

Happy 35th B-day honey!

OMG! I'm so F***
mad at you!

Oh gosh! I'm sorry,
What's wrong?

wait, what were
we talking about?

(Oh boy! Let's get
you to the
doctor,
crazy!

OH BALLS!

Later, at the doctor...

What are your symptoms?

she's having mood changes,
forgetfulness, involuntary move-
ment, slurred speech,
difficulty swallowing and
she lost a lot of weight
recently!

Well, according to my super smart brain, it seems you have a combination of ALS, Parkinson's, and Alzheimers!

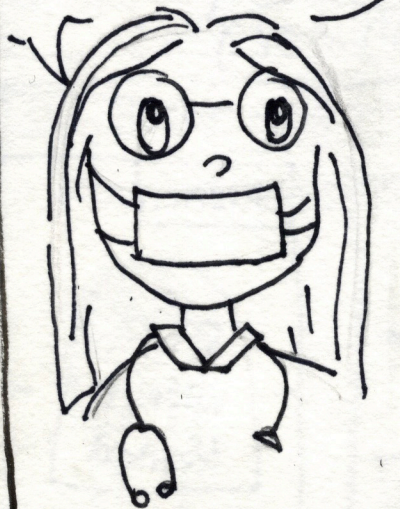

GASP!

Actually Doctor, My wife has the Huntington Gene, and I know it can appear as a combination of those. I also know symptoms start showing between 30-50 yrs age so that makes sense.

OH BALLS!

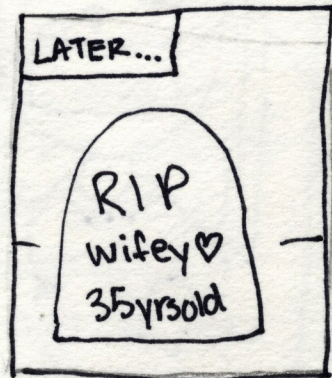

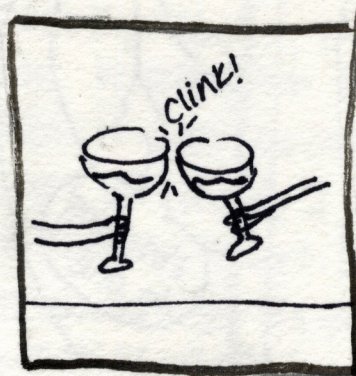

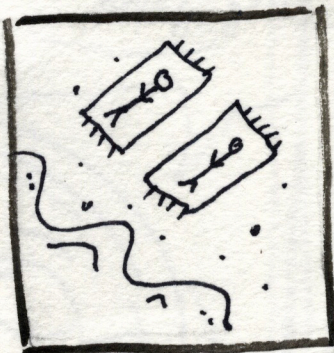

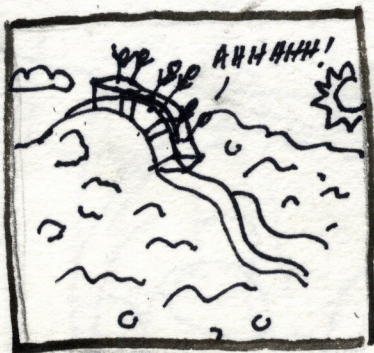

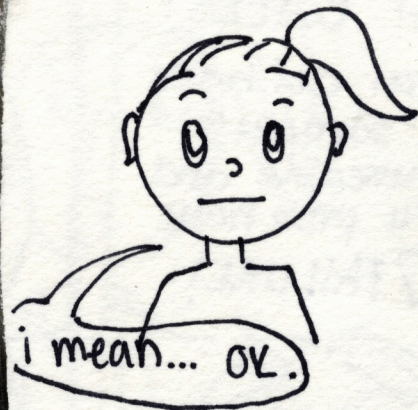

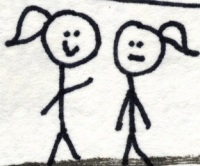

OK, you def. have
this. sorry it's
incurable and
you'll prob have
♥ FAILURE!

this is a nervous system
disorder where your proteins
are messed up due to ~~the~~ CAG
repetition. there's a progressive
break down of nerve cells in
the brain which is whats
creating the difficult physical
and mental abilities. about
30,000 Americans have symptoms,
like you, and 200,000 carry
the gene.

Hey, dont worry about it wifey!
I still love you! lets go on a
really cool vacation since we're
rich and you're probably gonna die
soon!
