cases per 100,000 people.

8 Among other hardest hit counties and jurisdictions are:
9 Long Beach, Berkeley, Sonoma, Marin, Los Angeles, Pasadena,
10 Alameda, San Diego, Mendocino, San Luis Obispo, San Mateo, Contra
11 Costa, Sacramento, Riverside, Orange, Santa Cruz, Napa, Monterey,
12 Santa Clara, Santa Barbara.

13 More and more California counties are falling into the
14 hard hit category. In fact, only about 20 counties now have a
15 cumulative incidence lower than 12 AIDS cases per 100,000 people.
16 The rest have more.

17 Local response has been a key factor in response to the
18 HIV epidemic. The epidemic has been handled from the start as if
19 it were a series of local health problems. We might describe the
20 situation as bottoms-up health policy. The response of cities
21 first impacted by the epidemic -- San Francisco, Los Angeles, and
22 New York City -- is being recapitulated by communities impacted
23 later in the epidemic.

24 Municipalities and counties in California and in other
25 high incidence states have taken the lead in developing and
26 testing policies and programs. In reality, communities, and
27 communities within these communities, were the first to respond
28

1 to the epidemic. Why? People do not live at the federal level
2 or at the state level; they live at home in their communities,
3 and the epidemic has hit at the heart of homes in these
4 communities.

5 Mayors' HIV task forces and advisory groups, special HIV
6 commissions mandated by boards of supervisors or city councils,
7 interagency task forces, advisory groups to departments of public
8 health, AIDS offices and planning departments within departments
9 of health, and ad hoc groups of community activists -- this is
10 the way that planning related to the HIV epidemic has gotten
11 started and continues in California and other states.

12 HIV planning in California counties is proceeding at
13 various levels and paces. When my colleague, Carl Lester,
14 surveyed the 12 California counties with the most AIDS cases as a
15 project of the Center of AIDS Prevention Studies at UCSF last
16 year, he looked at county plans, and he also visited these
17 counties and talked with lots of folks.

18 In all 12 counties, we know that the chief health
19 officer, or designated local health officer, has overall
20 responsibility for administrating AIDS activities. Seven of the
21 12 counties at that time had established a formal AIDS planning
22 process and had written AIDS response plans. The AIDS response
23 plans varied from plan-to-plan documents, to detailed
24 comprehensive five-year plans.

25 Again, these plans were not in any case operational
26 plans, but more policy plans or policy statements. Some of the
27 plans were prepared by consultants hired by the county. The rest
28

1 were developed under the direction of public agencies or public
2 bodies with varying degrees of input from the rest of the
3 community.

4 Nine of the 12 counties had established permanent,
5 multidisciplinary advisory bodies to assist the county in
6 planning, coordinating, and developing HIV policies. Of course,
7 the composition of these bodies varied greatly. In some cases,
8 the advisory group members were appointed by the board or the
9 mayor; in others, the health director had requested a great
10 number of people to serve on a great number of advisory bodies.

11 Lines of authority for planning and coordination are
12 often blurred in counties. It's often not clear whose job it is
13 to plan, and whose job it is to carry out the plans that are
14 developed.

15 Last week, I had a call from one of Sonoma County's AIDS
16 Commissioners who wanted to know how other counties were
17 responding structurally and with funding. He sent a copy of the
18 Commission's Report on AIDS, issued in July, 1988. The title is
19 telling: "AIDS in Sonoma County: An Internal Assessment of the
20 Scope of the Epidemic, the Immediate and Intermediate Needs, and
21 the Available Services and Resources." The report is an
22 eloquent, almost poignant, statement of the plight of this high
23 incidence California county.

24 HIV planning in counties and communities outside
25 California is also proceeding at a variable pace. I also
26 received in the mail last week an equally poignant document from
27 the Citizens Commission on AIDS for New York City and Northern
28

1 New Jersey. This document was, "A Guide to the Plans." Now six
2 of them have been produced by public agencies, public-private
3 efforts, and private sector efforts. Accompanying that document
4 was an article from The New York Times, saying that New York's
5 plans for AIDS are inadequate.

6 On the other hand, in a given week, I will hear that
7 Boston or Detroit or Cleveland or St. Paul has had a major
8 breakthrough in developing a consensus report or policy
9 guidelines.

10 Municipal and county policies and programs are forming
11 state and federal policy decisions and shaping state and federal
12 programming.

13 What's my perspective on California's draft HIV plan?
14 First of all, what about the HIV planning process in California?

15 Almost a year ago today -- March 30th, 1988, to be exact
16 -- there was an AIDS policy meeting at the AIDS Office in
17 Sacramento. A number of people from the Department of Health
18 Services, including Dr. Kizer and Ms. Frazier, legislative
19 staff, and people from California's counties met to discuss the
20 need for a California AIDS Leadership Committee and a State HIV
21 plan. There was a bomb threat in the late morning at the AIDS
22 Office, so we moved the meeting to the Senate Office of Research
23 and spent the rest of the afternoon talking about what the HIV
24 plan might look like.

25 Today, we have a California AIDS Leadership Committee
26 and a draft HIV plan. And I think that a number of people should
27 be congratulated for their efforts: Dr. Kizer and Dr. Marcus
28

1 Conant, UCSF, Co-Chairs of the Leadership Committee; Dr. Don
2 Francis, CDC AIDS Advisor to the State of California;
3 Ms. Frazier; and Dr. David Werdegar, all members of the
4 Leadership Committee's Executive Committee.

5 The full membership of the Committee also deserves
6 credit because I know how hard many of them have worked,
7 especially subcommittee co-chairs. Many more people were
8 included as members of these subcommittees.

9 As I reviewed the State of California's three-year
10 comprehensive HIV Disease Prevention and Treatment Plan, dated
11 March, 1989, I went to my file. I pulled out another document,
12 "Acquired Immune Deficiency Syndrome in California: A
13 Prescription for Meeting the Needs of 1990," dated March, 1986.

14 Both of California's HIV plans were developed pursuant
15 to legislative budget control language. The California State
16 Legislature required the California Department of Health Services
17 to develop comprehensive AIDS plans so that identified needs
18 could be addressed during the budgetary process.

19 California's HIV planning process has taken a
20 significant step forward, but we need to go further and, I might
21 add, faster. As you know, we can do top-down planning, or
22 bottoms-up planning, or horizontal planning, or vertical
23 planning. As I reviewed a list of California's AIDS Leadership
24 Committee members, I was impressed with the large number of State
25 public agencies represented, and the significant representation
26 from the private health care sector.

27
28

1 I did not find adequate representation from the
2 Legislature, from county agencies, and not-for-profit agencies --
3 community agencies that have been in hand-to-hand combat with
4 this epidemic from the start -- or from the religious community,
5 the labor, the business community, minority communities, private
6 and corporate foundations, or the media.

7 It's my perspective that the nature of the HIV epidemic
8 requires us to be as embracive as we can in enlisting people's
9 help in ending it, in caring for the sick, in assuring the
10 protection of the human rights of all Californians, and in
11 understanding better how to finance HIV prevention, treatment,
12 and support services, and research.

13 What about the structure or organization of California's
14 draft HIV plan? The structure or organization of the plan needs
15 to reflect the purpose of the plan. Is it a policy plan, a
16 strategic plan, or an operational plan?

17 I believe that it is now a blend of plans, but mostly a
18 policy plan.

19 Is the purpose of the plan to provide guidance to the
20 Legislature or to counties? Is the purpose of the plan to lay
21 the groundwork for a strategic plan, and then an operational plan
22 for all California State departments and agencies?

23 The HIV plan outline developed on November 12th -- I
24 believe it's November 17th -- which I have attached as an
25 appendix to my statement, seems to be a better way to structure
26 the plan than the way the plan is now organized.

27

28

1 What about the content of California's draft HIV plan?
2 I think that the plan represents a significant achievement. It
3 is obviously the product of much collaborative, thoughtful work.
4 The ten priority issues in the Executive Summary are sound. The
5 majority of recommendations are also sound, and they demonstrate
6 a growing or new consensus on a number of important issues about
7 how Californians need to move forward in relation to the HIV
8 epidemic.

9 However, most of the recommendations are "shoulds."
10 They will need to be translated into action. Some of the
11 recommendations will require legislative action. Some have
12 budgetary implications.

13 If the plan is to move from a policy plan to a strategic
14 plan to an operational plan, meat needs to be put on the bones.
15 Goals, objectives, methods, procedures, tasks, responsibilities,
16 timelines, costs, and outcome measures will need to be added. We
17 will need to know who is going to do what, when, and how much
18 things will cost. We'll also need to know how to measure our
19 progress, because we can't manage what we can't measure.

20 There is one omission in the content of the plan that
21 needs to be remedied. There is no information on the present or
22 projected utilization and costs of health care services --
23 inpatient, outpatient, physician, and community-based -- or
24 social support services. Information from the Institute for
25 Health Policy Studies' "California AIDS Cost of Care Study and
26 Skilled Nursing Facility Study" needs to find its way into
27 California's HIV plan.

1 What are the next steps for California with the planning
2 process and with the HIV plan? The people of California have
3 already shown an extraordinary commitment in responding to the
4 HIV epidemic. We have shown a commitment to end the HIV
5 epidemic, to care for the sick, to protect the human rights of
6 all Californians, and to finance HIV prevention, education, and
7 information, HIV treatment and support services, and HIV
8 research.

9 We were the first to develop innovative community-based
10 HIV prevention programs, dedicated AIDS outpatient and inpatient
11 units in our public hospitals, home and hospice care programs for
12 persons with AIDS. We were the first to speak out strongly
13 against discrimination against persons with HIV infection. We
14 were the first to define components of a continuum of HIV
15 prevention, treatment, and support services. We have many firsts
16 in biomedical, clinical, behavioral, epidemiologic, and health
17 services research. We were the first to do studies of the costs
18 of AIDS care.

19 The people of California have committed more State
20 dollars to responding to the HIV epidemic than any other state
21 and many countries. We also have committed a tremendous amount
22 of local dollars and local effort, especially in cities like San
23 Francisco. The Legislature, the Department of Health Services,
24 local health departments, community-based agencies, and thousands
25 of volunteers deserve great praise. The Governor also deserves
26 credit.

27
28

1 California's HIV plan is a way to lend focus to our
2 commitment, and to tie that commitment to the budgetary process
3 in the form of an operational plan of action. California is a
4 diverse, multicultural State. The face of the HIV epidemic is
5 changing, and we are being challenged with creating and
6 recreating new systems to respond to the epidemic. What is
7 happening is that we are moving from a perception of AIDS as a
8 rapidly fatal catastrophic illness, to the perception of HIV
9 disease as a preventable, communicable, chronic illness. We are
10 now being challenged to blend a public health model, a medical
11 model, a social model, and a self-care model in responding to
12 this disease.

13 California's HIV planning process must continue as a way
14 to build consensus and focus the efforts of all Californians.
15 State and communities, like people responding to HIV disease,
16 proceed through stages in their responses to the HIV epidemic.
17 These stages include denial, panic, and coping. It's time for
18 us, as a State, to move out of denial and panic -- and
19 divisiveness, and partisanship, and anger, and hostility -- and
20 into a coping mode.

21 I recommend four next steps in helping California move
22 forward in responding to this epidemic.

23 First, expand immediately the membership of the
24 California AIDS Leadership Committee, including the Executive
25 Committee and subcommittees.

26 Second, complete a revised draft of the HIV plan by
27 May 1st, 1989, so the policy plan can be useful to the
28 Legislature during the budget process.

1 Third, move the HIV plan from a policy plan to a
2 strategic plan by June 30th, 1989, involving the expanded
3 California AIDS Leadership Committee.

4 And fourth, move the HIV plan from a strategic plan to
5 an operational plan by September 30th, 1989, involving the
6 expanded California AIDS Leadership Committee.

7 Thank you very much.

8 CHAIRMAN HART: Thank you very much.

9 I must say that I usually find people who read testimony
10 deadly boring.

11 MS. FRANKS: I'm sorry.

12 CHAIRMAN HART: And I also find discussions of plans
13 usually deadly boring.

14 I was captivated by your presentation. It was
15 compelling, and I don't know how to put it. It was compelling to
16 me.

17 I wanted to ask a couple of specific questions. On Page
18 Five in your identification of the various jurisdictions that
19 have been impacted, I guess I need to understand if you're sort
20 of mixing cities and counties in here a little bit?

21 MS. FRANKS: Yes, we were.

22 CHAIRMAN HART: Like Los Angeles, which I've always
23 thought of as bearing the brunt with San Francisco, and places
24 like West Hollywood. Los Angeles ranks farther down than a place
25 like Long Beach, which I've not usually associated with a heavy
26 impact.

27

28

1 MS. FRANKS: Do you know why? Los Angeles is so big.
2 In this case, when we looked --

3 CHAIRMAN HART: You're talking about the city or the
4 county?

5 MS. FRANKS: The county -- both the county and the city.
6 The other thing that happens, Senator, is that the
7 Department of Health Services reports -- we have special health
8 jurisdictions. Some of our municipalities -- Berkeley, and Long
9 Beach, and San Joaquin has a special health district, too. Let's
10 see if there are other cities: Pasadena. And that's how that
11 happens.

12 CHAIRMAN HART: I also wanted to ask, you mentioned
13 other jurisdictions, other states that have these plans. You
14 mentioned Georgia and New York that have five-year plans; you
15 made reference to Washington.

16 MS. FRANKS: Yes.

17 CHAIRMAN HART: Are any of these plans ones that we
18 ought to be looking at --

19 MS. FRANKS: I don't think so.

20 CHAIRMAN HART: -- as a model?

21 MS. FRANKS: No, I do not think so.

22 I think that each state is unique, as each community is
23 unique in responding. I think we could learn. You know, there
24 was kind of an irony about New York City. They took San
25 Francisco as a model and made it a state model. Maybe we could
26 look back at New York's model and bring it back home.

27

28

1 I'll be happy to send it to you, but the plan itself,
2 actually I think -- because I'm very chauvinistic as a
3 Californian, used to live in New York -- I think we did a better
4 job. I think we're on the way of doing a better job with our
5 plan.

6 CHAIRMAN HART: Any other questions?

7 ASSEMBLYMAN FILANTE: A comment on the District of
8 Columbia.

9 MS. FRANKS: Yes.

10 ASSEMBLYMAN FILANTE: If you will, this far away, the
11 high incidence here is obviously tied to drug abuse, and we have
12 D.C. in the news for all their murders, and what have you.

13 Is that only another seat of drug crimes, or is there
14 something else?

15 MS. FRANKS: It just seems to me that the nation's
16 Capitol seems to be kind of out of control.

17 ASSEMBLYMAN FILANTE: That's our response; just one more
18 example.

19 (Laughter.)

20 CHAIRMAN HART: In more ways than one.

21 MS. FRANKS: I'm sorry, I didn't address your question.

22 ASSEMBLYMAN FILANTE: I thought it was well addressed.

23 Thank you.

24 (Laughter.)

25 ASSEMBLYMAN FILANTE: But it is essentially that?

26 MS. FRANKS: Yes, it is.

27 Thank you very much.
28

1 CHAIRMAN HART: Thank you very much.

2 Our next witness is Dr. Marcus Conant. Dr. Conant is
3 Co-Chair of the AIDS Leadership Committee and Professor at the
4 UCSF School of Medicine.

5 DR. CONANT: Senator Hart, Senator Marks, Dr. Filante.

6 Let me join Dr. Kizer in thanking you for the
7 opportunity of addressing you today to tell you what we've been
8 about for the last nine months, and give you at least our
9 insights into why we think this plan may be of assistance to you
10 as you form legislation this year and in the future.

11 We, or at least I, come to you with a degree of urgency
12 that I have had for a long time. My first public AIDS lecture
13 was a little more than half a mile from here at Moscone Center in
14 1981. At that time there were 91 -- 91 -- known cases of AIDS in
15 the world. We were pleading for intervention. We were pleading
16 for education. We were pleading for help in stopping the
17 epidemic. Unfortunately, those pleas fell on deaf ears.

18 One of the things that has characterized this epidemic
19 as we've gone from 91 cases to today 91,000 cases of AIDS, that
20 thing that has characterized it is the lack of leadership,
21 particularly in the executive, both nationally and in the local
22 level.

23 This plan is not a plan created de novo. There were
24 outstanding models on which we based many of our considerations
25 and which would have, themselves, served as adequate plans to
26 lead the nation and the State in the past. The first was
27 prepared by the National Academy of Science, entitled
28

1 "Confronting AIDS", and it was published four years ago.
2 Unfortunately, it was largely ignored by the administration. The
3 next was the Surgeon General's Report, which was received by the
4 President but unfortunately never endorsed. And finally was the
5 Presidential AIDS Commission Report, which lays down precisely
6 how the nation has to respond to this epidemic. Unfortunately,
7 it was received by the President but again not endorsed.

8 In the State, this is the third plan. The first was a
9 plan which Dr. Filante and I helped draft at a meeting in Los
10 Angeles in 1985. That plan never saw the light of day. Two
11 years later, we had California's War on AIDS, which was an
12 extensive plan, budgeted, placed on the Governor's desk, and
13 unfortunately it was never heard of again.

14 This plan, the current AIDS Leadership plan, derived
15 most of its impetus last year when we realized we were working in
16 a vacuum of leadership. There were over 100 AIDS bills
17 introduced into the Legislature last year, and I've just been
18 told there have been 83 introduced this year. And it was clear
19 that we did not have a comprehensive plan on which to base
20 appropriate legislation. We were seeing inappropriate
21 legislation introduced; legislation, for example, that would
22 require mandatory testing of all people to find out who was
23 positive or not. Unfortunately, we felt -- the health experts
24 felt -- that that type of legislation would do nothing more than
25 drive the people who were afraid they were infected underground,
26 and in fact increase the magnitude of the epidemic.

27

28

1 Often when people are frightened, they find security in
2 codifying what they consider traditional wisdom. For those of us
3 who have tried to study epidemics, you find that what happens
4 usually as the last step in the epidemic is the passing of laws
5 to codify behavior or to persecute certain groups. The most
6 classic example is the Great Plague of 1348, when everyone knew
7 that it was the Jews poisoning the wells that killed a quarter of
8 the population of Europe in a two-year period. And so, laws were
9 passed to prevent Jews from traveling throughout Europe, and
10 those laws, in many locals, persisted for another 150 years.

11 People rush in, and they pass laws that satisfy their
12 prejudice, even though the Great Plague was not caused by Jews
13 poisoning wells. It was caused by the typhoid -- by the plague
14 bacillus.

15 We saw legislation introduced to round up and test
16 prostitutes, even though we had ample evidence from the syphilis
17 epidemic of World War I that closing down the Barbary Coast and
18 testing prostitutes was of little or no public health benefit in
19 stopping an epidemic.

20 We had legislation introduced for mandatory testing
21 before marriage, and yet health care experts were pointing out
22 that that would not stop the epidemic and would, in fact, drive
23 people underground. And I remind you that in the State of
24 Illinois, where it was passed, marriage in some areas was down 40
25 percent within a year. People were going out of the State of
26 Illinois to be married. Why should that be? These were
27 heterosexual people who were at low risk for AIDS. They were
28

1 fleeing the state because they were afraid if they had a false
2 positive test, they would experience discrimination.

3 This plan was written by a group of over 200
4 individuals, all of whom are expert in various aspects of AIDS
5 and public policy, and it was written quickly because many of the
6 public health ideas, the policy ideas, had been developed over
7 the last seven years from the previous plans I've enunciated and
8 from innumerable local plans that have been implemented.

9 We stress that this is a plan for the people of
10 California. We hope through it to inform the Governor, to
11 provide information for the Legislature on which they can base
12 legislation, and to bring in the private sector, which we will
13 need desperately as the cost of this epidemic escalates. We hope
14 that it will help in legislative endeavors, but we do not see it
15 solving the problems that the Legislature faces with this
16 epidemic.

17 I think that one of the problems is that we often think
18 that we can find societal solutions with medical intervention.
19 Medicine cannot solve the IV drug use problem, the homeless
20 problem, the teenage pregnancy problem, the sexually transmitted
21 disease problem, or AIDS. These are societal problems which
22 medicine plays only a small role in solving.

23 Working together, we may find solutions, but we cannot
24 rely on a group of experts to stop the AIDS epidemic any more
25 than a group of experts can stop the IV drug epidemic.

26 I would remind you that we have also produced through
27 this process a group of over 200 experts who have deliberated
28

1 many of the contentious issues around AIDS that you can use in
2 legislative hearings as you begin to formulate legislation to
3 respond to some of the issues raised in the plan.

4 As Dr. Kizer pointed out earlier, we have structured the
5 plan to give ten major recommendations which we feel are the
6 major things that the Legislature, the Governor and the people of
7 California need to hear. We stress education; we stress the fact
8 that this is spreading to the IV drug using community; we stress
9 the fact that counties must work closely with the State.

10 And then, for each of the major issues -- for education,
11 for prevention, children, for IV drug problems, for treatment --
12 we have made a number of specific recommendations, many of which
13 will require legislation for implementation. My guess is that
14 the plan will end up with approximately 100 such recommendations
15 which will need implementation by someone.

16 It is my hope that in the final draft of the plan, it
17 will be quite clear who we feel should be the person that should
18 implement those various 100 recommendations.

19 Let me take five examples from the prevention, treatment
20 and testing area to give you the kind of verbiage that the plan
21 will contain and where I think that it will help the Legislature.
22 Education, we acknowledged, was the most important tool we have
23 in terms of preventing the further spread of the epidemic. And
24 as you heard this morning from Mr. Carpenter and others, we
25 cannot be shy in telling children what they need to know.

26 Now, we've been through that. We know what happens when
27 you don't tell people what they need to know. Victorians,
28

1 uncomfortable talking to their children about sex, talked about
2 birds and bees, so that they wouldn't be embarrassed or embarrass
3 their children. And of course what happens is, the children
4 never understood what the parents were trying to tell them.

5 We have to explicitly tell children that are ready to
6 hear the kind of information they need to know about their
7 bodies, about the instincts that they will develop as they
8 mature, and about the strategies they need to use to prevent
9 disease transmission.

10 The wording in the plan is something to the effect that
11 we recommend that the State should mandate all public schools to
12 provide age-appropriate HIV disease education, beginning -- and
13 this is underlined -- no later than the fifth grade. This
14 education should be provided unless a parent requests that the
15 pupil not attend this instruction.

16 Senator Hart, we are mindful that you have introduced
17 similar legislation in the past. Hopefully, when you do so again
18 in the future, you can point to the State plan provided by a
19 group of AIDS experts which endorsed your idea of two years ago,
20 that we need this kind of education to stop the transmission of
21 AIDS in this State.

22 ASSEMBLYMAN FILANTE: Mr. Chairman.

23 CHAIRMAN HART: Dr. Filante.

24 ASSEMBLYMAN FILANTE: On that point -- I hate to
25 interrupt you, Dr. Conant -- it was thoroughly debated. It was a
26 problem, and there's an obvious need both at that time and today
27 for a wider section of the population, namely parents, to be
28 involved.

1 Can you or the Committee suggest a way to implement that
2 education goal with the involvement of many more parents? Far
3 more than just parents saying you can't have it. That's the last
4 thing we want to see, is that little note. Any suggestions?

5 DR. CONANT: But you won't -- that little note, that
6 parent has to approve it. There's another little note that
7 people like to pin --

8 ASSEMBLYMAN FILANTE: My plan would say that you've got
9 to give it to all parents and their kids, or the kid can't pass
10 if the parent -- something Draconian, or whatever, because I have
11 the fear, and you come up with some weird ideas.

12 But, you know, anything that might make sense that could
13 be done to at least move in that direction. For example, my
14 suggestion in terms of getting -- let the parents decide, the
15 parents had to know what the plan was and be aware of it before
16 they could reject it, so at least they'd have a little education.

17 Anyway, were there any thoughts in the development of
18 that?

19 DR. CONANT: I wasn't present at the deliberations, but
20 it might be useful to get the subcommittee chair who conducted
21 those to help you as you formulate the bill again.

22 ASSEMBLYMAN FILANTE: All right, thank you.

23 DR. CONANT: But I think, Dr. Filante, that what we're
24 going to have to do is, the Legislature is going to have to speak
25 directly for what most parents want. Certainly, the parents of
26 the children that I'm seeing, as a physician here, want their
27 kids to be educated. So, while I understand your concerns, this
28

1 large body of people who do not wish their kids educated, many of
2 us don't see them. So, I think that need to speak for what the
3 majority seem to want their kids to have.

4 And clearly, if the kids are not informed, we are
5 negligent, and we're going to be watching our kids die. I think
6 it's just unconscionable that we would have a situation where a
7 child was not told how to protect himself.

8 ASSEMBLYMAN FILANTE: Let me reword my statement or
9 question.

10 Given that no parent precluded their children from this
11 education process, a large number won't be educated. In the
12 current state of our schools, whether it be funding, or mix, or
13 illiteracy, or drugs, or violence, or anything else, the fact is,
14 a tremendous percentage are not going to get the message.

15 That's why I'm so concerned.

16 DR. CONANT: Why is that?

17 ASSEMBLYMAN FILANTE: Why is it? Because they're either
18 zonked on drugs, absent, doing something else during class, out
19 to detention, or whatever, or it's smart not to pay attention,
20 whatever it might be. They're not going to get the message.
21 There is no homework, and so on and so forth.

22 Just pragmatically, even if I could get 100 percent
23 okay, and no parent ever said no, that's where I have the
24 problem.

25 DR. CONANT: Of course, your question goes to a greater
26 issue than we have.

27 ASSEMBLYMAN FILANTE: Obviously, yes.
28

1 That's why I was trying to drag in parents, or homework,
2 or anything that would -- because this is not like history or
3 math; this is life and death.

4 DR. CONANT: But to go to a point that Senator Hart
5 mentioned earlier, as to how do we go from education to behavior
6 change, one of the ways you do it is, you get the entire cohorts
7 to start behaving in a certain way.

8 We were educating the gay community in 1982, and telling
9 them they should use condoms, and we had documentation that they
10 were not. What happened was, when people started seeing their
11 friends and neighbors die, they became frightened. They started
12 using the information that had been given them, and now we've
13 seen the entire consensus change in the community where everyone
14 is behaving in the same way.

15 Even if you reach 80 percent of the children, it becomes
16 the norm to behave in a certain way. Those that were asleep, or
17 zonked, or didn't listen might be positively impacted.

18 One of the other concerns that we have had is that we
19 are seeing people with indeterminate tests for AIDS with those
20 tests reported out. This, too, can be fixed by legislation. An
21 individual is told that the test is indeterminate -- it may be
22 reported as positive when it's not positive, and the person is
23 frightened to death, or even worse if it's reported as negative.

24 The subcommittee that dealt with that -- and Dr. Smith
25 is here and can answer questions about it on that specific issues
26 later if they come up -- suggested, quote:

27

28

1 "Legislation should be written to
2 require that all indeterminate test
3 results should be confirmed by a
4 designated State lab ..."

5 which has greater expertise in doing the test, and hopefully, we
6 could reduce to an acceptable minimum the number of tests that
7 were indeterminate. There is --

8 CHAIRMAN HART: On that point, what percentage are
9 indeterminate? Less than one percent?

10 DR. CONANT: I don't know.

11 Carl, do you know?

12 DR. SMITH: Less than one percent in a thousand, I
13 think. [Ed. Note: Recent figures indicate 1 in 2,000.]

14 CHAIRMAN HART: I would assume that if you had an
15 indeterminate test, you'd do the test again.

16 DR. CONANT: Sometimes they'll be indeterminate if you
17 do them again. You need more refined testing mechanisms than
18 many commercial labs have.

19 CHAIRMAN HART: And now, when there is an indeterminate
20 test, the test giver doesn't suggest or automatically send it to
21 a more sophisticated test?

22 DR. CONANT: No. That's what this is asking for.

23 CHAIRMAN HART: Why not? Why wouldn't they do that?
24 Cost?

25 DR. CONANT: I don't know.

26 They are a private lab. They do it and report it the
27 way they have it, and they stop there.

1 What we think needs redressing there is that, with that
2 small number of tests, they should be sent to a reference
3 facility for a final arbitration and determination.

4 And this is a real issue. I have a surgeon friend who
5 stuck his finger with a needle and went back two months later,
6 tested himself to make sure he had not seroconverted so he did
7 not expose his wife, and got an indeterminate test result. While
8 it's rare, it ruined his life for about six months while he tried
9 to figure out if he had seroconverted from the needle stick or
10 not.

11 So, it's a real issue. A small issue, but one that
12 could be quickly remedied with legislation.

13 CHAIRMAN HART: I don't want to take too much time, but
14 why did it take six months? A surgeon, knowledgeable about
15 medical procedures, wouldn't he immediately, upon finding out
16 that it was indeterminate, get this other test done right away?

17 DR. CONANT: We did the other test right away, and then
18 he didn't know which one to believe, so we had to wait and redo
19 it.

20 If it had gone to the reference lab initially and come
21 out negative to start off with, I think he would have avoided a
22 lot of it. At the point that it was indeterminate, he saw me,
23 and then we started the process.

24 The Legislature has passed laws which have said that
25 while people can test for life insurance for HIV, they cannot
26 test for health insurance. Unfortunately, what we are now seeing
27 is that companies writing legislation -- writing health insurance
28

1 policies are requiring life insurance policies that have the
2 health insurance policy, a way of getting around the intent of
3 the Legislature.

4 The plan addresses this by suggesting that we need
5 legislation to close that loophole.

6 And, of course, there's the whole issue of surrogate
7 testing, whether you can use a helper or suppressor T-cell ratio
8 to determine whether someone qualifies for health insurance or
9 not. You can say that, yes, you can't do an HIV test, but
10 perhaps the insurance company would like to do a surrogate test.

11 The plan suggests that that's inappropriate and calls
12 for legislation which would prohibit the use of surrogate tests
13 in the case of someone applying for health insurance.

14 Another contentious issue is the recalcitrant patient.
15 There's been a lot made in the press, and there have been a number
16 of bills introduced to try to deal with the individual who
17 continues to have sex, perhaps unprotected sex, after he or she
18 finds that they are antibody positive. In my experience as a
19 physician who treats large numbers of HIV patients, this is
20 exceedingly rare, but when it does occur, it tends to get public
21 attention.

22 The plan points out that such individuals are generally
23 terribly disturbed. What they are doing is notifying society and
24 their physician that they need help, and the first approach
25 should be an attempt to intervene and find some acceptable way of
26 diffusing their anxiety rather than letting them act out in
27 public.
28

1 The plan goes on to acknowledge, though, that the public
2 needs to be protected, and that if attempts at intervention have
3 failed that there are existing statutes that can be used for
4 health officials to intervene and control the behavior of such an
5 individual.

6 Finally, there's an area that we have not addressed in
7 the plan, and the plan is notably deficient in not yet having a
8 solution for this problem. This is the whole issue of
9 antidiscrimination legislation. There are many experts in the
10 State who feel that there are already existing laws which
11 adequately protect people against discrimination in the
12 workplace, from discrimination by losing their job, their
13 insurance, their home. There are others who point out -- and I
14 believe you will have the opportunity this afternoon of talking
15 to some HIV infected patients who have experienced it -- this
16 kind of discrimination is occurring. That even though the laws
17 may exist to protect people, the discrimination occurs.

18 These people who are experiencing the discrimination
19 point out that they are often too ill to fight in the courts;
20 their health is often so poor that they will not live long enough
21 for the issue to be adjudicated. And even if they do fight it,
22 the stress of the litigation in fact is detrimental to their
23 health.

24 There have been a number of proposals, and we have had
25 testimony at the Committee, but no definitive language has yet
26 been written. As you know, John Vasconcellos has introduced
27 Assembly Bill 65 that addresses this issue. Many of us on the
28 Committee would urge that you support that bill this year.

1 In an attempt to try and further shed light on this
2 issue, there will be a public forum on the issue of
3 antidiscrimination in AIDS in the Capitol, Room 447, on
4 April 13th, sponsored by John Vasconcellos and the International
5 Bioethics Institute, to try to get further dialogue on this
6 issue. So, that's one of the major deficiencies in the plan as
7 it stands today.

8 We join you in hoping that we can get you a final draft
9 of this plan within the next six weeks. Copies of the plan are
10 available to Legislators to use as you begin to formulate plans
11 for legislation this year. And I and other members of the
12 Committee would welcome an opportunity to help you formulate
13 those plans for legislation.

14 Thank you.

15 CHAIRMAN HART: Dr. Conant, thank you for both a cogent
16 statement and also for your involvement in this issue over the
17 years. You've been a great contributor, and we are all very
18 appreciative for your contributions.

19 ASSEMBLYMAN FILANTE: A couple of things, and I'll ask
20 later on testing, but in the area of counseling, there's
21 obviously tremendous need for counseling, and that gets buffeted
22 around in the legislative process, almost ridiculed. Those of us
23 who are involved in this, like you, know that it is a tremendous
24 need and cost.

25 Do you have, or does the plan have some rational way of
26 reaching that goal, because it is tremendously expensive in terms
27 of dollars today, although it may serve to help a lot to defray
28 costs later. What is the suggestion here?

1 DR. CONANT: I don't recall specific language in the
2 plan about how much it would cost, Bill.

3 I think what you could do is, experimental test programs
4 in different communities. You see, the counseling will depend
5 directly on the community in which you're involved. Counseling
6 in San Francisco, where there's already this data base in the
7 general population, is going to be quite different from
8 counseling in, say, Fresno.

9 As the disease spreads -- as you've heard this morning,
10 the disease is clearly spreading to other risk groups --
11 counseling among Black and Hispanic kids in the inner city, or
12 intravenous drug users, is an entirely different problem than
13 counseling gay men.

14 And finally, in my practice, I am now seeing young
15 heterosexual women who have contracted the disease as a
16 consequence of sex with bisexual men, and counseling in that
17 group is an entirely different problem because you're now
18 counseling about pregnancy and continued intimacy in the
19 heterosexual setting.

20 So, I think that the costs are going to be all over the
21 board. I think you would find, though, that most of the experts
22 on the Committee would second your suggestion that the money
23 spent for that kind of counseling now will save us in total
24 dollars later on.

25 ASSEMBLYMAN FILANTE: Those figures, that's what I'm
26 going to have to have. I can tell you, and I'm sure our Chairman
27 can confirm it, that without that kind of backup, we haven't got
28 a prayer of getting adequate counseling.

1 CHAIRMAN HART: Thank you, Doctor.

2 We need to take a break for our stenographer of five
3 minutes max, and we'll be right back.

4 (Thereupon a brief recess was taken.)

5 CHAIRMAN HART: We're ready to reconvene, if everyone
6 could please take your seat.

7 Our next witness is Michael Hennessey. He's Co-Chair of
8 the CALC Subcommittee on Public Safety and Prison Issues. He's
9 the Sheriff of the City and County of San Francisco.

10 Sheriff, we appreciate your testimony here today, and we
11 apologize for being about an hour late. You're a busy man, and
12 we've taken more of your valuable time than I wanted to. I'm
13 pleased you were able to stay with us.

14 SHERIFF HENNESSEY: Thank you, Senator. I'm very happy
15 to be here, and the time is well worth it.

16 In addition to being a co-chairman of the AIDS
17 Leadership Subcommittee on Prison and Public Safety, I'm also on
18 the National Sheriffs Association Advisory Board Regarding AIDS
19 Issues, and I'm also the California State Sheriffs Association
20 representative to the Red Cross Project on Emergency Employee
21 Safety Issues.

22 In addition to that, as being Sheriff of San Francisco,
23 we've had a considerable amount of experience with AIDS in the
24 correctional facilities and those issues. We've seen literally
25 thousands of people come through our jail system with AIDS.
26 We've had two inmates die in our custody of AIDS. We've had nine
27 Deputy Sheriffs die from AIDS in the past six years. So, in our
28

1 Department, we've seen first-hand how this tragedy can affect a
2 public safety agency.

3 I'm going to be talking briefly about the Committee
4 recommendations, the Subcommittee recommendations, which are --
5 can generally be broken down into two areas. We do see transmission
6 among -- within the inmate population in State prisons and in
7 county jails; and secondly, what are generically worker safety
8 issues for emergency workers.

9 I'd like to preface my remarks about the worker safety
10 issue and point out that in the entire life of this epidemic, no
11 correctional officer or deputy sheriff working in a county jail
12 has ever acquired AIDS, or has become HIV positive in the course
13 of their professional duties. Of the nine Deputy Sheriffs who
14 died in my Department, all have been gay men who -- there was no
15 claiming it was incurred during the course of their duties.

16 So, there is a great deal of concern among public safety
17 workers, police officers, correctional officers, deputy sheriffs
18 who work in jails, but I would like to stress that no jail
19 workers anywhere in the United States, or the world that we know
20 of, has ever acquired AIDS in a jail or prison setting in the
21 course of their professional duties.

22 There are inherent contradictions in enforcing public
23 safety and addressing the prevention of the disease. The two
24 examples, or the three examples that come most readily to mind
25 are: IV drug use and how to do AIDS prevention with IV drug
26 users at a time when the mere possession without prescription of
27 a needle is a crime itself. That creates a contradiction to a
28

1 public safety agency who's interested in helping the community do
2 drug prevention, and at the same time, is mandated by law to take
3 away the very tools of disease prevention.

4 A second one is condoms in a jail or prison institution.
5 As you know, in the State of California consensual sex at a State
6 institution of a jail or a prison is a felony. Therefore, at
7 this point in California, jails and State prisons do not permit
8 condoms to be distributed, even though we acknowledge,
9 professionally acknowledge, that consensual sex does take place,
10 and that that presents a great risk factor for the transmission
11 of AIDS in prisons and jails.

12 I think San Francisco will be the first jail in the
13 State of California to begin such a project, but we are doing it
14 with the risk of potentially being prosecuted for aiding and
15 abetting a felony.

16 A third area is the contradiction of medical
17 confidentiality and criminalization of those who are HIV positive
18 or who have AIDS. We are seeing an alarming trend of
19 criminalizing people who are HIV positive by making sentencing
20 enhancements, turning misdemeanors into felonies, creating new
21 crimes for people who are HIV positive.

22 And at the same time, through particularly Proposition
23 96, we have done away entirely, or almost entirely, with any
24 sense of confidentiality for anyone in custody. Therefore, a
25 person who is in custody who may be concerned that they are
26 positive, it is not in their best interest in general to seek
27 assistance or seek help, because any sense of confidentiality
28

1 will be out the window, first of all. Second of all, it may in
2 fact jeopardize their status with a pending case, or their status
3 in terms of programs and treatments within the jails or prisons
4 themselves.

5 Specifically, the Subcommittee on Public Safety on
6 workers in custody issues made recommendations in five separate
7 areas, and there are eight separate recommendations. I will go
8 over them very quickly.

9 First of all, we recommended that there be mandatory
10 staff education. There is no such requirement under State law
11 now for correctional officers or for deputy sheriffs. As a
12 result, education among peace officers is very spotty and is, in
13 fact, woefully inadequate.

14 We recommend further that a Red Cross model be used. If
15 you're familiar with the "Public Safety Workers and AIDS" booklet
16 put out by the Red Cross and developed through law enforcement,
17 it is an outstanding publication, easily obtained, and it is one
18 which we highly recommend that correctional officers and deputy
19 sheriffs become familiar with.

20 We also recommend that in adopting guidelines, that the
21 CDC guidelines for infection control be adopted and adhered to by
22 agencies.

23 CHAIRMAN HART: May I just take a look at that?

24 SHERIFF HENNESSEY: I brought this for you. You can
25 have it.

26 We further recommend, in terms of employee education,
27 that -- believe it or not, we recommend that departments adopt a
28

1 policy about AIDS and education, and adopt a policy about how to
2 prevent transmission within the agency, and that that procedure
3 provide for a reporting mechanism if a person feels they've been
4 exposed, and that that reporting mechanism be followed with
5 appropriate medical follow-up.

6 Secondly, we made a recommendation for inmate or prison
7 education. Senator Watson passed a bill, SB 2854, requiring
8 education, but it carried with it no funds to implement it, nor
9 any teeth to implement. Therefore, it is my belief that that law
10 is, at this point, not being implemented.

11 It may not be necessary to add additional funds. There
12 may be existing training funds through POST* or through the Board
13 of Corrections training programs. But unless there's any --
14 unless there's a further mandate or teeth, I don't believe that
15 AIDS education will be implemented statewide merely because of
16 the existence of that law.

17 We also recommend with regard to inmate education that
18 there be a study regarding -- a long-term study regarding the
19 degree of transmission within the jail or prison setting. There
20 are many myths about this, concerns, hysteria about this, and I
21 believe that while it's acknowledged that jails and prisons have
22 a tremendous pool of at-risk individuals, and the environment is
23 there for considerable transmission, the general feeling among
24 people who've studied it so far is that the level of transmission
25 is fairly low, and indeed, no higher than the general public.
26 This needs to be studied further to determine what other steps
27 must be taken to stem the expansion of transmission within a jail
28 or prison.

* Peace Officers Standards and Training (POST)

1 CHAIRMAN HART: Sheriff.

2 SHERIFF HENNESSEY: Yes.

3 ASSEMBLYMAN FILANTE: Are you suggesting in those words,
4 then, that we continue or repeat the policy that was started in
5 terms of surveying anonymously the incidence in State prisons so
6 that we have a record over time?

7 SHERIFF HENNESSEY: No, I'm not, Assemblyman.

8 One of our recommendations is regarding testing. And
9 our recommendation of the Committee is that, because of the
10 change of the confidentiality laws, primarily through Proposition
11 96, that we do not recommend mandatory testing.

12 ASSEMBLYMAN FILANTE: I said anonymous screening. It
13 was just a survey of the State prisons, as I recall, to get an
14 incidence.

15 I thought that you were talking about a follow-up, or an
16 idea of how much spread there would be that that represented,
17 basically serial repetitions of that anonymous survey or
18 sampling.

19 SHERIFF HENNESSEY: To be truthful, I'm not familiar
20 with the anonymous sampling project that the State of California
21 may have, so I don't know how anonymous it is.

22 With regard to testing, we recommend that prisons and
23 jails do encourage voluntary testing with informed consent; that
24 the results of the test will become -- may become widely known
25 within that jail or prison. Nevertheless, we do feel that
26 voluntary testing for those individuals who want to know should
27 made available.
28

1 We also recommended that separate housing for persons
2 who are HIV positive is not necessary. It's not mandatory, in
3 other words. We acknowledge that there is a difference between
4 -- in settings between prisons and jails: jails being more
5 transitory in nature, and prisons being more longer term in
6 nature. Therefore, we said that if separate housing is to be a
7 department policy, that there be concern that there is equal
8 access to programs and services, that staff who are working in
9 the, quote, "noninfected" areas still be educated, because there
10 will be people who are infected there who have just not been
11 identified yet and they are not necessarily free from potential
12 exposure, and that the confidentiality of medical records, to the
13 degree they can be protected, do be protected.

14 And then finally, we made recommendations with regard to
15 prevention programs, one of which I alluded to at the start, and
16 that is regarding condoms. We recommend that the State should,
17 in some fashion, sanction pilot programs for the distribution of
18 condoms in jails or prisons where necessary. As it is now, there
19 is a great concern that to do such a program would be violating
20 State law, and as a result, no one in the State of California is
21 allowing condoms within a jail or prison. Nevertheless, this is
22 being done in the State of Mississippi; this is being done in the
23 New York City Jail; this is being done in the Philadelphia City
24 Jail; and this is done in the entire State of Vermont in jails
25 and prisons without, at this point, any jeopardizing of safety or
26 security.

27

28

1 In closing, I'd like to say that there are areas for
2 legislation: again, regarding mandatory training through either
3 POST of the Board of Corrections; regarding the funding or
4 further mandating of inmate education; in the area of providing
5 permission -- not to make it mandatory -- but providing
6 permission for limited condom distribution; in the area of
7 ensuring nondiscrimination against people with AIDS or HIV
8 positive within a jail or prisons. And I think there should be
9 provisions for voluntary, anonymous testing, although currently
10 that would take a change in law because Proposition 96 mandates
11 that any knowledge of a positive person be reported.

12 So, those are areas where I think legislation would be
13 helpful.

14 CHAIRMAN HART: Thank you very much.

15 I had a couple of questions, Sheriff, if I could ask. I
16 guess the most fundamental one that I'm interested in, if you
17 could give me some insights, is to the concerns that your
18 officers or officers in general have about exposure, and what
19 those concerns specifically are.

20 Obviously, they're concerned about becoming infected,
21 and I sort of have this image that if there's some kind of fight
22 or altercation, is that the principal thing that people would be
23 concerned about, or are there other kinds of activities that law
24 enforcement officers are primarily concerned with?

25 SHERIFF HENNESSEY: Well, at this point, in our
26 Department, because of six years of education, I think the
27 primary areas of concern are exposure to blood or other bodily
28

1 fluids, because there still are concerns in that regard, and
2 those would occur at the scene of a crime, or a suicide where
3 there's blood, or in a fight where people are injured and an
4 officer may have an open cut or not. And that is probably the
5 most primary concern.

6 But then also there's the area of needle sticks,
7 specifically, because deputies, correctional officers, and peace
8 officers who are searching subjects may find needles in the
9 course of their searches, and people are concerned about that
10 type of exposure. That's very hard for them for good searching
11 techniques, and some devices can help.

12 In other departments, where the education has not been
13 so high, the concern is much greater. There is concern about
14 dirty clothing and laundry; there is concern about the common use
15 of utensils in eating areas; there's a concern about working with
16 coworkers with AIDS. They've not -- other departments have not
17 had the experiences that we've had to learn from, and there is a
18 high level of concern. CPR is a high level of concern; although
19 there now is a State mandate that CPR masks be provided.

20 I, nevertheless, have been told to my face by peace
21 officers that they would not provide CPR to someone whom they
22 believed had AIDS, even with a mask. So, that still is an area
23 of high concern.

24 CHAIRMAN HART: So what happens when an officer is the
25 first on the scene in the Castro, you know, or where ever a high
26 AIDS area in San Francisco is today, does that mean that in those
27 instances, some of your officers or most of your officers would
28 not provide CPR?

1 SHERIFF HENNESSEY: Well, in those situations, Senator,
2 that would be the San Francisco Police Department who would
3 respond, and so I really can't speak on behalf of the San
4 Francisco Police Department, but I do know that many officers in
5 that situation will call for the ambulance rather than provide
6 medical care themselves. And they'll risk the chances of being
7 disciplined or sued for not providing first aid.

8 CHAIRMAN HART: On the issue of prisoner segregation, we
9 have such a policy here California now. Most other states, as I
10 understand it, do not.

11 I'm curious as to whether or not in your judgment, with
12 this policy in place, is that likely to trickle down, if you
13 will, to county jails? Is there pressure building? Is there
14 some likelihood that there'll be segregation in county jails as
15 there has been in our State penal institutions?

16 SHERIFF HENNESSEY: I think the pressure is there,
17 without question. I think that many county jails currently do
18 follow such a practice.

19 San Francisco does not, and of course, many county jails
20 have had very little -- in the 58 counties, have had very little
21 exposure to the individuals with AIDS at this point, Los Angeles
22 and this county being the two major exceptions.

23 I don't know exactly what they do in Los Angeles County
24 in that regard. I know in San Francisco, we do not. We simply
25 cannot use our segregated areas, our rare resources, where it's
26 not necessary. We've got to put people in those areas who are
27 predators, or who are escape artists, or who are people who are
28

1 vulnerable and present a risk. The mere fact the person's HIV
2 positive does not make them a risk in running a jail or prison.

3 CHAIRMAN HART: Did you say, though, that you believe
4 there are counties that are segregating currently?

5 SHERIFF HENNESSEY: Yes, I believe there are.

6 CHAIRMAN HART: Can you identify those?

7 SHERIFF HENNESSEY: No, I could find out, but I would
8 not like to say without checking.

9 CHAIRMAN HART: Getting back to the issue with your
10 officers, do you have any idea, of either the City Police force
11 or your County officers, what percentage have requested and had
12 HIV tests? Is this a fairly rare request that's made by an
13 officer, or in your jurisdiction is it somewhat common?

14 SHERIFF HENNESSEY: It is not uncommon in San Francisco
15 to have a person file an exposure report. In other words, a
16 report -- either a formal report saying they believe they may
17 have been exposed to HIV in the course of their employment.
18 However, any testing they would request is anonymous. That's
19 between them and their doctor, and the Department would not know
20 unless they volunteered the information. We would not know if
21 they requested the test or not.

22 CHAIRMAN HART: The last question I had was on
23 Proposition 96. You made a number of references to Proposition
24 96 in terms of testing programs.

25 I'm not sure I really understand what you're saying.
26 The implication was that because of Proposition 96, one who was a
27 prisoner would not want to be tested because that would somehow
28 harm them.

1 SHERIFF HENNESSEY: Yes.

2 Under Proposition 96, if a medical person or a jail
3 custody person finds out -- and of course, if you're going to
4 your medical person for a test, they find out -- that you're HIV
5 positive, the law says that that medical person is obliged to
6 tell the commander of the facility; and the commander of the
7 facility is obliged in some fashion to let anyone who may be
8 working with this individual know of the person's status.

9 So, obviously, there is no confidentiality.

10 The law also, in a backwards fashion, exempts any peace
11 officer from telling -- from any liability of telling any other
12 peace officer the HIV status of anyone who's been in their
13 custody. Under Health and Safety Code 199.99(e), it says that it
14 is a misdemeanor to willfully disclose a person's HIV status,
15 except peace officers who are communicating this to other peace
16 officers and health officials who are communicating this to other
17 health officials.

18 I think what we will see in the near future is
19 computerized AIDS lists being circulated in the criminal justice
20 system, because it's currently permitted under Proposition 96,
21 and that will be an easy way to communicate from one jurisdiction
22 to another, just like we communicate about outstanding arrest
23 warrants.

24 CHAIRMAN HART: Thank you very much for your testimony.

25 Our next witness is Dr. Moses Grossman, who chaired the
26 Subcommittee on Pediatric Issues of CALC, and is Chairman of the
27 San Francisco General Hospital Department of Pediatrics.

28

1 Dr. Grossman, I don't know if you were here this
2 morning, but we had some questions about incidence of newborns
3 and AIDS, and the general consensus was that in many of our
4 public facilities in California now, particularly in urban
5 settings, that as many as 25 percent of babies are born with some
6 drug-related problems. When we asked one of the witnesses to go
7 on a little bit in greater detail, he suggested that you might be
8 the person to amplify or comment on that.

9 I just throw that out to you if you care to say anything
10 about that particular issue. I think the Members of the
11 Committee would be particularly interested.

12 DR. GROSSMAN: Yes, I was here when Dr. Werdegar
13 testified. It was towards the end of his testimony, and I heard
14 some if not all of the questions that were addressed.

15 Senator Hart, Dr. Filante, I chaired the Committee on
16 Pediatrics, as you know, which is why I'm here. And the reason I
17 was appointed to chair the Committee was because for the previous
18 five years, I chaired the Committee in San Francisco, devised a
19 plan for perinatal and pediatric AIDS and issued guidelines. So,
20 the Board recommended that I be appointed to the State Committee.
21 We had some meetings and presented recommendations.

22 What I thought I'd do today is highlight those
23 recommendations concerning children for you, and I will go into
24 the area that you mentioned.

25 Before I do, I might just give you a few elementary
26 statistics about pediatrics and women in California. We're in a
27 different situation with children than we are with adults.

1 There's much greater opportunity to exercise prevention because
2 not as many are infected yet as far as we can tell, so prevention
3 is even more important in dealing with pediatric AIDS than it is
4 in adult AIDS, which has spread so much in our State.

5 The number of women infected in the State is unknown,
6 but the number of AIDS patients is 468 as of January 1, 1989.
7 That's 3 percent of the total reported AIDS patients, which is
8 not very much if you look at the population distribution.

9 CHAIRMAN HART: Four hundred sixty-eight is what?

10 DR. GROSSMAN: Number of AIDS women -- not HIV infected;
11 AIDS women.

12 In terms of positives in pregnant women, there was some
13 question raised about that earlier today. As you know, all
14 states are doing a survey of [umbilical] cord bloods. The first
15 month of the California survey is done. We're doing a
16 three-month sample. When the three months are done, we'll know
17 by ZIP Code the exact distribution of positives.

18 In the first month's survey, which is 4200 births, I
19 believe, California is 8.3 per 10,000. That's much less than I
20 anticipated. That's compared to 21 per 10,000 in Massachusetts,
21 and 74 per 10,000 in New York.

22 I think we'll also find that there are pockets when they
23 distribute it by ZIP Code. That's a lesser incidence than I
24 expected.

25 Not surprisingly, looking at the infections, Black women
26 are disproportionately represented throughout the State. I think
27 that's pretty well known.

1 A few other facts. If the mother is positive at the
2 present time, the evidence is that 30 or 40 percent of the
3 children she has will become infected. Which 30 or 40 percent is
4 not clear.

5 Numbers for California of AIDS in the State at the
6 present time, as of January 1, is 108. Of these, 42 percent
7 infected through transfusion, 47 percent perinatally, 8 percent
8 in the fluid. This is different from national data, where 75
9 percent are perinatal. I think California data will resemble
10 national data very soon because they're no longer getting
11 infected by infected blood. That's been controlled.

12 Nobody knows the number of HIV positive children in
13 California, and there's no way to find out. A group of
14 particular interest, and some samplings may be done soon, are the
15 adolescents, because the thought is that it's the high-risk
16 adolescents who get infected, who then develop the disease and
17 die. But no data are available on that in our State.

18 The other fact which underlies many of the issues in
19 pediatrics is that when the baby is born, it is not immediately
20 clear, and often not clear for nine, twelve, sixteen months,
21 whether the child is infected or not. So, during that period of
22 time, the child is in limbo, so to speak, in terms of knowing
23 whether the baby has just been exposed or is infected. It
24 presents a variety of special both medical and social problems in
25 dealing with that baby.

26 So much for the facts. Now, I broke down the Committee
27 recommendations to three areas, as you see in the small paper I
28

1 distributed. Even though a lot has been said about education, I
2 laid a few more things about education because we discussed it a
3 great deal in our committee. It is the most important thing to
4 do. We certainly, as well as every other committee of the
5 Leadership group, recommended that school education be mandated,
6 school education be effective, and it be throughout the State.

7 Initial comments that were made in our committee is that
8 neither the legislative branch -- the legislative branch
9 attempted to do something, not successfully -- nor the executive
10 branch have really exercised strong leadership in the State on
11 how to do this, that it should be done. We should know how many
12 schools are teaching, how many are not teaching. And you might
13 consider requiring a report to the Legislature on what is
14 happening in our schools, because I don't think that we know.

15 We also thought that if HIV related items were added to
16 the standardized school tests, it would give us some idea about
17 how much children in fact know about HIV infections, and this is
18 something that could be done through the State Department of
19 Education. We thought it's not enough to talk about children who
20 are in school. What we're doing in this area is not reaching the
21 highest risk group, out-of-school teens and homeless youth. So,
22 I think we need to devise programs for those who are clearly not
23 going to go through school, which are going to be in some way
24 peer-driven, or peer-oriented, to give a message to the children
25 and youth who are not in school.

26 Finally, one of the highest risk groups is incarcerated.
27 We want to make sure that youth who wind up in juvenile halls,
28

1 whether short term or long term, use that time to provide the
2 opportunity to at least start their education. I think much
3 remains to be done to flesh out these recommendations, but we
4 thought that really was a most important issue.

5 The second issue is prevention of -- the neonate
6 prevention of children being born with HIV infection. We thought
7 there should be risk assessment in prevention in all childbearing
8 women. That's education of all women, essentially, to say that
9 this is one of the problems in our society; if they're thinking
10 about having children, they might think about their own risks,
11 and they might think about getting tested before they become
12 pregnant so they can become informed, give it adequate thought.

13 Our committee was divided, and I think it's an issue on
14 which our society is divided, on whether we should test all
15 pregnant women routinely. And I don't mean mandated; I mean
16 routinely. If you're pregnant, you come to the doctor. He says,
17 "Now we'll test you for syphilis, or we'll test you for this, and
18 we'll test you for HIV, unless you object, of course." Rather
19 than singling out -- with informed consent, rather than singling
20 out what we do know may be high-risk women. This is done at the
21 present time in women who are perceived to be high risk. Usually
22 the way this is done is to have the woman herself determine
23 whether she thinks she's high risk, and then counsel those women
24 to be tested to make sure that Hepatitis B, where transmission is
25 similar to HIV, testing high-risk groups does not work. You
26 really need to do routine testing.

27
28

1 The committee was not unanimous on this issue. Some
2 wanted to wait for the results of the California cord blood
3 testing to see what the overall risk in the State really was. We
4 thought that all HIV infected pregnant women deserved really
5 thorough reproductive counseling in terms of telling them what is
6 likely to happen, what the risks are, if the baby will be
7 infected, what the future of an infected baby is, and what their
8 own options were with regard to the pregnancy.

9 We thought we needed standards for breast milk banks.
10 That probably could be done --

11 ASSEMBLYMAN FILANTE: Dr. Grossman, before you move off
12 testing and counseling, I was discussing this at a recent College
13 of OB/GYN seminar, and the counseling problem is, as we've
14 described before, it's a very large problem, extensive. So,
15 there were no answers.

16 The problem that came up because of differences was in
17 the routine testing as we described it. It is a good idea to
18 diffuse the issue and so forth.

19 The question of accuracy, as was alluded to earlier
20 today, and the question of cost. We have very grossly different
21 -- a great spectrum of cost differentials, from as low as a
22 couple of dollars, literally, in the Armed Forces, to \$50, \$60,
23 \$75.

24 What recommendations does the committee make? Obviously
25 what we need to do is universal availability, however it's done,
26 for routine testing, and reliability, a designated lab, and cost.

27 What was the response?
28

1 DR. GROSSMAN: We had a good deal of discussion. It's
2 based on that, based on cost more than anything else. More cost
3 than philosophy. The committee was divided. Several
4 obstetricians on the committee -- we were both pediatricians and
5 obstetricians -- several obstetricians on the committee said that
6 you just cannot continue raising the cost of pregnancy. And this
7 would be just another addition which is not warranted, in their
8 opinions, except in high-risk women.

9 I think that the cost did play a part in their thoughts.
10 I think that if it was possible to get it, for example, the way
11 the Armed Forces do it, reliably and cheaply, it would not
12 eliminate but decrease the issue of cost.

13 ASSEMBLYMAN FILANTE: Actually, it does away with the
14 issue of cost. A \$500 item -- I don't know what a pregnancy
15 costs nowadays, but --

16 DR. GROSSMAN: If it were \$10, but it's probably closer
17 to 2,000.

18 ASSEMBLYMAN FILANTE: It was \$150 when I was delivering
19 babies.

20 But anyway, if it's anything over 500 bucks -- take the
21 Armed Forces mode, or any kind reliability and volume, it's under
22 \$10, \$8, or what have you. So, it's just negligible; it's
23 nonexistent.

24 So, the cost question disappears if we have the
25 standards, whether it be a designated -- I hate to mandate a lab,
26 but certainly we could say it should cost no more than that.
27
28

1 That's what I would hope the committee or the
2 Legislature would, you know, kind of look to implement.

3 DR. GROSSMAN: The other issue, of course, is one of
4 discrimination, because if we really have strong,
5 nondiscrimination laws, people wouldn't be quite as anxious about
6 will this test get out. That goes across everything because of
7 the number of anecdotal things were stated in the committee about
8 small communities with an obstetrician, and his secretary will
9 tell everybody in town those issues on AIDS.

10 ASSEMBLYMAN FILANTE: The former secretary.

11 DR. GROSSMAN: I might add before I get off the newborn
12 issue, the question you asked me about crack.

13 In our own institution, San Francisco General, today 17
14 percent of all babies are born -- are babies of crack using
15 mothers. They are a particular problem in our society over and
16 above HIV because many of these babies are premature, and the
17 cost of raising them is enormous. Using crack brings on labor in
18 many mothers. In fact, when they're tired of pregnancy, they use
19 crack just to have premature births. Enormous costs not only to
20 the immediate care of the baby, but many of these babies are
21 brain damaged and represent future problems.

22 The way it relates to HIV is that, as is not surprising,
23 women earn money for crack by prostitution, and in so doing, they
24 expose themselves to the risk of HIV.

25 I don't think that anybody knows, at least I certainly
26 don't know, what the incidence is in crack using women as opposed
27 to other women. Theoretically at least, that is the connection.
28

1 The concern is, with the number of crack babies, there
2 will be an increased number HIV babies among that group. I
3 haven't seen any figures or data in that regard.

4 CHAIRMAN HART: I'm very ignorant, Doctor, in this area.

5 If you have a crack mother, does that mean you will have
6 an addicted crack baby?

7 DR. GROSSMAN: Yes, if you have a crack mother who's
8 been using crack during pregnancy, things are going to happen:
9 (a) the baby only suffers some damage in utero because of the
10 effect of the crack on the cardiovascular system of the mother
11 and the baby; (b) the baby's almost guaranteed to come early,
12 prematurely, and carries -- over and above costs -- carries
13 health risks and neurological risks to the baby in the future.

14 The baby will be addicted, but that is the least of its
15 problems. If that's all there is, then it's just a seven or nine
16 day cost of caring for the baby, who is a very unhappy, tremulous
17 baby, cries all the time. And if that was all there was, it
18 wouldn't be such a big problem.

19 CHAIRMAN HART: Meaning that the addiction is eliminated
20 after that seven or nine day period?

21 DR. GROSSMAN: Yes. Addiction, in and of itself, is
22 eliminated. But the prematurity, a stroke of the baby, and some
23 do suffer stroke that leaves damage.

24 CHAIRMAN HART: I wanted to also ask as it relates to
25 AIDS babies, is a baby who has AIDS different in terms of the
26 nature and duration of the illness in comparison to an adult who
27 has AIDS?
28

1 DR. GROSSMAN: There is a spread, but they are different
2 because the incubation period in a typical baby who was
3 perinatally transmitted is only nine months. The majority of the
4 babies who are infected will begin to have symptoms at nine
5 months.

6 You realize that that's very different from the six,
7 seven, eight years that adults will have before they become sick.
8 There are exceptions to this because we've seen a baby who went
9 six years, but that's a distinct exception. Most babies who
10 develop symptoms at nine months if they are infected by two, two-
11 and-a-half years.

12 CHAIRMAN HART: The normal life expectancy of an adult
13 who has full-blown AIDS, as I understand it, is roughly two
14 years, and you're saying that for a baby it's about the same?

15 DR. GROSSMAN: About the same.

16 CHAIRMAN HART: Thank you.

17 DR. GROSSMAN: To go on to other issues concerning with
18 children themselves, one of the steps that's been taken in our
19 State, a forward step, administrative -- rather, legislative, it
20 was a legislative step. One of the Assemblywomen introduced
21 legislation to have California Children's Services to provide --
22 to include within their service component all children who are
23 HIV positive. That's a distinctly positive step forward because
24 now every child who's HIV positive has the medical coverage for
25 doing the tests and following the baby.

26 What they do not yet have, either this group or the AIDS
27 group, is for California Children's Services to provide some type
28

1 of social services and home support, which is needed for adults
2 also, but it's particularly needed for children because, as you
3 recognize, many mothers are ill, many mothers are nonfunctional,
4 some mothers are dead. So, every child who's infected, almost
5 without exception, needs serious social and psychiatric,
6 developmental support. So, we hope that through budget efforts
7 or otherwise, California Children's Services could provide that
8 component as well.

9 Some uniform recommendations for the State, and that
10 probably is not a legislative issue, are needed for day care
11 arrangements for these children. There is no consensus yet about
12 how that could be done best. But again, for the same reasons I
13 already mentioned, these children need infant stimulation, they
14 need day care. They're not all going to be infected. Sixty
15 percent are not going to be infected, so in the meantime, we want
16 to be sure that they develop adequately, and yet the home
17 environment is often deficient. So, we need to work out some way
18 in which they could benefit by day care programs and infant
19 stimulation programs.

20 It's very important for those who are going to foster
21 care to provide the foster homes. San Francisco and Los Angeles
22 both have demonstrated that can be done by special recruiting, by
23 special support for foster parents, and frankly, by incentive
24 payments.

25 I talked to Jim Brown, who was -- testified before our
26 committee, in fact was part of our committee, was part of social
27 services. He felt that cost-wise, the number of these children
28

1 compared to the overall number of foster children in California
2 is so small that the overall fiscal impact is not going to be
3 felt. It's more a policy issue than a true fiscal issue.

4 Nevertheless, when you're asking somebody to take one of
5 these children in their home, we need to give them something in
6 return, whether it be more support, more money, or both. San
7 Francisco does both. We've been fortunate in being able to get
8 high-class foster parents to take these children on. New York
9 has not been. Of course, they have much greater numbers to deal
10 with than we do.

11 As the number of adolescents increases in our State, and
12 we don't know how many adolescents there will be -- we had a
13 meeting of people taking care of adolescents in San Francisco,
14 just anecdotally they came up with maybe 14-18 known adolescents,
15 aged around 15-18, 15-16, who are HIV positive, many of them
16 homeless. I think there are probably some residential
17 arrangements in larger areas in the State, like San Francisco or
18 Los Angeles, where some program will be necessary for adolescents
19 with this disease.

20 One other particular issue, which goes right across all
21 age groups, but I'll highlight pediatric issues because that's
22 the one we dealt with, I'm not sure if you're familiar with the
23 fact that if a child is on a protocol, or an adult for that
24 matter, is on a protocol which includes investigational drugs,
25 Medi-Cal will not pick up the fiscal tab if you're ~~any~~ using any
26 investigational drugs at all.

27

28

1 Children are, essentially, all of them are on
2 investigational drugs. Investigational drugs are drugs not yet
3 completely approved.

4 CHAIRMAN HART: It's like an experimental drug?

5 DR. GROSSMAN: Experimental drugs. And because AIDS is
6 so new, and because we're bringing in newer and newer drugs, most
7 drugs are investigational. And Medi-Cal excludes all patients
8 from payment if you're using experimental drugs.

9 With children there's a particular impact because
10 essentially they're all on experimental drugs or you wouldn't be
11 treating them at all.

12 CHAIRMAN HART: Don't they --

13 DR. GROSSMAN: With children, everything's experimental.

14 CHAIRMAN HART: Again, I don't know much about this, but
15 I would assume that the manufacturer of the drug would pick up
16 the cost because they need to verify that their drug works. If
17 the investigation or experiment proves efficacious, then they're
18 going to make a lot of money. So, don't they underwrite the --

19 DR. GROSSMAN: That's the way it's been done
20 traditionally, and that's the reason that Medi-Cal excludes them.

21 Manufacturers, however, will not underwrite
22 hospitalization, will not underwrite expensive tests. They will
23 pay for the drugs, but that's as far as that goes.

24 So, there is a significant fiscal impact on those
25 providers, particularly hospital providers, who participate in
26 these programs. That's why we highlighted it.

27

28

1 Finally, when I testified to your Committee before, a
2 year or two ago, there was a very serious -- a year-and-a-half
3 ago -- there was a very serious problem in communication between
4 obstetricians and pediatricians, and how to pass information
5 along. The bill that passed allowing health professionals to
6 exchange information has helped a great deal in regard to those
7 communications.

8 The issue still remains about how we go about testing a
9 baby who's going to foster care so we can let the foster parents
10 know. It's considered proper if foster parents are going to be
11 parents in locum, so to speak, that they should have similar
12 information that parents would have. It's become pretty
13 universal among foster parents, if they're going to take a
14 high-risk baby, to be able to tell them whether the baby is or is
15 not HIV positive. It's confidential to them, but nevertheless,
16 they find out.

17 The way we can do this today is by going to the judge of
18 the Juvenile Court, and then -- the procedure was devised in San
19 Francisco by my committee, of going to the judge of the Juvenile
20 Court, who then reviews the evidence, and then orders -- issues
21 an order that such testing could be done, and would be
22 confidential, and who would be allowed to see the result. In San
23 Francisco, it's become pretty routine; it is not a burden.

24 Nevertheless, there are many juvenile court justices all
25 around the State; they change all the time. If you look at it
26 statewide, there's a considerable amount. Last year, a bill was
27 introduced, which didn't pass and which I testified in favor of,
28

1 allowing any two physicians who feel that this test is medically
2 indicated, if the indication here is the one I told you, to order
3 the test to be done. But that bill didn't pass. It was
4 controversial, and I understand why it was controversial.

5 Nevertheless, I still think we need some mechanism,
6 which is probably legislative, which wouldn't be quite as
7 burdensome as the one we have now.

8 Those are our principle recommendations that we
9 submitted to the Leadership Committee. Thank you for the
10 opportunity to tell you about them.

11 CHAIRMAN HART: Thank you, Dr. Grossman, very much.

12 Our next witness is Dr. Carl Smith, who's another
13 Co-Chair -- we've got a lot of co-chairs, just like the
14 Legislature -- of the CALC Subcommittee on HIV Antibody Testing
15 and Reporting Issues. He's the Health Officer of Alameda County
16 Health Systems Agency, and Chairman of the Epidemiology and
17 Disease Control Subcommittee of the Health Officers' Association
18 of California.

19 DR. SMITH: Thank you, Senator Hart, Dr. Filante.

20 Dr. Conant touched on some of the issues we covered in
21 our committee, and I hope I won't go much farther on those.

22 The interesting thing in our committee was that it was a
23 group of quite technical people who were -- laboratories were
24 highly represented on the committee. And the first issue that
25 came up was the issue of discrimination. And I was sort of
26 startled at this. I thought we would quickly get into the
27 esoterics of various kinds of lab testing. But the issue over
28

1 rode everything. It was the recognition that before you can talk
2 about testing or reporting, you have to have a system that will
3 guarantee confidentiality. You've heard this several times
4 before, but I thought it was interesting to see it come up in the
5 context of this committee.

6 Dr. Conant pointed out the problem of the inconclusive
7 test. I think that what became clear in the discussions about
8 this was, there does not need to be an inconclusive test if you
9 do the adequate follow-up of a single test with confirmatory
10 tests and backup tests, and follow a person over time. You can
11 usually -- not usually, but always -- can put that person in --
12 either classify them as a negative or a positive for HIV. So,
13 there's no need to have people sort of languish in this
14 indeterminate sort of limbo which sometimes happens. So, a lot
15 of emphasis in this committee was to determine ways in which you
16 could really be certain that testing was conducted in such a way
17 to keep people from being left in the indeterminate status.

18 You asked about some of the problems about this, and one
19 of them is that -- one of the issues is who has the
20 responsibility to really figure out, to take all the steps that
21 are necessary to resolve an indeterminate test. If the tests are
22 performed in a public health laboratory, automatically confirming
23 tests are done. If they're done in a private laboratory,
24 confirming tests may or may not be done.

25 One of the barriers here is the cost. When the tests
26 are ordered, it may be difficult to return and order backup tests
27 for that person because the follow-up test, then, is more
28

1 expensive than the initial screening. So, one of the things we
2 talked a lot about, as a sort of footnote on this, but it's how
3 you begin to develop a fee structure for laboratory tests, which
4 includes as part of it the automatic development of the automatic
5 payment for the follow-up testing.

6 The other part of it is to be certain that the
7 evaluation is done in an accredited State Department of Health
8 Services' laboratory.

9 So, this was an issue that took up a lot of the
10 discussion in the group.

11 A related issue had to do with surrogate testing. That
12 is, testing for signs of HIV disease other than HIV antibodies.
13 And the committee's recommendation was that tests for markers to
14 HIV, other than antibodies, should be restricted to the
15 evaluation of known infected individuals in research studies
16 until these tests are licensed for use by the FDA. So, we tried
17 to make a distinction, tried to limit the use.

18 We noted that screening tests of infectious diseases are
19 not required for evaluation of tissues, such as organs, semen,
20 bone from living donors, and we wanted to be certain that this
21 hole is plugged.

22 Another thing that the committee was interested in was
23 in looking back at the current law which requires a 60-day
24 waiting period for blood donors after -- for notification of
25 results after tested. As you recall, this was built in when HIV
26 antibody testing was first initiated, the idea being we didn't
27 want people to go to blood donor sites in order to determine what
28

1 their HIV status was, so that there was this pause built in. We
2 have a good anonymous testing test site system now, and really,
3 we should begin to notify people immediately after blood donation
4 if they do have HIV antibodies, or if their tests are
5 indeterminate so that, again, they can be evaluated and placed in
6 either the positive or negative category.

7 We noted that the impact of HIV disease in racial and
8 ethnic minority communities is growing. I'm sure you've heard
9 this several times before, too. But again, the issue here of
10 making testing readily available to the groups which will be --
11 we perceive as being at increasing risk in the coming years, and
12 to be certain that testing services are made more available to
13 minority groups.

14 Dr. Conant mentioned the position he took on the
15 so-called recalcitrant patient.

16 And the last recommendation was that we noted that
17 there's -- this is a sort of a process thing, but that there's a
18 significant lack of microbiologists in this State. And as the
19 demand for laboratory work, particularly associated with HIV
20 testing increases, we are going to have to implement much better
21 training programs in order to increase the pool of available
22 microbiologists.

23 So, those were the issues that our committee dealt with.
24 Again, I was interested and rather startled at the breadth of the
25 concern the committee had. We were able to get beyond the issues
26 of just technicalities of testing.

27 Thank you.
28

1 CHAIRMAN HART: I had one question I wanted to ask.

2 The ongoing controversy, at least in the Legislature
3 among some, is as to the advisability of mandatory reporting for
4 HIV positive results.

5 Did this subcommittee, or your own work in this, health
6 officers, get involved in this?

7 DR. SMITH: Actually, the subcommittee felt -- we didn't
8 -- the subcommittee did not take a position on this. Their
9 rationale for this was that testing should be -- reporting,
10 mandatory reporting should be considered in the context of a
11 broader program or broader approach. If you're going to discuss
12 mandatory reporting, what are your goals, and what are your
13 objectives, and what is the breadth of the particular strategy
14 that you're working on?

15 The Conference of Local Health Officers has debated this
16 subject a long time, for several years. And our current position
17 on that is that if -- there is value to reporting HIV antibody
18 positivity to local health officers if three conditions or three
19 things are in place. One is that there's adequate protection
20 against discrimination. The second is that anonymous test sites
21 are as readily and easily available as they are now, and continue
22 to be available. And the third is that there are treatment and
23 education resources available to which you can refer people once
24 they are report to you. And if those three conditions are met,
25 we believe that it would be profitable to make HIV antibody
26 status reportable to local health officers.

27

28

1 CHAIRMAN HART: So, tell me again how that would work as
2 it relates to anonymous testing? Anonymous testing, by
3 definition, is anonymous. Sharing of these results --

4 DR. SMITH: The way anonymous testing works, there's no
5 way in which those data can be reported to the local health
6 officers, because there's never a name associated with the test
7 results. It's just a numerical match.

8 CHAIRMAN HART: So, under those conditions, there would
9 be a significant number of people who would be HIV positive, who
10 went through anonymous testing, and that information would not
11 become known.

12 DR. SMITH: That's correct. The real concern there is,
13 if you make it -- if you make HIV antibody status reportable,
14 people will stop getting tested. And that's an ongoing concern,
15 and that's why we stress the need for antidiscrimination,
16 specific antidiscrimination.

17 CHAIRMAN HART: But if you had antidiscrimination, and
18 you had support services, once you had that identification you
19 would still want to leave that option because the fear would be
20 that some people would feel that discrimination protections
21 wouldn't prevail.

22 DR. SMITH: Yes, exactly.

23 CHAIRMAN HART: Dr. Filante.

24 ASSEMBLYMAN FILANTE: Back to a question we talked about
25 before from your standpoint on testing, just as you stated it
26 here, because we talked about the need to counsel all the HIV
27 positives, and you mentioned that.

28

1 I'm still looking for additional ways to get more people
2 tested. This set of criteria would help; we don't have it yet,
3 but it would help. And I think general public education helps.

4 One of the things you bring to mind is the problem with
5 time of exposure, and the need to test early, or young, or
6 whatever it might be, particularly with sex partners. And that
7 the incidence of HIV conversion increases every year with the
8 contact with an HIV positive person; it doesn't necessarily take
9 one. So that you've got a year or two years or three years, but
10 if you delay it inordinately, that's when the real problems come
11 on.

12 I'm always looking for ways to compress this and get
13 down, and what you just talked about for local health officers
14 would help, but can you give me any other suggestions as to how
15 we can diffuse and broaden this?

16 DR. SMITH: I think that the emphasis on what you want
17 to get from reporting is really people into treatment programs so
18 they can identify the illness early and manage their disease, and
19 take responsible measures to prevent transmission.

20 I don't think it's going to be the basis for patient --
21 I mean, educating people about how to break the chain of
22 transmission. I think it'll be helpful.

23 I think that the primary thing we're going to have to do
24 is continue to educate everyone in the community about AIDS, or
25 how you avoid transmission of the disease.

26 I think knowing your HIV status is an enhancement, but I
27 think the basic thing is going to have to be the educational
28 message which we direct to the entire community.

1 I don't think that we're going to get an awful lot of
2 benefit from having -- in terms of educating people and modifying
3 their behavior -- from reporting of the disease.

4 ASSEMBLYMAN FILANTE: Not so much from the reporting but
5 from the testing, along with the education of the community,
6 along with counseling.

7 DR. SMITH: I missed your point.

8 ASSEMBLYMAN FILANTE: My problem as a physician is the
9 increased spread of the disease from HIV positives who don't know
10 it in sexual relationships, because the figures that I've seen
11 show the increasing incidence of the disease in the partner --
12 one year, two years, three years -- after the person becomes HIV
13 positive. And if I had some better way -- you've touched on part
14 of it; in other words, antidiscrimination -- but some better way
15 to have the testing done, along with counseling and education,
16 and more of these people be tested early, then I could help stop
17 the disease from spreading. That's all.

18 DR. SMITH: Yes, the other part of that is -- which
19 doesn't really affect you as a practitioner; doesn't help you too
20 much -- but what does help, I think, is the presence of the
21 anonymous test site, where people are encouraged to determine
22 their own status. Hopefully, with the counseling that goes
23 around the anonymous test site, they'll take the steps necessary
24 to avoid transmission.

25 ASSEMBLYMAN FILANTE: Test sites exist. They've been
26 very helpful here, but they're not enough. I need to do more
27 without mandating testing, which we know doesn't work.

28

1 So, that's why I thought perhaps you could --

2 DR. SMITH: I don't have a bright idea on that.

3 I think, you know, what I say is lots more anonymous
4 testing and the protections from confidential -- around
5 confidential testing.

6 ASSEMBLYMAN FILANTE: Do you see the schools or the
7 universities as a place where maybe more could be done? I know
8 that's a select population at the university.

9 But I think whatever we can do to make it more -- I'm
10 sorry to say this -- matter of fact because now we've gotten to
11 the point where it isn't just one population group; that should
12 help. It's not just one racial group, and that will help.

13 You know, it just needs to be a part of everybody's
14 knowledge, and that's the job of being a responsible person.

15 And I think with, for example, the program we've talked
16 about here, of childbearing women, that's important. Because I
17 don't care who you are, as a childbearing woman you care about
18 your infant or your potential infant. That's an automatic
19 selection against irresponsible behavior.

20 I'm looking for things, like maybe your education
21 groups, like universities, would be a start, the university
22 students.

23 DR. SMITH: You have to be a little careful when you --
24 you don't want to make testing -- like, say, take a university.
25 You've got a group of very sexually active people. You don't
26 want to have the cornerstone of your efforts there be testing,
27 because otherwise you give sort of the assumption that if you're
28 HIV negative, it's okay and you don't have to worry about --

1 ASSEMBLYMAN FILANTE: I think everybody in the room here
2 knows that testing is not the cornerstone. We're talking about
3 the rest of this, so that testing can be a part of, you know, the
4 reasonable behavior in helping to stop the spread of the disease.
5 That's all.

6 CHAIRMAN HART: Thank you, Dr. Smith.

7 We're going to take a short break for our stenographer,
8 then we'll return with Delia Alvarez as our next witness.

9 (Thereupon a brief recess was taken.)

10 MS. ALVAREZ: I'm Delia Alvarez, Director of the Santa
11 Clara County Health Department. I'm also the Co-Chair of the
12 Ethnic Minority Subcommittee of the California AIDS Leadership
13 Committee.

14 What I want to do today is just highlight the major
15 problems and recommendations that have come out of the Minority
16 Subcommittee.

17 First, I just wanted to give some statistical
18 information. I hope I'm not repeating what's been said earlier
19 in the day, but I also want to just show what the alarming impact
20 is on the minority communities throughout the State of
21 California.

22 [Ms. Alvarez presents first slide]

23 Clearly, HIV infections have been a very severe problem
24 nationwide within the ethnic minority communities. On a
25 nationwide basis, the statistics do look different because the
26 racial and ethnic minorities, who are approximately about 22
27 percent of the population, and yet we're about 42 percent of the
28 AIDS cases reported nationwide.

1 In looking at California statistics, which we did in the
2 subcommittee, the statistics do not reflect the same national
3 trend, but there is an alarming increasing trend to the
4 minorities being a disproportionate share of the number of AIDS
5 cases.

6 [Second Slide]

7 I'm going to go through this very quickly because
8 everyone's very tired, and it's been a really long day.

9 What I really wanted to show here is that as of December
10 of 1988, there were over 17,000 cases reported to the California
11 AIDS Registry. Clearly, that the Whites account for the greatest
12 percentage; however, the data indicates that there is a rapidly
13 increasing problem among the racial ethnic minorities population,
14 particularly the Blacks and Hispanics and Asians. And if you'll
15 look at the far left, you'll see in the column that is in total
16 black there, it shows in the Black population the percentage of
17 AIDS cases is certainly disproportionate according to the
18 percentage of the Black population in the State.

19 Given the Hispanic community, however, Hispanics really
20 being about 19 percent of the State population, the number of
21 AIDS cases in the Hispanic community is between 11-12 percent.

22 And then you see in the Asian population, a little over
23 6 percent of the population, the number of AIDS cases goes about
24 2 percent.

25 I should point out that in 1988, Blacks accounted for
26 the highest proportion of new AIDS cases that were reported
27 throughout this State.
28

1 [Third Slide]

2 I just wanted to show this, because again, I wanted to
3 show in graphic form some of the statistics that have come out of
4 the introductory part of Section 6 of the Minority Subcommittee
5 report.

6 If you really take a look, starting from about '84, you
7 do have variations typical of statistical reporting, but if you
8 take a look, particularly '86, '87, '88, if you run a pencil
9 through there of the percentage of AIDS cases by ethnic groups,
10 you could just see the escalating numbers and the trends, and
11 it's continuing to go up. That's what I indicated earlier, that
12 even though total minority population in the State of California
13 is not a disproportionate amount according to the number of the
14 minorities in the State -- except for the Blacks, this is
15 different -- but we are seeing a tremendous growing trend,
16 particularly among the Hispanic community, where we are certainly
17 going to the point where the total minority population in the
18 State will be a disproportionate number according to the number
19 of AIDS cases.

20 [Final Slide]

21 Given some of these statistics, the Minority
22 Subcommittee -- and what I want to say at this point is that it
23 was quite a challenge to bring together the Minority
24 Subcommittee. As a member of the California AIDS Leadership
25 Committee, it was my responsibility to ask someone to be a
26 co-chair, who was Dr. Wilbert Jordon out of Los Angeles, and we
27 put together a subcommittee that represented a number of
28

1 minorities, ethnic minorities, throughout the State, and
2 represented not only urban communities but the agricultural
3 communities. And it was really, I think, a very constructive
4 workable group. I've had a long experience working with minority
5 groups, and I was really quite pleased that we were able to work
6 so well together, and for everyone to really make a tremendous
7 effort to really highlight what we thought were the minority
8 issues that should be reflected in the plan.

9 I should clarify that there are minority issues
10 identified in other elements of the plan. I think Dr. Werdegar
11 talked about it this morning, and some of the other co-chairs
12 have talked about the impact on minority communities.

13 What this committee tried to do was to make sure that
14 there were not minority issues that were falling through the
15 cracks and were not identified anywhere in the plan. So, as we
16 reviewed the other plan elements, we wanted to avoid a
17 redundancy, but we also wanted to highlight some specific
18 minority issues that needed to be highlighted in the State plan.

19 The first one, of course -- and I'm really going to be
20 paraphrasing this, because again, I've promised to summarize --
21 the first one is a problem that -- and I know it's not that
22 clear, or at least my contacts aren't that clear, or I'm just
23 getting older, or whatever -- but it's clear the HIV disease is
24 escalating in the ethnic communities, as I just showed in the
25 chart.

26 A recommendation that came out of the group was that the
27 public and the private sector -- and as a Director of Public
28

1 Health, I think that's very important, that we in local
2 government and State government work very closely with the
3 private agencies, the community agencies, coalitions, et cetera,
4 and work very closely with the ethnic minority communities and
5 their organizations to take the lead in carrying out services,
6 doing the plan, the development, the implementation, getting into
7 research. That minority perspective certainly needs to be
8 brought into the whole AIDS war. Clearly, the minority groups
9 need a lot of help.

10 Another problem was the difficulty in translating
11 materials. There are a lot of materials that are available, say,
12 in Spanish, Chinese, et cetera. But what was discussed
13 considerably in the committee was that you have so many dialects,
14 so many special community needs, say, from the urban to the
15 agricultural, that there's a constant need by community and
16 groups, along with the health departments, to have relevant,
17 culturally-related materials.

18 Looking at the Asian community, on which I'll talk more
19 later, there are a lot of dialects that have to be taken into
20 consideration. A lot more work has to be done as far as
21 translating the materials.

22 The next problem, the health workers and other related
23 workers, need to have greater education regarding the cultural
24 factors in the ethnic and racial populations. We spent a lot of
25 time discussing the fact that, as a Director of Public Health, I
26 see it since I have responsibility working with paramedic
27 services, et cetera. And we constantly have to be aware of doing
28

1 the training, the cultural training, of the health workers within
2 the health care system. So, this was a high priority area for
3 those on the committee, that the health people working in the
4 health industry really need to receive a lot more training. It
5 has to be constant, and it has to be constantly increased in
6 order for them to be aware of the cultural differences, et
7 cetera, regarding minority communities.

8 The next problem, methods of reporting the disease in
9 the Asian-Pacific Islanders, does not allow for adequate
10 planning. A great deal of discussion was centered around the
11 fact that there are so many groups that fall into the category of
12 Asians, and they're put together into one lump sum, and that
13 presents a lot of problems because a lot of the different
14 minority issues are not addressed within the Asian communities:
15 the differences between those who are Filipino, Chinese, et
16 cetera, Japanese. So that the recommendation was made that the
17 State Health Department really improve, greatly improve, their
18 disease surveillance and reporting procedures for these groups.

19 Next we go on to the AIDS HIV data on the native
20 American Indians is inaccurate. There was very strong feeling on
21 this subject area from those representing the Indian community.
22 The Indian reporting of those who really are native Americans is
23 considered to be quite serious, and the recommendation was made
24 that the State Health Department needs to provide greater
25 training to those who do the reporting to make sure that there is
26 valid reporting. The example was given that you will have some
27 native Americans that really have Spanish surnames, and they
28

1 could fall under the Hispanic category and not appropriate fall
2 into the native American category. And there's just a lot of
3 difficulty with self-identification.

4 Another and the last, again, this is a summary; really a
5 summary of the numbers of issues that were discussed. They're
6 not in priority order, by the way.

7 The mandatory HIV antibody test requirements for
8 applicants to the Immigration and Naturalization Services has
9 created considerable confusion among the applicants and the civil
10 surgeons. The recommendation coming out of the committee is that
11 the civil surgeons for the INS should follow the California
12 standards for confirming tests, and informing, and counseling
13 applicants. I know within Santa Clara County alone, we've had
14 some horror stories of how applicants for amnesty have gone to a
15 doctor designated as a civil surgeon. They have found out
16 they're HIV positive; they have not received any counseling;
17 there's been no follow up. They ended up at the Health
18 Department being terribly scared, afraid, and these are the very
19 individuals who will really go underground and will not even
20 continue the application procedures.

21 A lot more training -- a lot of training has to be done
22 with the civil surgeons so they can deal with this issue more
23 appropriately.

24 That, very briefly, is what's been highlighted under
25 that Section 6 of the State health plan as to what are some of
26 the critical problems identified by the committee and some of the
27 recommendations.

28

1 Clearly, a lot has to be done, as was mentioned earlier,
2 about how we're going to address the specific issues. There are
3 many minority and cultural issues that have to be addressed.
4 There are, again, within the other plan elements, a lot more said
5 about the impact on the minority communities. But clearly all of
6 us, and I speak again as the Director of Public Health, those in
7 the public sector have to work with the communities and work in a
8 partnership effort so that we can really decide where we're going
9 to spread our priorities, and our energy, and time, and
10 reallocation of resources so that we can really address this
11 tremendous impact on the minority communities.

12 If we don't, and we look at it only from my own
13 Department, the prevention efforts are really critical as we work
14 with the minority communities, because as we see the trends,
15 we're clearly going to be having a disproportionate impact on the
16 minority communities, as has happened nationwide.

17 I promised I was going to be real short, and I think
18 that was short. I left out some things.

19 Thank you.

20 CHAIRMAN HART: Thank you.

21 Let me just ask, the INS testing, is that going on now?

22 MS. ALVAREZ: It's still going on, not as much as
23 before. But, we're still trying to do some of the follow-up,
24 trying to get to some of the applicants. I don't have the
25 specific numbers.

26 CHAIRMAN HART: Thank you very much for your
27 presentation and the specificity of your recommendations. It was
28 very helpful.

1 Our next witness is Brian Dobrow, President of the
2 California Association of AIDS Agencies.

3 Welcome.

4 MR. DOBROW: Thank you, Senator Hart. We appreciate
5 this opportunity to provide comments on the draft plan and hope
6 that these will be constructive.

7 First of all, I'd like to commend the California AIDS
8 Leadership Committee and the Office of AIDS for the development
9 of what we look on as a meaningful policy document. It's a
10 statement of policies, and I hope it will serve as a basis for
11 further implementation, for further allocation of resources in
12 the State.

13 But I hasten to point out to you that as a community
14 health planner, I have to second the comments that came from Pat
15 Franks earlier. I don't look at this as a strategic or an
16 operational plan. It is a good statement of policies. It lays
17 things out very well. But in terms of having specific
18 objectives, of goals, of an action plan, of even recommendations
19 for -- or referrals as to who will implement activities and what
20 they might cost, and how we might evaluate the progress later on,
21 it doesn't do it. It falls short in that respect, and I hope in
22 latter or later activities in the further development of the
23 plan, these will be elaborated on and added to.

24 The Association actually had some specific comments on
25 the contents of the plan document. These are not meant to
26 criticize what is currently being stated, but it's to point out
27 some of the omissions and, perhaps, some of the areas that might
28 be considered for further elaboration.

1 I'm editing these comments as I go along so that we're
2 not going to spend all afternoon listening to them.

3 First, although we recognize that the document was
4 developed in compliance with a legislative mandate, and will
5 require the Governor's approval in order to be implemented, there
6 are a number of recommendations that appear to have been watered
7 down somewhat, that they have been made politically acceptable in
8 order to obtain gubernatorial approval.

9 That is understandable, but I think that we have come to
10 a point where we need to say what needs to be said. We need to
11 take the recommendations of experts. We need to take the
12 recommendations of departments, whether it's State departments or
13 local health departments, and get them implemented. If they're
14 controversial, they're controversial. They need to be stated
15 flat out.

16 We are no longer at the point where we can afford to
17 allow specific recommendations to be referred for further study.
18 There has been study after study after study, and it's time to
19 start implementing.

20 A second point, although the document does refer to the
21 existence of community-based organizations, at least in some
22 sections, it doesn't truly recognize the fact that there is an
23 essential network of both public and private agencies out in the
24 community working to combat the entire HIV epidemic throughout
25 the State. The State Office of AIDS and other State departments
26 are supported by county health departments and those community-
27 based organizations throughout the State, in both their AIDS
28 education and their service programs.

1 In reality, much of the innovation in education and
2 prevention is being done by local health departments, is being
3 done by community-based organizations in Los Angeles, San
4 Francisco, Sacramento -- you name the community. A lot of things
5 that are quite innovative are going on in Sonoma County. These
6 don't tend to be recognized.

7 We believe that the document should, somewhere along the
8 line, credit the effectiveness of those efforts, and should spell
9 out ways and means of strengthening and enhancing them.

10 In addition, there needs to be a recognition that
11 additional resources need to be provided to support the further
12 development of cooperative arrangements on a local level. From
13 our perspective, the cooperative efforts of a comprehensive
14 network of agencies, public and private agencies, is an essential
15 element in the statewide battle against HIV infection.

16 Also, if there's going to be successful planning, the
17 State plan has to lay out principles for the development and
18 implementation of local plans in addition to establishing some
19 clear-cut goals that can be addressed in response to requests for
20 proposals from the State Office of AIDS.

21 Third, the draft document, as Dr. Conant pointed out and
22 we also identified, does not address the issue of AIDS
23 discrimination. We're concerned about this omission and feel
24 that it has to be immediately addressed in order to avoid further
25 instances of discrimination against HIV infected individuals.

26 The fourth and final point that I will deal with at this
27 point is that we believe the AIDS Leadership Committee plays a
28

1 pivotal role in the determination of State policies on AIDS. We
2 find it difficult to accept the fact that the California
3 Association of AIDS Agencies, as one of the principle agencies,
4 functioning on a statewide basis, specifically focused on AIDS,
5 is not involved in those discussions and has not been.

6 We're urging that specific consideration be given to the
7 appointment of a representative from the California Association
8 of AIDS Agencies, along with a broadening of the composition and
9 the base of the AIDS Leadership Committee.

10 I think those are the basic points. If you have any
11 questions, or you'd like some additional information, I'd be
12 happy to respond.

13 CHAIRMAN HART: Thank you. You've been very concise,
14 and we appreciate that.

15 In terms of your first point about watering down, could
16 you give, or do you care to give a specific example of something
17 that's particularly distressing in that regard where you think
18 the compromise process has gone too far, and that the basic
19 document, indeed, has been compromised?

20 MR. DOBROW: It's my understanding that there was a
21 specific request or recommendation from one of the State
22 departments that involved the expenditure of funds that was
23 deleted, and it's one of the essential -- it was felt that it was
24 one of the essential points that could have been and should have
25 been included. It was related to the Department of Mental
26 Health.

27 I don't have any more specifics.
28

1 CHAIRMAN HART: We began this hearing with some focus on
2 that, and personally I think you're right on target.

3 Thank you very much.

4 MR. DOBROW: Thank you.

5 CHAIRMAN HART: Keep up your good work.

6 Our next witness is Alison Hardy, the Staff Attorney,
7 Prison Law Office, Director, AIDS in Prison Project.

8 MS. HARDY: Good afternoon. I thank you for having me
9 here to speak today.

10 As you say, I am the Staff Attorney for the Prison Law
11 Office. In that capacity, I represent many of the prisoners who
12 are in the AIDS Units in California. There are approximately 240
13 State prisoners right now who are known to have tested positive
14 for the AIDS virus and are living in the AIDS Units at Vacaville
15 and at Chino.

16 I'm here today to address specifically the
17 recommendations that are found in Section 7 of the draft report.
18 Section 7 identifies a number of problem areas for public safety
19 and custody workers, and makes recommendations on policies to
20 address those problems.

21 The first problem area that's identified that I'd like
22 to speak about is Problem Statement Number 49: the problem of
23 AIDS education in prisons.

24 The report notes that detainees in custody settings are
25 frequently at high risk for HIV infection, and therefore
26 recommends that Senator Watson's AIDS education bill be
27 implemented, as it was written last year but was not funded.

28

1 The AIDS education program in prisons and jails that is
2 aimed specifically toward affecting behavioral change could be
3 the key towards preventing widespread AIDS infection in
4 California, particularly among IV drug users, and so therefore, I
5 would stress that it is very important that such a program be
6 implemented.

7 AIDS education should be a priority in jails and prisons
8 not simply so that we ensure that all prisoners are aware of what
9 does not spread the virus, but also so that we provide some
10 motivation for these individuals to change their high risk
11 behavior. Most prisoners and inmates will not stay in prison for
12 the rest of their lives; rather, they are going to return to
13 their communities. And if they are not properly educated in
14 prison, they will be a risk to their families and to their
15 lovers.

16 Senator Watson's education and counseling bill is a very
17 good first step towards the program, and I would reiterate that
18 it should be funded.

19 I would also stress, however, that the Department of
20 Corrections and many local jails are already providing some sort
21 of AIDS education. Most of their programs are based on an
22 information-based model. That is, they consist of an educator
23 who presents a presentation and then distributes educational
24 materials. While this education model may be appropriate for
25 some subjects, such a program is not likely to affect long term
26 behavioral change among prisoners. The behaviors that put many
27 inmates at risk for contracting and transmitting the virus, i.e.,
28

1 sex and drug use, are deeply rooted in biological impulses, and
2 individuals are not likely to change their behaviors simply
3 because they're told their behavior is dangerous.

4 How many of us here are smokers? And despite the fact
5 that we know conclusively that smoking causes lung cancer, we
6 don't change our behavior.

7 So, I would urge that the report also recommend that the
8 Department of Corrections work with AIDS education groups who
9 have specifically targeted at-risk communities to come up with a
10 sensible program which is specifically tailored for the prison
11 population and is not just based on distributing educational
12 materials to prisoners.

13 The next problem area that's discussed that I'd like to
14 address is that of HIV testing. People with AIDS, and ARC, and
15 HIV infection continue to suffer discrimination, as we've talked
16 about earlier today. Without the assurances of anonymity
17 provided at alternative test sites in California, many people
18 would choose to forego taking the antibody test.

19 Due to legislation in Proposition 96, prisoners and jail
20 inmates cannot be tested anonymously while incarcerated. The
21 test results of prisoners who test positive must, by law, be
22 distributed to correctional employees, volunteers who may come in
23 contact with the prisoners, the chief medical officer of the
24 institution, and also to the inmate's parole officer. Never mind
25 the fact that while you're in State prison, you are also
26 segregated in an isolated ward where everyone knows that you've
27 tested HIV positive. So, prisoners who test positive within the
28

1 institution will have their HIV status basically known by
2 everyone.

3 I believe that prisoners who are in the institution and
4 who want to receive testing should be counseled that should they
5 choose to get tested, probably the people in their communities
6 that they return to are going to know about their HIV status;
7 probably the parole officer will know; probably the police
8 officers who are going to be looking for them once they get back
9 are going to know that this person tested HIV positive.
10 Prisoners who return to their communities will be marked not only
11 as lawbreakers, but also as public health threats.

12 In the wake of these disclosure laws, some counties have
13 stopped offering HIV testing. I think that this is a sound
14 policy, given that inmates are in county jails for a short period
15 of time, and I think that when they request counseling, they
16 should be told -- or request testing, excuse me, they should be
17 told that alternative test sites are available when they're
18 released, and they can be tested anonymously there, unless, of
19 course, they are symptomatic, at which point they should seek
20 medical care.

21 The next area that I'd like to address is that of
22 segregation. Recommendation 51 says that should segregation be
23 followed, then certain guidelines should be in place: prisoners
24 should have full access to all of the programs that prisoners
25 have access to on the mainline.

26 I would like to say that segregation is not an
27 acceptable policy for the California Department of Correction.
28

1 California has segregated its prisoners who test positive for
2 about the past four years. It's one of only six states in the
3 nation who does that, and the federal prisons, which have
4 relatively the same rate of HIV seroprevalence in its
5 institutions, have not -- don't follow such policies.

6 In California presently, when a State prisoner tests
7 positive, they are shipped to one of the AIDS Units at either
8 Vacaville or Chino, and they suffer great deprivation in terms of
9 their access to programming, educational programs, vocational
10 programs. They're not allowed to participate in work furlough
11 programs, and they are isolated with a number -- with all levels
12 of security classifications, so that prisoners with very low
13 security classifications, such as petty thieves, are housed with
14 murderers, creating a very tense environment.

15 One of the most poignant cases of segregation is in the
16 women's prison. There are currently approximately 10 women
17 prisoners who are segregated in the infirmary at CIW. They are
18 barred from participating in any prison programs at CIW.

19 And most painfully for some of the women, they are
20 barred from participating in the family visiting program. The
21 family visiting program is a program that allows women to be with
22 their families for an overnight visit on weekends. This is most
23 often used by the women at CIW to spend weekends with their
24 children. There are three women right now who are at the CIW
25 unit who have been denied access to the family visiting program
26 to spend weekends with their children, who are between the ages
27 of 8 to 15. This has been a very painful experience for them.
28

1 CHAIRMAN HART: What's the rationale for that? Do you
2 know?

3 MS. HARDY: Well, the rationale is that no prisoner who
4 tests positive should have access to the family visiting program
5 because it's a hazard to the visitors.

6 That was developed because most of the prisoners who
7 originally had AIDS were men, and the assumption was that if they
8 had their spouses come, they could infect their wives and the
9 Department of Corrections would be -- could possibly be liable.
10 That's what the Department of Corrections has said.

11 But it doesn't work that way for women who, most of them
12 want to spend time with their children.

13 It also bars prisoners from having family visits with
14 their parents. Many of the men, in fact --

15 CHAIRMAN HART: One can argue about the conjugal visit
16 thing, but if there's no conjugal visit, it seems like the policy
17 doesn't make any sense.

18 MS. HARDY: Absolutely. It does not, but the Department
19 of Corrections has been very firm in opposing access to family
20 visiting. It's something that we've urged them on, and it's
21 something that we've included in a lawsuit that we have against
22 Vacaville currently.

23 So, I would like to reiterate that the report should
24 reflect, I believe, that segregation is not viable or reasonable
25 policy for dealing with AIDS in prisons.

26 Finally, I would like to briefly say that I am
27 encouraged that the report recognizes the necessity of bringing
28

1 -- or the possibility of the necessity of bringing condoms and
2 bleach into the prison setting. Sheriff Hennessey noted earlier
3 that the Department is reluctant to do that because, of course,
4 AIDS -- having sex in prison is a felony in California, as is
5 drug use.

6 However, I don't believe that handing out condoms or
7 bleach in the prison would be aiding and abetting a felony.
8 Rather, it would be recognizing that such activity does occur in
9 the prison, and such activity will occur, regardless of whether
10 or not condoms or bleach are distributed in prison. And the
11 Department has an opportunity to distribute these items and to
12 encourage their use among prisoners should they decide to
13 participate in these activities.

14 Other states -- Mississippi and Vermont -- have decided
15 to distribute condoms, and other jurisdictions, as well as New
16 York City, and Philadelphia, notably.

17 I think that any AIDS education program within the
18 prison is severely -- the message of any AIDS education program
19 is severely undercut where an educator emphasizes to the
20 prisoners that they must use these items in order to prevent
21 transmission of the disease, and then refuses to distribute those
22 items.

23 In conclusion, I applaud the section on public health.
24 I think it makes some very good policy statements, and I hope
25 that they are further elaborated upon with concrete plans.

26 Thank you.

27 CHAIRMAN HART: Thank you very much, Ms. Hardy.
28

1 Rand Martin, Legislative Advocate, LIFE AIDS Lobby.

2 MR. MARTIN: Thank you, Senator. Since I'm last, I
3 guess this is the star turn?

4 CHAIRMAN HART: We have a couple of other people.

5 MR. MARTIN: Oh, you do. I'll try to be brief.

6 I don't have a whole lot more to add to what the last
7 few witnesses have indicated.

8 I will indicate that LIFE does believe that the plan is
9 an excellent policy document, but again, as Mr. Dobrow has said,
10 it is not a plan because it does not have objectives, it is not
11 strategic, it is not operational.

12 Unfortunately, I think that's what many of us were
13 expecting to come out of the AIDS Leadership Committee in this
14 plan: something that could be implemented instead of discussed
15 and left for future implementation by either the Legislature or
16 by the Leadership Committee, or by a subsequent committee or
17 commission.

18 If you consider some of the recommendations that are
19 highlighted in the Executive Summary, which are ostensibly a
20 prioritization of recommendations, it indicates that we are about
21 three years behind where we should be in terms of this plan.
22 According to that list of recommendations, the top priority is
23 that the Office of AIDS should continue to be the center of
24 expertise.

25 While we don't disagree that that is the case, I highly
26 doubt that it should be the top priority in a 100 recommendation
27 plan.

1 There is a recommendation that there be adequate
2 counseling provided to minority communities to meet their unique
3 needs. Nobody disagrees that that should be done. The plan does
4 not say how it's going to be done. If you talk to people in
5 South Central L.A., and south of Market in San Francisco, these
6 are the places where they need some guidance. They need some
7 specifics on how to get the message out to people in those
8 communities.

9 One recommendation indicates that the Department of
10 Mental Health should conduct a needs assessment. As I recall --
11 and I've been doing this for three years now -- the budget
12 contained money for a needs assessment two years ago. The
13 Department of Mental Health was supposed to conduct a needs
14 assessment. If the Department has conducted a needs assessment,
15 why are we conducting another needs assessment?

16 As I understand the subcommittee's report to the full
17 Leadership Committee, it was very specific. It was very
18 detailed. And it was watered down basically to a needs
19 assessment, again, because it was too specific.

20 There is a recommendation in the top priority that we do
21 evaluation of education and prevention programs. Last year's
22 budget -- the current year budget -- there was \$500,000
23 appropriated by the Legislature to do evaluations of information
24 and education programs. And it seems odd that the draft plan
25 would contain a recommendation to do something that has been
26 done, or should have been done, over the last at least two years,
27 if not longer.

1 One recommendation that really underscores the delay and
2 the problems that the delay has caused in terms of developing
3 specifics on a plan is the recommendation that they do a study on
4 licensure of hospices and other residential care facilities.
5 Because there has been no firm policy on that in the State of
6 California, and there is not now until this plan is adopted, it
7 has been real hit and miss in terms of who to provide residential
8 care.

9 What has resulted is a licensure category that was
10 created by legislation last year for congregate living health
11 facilities that has caused nothing but problems, except for a
12 few, isolated facilities across the State who have benefitted
13 from the licensure category. The others are being forced to
14 either meet the standards in that category or not to provide the
15 kind of care to residents with AIDS that they have been providing
16 and been providing well. Los Angeles County is currently
17 suffering most from that, from those restrictions, and are
18 looking at several residential care facilities, either closing
19 down, or ones that are being planned are not opening up because
20 they cannot meet the stringent requirements.

21 If there had been a policy in place in 1985, when Dr.
22 Conant and others were attempting to put together a plan in this
23 State, then I believe that by 1988, we would have passed
24 legislation that developed residential care models that were
25 comprehensive and dealt with the needs of the client population
26 at that time.

27
28

1 I do want to be somewhat selfish for a moment and bring
2 up one recommendation that was notably absent from the priorities
3 in the Executive Summary. For over a year now, we have been,
4 LIFE, has been speaking with leaders like Dr. Conant and
5 Dr. [Don] Francis about the issue of early intervention for
6 people who are HIV positive but asymptomatic, and how that is in
7 terms of preventing transmission to other people, and delaying or
8 forestalling the progression to more serious disease.

9 As a result of those discussions, and as a result of
10 pilot legislation that was passed and implemented last year, LIFE
11 took on sponsorship of a bill this year to establish early
12 intervention projects across the State.

13 We have been under the impression that this is a top
14 priority from everybody's viewpoint. However, it is clearly
15 missing from those recommendations, and I guess it leaves us with
16 the question: are we missing something?

17 While we applaud the Department, and while we applaud
18 the Office of AIDS, and we certainly applaud the AIDS Leadership
19 Committee for developing the plan that they did, we are very
20 concerned about what happens now when the plan goes to the
21 Governor's office. Clearly, if you look at some of the
22 subcommittee reports, compare them to what was done -- what was
23 finally distilled down in the draft plan, there was a lot of
24 watering down: mental health, health care financing.
25 Subcommittee reports were clearly watered down.

26 If that is the case in that step of the process, what
27 happens when it now goes to the Governor's office? Are we going
28

1 to see it watered down even more, or, as has happened with other
2 plans in the past, is it going to sit on the Governor's desk and
3 never see the light of day?

4 We're certainly concerned that this not be an exercise
5 in futility, that something come out of it now.

6 I heard an anecdote yesterday about the Public Health
7 Director from Massachusetts coming out here and finding out that
8 California did not have a plan, and Massachusetts has had one in
9 place for three years. And he could not believe that California
10 was still without a master plan.

11 The bottom line is, I think it is up to the Legislature
12 to ensure that there is a plan implemented, a plan with
13 specifics, a plan with objectives that are measurable, concise,
14 time-limited, that gives the assignment to somebody to do in a
15 certain period of time.

16 I think the AIDS Leadership Committee could do that. I
17 think the Legislature can do that. I'm not sure whether the
18 Department as an arm of the administration can, so -- we defer to
19 those two bodies, the Committee and the Legislature, to implement
20 a plan and quickly.

21 Thank you.

22 CHAIRMAN HART: Thank you.

23 We have a couple other persons who have asked to speak
24 to the Committee: a John Belskus, he's on the Board of the
25 Community Health Coalition of San Francisco.

26 MR. BELSKUS: I thank you for the opportunity to speak
27 for a couple of minutes.

1 I'm a little bit overawed by listening to the testimony
2 today. When I hear terms like should this plan be strategical,
3 should it be operational, I must confess that it sounds to me
4 like a lot of -- that kind of discussion sounds like a lot of
5 bureaucratic language that obfuscates some of the human issues
6 involved; the human issues being people receiving the health care
7 and the treatment and the protection that they need at a time of
8 crisis during the AIDS epidemic.

9 I know that I had a very close friend who, when he was
10 coming down with his first attack of Pneumocystis here in San
11 Francisco, went to San Francisco General, had to wait in the
12 waiting room for six hours because he has no medical insurance.
13 He's not covered by any kind of medical plan whatsoever. After
14 waiting six hours, the overworked medical staff there told him
15 that he had asthma, gave him some kind of asthma inhalant, sent
16 him home, and two weeks later he was calling an ambulance to go
17 back to San Francisco General Hospital with a full-blown
18 Pneumocystis attack.

19 And I really haven't -- maybe I'm not schooled enough in
20 the language of the terms that have been used -- but I haven't
21 heard much significant testimony today, with some exceptions,
22 that have really even begun to address the problem of my friend,
23 which I think will be a growing problem. There are estimates
24 that there are as many 10,000 asymptomatic people in the City of
25 San Francisco alone, mostly in the Castro District. With the new
26 wave of the epidemic growing among Black and minority teenagers
27 who are involved in the drug epidemic, you'll see even greater
28 numbers of people coming along in the future.

1 The human issue that that points to, if we take it out
2 of the strictly, you know, emotional terms that it touches upon,
3 is: what are we going to do about our health care system in
4 general; and does the AIDS epidemic pose a crisis for our health
5 care system?

6 What are we going to -- if San Francisco General is
7 facing cuts of \$4½ million because of San Francisco's budget
8 crisis, that means what? That they're going to cut back on X-ray
9 technology at San Francisco General, so that there's going to be
10 a longer line waiting to use the X-ray facilities there.

11 Well, if you have Pneumocystis, or some kind of lung
12 infection, and you get sent to have X-rays done, you wait in the
13 same line as everybody else who's dependent upon those facilities
14 at San Francisco General.

15 So, the AIDS epidemic itself becomes a part of the
16 crisis of our health care system that is not being adequately
17 funded, and becomes a part of the crisis of the fact that 5
18 million Californians are without health care. So we have to --
19 if we're going to address the issue of how to provide adequate
20 health care for people with AIDS, we have to think about how to
21 provide an adequate health care system for the people of the
22 State of California across the board.

23 ~~Now, I don't know if I've made myself clear, or if I've~~
24 ~~gotten the idea across. It's been repeated by a great many more~~
25 ~~people than myself. I really haven't heard it that clearly~~
26 ~~expressed here today.~~

27

28

1 I think that's only one of the larger social issues
2 surrounding the AIDS epidemic that needs to be taken into account
3 in any kind of strategic or operational plan for what to do about
4 the AIDS epidemic.

5 There's one final issue that I think we can narrow on
6 that I would like to speak to in closing, and that's the issue of
7 needle exchange. It seems to me needle exchange is a simple
8 thing. Unfortunately, I've had a drug abuse problem in my past
9 and limited -- it was a vision of hell that I don't care to go
10 back to -- limited though it was, I never found anyone who
11 developed any kind of drug abuse problems because of exchanging
12 the needle. It's just a fact of life that I never encountered.

13 It seems to me such a simple thing. The barriers to it,
14 I think, come from people who misunderstand the problem, people
15 who are related to puritanical, unnecessarily puritanical
16 backgrounds, or really want to hide from the problem.

17 The fact is, it is easier to get any drug that you might
18 want on the streets of San Francisco than it is to get a clean
19 needle. And I think that providing for needle exchange will do
20 absolutely nothing to encourage the spread of drugs. And it's
21 almost ridiculous to talk about encouraging the spread of drugs
22 when drugs are so widespread; it's absurd.

23 There was a Bayview Hunter's Point group that
24 interviewed several hundred African-American youths, ages 15-19
25 years old, about their crack and drug habits. They found from
26 the group that they interviewed that 68 percent had engaged in
27 the sale of crack. These are teenagers, 15-19 years old; 68
28

1 percent had engaged in the sale. And some 40 or 50 percent had
2 contracted at least one venereal disease at some time in their
3 lives in that four-year age span.

4 Now, among that group of people, to present something as
5 simple as a needle exchange is not going to encourage an already
6 existing problem. And of course, it's not going to be the only
7 solution that needs to be made. But I think it is definitely
8 something that we can get the political will to do.

9 And if we can't get the political will to do something
10 so simple as a needle exchange, I don't think we're ever going to
11 be able to address the larger issues of what are we going to do
12 about a comprehensive health care plan in the State of
13 California.

14 Thank you.

15 CHAIRMAN HART: Thank you very much.

16 What appears to be the last person to speak today is
17 Harvey Maurer. Is Mr. Maurer present?

18 MR. MAURER: Thank you, Senator Hart, for having this
19 hearing and this Committee meeting.

20 I have to admit to a certain amount of confusion myself.
21 It's a very wide topic, but it's certainly clear to me that
22 there's a lot of controversy surrounding what the effects of this
23 report will be: how the Governor will interpret it; how it will
24 be implemented.

25 I'm afraid some of that comes from confusion within the
26 report, and that deals with treatment being a priority, but what
27 does treatment mean? Does that mean going into a hospital,
28

1 having a bed, having a physician, having a standard of treatment,
2 and then a release? Or, does that mean access to an efficacious
3 treatment that isn't yet approved by the FDA, such as aerosol
4 pentamidine?

5 It really is a question that's going to come up more and
6 more frequently. We're talking about AIDS going into the IV drug
7 using community, and we're talking about wanting to limit the
8 spread of AIDS, and we're talking about wanting to reach the IV
9 drug user, and have him or her modify their behavior.

10 Well, it's interesting. Conventional wisdom is that IV
11 drug users are real difficult to reach, don't have much
12 self-respect, certainly don't modify behavior quickly.

13 I've been involved for now almost three years with the
14 bleach exchange program, which has seen about 20 percent of its
15 weekly allotment being given out to IV drug users, seen the
16 consequence of the return by those users of the empty bottles.
17 Now, these people have embraced the program. They have
18 recognized that it is helpful to themselves, and they are
19 participating.

20 Now, there are a couple of things. We don't ask for
21 names, and we don't take photographs. We don't keep records. We
22 make it very easily available. They can drop off; they can
23 collect. Very simple, but they participate.

24 And if you had gone to the literature a couple -- say,
25 five or ten years ago, you would have found that people would say
26 IV drug users won't participate in prevention. They do. The
27 question is whether you're clever enough to provide a basis
28 whereby they can contribute.

1 I guess the last comment that I'll make deals with the
2 area of the mental health cutbacks. I really think that mental
3 health appropriations or programs as relate to AIDS, we're
4 involved in a learning experience. And we're involved with --
5 particularly in the IV user population, the substance abusing
6 population in general, whether that includes crack cocaine or
7 whatever -- we're dealing with a different mentality of a lot of
8 people posing multiple problems. And in the end, I would ask,
9 who is going to help these people maintain some stability in
10 their lives? Because I would say from what I understand this
11 Committee's done here that a principle area of interest is that
12 people who are infected act responsibly. To accomplish that,
13 sometimes people have to receive a lot of counseling, a lot of
14 education, and I think the Committee's recognized that.

15 But I also think that people, when they're under extreme
16 stress, sometimes need some special help. And I would submit
17 that that's not going to come from a nurse. That's not going to
18 come from a doctor who they see once a month. That at some time,
19 they're going to need to be referred to a person with specific
20 competence, psychiatric competence. And if that person isn't
21 there, then I would ask whether society's prepared to pay the
22 cost for that? Because I think we know that the cost of society
23 not providing those services is going to be more infection and,
24 in the end, more expense, and probably more death.

25 Thank you.

26 CHAIRMAN HART: Thank you, Mr. Maurer.
27
28

1 I want to bring this hearing to a close. I first want
2 to thank all of the people who testified, as well as others who
3 are here in attendance, for your contributions and for your
4 patience throughout the day.

5 I also want to mention that with our stenographer here,
6 we'll be producing a transcript of this hearing. If anyone would
7 like a copy of the transcript, I don't know how long it will take
8 for it to be available, but hopefully it won't be in the too
9 distant future, and if anyone would care to receive a copy,
10 please call or write the Select Committee on AIDS office in
11 Sacramento.

12 In terms of this report, I'm impressed by the number of
13 people who participated in the deliberations, and the expertise
14 that the people who were part of the development of this plan
15 brought to the process, and the degree of specificity in the
16 recommendations, the length of the recommendations in the report,
17 and the consensus that has been developed. I think those are all
18 things that we can be very pleased about.

19 As I mentioned at the beginning of the hearing in my
20 comments directed toward Dr. Kizer, and it's been repeated by
21 others as well, the fact that there are not dollar figures that
22 in any way are really attributed to this report is troublesome.
23 I understand the sensitivity of that issue, but it seems to me a
24 plan that does not attach any resources or any dollar figures to
25 implementation of the plan is really lacking in credibility.

26 I think the whole idea behind this, as I see it, is that
27 we are trying to fashion a battle plan. When you're in a war,
28

1 need to be specific. You need to be operational, and you need to
2 be dealing with some kind of measure as to whether or not you are
3 succeeding in winning or losing the war.

4 The degree to which we can have greater specificity and
5 greater implementation of a plan that gives all of us in this
6 process some indication as to how we're doing in effectively
7 implementing the plan seems to me to be extremely important.

8 I guess I would conclude by saying that although this
9 plan is put forward by many people with expertise in the health
10 and medical fields -- and that's my bias, is that we want to rely
11 upon this expertise; that's what we want to do through this
12 planning process -- but I think it's also important to mention
13 that this plan is not only an expertise document, a health
14 document, it's a political document. And this hearing is a
15 political process, obviously. Where this report goes in terms of
16 its further draft revisions and final execution, it is a
17 political process that we are part of. And the extent to which
18 this plan can be a focal point for a political debate and
19 discussion is extremely important.

20 So, I would urge those that are involved in sort of the
21 final execution of this report to keep this in mind, that it is a
22 political process. That political process is educational for
23 Members of the Legislature, for the media, for the general
24 public, and certainly for the Governor of this State. And I hope
25 we'll keep that in mind so that we can have a document.

26 What strikes me is that with this issue and so many
27 other issues, those of us that are involved in the process, it is
28

1 so easy to sort of have an informational overload, or to get
2 confused, or to -- there's just too much. A document like this
3 can help focus our understanding, and hopefully our will, to take
4 some decisive action.

5 That's what my hope is that this plan will be, and what
6 I hope that this Committee hearing is sort of initiating, that
7 process.

8 So with that, we'll conclude the hearing. We won't
9 conclude the process, because the process, in a sense, is really
10 moving from those that are part of developing this plan to, as
11 someone suggested, to make it more inclusionary, and that
12 inclusionary process will certainly include the Legislature and
13 others as well, so the process is really just under way.

14 Thank you all for attending, and this hearing stands in
15 adjournment.

16 (Thereupon this hearing of the Senate
17 Select Committee on AIDS was adjourned
18 at approximately 4:30 P.M.)

19 --oo0oo--

CERTIFICATE OF SHORTHAND REPORTER

1
2
3 I, EVELYN MIZAK, a Shorthand Reporter of the State of
4 California, do hereby certify:

5 That I am a disinterested person herein; that the
6 foregoing March 31, 1989 hearing of the Senate Select Committee
7 on AIDS was reported verbatim in shorthand by me, Evelyn Mizak,
8 and thereafter transcribed into typewriting.

9 I further certify that I am not of counsel or attorney
10 for any of the parties to said hearing, nor in any way interested
11 in the outcome of said hearing.

12 IN WITNESS WHEREOF, I have hereunto set my hand this
13 14 day of April, 1989.
