2 of 45 IMSAloquium 2017

Decision-making swarms are prevalent in the world

Outline

- Swarm Definitions
- · Swarm Design
- Designing Ant Swarms
- Measuring Shortest Length with Ant Swarms
- Designing Locust Swarms
- · Measuring Density with Locust Swarms

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 4 of 45 IMSAloquium 2017

An agent is a subset of a system which controls at least one degree of freedom

A swarm is a collection of agents that has more abilities than any individual agent.

Examples • Definitions • Hamiltonian • Decisions • Ants • Locusts • Conclusion 6 of 45 IMSAloquium 2017

How do we mathematically analyse a swarm?

Examples • Definitions • Hamiltonian • Decisions • Ants • Locusts • Conclusion 7 of 45 IMSAloquium 2017

Local properties are anything the agent can directly observe or interact with.

Examples • Definitions • Hamiltonian • Decisions • Ants • Locusts • Conclusion 8 of 45 IMSAloquium 2017

Global properties are well-defined, differentiable functions of the local properties.

Examples • Definitions • Hamiltonian • Decisions • Ants • Locusts • Conclusion 9 of 45 IMSAloquium 2017

Global properties are well-defined, differentiable functions of the local properties.

Illinois Mathematics and Science Academy

Examples • Definitions • Hamiltonian • Decisions • Ants • Locusts • Conclusion 10 of 45 IMSAloquium 2017

Global properties are well-defined, differentiable functions of the local properties.

r**≝IMSA**®

Examples • Definitions • Hamiltonian • Decisions • Ants • Locusts • Conclusion 11 of 45 IMSAloquium 2017

The Global Property space, or the Phase Space, can be drawn.

Examples • Definitions • Hamiltonian • Decisions • Ants • Locusts • Conclusion 12 of 45 IMSAloquium 2017

r≝IMS

The Phase Space shows clearly the ways in which the swarm must change in order to reach the desired end phase.

Examples • Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 13 of 45 IMSAloquium 2017

The Hamiltonian Method of Swarm Design entails looking at the phase space and determining which direction the Global Properties must change. The direction that they must go determines the swarm conditions, which must be met in order for the desired outcome to be achieved.

A swarm decision is a change in attractor in Phase Space.

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 16 of 45 IMSAloquium 2017

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 17 of 45 IMSAloquium 2017

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 18 of 45 IMSAIoquium 2017

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 21 of 45 IMSAloquium 2017

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 22 of 45 IMSAloquium 2017

A global property is the length of the paths

ب**±IMSA** _ا

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 23 of 45 IMSAIoquium 2017

A global property is the number of ants on each path.

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 24 of 45 IMSAIoquium 2017

After some mathematical tricks, it can be seen that the dot product of the two global properties needs to be negative in order for the swarm to make the decision. The state change can be seen below.

25 of 45 IMSAloquium 2017

A group of grasshoppers is in an enclosed space

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 26 of 45 IMSAloquium 2017

As they move around, they contact each other

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 27 of 45 IMSAloquium 2017

Upon contact, the grasshopper's serotonin level increases

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 28 of 45 IMSAloquium 2017

Continued collisions further increase the serotonin levels, until...

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 29 of 45 IMSAloquium 2017

Continued collisions further increase the serotonin levels, until...

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 30 of 45 IMSAloquium 2017

Continued collisions further increase the serotonin levels, until...

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 31 of 45 IMSAloquium 2017

The grasshopper begins its transition into a locust

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 32 of 45 IMSAloquium 2017

The erratic behavior of locusts lead to many more collisions, increasing the rate of serotonin increase for surrounding grasshoppers

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 33 of 45 IMSAloquium 2017

As a result, more grasshoppers turn into locusts

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 34 of 45 IMSAloquium 2017

As a result, more grasshoppers turn into locusts

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 35 of 45 IMSAloquium 2017

Eventually, all of the grasshoppers have transitioned into locusts

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 36 of 45 IMSAloquium 2017

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 37 of 45 IMSAloquium 2017

The internal state of the agent increases by a constant amount for collisions with other agents. This state also decays exponentially over time. After the threshold, the agent is triggered.

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 38 of 45 IMSAloquium 2017

The global property is the sum of each agent's internal property, and so the swarm condition is that the global property must increase over time.

Global Property

$$P = \sum_{i=1}^{N_a} s_i.$$

Desired Behavior

$$\frac{dP}{dt} > 0$$

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 39 of 45 IMSAloguium 2017

The swarm condition can be expressed in terms of parameters that determine the dynamics of the internal state.

Swarm condition

$$\frac{k_1 P}{R_{max}} < N_{trigger}.$$

r≝IMS Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion

The state change can be seen below. The swarm condition is verified through experimental data.

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 41 of 45

IMSAloquium 2017

How do we engineer swarms to make decisions provably?

- 1. ???
- 2. ???
- 3. ???
- 4. Swarm works a priori

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 42 of 45 IMSAloquium 2017

The Hamiltonian Method of Swarm Design can be used to generate the swarm conditions, but there is no general methodology to go from those conditions to the swarm working a priori.

- 1. Hamiltonian Method of Swarm Design
- 2. Swarm Conditions
- 3. ???
- 4. Swarm works a priori

What's a general methodology for the third step?

Examples · Definitions · Hamiltonian · Decisions · Ants · Locusts · Conclusion 43 of 45 IMSAloquium 2017
